

# GENERAL HISTORY

OF THE

## DICHLAMYDEOUS PLANTS,

COMPRISING COMPLETE

DESCRIPTIONS OF THE DIFFERENT ORDERS;

TOGETHER WITH THE

CHARACTERS OF THE GENERA AND SPECIES, AND AN ENUMERATION OF THE CULTIVATED VARIETIES

THEIR PLACES OF GROWTH, TIME OF FLOWERING, MODE OF CULTURE, AND

USES IN MEDICINE AND DOMESTIC ECONOMY.

THE SCIENTIFIC NAMES ACCENTUATED, THEIR ETYMOLOGIES EXPLAINED, AND THE CLASSES AND ORDER

ILLUSTRATED BY ENGRAVINGS.

AND PRECEDED BY INTRODUCTIONS TO THE LINNÆAN AND NATURAL SYSTEMS

AND A GLOSSARY OF THE TERMS USED.

THE WHOLE

ARRANGED ACCORDING TO THE NATURAL SYSTEM

BY GEORGE DON, F.L.S.

IN FOUR VOLUMES.

VOL. II.—CALYCIFLORE.

LONDON:

PRINTED FOR J. G. AND F. RIVINGTON; J. AND W. T. CLARKE; LONGMAN AND CO.; T. CADELL; J. RICHARDSON; JEFFERY  
AND SON; BALDWIN AND CRADOCK; J. BOOKER; P. BOOTH; HARVEY AND DARTON; S. BAGSTER; SHERWOOD AND CO.;  
HARDING AND LEHARD; J. F. SETCHEL; WHITTAKER AND CO.; SIMPKIN AND MARSHALL; AND E. HODGSON.

MDCCXXXVI.

LONDON.  
HERBERT & BENTLEY, PRINTERS,  
ST. JOHN'S SQUARE.

# INDEX TO THE SECOND VOLUME,

COMPRISING THE

SYSTEMATIC AND ENGLISH GENERIC NAMES, AND THE ENGLISH AND SYSTEMATIC SYNONYMES.

\*. In this Index the systematic names used, and the English names in common use, are in *Roman letters*; the synonymes in *Italics*; the names of Classes, Sub-classes, and Orders in *large capitals*; and the names of Sub-orders and Tribes in *small capitals*.

## GARDENER'S AND BOTANIST'S DICTIONARY.

**SUBCLASS II. CALYCIFLOREÆ** (from *calyx*, and *flos*, a flower). D. C. prod. 2. p. 1. Calyx gamosepalous (f. 1. *a.*); sepals more or less connected together, especially at their base (f. 1. *a.*). Torus more or less adnate to the inside of the calyx at the base (f. 4. B. *c. f.* and A. *d.*). Petals and stamens inserted in the calyx (vol. 1. f. 2. 2. *a. b.*) or in that part of the torus adnate to the calyx (f. 4. C. *c.* and B. *e.*), and therefore rising from the calyx. Petals usually free (vol. 1. f. 2. 2. *a.*). Ovary free or adnate to the calyx. The torus or disk in *Calycifloræ* appears to be a dilatation of the peduncle converted into petals and stamens, it is large and adnate to the calyx, and usually bears the petals and stamens, sometimes it girds the stipe of the ovary as in *Pussifloræ* and the most of *Leguminosæ*. The petals and stamens in the *Calycifloræ* are, however, for the most part, inserted in the calyx. In the *Thalamifloræ* the torus neither adheres to the calyx nor to the ovaries, which character distinguishes it from the *Calycifloræ*.

**ORDER LXIV. CELASTRINEÆ** (plants agreeing with *Celastrus* in important characters). R. Br. gen. rem. p. 22. D. C. prod. 2. p. 2.—Rhamnæ, Spec. Juss.

Calyx of 4-5 obtuse sepals (f. 1. *a.*) connected at the base, imbricate in the bud (f. 2. *a.*). Petals alternating with the sepals (f. 2. *b.*), oblong, flat, rather fleshy, broadest at the base, fixed under the margin of the disk, imbricate in æstivation (f. 2. *a.*). Stamens (f. 2. *c.*) equal in number with the petals, and alternate with them, inserted in the margin, middle part, or superior part of the disk. Anthers 2-celled bursting inwards. Disk large (f. 2. *d.*) expanded, flat, closely girdling the ovary, and covering the flat part of the calyx. Ovary free, immersed in the disk, and adnate to it, 2-4-celled; cells 1-seeded (f. 1. *c.*) Ova fixed to the inner angle of the cells by a short narrow podosperm, ascending. Raphe interior. Fruct or capsule never adherent, 2-4-valved, 2-4-celled, with a dissepiment in the middle of each valve, or a dry drupe containing a 2-celled nut; cells 1 or many-seeded. Seeds ascending, rarely resupinate, suspended, arillate or exarillate. Endosperm fleshy. Embryo straight, with flat, thick cotyledons

and a short inferior radicle. The order is composed of shrubs, having alternate or opposite, simple, rarely compound, rather coriaceous, entire, or toothed, feather-nerved, usually stipulate leaves, and axillary cymes of small whitish or greenish flowers. Several of the species are favourite ornaments of our shrubberies, as the *Staphylæa*, the *Celastrus*, and the *Euonymus*. The fruit of *Euonymus Europæus* is a brisk purgative, as is also the inner bark, and in strong doses powerfully emetic. A decoction of the twigs of *Maytênus Boària* is used to bathe the swellings produced by the poisonous shade of the tree *Litri* or *Lithi*, *Rhus caustica*. This order is distinguished from *Rhamnæ* in the sepals being imbricate in æstivation, not valvate, and in the stamens being alternate with the petals as well as in the ovary being wholly superior and in the petals being flat. It differs from *Ilicinæ* in the petals being free and in the stamens being perigynous, and from *Hippocrateæ*, to which it has been referred by R. Brown, in the stamens being free and perigynous, not as in that order hypogynous and monadelphous.

*Synopsis of the genera.*

## TRIBE I.

**STAPHYLEÆ.** *Seeds bony, truncate at the hilum, exarillate. Albumen wanting, or very sparing. Leaves compound, pinnate, or trifoliate.*

1 **STAPHYLEÆ.** Calyx 5-parted (f. 1. *a.*), with coloured segments. Disk urceolate. Petals 5. Stamens 5. Styles 2-3, sometimes connected. Capsule bladderly, 2-3-celled, few-seeded (f. 1. *c.*).

2 **TURPINIA.** Flowers polygamo-dioecious. Calyx 5-parted, with coloured margins. Petals 5, inserted in a 10-crenated disk. Styles 3, joined in one. Berry trigonal, 3-celled; cells 2-3-seeded.

## TRIBE II.

**EUONYMÆ.** *Seeds arillate, not truncate at the hilum. Embryo straight, placed in the axis of a fleshy albumen. Leaves simple*

3 *EUC'NYMUS*. Calyx 4-6-lobed (f. 2. a.), flat, with the base covered by the peltate disk. Petals 4-6 (f. 2. b.), spreading, inserted in the disk. Stamens 4-6, inserted in rather prominent glands. Style 1. Capsule 3-5-celled, 3-5-angled (f. 2. f.); cells 1-4-seeded, with a dissepiment in the middle of each valve.

4 *CELA'STRUS*. Calyx small, 5-lobed. Petals 5, unguiculate. Stamens 5. Ovary immersed in the disk. Style 1, crowned by 2-3 stigmas. Capsule 2-3-valved, usually with a complete or an incomplete dissepiment in the middle of each valve, and usually with a single seed in each cell.

5 *CAT'HA*. Calyx flat, 5-lobed. Petals 5, inserted under the margin of the disk. Stamens 5, inserted with the petals. Capsule 3-4-sided, 3-4-celled; cells 1-seeded. Style short, crowned by a 3-parted stigma.

6 *PLECTRO'NIA*. Calyx obsoletely 5-toothed. Petals 5, sessile. Stamens 5, short. Style filiform, crowned by an ovate stigma. Berry oblong, 2-celled, 2-seeded.

7 *MAYTE'NUS*. Flowers polygamous. Calyx small, 5-cleft. Petals 5, spreading. Stamens 5. Disk fleshy. Stigma sessile, 2-3-lobed. Capsule 1-4-valved, with a dissepiment in the middle of each valve. Seeds few.

8 *ALZATE'A*. Calyx 5-cleft, 5-angled, coloured. Stamens 5, hypogynous? Style 1. Capsule obcordate, 2-valved, 2-celled, with a dissepiment in the middle of each valve. Seeds numerous, girded by a membrane. Corolla none.

9 *CRYPTER'ONIA*. Flowers monoeious. Calyx small, 5-toothed. Corolla none. Stamens 5. Style crowned by an obtuse stigma. Capsule 2-celled, 2-valved, many-seeded.

10 *POLYCA'RDIA*. Calyx 5-lobed. Petals 5. Stamens 5, short. Ovary depressed. Style very short, crowned by a lobed stigma. Capsule woody, 5-celled, 5-valved, or from abortion only 3-4-valved, with a dissepiment at the base of each valve. Seeds few, covered by a jagged aril.

11 *ELÆODE'NDRON*. Calyx small, 4-5-lobed. Petals 4-5. Stamens 4-5. Disk fleshy. Style very short. Drupe dry, containing a 5-celled nucleus, rarely 2-celled from abortion. Seeds solitary or twin in the cells.

12 *ACTEGE'TON*. Flowers dioecious. Calyx 4-toothed. Petals 4. Stamens 4, connate at the base. Stigmas 2, sessile. Berry globose, 1-3-seeded.

13 *PTELID'UM*. Calyx urceolate, 4-lobed. Petals 4, inserted in the 4-lobed disk by the broad claws. Stamens 4. Ovary compressed. Style almost wanting. Fruit samaroid, much compressed, indehiscent, girded by a wing, 2-celled, 2-seeded.

14 *TRALLIA'NA*. Calyx 5-parted. Petals 5, spreading. Disk erect, 10-crenate. Stamens 5. Style 1. Berry roundish, 2-celled, 2-seeded.

### TRIBE III.

*CASSINIE'Æ*. Petals broadest at the base. Fruit indehiscent. Embryo straight in the axis of a fleshy albumen. Leaves simple.

15 *CASSI'NE*. Calyx small, 5-parted. Petals 5, spreading. Stamens 5. Stigmas 3. Drupe dry, containing a 3-celled, 3-seeded nut. Seeds hanging from the top of the cells.

\* 16 *HARTO'GIA*. Calyx 4-5-cleft. Petals 4-5, spreading. Stamens 4-5. Style thick, bifid; lobes bifid. Drupe dry, ovate, 2-celled, 2-seeded.

17 *CURTIS'IA*. Calyx 4-parted. Petals 4. Stamens 4. Style crowned by 4-5 stigmas. Drupe subglobose, succulent, containing a 4-5-celled, 4-5-seeded nut.

18 *NEMOPA'NTHE'S*. Flowers dioecious or polygamous from abortion. Calyx very small. Petals 5. Stamens 5. Stigmas 3-4, sessile. Berry subglobose, 3-4-celled, 3-4-seeded.

19 *SKI'MMIA*. Calyx small, 4-parted. Petals 4, concave. Stamens 4, very short. Style 1. Berry ovate, umbilicate, obsoletely 4-furrowed, somewhat 4-valved, filled with farinaceous pulp. Seeds 4.

20 *LE'PTA*. Calyx small, 4-parted. Petals 4, inflexed, triangular. Stamens 4, inserted at the angles of the disk. Style almost wanting. Stigma obtuse. Berry 4-lobed; lobes 1-seeded.

† *Genera allied to Celastrineæ, but differ materially in the valvate æstivation of the petals.*

21 *PERROTTE'TIA*. Calyx 5-lobed. Petals 5, valvate in æstivation, inserted under the disk. Stamens 5, inserted with the petals. Stigma sessile. Berry subglobose, containing 1-2 wrinkled nuts.

22 *DULÓNGIA*. Flowers hermaphrodite. Calyx 5-toothed, adnate to the ovary. Petals 5, valvate in æstivation, inserted round the base of the disk. Stamens 5, inserted with the petals. Stigmas 2, sessile. Fruit globose, baccate 2-celled; cells 2-3-seeded.

### Tribe I.

*STAPHYLEACEÆ* (plants agreeing with *Staphylëa* in some characters). D. C. prod. 2. p. 2. Seeds bony, truncate at the hilum, without aril. Albumen wanting or sparing. Cotyledons fleshy. Leaves compound.

I. *STAPHYLE'A* (name abridged from *Staphylodéndron*, its name in ancient botany, derived from *σταφυλή*, *staphylë*, a bunch or cluster, and *ἑνὶ δένδρῳ*, *déndron*, a tree; the flowers and fruit are disposed in clusters). Lin. gen. no. 374. Lam. ill. t. 210. D. C. prod. 2. p. 2.—*Staphylodéndron*, Tourn. inst. 386.—Bumál'da, Thumb.

LIN. SYST. *Pentándria*, *Di-Trigýnia*. Calyx 5-parted (f. 1. a.), covered by an urceolate disk at the base; lobes oblong, concave, coloured. Petals 5 (f. 1. f.). Stamens 5. Ovary 2-3-lobed. Styles 2-3, sometimes connected together. Capsule 2-3-celled; cells membranous (f. 1. c.), opening on the inside, few-seeded, sometimes connected together at the base, sometimes their whole length. Seeds globose.—Shrubs with impari-pinnate or trifoliolate, opposite, rarely alternate leaves, bearing 2 stipulas at the base of the petioles (f. 1. b.), and at the base of the leaflets. Flowers white, disposed in racemose panicles.

\* *Leaves trifoliolate.*

1 *S. TRIFÓLIA* (Lin. spec. 386.) leaflets ovate, acuminate, regularly serrated, young ones downy beneath; styles smooth; capsules bladderly. h. H. Native of North America, from New York to Carolina, on rocks. Schmidt: æstr. baum. 2. t. 81. A very common shrub in the gardens.

*Three-leaved* Bladder-nut. Fl. May, June. Clt. 1640. Sh. 6 to 8 feet.

2 *S. BUMA'LDA* (D. C. prod. 2. p. 2.) leaflets oblong, acu-

minate, rather scabrous; serratures awned, protruding from the recesses of the crenæ; styles villous; capsule with 2 beaks. *h. G.* Native of Japan, on the mountains. *Bumalda trifolia*, Thunb. fl. Jap. p. 8. Flowers white.

*Bumalda's* or Japan Bladder-nut. Fl. June, Aug. Clt. 1812. Shrub 6 feet.

• • *Leaves impari-pinnate.*

3 *S. HETEROPHYLLA* (Ruiz et Pav. fl. per. 3. p. 29. t. 253. f. A.) petioles biglandular; leaflets 3-5 or 7, oblong-lanceolate, quite smooth, with callous serratures; flowers disposed in racemose panicles; capsules coriaceous, not bladdery. *h. S.* Native of Peru, in groves. Flowers white.

*Variable-leaved Bladder-nut.* Shrub 12 feet.

4 *S. PINNATA* (Lin. spec. 386.) petioles without glands; leaflets 5 to 7, oblong-lanceolate, quite smooth, serrated; flowers racemose; styles 2; capsules membranous, bladdery. *h. H.* Native of Europe, in hedges and thickets. In England, about Pontefract and other parts of Yorkshire; about Ashford, Kent. Smith, engl. bot. t. 1560. *Staphylodendron pinnatum*, Ray. syn. 468. Duh. arb. 2. t. 77. A smooth branching shrub with foliage resembling some kind of ash. Flowers white or of a pale greenish-yellow, bell-shaped, pendulous, inodorous. Haller says children eat the kernels, but according to Gerarde their first sweetness is succeeded by a nauseous taste, and an emetic effect. The nuts being hard and smooth, are strung for beads by the Roman Catholics in some countries. Singularity rather than beauty procures this plant a place in gardens.

*Pinnate-leaved or Common Bladder-nut.* Fl. June. Britain. Shrub 4 to 12 feet.

*Cult.* These shrubs possess very little beauty, but answer very well to mix with other shrubs for variety. They will grow in any common soil, and are easily increased by taking the suckers from the roots, by layers, or by cuttings put in the ground in September. The *S. heterophylla* and *S. Bumalda* will require protection during frost.

II. *TURPINIA* (in honour of M. Turpin, a distinguished French botanical artist and naturalist, author of several articles in the Annales du Musée d'Histoire Naturelle). Vent. choix. 1803. p. 31. t. 31. but not of Humb. nor Pers. nor Rafin. D. C. prod. 2. p. 3. *Dalrymplea*, Roxb. cor. 3. p. 276.

LIN. SYST. *Polygamia*, *Diœcia*, or *Diœcia*, *Pentandria*. Flowers polygamous or dioecious. Calyx 5-parted, permanent, with coloured edges. Petals 5, inserted in the disk, alternating with the sepals. Stamens 5, inserted in a 10-crenate disk, alternating with the petals. Ovary trigonal. Styles 3 joined in one, or distinct. Berry trigonal, 3-celled; cells 2-3-seeded.—Trees with the habit of *Staphylea*, with smooth, opposite, impari-pinnate leaves, and stalked, ovate, acuminate, serrated leaflets. Flowers white, disposed in panicles.

1 *T. PANICULATA* (Vent. choix. 1803. p. and t. 31.) upper branches of panicle alternate. *h. S.* Native of St. Domingo on the mountains, as well as of Mexico. *Dalrymplea Dominicensis*, Spreng. syst. 1. p. 771. Flowers loosely paniced. Leaflets 7, 2 inches long, edged with glandular serratures. Fruit blue, 3-furrowed, very bluntly 3-lobed.

FIG. 1.

*Panicle-flowered Turpinia.* Tree 25 feet.

2 *T. CORYMBOSA*; flowers paniced, corymbose; leaflets 5-7, oval, acuminate, bluntly sinuate-crenate, quite smooth; styles distinct. *h. S.* Native of Jamaica. *Staphylea corymbosa*, D. C. prod. 2. p. 3. Leaflets opposite.

*Corymbose-flowered Turpinia.* Tree 30 feet.

3 *T. OCCIDENTALIS*; flowers paniced; leaves doubly pinnate; leaflets ovate, acuminate, serrated, smooth; styles distinct. *h. S.* Native of Jamaica, on the mountains. Fruit about the size of a cherry. Leaflets alternate. Stipulas in pairs between the pinnæ. *Staphylea occidentalis*, Swartz, fl. ind. occ. 1. p. 566. exclusive of the synonyms. Flowers white.

*Western Turpinia.* Clt. 1824. Tree 30 feet.

4 *T. POMIFERA* (D. C. prod. 2. p. 3.) branches of panicle all opposite; leaves ternate or pinnate, bluntly serrated. *h. S.* Native of the East Indies, in Silhet and probably in Nipaul. Its vernacular name in Silhet is *Junki-jam*. *Dalrymplea pomifera*, Roxb. cor. 3. p. 276. t. 279. Panicle spreading. Leaflets 3-7, opposite, 5-6 inches long. Fruit yellow when ripe, roundish, 3-lobed, almost smooth, size of a large medlar, very fleshy. Flowers yellowish-white.

*Pome-bearing Turpinia.* Fl. May. Clt. 1820. Tree 20 feet.

*Cult.* These trees possess very little beauty, they are therefore hardly worth cultivating, unless in general collections. They will thrive well in a mixture of loam and peat, and cuttings will strike root in a pot of sand under a hand-glass, in heat.

TREE II.

EUONYMEÆ (plants agreeing with *Euonymus* in important characters). D. C. prod. 1. p. 3. Seeds arillate, not truncate at the hilum. Embryo erect in the axis of a fleshy albumen. Cotyledons leafy.—Shrubs and trees with simple leaves.

III. *EUONYMUS* (from *eue*, *eus*, good, and *onoma*, *onoma*, a name, well-named; by antiphrasis fetid). Tourn. inst. t. 388. Lin. gen. 271. D. C. prod. 2. p. 3. Roxb. fl. ind. 2. p. 102.

LIN. SYST. *Tetra-Heandria*, *Monogynia*. Calyx 4 (f. 2. a.) or 5-lobed, flat, covered by the peltate disk at the base. Petals 4 (f. 2. b.) -6, spreading, inserted in the disk. Stamens 4-6, inserted above the disk in rather prominent glands, alternating with the petals (f. 2. c.). Style 1. Capsule 3-5-celled, 3 5-angled, bearing a dissepiment in the middle of each valve. Seeds 1-4 in each cell, enwrapped in pulp or aril. Embryo green, straight, placed in the middle of a fleshy albumen.—Shrubs with tetragonal or terete branches, and ovate, usually opposite leaves, scarcely stipulaceous. Peduncles axillary. Shrubs. fetid in every part when bruised, and esteemed poisonous.

\* *Petals oblong, oval, or ovate.*

*European.*

1 *E. EUROPEUS* (Lin. spec. 286. var. *a*, exclusive of the synonym of Clus.) branches smooth; leaves ovate-lanceolate, finely serrated; peduncles usually 3-flowered; petals oblong, acute; lobes of capsule 5, blunt. *h. H.* Native of Europe in hedges and thickets. Plentiful in Britain. Smith, engl. bot. t. 362. Bull. herb. t. 135. *E. vulgaris*, Mill. diet. no. 1. Flowers small, greenish-white, fetid. Capsules of a fir rose-colour, 5-celled, 5-valved; cells 1-seeded. seeds orange-coloured. From its use for skewers it has the name of *Pickwood*, and is called by

FIG. 2.

*Gerard Prick-timber.* It is called also *Louse-berry*, *Dogwood*, and *Catteridge-tree*. In German it is named *Spindelbaum*; in Danish, *Beenved*; in Italian, *Fusaggéne*; in Spanish, *Bonetero*; *Bonete de Clerigo*; in Portuguese, *Barrete de Clerigo*; in Russian, *Mereskletiana kislianka*, *Swida*, *Sedlini Beresdren*. The wood is said to be used by musical instrument makers. For skewers and toothpicks the branches should be cut when the shrub is in blossom, for it is tough and not easily broken in that state; it is also used by watchmakers for cleaning watches: it was formerly used to make spindles, hence the English name of the genus. According to Linnæus, kine, goats, and sheep eat the leaves, but horses refuse it. No animal, however, seems to browse upon it but the goat. The berries are said to be fatal to sheep; they are violently emetic and purgative; powdered and sprinkled upon the hair they destroy lice. The shrub seldom attains any great size when growing wild in the hedges, but when planted singly and properly trained it will have a strong woody stem, and rise more than twenty feet high, dividing into many branches, and when in fruit it has a fine appearance, the capsules being red and the seeds yellow. First flowers pentandrous, but the others are tetrandrous.

*Var. β, leucocarpus* (D. C. prod. 2. p. 4.) capsules white or pale, as well as the seeds.

*European or Common Spindle-tree.* Fl. May. Britain. Shrub 6 to 20 feet.

2 *E. verrucosus* (Scop. carn. ed. 2. no. 268.) branches warted; leaves ovate, somewhat serrated; peduncles 3-flowered; petals ovate; capsule bluntly tetragonal. *h. II.* Native of Europe, particularly in Austria, Hungary, and Carniola. Jacq. fl. austr. t. 49. Duh. ed. nov. 3. t. 8. Schmidt. arb. t. 72. *E. Europæus leprosus*, Lin. fil. suppl. 154. Petals covered with a pile consisting of very small teats. Capsules 3-4-celled, 3-4-valved; cells 1-seeded. Stigma bladder-like. Flowers small, greenish-white or greenish-yellow, tetrandrous and pentandrous.

*Warted-branched Spindle-tree.* Fl. May, June. Clt. 1763. Shrub 6 to 8 feet.

3 *E. latifolius* (C. Bauh. pin. 428.) branches smooth; leaves broad-ovate, toothletted; peduncles trichotomous, many-flowered; petals oval, obtuse; lobes of capsule acutely angled, wing-formed. *h. H.* Native of Europe, in groves from Dauphiny to Tauria. Jacq. austr. t. 289. Sims, bot. mag. 2384. Jacq. hort. vind. 2. t. 120. Duh. arb. ed. nov. 3. t. 7. *E. Europæus β*, Lin. spec. 286. Flowers usually pentandrous, white at first, but becoming purplish as they fade. Capsules red?

*Broad-leaved Spindle-tree.* Fl. June, July. Clt. 1730. Shrub 10 to 20 feet.

4 *E. naus* (Bieb. fl. taur. suppl. p. 160.) branches smooth, somewhat herbaceous; leaves lanceolate, quite entire, nearly opposite; peduncles 1-3-flowered; flowers tetrandrous, 4-petalled. *h. II.* Native of the north of Caucasus. A little shrub, with the appearance of *Cnèdum tricoccum*. The fruit being unknown the genus is doubtful. Flowers whitish?

*Dwarf Spindle-tree.* Clt. 1825. Shrub 2 feet.

#### Asiatic.

5 *E. Hamiltonianus* (Wall. in fl. ind. 2. p. 403.) branches smooth, terete; leaves lanceolate, finely serrated; peduncles dichotomous, 6-flowered; flowers tetrandrous; petals 4, lanceolate, cordate; ovary 4-lobed, 4-celled, each cell containing 2 ova. *h. II.* Native of Nipaul. *E. atropurpurea*, Wall. in fl. ind. 2. p. 402. Trunk erect; branchlets spreading. Petals with revolute edges, white. Anthers brown.

*Hamilton's Spindle-tree.* Fl. April, May. Clt. 1825. Sh. 5 to 20 feet.

6 *E. glabrus* (Roxb. fl. ind. 2. p. 403.) arboreous; leaves oblong, smooth, with the anterior margin serrated; peduncles

2 or 3 times dichotomous, with a single flower in each fork; flowers pentandrous. *h. F.* Native of Chittagong, in the East Indies, where it flowers in May. Flowers greenish-white.

*Smooth Spindle-tree.* Tree 15 feet.

7 *E. garcinifolius* (Roxb. in fl. ind. 2. p. 403.) branchlets smooth, terete; leaves lanceolate, entire; petals oblong, with incurved edges, much longer than the calyx; peduncles between the leaves, sometimes solitary, 3-flowered; flowers pentandrous. *h. F.* Native of Silhet, in the East Indies, where it is called *Mori*, and at Suemba in Upper Nipaul. *E. lacerus*, Hamilt. in D. Don, prod. fl. nep. p. 191? Flowers small, pale-yellow. Capsule oblong, size of a small field-bean, 1-celled, 2-valved, opening from the base, containing a solitary, oval seed, covered with a thin, succulent, veined, bright scarlet aril.

*Garcinia-leaved Spindle-tree.* Fl. May. Clt. 1820. Tree 12 feet.

8 *E. tingens* (Wall. in fl. ind. vol. 2. p. 406.) branchlets obscurely tetragonal, smooth; leaves leathery, ovate-lanceolate, serrulated, wrinkled above; lobes of calyx permanent; peduncles 2 or 3 times dichotomous, short, flattened, disposed in numerous approximate pairs on the young shoots, with opposite, linear, fringed bractæas at each subdivision; petals veined, ovate, with short claws; capsule 5-cornered. *h. F.* Native of the East Indies, on the summit of Sheopore, as well as on the Sewalik mountains, and on those of Shreenugur. Its Newar name is *Kasoori*. Trunk as thick as a man's thigh, spotted with large, ochre-coloured tubercles; branchlets short, thick. Both the flower and leaf-buds consist of imbricated, lanceolate, fringed scales, and here and there interspersed among the peduncles. Flowers large, tetrandrous, or pentandrous, yellowish-green, marked with purplish veins. The yellow bark is employed by the Nipaulese for the purpose of marking the forehead with the idolatrous symbol, commonly called *Tika*. The wood is white and compact. Capsule about the size of a gooseberry, 4-5-cornered, 5-seeded.

*Painting Spindle-tree.* Fl. April, May. Tree 16 to 20 feet.

9 *E. finlaysonianus* (Wall. in fl. ind. 2. p. 408.) branches terete, smooth; leaves ovate, finely acuminate, fringed with long parallel toothed serratures; flowers tetrandrous, subumbellate, on long filiform peduncles; capsules with from 2-5 long, vertical tapering wings. *h. F.* Native of the East Indies, on the Sewalik mountains, as well as on those of Shreenugur. It is impossible to confound this with any other species, the leaves being distinctly doubly-serrated.

*Fringed-leaved Spindle-tree.* Tree.

10 *E. grossus* (Wall. in fl. ind. 2. p. 408.) branches dotted; leaves subopposite, ovate, acute, bluntly and coarsely serrated on longish footstalks; peduncles twice dichotomous, with long, divaricating divisions, supported by a pair of lanceolate, acute bractæas; petals oblong. *h. F.* Native of Nipaul, on the northward of Sheopore, flowering in June. Leaves shining, rounded at the base, elegantly reticulated beneath.

*Coarse-serrated Spindle-tree.* Clt. 1824. Tree 12 feet.

11 *E. indicus* (Heyne, herb. Wall. in fl. ind. 2. p. 409.) branches terete, smooth; leaves lanceolate or ovate-lanceolate, acuminate, quite entire; peduncles 1-3-flowered; petals oval, fringed; flowers pentandrous; capsule clavate, furnished with 5 short projecting wings. *h. F.* Native of the East Indies. Branchlets slender, slightly quadrangular. Leaves acute at the base.

*Indian Spindle-tree.* Shrub 8 feet.

12 *E. dichotomus* (Heyne, herb. Wall. in fl. ind. 2. p. 410.) branchlets slightly quadrangular; leaves linear-lanceolate, acuminate at both ends, perfectly entire; peduncles fascicled, filiform, one-third shorter than the leaves, 2 or 3 times dichotomous at the apex, bearing a number of small pentandrous

flowers; petals oval, fringed; capsules lengthened, clavate, 5-lobed, retuse.  $\frac{1}{2}$ . S. Native of the East Indies. Branches smooth, slender, opposite, or dichotomous.

*Forked-branched Spindle-tree.* Shrub.

13 *E. MICRANTHUS* (D. Don, prod. fl. nep. p. 191.) leaves elliptical, serrulated, smooth, acuminate, shining; peduncles trifid, many-flowered, one-half shorter than the leaves.  $\frac{1}{2}$ . F. Native of Nipaul. *E. frigida*, Wall.? Petals oval.

*Small-flowered Spindle-tree.* Clt. 1820. Shrub 8 feet.

14 *E. LUCIDUS* (D. Don, prod. fl. nep. p. 191.) leaves lanceolate, acuminate, sharply serrated, shining, acute at the base; umbels lateral, opposite, pedunculate.  $\frac{1}{2}$ . F. Native of Nipaul. Petals ovate or oval?

*Shining-leaved Spindle-tree.* Clt. 1820. Shrub 6 feet.

\* \* *Petals orbicular.*

*American.*

15 *E. ATROPURPUREUS* (Jacq. hort. vind. 2. t. 120.) branches smooth; leaves oblong-lanceolate, acuminate, serrated, stalked; peduncles many-flowered, compressed; petals orbicular; capsules angularly-furrowed, smooth.  $\frac{1}{2}$ . H. Native of North America, from New York to Carolina, on the banks of rivulets, Schmidt. arb. 73. *E. Caroliniensis*, Marsh. arbr. amer. no. 1. and probably latifolius, Marsh. arb. no. 2. Flowers quadrifid, tetrandrous, dark-purple. Fruit red.

*Dark-purple-flowered Spindle-tree.* Fl. June, July. Clt. 1756. Shrub 6 to 10 feet.

16 *E. AMERICANUS* (Lin. spec. 286.) branches smooth, quadrangular; leaves elliptic-lanceolate, acute, serrated, almost sessile; peduncles 1-3-flowered; flowers pentandrous; petals nearly orbicular; capsules warted and ciliated.  $\frac{1}{2}$ . H. Native of North America from New England to Carolina, in hedges and shady woods, among rocks, and on the edges of swamps. Duham. arb. ed. nov. 3. t. 9.—Pluk. alm. t. 115. f. 5. Schmidt. arb. t. 75. Flowers yellow, tinged with red. Fruit scarlet, resembling those of *Arbutus Uva-ursi* at first sight. They are a great ornament to this almost evergreen shrub. Its common name in America is *Burning-bush* on account of the colour of the fruit. *E. sempervirens*, Marsh. arbr. amer. no. 3. *E. alternifolius*, Mönch.

*American Burning-bush.* Fl. June, July. Clt. 1686. Shrub 6 feet.

17 *E. SARMENTOSUS* (Nutt. gen. amer. 1. p. 155.) branches smooth, tetragonal, sarmentose, usually rooting; leaves lanceolate, serrated, almost sessile; peduncles 1-3-flowered; flowers pentandrous; petals somewhat orbicular; capsules muricated.  $\frac{1}{2}$ . H. Native of North America, in Virginia and Carolina, in shady woods. *E. scandens*, Hort. Flowers yellow, tinged with red? Fruit scarlet?

*Sarmentose Spindle-tree.* Fl. June, July. Clt. 1824. Shrub straggling.

18 *E. ANGUSTIFOLIUS* (Pursh. fl. amer. sept. 1. p. 168.) branches quadrangular, smooth; leaves elongated, linear-elliptical, somewhat falcate, nearly entire, almost sessile; peduncles for the most part 1-flowered; flowers pentandrous; capsules warted.  $\frac{1}{2}$ . H. Native of North America, in Georgia, in shady woods. Flowers yellow, tinged with red. Fruit scarlet. This species is nearly related to *E. Americanus*, and keeps its distinction from seed.

*Narrow-leaved Spindle-tree.* Fl. June, July. Clt. 1806. Shrub 6 feet.

19 *E. OBOVATUS* (Nutt. gen. amer. 1. p. 155.) stem prostrate, rooting; branches erect, bluntly quadrangular, with the bark inflated at the apex; leaves broad, obovate, obtuse, almost sessile, acutely-serrulated; peduncles 3-flowered; calyxes in-

flated.  $\frac{1}{2}$ . H. Native of Pennsylvania, in marshes between Franklin and Waterford. Fruit unknown. Anthers sessile.

*Obovate-leaved Spindle-tree.* Fl. June, July. Clt. 1820. Shrub creeping and straggling.

*Asiatic species.*

20 *E. GRANDIFLORUS* (Wall. in fl. ind. 2. p. 404.) branches terete, smooth; leaves obovate-oblong, obtuse, acutely-serrulate, with a tapering entire base; peduncles slender, flattened, nearly equalling the length of the leaves, 3-6-flowered; flowers tetrandrous; petals orbicular, flat with curled edges; capsule globular, pendulous, obscurely 4-cornered, with usually geminate, pendulous seeds.  $\frac{1}{2}$ . H. Native of the valley of Nipaul, in forests. Branches slightly 4-cornered. Flowers white, very large, inodorous, slightly nodding. Capsule nearly globular, about the size of a cherry, 4-celled, 4-valved. Seeds oval, black, half covered by a brilliant, red, minutely lobed, warted aril. This is a very ornamental shrub, both when in flower, and when loaded with its yellow pendulous capsules, each of which is furnished with as many as 6 black pendulous seeds.

*Great-flowered Spindle-tree.* Fl. April, May. Shrub 10 ft.

21 *E. JAPONICUS* (Thunb. jap. 100.) branchlets pendulous, slightly compressed; leaves oblong, sharply serrulated, acuminate; peduncles flattened, crowded and panicled on the recent shoots, 2 or 3 times dichotomous, bearing several flowers; petals orbicular, fringed, twice as long as the stamens; capsule with 4 horizontal spreading wings.  $\frac{1}{2}$ . G. Native of Nipaul, on Sheopore and Chundrugiri, as well as at Shreenugur and of Japan. Hüll. in Ust. del. op. 1. p. 84. t. 4. Banks, icon. Kämpf. t. 8. Flowers small, white, tetrandrous, rarely pentandrous. Outer branches hanging down in a very elegant manner.

*Japan Spindle-tree.* Fl. April, May. Clt. 1804. Tree 20 ft.

22 *E. ECHINATUS* (Wall. in fl. ind. 2. p. 410.) stems climbing, as well as rooting; leaves ovate-lanceolate, serrated; peduncles filiform, several times dichotomous, many-flowered, with one flower in each fork; petals orbicular, crenulate; capsules armed with numerous prickles.  $\frac{1}{2}$ . F. Native of the mountains of Nipaul, especially on Sheopore. Hook. bot. mag. 2767. Branches quadrangular at the apex, climbing over trees, and rooting by means of dense capillary fibres. Flowers small, pea-green, inodorous, tetrandrous. Capsules pendulous, globular, yellow, 4-celled, 1-seeded. Seeds black, almost covered with a scarlet fleshy aril. *E. scandens*, Graham.

*Echinated-capsuled Spindle-tree.* Fl. Ap. March. Clt. 1824. Shrub climbing.

23 *E. VAGANS* (Wall. in fl. ind. 2. p. 412.) climbing; branches quadrangular at the apex; leaves ovate-lanceolate, serrated; peduncles filiform, several times dichotomous, many-flowered, with a single flower in each bifurcation; petals orbicular, crenulate; capsules globular, naked, unarmed.  $\frac{1}{2}$ . F. Native of the mountainous forests of Nipaul, especially on Sheopore, and on Cheesapani. A most extensive, rambling, and climbing shrub, with stem, branches, and flowers exactly like those of *E. echinatus*, but never throwing out roots from the branches and stems. Capsule 4-celled, 4-seeded. Seeds large, covered with a scarlet fleshy aril.

*Rambling Spindle-tree.* Shrub cl.

24 *E. JAVANICUS* (Blum. bijdr. 1146.) leaves opposite, oblong, bluntish, smooth, remotely serrulated above; pedicels 1-flowered, in fascicles, axillary, and terminal; flowers pentandrous; petals fringed.  $\frac{1}{2}$ . S. Native of Java, in woods.

*Java Spindle-tree.* Shrub 8 feet.

25 *E. SIEBOLDIANUS* (Blum. bijdr. 1147.) leaves opposite, oblong-lanceolate, sharply serrulated, smooth, puberulous on the middle nerve beneath; peduncles usually 5-flowered; flowers

tetrandrous; capsule acutely tetragonal. *h. S.* Native of Java. The shape of the petals is unknown.

*Siebold's Spindle-tree.* Shrub 10 feet.

26 *E. SUBTRILOBUS* (Blum. bijdr. 1147.) spinose; leaves nearly opposite, oval-lanceolate, acuminate, sharply-serrulated, smooth; peduncles lateral, 3-flowered at the apex; flowers tetrandrous; capsule 4-lobed. *h. G.* Native of Japan.

*Somewhat-three-flowered Spindle-tree.* Shrub.

27 *E. THUNBERGIANUS* (Blum. bijdr. 1147.) leaves nearly opposite, elliptic-oblong, tapering to both ends, sharply-serrulated, smooth; peduncles axillary, 3-flowered; flowers tetrandrous; capsule 4-lobed. *h. G.* Native of Japan. *Celastrus alata*, Thunb. fl. jap. 98. Form of petals unknown.

*Thunberg's Spindle-tree.* Shrub.

† *A doubtful species, which probably should be excluded from the genus.*

28 *E. CHINENSIS* (Lour. fl. coch. ed. Willd. 1. p. 194.) stem herbaceous, climbing, with tendrils; leaves cordate, toothletted, rough; peduncles lateral; petals 5, oblong-ovate; berry free, ovate, 10-angled, 1-celled, valveless; seeds many, covered with aril. *h. G.* Native of China, in the suburbs of Canton. Flowers white, pentandrous.

*China Spindle-tree.* Fl. May, June. Clt. 1820. Pl. cl.

*Cult.* The hardy kinds of this genus are well adapted for large shrubberies. They will thrive in any common soil, and are easily increased by seeds, which ripen in abundance; or ripened cuttings, planted in autumn, will readily strike root. Those said to be frame and greenhouse plants will no doubt turn out to be truly hardy.

IV. CELASTRUS (from *κελας*, *celas*, the latter season; the fruit remains on the tree all winter. The *Celastrus* of the Greeks is supposed to be *Euonymus*). Lin. gen. 270. Gart. fruct. 2. t. 95. D. C. prod. 2. p. 5.—Catha, Forsk. descr. p. 63.—*Euonymoides*, Mench. meth. 70.

LIN. SYST. *Pentandria, Monogynia.* Calyx small, 5-lobed. Petals 5, unguiculate. Stamens 5. Ovary small, immersed in a 10-striped disk. Style 1. Stigmas 2-3. Capsule 2-3-valved, bearing a complete or incomplete dissepiment in the middle of each valve. Seed 1, or few, more or less involved in a large fleshy aril.—Shrubs with alternate leaves, and many-flowered axillary peduncles, sometimes approximating in terminal panicles. The carpology of many of the species being unknown, the species are arranged here in an artificial manner.

\* *Leaves quite entire.*

*African.*

1 *C. FILIFORMIS* (Thunb. fl. cap. 2. p. 115.) climbing, smooth; leaves lanceolate, opposite; branches filiform, flexuous; flowers axillary, few, almost sessile. *h. G.* Native of the Cape of Good Hope. Flowers white. Stigma capitate.

*Filiform-branched Staff-tree.* Shrub cl.

2 *C. CRISTATUS* (Thunb. fl. cap. 2. p. 115.) erect, much branched; leaves obovate, obtuse, wavy, smooth; branchlets pubescent; flowers axillary, umbellate, hairy. *h. G.* Native of the Cape of Good Hope. Flowers white.

*Curled-leaved Staff-tree.* Shrub 4 feet.

3 *C. OBTUSUS* (Thunb. fl. cap. 2. p. 116.) erect, smooth; leaves obovate, very blunt, with revolute edges; panicles axillary. *h. G.* Native of the Cape of Good Hope. Panicle simple or dichotomous. Flowers white.

*Obtuse-leaved Staff-tree.* Shrub 6 feet.

4 *C. LAURINUS* (Thunb. fl. cap. 2. p. 116.) erect, smooth; leaves ovate-oblong, blunt, somewhat emarginate, with the

edges a little revolute; panicles axillary. *h. G.* Native of the Cape of Good Hope. Style very short. Leaves 2 inches long. Flowers white.

*Laurel-like Staff-tree.* Fl. June, July. Clt. 1818. Shrub 2 ft.

5 *C. OLEOIDES* (Lam. ill. no. 2596.) erect, smooth; leaves ovate-lanceolate, acute, stalked; petiole short, stem-clasping at the base; corymbs axillary, few-flowered, subterminal, some of them opposite the leaves, and others axillary. *h. G.* Native of the Cape of Good Hope. *C. oleifolia*, Pers. ench. 1. p. 327. *C. oleoides*, Sieb. pl. ex sic. cap. no. 93. Flowers white.

*Olive-like Staff-tree.* Fl. May, June. Clt. 1824. Shrub 4 ft.

6 *C. PTEROCARPUS* (D. C. prod. 2. p. 5.) erect, smooth; leaves ovate, somewhat emarginate; racemes short, axillary; capsules 3-valved, drawn out into 3 vertical toothed wings. *h. G.* Native of the Cape of Good Hope.—Burm. afr. t. 97. f. 1. This and the two following species will probably form a distinct genus, on account of their appendiculate fruit. Flowers white.

*Wing-fruited Staff-tree.* Fl. July. Clt. 1824. Shrub 4 ft.

7 *C. ROSTRATUS* (Thunb. fl. cap. 2. p. 117.) erect, smooth; leaves oblong-ovate, unequal, bluntly acuminate; panicles or corymbs dichotomous, axillary; capsules prickly, with unarmed scales. *h. G.* Native of the Cape of Good Hope. Flowers white.

*Beaked-capsuled Staff-tree.* Shrub 6 feet.

8 *C. TRIENSPIDATUS* (Lam. ill. no. 2594.) erect, smooth; leaves oblong-ovate, obtuse, smooth, on short petioles; racemes axillary, simple, nearly the length of the leaves; fruit trigonal. *h. G.* Native of the Cape of Good Hope. Cassine lævigata, Lam. dict. 1. p. 652. *Olea Capensis*, Buchoz. dec. 6. t. 3. Flowers white.

*Three-pointed-fruited Staff-tree.* Fl. May, June. Clt. 1818. Shrub 6 feet.

9 *C. LUCIDUS* (Lin. mant. 49.) erect, smooth; leaves oval or roundish, shining, margined; pedicels axillary, crowded, very short; fruit 3-valved, naked. *h. G.* Native of the Cape of Good Hope. Liber. stirp. t. 25. Cassine concava, Lam. dict. 1. p. 633.—Pluk. alm. t. 280. f. 4. Flowers white.

*Shining-leaved Staff-tree.* Fl. April, Sept. Clt. 1722. Sh. 3 ft.

10 *C. MICROPHYLLUS* (Thunb. fl. cap. 2. p. 110.) erect, smooth; leaves ovate, blunt, approximate; panicle terminal, dichotomous. *h. G.* Native of the Cape of Good Hope. Flowers white.

*Small-leaved Staff-tree.* Shrub 2 feet.

11 *C. DIFFUSUS*; much branched, diffuse; leaves alternate, ovate, almost entire, obtuse, mucronate, glabrous; flowers axillary and terminal, sessile. *h. S.* Native of Guinea. Flowers yellowish-green.

*Diffuse Staff-tree.* Shrub 6 feet.

12 *C. ELLIPTICUS* (Thunb. fl. cap. 2. p. 119.) erect, smooth; leaves elliptical, opposite; panicles simple, axillary. *h. G.* Native of the Cape of Good Hope, in woods. Flowers white.

*Elliptical-leaved Staff-tree.* Shrub 4 feet.

*Asiatic.*

13 *C. TRIGYNUS* (Roxb. fl. ind. 2. p. 351.) erect, smooth; leaves oblong, on short petioles; flowers in small, axillary, dichotomous, round heads; nectary of 5 scales; styles 3. *h. S.* Native of the Moluccas. Flowers white?

*Three-styled Staff-tree.* Shrub.

14 *C. VERTICILLATUS* (Roxb. fl. ind. 2. p. 291.) arboreous, smooth; leaves scattered, broad-lanceolate, wavy; panicle terminal, umbelliferous; capsule 1-celled, 2-valved, few-seeded. *h. F.* Native of Nipaul, where it is known by the name of *Tibiliti*. Trunk straight; the branches and branchlets have a strong tendency to be verticillate, as well as the leaves, which

are drooping. Stigma 2, rarely 3-lobed. Flowers white? Seeds covered with a soft scarlet aril.

*Whorled*-branched Staff-tree. Fl. April, July. Clt.? Tree 20 feet.

15 *C. ROBUSTUS* (Roxb. fl. ind. 2. p. 395.) erect, smooth; leaves lanceolate, entire, glossy; racemes axillary, length of leaves; capsules 1-celled, 2-valved. *h. G.* Native of Silhet, in the East Indies, where it is called *Sheelkoil*. It grows to be one of their largest timber trees. Racemes simple, solitary, or in pairs. Flowers numerous, small, greenish-yellow. Disk 5-lobed, girding the base of the ovary. Styles 2, terminated by capitate stigmas.

*Robust* Staff-tree. Fl. Aug. Tree 50 feet.

16 *C. OPPOSITUS* (Wall. in fl. ind. 2. p. 398.) erect, smooth, with opposite jointed branches, younger ones tetragonal; leaves opposite, lanceolate, blunt; peduncles axillary, 3-flowered. *h. S.* Probably a native of the peninsula of India. Flowers small, white? Style columnar, terminated by a bifid stigma.

*Opposite*-branched Staff-tree. Shrub 6 feet.

17 *C. BIVALVIS* (Jack, in mal. misc. 1. no. 2. p. 19.) erect, smooth; leaves lanceolate, acuminate; peduncles lateral, few-flowered; capsules ovate, 2-valved, 1-seeded; corolla wanting. *h. S.* Native of the Malay Islands. Peduncles dichotomous, 5-10-flowered. Style terminated by a truncate stigma. Seeds covered with a crimson aril, which is beautifully veined.

*Two-valved*-capsuled Staff-tree. Shrub.

#### American.

18 *C. MACROCARPUS* (Ruiz et Pav. fl. per. 3. t. 230. f. 16.) erect, smooth; leaves oblong-lanceolate, with an emarginate acumens; pedicels axillary, very short, aggregate; capsules ovate, 2-3-valved. *h. S.* Native of Peru, in woods. *Haenkia multiflora*, Ruiz et Pav. fl. per. syst. p. 65. Seeds with a white pulpy aril. Flowers white. This is probably a species of *Pyrularia*, according to Nuttall.

*Large-fruited* Staff-tree. Shrub 6 feet.

19 *C. DUBIUS* (Spreng. syst. 1. p. 774.) erect, smooth; leaves elliptical, obtuse; flowers axillary, somewhat fascicled; capsules 2-valved. *h. S.* Native of the Antilles. *Senäica elliptica*, Lam.

*Doubtful* Staff-tree. Shrub 4 feet.

20 *C. BULLATUS* (Lin. spec. 285.) climbing, smooth; leaves ovate, acute, stalked, coriaceous; panicle terminal. *h. G.* Native of St. Domingo.—Pluk. alm. t. 28. f. 5. Capsules scarlet, elegantly wrinkled, 3-valved, each containing a hard oval seed, covered with a thin red aril. Flowers white, in loose terminal racemes. This species is said to be a native of Virginia, but notwithstanding the diligent researches of Mr. Pursh at the place of its supposed nativity, he has not been able to find it. He therefore strongly suspects that it is not a native of North America.

*Wrinkled*-capsuled Staff-tree. Fl. July. Clt. 1759. Shrub cl.

21 *C. HAENKEI* (Spreng. syst. app. p. 88.) branches flexuous; leaves stalked, oblong-lanceolate, wavy, quite entire; racemes axillary, much exceeding the leaves; flowers bracteate. *h. S.* Native of Peru. *Haenkea flexuosa*, Ruiz et Pav. fl. per. 3. t. 231. Corolla monopetalous; pitcher-shaped, and the fruit a drupe. This is a very doubtful species of *Celastus*.

*Haenk's* Staff-tree. • Shrub.

22 *C. OVALATUS* (Hill in hort. kew. 437. t. 16.) erect, smooth; leaves ovate, stalked, entire; flowers axillary, crowded. *h. H.* Native of the Bahama Islands.

*Ovate*-leaved Staff-tree. Shrub 4 feet.

• • • Leaves toothed, serrated or crenate.

#### African

23 *C. ACUMINATUS* (Thunb. fl. cap. 2. p. 119.) erect, smooth;

leaves elliptical, acute, crenated; flowers axillary, usually twin. *h. G.* Native of the Cape of Good Hope. *C. populifolius*, Lam. ill. no. 2698. according to Poir. suppl. 2. p. 144. Flowers white.

*Acuminate*-leaved Staff-tree. Shrub 6 feet.

24 *C. PROCUMBENS* (Thunb. fl. cap. 2. p. 119.) decumbent, smooth; leaves ovate, toothed; flowers axillary, usually solitary; capsules 3-4-valved. *h. G.* Native of the Cape of Good Hope, in sandy places.

*Procumbent* Staff-tree. Shrub decumbent.

25 *C. CYMATODES* (Spreng. syst. 1. p. 775.) leaves obovate, wavy-toothed, and reticulately veined, opposite; flowers axillary, sessile. *h. G.* Native of the Cape of Good Hope.

*Waved-toothed*-leaved Staff-tree. Shrub.

26 *C. CERNEUS* (Thunb. prod. p. 42.) leaves ovate, obtuse, serrated; peduncles axillary, 1-flowered, drooping. *h. G.* Native of the Cape of Good Hope. Flowers white?

*Drooping*-flowered Staff-tree. Fl. May, June. Clt. 1817. Shrub 6 feet.

27 *C. UNDATUS* (Thunb. fl. cap. 2. p. 126.) erect, smooth; leaves obovate, somewhat wedge-shaped, undulately-toothed; flowers axillary, sessile. *h. G.* Native of the Cape of Good Hope. Flowers white.

*Waved*-leaved Staff-tree. Fl. June, July. Clt. 1826. Sh. 6 ft.

28 *C. TETRAGONUS* (Thunb. prod. p. 42.) erect, smooth; leaves ovate, serrated, opposite; branches tetragonal; panicle terminal. *h. G.* Native of the Cape of Good Hope. Flowers white?

*Tetragonal*-branched Staff-tree. Clt. 1816. Shrub 4 feet.

29 *C. ILICINUS* (Burch. cat. afr. austr. no. 1663.) erect, smooth; leaves alternate, ovate, somewhat rhomboid, coarsely serrated, pale beneath; pedicels axillary, 1-flowered, jointed beneath the middle. *h. G.* Native of the Cape of Good Hope. Capsules 3-valved. Leaves like those of *Quercus ilex*. Flowers white.

*Spanish-oak*-leaved Staff-tree. Clt. 1817. Shrub 4 feet.

30 *C. RHAMNOIDES* (Poir. suppl. 2. p. 145.) branches diffuse; leaves ovate or lanceolate, acute, sharply serrated, smooth; pedicels 1-flowered, axillary, crowded, unequal. *h. G.* Native of the Cape of Good Hope. Flowers white. It is not known whether this shrub is unarmed or spiny.

*Rhamnus*-like Staff-tree. Shrub 10 feet.

31 *C. CASSINOIDES* (Lher. sert. p. 6. t. 10.) erect, smooth; leaves ovate, acute at both ends, serrated, permanent; pedicels 2-3 together, axillary, very short. *h. G.* Native of the Canary Islands. Flowers white.

*Cassine*-like Staff-tree. Fl. Aug. Sept. Clt. 1779. Shrub 4 ft.

32 *C. LYCIOIDES* (Brouss. ex Willd. mss. in Schult. syst. 5. p. 427.) erect, smooth; leaves roundish-ovate, obtuse, crenate, coriaceous; pedicels axillary, very short. *h. G.* Native of the Canary Islands. Flowers white.

*Lycium*-like Staff-tree. Shrub 4 feet.

33 *C. EDULIS* (Vahl. symb. 1. p. 21.) erect, smooth; leaves opposite and alternate, elliptical, bluntly serrated; cymes axillary, dichotomous. *h. G.* Native of Yemen, in Arabia, where it is cultivated in gardens along with the coffee. The green leaves of this tree are eaten with avidity by the Arabs. They possess nearly the same qualities as opium. The tree is called *cat* or *kat* in Arabic; hence *Catha* of Forsk. Flowers white. Capsule oblong-cylindrical, 3-celled, with one seed in each cell.

*Eatable* Staff-tree. Shrub 10 feet.

34 *C. DECOLOR* (Gaillard. voy. meroe. 2. t. 64. f. 6.) leaves oval-oblong, somewhat crenate, tapering to the base; peduncles axillary, 3-6-flowered; flowers subumbellate; capsules 2-valved. *h. F.* Native of Upper Egypt?

*Ill-coloured* Staff-tree. Shrub.

35 *C. POPULIFOLIUS* (Lam. ill. no. 2698.) leaves ovate, acuminate, serrated; umbels almost sessile, few-flowered. *h. G.* Native of the Cape of Good Hope.

*Poplar-leaved Staff-tree.* Shrub 6 feet.

### Asiatic.

36 *C. PANICULATUS* (Willd. spec. 1. p. 1125.) climbing; leaves roundish-oval, serrated, smoothish; panicle terminal; stamens inserted in a nectarial ring. *h. S.* Native of the East Indies, on the Circar mountains.—A large climbing shrub; the bark covered with grey scabrous specks. Flowers numerous, small, yellow. Style 1. Stigmas 3. Capsule round, size of a pea, 1-celled, 3-valved, containing from 3 to 6 seeds, surrounded by yellow aril.

*Panicle-flowered Staff-tree.* Fl. March, April. Shrub cl.

37 *C. DEPENDENS* (Wall. in fl. ind. 2. p. 389.) climbing, smooth; leaves oblong, acuminate, serrated; panicle terminal, composed of many simple, diverging, short racemes; stamens alternating, with an equal number of reniform nectarial glands. *h. S. G.* Native of Nipaul. *C. multiflora*, Roxb. fl. ind. 2. p. 389. Flowers numerous, small, pale greenish-white. Capsule straw-coloured, roundish, somewhat 3-lobed, 3-valved, 3-celled, and usually with a single seed in each cell. Seeds covered with a thin, pulpy, scarlet aril. Style terminated by a stigma of 3 emarginate lobes.

*Hanging-leaved Staff-tree.* Fl. July. Shrub cl.

38 *C. NUTANS* (Roxb. fl. ind. 2. p. 390.) climbing, smooth; leaves stalked, broad-ovate, bluntly serrated; panicle racemose, terminal, drooping; seeds invested by a complete aril. *h. S.* Native of Mysore. A large climbing and twining tree, with light-brown scabrous bark. Nectary a concave, 5-sided receptacle. Flowers small, greenish-white. Capsule round, size of a pea, 1-celled, 3-valved, containing 3-6 seeds each, invested by a thick, complete, fleshy, orange-coloured aril. Style scarcely any. Stigma with 3 spreading notched lobes.

*Nodding-panicked Staff-tree.* Clt. 1810. Shrub cl.

39 *C. OBTUSIFOLIUS* (Roxb. fl. ind. 2. p. 393.) arboreous, smooth; leaves stalked, lanceolate, bluntly serrated, very blunt and hard; peduncles axillary, many-flowered. *h. S.* Native of the Mauritius. *C. trigynus*, Lam. ill. 2. no. 2699. Style none. Stigma deeply 3-lobed. Capsules 3-valved, naked. *Sonneratia*, Comm. *C. pyrius*, Willem. herb. maur. p. 21. Young shoots glaucous, nodding at the points. Peduncles once or twice dichotomous. Flowers small, white. Calyx fringed. Stigma obscurely 3-lobed.

*Blunt-leaved Staff-tree.* Fl. May, June. Clt. 1824. Tree 20 feet.

40 *C. MONOSPERMUS* (Roxb. fl. ind. 2. p. 394.) climbing, smooth; leaves oblong, glossy, serrated; panicles thin, linear, axillary, and terminal, longer than the leaves; capsules 3-valved, 1-seeded. *h. S. G.* Native of Silhet, in the East Indies, where it is called *Tiara*. Climbing and twining over trees to a considerable extent. Flowers numerous, small, pale greenish-yellow. Disk flat, repand, embracing the base of the ovary. Stigma trigonal. Capsule slightly triquetrous, oblong, smooth, the size of a field bean. Seed solitary, covered with an orange-coloured or scarlet aril.

*One-seeded Staff-tree.* Fl. April, May. Shrub cl.

41 *C. WALLICHII*; climbing, smooth; leaves ovate, coriaceous, acute, serrated, glossy, and shining; racemes axillary; capsules triquetrous, 3-valved, many-seeded. *h. S.* Native of Penang, in the East Indies. *C. lucida*, Wall. in fl. ind. 2. p. 400, but not of Lin.

*Wallich's Staff-tree.* Shrub cl.

42 *C. PAUCIFLORUS* (Wall. in fl. ind. 2. p. 400.) erect, smooth;

leaves lanceolate, acuminate, serrated; peduncles axillary, 6-8-flowered; pistil villous; nectary 5-lobed; capsule triangularly globose, 3-valved. *h. S.* Native of Penang, in the East Indies, where it is called *Boonga Lawung*. *Pittospora serrulata*, Jacq. mss. Flowers yellowish-green, fascicled. Ovary downy. Stigma simple. Capsule 1-celled. Seeds attached along the middle of each valve to parietal prominent placentas, 6 in number, roundish, and angular.

*Few-flowered Staff-tree.* Shrub 6 feet.

43 *C. STYLOSUS* (Wall. fl. ind. 2. p. 401.) climbing, smooth; leaves ovate-lanceolate, acuminate, acutely serrated; peduncles axillary, few-flowered, racemose; petals oblong; capsules globular, crowned by a long style. *h. S. G.* Native of Nipaul. Flowers greenish-white. Capsule yellow. Style crowned by a 3-lobed, 3-furrowed stigma.

*Long-styled Staff-tree.* Fl. May, July. Shrub cl.

44 *C. ALNIFOLIUS* (D. Don, prod. fl. nep. p. 190.) leaves elliptical, acuminate, serrated, nerved, opaque on both surfaces, blunt at the base; peduncles axillary, usually solitary. *h. G.* Native of Nipaul, at Sirinagur. A smooth shrub.

*Alder-leaved Staff-tree.* Shrub.

45 *C. MICROCARPUS* (D. Don, prod. fl. nep. p. 191.) leaves ovate, crenated, pubescent on both surfaces, as well as the branchlets, acute at the base; peduncles axillary, usually solitary, 1-flowered. *h. G.* Native of Nipaul, at Sirinagur.

*Small-fruited Staff-tree.* Shrub.

46 *C. HEYNEANUS* (Roth. in Schult. syst. 5. p. 421.) erect, smooth; leaves elliptical, bluntly serrated; cymes axillary, when in fruit divaricating. *h. S.* Native of the East Indies. *C. serrulatus*, Roth. nov. spec. p. 155. Flowers whitish.

*Heyne's Staff-tree.* Shrub.

47 *C. ALPESTRIS* (Blum. bijdr. 1145.) leaves ovate-oblong, acuminate, glandularly serrated, smooth; corymbs axillary, dichotomous. *h. S.* Native of Java, in the higher woods.

*Alp Staff-tree.* Shrub 7 feet.

48 *C. REPANDUS* (Blum. bijdr. p. 1145.) leaves ovate-oblong, long-acuminate, rather repand, smooth; panicle axillary, about equal in length to the leaves. *h. S.* Native of Java.

*Repand Staff-tree.* Shrub.

49 *C. ROTHIANUS* (Schult. syst. 5. p. 423.) leaves roundish-oval, acuminate, serrated, pubescent; panicle terminal, with corymbose branches. *h. S.* Native of the East Indies. *C. paniculatus*, Roth. mss. but not of Willd. Flowers white.

*Roth's Staff-tree.* Shrub.

50 *C. PUNCTATUS* (Thunb. fl. jap. 97.) climbing, smooth; branches dotted; leaves oval, acuminate, serrated; flowers scattered on the branches. *h. S. G.* Native of Japan and China. Branches angular, rough from white dots. Flowers greenish. Seeds covered with a yellow wrinkled aril.

*Spotted-branched Staff-tree.* Clt. 1817. Shrub cl.

51 *C. STRIATUS* (Thunb. jap. 98.) erect, smooth; branches striped, and arc as well as the leaves, opposite, ovate, acuminate, serrated; peduncles scattered, 1-flowered. *h. G.* Native of Japan. Capsule 1-4-celled, or from 1-4 aggregate carpels.

*Striped-branched Staff-tree.* Shrub.

52 *C. CRENATUS* (Forst. prod. no. 113.) leaves ovate, crenulate; cymes axillary. *h. G.* Native of Marquesas Islands in the Pacific ocean, as well as in the East Indies, according to Roth, which is probably the same.

*Notch-leaved Staff-tree.* Shrub.

53 *C. DILATUS* (Thunb. in Lin. trans. 2. p. 332.) erect, smooth; leaves obovate, pointed, serrated at the apex; flowers aggregate, terminal. *h. G.* Native of Japan. Berries blue, aggregate.

*Dilated-leaved Staff-tree.* Shrub.

54 *C. ARTICULATUS* (Thunb. jap. 97.) erect, smooth; leaves

roundish, serrated, acuminate; peduncles axillary, somewhat trifid. *h. G.* Native of Japan. *C. orbicularis*, Lam. *ill.* no. 2700. *C. auriculatus*, Vilm. summ. 2. p. 37. Capsules 3-valved.

*Jointed Staff-tree.* Shrub.

55 *C. ALATUS* (Thunb. jap. 98.) erect, smooth; branches winged; leaves opposite, on very short petioles, acuminate, serrated; peduncles 1-flowered, furnished with 2 glands above the middle. *h. G.* Native of Japan. Capsules 1-2-3-celled. This is probably a species of *Euonymus*.

*Winged-branched Staff-tree.* Shrub 7 feet.

*American.* \* \*

56 *C. SCANDENS* (Lin. spec. 285.) climbing, smooth; leaves oval, acuminate, serrated; racemes terminal. *h. S. H.* Native of North America, from Canada to Virginia, in hedges and woods among rocks. Duh. arb. 1. t. 95. Schkuhr. handb. 1. t. 47. Flowers pale yellow. Berries orange-scarlet, 3-cornered, 3-seeded. See *H. B. et Kunth*, nov. gen. amer. 7. p. 64. Flowers dioecious.

*Climbing Staff-tree.* Fl. May, June. Clt. 1736. Shrub cl.

57 *C. MYRTIFOLIUS* (Lin. spec. 285.) erect, smooth; leaves ovate, serrated; flowers racemose. *h. S.* Native of Jamaica.—Sloane, hist. 2. t. 193. f. 1. There is a species from Siberia very like this plant, and another said to be from Virginia; but these are truly obscure plants.

*Myrtle-leaved Staff-tree.* Clt. 1810. Tree 15 feet.

58 *C. QUADRANGULARIS* (Schrad. in Gœtt. anz. 1821. p. 716.) erect, smooth; younger branches quadrangular; leaves oblong-oval, spiny-toothed, shining; peduncles axillary, crowded. *h. S.* Native of Brazil. *Ilex acutangula*, Neuw. bras. ex Nees, in flora, 1821. p. 739. Flowers white.

*Quadrangular-branched Staff-tree.* Clt. 1820. Sh. 10 feet.

59 *C. ILICIFOLIUS* (Schrad. l. c.) erect, smooth; leaves oblong, truncate, subsinuate, spiny, shining above, opaque beneath; peduncles axillary. *h. S.* Native of Brazil. *Ilex truncata*, Neuw. bras. 2. ex Nees, in flora, 1821. p. 329 and 361.

*Holly-leaved Staff-tree.* Shrub.

60 *C. RETUSUS* (Poir. suppl. 2. p. 146.) erect, smooth; leaves ovate and oval, acuminate, emarginate, or retuse at the apex, serrately-crenate. *h. G.* Native of the Andes of Peru. *C. emarginatus*, Ruiz et Pav. fl. per. 3. p. 6. t. 229. f. a. but not of Willd. *C. Peruvianus*, Destr. lex. 2. p. 111. This is probably a species of *Maytenus* according to Kunth.

*Retuse-leaved Staff-tree.* Clt. 1824. Tree 20 feet.

61 *C. CONFERTUS* (Ruiz et Pav. fl. per. 3. p. 6.) erect, smooth; branches in aggregate whorles; leaves crowded, oval, and roundish, serrated; flowers crowded. *h. S.* Native of Peru in groves. Flowers white. Capsules with 2 or 3 spreading reflexed valves. Probably a species of *Maytenus*.

*Crowded Staff-tree.* Shrub.

62 *C. MEXICANUS* (Moc. et Sesse, fl. mex. icon. ined. D. C. prod. 2. p. 8.) erect, smooth; leaves ovate-oblong, acute, serrated; pedicels axillary, trifid, 3-flowered. *h. G.* Native of Mexico. Capsule 3-celled, 3-seeded.

*Mexican Staff-tree.* Clt. 1824. Shrub 6 feet.

63 *C. MAGELLANICUS* (D. C. prod. 2. p. 8.) leaves ovate-lanceolate, acute, bluntly serrated; flowers axillary, almost sessile; fruit compressed, 2-celled, 2-seeded. *h. F.* Native of the Straits of Magellan. Cassine Magellanica, Lam. ill. no. 2590.

*Magellan Staff-tree.* Shrub.

† *Doubtful species. Leaves ternate or pinnate. These will probably form a distinct genus in some other order.*

64 *C. MAURITIANUS* (Willem. herb. maur. 22.) leaves ternate, downy beneath; panicle terminal. *h. S.* Native of the Mauritius.

*Mauritian Staff-tree.* Shrub.

65 *C. MICRANTHUS* (Roxb. fl. ind. 2. p. 393.) climbing, somewhat armed; leaves unequally pinnate, with from 7-9 opposite, oblong, entire, smooth leaflets; panicles axillary, filiform, rusty; disk saucer-shaped, bearing the stamina on its margin; style wanting. *h. S.* Native of the Moluccas.

*Small-flowered Staff-tree.* Shrub.

*Cult.* The hardy kinds of *Staff-tree* will grow in any common soil; they are well fitted to be planted in small shrubberies. *C. scandens* is a plant well adapted to cover bowers of trellis-work. All are easily increased by laying the young shoots, or by slips of the roots. The stove, greenhouse, and frame species will thrive well in a mixture of loam, peat, and sand; and ripened cuttings, planted in mould with a hand-glass placed over them, will root freely, those of the stove kinds in heat.

V. CATHA (a name of Arabian origin). Forsk. descr. p. 63.

LIN. SYST. *Pentandria, Monogynia*. Calyx small, flat, 5-lobed, regular. Petals 5, inserted under the margin of the disk, sessile, spreading. Stamens 5, inserted with the petals, equal. Disk large, orbicular, filling the bottom of the flower, emarginate at the origin of the stamens. Ovary half immersed in the disk, 3-celled; ovula 2, fixed to the central axis, collateral, ascending, in *C. pyracantha* 5-6, and without an axis. Style short, or nearly wanting, crowned by a 3-parted stigma. Capsules triquetrous, 3-furrowed, 3-celled, 3-valved. Albumen fleshy. Cotyledons leafy. Radicle pointing towards the hilum. Spiny trees and shrubs, with scattered, simple, leaves, sometimes in fascicles, with stipular ciliae. Corymbs of flowers axillary, somewhat dichotomous. Flowers stalked in fascicles, white.

\* This genus being separated from *Celastrus*, we shall therefore retain the authorities for the species under that genus.

\* *Leaves quite entire.*

1 *C. ENCISA* (Thunb. fl. cap. p. 219.) prickles recurved; leaves orbicular, cut; peduncles axillary, very short, subumbellate. *h. G.* Native of the Cape of Good Hope.

*Cut-leaved Staff-tree.* Shrub 4 feet.

2 *C. LINEARIS* (Thunb. fl. cap. 219.) spines leafy; leaves linear; panicles axillary. *h. G.* Native of the Cape of Good Hope, in woods.

*Linear-leaved Staff-tree.* Fl. May, Ju. Clt. 1818. Sh. 4 ft.

3 *C. INTEGRIFOLIA* (Thunb. fl. cap. 219.) spines leafy; leaves ovate, reflexed; pedicels axillary. *h. G.* Native of the Cape of Good Hope, in bushy places. Flowers white.

*Entire-leaved Staff-tree.* Shrub 3 to 4 feet.

4 *C. INTEGER* (Thunb. fl. cap. 123.) spiny, smooth; leaves ovate, emarginate; panicle axillary. *h. G.* Native of the Cape of Good Hope. According to Sprengel this is the same as *C. integrifolia*.

*Entire Staff-tree.* Shrub 3 to 4 feet.

5 *C. RIGIDA* (Thunb. fl. cap. 220.) spiny, smooth; branches somewhat secund; leaves obovate, quite entire, cut; flowers axillary, sessile. *h. G.* Native of the Cape of Good Hope. Flowers white.

*Stiff Staff-tree.* Clt. 1818. Fl. May, June. Shrub 4 feet.

6 *C. EMARGINATA* (Willd. spec. 1. p. 1128.) spines leafy; leaves obovate, entire, smooth; flowers numerous, axillary; capsules inflated; cells 2-seeded. *h. S.* Native of every part of the East Indies, very common. Stem nothing deserving the name, but innumerable branches bent in every direction. Umbellules many-flowered on very short peduncles, one or two

rising from the centre of the fascicles of leaves. Flowers small, whitish-yellow. Disk saucer-like, crenulate, surrounding the base of the ovary. Style half 3-parted. Stigmas emarginate. Capsule inflated, 3-sided, 3-celled, 3-valved, with 2 red seeds in each cell, resting on a white fleshy receptacle. It is called *Chennee-chintoo* in the Telinga language, and is very useful to make fences and for fuel.

*Emarginate-leaved Staff-tree.* Clt. 1820. Shrub 4 feet.

\* \* \* *Leaves toothed or serrated.*

#### Asiatic.

7 *C. MONTANA* (Roth. nov. spec. 154. Roxb. fl. ind. 2. p. 387.) spines bearing leaves and flowers; leaves obovate, serrulated, smooth; panicles axillary, small, dichotomous; capsules 3-sided, 3-celled, each cell containing 1 or 2 seeds. *h. S.* Native of the East Indies, on mountains. Flowers small, white. Disk as in *C. emarginata*. Stigmas emarginate. Seeds small, nearly round, with a white aril embracing the lower part of the seed. The wood is hard and durable.

*Mountain Staff-tree.* Tree 20 feet.

8 *C. WALLICHII*; spines bearing leaves and even flowers; stem erect, stiff; branches round, flexuous; leaves very tough, obovate-cuneate, sharply-serrulated; corymbs small, scattered among the leaves. *h. S.* Native of the East Indies, at Travancore. *C. rigida*, Wall. fl. ind. 2. p. 396. *C. buxifolius*, Roxb. Leaves at first in fascicles on the spines. Flowers small, white.

*Wallich's Staff-tree.* Shrub 8 feet.

9 *C. RUFA* (Wall. fl. ind. 2. p. 397.) erect, smooth, sparingly armed with axillary short spines; leaves lanceolate, acuminate, serrulated, coriaceous; corymbs axillary, fascicled, on capillary, coloured peduncles; capsule obovate, triangular, 3-seeded. *h. S.* Native of the forests in the valley of Nipaul. A large very branchy tree. Young branches angular, of a more or less deep red colour, glaucous. Leaves with glandular serratures. Flowers small, white. Capsules small, obovate, 3-lobed, 3-celled, 3-seeded. Segments of calyx and petals crenulate.

*Rufous Staff-tree.* Fl. March, April. Tree 30 feet.

10 *C. ZEYLANICA* (Roth. mss. ex Schult. syst. 6. p. 427.) spines axillary, opposite, shorter than the petioles; leaves roundish-cuneate, somewhat emarginate at the apex, obsolete crenate, shining; peduncles axillary, aggregate. *h. S.* Native of the East Indies. Flowers white.

*Ceylon Staff-tree.* Shrub.

#### African.

11 *C. SENEGALENSIS* (Lam. dict. 1. p. 661.) spines bearing leaves and flowers; branches terete; leaves obovate-oblong, smooth, somewhat glaucous, unequally toothed; cymes small, few-flowered. *h. S.* Native of Senegal and Gambia. *C. phyllacanthus*, Lher. sert. ang. 6. no. 28. Flowers whitish-green.

*Var. β, glaucifolius* (D. C. prod. 2. p. 8.) leaves whitish-glaucous beneath, bluish; cymes many-flowered, about the length of the leaves.

*Senegal Staff-tree.* Shrub 8 feet.

12 *C. BUXIFOLIA* (Lin. spec. 285.) spines large, bearing both leaves and flowers; leaves lanceolate-obovate, obtuse, serrated, smooth, coriaceous; branches angular; corymbs axillary, pedunculate, longer than the leaves. *h. G.* Native of the Cape of Good Hope, in bushy places. Sims, bot. mag. 2114. Houtt. pfl. syst. 3. t. 21. f. 1. Flowers white. Capsules globular.

*Box-leaved Staff-tree.* Fl. May, June. Clt. 1752. Shrub 8 to 10 feet.

13 *C. CYMOSA* (Sol. in bot. mag. t. 2070.) spines all naked; leaves obovate, obtuse, serrated, smooth, coriaceous; corymbs

shorter than the leaves. *h. G.* Native of the Cape of Good Hope. Flowers whitish.

*Cymose-flowered Staff-tree.* Fl. July. Clt. 1815. Shrub 8 to 10 feet.

14 *C. MULTIFLORA* (Lam. dict. 1. p. 661.) lower spines very long, those on the branches small, rather leafy; leaves obovate, rhomboid, serrated, smooth; branches rather angular; cymes axillary, stalked. *h. S.* Native of Africa. *C. hispánicus*, Hort. par. Flowers white.

*Many-flowered Staff-tree.* Fl. May, Ju. Clt. 1816. Sh. 6 ft.

15 *C. PYRACANTHA* (Lin. spec. 285.) spines naked; branches round; leaves obovate or elliptical, serrated or entire, shining; peduncles axillary, few-flowered, branched, divaricating. *h. G.* Native of the Cape of Good Hope. Sims, bot. mag. 1157. Mill. icon. t. 87. Flowers greenish-white. Capsule red, 3-celled, 3-seeded, but often fewer from abortion.

*Fire-spined Staff-tree.* Fl. May, Ju. Clt. 1742. Sh. 4 ft.

16 *C. ROTUNDIFOLIA* (Thunb. fl. cap. 221.) spines spreading; leaves stalked, roundish, obsolete toothed. *h. G.* Native of the Cape of Good Hope. Flowers unknown.

*Round-leaved Staff-tree.* Shrub 4 feet.

17 *C. FLEXUOSA* (Thunb. fl. cap. 221.) spines filiform; branches flexuous; leaves smooth, ovate, wavyly-serrated; pedicels numerous, axillary, 1-flowered. *h. G.* Native of the Cape of Good Hope. Flowers whitish.

*Flexuous-branched Staff-tree.* Fl. May, June. Clt. 1820. Shrub 6 feet.

18 *C. PARVIFLORA* (Vahl. symb. 1. p. 31.) spines naked; leaves ovate, crenate, smooth; peduncles filiform, dichotomous, longer than the leaves. *h. G.* Native of Kurma, in Arabia. *Catha spinosa*, Forsk. descr. 64. Flowers small, white.

*Small-flowered Staff-tree.* Shrub.

19 *C. ARTICULATA* (Thunb. jap. Blum. bijdr. p. 1146.) spinose; leaves roundish, oval, acute at both ends, smooth; young branches rather spiny, sarmentose; peduncles axillary, trifid. *h. G.* Native of Japan.

*Jointed Staff-tree.* Shrub 6 feet.

*Cult.* The culture and propagation of the species of *Catha* is the same as that for the stove and greenhouse species of *Celastrus*, p. 9.

VI. PLECTRONIA (from *πλεκτρον*, *plectron*, a thorn; shrub covered with thorns.) Lin. gen. no. 300. Schreb. gen. no. 389. Burm. prod. p. 6.

LIN. SYST. *Pentándria*, *Monogynia*. Calyx obsolete 5-toothed, clothed with sinuses or 5 villous scales, permanent. Petals 5, sessile, inserted in the throat of the calyx. Stamens 5, very short; anthers 2-celled, roundish, each covered by a calycine scale. Ovary small. Style filiform. Stigma ovate. Berry oblong, 2-celled, 2-seeded. Seeds oblong, compressed.—A tree of no beauty, with quadrangular branches, opposite, stalked, lanceolate-ovate, entire, long leaves, and branched corymbs of white flowers, which are shorter than the leaves.

1 *P. VENTOSA* (Lin. mant. 52. syst. 242.). *h. G.* Native of the Cape of Good Hope. *P. corymbosa*, Burm. prod. 6.—Burm. afr. 257. t. 94. *Celastrus*? *Plectronia*, D. C. prod. 2. p. 9.

*Wind Plectronia.* Clt. 1816. Tree.

*Cult.* For culture and propagation see greenhouse species of *Celastrus*, p. 9.

VII. MAYTENUS (Maiten is the name of one of the species in Chili). Feuill. Domb. Molin. ? H. B. et Kunth, nov. gen. amer. 7. p. 64. D. C. prod. 2. p. 9.

LIN. SYST. *Polygamia*, *Diœcia*. Flowers polygamous. Calyx 5-cleft, small, permanent. Petals 5, spreading, alternating with the sepals. Disk fleshy, surrounding the ovary. Stigma

sessile, 2-3-lobed. Capsule 1-4-valved, with a dissepiment in the middle of each valve. Seeds few, arillate, in the bottom of the cells. Embryo flat, placed in a fleshy albumen.—Small trees, natives of Chili and Peru, with alternate, simple, coriaceous, toothed, permanent leaves, and axillary, small, greenish-white flowers. Capsules usually copper-coloured inside. This genus is allied to *Senecia* from the structure of the fruit, but from the embryo is referable to *Celastrineæ*. According to Molina, his *Maytenus* has a 1-leaved calyx, a monopetalous corolla, 2 stamens, and a 1-seeded capsule. It may be this genus badly described, or a distinct one.

1 *M. octogonus* (D. C. prod. 2. p. 9.) leaves elliptical, bluntly angular, nerveless, obtuse, glaucous. *h. S.* Native of Peru in groves. *Celastrus octogonus*, Lher. sert. angl. p. 7. *Senecia octogona*, Lam. ill. no. 2713. *Zizyphus Peruviana*, Lam. dict. 3. p. 320. Capsule 2-valved, 1-seeded.

*Eight-angled-stemmed Maytenus.* Fl. Oct. Nov. Clt. 1786. Shrub 6 feet.

2 *M. ? uliginosus* (H. B. et Kunth, nov. gen. amer. 7. p. 65.) branches terete, scattered; leaves obovate-elliptical, rounded at both ends, obsolete repand-toothed, rather coriaceous, smooth; flowers axillary, crowded; pedicels 1-flowered. *h. G.* Native of New Granada, in the province of Quito, near Guayaquil, in bogs. *Celastrus orbicularis*, Willd. in Schult. syst. 5. p. 423. Capsule 3-valved, 3-celled, 3-seeded, ex. Bonpl.

*Bog Maytenus.* Shrub 5 feet.

3 *M. chilensis* (D. C. prod. 2. p. 9.) leaves elliptic-oblong, tapering to the base, taper-pointed, with serrated edges. *h. G.* Native of Chili, at Coquimbo. *Maiten*, Feuill. obs. 3. p. 39. t. 27. *Maytenus*, Juss. gen. 449. Desrous, in Lam. dict. 4. p. 2. exclusive of the synonyme of Molina? *Senecia Maytenus*, Lam. ill. no. 2712. *Celastrus Maytenus*, Willd. spec. 1. p. 1127. Capsules 2, rarely 3-valved.

*Chili Maytenus.* Tree 12 feet.

4 *M. uncinatus*; leaves lanceolate-linear, narrow, elongated, acuminate, serrated. *h. G.* Native of Chili. *Celastrus uncinatus*, Ruiz et Pav. fl. per. 3. p. 7. t. 230. Flowers as in the former species crowded in the axillæ of the leaves, on short pedicels. *M. Chilensis*, var. *β*, *angustifolius*, D. C. prod. 2. p. 10.

*Hooked Maytenus.* Shrub 6 feet.

5 *M. verticillatus* (D. C. prod. 2. p. 10.) branches aggregate, whorled; leaves oblong-lanceolate, serrated; peduncles 1-3-flowered, much shorter than the leaves, rising along the branches either above or below the leaves in racemes. *h. G.* Native of Peru, in groves at Cuchero, Munna, &c. Leaves almost smooth, shining. Capsules 2-3-4-celled.

*Whorled-branched Maytenus.* Clt. 1823. Shrub 6 feet.

6 *M. Boaria* (Mol. chili, 152.) leaves opposite or alternate, oblong, smooth, serrated; flowers scattered; seeds covered with red aril; corolla monopetalous; style 1; stamens 2; capsule 2-valved, 2-celled, 2-seeded. *h. G.* Native of Chili. A decoction of the twigs of this shrub is used to bathe the swellings produced by the poisonous shade of the Llithi, *Rhus caustica*. Its vernacular name is *Boaria*.

*Boaria Maytenus.* Clt. 1822. Shrub 10 feet.

*Cult.* See greenhouse species of *Celastrus* for culture and propagation, p. 9.

VIII. ALZATEA (in honour of Joseph Anthony de Alzati y Ramirez, a Spanish naturalist). Ruiz et Pav. fl. per. prod. t. 7. D. C. prod. 2. p. 10.

*Lin. syst.* *Pentandria, Monogynia*. Calyx 5-cleft, 5-angled, permanent. Petals wanting. Stamens 5, hypogynous? Style 1. Capsules obovate, 2-celled, 2-valved, with a dissepiment

in the middle of each valve. Very like *Maytenus*, but the flowers are apetalous.

1 *A. verticillata* (Ruiz et Pav. fl. per. 3. p. 20. t. 241. f. a.). *h. G.* Native of Peru in groves near Messapata. Leaves obovate, emarginate. Flowers small, greenish-white, in corymbs.

*Whorled Alzatea.* Clt. 1824. Shrub 10 feet.

*Cult.* See greenhouse species of *Celastrus* for culture and propagation.

IX. CRYPTERONIA (from *κρυπτος*, *cryptos*, hidden, and *πτερον*, *pteron*, a wing; the seeds are terminated by a narrow wing). Blum. bijdr. 1145.

*Lin. syst.* *Monœcia, Pentandria*. Flowers monoœcious from abortion. Calyx inferior, small, 5-toothed. Corolla none. Stamens 5, short, alternating with the calyx. Ovary 2-celled, girded by a membranous margin. Style crowned by an obtuse stigma. Capsule subglobose, crowned by the permanent style, 2-celled, 2-valved, many-seeded. Dissepiments contrary to the valves. Seeds albuminose, terminated by a subulate wing. This genus comes near to *Alzatea*—A tall tree, with opposite, oblong, quite entire leaves, and lateral panicles of small flowers.

1 *C. paniculata* (Blum. l. c.). *h. S.* Native of Java on the mountains.

*Panicled-flowered Crypteronia.* Tree 50 feet.

*Cult.* For culture and propagation see *Polycardia*.

X. POLYCARDIA (from *πολυ*, *poly*, many, and *καρδια*, *kardia*, a heart; in allusion to the petioles being furnished with numerous heart-shaped wings). Juss. gen. 377. D. C. prod. 2. p. 10.

*Lin. syst.* *Pentandria, Monogynia*. Calyx 5-lobed, permanent. Petals 5. Stamens 5, short, alternating with the petals. Ovary depressed. Style 1, very short. Stigma lobed. Capsule woody, 5-celled, 5-valved (rarely 3-4-valved from abortion) with a membranous dissepiment at the base of each valve in the middle. Seeds few in the bottom of each cell, oblong, each surrounded by a calyciform jagged aril. Flowers sessile on the middle nerves of the leaves.

1 *P. phyllanthoides* (Lam. ill. 2. p. 100. t. 132.). *h. S.* Native of Madagascar. A smooth shrub, with alternate coriaceous leaves, tapering into the footstalk, some of which are oblong, entire; others deeply emarginate, bearing 1-5 flowers in the recess. Florinda, Nor. mss. Commersonia, Comm. mss. *P. Madagascariensis*, Gmel. syst. p. 107. *P. epiphylla*, Smith, in Rees' cycl. vol. 28.

*Phyllanthus-like Polycardia.* Shrub 6 feet.

*Cult.* Loam, peat, and sand is a good soil for this shrub, and ripened cuttings will strike root in a pot of sand under a hand-glass, in heat.

XI. ELEODENDRON (from *ελαια*, *elaia*, an olive, and *δένδρον*, *dendron*, a tree; the fruit is like that of an olive, and the seeds are oily). Jacq. in act. helv. nov. 1 p. 36. but not of Retz. D. C. prod. 2. p. 10.—*Rubentia*, Comm. in Juss. gen. 378.—Schrebera, Retz. obs. 6. p. 25.

*Lin. syst.* *Tetra-Pentandria, Monogynia*. Calyx small, 4-5-lobed. Petals 4-5, spreading, broad at the base. Stamens 4-5, alternating with the petals. Disk fleshy, girding the ovary. Style very short. Drupe dry, containing a woody 5-celled (rarely 2-4-celled from abortion) nut. Seeds 2 in each cell, but sometimes solitary from abortion, erect, oblong. Albumen fleshy. Embryo central, straight, with leafy cotyledons and an inferior radicle.—Trees or shrubs with smooth, laurel-like, opposite leaves, and axillary panicles of flowers. Flowers small, greenish-white or yellowish-green.

1 *E. orientale* (Jacq. icon. t. 48.) leaves entire, or toothed,

obovate-oblong, or ovate, much longer than the petioles; flowers usually pentandrous. *h. S.* Native of the Mauritius and Madagascar, where it is called bois d'olive. *Rubéntia olivina*, Gmel. syst. 408. *E. indicum*, Gaert. fruct. 1. t. 57. *Lam. ill.* t. 132. Nerves in the young leaves reddish. The nut is said to be hairy on the outside. Flowers yellowish-green.

*Eastern Olive-wood.* Clt. 1771. Tree 12 feet.

2 *E. AUSTRIALE* (Vent. malin. t. 117.) leaves crenately-toothed, oblong-lanceolate, coriaceous, much longer than the petioles; flowers usually tetrandrous. *h. G.* Native of New Holland. *Portenschlågia australis*, Tratt. arch. t. 250. *Lamarekia dentata*, Hortul. Flowers small, greenish-yellow.

*Southern Olive-wood.* Fl. June, Aug. Clt. 1796. Sh. 4 ft.

3 *E. INTEGRIFOLIUM*; leaves oblong-lanceolate, coriaceous, much longer than the petioles, quite entire, or with a few small glandular teeth; flowers numerous, usually tetrandrous; calyx reflexed. *h. G.* Native of New Holland. *Portenschlågia integrifolia*, Tratt. arch. t. 284. Flowers yellowish-green.

*Entire-leaved Olive-wood.* Fl. June, Aug. Clt. Sh. 6 ft.

4 *E. GLAUCUM* (Pers. ench. 1. p. 241.) leaves elliptical, serrated, hardly 3-times longer than the petioles; cymes loose, nearly the length of the leaves; flowers pentandrous. *h. S.* Native of Ceylon and Coromandel. *Schrebéria albens*, Retz. obs. 6. p. 25. t. 3. *Celastrus glaucus*, Vahl. symb. 2. p. 12. *Mangifera glauca*, Rottb. nov. act. hafn. 2. t. 4. f. 1. *Senécia glauca*, *Lam. ill.* no. 2714. Leaves oblong. Panicles axillary, dichotomous. Flowers small, greenish-yellow. Drupe nearly round, size of a large cherry. This plant has been introduced from Ceylon, under the name of Ceylon-tea; its leaves are like those of that plant, but much longer; their taste slightly bitter and astringent.

*Glaucous Olive-wood.* Clt. 1824. Tree 14 feet.

5 *E. XYLOCARPUM* (D. C. prod. 2. p. 11.) leaves ovate, entire, or somewhat scalloped, glaucous, coriaceous, on very short petioles; corymbs dichotomous, one-half shorter than the leaves; flowers pentandrous. *h. S.* Native of the island of St. Thomas. *Cassine xylocarpa*, Vent. choix. t. 23. *Cassine sphaerocarpa*, hort. par. Flowers greenish-yellow. Probably this and the following will form a separate genus.

*Woody-fruited Olive-wood.* Clt. 1816. Shrub 4 feet.

6 *E. ROTUNDATUM* (D. C. prod. 2. p. 11.) leaves ovate-roundish, obtuse, quite entire, or a little toothed, coriaceous, on short stalks, usually three in a whorl; cymes crowded, one-half shorter than the leaves; flowers pentandrous, dioecious. *h. S.* Native of St. Thomas, in salt marshes. Flowers greenish-yellow.

*Rounded-leaved Olive-wood.* Shrub.

† *Species hardly known.*

7 *E. ? CRUCEUM* (D. C. prod. 2. p. 11.) leaves elliptical, coriaceous, with awned, spiny serratures. *h. G.* Native of the Cape of Good Hope. Flowers copper-coloured?

*Copper-coloured Olive-tree.* Shrub.

8 *E. ? TOMENTOSUM* (Humb. ex Willd. mss. in Rœm. et Schult. syst. 3. p. 315.) leaves oblong-lanceolate, downy; flowers pentandrous. *h. S.* Native of South America. Flowers greenish-yellow.

*Downy Olive-wood.* Tree.

9 *E. ? TRINERVE* (Hort. madr. ex Willd. l. c.) leaves ovate, cordate, 3-nerved, crenated; branches spiny. *h. S.* Native of? *Three-nerved-leaved Olive-wood.* Tree?

*Cult.* See *Ptelidium* for culture and propagation.

XII. ACTEGETON (from *ἀκτίς*, *actis*, a ray, and *γενῶν*, *geion*, near to?). *Blum. bijdr.* p. 1143.

• LIN. SYST. *Diœcia*, *Tetrândria*. Flowers dioecious from abortion. Calyx inferior, urceolate, 4-toothed. Petals 4. Stamens 4, joined together a little at the base, alternating with the petals. Anthers incumbent. Ovary 1-celled, 4-ovulate. Stigmas 2, sessile. Berry globose, 1-3-seeded. Seeds marked by a prominent hilum at the base, exalbuminous. Embryo straight. This genus comes near to *Schœfferia*, but differs in the structure of the fruit.—A sarmentose shrub with axillary, twin, spreading prickles. Leaves opposite, ovate, elliptic, cuspidate, quite entire, smooth. Flowers small, racemose, axillary, and terminal.

1 *A. SARMENTOSUM* (Blum. bijdr. 1144.). *h. S.* Native of Java, where it is called *Papadjaran*.

*Sarmentose Actegeton.* Shrub straggling.

*Cult.* For culture and propagation, see next genus.

XIII. PTELIDIUM (it has received this name from its similarity to *Ptelea*). *Pet. Th. gen. nov.* 24. *veg. afr. austr.* 1. p. 11. and 29. t. 2. *D. C. prod.* 2. p. 11.—*Seringia*, Spreng. syst. 1. p. 160. but not of Gay.

LIN. SYST. *Pentândria*, *Monogýnia*. Calyx urceolate, 4-lobed. Petals 4, inserted by the broad claws in the calyx. Disk 4-lobed. Stamens 4, alternating with the petals. Ovary compressed. Style almost wanting. Fruit samara-like, much compressed, indehiscent, surrounded by a wing, 2-celled, 2-seeded. Seeds erect. Embryo flat, green, in a fleshy albumen.—A shrub with opposite, ovate, quite entire leaves, and loose, axillary panicles of small flowers.

1 *P. OVATUM* (Poir. suppl. 4. p. 597. *Lam. ill.* t. 910.) *h. II.* Native of Cochinchina. *Seringia ovata*, Spreng. syst. 1. p. 441. *Ptelea ovata*, Lour. fl. coch. p. 82. Flowers greenish-white.

*Ovate-leaved Ptelidium.* Clt. 1818. Shrub 6 feet.

*Cult.* Loam, peat, and sand is a good mixture for this shrub, and ripened cuttings will strike root in sand under a hand-glass, in heat.

XIV. TRALLIANA (in honour of Alexander Trallian, a celebrated physician of the sixth century: his works were published at Paris, 1548.) *Lour. fl. coch.* p. 157. *D. C. prod.* 2. p. 11.

LIN. SYST. *Pentândria*, *Monogýnia*. Calyx permanent, 5-parted, with rounded lobes. Petals 5, spreading, reflexed. Disk erect, with 10 notches. Stamens 5, hypogynous? Ovary roundish. Style 1. Berry roundish, 2-celled, 2-seeded. Seeds angular inside, and rounded on the outside. Leaves cordate, acuminate, alternate. Peduncles lateral, dichotomous, bearing small greenish-white flowers.

1 *T. SCANDENS* (Lour. l. c.) *h. G.* Native of Cochinchina. *Rhâmnus scandens*, Spreng. syst. 1. p. 768.

*Climbing Tralliana.* Shrub cl.

*Cult.* A climbing shrub of no beauty. It will grow in any common soil, and ripened cuttings will root in sand, under a hand-glass.

### Tribe III.

CASSINIEÆ (plants agreeing with *Cassine* in important characters). Petals broadest at the base. Fruit indehiscent. Embryo straight, placed in the axis of a fleshy albumen.—Trees or shrubs, with simple leaves.

XV. CASSINIE (a name of American origin). *Lin. gen.* 371. *Lam. ill.* t. 310. *Gaert. fruct.* 2. p. 72. t. 92. *D. C. prod.* 2. p. 11.

LIN. SYST. *Pentândria*, *Monogýnia*. Calyx small, 5-parted. Petals 5, spreading, broadest at the base. Stamens 5, alternat-

ing with the petals. Ovary 1. Style wanting. Stigmas 3-5. Drupe almost dry, containing a thin 3-5-celled, 3-5-seeded nut. Seeds hanging from the top of the cells.—Cape and Asiatic shrub, with tetragonal branches, opposite, smooth, coriaceous leaves, and axillary peduncles, bearing small flowers.

1 *C. MAUROCENIA* (Lin. spec. 385.) leaves sessile, obovate, quite entire, convex; pedicels many, very short. *h. G.* Native of *Æthiopia*. *Maurocœnia frangulæria*, Mill. dict. no. 1.—Dill. elth. t. 121. f. 147. Flowers at first greenish-yellow, but changing at length to white. Fruit dark-purple when ripe. The specific name is in honour of the Venetian senator Franc Morosini, who had a fine garden at Padua, a catalogue of which was published by Ant. Tita.

*Morosini's* Hottentot-cherry. Fl. July, Aug. Clt. 1690. Shrub 6 feet.

2 *C. CAPE'NSIS* (Lin. mant. 220.) leaves stalked, ovate, retuse, crenate, flat; panicles axillary, shorter than the leaves. *h. G.* Native of the Cape of Good Hope, in woods.—Burm. afr. t. 85.—Dill. elth. t. 236. Flowers small, white.

*Cape Phillyrea*. Fl. July, Aug. Clt. 1629. Shrub 6 feet.

3 *C. EXCELSA* (Wall. in fl. ind. 2. p. 376.) leaves alternate, oval, acuminate, quite entire, with an acute base, rather fleshy, shining above; umbels axillary and lateral, many-flowered, rounded; stigmas 5; berry 5-celled, 5-seeded. *h. G.* Native of Nipaul, in all the forests of the valley and the surrounding mountains. Flowers white! Berry about the size of a currant, pulpy, yellow. Notwithstanding the rotate corolla, and the increased number of stigmas and seeds, as well as the alternate leaves, Dr. Wallich had no hesitation in referring this tree to *Cassine*.

*Tall Cassine*. Fl. May, June. Clt. 1820. Tree 40 feet.

4 *C. DISCOLOR* (Wall. in fl. ind. 2. p. 278.) leaves ovate, acuminate, tapering much to the base, whitish beneath, quite entire, coriaceous; fascicles of flowers axillary, dichotomous; stigmas 4. *h. G.* Native of the East Indies, on the mountains bordering on Silhet. Flowers yellowish, monopetalous.

*Two-coloured-leaved Cassine*. Fl. Jan. Tree 20 feet.

5 *C. COLPOON* (Thunb. fl. cap. 2. p. 227.) leaves stalked, ovate, crenate, but usually quite entire; panicle axillary, length of leaves. *h. G.* Native of the Cape of Good Hope. *Euonymus Colpoon*, Lin. mant. 200.—Burm. afr. t. 86. Flowers white. (quadrifid?)

*Colpoon-tree*. Fl. July, Aug. Clt. 1791. Shrub 6 feet.

† *Doubtful species.*

6 *C. ÆTHIOPICA* (Thunb. fl. cap. 2. p. 227.) leaves stalked, oblong, deeply crenate; panicles axillary. *h. G.* Native of the Cape of Good Hope. Flowers white. This is probably a variety of *C. Capensis*.

*Æthiopian Cassine*. Fl. July, Aug. Clt. ? Shrub 5 feet.

7 *C. BARBARA* (Lin. spec. 385.) leaves sessile, cordate-oblong, serrate-toothed; panicles axillary, shorter than the leaves. *h. G.* Native of the Cape of Good Hope. Thunb. fl. cap. 2. p. 226. Peduncles usually 3-flowered. Flowers small, white.

*Barbarous Cassine*. Fl. July, Aug. Clt. 1816. Shrub 6 ft.

8 *C. OPPOSITIFOLIA* (Mill. dict. no. 3.) leaves stalked, ovate, acute; flowers axillary, scattered. *h. G.* Native of? Formerly cultivated in the gardens of England under the name of *Nysson tea*. Flowers greenish-white?

*Opposite-leaved Cassine*. Shrub.

*Cult.* Shrubs with large thick leaves, and small white flowers. They will grow freely in a mixture of loam and peat; and ripened cuttings will readily strike root, if planted in a pot of sand with a hand-glass placed over them.

XVI. *HARTOGIA* (in honour of J. Hartog, a Dutch naturalist and traveller at the Cape of Good Hope). Thunb. nov. gen. 5. p. 35, with a figure, but not of Lin. D. C. prod. 2. p. 12.

*Lin. syst. Tetra-Pentandria*. Calyx 4-5-cleft. Petals 4-5, spreading. Stamens 4-5, alternating with the petals. Ovary 1. Style thick, bifid, with bifid lobes. Drupe dry, ovate, 2-celled, 2-seeded. Habit of *Myginda*, from which it is hardly distinct.

1 *H. CAPE'NSIS* (Lin. fil. suppl. 128.) *h. G.* Native of the Cape of Good Hope. Leaves opposite, oblong, crenate, smooth, hardly stalked. Pedicels few-flowered, axillary, drooping. *Schreberia schinioides*, Thunb. prod. t. 2. *Elæodendron schinioides*, Spreng. syst. 1. p. 780.

*Cape Hartogia*. Fl. June, July. Clt. 1800. Shrub 10 feet.

*Cult.* See *Cassine* for culture and propagation.

XVII. *CURTISIA* (in honour of the late William Curtis, a celebrated English botanist, who commenced the Botanic Magazine). Ait. hort. kew. 1. p. 162, but not of Schreb. D. C. prod. 2. p. 12.—*Doratorium*, Sol. in Jaum. exp. 2. p. 267.—*Relbaniæ* and *Junghaniæ*, Gmel. syst. 247. and 259.

*Lin. syst. Tetrandria, Monogynia*. Calyx 4-parted. Petals 4, blunt, longer than the calyx. Stamens 4, alternating with the petals. Ovary and style 1. Stigmas 4-5. Drupe subglobose, succulent, containing a 4-5-celled, 4-5-seeded nucleus.—A fine tree, with opposite, broad, shining, toothed, smooth leaves, which are rusty beneath, and racemose panicles of small flowers. See Rich. dict. class. hist. nat. t. 5. p. 203.

1 *C. FAGINEA* (Ait. hort. kew. l. c. Lam. ill. t. 71.) *h. G.* Native of the Cape of Good Hope.—Burm. afr. t. 82. The Hottentots and Caffres make the shafts of their javelins or assagays from the wood of this tree. They always carry one or two of these with them on their journeys. They consist of an iron spear, hollowed out on each side, about six inches long, with or without an iron shaft, which is sometimes round and smooth, and sometimes grooved. It is fastened with thongs of leather to a slender, round stick, 5 feet long, tapering towards the end, and made of the wood of this tree. With these lances, which they throw with great dexterity to the distance of a hundred paces, the Hottentots and Caffres defend themselves, and kill buffaloes and other wild animals. The tree is called in Dutch *Assagay-hout*, *Wite-else*, and *Stink-hout*. In English *Hassagay*, or *Assagay-tree*, from its use among the natives at the Cape.

*Beech-like Hassagay-tree*. Clt. 1775. Tree 60 feet.

*Cult.* See *Cassine* for culture and propagation.

XVIII. *NEMOPANTHES* (from *νεμος*, *ne mos*, a grove, and *ανθος*, *anthos*, a flower; habitat). Rafin. journ. phys. 1819. p. 96. and in Sillim. amer. journ. 1. p. 377. D. C. prod. 2. p. 17.—*Illicioides*, Dum. Cours. ed. 1. vol. 4. p. 27.

*Lin. syst. Polygamia, Diœcia*. Flowers dioecious or polygamous from abortion. Calyx small, scarcely conspicuous. Petals 5, distinct, oblong-linear, deciduous. Stamens 5, alternating with the petals. Ovary hemispherical, covered with clammy juice. Style wanting. Stigmas 3-4, sessile, in the male flowers they are hardly manifest. Berry somewhat globose, 3-4-celled, 3-4-seeded.—A small deciduous shrub.

1 *N. CANADENSIS* (D. C. mem. soc. gen. 1. p. 44. pl. rar. hort. gen. t. 3.) *h. H.* Native of North America, from Canada to Carolina, on high mountains, near edges of ponds. *Flex Canadensis*, Michx. fl. bor. amer. 2. p. 299. f. 49. *N. fasciculæris*, Rafin. l. c. *Flex delicatula*, Bart. fl. virg. p. 67. ? *Prinos lucidus*, Ait. hort. kew. 2. p. 478. Leaves ovate, quite entire, or serrated at the apex, smooth. Pedicels usually solitary, 1-flowered, very long. Flowers white. Berries large, beautiful crimson, very ornamental.

*Canadian Nemopanthus*. Fl. April, May. Clt. 1802. Shrub 3 feet.

*Cult.* See hardy species of *Prinos* for culture and propagation.

**XIX. SKIMMIA** (from *mijama-skimmi*, the name of the plant in Japan). Thunb. fl. jap. 62. nov. gen. 57. D. C. prod. 2. p. 18.

*LIN. syst.* *Tetrándria, Monogýnia*. Calyx small, permanent, 4-parted. Petals 4, concave. Stamens 4, very short. Ovary free? Style 1. Berry ovate, umbilicate, obsoletely 4-furrowed, somewhat 4-valved, containing mealy pulp inside. Seeds 4, somewhat trigonal, oblong. Perhaps an *Ilex* or *Eúonymus*, or probably allied to *Rhamnus*.

1 *S. JAPÓNICA* (Thunb. l. c.) *h. G.* Native of Japan. Leaves alternate, somewhat crowded in whorles, oblong, wavy, evergreen. Flowers paniced. Kœmpf. t. 5. *Ilex Skimmia*, Spreng. syst. 1. p. 495.

*Japan Skimmia*. Tree 20 feet?

*Cult.* See *Cassine* for culture and propagation, p. 13.

**XX. LEPTA** (from *λεπτος*, *leptos*, minute; flowers minute). Lour. fl. coch. p. 82. D. C. prod. 2. p. 18.

*LIN. syst.* *Tetrándria, Monogýnia*. Calyx small, 4-parted, spreading. Petals 4, somewhat triangular, furrowed, inflexed. Stamens 4, inserted in the angles of the receptacle; filaments awl-shaped. Ovary roundish. Style almost none. Stigma blunt. Berry 4-lobed; lobes 1-seeded.—A much branched shrub, with ternate, lanceolate, quite entire leaves, and axillary compound racemes of small white flowers. This is a species of *Skimmia* according to Juss., *Ilex* of Spreng., *Vitis* of Smith, and *Othra* of Poir. but it is hardly known.

1 *L. TRIPHÝLLA* (Lour. l. c.) *h. G.* Native of Cochinchina, in woods. *Ilex Lépta*, Spreng. syst. 1. p. 496.

*Three-leaved Lepta*. Shrub 10 feet.

*Cult.* See *Cassine* for culture and propagation, p. 13.

† *Genera allied to Celastrineæ, but differ materially in the æstivation of the petals.*

**XXI. PERROTTETIA** (in honour of Perrottet, a botanical collector, who travelled in Guiana and Madagascar). H. B. et Kunth, nov. gen. amer. 7. p. 73.

*LIN. syst.* *Pentándria, Monogýnia*. Calyx 5-lobed, regular, permanent. Petals 5, inserted under the disk, sessile, ovate, acute, longer than the calyx, permanent, valvate in æstivation. Stamens 5, inserted with the petals, and alternating with them, free, permanent. Anthers roundish, kidney-shaped, 2-celled. Disk orbicular, filling the bottom of the flower. Ovary superior, half immersed in the disk, 2-celled, and with 2 ovula in each cell. Stigma sessile, obtuse. Berry subglobose, containing 1-2 wrinkled nuts.—An unarmed shrub, with alternate, simple, entire, dotless leaves, with twin petiolar stipulas. Panicles axillary, bracteate. Flowers very minute, sessile, in fascicles, dark-purple.

1 *P. QUINDIÛENSIS* (H. B. et Kunth, nov. gen. amer. 7. p. 75. t. 622.) *h. S.* Native of South America, on Mount Quindiu. *Quindiu Perrottetia*. Shrub 5 to 6 feet.

*Cult.* Loam and sand is a good mixture for this shrub; and ripened cuttings will root in heat.

**XXII. DULONGIA** (in honour of Peter Louis Dulong, a learned physician, and member of the Academy of Sciences of Paris). H. B. et Kunth, nov. gen. amer. 7. p. 78.

*LIN. syst.* *Pentándria, Digýnia*. Calyx adnate to the ovary, with a free 5-toothed limb. Petals 5, inserted round the base of the disk, sessile, ovate, valvate in æstivation. Stamens 5,

free, inserted with the petals. Anthers 2-celled, didymous. Ovary inferior, 2-celled, having 6 ova in one cell, and 3 in the other. Disk orbicular, rather convex. Stigmas 2, sessile, acutish. Fruit globose, baccate, pea-formed, crowned by the permanent calyx, petals and stamens half-2-celled; cells 2-3-seeded, tuberculated.—An unarmed shrub, with alternate, simple, exstipulate leaves. Peduncles rising from the middle nerve of the leaf, branched, many-flowered. Flowers stalked, minute, white.

1 *D. ACUMINATA* (H. B. et Kunth, nov. gen. amer. 7. p. 78. t. 626.) *h. S.* Native of South America, near Popayan. *Phyllonoma ruscifolia*, Willd. in Rœm. et Schult. syst. 6. p. 210. *Acuminated-leaved Dulongia*. Shrub 6 feet.

*Cult.* See last genus for culture and propagation.

**ORDER LXV. BREXIACEÆ** (the order only contains the genus *Brexia*). Lindl. introd. nat. syst. p. 112.

Calyx inferior, small, permanent, 5-parted, imbricate in æstivation. Petals hypogynous, also imbricate in æstivation. Stamens 5, hypogynous, alternating with the petals, arising from a narrow cup, which is toothed between each stamen; anthers oval, innate, 2-celled, bursting lengthwise. Style one, continuous, crowned by a simple stigma. Fruit drupaceous, 5-celled, many seeded. Seeds attached to the axis, without albumen. Embryo with ovate, obtuse cotyledons, and a cylindrical centripetal radicle.—Trees, with nearly simple stems. Leaves alternate, simple, without dots, and furnished with minute deciduous stipulas. Flowers green, in axillary umbels, surrounded by bracteas on the outside. This order differs from *Celastrineæ* in the hypogynous insertion of the stamens, and in the numerous seeds. It agrees with *Pittosporæe* in the insertion and definite number of stamens, as well as in the fruit being many seeded; but it differs in many important characters.

1. **BREXIA** (from *βρέξω*, *brexis*, rain; the leaves afford protection against rain). Pet. Th. mad. 69.—Venana, Lam. ill. 2. t. 99. no. 365. t. 131. dict. 8. p. 450.

Character the same as the order.

1 *B. MADAGASCARIENSIS* (Pet. Th. gen. mad. no. 69.) leaves obovate or oblong, entire, while young minutely gland-toothed. *h. S.* Native of Madagascar. Ker. bot. reg. 730.

*Madagascar Brexia*. Fl. June. Clt. 1812. Tree 20 feet.

2 *B. SPINOSA* (Lindl. bot. reg. 872.) leaves lanceolate, long, spiny-toothed. *h. S.* Native of Madagascar.

*Spiny Brexia*. Fl. June. Clt. 1812. Tree 20 feet.

3 *B. CHRYSOPHYLLA* (Sweet. hort. brit. p. 492.) leaves lanceolate, yellowish, entire or slightly and sparingly toothed. *h. S.* Native of Madagascar.

*Golden-leaved Brexia*. Clt. 1820. Tree 20 feet.

*Cult.* Elegant trees, with fine foliage. They will grow freely in a mixture of turfy loam and peat; and cuttings with their leaves not shortened strike readily in sand under a hand-glass in heat, or a leaf torn off with a bud attached will grow.

**ORDER LXVI. ILICINEÆ** (plants agreeing with *Ilex* in important characters). Brogn. mem. Rhamneæ, p. 16.

Calyx of 4-5 sepals, imbricate in æstivation. Corolla monopetalous (f. 3. a.), deeply divided, imbricate in æstivation, inserted under the ovary (f. 3. d.). Stamens alternating with the petals (f. 3. b.), rarely opposite them, and inserted in the corolla (f. 3. b.); filaments erect. Anthers 2-celled;

cells adnate to the sides of the filament. Disk wanting. Ovary fleshy, thick, subtruncate, 2-6-celled; cells small, 1-2-ovulate. Ova hanging from the tops of the cells, by a podosperm, which is cup-shaped at the top, and girding the ovum at the base. Raphe exterior. Stigma nearly sessile, lobed. Fruit baccate (f. 3. c.), containing 2-6 woody or fibrous nuts. Seed suspended, nearly sessile. Endosperm large, fleshy. Embryo small, situated near the hilum, 2-lobed, with a superior radicle.—This order is composed of shrubs or trees, having alternate or opposite, usually coriaceous, glabrous, entire or prickly-toothed, feather-nerved leaves. Flowers axillary, solitary, or in fascicles. Peduncles simple, but sometimes disposed in dichotomous cymes. The order differs from *Celastrineæ* in the corolla being monopetalous, with the stamens inserted in it, and in the absence of the disk. It differs from *Rhamnaceæ* in these last particulars, as well as in the calyx being valvate in æstivation.—The famous Paraguay-tea is the leaves of a species of *Ilex*, and the *Prinos verticillatus* possesses such active and astringent bitter tonic and febrifugal qualities, that it is used in North America with success as a substitute for Peruvian bark.

#### Synopsis of the Genera.

1 MYGINDA. Calyx small, 4-cleft. Corolla deeply 4-cleft. Stamens 4, inserted in the base of the corolla. Style short, crowned by 4 stigmas. Drupe 1-celled, 1-seeded, probably from abortion.

2 LEPIONURUS. Flowers monocious. Calyx small, entire. Corolla 4-parted. Stamens 4, opposite the segments of the corolla, and inserted in its throat. Drupe baccate, containing a 1-seeded nut. Stigmas 4, sessile.

3 PLEX. Calyx 4-5-toothed. Corolla 4-5-cleft. Stamens 4-5, inserted in the tube of the corolla. Stigmas 4-5, almost sessile, sometimes distinct, sometimes connected. Drupe containing 4-5 1-seeded nuts.

4 PRINOS. Calyx 6-toothed. Corolla 6-cleft. Stamens 6, inserted in the tube of the corolla. Drupe containing 6 1-seeded nuts.

5 STROMBOSIA. Calyx small, obsoletely-crenulated. Corolla 5-cleft, with a villous throat, with 5 stamens inserted in the bottom of it; these are opposite the divisions. Drupe baccate, 1-seeded from abortion. Style short, crowned by an obtuse stigma.

6 LEUCOXYLON. Flowers polygamous. Calyx 4-parted. Corolla 4-parted. Stamens 12-14, adhering to the base of the corolla. Drupe containing 1-2 1-seeded nuts.

I. MYGINDA (in honour of Francis von Mygind, a German botanist). Jacq. amer. p. 24. D. C. prod. 2. p. 12.—*Rhacoma*, Lin. gen. no. 114.—*Crossopetalum*, P. Browne, jam. 145.

LIN. SYST. *Tetrandria*, *Monogynia*. Calyx small, 4-cleft. Corolla deeply 4-cleft, sub-rotate. Stamens 4, alternating with the segments of the corolla, and shorter than them, and inserted in its throat. Ovary roundish. Style short or wanting. Stigmas 4, therefore sometimes at the top of the style, and sometimes sessile. Drupe ovate, 1-celled, 1-seeded, probably from abortion. Seed hanging from the top of the cell, albuminous.—Caribbean or South American shrubs, with tetragonal branches, opposite, subcoriaceous, laurel-like leaves, axillary pedicels,

which are usually trifid or trichotomous, and small flowers, which are for the most part white.

#### \* Leaves downy beneath.

1 M. MICROPHYLLA (D. C. prod. 2. p. 12.) leaves obovate-oblong, blunt, quite entire, pubescent beneath, as well as the branchlets; fruit solitary, almost sessile, terminated by the filiform style. *h. S.* Native of St. Domingo, where the Spaniards call it *Mala-muger*. *Plex microphylla*, Spreng. in herb. Balb.

*Small-leaved Myginda*. Shrub.

2 M. ROTUNDA TA (Lam. ill. no. 1546.) leaves ovate-roundish, crenate, pubescent beneath; peduncles nearly simple, few-flowered. *h. S.* Native of the Antilles.

*Rounded-leaved Myginda*. Shrub.

3 M. URAGOGA (Jacq. amer. t. 16. pict. t. 22.) leaves ovate or cordate, almost sessile, acuminate, serrated, pubescent: corymbs twice trifid. *h. S.* Native of South America, near Carthagena, and in the island of St. Martin, near the sea. Each division of the corymb bearing 3 flowers. Flowers small, of a dark shining red. Fruit red, soft, the size of a pea. The Spaniards call it *Fera de Maravedi*. At Carthagena the inhabitants use a decoction or infusion of the root as a powerful diuretic; the leaves have the same quality, but in a much smaller degree. Houtt. fl. syst. 3. p. 142. t. 19. Lam. ill. t. 76. *Rhacoma crossopetalum*, Lin. and *crossopetalum*, P. Browne, jam. t. 17. f. 1.

*Diuretic Myginda*. Fl. Aug. Sep. Clt. 1790. Shrub 3 to 6 ft.

#### \* \* Leaves smooth on both surfaces.

4 M. ILICIFOLIA (Lam. dict. 4. p. 396.) leaves ovate-roundish, spiny-toothed, smooth, pale beneath; peduncles axillary, forked; fruit pointed by the permanent style. *h. S.* Native of St. Domingo. Flowers white.

\* *Var. β, acutifolia* (D. C. prod. 2. p. 13.) leaves ovate, acuminate, spiny-toothed, smooth. *h. S.* Native of St. Domingo.

*Holly-leaved Myginda*. Shrub 4 feet.

5 M. MYRSINOIDES (H. B. et Kunth. nov. gen. amer. 7. p. 68. t. 620.) leaves somewhat distich, elliptical, acute, rounded at the base, serrulated, smooth, on short stalks; peduncles 1-flowered, 2-3 times longer than the leaves; flowers pentandrous. *h. S.* Native of Peru, in hot places, near Contumasa. The ovary in this and the preceding species is 2-celled, each cell containing 3 seeds. It is therefore probable that these two species may form a distinct genus.

*Myrsine-like Myginda*. Shrub 2 feet.

6 M. MYRTIFOLIA (Nutt. gen. 1. p. 109.) leaves oblong, blunt, serrated, smooth, with revolute edges; peduncles very short, usually solitary, 1-flowered; style short, club-shaped, 4-lobed at the apex. *h. H.* Native of North America, on the western coast. *Plex myrsinites*, Pursh. fl. sept. amer. 1. p. 119. Flowers small, white. Drupe containing only one seed at maturity, dark-purple, about the size of a pea. Leaves permanent, serrate in front, and entire behind.

*Myrtle-leaved Myginda*. Fl. May, Aug. Clt. 1818. Sh. 4 ft.

7 M. PALLENS (Smith in Rees' cycl. no. 4.) leaves elliptical, very obtuse, crenate, smooth, almost sessile; peduncles bifurcate, with a flower in the fork; style 4-lobed at the apex. *h. S.* Native of Antigua. Flowers white? with waved petals. Leaves yellowish-green.

*Pale-leaved Myginda*. Shrub 4 feet.

8 M. RHACOMA (Swartz. fl. ind. occ. p. 340.) leaves lanceolate-ovate, bluntish, crenated, on short stalks, smooth; peduncles dichotomous, cymosely-umbellate; style short, filiform, 4-lobed at the apex. *h. S.* Native of St. Domingo and Jamaica, in the sand by the sea-side, and many other parts of South America in a like situation. *Rhacoma crossopetalum*, Lin. spec.

169.—P. Browne, jam. t. 17. f. 1.—Jacq. icon. rar. t. 311. Flowers small, reddish. Drupe about the size of a red currant, containing one nut.

*Rhacoma Myginda*. Clt. 1798. Shrub 3 feet.

9 *M. LATIFOLIA* (Swartz, fl. ind. occ. 1. p. 342.) leaves elliptical, crenate, smooth, on short footstalks, coriaceous; peduncles trifid, few flowered; stigmas 2-4, almost sessile.  $\frac{1}{2}$ . S. Native of the Caribbee islands. Flowers small, white. Drupe ovate, about the size of pepper, drooping.

*Broad-leaved Myginda*. Fl. Ap. May. Clt. 1795. Sh. 3 ft.

10 *M. INTEGRIFOLIA* (Lam. dict. 4. p. 396.) leaves elliptical, blunt, entire, smooth, coriaceous, on short stalks; peduncles dichotomous, few-flowered; flowers dioecious; stigmas 4, sessile.  $\frac{1}{2}$ . S. Native of Martinique and St. Domingo. It is probably a species of *Ilex*, according to Kunth, but with the true habit of *Rhacoma*. *M. integrifolia* Guadalupensis, Spreng. syst. 1. p. 496. Flowers white?

*Entire-leaved Myginda*. Clt. 1826. Shrub 3 feet.

11? *M. BRASILIENSIS* (Spreng. syst. 1. p. 496.) leaves oblong, tapering to both ends, coriaceous, quite entire, shining, reticulated; panicles axillary, shorter than the leaves.  $\frac{1}{2}$ . S. Native of Brazil. Flowers whitish?

*Brazilian Myginda*. Shrub 3 feet.

12? *M. GONGONHA* (D. C. prod. 2. p. 13.) leaves oblong, rounded at the base, with a short acumen at the apex, marginate, remotely serrated; racemes axillary, sparingly branched; flowers sessile; branches terete.  $\frac{1}{2}$ . S. Native of Brazil, in the provinces of St. Paul and Minas Geraes, where it is called *Gongonha*. Cassine Gongonha, Mart. in Isis. 1824. p. 589. An infusion or decoction of the roots is a powerful diuretic; the leaves and branches possess the same quality, but in a less degree.

*Gongonha Myginda*. Shrub 6 feet.

*Cult.* A mixture of loam and peat will answer the species of *Myginda*, and ripened cuttings will root in sand, under a hand-glass; those of the stove species in heat.

II. LEPIONURUS (from *λεπις*, *lepis*, a scale, and *ουρα*, *oura*, a tail; in allusion to the pendulous bracteate spikes of flowers). Blum. bijdr. 1148.

*Lex. syst.* *Monœcia*, *Tetrândria*. Flowers monoecious from abortion. Calyx inferior, small, coloured, entire. Corolla deeply 4-parted, with spreading segments. Stamens 4, opposite the segments of the corolla; filaments very short, inserted in the base of the corolla. Ovary girded by a short fleshy margin. Stigmas 4, acute, sessile. Drupe baccate, fleshy, containing a 1-seeded nut. Embryo albuminous, inverted.—A shrub, with alternate, oblong, entire, smooth leaves, and axillary, pendulous spikes of flowers, before expansion covered with imbricate bractæas, each bractea covering 3 flowers.

1 *L. JAVANICUS*.  $\frac{1}{2}$ . S. Native of Java.

*Java Lepionurus*. Shrub 6 feet.

*Cult.* For culture and propagation, see stove species of last genus.

III. ILEX (this name is originally derived from *ac*, a point in Celtic; the leaves of several species are prickly). Lin. gen. no. 172. D. C. prod. 2. p. 13. *Aquifolium*, Tourn. inst. t. 371. Gært. fruct. 2. t. 92.

*Lex. syst.* *Tetrândria*, *Tetragynia*. Calyx 4-5-toothed, permanent. Corolla 4-5-cleft, sub-rotate. Stamens 4-5, alternating with the segments of the corolla, and inserted in its tube. Ovary sessile, 4-celled; stigmas 4, almost sessile, sometimes distinct, sometimes connected in one. Berry containing 4-5 1-seeded nuts. Seeds inverted; albumen fleshy.—Evergreen shrubs or trees, with the leaves usually coriaceous. Peduncles

many-flowered. Flowers small, usually white, hermaphrodite, rarely dioecious or polygamous from abortion.

† *Leaves spiny-toothed*.

1 *AQUIFOLIUM* (Lin. spec. 181.) leaves ovate or oblong acute, shining, waved, spiny-toothed at the apex; peduncles axillary, short, many flowered; flowers subumbellate.  $\frac{1}{2}$ . H. Native of Europe, in shady places. It is to be found in many parts of Britain in woods and forests, but still it is a truly doubtful native. Smith, eng. bot. t. 496. Fl. dan. 508. Mill. fig. 46. Black, icon. t. 205. The holly rises even to 30 feet high, and sometimes more. The flowers dirty white, hermaphrodite, dioecious, or polygamous. Berries roundish, red, crowned by the calyx, each containing 3 or 4 seeds. The holly is called also in English *Hulcr* and *Holme*. It is known by the name of *Hulcr* in Norfolk. In German it has a great variety of appellations; *Stechpalme*, *Stechelche*, *Stechbaum*, *Stechlaub*, *Hulse*, *Hulsenbaum*, *Hulsenstrauch*, *Hulst*, *Hulch*, *Holst*, *Hulze*, *Hullgenholz*, *Myrtendorn*, *Christdorn*, *Mausdorn*, *Zwieseldorn*, *Kleeschusch*, *Stechapsel*, *Stechwinde*, *Walddistel*. In Danish *Stikpalme*, *Marctorn*, *Christorn*, *Skoutidel*. In Swedish *Jernuck*, *Christorn*. In French, *Le Houx*, *le grand Housson*, *L'Agron grand Pardon*, and *Bois Franc*. In Italian, *Agrifolio*, *Alloro spinoso*. In Spanish, *Accho Agrifolio*. In Portuguese, *Azevinho*, *Agrifolio*, *Acrifolio*, *Aquifolio*. In Russian, *Wafescheld*, *Ostrokof*, *Padub*.—The holly makes an impenetrable fence, and bears cropping well, nor is its verdure, or the beauty of its scarlet berries, ever observed to suffer from the severest of our winters. It would be preferable to the hawthorn for hedges were it not for the slowness of its growth. A holly hedge should always be cropped in May. The wood is the whitest of all hard woods, and useful for various purposes. It is used in fineering, and is sometimes stained black to imitate ebony. It is much used with box, yew, white-thorn, &c. in the small trinkets, and other works carried on in and about Tunbridge, commonly called Tunbridge-ware. The bark also affords the substance called bird-lime, which is prepared by boiling it till the green part is capable of being separated from the white, then laying it in a cool cellar for a few days, afterwards pounding it till it becomes a tough paste, washing it repeatedly till it gets quite clear; then placing it in an earthen vessel to ferment or become fine, when it will be fit for use.

There are numerous varieties of this tree, which are highly ornamental in clumps, borders, and other parts of pleasure grounds, affording much variety when judiciously intermixed. The most remarkable of these are as follow: the *smooth green-leaved*, the *common green-leaved*, the *narrow-serrated green-leaved*, the *green-leaved yellow-berried*, the *box-leaved green*, and the *hedge-hog green*, the *prickly silver-striped-leaved hedge-hog*, the *gold-striped-leaved hedge-hog*, the *blotched-leaved hedge-hog*, *yellow and white*, the *smooth white-striped-leaved*, the *smooth yellow-white-striped-leaved*, the *smooth blotched-leaved*, the *smooth narrow-striped-leaved*, the *blotched-leaved yellow-berried*, the *cream-coloured-leaved*, the *copper-coloured-leaved*, the *white-leaved*, the *mottled-edged-leaved*, the *painted lady*, the *various-leaved*, the *thick-leaved holly*, &c.

*Var. β*, *echinatum* (Mill. dict. no. 2.) leaves full of spines on the disk, as well as the edges.  $\frac{1}{2}$ . H. Said to be originally from North America. It does not change by culture.

The leaves in young plants are always spiny-toothed, but in the adult ones they are usually entire. The plant, native of Cochin-china, is said to bear black berries; it is therefore probable that this may turn out to be a distinct species.

*Prickly-leaved* or common Holly. Fl. May, June. Britain. Tree 30 feet.

2 *I. RECURVA* (Link, enum. 1. p. 247.) leaves oblong, acu-

minated, regularly spiny-serrated; spines of the young leaves recurved; peduncles short, many-flowered. *h. H.* Native of? *Ilex Aquifolium*, var. *γ serratum*, Desf. cat. 230. Flowers whitish. Berries red.

*Recurved-spined Holly.* Fl. May, June. Clt. ? Treg.

3 *I. BALEARICA* (Desf. arb. 2. p. 262.) leaves ovate, acute, shining, flat, entire or spiny-toothed; umbels axillary, few-flowered, short. *h. G.* Native of Minorca and Madeira. *I. Aquifolium*, var. *δ*, Lam. dict. 3. p. 145. *I. Maderensis*, Willd. enum. suppl. 8. ex Link. Flowers white.

*Minorca Holly.* Fl. May, July. Clt. 1815. Tree 10 feet.

4 *I. OPAEA* (Ait. hort. kew. 1. p. 177.) leaves ovate, flat, coriaceous, acute, sinuately-toothed, spiny, smooth, but not shining; flowers at the base of the annual shoots; calycine teeth acute. *h. H.* Native of North America, from Canada to Carolina, in sandy woods, particularly plentiful in the State of New Jersey. Tree sometimes 80 feet high, and 4 in diameter. Flowers white. Berries scarlet.

*Opaque Holly.* Fl. May, June. Clt. 1744. Tree 80 feet.

5 *I. LAXIFLORA* (Lam. dict. 3. p. 147.) leaves ovate, sinuately toothed, spiny, coriaceous, smooth; stipulas awl-shaped; peduncles many-flowered, loosely branched, scattered above the axillæ of the leaves on the young branches; calycine teeth acute. *h. H.* Native of Carolina, in shady sandy woods. Flowers white. Berries yellowish-red.

*Loose-flowered Holly.* Fl. May, June. Clt. 1811. Shrub 5 feet.

6? *I. MADAGASCARIENSIS* (Lam. dict. 3. p. 148.) leaves ovate, acute, spiny, smooth; pedicels axillary, 1-flowered; berries ovate, 2-seeded. *h. S.* Native of Madagascar.

*Madagascar Holly.* Tree 30 feet.

7 *I. DIPYRENA* (Wall. in fl. ind. 1. p. 473.) leaves elliptical-oblong, mucronate, on short stalks, even, hardly wavy, remotely spiny-serrated; flowers sessile, in axillary fascicles; berries 2-seeded. *h. G.* Native of Nipaul, where it is called *Caulah*; also on the confines of Chinese Tartary, where it is called *Kundar*. Branchlets angular. Flowers small, white. Berries dark-brown. The tree is called *Gumshing* in the Bhotia language.

*Two-seeded Holly.* Fl. April, May. Shrub 12 feet.

8? *I. LONGIFOLIA* (Neuw. bras. 2. ex flora. 1821. p. 301.) leaves oblong, spiny, with 6 recesses on both sides, wavy, tridentate at the apex, cuneated at the base. *h. S.* Native of Brazil.

*Long-leaved Holly.* Tree.

\* \* *Leaves toothed, serrated, or crenate, but not spiny.*

9 *I. PERADO* (Ait. hort. kew. 1. p. 169.) leaves ovate, with an entire acumen, or having a very few teeth, shining; umbels short, axillary, few-flowered. *h. G.* Native of Madeira. *I. Maderensis*, Lam. dict. 3. p. 146. Flowers white or reddish. Berries large, red.

*Var. β, obtusa* (D. C. prod. 2. p. 14.) leaves blunt, emarginate. Duh. ed. nov. 1. t. 2.

*Perado Holly.* Fl. May, June. Clt. 1760. Tree.

10 *I. CHINENSIS* (Sims, bot. mag. t. 2043.) leaves oblong, tapering to both ends, with cartilaginous toothletted edges; teeth hardly pungent; petioles and midrib villous; corymbs lateral; peduncles dichotomous. *h. G.* Native of China. Leaves somewhat spotted above. Flowers white.

*China Holly.* Fl. July. Clt. 1814. Tree 20 feet.

11 *I. HETEROPHYLLA*; leaves opposite, stalked, oval, acute at both ends, quite entire, or spiny-toothed; peduncles crowded, axillary, 1-flowered. *h. G.* Native of Japan. *I. Aquifolium* var. *heterophylla*, Blum. bijdr. 1150.

*Variable-leaved Holly.* Tree 30 feet.

12 *I. MACROPHYLLA* (Blum. bijdr. 1150.) leaves ovate or oval-oblong, obtuse, acute at the base, serrated, coriaceous, glabrous, shining above; racemes axillary, about equal in length to the petioles; branches smooth, striated. *h. G.* Native of Japan.

*Large-leaved Holly.* Tree.

13 *I. TRIFLORA* (Blum. bijdr. 1150.) leaves oval-lanceolate, acute at both ends, serrulated, veinless, puberulous on the middle nerve, and on the branches; fascicles of flowers axillary and lateral, usually 3-flowered. *h. S.* Native of Java.

*Three-flowered Holly.* Tree.

14 *I. CASSINE* (Ait. hort. kew. p. 170.) leaves ovate-lanceolate, sharply serrated, flat, smooth, as well as midrib petioles and branches; peduncles lateral, corymbosely-branched. *h. H.* Native of North America, from Lower Carolina to Florida, in swamps. *Aquifolium Carolinense*, Catesb. car. 1. t. 31. *I. Caroliniana*, Mill. dict. no. 3. *I. cassinoides*, Link. enum. 1. p. 148. Flowers white. Berries red. The leaves of this species are used in the same way as those of *I. vomitoria*.

*Cassine-like or Broad-leaved Dahoon Holly.* Fl. Aug. Clt. 1700. Shrub 10 feet.

15 *I. ANGUSTIFOLIA* (Willd. enum. 1. p. 172.) leaves linear-lanceolate, serrated at the apex, with the edges rather revolute, smooth, as well as the midrib petioles and branches; cymes lateral, stalked. *h. H.* Native of North America, from Virginia to Georgia, in deep swamps. *I. myrtifolia*, Walt. carol. 241. *I. rosmarinifolia*, Lam. ill. 1. p. 356. Flowers white. Berries red?

*Narrow-leaved Holly.* Fl. June. Clt. 1806. Shrub 8 feet.

16 *I. VOMITORIA* (Ait. hort. kew. 1. p. 278.) leaves oblong or elliptical, blunt at the apex, crenate-serrated, and are, as well as the branchlets smooth; umbels lateral, nearly sessile. *h. H.* Native of North America along the sea coast, from Carolina to Florida. *I. Cassine vera*, Walt. fl. carol. 241. *I. ligustrina*, Jacq. coll. 4. p. 105. icon. rar. t. 310. Wendl. hort. t. 31. *Cassine Peragua*, Mill. fig. t. 83. f. 2. — *I. Cassena*, Michx. fl. 1. p. 229. *I. religiosa*, Bart. fl. virg. 69. *I. Floridana*, Lam. ill. no. 1731. Flowers white. Berries red. The leaves of this handsome shrub are used by the Indians to make their black drink, so much in use among them, not only as a medicine, but also as a drink of etiquette on their councils, when matters of consequence are to be transacted. At a certain time of the year the Indians come down in droves, from a distance of some hundred miles, to the coast, for the leaves of this tree, which is not known to grow at any considerable distance from the sea shore. They make a fire on the ground, and putting a great kettle of water on it, they throw in a large quantity of these leaves, and setting themselves round the fire, from a bowl that holds about a pint they begin drinking large draughts, which in a very short time occasion them to vomit easily and freely; thus they continue drinking and vomiting for the space of two or three days, until they have sufficiently cleansed themselves, and then every one taking a bundle of the branches to carry away with him, they all retire to their habitations.

*Emetic Holly or South-sea Tea.* Fl. June, July. Clt. 1700. Shrub 12 feet.

17 *I. OVALIFOLIA* (Meyer. esseq. 91.) leaves oval, serrate-crenate, coriaceous, with revolute edges, smooth; flowers racemose, axillary, and terminal; pedicels corymbosely. *h. S.* Native of South America, about Essequibo. The leaves are 3 times larger than those of *I. vomitoria*. Flowers white.

*Oval-leaved Holly.* Shrub 6 feet.

18 *I. ELLIPTICA* (H. B. et Kunth, nov. gen. amer. 7. p. 70. but not of D. Don.) leaves elliptical, rounded at both ends, sharply serrulated towards the apex, coriaceous, quite smooth, shining above; peduncles 1-flowered, and arc, as well as the

is therefore reasonable to suppose that his plant is identical with that from Paraguay. Since the export of tea from Paraguay has been prohibited by the present Dictator, Dr. Francia, the inhabitants of the other States, who were formerly supplied from Paraguay, are now obliged to use that from Brazil, which is found to be much inferior. Persons ignorant of the specific distinctions between the two trees have attributed the inferiority of the Brazil kind merely to the different mode of preparing the leaves.

*Gongonha* or Brazilian Mate or Tea. Tree.

26 I. MARTINIANA (Lamb. pin. append. t. 8.) leaves oval-oblong, crenated, coriaceous, shining, short-acuminate; racemes aggregate, compound, smoothish; flowers tetrandrous. *h. S.* Native of Guiana. Berry red, containing 4 nuts. Mr. Lambert thinks that the properties of this plant are the same as those of *Ilex Paraguensis*, from the habit being similar.

*Martin's Holly* or Guiana Mâte. Tree 30 feet.

27 I. EMARGINATA (Thunb. jap. 78.) leaves obovate, emarginate, crenated, with revolute edges; flowers axillary, twin, stalked. *h. G.* Native of Japan, near Nagasaki. Flowers white.

*Emarginate-leaved Holly.* Shrub 10 feet.

28 I. ? CUNEIFOLIA (Lin. spec. 181.) leaves wedge-shaped, smooth, equally tricuspidate. *h. H.* Native of North America. Flowers and fruit unknown.

*Var. β, Bonariensis* (D. C. prod. 2. p. 16.) leaves ovately wedge-shaped, smooth, tricuspidate, with the middle lobe twice as long as the lateral ones. *h. G.* Native of Buenos Ayres. Flowers axillary, solitary, almost sessile, surrounded by scales. Lam. dict. 3. p. 148.

*Wedge-leaved Holly.* Shrub 10 feet.

29 I. CRENATA (Thunb. jap. p. 78.) leaves ovate, crenate, blunt, with revolute edges; peduncles drooping, scattered on the branches, usually 3-flowered. *h. G.* Native of Japan. Flowers white.

*Crenate-leaved Holly.* Shrub.

30 I. SERRATA (Thunb. jap. 78.) leaves ovate, acute, ciliate serrated; pedicels axillary, solitary, 1-flowered, drooping. *h. G.* Native of Japan, in the island of Nipon. Flowers white.

*Serrate-leaved Holly.* Fl. June. Shrub.

31 I. LATIFOLIA (Thunb. jap. 79.) leaves ovate, bluntish, serrated, shining above, with revolute edges; pedicels aggregate, longer than the petiole, and rising above the axillæ of the leaves. *h. G.* Native of Japan. Flowers white.

*Broad-leaved Holly.* Tree 20 feet.

32 I. MYRICOIDES (H. B. et Kunth, nov. gen. amer. 7. p. 71.) leaves oblong, acute, cuneated at the base, somewhat cordate, serrulated, smooth, as well as the branches; peduncles 3-flowered, twice or thrice longer than the petioles; flowers 4-petalled. *h. G.* Native of New Granada, on the mountains between Meneses and Pasto. Flowers whitish.

*Myrica-like Holly.* Tree 6 feet.

33? I. HIPOCRATEOIDES (H. B. et Kunth, nov. gen. amer. 7. p. 71.) leaves oblong, somewhat acuminate, crenate-serrulated, veiny, coriaceous, rather shining, and arc, as well as the branchlets, smooth; peduncles dichotomous, 3-7-flowered, 2 or 3 times longer than the petioles; flowers 4-petalled. *h. S.* Native of South America? Flowers white.

*Hippocratea-like Holly.* Shrub.

34? I. LAURINA (H. B. et Kunth, nov. gen. amer. 7. p. 71.) leaves lanceolate-oblong, acuminate, acute at the base, remotely serrulated, netted, coriaceous, and arc, as well as the branches, smooth; peduncles 1-3-flowered, in crowded fascicles, length of petioles; flowers 4-petalled. *h. S.* Native of South America?

*Laurel-like Holly.* Tree.

\*\*\* *Leaves quite entire or nearly so.*

35 I. CANARIENSIS (Poir. suppl. 3. p. 67.) leaves ovate-lanceolate, flat, somewhat acute, quite entire, shining; umbels axillary, few-flowered; peduncles longer than the petioles. *h. I.*

II. Native of the Canary Islands. Flowers white, truly dioecious. Fruit black.

*Canary-Island Holly.* Fl. June, July. Clt. 1820. Tr. 20 ft.

36 I. DAHOON (Walt. fl. car. 241.) leaves lanceolate-elliptical, coriaceous, almost quite entire, with the edges a little revolute, and with the midrib, petioles, and branchlets villous; peduncles lateral and terminal, in panicle corymbs. *h. H.* Native of North America, from Carolina to Florida, in open swamps. I. Cassine, Willd. hort. berl. 1. t. 31. Flowers white. Berries red. An elegant shrub.

*Var. β, laurifolia* (Nutt. in Sillim. amer. journ. 5. 1822. p. 289.) leaves larger, elliptical, acutish, permanent; pedicels elongated, usually 3-flowered. *h. H.* Native of Eastern Florida. Very like *I. Dahoon*.

*Dahoon Holly.* Fl. May, June. Clt. 1746. Shrub 8 feet.

37 I. LIGUSTRIFOLIA; leaves obovate-lanceolate, quite entire, with the edges revolute, midrib, petioles, and branches smooth; cymes lateral. *h. H.* Native of North America, from Virginia to Georgia, in deep swamps. I. angustifolia, Nutt. gen. amer. 1. p. 109. Flowers white. Berries red.

*Privet-leaved Holly.* Fl. June, July. Shrub 6 feet.

38 I. MYRTIFOLIA (Lam. ill. no. 1732.) leaves ovate, acute at both ends, quite entire; flowers lateral, in fascicles, dioecious. *h. S.* Native of the Caribbee islands. Flowers white. This species has the habit of a *Sideroxylon*.

*Myrtle-leaved Holly.* Clt. 1806. Shrub 10 feet.

39 I. NIPAULENSIS (Spreng. syst. app. p. 18.) leaves elliptical, quite entire, acute at both ends; umbels globose, stalked, solitary, puberulous, shorter than the petioles. *h. H.* Native of Nipaul. I. elliptica, D. Don, prod. fl. nep. p. 189. but not of Kunth. Flowers white.

*Nipaul Holly.* Shrub 8 feet.

40 I. CYMOSEA (Blum. bijdr. 1149.) leaves oblong, bluntly acuminate, quite entire, smooth; cymes dichotomous, axillary; berry 8-seeded. *h. S.* Native of Java. Flowers dioecious.

*Cymose-flowered Holly.* Tree 50 feet.

41 I. SPICATA (Blum. bijdr. 1149.) leaves oblong-lanceolate, quite entire, coriaceous, quite smooth, with revolute margins; spikes axillary and lateral; berry 6-8-seeded. *h. S.* Native of Java, in woods on the higher mountains.

*Spike-flowered Holly.* Tree 20 feet.

42 I. MACOUCOA (Pers. ench. 1. p. 152.) leaves oval or somewhat ovate, sometimes tapering to an obtuse emarginate point, coriaceous, smooth, quite entire; peduncles numerous, cymose, axillary. *h. S.* Native of Guiana and Cayenne, in woods, as well as of the islands of St. Domingo and Trinidad. *Macoucoua Guianensis*, Aubl. guian. 1. t. 34. *Ilex acuminata*, Willd. spec. 1. p. 711. *Cassine Maurocœnia*, Sieb. pl. exsicc. trin. no. 81. Flowers white. Berries red, ovate, 2-celled. The tree is called *Macoucou* in Guiana.

*Macoucoua Holly.* Tree 10 feet.

43? I. OBCORDATA (Swartz, fl. ind. occ. 1. p. 338.) leaves obcordate, coriaceous, quite entire, shining, nerveless; stipulas small, prickly; peduncles 3-flowered, axillary, shorter than the petioles. *h. S.* Native of Jamaica, on the Blue Mountains. Flowers white. Style very short. Stigma blunt. Berries red, 1-celled.

*Obcordate-leaved Holly.* Shrub 6 feet.

44 I. ASIATICA (Lin. spec. 710.) leaves broad-lanceolate, obtuse, quite entire. *h. G.* Native of the East Indies.

*Asiatic Holly.* Shrub?

45 *I. INTE'GRA* (Thunb. fl. jap. p. 77.) leaves oblong, blunt, quite entire; umbels axillary, sessile; pedicels 1-flowered, usually 4 together. *h. G.* Native of Japan.

*Entire-leaved Holly.* Shrub 6 feet.

46 *I. ROTUNDA* (Thunb. fl. jap. 77.) leaves broad, oval, acuminate, entire, smooth; peduncles umbelliferous, pubescent, longer than the petioles. *h. G.* Native of Japan. Branches knotted. Flowers pentandrous.

*Round-leaved Holly.* Shrub 8 feet.

47 *I. BUMELIOIDES* (H. B. et Kunth, nov. gen. amer. 7. p. 71.) branches smooth; leaves obovate, mucronate, decurrent at the base, almost quite entire, coriaceous, shining above; peduncles 3-4 together, 1-flowered. *h. G.* Native of Peru, in the province of Quito, near Loxa. Flowers unknown. Berries 4-5-seeded.

*Bumelia-like Holly.* Tree 16 feet.

*Cult.* All kinds of *Hollies* are much esteemed on account of their evergreen leaves. The hardy kinds are usually increased by budding or grafting on the common Holly, which is easily reared from seed, but they will also root freely by cuttings taken off at a joint in ripened wood, planted in sand in a shady situation, with a hand-glass placed over them. The greenhouse and stove kinds may be struck in the like manner, but those of the latter will require a little heat. The berries of all kinds of Holly should be gathered when they are ripe, mixed with sand, and turned over frequently till the October following, when they should be sown in beds covered over with mould three quarters of an inch thick, or the berries may remain on the trees till spring, when they may be sown. In general they do not vegetate till the second year.

IV. PRINOS (*πρινος*, *prinos*, is the Greek name of the Holly, which the present genus much resembles). Lin. gen. no. 461. D. C. prod. 2. p. 16.—*Agèria*, Adans. fam. 2. p. 166.

LIN. SYST. *Hexándria*, *Monogýnia*, or *Polygámia*, *Diœcia*. The character is the same as *Ilex*, but the flowers are 6-cleft, hexandrous, usually dioecious or polygamous from abortion, and the fruit contains 6 nuts.—Shrubs, with alternate, deciduous or permanent leaves, and axillary, usually 1-flowered pedicels.

§ 1. *Prinoïdes* (see genus for derivation). D. C. prod. 2. p. 16. Flowers usually 4-5-cleft.

1 *P. DECIDUUS* (D. C. prod. 2. p. 16.) leaves deciduous, elliptic-lanceolate, tapering into the petiole, serrated, with the middle nerve villous beneath; pedicels axillary, those bearing the male flowers aggregate, and those bearing the female ones solitary. *h. H.* Native of North America, from Virginia to Georgia, on rocky shady banks of rivers. *Ilex prinoïdes*, Ait. hort. kew. 2. p. 278. *Ilex decidua*, Walt. fl. car. 241. Flowers white. Berries crimson, large.

*Var. β, æstivâlis* (Lam. dict. 3. p. 147.) adult leaves smooth on both surfaces. *h. H.* Native of North America. *Ilex æstivâlis*, Lam. f. c. Flowers white.

*Deciduous Winter-berry.* Fl. June, July. Clt. 1736. Shrub 4 feet.

2 *P. AMBIGUUS* (Michx. fl. bor. amer. 2. p. 236. but not of Pursh.) leaves deciduous, oval or elliptical, mucronate, entire, quite smooth; pedicels bearing the male flowers, crowded at the bottom of the branchlets, those bearing the female ones solitary, upon long pedicels. *h. H.* Native of Carolina. Wats. dend. brit. t. 29. Cassine Caroliniâna, Walt. fl. car. p. 242. The leaves, according to Nuttall, are entire, but in De Candolle's specimen they are serrated at the apex. Perhaps distinct plants. Flowers white. Berries red.

*Ambiguous Winter-berry.* Fl. June, Aug. Clt. 1812. Sh. 4 ft.

3 *P. NITIDUS* (Vahl. ecl. 2. p. 26.) leaves oblong-ovate, serrated, shining, membranous; pedicels axillary, 1-flowered;

flowers tetrandrous. *h. G.* Native of Montserrat. The leaves are probably deciduous. Branches angular.

*Shining-leaved Winter-berry.* Shrub.

4 *P. DIOÏCUS* (Vahl. ecl. 2. p. 25. t. 14.) leaves oblong-ovate, somewhat serrated, smooth, coriaceous; peduncles axillary, usually 1-flowered, flowers dioecious, tetrandrous. *h. H.* Native of the island of Montserrat. Flowers white. Berries red. Perhaps a species of *Ilex*.

*Dioecious Winter-berry.* Shrub.

§ 2. *Agèria* (D. C. prod. 2. p. 17.) Flowers usually 6-cleft. Leaves deciduous.

5 *P. VERTICILLATUS* (Lin. spec. 471.) leaves oval, deciduous, acuminate, serrated, pubescent beneath; fascicles of male flowers axillary, umbel-like; female ones aggregate, all 6-parted. *h. H.* Native of North America, from Canada to Virginia, in sandy wet woods, and on the borders of swamps. Duh. arb. 1. t. 23. Wats. dend. brit. t. 30. *P. padifolius*, Willd. enum. 394. *P. Gronovii*, Michx. fl. bor. amer. 2. p. 236. *P. confertus*, Mœnch. Flowers white. Berries red or crimson.

*Whorled Winter-berry.* Fl. June, Aug. Clt. 1736. Shrub 8 feet.

6 *P. DUBIUS*; leaves deciduous, oval, acuminate at both ends, mucronately-serrated, pubescent beneath; flowers 4-5-cleft; male ones crowded at the bottom of the branches, female ones solitary. *h. H.* Native of North America, in sandy woods, and on the borders of swamps, from New Jersey to Carolina. *P. ambiguus*, Pursh. fl. amer. sept. 1. p. 220. Flowers white. Berries red, larger than those of *P. verticillatus*.

*Doubtful Winter-berry.* Fl. July, Aug. Clt. 1736. Tree 12 ft.

7 *P. LEVIGATUS* (Pursh. fl. sept. amer. 1. p. 220.) leaves deciduous, lanceolate, with adpressed serratures, acuminate, smooth on both surfaces, shining, hardly pubescent on the nerves beneath; flowers 6-cleft, male ones scattered; female ones axillary, solitary, almost sessile. *h. H.* Native of North America, on the Alleghany mountains, from New York to Virginia. Wats. dend. brit. t. 28. Flowers white. Berries large, dark-red.

*Smooth-leaved Winter-berry.* Fl. July. Clt. 1812. Sh. 8 ft.

8 *P. LANCEOLATUS* (Pursh. fl. sept. amer. 2. p. 17.) leaves deciduous, lanceolate, finely and remotely serrated, smooth on both surfaces; male flowers aggregate, triandrous; female ones usually twin, stalked, 6-cleft. *h. H.* Native of Georgia and Carolina, in the lower counties. Flowers white. Berries small, scarlet.

*Lanceolate-leaved Winter-berry.* Fl. June, July. Clt. 1811. Shrub 8 feet.

§ 3. *Wintèrlia* (probably from the name of some botanist). Mœnch. meth. 74. D. C. prod. 2. p. 17. Flowers for the most part 6-cleft. Leaves permanent.

9 *P. GLABER* (Lin. spec. 471.) branches rather pubescent; leaves evergreen, cuneate-lanceolate, coriaceous, smooth, shining, a little toothed at the apex; pedicels axillary, usually solitary, for the most part 3-flowered. *h. H.* Native of North America, from Canada to Florida, in sandy shady woods. Flowers white. Berries black, called in Jersey *Ink-berries*. A low and handsome shrub.

*Glabrous Winter-berry.* Fl. July, Aug. Clt. 1759. Shrub 3 to 4 feet.

10 *P. ATOMARIUS* (Nutt. gen. amer. 1. p. 213.) leaves evergreen; cuneate-oval, acute, coriaceous, somewhat serrated at the apex, bearing black atoms or dots beneath; young branches a little clammy; pedicels lateral, 1-flowered. *h. H.* Native of Georgia, in woods on the banks of rivers. Flowers white. Berries dark.

*Atom-bearing* Winter-berry. Fl. July, Aug. Clt. 1820. Shrub 2 feet.

11 *P. CORIACEUS* (Pursh, fl. sept. amer. 1. p. 221.) leaves evergreen, cuneate-lanceolate, coriaceous, smooth, shining, quite entire; corymbs axillary, sessile, very short, many-flowered; flowers 6-cleft. *h. S.* Native of Georgia in sandy woods, near the banks of rivers. *Wats. dendr. brit. t. 27.* Flowers white. A handsome tall shrub, with the appearance of *Ilex Dahoon*. There are two varieties of this shrub, the one with broader obovate-lanceolate leaves, the other with narrower lanceolate acute leaves.

*Coriaceous-leaved* Winter-berry. Fl. June, July. Clt. 1820. Shrub 10 feet.

12 *P. MONTANUS* (Swartz, fl. ind. occ. 1. p. 622.) leaves evergreen, ovate, serrated all around the edges, quite smooth and shining on both surfaces; peduncles axillary, 3-flowered. *h. S.* Native of Jamaica among bushes on the mountains. Flowers small, white. Berries roundish, black.

*Mountain* Winter-berry. Tree 30 feet.

13 *P. SIDEROXYLOIDES* (Swartz, fl. ind. occ. 1. p. 624.) leaves roundish, obtuse, quite entire, somewhat coriaceous; pedicels 4-8, axillary, crowded, 1-flowered, longer than the petioles. *h. S.* Native of the Caribbee Islands. Flowers white. The wood is hard.

*Iron-wood-like* Winter-berry. Tree 20 feet.

*Cult.* The hardy kinds of *Prinos* are well adapted for small shrubberies; they will grow well in any light soil, but prefer peat, and are easily increased by laying down the shoots or by seeds. The stove species will grow in a mixture of loam and peat, and ripened cuttings will root in sand under a hand-glass, in a moderate heat. The seeds will not vegetate till the second year.

† *Genera allied to Ilicinæ, but differ materially in some particulars from the rest of the order.*

V. STROMBOSIA (*στρομβος*, *strombos*, a turban, a top; shape of fruit). Blum. bijdr. 1154.

*Lin. syst. Pentandria, Monogynia.* Calyx inferior, small, flat, obsoletely-crenulated. Petals 5, conniving, campanulate, villous in the throat. Stamens 5, short, opposite the petals and inserted in them. Anthers bursting inwards, didymous. Ovary immersed in the disk, 5-celled, cells 1-seeded; or 3-celled, cells 2-seeded. Style short, crowned by an obtuse stigma, which is obsoletely toothed. Fruit baccate, turbinate, substipitate, 1-seeded from abortion.—A tall tree, with alternate, oblong, acuminate, entire, smooth, shining leaves, and axillary fascicles of greenish flowers.

1 *S. JAVA'NICA* (Blum. bijdr. 1155.) *h. S.* Native of Java, in mountain woods.

*Java* Strombosia. Tree 50 feet.

*Cult.* See stove species of *Prinos* for culture and propagation.

VI. LEUCOXYLON (from *λευκος*, *leukos*, white, *ξυλον*, *xylon*, wood; wood white). Blum. bijdr. 1169.

*Lin. syst. Polygamia, Diœcia.* Flowers polygamous from abortion. Calyx inferior, 4-parted, with the segments obtuse and imbricate. Corolla subcampanulate, 4-parted. Male flowers with about 12-14 stamens, which are partly hypogynous and partly adnate to the base of the corolla, and inclosed in it. Anthers 2-celled. Female flowers with a 4-celled ovary, each cell containing many seeds. Style 2-parted, crowned by 2 emarginate stigmas. Drupe corticate, 1-celled, containing 1-2 1-seeded bony nuts. Embryo inverted in cartilaginous albumen. A tall tree with spreading branches, with the branchlets and

leaves distich. Leaves small, alternate, approximate, elliptic-lanceolate, coriaceous, veinless, shining above but silky-pubescent beneath as well as the branchlets. Flowers axillary, male ones crowded, female ones solitary. According to Blume, the genus has the habit of *Ternstroemia*, but it is more nearly allied to *Ebenaceæ* and *Ternstroemiaceæ*, but we think it is still nearer to *Ilicinæ*.

1 *L. BUXIFOLIUM* (Blum. bijdr. 1169.) *h. S.* Native of Java, in mountain woods, where it is called *Kimerak*.

*Box-leaved* Leucoxyllum. Fl. Feb. Tree 60 feet.

*Cult.* For culture and propagation see stove species of *Prinos*.

VII. RHAPSTYLUM (*ῥαπτος*, *rhapstos*, sewed together; and *στυλος*, *stylos*, a style; styles joined together). H. B. et Kunth, nov. gen. amer. 7. p. 78.

*Lin. syst. Decandria, Monogynia.* Calyx 5-cleft, with ovate, equal segments. Petals 5, sessile, valvate in æstivation, acute, equal, longer than the calyx, hypogynous. Disk wanting. Stamens 10, hypogynous, shorter than the corolla. Filaments dilated at the base and subulate at the apex, adhering together and with the petals at the base, smooth, opposite the petals. Anthers 2-celled, bursting inwards. Ovary superior, large, conical, 3-celled; ova solitary, pendulous. Stigma sessile, 3-lobed.—An unarmed, smooth tree, with alternate, slender branches, and alternate, entire, membranous, exstipulate leaves. Flowers minute, white, in fascicles in the axils of the leaves.

1 *R. ACUMINATUM* (H. B. et Kunth 7. p. 79. t. 621.) *h. S.* Native of New Granada.

*Acuminate-leaved* Rhapstylum. Shrub 6 feet.

*Cult.* For culture and propagation see stove species of last genus.

ORDER LXVII. RHAMNÆ (plants agreeing with *Rhamnus* in important characters). R. Br. gen. rem. p. 22. D. C. prod. 2. p. 19. Brogn. mem.—*Rhamnorum*, Gen. Juss.

Calyx monosepalous, 4-5-cleft (f. 4. B. a. D. c.), with the tube adhering to the base of the ovary (f. 6. C. d. B. f.); lobes valvate when in the bud. Petals 4-5 (f. 4. D. a. B. c.), cucullate (f. 7. A. h.) or convolute (f. 6. C. c.), rarely wanting, alternating with the lobes of the calyx, very often of the form of a scale, all inserted in the mouth of the calyx. Stamens 4-5, opposite the petals (f. 4. B. c.). Anthers 1- (f. 7. D. c.) 2-celled (f. 6. C. b.). Ovary free, or adhering to the calyx more or less, always immersed in the disk when there is any, 2-3 (f. 6. E. g.) rarely 4-celled, each cell containing 1 erect seed (f. 6. E. g.). Style 1-3. Stigmas 2-3 (f. 6. E. c.). Fruit fleshy (f. 5. F. k.) indehiscent or dry, tricoecous (f. 6. E. g.). Seeds erect. Albumen fleshy, rarely wanting. Embryo straight, slender, about equal in length to the seed, with large, flat cotyledons, and a short inferior radicle.—Trees or shrubs, with simple, alternate, rarely opposite leaves, usually furnished with stipulas. Flowers small, usually greenish-yellow. This order is nearly allied to *Celastrinæ*, but differs in the sepals or lobes of the calyx being valvate in æstivation, not imbricate, and in the stamens being opposite the petals, not alternating with them, as well as in the ovary being more or less adnate to the calyx, not distinct from it. It also comes near to *Byttneriaceæ* in the æstivation of the calyx, but is distinguished from it by the insertion of the stamens. Throughout this order there is a remarkable agreement between the inner bark and the

fruit, especially in several species of *Rhamnus*, in which they both are purgative and emetic, and in some degree astringent. Many species of *Zizyphus*, however, bear wholesome and agreeable fruit. The berries of the greater number yield yellow and green dyes, under the hands of the chemist, of much importance to manufacture. The bark of *Ceanothus coriuleus* is esteemed febrifugal in Mexico.

*Synopsis of the Genera.*

1 *PALIURUS*. Calyx spreading, 5-cleft (f. 4. A. a.). Petals obovate, convolute (f. 4. A. b.). Stamens exserted (f. 4. A. c.). Anthers 2-celled (f. 4. A. c.). Disk flat (f. 4. A. d.) pentagonal. Styles 3. Fruit dry, indehiscent (f. 4. A. g.), containing a 3-celled nut (f. 4. A. h.), winged in the circumference (f. 4. A. f.).

2 *ZIZYPHUS*. Calyx spreading (f. 4. B. a.), 5-cleft. Petals obovate, unguiculate (f. 4. B. b.), convolute. Stamens exserted (f. 4. B. c.). Anthers 2-celled (f. 4. B. c.). Disk flat (f. 4. B. f.), pentagonal. Styles 2-3 (f. 4. B. g.). Fruit fleshy, containing a 1-2-celled nut (f. 4. B. h.).

3 *SPHEROCARYA*. Calyx 5-parted. Petals minute, ovate, obtuse. Stamens short. Disk none. Style 1. Drupe fleshy, containing a 1-celled, 1-seeded nut.

4 *CONDALIA*. Calyx spreading, 5-cleft (f. 4. C. a.). Petals wanting. Anthers 2-celled (f. 4. C. c.). Disk flat, pentagonal (f. 4. C. c.). Style 1. Fruit drupaceous, containing a 1-celled nut (f. 4. C. d.).

5 *BERCHEMIA*. Calyx tubular, 5-cleft (f. 4. E. a.). Petals convolute (f. 4. E. c.). Stamens inclosed (f. 4. E. d.). Anthers 2-celled (f. 4. E. c.). Disk annular (f. 4. E. f.), nearly flat. Style simple. Fruit dry, 2-celled (f. 4. E. g.).

6 *VENTILAGO*. Calyx spreading, 5-cleft (f. 4. D. c.). Petals obovate, convolute (f. 4. D. a.). Stamens exserted (f. 4. D. b.). Anthers 2-celled (f. 4. D. b.). Disk fleshy, flat. Style compressed, bidentate (f. 4. D. j.). Fruit indehiscent (f. 4. D. h.), woody, 1-celled, 1-seeded, winged at the apex (f. 4. D. k.).

7 *SAGERETIA*. Calyx urceolate, 5-cleft (f. 4. F. a.). Petals convolute or cucullate (f. 4. F. c. b.). Anthers 2-celled (f. 4. F. f.). Disk thick, cup-shaped. Ovary 3-celled (f. 4. F. d.). Style short, thick (f. 4. F. g.).

8 *RHAMNUS*. Calyx urceolate (f. 5. A. b. C. b.), 4-5-cleft (f. 5. A. a. C. a.). Petals emarginate (f. 5. C. c.), or wanting. Anthers 2-celled (f. 5. A. d.). Disk thin (f. 5. C. c.). Styles 3-4, connected (f. 5. A. g.), or free. Fruit baccate, containing 3-4, rarely 2, little nuts (f. 5. A. j. B. f.).

9 *SCUTIA*. Calyx urceolate, 5-cleft (f. 6. A. g.). Petals flattish, emarginate (f. 6. A. c. f.). Anthers 2-celled (f. 6. A. b.). Disk fleshy (f. 6. A. c.). Style short (f. 6. A. k.). Fruit containing 3 nuts (f. 6. A. l.).

10 *RETANIA*. Calyx urceolate, 5-cleft (f. 5. E. b. c.). Petals cucullate (f. 5. E. c. d.), sessile. Stamens inclosed (f. 5. E. c.). Anthers kidney-shaped, 1-celled. Disk covering the bottom of the calyx (f. 5. E. g.). Style simple (f. 5. E. h.). Fruit containing a 3-celled nut (f. 5. E. i.).

11 *COLLETTIA*. Calyx campanulate (f. 5. F. f.), coloured. Petals wanting. Anthers 1-2-celled, kidney-shaped (f. 5. F. i.)

or ovate. Disk cup-shaped (f. 5. F. g.). Style simple, elongated. Fruit dehiscent, containing 3 nuts (f. 5. F. h. k.).

12 *TREVORA*. Calyx turbinate, 5-cleft. Petals cucullate. Stamens inclosed. Anthers 1-celled, kidney-shaped. Disk almost wanting. Style long, hairy. Capsule membranous, 2-valved, 1-seeded.

13 *DISCARIA*. Calyx campanulate, 4-5-cleft, coloured. Petals 4-5. Stamens inclosed. Anthers 2-celled. Disk cup-shaped, fleshy. Style crowned by a 3-lobed stigma.

14 *HOVENIA*. Calyx rather spreading (f. 6. B. a.), 5-cleft. Petals obovate, unguiculate (f. 6. B. c.), convolute. Stamens inclosed (f. 6. B. c.). Anthers 2-celled. Disk fleshy (f. 6. B. f.), flat. Style trifid. Fruit of 3 free berries (f. 6. B. l.).

15 *COLUBRINA*. Calyx spreading, 5-cleft (f. 6. D. a.). Petals obovate, convolute (f. 6. D. b.). Stamens exserted (f. 6. D. c.). Anthers 2-celled. Disk fleshy, flattish, pentagonal (f. 6. D. g.). Style trifid. Fruit dehiscent, containing 3 seeds (f. 6. D. f.).

16 *CEANOTHUS*. Calyx a hemispherical tube, with a 5-cleft limb (f. 6. C. d.). Petals unguiculate, cucullate (f. 6. C. c.). Anthers 2-celled (f. 6. C. b.). Disk spongy, annular (f. 6. C. e.). Styles 3. Fruit containing 3-seeds (f. 6. D. f.).

17 *WILLEMETIA*. Calyx urceolate, 5-cleft (f. 6. F. d.). Petals cucullate, sessile (f. 6. F. b.). Stamens inclosed. Anthers 2-celled. Disk very thin (f. 6. F. c.). Ovary 3-celled. Style simple.

18 *POMADERRIS*. Calyx rather spreading (f. 6. E. a.), 5-cleft. Petals flat, unguiculate, subcordate or wanting. Stamens exserted (f. 6. E. b.). Anthers 2-celled (f. 6. E. c. c.). Disk wanting. Style trifid (f. 6. E. c. d.). Fruit containing 3 seeds (f. 6. E. f.).

19 *CRYPTANDRA*. Calyx coloured, campanulate 5-cleft (f. 5. D. c. b. a.). Petals small, cucullate, sessile (f. 5. D. c.). Stamens inclosed (f. 5. D. c.). Anthers 2-celled. Disk wanting. Style simple. Capsule containing 3 seeds.

20 *BARTLINGIA*. Calyx bibracteate, tubular, 5-cleft. Petals scale-formed. Stamens 10. Anthers 2-celled, opening laterally. Disk wanting. Style simple. Ovary compressed, 1-celled, 1-2-seeded.

21 *SOLEAINTIA*. Calyx 5-cleft. Petals 5, conniving into a tube. Anthers 2-celled, each inserted under a scale. Ovary 2-lobed.

22 *TETRAPLEURA*. Calyx 4-cleft. Petals 4, cucullate. Stamens 4, inclosed. Stigma 3-lobed. Ovary 3-celled.

23 *TRICHOCEPHALUS*. Calyx with a short tube and long setaceous segments (f. 7. C. b.). Petals wanting or setaceous. Anthers kidney-shaped, 1-celled (f. 7. C. c.). Disk hardly any. Style simple, short. Fruct containing 3 seeds (f. 7. C. c.).

24 *PHYLLICA*. Calyx with a cylindrical tube and a 5-cleft limb (f. 7. B. b.). Petals cucullate (f. 7. B. d. c.). Stamens inclosed (f. 7. B. c.). Anthers 1-2-celled. Disk hardly evident (f. 7. B. f.). Style trifid (f. 7. B. i.). Fruct 3-seeded (f. 7. B. h. k.).

25 *SOULANGIA*. Calyx with an obconical tube and a cleft limb (f. 7. D. d.). Stamens inclosed (f. 7. D. c.). Anthers kidney-shaped, 1-celled (f. 7. D. c.). Disk epigynous (f. 7. D. h.), pentagonal, fleshy. Style simple. Fruit 3-seeded (f. 7. D. k. i. j.).

26 *GOVANIA*. Calyx with a rather spreading, 5-cleft limb

(f. 7. A. a.). Petals convolute (f. 7. A. f.) or cucullate (f. 7. A. h.). Stamens inclosed (f. 7. A. h.). Anthers 2-celled. Disk epigynous (f. 7. A. d.) pentagonal or stellate (f. 7. A. c.). Style trifid. Fruit 3-winged, 3-seeded (f. 7. A. g.).

27 CRUMENARIA. Calyx campanulate, 5-cleft. Petals cucullate. Stamens inclosed. Anthers 2-celled. Style crowned by 3 stigmas. Capsule papyraceous, 3-seeded.

† Genera allied to *Rhamnææ*, but they are not sufficiently known.

28 COTYPIA. Calyx small, 5-toothed. Petals 5, oblong, appendiculate inside. Stamens 5. Stigmas 4-5, sessile. Berry pea-shaped, 4-5-celled, 4-5-seeded.

29 CARPODETUS. Calyx turbinate, 5-cleft. Petals 5, small. Stamens 5. Style filiform. Drupe dry, globose, 5-celled, 5-seeded.

30 SCHEFFERIA. Flowers dioecious. Calyx 4-parted. Petals 4. Stamens 4. Style short or wanting. Stigmas 2. Berry dry, 2-celled; cells 1-seeded.

31 OLINIA. Calyx campanulate, 5-6-toothed. Petals 5, narrow. Stamens 5-6, concealed under so many scales. Style short. Fruit inferior, 5-angled, 5-seeded.

32 DAPHNIPHYLLUM. Flowers dioecious. Calyx small, crenulated. Corolla none. Stamens 6-10, connate at the base. Stigma bifid, sessile. Drupe containing a 1-seeded fibrous nut.

FIG. 4.

I. PALIURUS (Paliurus was the name of a town in Africa). Tourn. inst. t. 386. D. Don, prod. fl. nep. p. 189. D. C. prod. 1. p. 22. Brogn. mem. Rhamn. p. 46.

LIN. SYST. *Pentandria, Trigynia*. Calyx spreading, 5-cleft (f. 4. A. a.). Petals 5, obovate, convolute (f. 4. A. b. c.). Stamens 5, protruding (f. 4. A. c.). Anthers ovate, 2-celled. Disk flat (f. 4. A. d.), pentagonal. Ovary 3-celled (f. 4. A. h.), half immersed in the disk (f. 4. A. d.). Styles 3. Fruit dry, indehiscent (f. 4. A. g.), expanding into a membrane round the disk (f. 4. A. f.), containing a 3-celled nut (f. 4. A. h.). Seeds sessile.—Shrubs or trees with alternate simple leaves, with the habit of *Zizyphus*.

1 P. ACULEATUS (Lam. ill. t. 210. fl. fr. ed. 3. no. 4081. Duh. ed. nov. 3. t. 17.) branchlets pubescent; leaves ovate, serrulated, quite smooth, 3-nerved, with 2 spines at their base, one erect the other hooked; umbellules axillary, few-flowered, crowded; wing of capsule crenated. L. H. Native of sterile places about the Mediterranean sea, on both shores, and on the western coast of Asia. P. petasus, Dum. Cours. 6. p. 266. P. australis, Gaert. fruct. 1. t. 43. f. 5. P. vulgaris, D. Don. prod. fl. nep. 189. Rhamnus Paliurus, Lin. spec. 281. Zizyphus Paliurus, Willd. spec. 1. p. 1103. Sims, bot. mag. 1893.

Flowers greenish-yellow. From the singular appearance of the fruit, resembling a head with a broad-brimmed hat on, the French call the tree *Porte-chapeau*. This is by many persons supposed to be the plant from which the crown of thorns, which was put upon the head of our Saviour, was composed; the truth of which is supported by many travellers of credit, who affirm that this is one of the most common shrubs in the country of Judea, and from the pliability of its branches, which may easily be wrought into any figure, it may afford a probability. Hasselquist is of opinion that it was rather the *Zizyphus spina-Christi*.

This is the common thorn of the hedges in Asia, and forms a fence of a most impassable kind. The seeds are sold in the herb-shops of Constantinople, and the native *hakims*, or doctors, prescribe them in many complaints, under the name of *Xallé*. They are also used as a dye.

Prickly Christ's-thorn. Fl. June, July. Clt. 1596. Sh. 8 ft.

2 P. VIRGATUS (D. Don, in bot. mag. t. 2535. fl. nep. 189.) branches smooth; leaves obliquely cordate or elliptical, 3-nerved, shining; wing of fruit entire. L. H. Native of Nipaul. Leaves serrulated, with 2 thorns at the base of each, the one straight, the other hooked. Flowers in axillary corymbs, greenish-yellow. A beautiful shrub.

Twiggy Christ's-thorn. Fl. July, Aug. Clt. 1819. Sh. 10 ft.

3 P. ACULETIA (Schult. syst. 5. p. 343.) prickles scattered, straight, short; leaves ovate, crenulate, smooth; corymbs axillary, pubescent; berries orbicular, convex beneath, flat above. L. H. Native of China, about Canton. *Aubletia ramosissima*, Lour. fl. coch. 283. P. ramosissima, Poir. suppl. 4. p. 262. Flowers greenish-yellow. Stamens inclosed in the petals. Probably a species of *Zizyphus*.

*Aublet's Christ's-thorn*. Shrub 8 feet.

Cult. These handsome shrubs are well fitted for shrubberies; they will grow in any common soil, and may be either increased by layers, cuttings of the roots, or seeds.

II. ZIZYPHUS (Zizouf, in Arabic, is the name of the *Lotos*). Tourn. inst. t. 403. Gaert. fruct. 1. p. 43. Lam. ill. t. 185. D. C. prod. 2. p. 19. Brogn. mem. Rhamn. p. 47.

LIN. SYST. *Pentandria, Di-Trigynia*. Calyx spreading, 5-cleft (f. 4. B. a.). Petals 5, obovate, unguiculate, convolute (f. 4. B. b. c.). Stamens 5, exserted (f. 4. B. c.). Anthers ovate, 2-celled (f. 4. B. c.). Disk flat, pentagonal (f. 4. B. f.), expanded, adhering to the tube of the calyx. Ovary 2-3-celled (f. 4. B. c.), immersed in the disk. Styles 2-3 (f. 4. B. g.). Fruit fleshy (f. 4. B. h.), containing a 1-2-celled nut (f. 4. B. h.). Seeds sessile, compressed, very smooth.—Shrubs with alternate, 3-nerved leaves, and spiny stipulas. Flowers axillary, cymose. Fruit mucilaginous, eatable, more or less grateful.

\* Leaves smooth on both surfaces.\*

1 Z. VULGARIS (Lam. ill. 185. f. 1.) leaves ovate, retuse, toothletted, and arc, as well as the branchlets, smooth; prickles wanting or twin, one of them recurved; drupe ovate, oblong. L. H. Native of Syria, from whence it has been introduced into Europe. Rhamnus Zizyphus, Lin. spec. 282. Pall. fl. ross. 2. t. 59. Z. sativa, Desf. arb. 2. p. 373. Duh. ed. nov. 3. t. 16. but not of Gaert. Z. Jujuba, Mill. diet. no. 1. but not of Lam. Flowers greenish-yellow, 2 or 3 together. Fruit blood-red or saffron-coloured, having a sweet granular pulp. This tree is cultivated for its fruit in many parts of the south of Europe, where it is called *Jujube*. In Italy and Spain the fruit is served up at the table in deserts, during the winter-season, as a dry sweet-meat. It is sold in the markets in the towns of Italy and Spain. The tree is said to have been first introduced into Italy from Syria by Sextus Pampinius, in the time of Augustus Caesar. The fruit is also sold in abundance in the markets of Constan-

tinople, under the name of *Hunnab-agaghi*, and which has for a long time been imported into the west of Europe under the name of *Jujube*. The Turks of Constantinople plant the trees before their coffee-houses with other trees, to enjoy the shade and fruit in their season.

*Common Jujube.* Fl. Aug. Sept. Clt. 1640. Tree 20 feet.

2 *Z. SINE'NSIS* (Lam. dict. 3. p. 318.) leaves ovate-oblong, acutely serrated, smooth; branches pubescent; prickles twin, spreading, straightish; petals reflexed; drupe ovate. *h. H.* Native of China. *Rhâmnus Zizyphus*, Lour. fl. coch. 158. Flowers greenish-white. Drupe eatable, brownish-yellow, ovate, fleshy, and are sold in the markets of Canton during the autumn.

• *Chinese Jujube.* Clt. 1818. Shrub 4 to 5 feet.

3 *Z. LÔTUS* (Lam. dict. 3. p. 316.) leaves ovate-oblong, obsoletely crenated, and are, as well as the branches, smooth; prickles twin, one of them recurved, the other straight, longer than the petiole; drupe roundish-ovate. *h. F.* Native of Persia, and the interior of Africa, Sicily, Spain, &c. *Rhâmnus Lôtus*, Lin. spec. 281. Desf. act. par. 1788. t. 21. Park's trav. with a figure. Shaw's afr. no. 632. f. 632. This is the *lotos* of the Lotophagi. It grows wild in Africa, especially in the kingdom of Tunis, in a tract called *Jerced*, which was formerly the country of the Lotophagi. The Lotophagi, as the Greeks call them, possessed a considerable part of the sea-coast, between the two Syrtes, the island of Meninx (now Jerba) and the coast beyond it as far as the lake and river Tritonis to the Machlies. Scylax extends the name to the tribes between the two Syrtes. Ptolemy limits them to the neighbourhood of the river Cinyps, while Herodotus appears to confine them to the west of that river. Strabo places them in the neighbourhood of Jerba, although he calls the adjoining Syrtes that of the Lotophagi. Pliny assigns them, in addition to the island, the environs of the Syrtes also. But the allotment of this confined space to the eaters of *lotos* was owing to the want of a more extended knowledge of the countries that border on the desert, for it appears that the tribes who inhabit them eat universally of this fruit, in a greater or less degree, and most of them apparently as much as they can obtain of it. The Arabs know the plant by the name of *Secdra*. It has the habit of *Rhâmnus*, and the flowers of the common *Jujube*. But the fruit is smaller, rounder, and sweeter, the size of sloes, containing large stones; they are borne on every part of the plant, like gooseberries; they have a purplish tinge. The farinaceous pulp is separated from the stone, and laid by for winter use; its flavour approaches nearly to that of figs or dates. A kind of wine is made from the fruit by expression, and diluted with water, but this will not keep more than a few days. The same liquor perhaps which is fabled to have produced such extraordinary effects on the companions of Ulysses.

"The trees around them all their food produce,  
Lotos the name divine, nectareous juice,  
Thence called Lotophagi, which whoso tastes,  
Insatiate riots in their sweet repasts,  
Nor other home nor other care intends,  
But quits his house, his country, and his friends."

*Homér's Odyssey.*

Dr. Shaw says that the fruit is common in the deserts, and other parts of Barbary, is still in great repute, and sold in the markets all over the southern districts of those kingdoms. Mr. Park says he discovered the *lotos* to abound in all the countries of Africa he traversed, flourishing most in a sandy soil, but in the greatest plenty in the kingdoms of Kaarta Ludamar, and in the northern parts of Bambara. The fruit small, farinaceous berries, of a yellow colour and delicious taste. The natives, he says, convert them into a sort of bread, by exposing them some days to the sun, and afterwards pounding them gently in a

wooden mortar, until the farinaceous part is separated from the stone. This meal is then mixed with a little water, and formed into cakes, which, when dried in the sun, resemble in colour and flavour the sweetest gingerbread. The stones are afterwards put into a vessel of water, and shaken about so as to separate the farina which may still adhere to them, this communicates a sweet and agreeable taste to the water, and with the addition of a little pounded millet, forms a pleasant gruel called *fondi*, which is the common breakfast in many parts of Ludamar, during the months of February and March. The fruit is collected by spreading a cloth upon the ground, and beating the branches with a stick.

Mr. Browne, in his Travels in Africa, informs us that the Arabic name of the *lotos* is *Nebbek*, and that there are two sorts of it at Dâr-foor, the largest of which is called *Nebbek-el-Arab*; the one a shrub the other a tree, both equally thorny. The latter bearing a smaller fruit than the former, of a darker colour and different flavour, which the natives eat both fresh and dry; for it dries on the tree and remains the greatest part of the winter months. In that state it is formed into a paste, of not unpleasant taste, and is a portable provision on journeys.

The *lotos* of the Lotophagi must not be confounded with the Egyptian *lotos*, which is *Nymphaea Lôtus*, nor with the *lotos* of Homer and Dioscorides, which is a species of *Trifolium*, nor with the *lotos* of Hippocrates, which is *Celtis australis*, nor with the Italian *lotos* which is *Diophrus lôtus*.

*Lotos* of the Lotophagi or Jujube *Lotus*. Clt. 1731. Shrub 2 to 4 feet.

4 *Z. MUCRONATA* (Willd. enum. 251.) leaves ovate, cordate, crenated, smooth; prickles twin, one recurved; drupe somewhat globose. *h. G.* Native of the Cape of Good Hope, along the banks of the river Cariep. *Z. bubalina*, Licht. ex Schult. syst. 5. p. 334. Flowers greenish-yellow. Fruit red, eatable.

*Mucronate-leaved Jujube.* Clt. 1810. Tree 20 feet.

5 *Z. HETEROGÈNEA* (Poir. suppl. 3. p. 193.) leaves ovate, acuminate, serrulated, shining; prickles twin, one recurved; pedicels solitary, 1-flowered. *h. II.* Native of Persia. *Rhâmnus heterogèneus*, Burm. fl. ind. p. 61.—Pluk. alm. t. 312. f. 4. Flowers yellowish. Fruit eatable, pleasant.

*Heterogèneus Jujube.* Shrub.

6 *Z. SPINA-CHRISTI* (Willd. spec. 1. p. 1105.) leaves ovate, toothed, smooth, or pubescent beneath; prickles twin, spreading, one of which is straightish, the other somewhat incurved; peduncles corymbose, villously downy; drupe ovate-globose. *h. H.* Native of the north of Africa, in Palestine, and Ethiopia, also in date plantations, near Tozer, and in Egypt. *Rhâmnus spina-Christi*, Lin. spec. 282. Desf. fl. atl. 1. p. 201. *Rhâmnus Nabêca*, Forsk. ægypt. 204. but not of Lin. *Z. Africana*, Mill. dict. no. 4. *Z. Napêca*, Lam. dict. 3. p. 520. *Nabêca*, Alp. eg. 2. t. 4. p. 10. (*Enôplia spinosa*, Bauh. pin. 477. Ger. emac. append. t. 1605. Branches whitish. Flowers yellowish-green. Fruit oblong, about the size of a sloe, with a pleasant taste, furnishing a very pleasant food to the inhabitants of Egypt and Arabia. Hasselquist thinks this is the tree which afforded the crown of thorns put on the head of Christ, as it is common in the East, and is very fit for the purpose, being furnished with many sharp spines well adapted to give pain. The crown might be made of the round plant branches, and what seems to be the greatest proof is, that the leaves much resemble those of ivy. But notwithstanding what Hasselquist says, we are still of opinion that the *Paliurus aculeatus* is the true Christ's-thorn.

*Var. β, inermis* (D. C. prod. 2. p. 20.) prickles wanting; leaves large, very blunt. *h. II.*—Clus. hist. 1. p. 27.

*Christ's-thorn.*, Fl. Aug. Sept. Clt. 1759. Shrub 8 feet.

7 *Z. PARVIFOLIA* (Del. voy. à Meroc a fleuve blanc, paris 1826.

part. bot.) prickles twin, one of which is longer than the other and recurved; leaves entire, on short petioles, ovate, acute.  $\frac{1}{2}$ . H. Native of Egypt, on the banks of the White river.

*Small-leaved Jujube.* Shrub.

8 *Z. NAFÉ'CA* (Willd. spec. 1. p. 1104.) climbing; leaves obliquely cordate, bluntish, serrate, downy beneath; prickles twin, exceedingly sharp, one recurved, the other straight; corymbs axillary, many-flowered; flowers digynous.  $\frac{1}{2}$ . S. Native of Ceylon and other parts of the East Indies. *Rhamnus Napéca*, Lin. spec. 282.—Pluk. phyt. t. 216. f. 2.—Rumph. amb. 2. t. 42. Flowers yellowish. Fruit size of a pea, smooth, shining, black, marked round the base with a circular scar. They are eaten by the natives. The taste is very acid and astringent. Rumphius says that three berries are a strong purgative. It is seldom eaten but with salt meat, or as a sauce to fish and other food. A decoction of the bark of the root is said to promote the healing of fresh wounds. The tree is to be found in Prince of Wales Island. At Silhet it is very common. The name is derived from *nabq* or *nabka*, the Arabic name of one of the species.

*Napéca Jujube.* Clt. 1816. Shrub cl.

9 *Z. BACLETI* (D. C. prod. 2. p. 20.) leaves broad-ovate, acuminate, crenulated, smooth, or somewhat downy on the nerves and petioles; prickles usually twin, one of them recurved; corymbs axillary, smooth; drupe ovate-globose.  $\frac{1}{2}$ . S. Native of Senegal. Flowers greenish-yellow. This is probably the *Lofo*s which Mr. Mungo Park saw at the Gambia. Fruit eatable.

*Bacle's Jujube.* Shrub 8 feet.

10 *Z. INCURVA* (Roxb. fl. ind. 2. p. 364.) leaves oval, smooth, serrulate, obtusely-acuminate, oblique at the base; prickles twin, one straight, the other recurved; peduncles axillary, few or many-flowered; flowers semidigynous; petioles and nerves of leaves somewhat pubescent.  $\frac{1}{2}$ . H. Native of Upper Nipaul at Suemba. *Z. paniculata*, Hamilt. mss. Flowers yellowish-green. Fruit small, round, dark-purple.

*Incurved-spined Jujube.* Fl. Aug. Sep. Clt. 1823. Tree 20 ft.

11 *Z. JAVANÉ'NSIS* (Blum. bijdr. 1142.) climbing; prickles solitary, recurved; leaves 5-nerved, elliptic-oblong, bluntish, doubly serrulated, smooth; corymbs axillary, dichotomous, and are, as well as the petioles, pubescent.  $\frac{1}{2}$ . S. Native of Java, where it is called *Aroy Kokuhoclang*.

*Java Jujube.* Shrub cl.

12 *Z. TIMORÉ'NSIS* (D. C. prod. 2. p. 20.) leaves ovate-oblong, acuminate, oblique at the base, smooth on both surfaces, crenately-serrulated, 3-nerved; branches unarmed; corymbs axillary, about the length of the petioles.  $\frac{1}{2}$ . S. Native of the island of Timor. Stigmas 2. Fruit unknown.

*Timor Jujube.* Tree.

13 *Z. TRINÉRVIA* (Roxb. fl. ind. 2. p. 354.) unarmed; leaves ovate-oblong, 3-nerved, bluntly serrated, glossy; flowers in axillary fascicles; stigma 2-cleft; drupe spherical.  $\frac{1}{2}$ . S. Native of Mysore, in the East Indies. Flowers numerous, small, greenish-yellow. Drupes spherical, size of a cherry, polished, of a lively yellow colour, with a soft, gelatinous, sweet pulp. This is the same as *Z. sororia*, Rœm. et Schult. syst. 5. p. 337. and *trinésia* var. *glabrata*, Roth. nov. spec. 5. p. 337.

*Three-nerved-leaved Jujube.* Clt. 1821. Tree 20 feet.

14 *Z. PANICULATA* (Roth. nov. spec. 161.) leaves oblong-oval, somewhat acuminate, serrulated, scabrous, hairy beneath at the nerves; prickles twin, recurved; branches rising as it were beneath the leaves; panicle terminal, elongated, dichotomous; nut 1-seeded.  $\frac{1}{2}$ . S. Native of the East Indies.

*Panicled-flowered Jujube.* Tree.

15 *Z. NITIDA* (Roxb. fl. ind. 2. p. 358.) leaves obliquely ovate-oblong, 3-nerved, obtusely-serrated, smooth; prickles twin, one recurved, the other straight; drupes subcylindrical; flowers few, collected on a common peduncle.  $\frac{1}{2}$ . G. Native

of China. Flowers yellow, semidigynous. Drupe oblong, pendulous, and smooth, about an inch long; when ripe, pale-yellow; they are eaten, but to the taste they are rather insipid. Innumerable suckers usually rise from the root, which run to a great distance from the parent tree, and make it a troublesome plant in a garden.

*Shining-leaved Jujube.* Clt. 1822. Shrub 8 feet.

16 *Z. ELLIPTICA* (Roxb. fl. ind. 2. p. 259.) leaves elliptic-ovate, 3-nerved, pale beneath, smooth; prickles twin, the upper one rather incurved, the under one recurved; corymbs axillary, dichotomous; flowers usually trigynous.  $\frac{1}{2}$ . S. Native of the East Indies, at Travancore. Flowers greenish-yellow. Young shoots slightly villous and flexuous.

*Elliptical-leaved Jujube.* Fl. May, June. Tree 20 feet.

17 *Z. GLABRA* (Roxb. fl. ind. 2. p. 364.) climbing, smooth; leaves ovate, cordate, long, obtuse, pointed, serrulated, smooth, strongly marked with 3 nerves; prickles solitary, recurved; drupes oval.  $\frac{1}{2}$ . G. Native of Chittagong, in the East Indies. Fruit about the size of a gooseberry.

*Smooth Jujube.* Shrub cl.

18 *Z. FLEXUOSA* (Wall. in fl. ind. 2. p. 365.) a smooth shrub, with spiny flexuous branches, and unarmed straight branchlets; prickles twin, one very long and straight, the other recurved; leaves lanceolate, obtuse, crenate, smooth; flowers axillary, usually solitary; style deeply bifid.  $\frac{1}{2}$ . H. Native of Nipaul, at Gosaingthan. An elegant shrub, with mahogany-coloured prickles. Flowers solitary or few in a fascicle, yellowish, rather large.

*Zigzag-branched Jujube.* Clt. 1820. Shrub 8 feet.

19 *Z. CARACTATA* (Hamilt. ex Wall. in fl. ind. 2. p. 361.) leaves round, serrulated, 3-nerved, adult ones smooth, but rather villous when young; prickles twin, the under one recurved; peduncles axillary, many-flowered, very short; style 3-cleft; drupe oval, with a 3-celled nut.  $\frac{1}{2}$ . S. Native of the East Indies, in the southern parts of Mysore, where it is called *Karakutta* by the natives. Young branches villous. Flowers greenish-yellow. Fruit the size of a large cherry, depressed a little at both ends, smooth, dark-brown; fleshy part tough, firm, and yellowish.

*Karakutta Jujube.* Fl. April. Clt. 1823. Tree 16 feet.

\* \* \* *Leaves downy beneath.*

20 *Z. RETICULATA* (D. C. prod. 2. p. 20.) leaves oval, somewhat toothletted, netted with veins, and downy beneath; prickles twin, straight; stigma usually 3-toothed; drupe globose.  $\frac{1}{2}$ . S. Native of South America. *Paliurus reticulatus*, Vahl. eclog. amer. 3. p. 6. t. 23. Flowers greenish-yellow. Fruit eatable.

*Netted-leaved Jujube.* Shrub.

21 *Z. RUGOSA* (Lam. diet. 3. p. 319.) leaves broad-oval, wrinkled, serrulated, sometimes smooth, sometimes downy beneath; prickles usually twin, recurved; corymbs stalked, dichotomous, downy.  $\frac{1}{2}$ . S. Native of the East Indies.—Pluk. alm. t. 29. f. 7. This species is said to come very near *Z. aglocarpa*.

*Wrinkled-leaved Jujube.* Shrub 6 feet.

22 *Z. HORRIDA* (Roth. nov. spec. 159.) leaves ovate, blunt, crenulate, pubescent beneath at the ribs; prickles twin or solitary, recurved; corymbs dichotomous, axillary, and lateral.  $\frac{1}{2}$ . S. Native of the East Indies.

*Horrid Jujube.* Shrub.

23 *Z. CELTIFOLIA* (D. C. prod. 2. p. 20.) leaves ovate, oblique at the base, upper ones acuminate, almost entire, 3-nerved, lateral nerves bifid at the base, and are, as well as the petioles and branchlets, pubescent; prickles usually solitary, recurved, quite smooth; corymbs axillary.  $\frac{1}{2}$ . S. Native of the island of Timor. This is very like *Z. Enoplia*, and is perhaps the *Z. glabrata* of Heyne and Roth. nov. spec. 158?

*Nettle-tree-leaved Jujube.* Tree.

§ 2. *Leaves silky or downy beneath.*

24 *Z. CENÓPLIA* (Mill. dict. no. 3.) leaves unequally ovate-cordate, entire, acute, 3-nerved, covered with rusty down beneath; prickles solitary, recurved; branchlets pubescent; flowers crowded in the axils of the leaves. *h. G.* Native of various parts of India. *Rhāmnus Cénoplia*, Lin. spec. 282.—Burm. zeyl. t. 61. Flowers minute, greenish-yellow. Fruit small, black, ovate-globose, juicy.

*Vinous Jujube.* Clt. ? Shrub 6 feet.

25 *Z. TOMENTOSA* (Roxb. fl. ind. 2. p. 360.) leaves unequally ovate-cordate, 3-nerved, obtuse, minutely-serrulated, hairy above, and downy beneath; panicles lateral; prickles solitary, scarcely curved. *h. G.* Native of Chittagong, in the East Indies, where it is used for fences.

*Downy Jujube.* Shrub 8 feet.

26 *Z. XYLÓPYRUS* (Willd. spec. 2. p. 11.) leaves obliquely-cordate, 3-nerved, serrated, clothed with hoary down beneath, as well as the branchlets and petioles; prickles stipular when present, the one recurved, the other straight; corymbs axillary, many-flowered, downy. *h. S.* Native on the coast of Coromandel, common in every forest. *Rhāmnus xylópyrus*, Retz. obs. 2. p. 11. Flowers greenish-yellow. Fruit the size of a large cherry, greenish, and downy, marked round the base with the remains of the nectary, containing a 3-celled, 3-valved, 3-seeded nut. Cattle eat the leaves, young shoots, and fruit. The kernels taste like filberts, and are eaten by the natives. The wood of the largest trees is much esteemed by them, being yellowish or orange-coloured, very hard, and durable, and at the same time not very heavy.

*Pear-wood Jujube.* Clt. 1824. Tree 20 feet?

27 *Z. ALBENS* (Roxb. fl. ind. 2. p. 356.) leaves obliquely-oval, serrulated, downy beneath; corymbs axillary, on long peduncles; corolla wanting; style 2-cleft; fruit drooping, smooth, white; prickles solitary, recurved. *h. G.* Native of China. Drupe the size of a small cherry. The pulp rather mealy and sweet.

*White-fruited Jujube.* Fl. year. Tree 20 feet.

28 *Z. LATIFOLIA* (Roxb. fl. ind. 2. p. 355.) leaves oval, serrated, 3-nerved, downy beneath, unequal at the base; prickles solitary, short, thick, recurved; corymbs panicled, terminal; corolla wanting; drupe turbinate; nut 1-2-celled. *h. S.* Native of the East Indies, in the mountainous tracts of the Circars. Dr. Wallich found a tree so closely allied to this in Nipaul at Noakote and Silhet that he dare not separate them; he ascertained that Roth's *Z. obliqua* is this very species, and *Z. paniculata* of the same individual to be hardly distinct. Drupe yellow, size of a small cherry; usually 1-celled and 1-seeded. Those of the Nipaul plant are eaten by the natives.

*Broad-leaved Jujube.* Shrub 12 feet.

29 *Z. JUJUBA* (Lam. dict. 3. p. 318.) leaves obliquely-ovate, serrated, downy below, as well as the young branches, hoary; prickles twin, the one recurved, the other straight; corymbs axillary, almost sessile. *h. G.* Native of India, and cultivated in China and Cochin-china. *Rhāmnus Jujuba*, Lin. spec. 282.—Rumph. amb. 2. t. 36.—Rheed. mal. 4. t. 41. Flowers greenish-yellow. Drupe globular, size of a large cherry, smooth, yellow when ripe, containing a 2-celled, 1-seeded nut. There is a variety of this, or a new species, in the East Indies, which produces an excellent fruit of a long form, about the size of a hen's egg, known by the name of *Narikellekool* in Bengal. The fruit of both varieties is eaten by all classes of persons. It is sweet and mealy. The bark of the tree is said to be used in the Moluccas in diarrhoea, and to fortify the stomach, which seems to confirm the astringent properties of the bark of most of the plants of this order.

*Jujube-tree.* Fl. April, May. Clt. 1759. Tree 16 feet.

30 *Z. SORORIA* (Schult. syst. 5. p. 337.) leaves roundish-ovate, obtuse, mucronate, serrulated, downy beneath; prickles wanting; corymbs axillary, divaricating, dichotomous; stigma simple. *h. S.* Native of the East Indies. *Z. trinervia*, var. *a*, Roth, nov. spec. 5. p. 337. Allied to *Z. Jujuba*. Fruit eatable. *Sister Jujube.* Fl. ? Clt. 1821. Tree 16 feet.

31 *Z. MICROPHYLLA* (Roxb. fl. ind. 2. p. 362.) leaves roundish-ovate, 3-nerved, serrulated, woolly beneath; prickles twin, one straight, the other recurved; branchlets bifarious, flexuous; flowers fascicled; stigma 2-cleft. *h. S.* Native on the coast of Coromandel, as well as of Ceylon. *Z. rotundifolia*, Lam. dict. 3. p. 319. *Z. nummularius*, Gmel. syst. 401?—Pluk. alm. 199. t. 197. f. 2.—*Rhāmnus nummularia*, Burm. ind. 61. Flowers greenish-yellow.

*Small-leaved Jujube.* Shrub 4 feet.

32 *Z. ORTHACANTHA* (D. C. prod. 2. p. 21.) leaves ovate, almost entire, obtuse, covered with short hoary down beneath, as well as branchlets and petioles; prickles twin, straight; corymbs axillary, downy. *h. S.* Native of Senegal. Flowers greenish-yellow. Drupe reddish, round, about the size of a filbert, and is eaten by the natives of Senegal, as well as made into a sort of drink by them, resembling that made from *Z. Latius*, which see, no. 3.

*Straight-prickled Jujube.* Tree 16 feet.

33 *Z. ORBICULARIS* (Schult. syst. 5. p. 338.) leaves cordate, orbicular, or somewhat ovate, obtuse, mucronate, downy, equally and bluntly serrulated; prickles solitary, recurved; corymbs axillary, conglomerated, dichotomous; fruit downy, containing a 3-celled nut. *h. S.* Native of the East Indies. *Z. rotundifolia*, Roth. nov. spec. 160. but not of Lam. Flowers greenish-yellow.

*Orbicular-leaved Jujube.* Tree?

34 *Z. POIRETTI*; leaves ovate-roundish, sharply serrulated, downy beneath, as well as the branches, petioles, and flowers; prickles twin, one recurved, the other straight; corymbs axillary; fruit subglobose, smooth. *h. S.* Native of St. Domingo. *Z. tomentosa*, Poir. suppl. 3. p. 192. but not of Roxb.

*Poirett's Jujube.* Tree?

35 *Z. ROTUNDATA* (D. C. prod. 2. p. 21.) leaves ovate, obtuse, rather oblique at the base, somewhat crenulated, clothed beneath with greyish-velvety down, as well as the petioles, branchlets, and flowers; prickles twin, the one recurved, the other straight; corymbs axillary; fruit ovate, blunt, smooth. *h. S.* Native of the Mauritius, in woods. *Rhāmnus Mauritiānus*, Willem. herb. Maur. p. 20? Flowers yellowish.

*Rounded-fruited Jujube.* Tree 12 feet?

36 *Z. MAURITIANA* (Lam. dict. 3. p. 319.) leaves oval, roundish, obtuse, almost entire, clothed beneath with dense white or somewhat rusty down, as well as the petioles, branchlets, and flowers; prickles twin, one recurved, the other straight; corymbs axillary; fruit oblong, acuminate. *h. S.* Native of the Mauritius. Flowers yellowish. Resembling *Z. Jujuba*.

*Mauritian Jujube.* Fl. May. Clt. 1820. Tree 16 feet?

37 *Z. OXYCARPA* (D. C. prod. 2. p. 21.) leaves ovate, somewhat acute, tapering to the base, and oblique, sharply serrulated, hoary-velvety beneath, as well as the petioles and branchlets; prickles twin, the one recurved, the other straight; corymbs axillary; fruit oblong, acuminate. *h. S.* Native of the East Indies, and in the Indian Archipelago. (Labill.) This species resembles *Z. Cénoplia* in the leaves, but *Z. Mauritiāna* in the fruit.

*Sharp-fruited Jujube.* Shrub 12 feet?

38 *Z. ELEGANS* (Wall. in fl. ind. 2. p. 360.) erect, nearly unarmed, with filiform pubescent branches, and bifarious, lanceolate, serrulated, bluntly-acuminate leaves, which are smooth above, and pubescent beneath. *h. S.* Native of Singapore. The fruit and flowers of this elegant shrub are unknown.

*Elegant Jujube.* Shrub 6 feet?

39. *Z. EXSE'RTA* (D. C. prod. 2. p. 21.) leaves ovate, serrulated, downy beneath; prickles wanting; corymbs axillary; calyx with 10 glands on the inside; stamens twice or thrice longer than the petals. *h. S.* Native of the island of Luzon, near Manilla. *Rhâmnus trinervis*, Cav. icon. t. 505. f. 1. but not of Roth. *Z. trinervis* Poir. suppl. 3. p. 192. Stigmas 2, thickened. \*Berry ovate, 1-celled, 1-seeded.

*Protruding-stamened Jujube.* Shrub or Tree.

† *Species not sufficiently known.*

40. *Z. ANGULATA* (Lam. dict. 3. p. 320.) leaves roundish-oval, a little toothed, smooth on both surfaces; prickles twin, straight; branches tetragonal, with prominent angles. *h. S.* Native of? Flowers, as well as fruit, unknown.

*Angular-stemmed Jujube.* Shrub?

41. *Z. HAVANENSIS* (H. B. et Kunth, nov. gen. amer. 7. p. 57.) branches 5-angled, twisted, flexuous, smooth; spines stipular, straight; leaves roundish-ovate, unequal-sided, somewhat cordate, 3-nerved, obsoletely-crenulated, coriaceous, smooth; calyxes clothed with rusty down. *h. S.* Native of the island of Cuba, near Havannah. Anthers behind. The tree has the habit of *Z. angulata*, and will probably with it form a distinct genus, or form a section of *Ceanothus*.

*Havannah Jujube.* Tree 20 feet.

42. *Z. AGRESTIS* (Schult. syst. 5. p. 341.) leaves oblong, quite entire, smooth; prickles twin, straight, short; flowers racemose, apetalous; drupe globose, containing a 3-celled nut. *h. G.* Native of Cochinchina. *Rhâmnus agræstis*, Lour. fl. coch. 158. Stamens surrounded by hairs. Drupe globose, red, eatable.

*Field Jujube.* Shrub 8 feet.

43. *Z. SOPORIFERA* (Schult. syst. 5. p. 340.) leaves lanceolate, nerveless, quite entire; prickles scattered, straight; flowers axillary, solitary; drupe roundish, 1-seeded. *h. G.* Native of the north of China. *Rhâmnus soporifer*, Lour. fl. coch. 158. According to Loureiro it comes very near to the figure in Rumph. amb. 2. t. 37. which has been considered *Z. Napæca* by Linnæus. Flowers reddish. Drupe small, red. The kernel of the nut, steeped a few days, is hypnotic and paregoric, causes gentle sleep, and mitigates pain.

*Sleepy Jujube.* Shrub.

44. *Z. CAPE'NSIS* (Poir. suppl. 3. p. 193.) leaves ovate-oblong, smooth; prickles twin, straight; flowers digynous; stem shrubby. *h. G.* Native of the Cape of Good Hope.

*Cape Jujube.* Shrub 4 feet.

*Cult.* The hardy kinds will grow in any common garden soil; they are well adapted for shrubberies, and are easily increased by ripened cuttings, planted in a good soil, with a hand-glass placed over them, or by slips of the roots, planted in the same manner. The greenhouse and stove species will grow well in a mixture of loam, peat, and sand, and ripened cuttings will root, planted in a pot of sand, with a hand-glass placed over them, but those of the stove species will require to be placed in heat.

III. SPHÆROCA'RYA (from *σφαῖρα*, *sphaîra*, a sphere, and *καρυον*, *caryon*, a nut; nuts round). Wall. fl. ind. 2. p. 371.

*LIN. SYST.* *Pentândria, Monogýnia.* Calyx 5-parted. Petals 5, alternating with the stamens, inserted in the calyx, and with 5 fringed scales between the stamens and opposite the calycine segments. Stamens 5, inserted in the calyx. Disk none. Drupe pear-shaped, containing a smooth round nut.—A large tree, with alternate, ovate, entire, smooth, exstipulate leaves, and axillary and terminal villous racemes of small greenish, inodorous flowers.

1. *S. EUP'OLIS* (Wall. l. c.). *h. G.* \* Native of Nipaul in the forests, about the valley. The flesh of the fruit is pale-brown,

and the inhabitants of Nipaul are very fond of it, which, however, to a European palate, holds out but little temptation.

• *Edible-fruited Sphærocarya.* Tree 40 feet.

*Cult.* For culture and propagation see greenhouse species of *Zizyphus*.

IV. CONDA'LIA (in honour of Anthony Condal, M. D. companion of Læfing in his voyages). Cav. icon. 6. p. 16. t. 525. D. C. prod. 2. p. 28. Brogn. mem. Rham. p. 48.

*LIN. SYST.* *Pentândria, Monogýnia.* Calyx spreading, 5-cleft (f. 4. C. a.), adhering to the ovary; segments deciduous, but with the base permanent. Petals wanting. Anthers bilocular (f. 4. C. e.). Stamens alternating with the sepals (f. 4. C. c.). Style 1. Disk flat, expanded (f. 4. C. c.), pentagonal. Ovary girded by the disk, free, 2-celled (f. 4. C. d.). Stigma small, entire. Fruit drupaceous, ovate, containing a 1-celled, 1-seeded nut (probably from abortion?). Seed ovate, destitute of a furrow.—Much branched, smooth shrubs, with spiny branchlets, alternate, almost sessile, obovate-oblong, entire leaves, and axillary flowers. This genus differs from *Zizyphus*, to which it is nearly allied, in being destitute of petals, as well as in the style and stigma being simple.

1. *C. MICROPHYLLA* (Cav. l. c.) leaves alternate, almost sessile, obovate-oblong, mucronate. *h. G.* Native of Chili. *Zizyphus myrtoïdes*, Ort. dec. 9. p. 119. Branches spreading, spiny at the apex. Flowers on short pedicels, greenish-yellow.

*Small-leaved Condalia.* Clt. 1824. Shrub 3 feet.

2. *C. ? PARADOXA* (Spreng. syst. 1. p. 825.) leaves opposite, connate, thick, decurrent, stiff, pungent; peduncles lateral, crowded. *h. S.* Native of Monte Video.

*Paradoxical Condalia.* Shrub 4 feet.

*Cult.* These shrubs will grow well in a mixture of loam, peat, and sand, and ripened cuttings will root freely, planted in a pot of sand, with a hand-glass placed over them.

V. BERCHEMIA (Berchem, probably the name of some botanist). Neck. elem. 2. p. 122. D. C. prod. 2. p. 22. Brogn. mem. Rham. 49.—*Enóplia*, Hedw. f. gen. 1. p. 151.—*Enóplia*, Schult. syst. 5. p. 962.

*LIN. SYST.* *Pentândria, Monogýnia.* Calyx with a hemispherical tube, and 5 erect segments (f. 4. E. a.). Petals 5, convolute (f. 4. E. c. d.). Stamens inclosed within the petals (f. 4. E. c.). Anthers ovate, 2-celled. Disk annular (f. 4. E. f.), rather flat. Ovary half immersed in the disk, 2-celled (f. 4. E. e.). Style simple, short, bifid at apex. Fruit dry, indehiscent, 2-celled (f. 4. E. g.). Seeds adhering to the testa of the pericarp.—Erect or climbing shrubs, with alternate, many-nerved, entire leaves, and with the flowers subumbellate in the axillæ of the upper leaves, or disposed in terminal panicles.

\* *Climbing shrubs.*

1. *B. VOLUBILIS* (D. C. prod. 2. p. 22.) branches smooth, a little twining; leaves oval, mucronate, a little wavy; racemes axillary and terminal; drupe oblong, violaceous. *h. G. H.* Native of Carolina and Virginia. *Rhâmnus volubilis*, Lin. fil. suppl. 132. Jacq. icon. rar. t. 336. *Zizyphus volubilis*, Willd. spec. 1. p. 1102. *Enóplia volubilis*, Schult. syst. 5. p. 332. Flowers greenish-yellow. Authors attribute to the roots antisyphilitic properties.

*Twining Berchemia.* Fl. June, July. Clt. 1714. Shrub cl.

2. *B. FLORIBUNDA* (Brogn. in mem. rhamn. p. 50.) unarmed, smooth, with rambling branches; leaves ovate, acute, quite entire, retuse at the base, glaucous beneath; panicle large, terminal; flowers racemose; drupe somewhat cylindrical. *h. S.* Native of Nipaul, at Tharkote and Sankoo, and on Chundrigiri.

*Zizyphus floribundus*, Wall. fl. ind. 2. p. 368. Flowers small, white.

*Bundle-flowered Berchemia*. Fl. May, July. Shrub ramble.

3 *B. FLAVESCENS* (Brogn. in mem. rhamn. p. 50.) unarmed, smooth, climbing; leaves oblong-ovate, acute, glaucous, quite entire; racemes terminal, simple; flowers fascicled.  $\frac{1}{2}$ .  $\frac{1}{2}$ . G. Native of Nipaul, about Gosainsthan. *Zizyphus flavescens*, Wall. fl. ind. 2. p. 367. Flowers white.

*Yellowish Berchemia*. Fl. July. Shrub cl.

4 *B. CALOPHYLLA*; climbing; armed with solitary, short, recurved prickles; leaves ovate-oblong, smooth, glossy, 3-nerved, veinless, minutely crenulated; corymbs terminal, panicled.  $\frac{1}{2}$ .  $\frac{1}{2}$ . S. Native of Pulo-Pinang. *Zizyphus calophylla*, Wall. fl. ind. 2. p. 367.

*Beautiful-leaved Berchemia*. Fl. Jan. Shrub cl.

\* \* *Stems erect.*

5 *B. LINEATA* (D. C. prod. 2. p. 23.) branches downy, unarmed; leaves ovate, repand, netted beneath; flowers hermaphrodite.  $\frac{1}{2}$ . G. Native of China. *Rhamnus lineatus*, Lin. aræn. 4. p. 308.—Osb. it. 219. t. 7. Leaves of a beautiful yellowish-green colour beneath, with red veins. Flowers whitish.

*Lined-leaved Berchemia*. Fl. June, July. Clt. 1804. Sh. 8 ft.

6 *B. ? POIRETTIANA* (D. C. prod. 2. p. 23.) branches pubescent; stipulas small, spiny; leaves ovate, netted; flowers solitary; fruit roundish.  $\frac{1}{2}$ . S. Native of the East Indies. *Rhamnus lineatus*, Poir. dict. 4. p. 473.—Pluk. alm. 1. p. 122. f. 4.

*Poiret's Berchemia*. Shrub 6 feet.

7 *B. LOUREIRIANA* (D. C. prod. 2. p. 23.) branches smooth, procumbent, with scattered prickles; leaves ovate, somewhat crenated, flat; flowers 10-petalled, pentandrous; drupes oblong-ovate, scabrous, 2-celled.  $\frac{1}{2}$ . G. Native of Cochinchina, in hedges and among bushes. *Rhamnus lineatus*, Lour. fl. coch. 159. but not of Lin. Flowers white, numerous on the peduncles. Drupe small, red. A decoction of the root is deobstruent and diuretic.

*Lourcira's Berchemia*. Shrub 8 feet, trailing.

N.B. *B. Burmanniana*, D. C. prod. 2. p. 23., *Rhamnus*, &c. Burm. zeyl. p. 198. t. 88. belongs to *Euphorbiaceæ* not far from *Andrachne*.

*Cult.* *B. rotundifolia* will grow in any common soil, and is well adapted for hedges or trellis-work. It may be increased by ripened cuttings, and slips of the root, planted under a hand-glass, or by laying down the young shoots. The other species will grow freely in a mixture of loam and peat, and ripened cuttings will strike root in a pot of sand, under a hand-glass.

VI. VENTILAGO (from *ventilo*, to be exposed to wind, and *ago*, to drive away; in allusion to the fruit being winged, which causes them to be scattered away by the wind). Gart. fruct. 1. p. 223. t. 49. Brogn. mem. Rhamn. p. 50. D. C. prod. 1. p. 38.

LIN. SYST. *Pentandria, Monogynia*. Calyx spreading, 5-cleft (f. 4. D. c.). Petals 5, obovate, convolute (f. 4. D. a.). Stamens exserted (f. 4. D. b.). Anthers ovate, 2-celled. Disk fleshy, flat. Ovary immersed in the disk, 2-celled. Style compressed, short, bidentate (f. 4. D. j.). Fruit indehiscent, woody (f. 4. D. h.), 1-celled, 1-seeded, with the upper part drawn out into a wing (f. 4. D. k.).—Large, climbing shrubs, with stiff smooth branches, alternate, short-stalked, coriaceous, smooth, serrulated leaves, which are oblique at the base, and with the flowers disposed in long axillary racemes, which are either solitary, twin, or in threes.

1 *V. MADRASPATANA* (Gart. 1. c.) leaves bifarious, ovate-oblong, serrulated; racemes disposed in terminal panicles.  $\frac{1}{2}$ .

$\frac{1}{2}$ . S. Native of the East Indies, in forests and other uncultivated places, amongst the mountains, very common in the north of Bengal. Roxb. cor. 1. t. 76. Flowers numerous, small, greenish-white. This plant is generally dioecious. The smell of the flowers is very offensive, not unlike that of *Sterculia foetida*. While young the stem and flexuous branches are striped with white lines, which elegantly contrast with the smooth green bark, not unlike what is observed in *Acer striatum*. This is most probably the *Ficus viminialis* of Rumph. amb. 3. t. 2.

*Var.  $\beta$ , denticulata* (Willd. in nov. act. berl. 3. p. 417.) leaves crenulated, pubescent beneath.  $\frac{1}{2}$ .  $\frac{1}{2}$ . S. Native of the East Indies near Samulcotta.

*Var.  $\gamma$ , bracteata* (Heyne, mss.) floral leaves long, villous.

$\frac{1}{2}$ .  $\frac{1}{2}$ . S. Native of Silhet in the East Indies.

*Madras Ventilago*. Fl. June, July. Clt. 1822. Shrub cl.

2 *V. CINERASCENS*; leaves full of parallel veins, oval, acute, quite entire, smooth, cinereous beneath; racemes terminal; pedicels in fascicles.  $\frac{1}{2}$ .  $\frac{1}{2}$ . S. Native of Java. *Rhamnus cinerascens*? Blum. bijdr. 1141.

*Cinereous Ventilago*. Shrub cl.

3 *V. OBLONGIFOLIA* (Blum. bijdr. 1144.) leaves oblong, acuminate, obliquely rounded at the base, serrated, tomentose in the axils of the veins beneath; racemes interrupted, leafy.  $\frac{1}{2}$ .  $\frac{1}{2}$ . S. Native of Java.

*Oblong-leaved Ventilago*. Shrub cl.

*Cult.* See *Berchemia* for culture and propagation.

VII. SEGERETIA (named in honour of M. Segeret, member of the Royal Agricultural Society of Paris, a vegetable physiologist). Brogn. mem. Rhamn. p. 52.

LIN. SYST. *Pentandria, Monogynia*. Calyx pitcher-shaped, 5-cleft (f. 4. F. a.). Petals 5, convolute or cucullate (f. 4. F. c.). Stamens bearing ovate, 2-celled anthers (f. 4. F. c.). Disk fleshy, cup-shaped, girdling the ovary. Ovary almost immersed in the disk, 3-celled (f. 4. F. d.). Style short, thick (f. 4. F. g.). Fruit unknown. Stigmas 3, sessile, or 3-lobed.—Shrubs with slender branches, which are usually spinescent. Leaves nearly opposite, on short petioles, lanceolate, or oblong, serrated, feather-nerved. Flowers small, solitary, or glomerated, disposed in simple or branched, interrupted, stiff, spreading, axillary, or terminal spikes.

\* *Spiny.*

1 *S. THEESANS* (Brogn. in mem. rhamn. p. 53.) branches divaricate, spiny at the apex; leaves ovate, smooth, serrulated; flowers somewhat panicled, glomerated, in terminal spikes.  $\frac{1}{2}$ . G. Native of China. *Rhamnus thesans*, Lin. mant. 207. R. thea, Osb. itin. 232. Flowers greenish? The poor in China make use of the leaves of this plant instead of the true tea, probably from its astringency and perfume. They call it *Tia*.

*Var.  $\beta$ , integræ*; leaves entire, mucronate.  $\frac{1}{2}$ . G. Dum. Cours. bot. cult. 6. p. 258.

*Tea Segeretia*. Fl. May, June. Clt. ? Shrub 4 feet.

2 *S. SPICATA* (Brogn. in mem. rhamn. p. 53.) branches cylindrical, smooth, lateral ones spiny; leaves lanceolate, acuminate, serrulated, quite smooth, with 2 stipulas at the base of each; spikes simple, stiff, divaricate, axillary, and terminal.  $\frac{1}{2}$ . S. Native of Peru.

*Spicate-flowered Segeretia*. Shrub 4 feet.

3 *S. BLUMII*; leaves veiny, nearly opposite, ovate-lanceolate, acuminate, rather cordate at the base, serrulated, shining above, young ones furfuraceous beneath; spikes axillary, filiform, hardly longer than the leaves, and terminal, panicled.  $\frac{1}{2}$ . S. Native of the East Indies and Java. *Rhamnus filiformis*, Roth. nov. spec. 153. ? Blum. bijdr. 1140.

*Blume's branched Segeretia*. Shrub 6 feet.

4 *S. OPPOSITIFOLIA* (Brogn. mem. rhamn. p. 53.) branches round, climbing; leaves and branches truly opposite, and with short straight thorns, which grow out into branches; leaves ovate-lanceolate, serrulated, acuminate, somewhat retuse at the base; racemes axillary and terminal, short, villous, the whole forming a pretty large brachiate panicle; flowers fascicled. *h. S. G.* Native of Nipaul at Cokurna in the valley. *Zizyphus oppositifolia*, Wall. fl. ind. 2. p. 370. Flowers greenish.

*Opposite-leaved Segeretia.* Fl. Aug. Sept. Shrub cl.

5 *S. AFFINIS*; leaves veiny, nearly opposite, ovate-oblong, long-acuminate, rounded at the base, serrulated, smooth; spikes panicle, axillary, and terminal, shorter than the leaves. *h. S.* Native of Java. *Rhamnus affinis*, Blum. bijdr. 1141.

*Allied Segeretia.* Shrub 8 feet.

6 *S. HAMOSA* (Brogn. mem. rhamn. p. 53.) branches round, climbing, opposite; spines hooked; leaves oblong, acuminate, serrulated, villous at the origin of the nerves; flowers fascicled, disposed in short, panicle, villous, terminal racemes. *h. S. G.* Native of Nipaul, at Chundrugiri, where it climbs over trees and shrubs to a great extent. *Zizyphus hamosa*, Wall. fl. ind. 2. p. 369. Thorns slightly curved. Flowers greenish.

*Hooked-thorned Segeretia.* Fl. Aug. Shrub cl.

7 *S. TRIGYNA*; climbing; branches round; leaves ovate, acuminate, smooth, shining, serrulated, retuse at the base; flowers glomerate, disposed in spikes, forming a terminal panicle; petioles and branchlets pubescent; styles 3. *h. S. G.* Native of Nipaul, in mountain woods. *Rhamnus trigyna* and *terminalis*, Hamilt. in D. Don, prod. fl. nep. p. 190. Shrub spinose.

*Trigynous Segeretia.* Fl. Aug. Sept. Shrub cl.

8 *S. GUAYAQUILENSIS* (Brogn. mem. rhamn. p. 53.) much branched; branches quadrangular; spines scattered, awl-shaped; leaves elliptical, mucronate, hoary beneath; flowers sessile, scattered on the spikes; stigmas 3. *h. S.* Native on the shore of the Pacific ocean, near Guayaquil. *Rhamnus Guayaquilensis*, H. B. et Kunth, nov. gen. amer. 7. p. 54.

*Guayaquil Segeretia.* Shrub 6 feet.

9 *S. SENTICOSUS* (Brogn. mem. rhamn. p. 53.) shrub very spiny, almost leafless; branches round; spines decussately-opposite, very long; leaves ovate, somewhat quintuple, nerved; flowers rising above the base of the spines in glomerated fascicles; stigma trifid. *h. S.* Native of Peru, in hot places, near Contumazay. *Collètia spicata*, Willd. in Schult. syst. 5. p. 513. *Rhamnus senticosus*, H. B. et Kunth, nov. gen. amer. 7. p. 51. Fruit globose, 1-3-seeded. Flowers green.

*Thorny Segeretia.* Shrub 6 feet.

10 *S. DECUSSATA*; branches angular, elongated; leaves ovate-oblong, acute, quite entire, somewhat coriaceous, quite smooth; spines axillary, decussate, spreading, stiff; flowers disposed on long spikes; spikes conjugate at the base of the spines, and are 3-times longer than them. *h. S.* Native of Peru. *Rhamnus decussata*, herb. Pav. This is probably the same as the preceding species.

*Decussate-spined Segeretia.* Shrub 6 feet.

• • *Unarmed.*

11 *S. ELEGANS* (Brogn. mem. rhamn. p. 53.) lower leaves truly opposite, ovate-oblong, acuminate, rounded at the base, serrulated, smooth, shining; panicles axillary and terminal, simple; flowers glomerate, spiked; stigmas 3, sessile. *h. S.* Native of South America, but in what place is unknown. This plant is probably spiny? *Rhamnus elegans*, Kunth.

*Elegant Segeretia.* Shrub.

12 *S. SPLENDENS*; climbing; leaves veiny, ovate, bluntly acuminate, somewhat cordate at the base, crenulated; types axillary, bifid, shorter than the petioles. *h. S.* Native of Java. *Rhamnus splendens*, Blum. bijdr. 1140.

*Splendid Segeretia.* Shrub cl.

• 13 *S. LANCEOLATA*; arborescent; leaves lanceolate, serrulated, acute at both ends and pubescent beneath. *h. H.* Native of North America, in Tennessee, on the sides of hills. *Rhamnus lanceolatus*, Pursh, fl. bor. amer. 1. p. 166. Berries black.

*Lanceolate-leaved Segeretia.* Tree 16 feet.

14 *S. MICHAUXII* (Brogn. mem. rhamn. p. 53.) leaves oval, serrulated; flowers very minute, dioecious, disposed in spikes, sessile; style trifid; berry 3-seeded. *h. H.* Native of Carolina and Florida, on the sea coast. *Rhamnus minutiflorus*, Michx. fl. bor. amer. 1. p. 154. Flowers white.

*Michaux's Segeretia.* Shrub 6 feet.

15 *S. FILIFORMIS*; leaves ovate-lanceolate, serrulated, shining, with the ribs beneath, as well as the petioles, pubescent; flowers hermaphrodite, disposed in filiform spikes, the whole forming a panicle. *h. S.* Native of the East Indies. *Rhamnus filiformis*, Roth. nov. spec. 153.

*Filiform-spiked Segeretia.* Shrub.

16 *S. PARVIFLORA*; leaves somewhat coriaceous, shining, serrated, ovate, acuminate; flowers disposed in loose spikes, the whole forming a panicle. *h. S.* Native of the East Indies. *Rhamnus parviflorus*, Klein. et Willd. in Schult. syst. 5. p. 294.

*Small-flowered Segeretia.* Shrub.

17 *S. CORYMBOSA*; leaves coriaceous, elliptical, a little serrated; flowers corymbose, on peduncles. *h. S.* Native of the East Indies. *Rhamnus corymbosus*, Vahl.

*Corymbose-flowered Segeretia.* Shrub.

18 *S. LEPROSA*; climbing, adult branches spiny; leaves veiny, nearly opposite, ovate, somewhat cordate, obtuse, serrated, smooth; young ones densely furfuraceous; pedicels 1-flowered, axillary, solitary. *h. S.* Native of Java. *Rhamnus leprosus*, Blum. bijdr. 1139.

*Leprous Segeretia.* Shrub cl.

• *Cult.* The hardy kinds of this genus are well fitted for shrubberies; they are increased by ripened cuttings or slips of the roots, planted under a hand-glass, but they are generally propagated by laying the branches. For the culture and propagation of the stove and greenhouse species see *Berchemia*, p. 28.

FIG. 5.

VIII. RHAMNUS (from the Celtic word *ram*, signifying a tuft of branches, which the Greeks have changed to *ῥαμνος*, and the Latins to *ramus*). Lam. dict. 1. p. 461. ill. t. 128. Gaert. fruct. 2. p. 106. D. C. prod. 2. p. 23. Brogn. mem. rhamn. p. 53.

LIN. SYST. *Pentandria, Monogynia.* Calyx urceolate, 4-5-cleft (f. 5. C. b. A. a.). Petals wanting or emarginate (f. 5: C. c.). Stamens bearing ovate 2-celled anthers (f. 6. A. d. B. b.). Disk thin, covering the tube of the calyx (f. 5. B. d. A. c. C. c.). Ovary free, 3-4-celled (f. 5. A. h. f.). Styles 3-4 (f. 5. A. g.), connected or free. Fruit baccate, containing 3-4 indehiscent nuts (f. 5. A. j. B. f.), rarely only 2 from abortion.—Small trees or shrubs, with alternate, stipulate, short, stalked, entire or toothed,

usually smooth leaves, which are permanent and coriaceous, or caducous, with feather nerves; in those with the permanent leaves the nerves are either vaguely branched, or in others approximating. Plants possessing strong purgative qualities.

SECT. I. MARCORÉLLA. Neck. elem. 2. p. 122. Rhámnus and Alatérnus of Tourn. Flowers usually dioecious, and 4-cleft. Seeds deeply furrowed with the raphe in the bottom of the furrow. Embryo curved. Leaves usually permanent, vaguely veined.

§ 1. *Alatérnus* (from *alternus*, alternate; leaves). Tourn. inst. t. 366. Flowers racemose, 5-cleft (f. 5. A. a. c.). Evergreen shrubs.

1 *R. ALATÉRNUS* (Lin. spec. 281.) leaves ovate-elliptical or lanceolate, coriaceous, quite smooth, serrated; flowers dioecious, disposed in short racemes. h. H. Native of the south of Europe and the north of Africa. Duh. ed. nov. 3. p. 42. t. 14. *Alatérnus Phyllica*, Mill. dict. no. 1. fig. t. 16. f. b. Flowers green, without any corolla.

Var. *a*, *Baleáricus* (Hort. par.) leaves roundish; stipulas awl-shaped, and are, as well as the branchlets, somewhat spiny. Rh. rotundifolius, Dum. Cours. 6. p. 260.

Var. *β*, *Hispanicus* (Hort. par.) leaves ovate, a little toothed.

Var. *γ*, *vulgaris* (D. C. prod. 2. p. 23.) leaves ovate, serrated.

Var. *δ*, *angustifolius* (Mill. fig. t. 16. f. 2.) leaves almost linear-lanceolate. h. H. Rh. Clusii, Willd. enum. 1. p. 250. —Clust. hist. 1. p. 50. Lob. icon. 2. t. 134.

There are several other varieties, as 1. The *Smooth Alaternus*. 2. The *Entire-leaved Alaternus*. 3. The *Spotted-leaved Alaternus*. 4. The *Gold-striped-leaved Alaternus*. 5. The *Silver striped-leaved Alaternus*.

The flowers of *Alaternus* are said not to be perfectly dioecious. The fresh shoots and leaves will dye wool yellow. The honey breathing blossoms, says Evelyn, afford an early and marvellous relief to the bees, as they open in April. Clusius reports that the fishermen in Portugal dye their nets red with a decoction of the bark; and that dyers there use small pieces of the wood to strike a blackish-blue colour. The *Alaternus* was much more in request formerly than at present, having been planted against walls in court-yards to cover them, as also to form evergreen hedges in gardens, for which purpose it is very improper, for the branches shoot too vigorously, and are easily broken, and displaced by the wind. It is still, however, used in towns for covering walls, but chiefly to make a variety in ornamental plantations.

*Alaternus*. Fl. April, June. Clt. 1629. Shrub 20 feet.

2 *R. HYBRIDUS* (Lher. sert. t. 5.) leaves oblong, acuminate, serrated, smooth, shining, hardly permanent, rather coriaceous; flowers androgynous. h. H. This plant has been raised in the gardens from *R. alaternus* and *R. alpinus*. R. Burgundiacus, Hort. par. R. sempervirens, Hortulan. Flowers green.

*Hybrid Alaternus*. Fl. April, June. Clt. 1629. Shrub 12 ft.

3 *R. GLANDULOSUS* (Ait. hort. kew. 1. p. 265.) leaves ovate, bluntly-serrated, smooth beneath, in the axillæ of the lower veins glandular; flowers hermaphrodite, racemose. h. G. Native of the Canary islands, in woods on the mountains. Vent. malm. t. 34. Flowers green.

*Glandular-leaved Alaternus*. Fl. Ju. Jul. Clt. 1785. Sh. 15 ft.

4 *R. INTEGRIFOLIUS* (D. C. cat. hort. monsp. p. 136. exclusive of the country,) leaves elliptical-oblong, mucronate, quite entire; flowers hermaphrodite, racemose. h. G. Native of Teneriffe, on the highest peak. R. coriaceous, Nees hort. phys. p. 114. t. 22. Brouss. in Roem. et Schult. syst. 5. p. 291. Young leaves flat, adult ones boat-shaped. Flowers green, apetalous.

*Entire-leaved Alaternus*. Clt. 1822. Shrub 2 feet

5 *R. INCANUS* (Roxb. fl. ind. 2. p. 350.) leaves ovate-lanceolate, entire, smooth above, hoary beneath; corymbs on small axillary branchlets; flowers hermaphrodite; style 3-cleft. h. S. Native of the Moluccas. Flowers very numerous, small, greenish-yellow. Calyx villous on the outside.

*Hoary Buck-thorn*. Shrub 10 feet.

§ 2. *Rhámnus* (see genus for derivation). Flowers in fascicles, 5-cleft.

6 *R. LONGIFOLIUS* (Link. enum. 1. p. 228. Dum. Cours. bot. cult. 6. p. 260.) leaves oval-oblong, acute at both ends, serrated, smooth, shining, pilose in the axillæ of the veins beneath. h. H. Native of? R. Willdenovianus, Roem. et Schult. syst. 5. p. 295. Flowers green.

*Long-leaved Buck-thorn*. Fl. ? Clt. 1822. Shrub 8 feet.

7 *R. PRINOIDES* (Lher. sert. 6. t. 9.) leaves ovate-lanceolate, acuminate, serrated, shining; flowers on pedicels, axillary, usually twin, polygamous. h. G. Native of the Cape of Good Hope. *Zizyphus lucidus*, Mœnch. suppl. 101. Drupe black. Stigmas 3. Flowers green or white.

*Prinos-like Buck-thorn*. Fl. Aug. Sept. Clt. 1778. Sh. 10 ft.

8 *R. CELTIDIFOLIUS* (Thunb. fl. cap. 2. p. 72.) leaves ovate, serrated, smooth; flowers on pedicels, axillary, solitary, apetalous. h. G. Native of the Cape of Good Hope.—Burm. afr. t. 88. Flowers green.

*Celtis-leaved Buck-thorn*. Fl. April, June. Clt. ? Shrub.

§ 3 Flowers 4-cleft (f. 5. B. a. c.), in fascicles.

\* Branchlets terminating in a thorn.

9 *R. CATHARTICUS* (Lin. spec. 280.) erect; leaves ovate, toothed; flowers in fascicles, polygamo-dioecious, berries 4-seeded, rather globose. h. H. Native of Europe, in hedges and groves; plentiful in England. Smith, engl. bot. t. 1629. Woodv. med. bot. t. 114. Oed. fl. dan. t. 850. Duh. ed. nov. 3. t. 10. This is the white-thorn of the modern Greeks. It is a rigid bush; its branches terminating in strong thorns. There is a variety of it with 5-cleft flowers, and unarmed branches. The flowers yellowish-green, with very narrow petals, and a deep 4-cleft style. Berries globular, blueish-black when ripe, size of a pea. The juice of the unripe berries has the colour of saffron, and is used for staining maps or paper; these are sold under the name of French berries. The juice of the ripe berries mixed with alum is the sap-green of the painters; but if the berries be gathered late in the autumn the juice is purple. The bark affords a beautiful yellow dye. The inner bark or liber, as well as the berries, like that of elder, is said to be a strong cathartic, and to excite vomiting. The berries are nauseous, and violently purgative, occasioning thirst and dryness in the mouth and throat, accompanied usually with severe griping of the bowels, unless some diluting liquor be taken plentifully with them. The juice made into a syrup is the official preparation called Buck-thorn. About an ounce of this is a moderate dose, and it was formerly employed as a hydrogogue; but it is now falling into disuse, and is rarely prescribed except in conjunction with other medicines of this class. It is said even that the flesh of birds which feed upon these berries is purgative.

Var. *β*, *Hydriensis* (Jacq. carn. 2. t. 2.) larger leaves tapering to the base. h. H. Native about Hydria.

*Purging Buck-thorn*. Fl. May. Britain. Shrub 12 feet.

10 *R. VIRGATUS* (Roxb. fl. ind. 2. p. 351.) erect; branchlets terminating in a spine; leaves nearly opposite, oblong, ventricose, serrated; flowers around the base of the young shoots, and axillary, tern; stigmas 2-3-cleft. h. H. Native of Nipaul, and the Nelligery mountains. R. catharticus, Hamilt. mss.

Leaves usually alternate. Flowers very small, yellow. Calyx seldom 5-cleft. Berries 2-3-seeded. Branches twiggy, the lateral branchlets terminated in a thorn.

*Twiggy Buck-thorn.* Fl. Ju. Jul. Clt. 1820. Shrub 12 ft.

11 *R. TINCTORIUS* (Walds. et Kit. pl. rar. hung. 3. p. 255.) erect; leaves ovate, crenate-serrated; petioles villous; flowers crowded, dioecious; berries obcordate, 3-4-seeded. *h. H.* Native of Hungary, in hedges. *R. cardiospermus*, Willd. herb. Flowers greenish-yellow. The berries are used for dying as well as the inner bark.

*Dyers' Buck-thorn.* Fl. May, June. Clt. 1820. Sh. 8 feet.

12 *R. INFECTORIUS* (Lin. mant. 49.) procumbent or diffuse; leaves ovate-lanceolate, serrulated, smoothish; flowers dioecious, bearing petals in both sexes. *h. H.* Native of the south of Europe, in rough places, and in the fissures of rocks.—Clus. hist. 1. p. 111. with a figure.—Ardu. mem. 78. t. 14. Flowers greenish-yellow, with two reflexed stigmas. The unripe berries are much used for dyeing, and are imported in great quantities into England under the name of *Grain d'Avignon* or *Avignon berries*. They are what give the yellow colour to Turkey leather or yellow Morocco.

*Dyers' or Avignon-berry.* Fl. June, July. Clt. 1683. Shrub procumbent.

13 *R. SAXATILIS* (Lin. spec. 1671.) procumbent or erectish; leaves ovate-lanceolate, serrulated, smoothish; flowers dioecious, female ones destitute of petals. *h. H.* Native of the south of Europe, among rocks, in Austria, Switzerland, Italy, and Greece. Jacq. austr. t. 53. *R. longifolius*, Mill. dict. Flowers greenish-yellow. Berries black, containing 3 whitish seeds, each inclosed in a dry whitish membrane, separating into two parts with elastic force. The unripe berries of the species are also supposed to be Avignon berries. See *R. infectorius*. Branches with a few long thorns.

*Rock Buck-thorn.* Fl. June, July. Clt. 1752. Shrub procumbent.

14 *R. OLEOIDES* (Lin. spec. 279.) diffuse or somewhat erect; leaves oblong, obtuse, entire, coriaceous, smooth, with netted veins beneath. *h. H.* Native of Sicily, Mauritania, Spain, and Greece, in the fissures of rocks. Desf. atl. 1. p. 197. Flowers greenish-yellow. Berry juiceless, 2-celled, 2-seeded.

*Olive-like Buck-thorn.* Fl. Ju. July. Clt. 1752. Shrub 3 ft.

15 *R. BUXIFOLIUS* (Poir. dict. 4. p. 463.) diffuse; leaves ovate, quite entire, mucronate, smooth, coriaceous, green on both surfaces. *h. H.* Native of Numidia. Flowers greenish-yellow. According to Desf. this is only a variety of the preceding. Perhaps this is *R. buxifolius*, Brot. fl. lus. 1. p. 301.

*Box-leaved Buck-thorn.* Fl. June, July. Clt. 1820. Sh. 3 ft.

16 *R. PUBESCENS* (Poir. dict. 4. p. 464.) diffuse; leaves ovate, quite entire, coriaceous, pubescent. *h. H.* Native of the south of France, and of the Levant. *R. oleoides*, Lam. fl. fr. 2. p. 545. ed. 3. no. 4075. This is probably only a variety *R. oleoides*.

*Pubescent Buck-thorn.* Fl. Ju. July. Clt. 1817. Shrub 3 feet.

17 *R. AMYGDALINUS* (Desf. atl. 1. p. 198.) diffuse; leaves permanent, lanceolate, obtuse, almost entire, coriaceous, smooth, not netted beneath. *h. H.* Native of the north of Africa, and the islands of the Archipelago, in the fissures of rocks. Flowers greenish-yellow. The Avignon berries or yellow berries are also obtained from this shrub, as well as from *R. infectorius*, *tinctorius*, *saxatilis*, *oleoides*, *buxifolius*, and *pubescens*.

*Almond-like Buck-thorn.* Fl. June, July. Clt. Shrub 3 feet.

18 *R. PERSICIFOLIUS* (Moris. stirp. sard. 4to. fasc. 2.) erect; branches spiny at the apex; leaves oblong-lanceolate, crenated, obtuse, reticulately-veined, and pilose beneath. *h. H.* Native of Sardinia.

*Peach-leaved Buck-thorn.* Shrub.

19 *R. CRENULATUS* (Ait. hort. kew. 1. p. 263.) erect; leaves oblong, somewhat serrated, permanent, smooth, netted with veins beneath. *h. G.* Native of Teneriffe, on the mountains. Flowers greenish-yellow.

*Crenulate-leaved Buck-thorn.* Fl. March. Clt. 1778. Sh. 6 ft.

20 *R. PRUNIFOLIUS* (Smith, prod. fl. græc. 1. p. 157. Rees' cycl. no. 6.) plant depressed or procumbent; leaves obovate, obtuse, crenated, naked; flowers dioecious or polygamous. *h. H.* Native of Crete, on the highest mountains. The female flowers have usually the rudiments of stamens. Flowers greenish-yellow.

*Plum-leaved Buck-thorn.* Shrub depressed.

21 *R. LYCIOIDES* (Lin. spec. 279.) erect; leaves linear, quite entire, obtuse, smooth; flowers hermaphrodite. *h. H.* Native of Spain, frequent on the limestone hills of Valentia. Cav. icon. 2. t. 182. Flowers greenish-yellow. Berries black, round, 2-3-seeded.

*Var. β, Arragonensis* (Asso, syn. arr. p. 27.) leaves yellowish above.

*Lycium-like Buck-thorn.* Fl. Sept. Dec. Clt. 1752. Shrub 4 feet.

22 *R. ERYTHROXYLON* (Pall. fl. ross. 2. t. 62. itin. French edit. t. 90.) erect; leaves linear-lanceolate, quite entire or serrated, smooth; flowers hermaphrodite; berries oblong. *h. H.* Native of Siberia, on rocks. Berries about the size of a pea, 3-seeded. Flowers greenish. This shrub when cultivated becomes destitute of spines. The wood is orange or almost red.

*Var. β, angustissimus* (D. C. prod. 2. p. 25.) leaves linear, narrow, very finely serrulated. *h. H.* Native of Caucasus. *R. lycioides*, Pall. fl. ros. t. 63. This is perhaps a distinct species.

*Red-wooded Buck-thorn.* Fl. July, Aug. Clt. 1823. Sh. 6 ft.

*\*\* Branchlets not terminated by spines.*

• 23 *R. RUPESTRIS* (Vill. dauph. 2. p. 531.) procumbent, branched; leaves ovate, quite entire, smooth; flowers dioecious. *h. H.* Native of Dauphiny, on rocks. *R. pumilus β, rupes-tris*, D. C. prod. 25. Flowers greenish-yellow. Stigma 3-cleft.

*Rock Buck-thorn.* Fl. June, July. Clt. 1752. Sh. proc.

24 *R. VALENTINUS* (Willd. spec. 1. p. 1096.) procumbent; leaves roundish, elliptical, minutely-crenate, and nearly sessile; flowers 4-cleft, hermaphrodite. *h. H.* Native of Spain, on the mountains of Mecca and Palomera, in the kingdom of Valentia. *R. pumilus*, Cav. icon. 2. t. 181. Style deeply 3-parted. Drupe dry, 3-celled.

*Valentia Buck-thorn.* Fl. June, July. Clt. 1816. Sh. proc.

25 *R. WULFENII* (Spreng. syst. 1. p. 762.) erectish; leaves orbicular, with cartilaginous crenate margins, veiny, silky beneath at the nerves; stigma simple; flowers hermaphrodite. *h. H.* Native of Austria. *R. pumilus*, Wulf. in Jacq. coll. 2. p. 141. t. 11. Flowers greenish-yellow.

*Wulfen's Buck-thorn.* Fl. June, July. Clt. 1752. Sh. 2 ft.

26 *R. PUSILLUS* (Ten. prod. 16.) procumbent; leaves obovate, acute, crenulated, and mucronate at the apex; flowers hermaphrodite; stigma 3-parted. *h. H.* Native of Naples.

*Small Buck-thorn.* Fl. Ju. July. Clt. 1823. Shrub proc.

27 *R. SIBTHORPIANUS* (Schult. syst. 6. p. 286.) diffuse; leaves obovately-rhomboid, almost entire, lined, villous; flowers dioecious, usually digynous. *h. H.* Native of Mount Parnassus. Allied to *R. alpinus* and *R. frángula*. *R. pubescens*, Sibth. fl. græc. t. 239. Flowers green.

*Sibthorp's Buck-thorn.* Shrub diffuse.

28 *R. DAHURICUS* (Pall. fl. ross. 2. t. 61.) erect; leaves oblong-ovate, serrated, smooth, veiny; flowers dioecious, female ones with bifid stigmas. *h. H.* Native of Dahuria, on the banks of the river Argun. Flowers greenish-yellow. Berries

about the size of a pea, sometimes twin. Very like *R. catharticus*, but without thorns. The wood is red, and is called sandal wood by the Russians.

*Dahurian* Buck-thorn. Fl. May, Ju. Clt. 1817. Shrub 5 feet.

29 *R. ALNIFOLIUS* (Lher. sert. p. 5.) erect; leaves obovate or ovate, serrulated, obliquely-lined, with lateral nerves, acuminate or obtuse, smoothish beneath, except the nerves; flowers hermaphrodite or dioecious; pedicels 1-flowered, aggregate; calyxes acute; fruit turbinate.  $\frac{1}{2}$ . H. Native of North America.

*Alder-leaved* Buck-thorn. Fl. Ju. July. Clt. 1778. Sh. 8 feet.

30 *R. FRANGULOIDES* (Michx. fl. bor. amer. 1. p. 153.) leaves oval, serrated, pubescent on the nerves beneath; flowers hermaphrodite; pedicels 1-flowered.  $\frac{1}{2}$ . H. Native of North America, from Canada to Carolina, on dry hills, near rivers. Flowers green. Berries black. Leaves small.

*Frangula-like* Buck-thorn. Fl. Ju. Jul. Clt. 1810. Sh. 8 feet.

31 *R. PURSHIANUS* (D. C. prod. 2. p. 25.) erect; leaves oval, toothletted, short-acuminate, with a small cordate recess at the base, pubescent on the nerves beneath; peduncles twice bifid; berries depressed, globose.  $\frac{1}{2}$ . H. Native of North America, on the banks of the Kookoosky. *R. alnifolius*, Pursh, fl. sept. amer. 1. p. 166. but not of Lher. Berries purple, very highly esteemed among the natives.

*Pursh's* Buck-thorn. Fl. May, June. Shrub 6 feet.

32 *R. SERRULATUS* (H. B. et Kunth, nov. sp. amer. 7. p. 51. t. 617.) shrubby; branches villously hairy; leaves oblong, acute at both ends, sharply serrated, smooth, clammy; peduncles axillary, solitary, single-fruited.  $\frac{1}{2}$ . G. Native of Mexico, in the plains near St. Augustin de las Guevas. Flowers greenish-yellow.

*Serrulated-leaved* Buck-thorn. Shrub 6 feet.

33 *R. CALIFORNICUS* (Eschscholtz, mem. acad. scienc. peterb. 10. p. 281.) unarmed; flowers hermaphrodite, monogynous, in fascicled umbels; berry 2-seeded; leaves oval, serrulated.  $\frac{1}{2}$ . H. Native of California.

*Californian* Buck-thorn. Shrub.

34 *R. MICROPHYLLUS* (Willd. in Schult. syst. 5. p. 295.) shrubby, procumbent, much branched; branches twisted; branchlets hairy; leaves linear-lanceolate, obtuse, almost entire, smooth; peduncles solitary, axillary; flowers 5-cleft, hermaphrodite, monogynous.  $\frac{1}{2}$ . G. Native of Mexico. Flowers greenish-yellow. This shrub has the habit of *R. olcoides*, but with the flowers 5 or 6-cleft, and the style simple, and 2-lobed at the apex. H. B. et Kunth, nov. gen. amer. 7. p. 51. t. 616.

*Small-leaved* Buck-thorn. Clt. 1823. Shrub trailing.

35 *R. ALPINUS* (Lin. spec. 280.) erect, twisted; leaves oval-lanceolate, crenate-serrated, smooth, lined with many parallel nerves; flowers dioecious, female ones with 4-cleft stigmas.  $\frac{1}{2}$ . H. Native of the Alps of Switzerland, Dauphny, Austria, and Carniola. Duh. ed. 2. vol. 3. t. 13. Hall. hist. no. 823. t. 40. Berries black. Flowers greenish.

*Alpine* Buck-thorn. Fl. May, June. Clt. 1752. Shrub 4 feet.

36 *R. RUPIDULUS* (Lin. mant. 49.) plant procumbent, much branched; leaves ovate, serrated, smooth; flowers hermaphrodite.  $\frac{1}{2}$ . H. Native of Mount Baldo, and the Alps, and Carniola, in the fissures of rocks. Stigma 3-cleft. Flowers greenish-yellow, with the stamens white. *R. rupéstris*, Scop. carn. 1. t. 5.

*Dwarf* Buck-thorn. Fl. Ju. July. Clt. 1752. Sh. procumbent.

SECT. II. *FRA'NGULA* (from *frango*, to break). Tourn. inst. t. 383. D. C. prod. 2. p. 26. Brogn. mem. rhamn. p. 55. Flowers hermaphrodite, rarely dioecious, 5-cleft (f. 5. C. a.), sometimes 4-cleft (f. 5. C. a.). Seeds smooth, compressed, with the hylun

white and exserted, and with the raphe lateral on the surface of the inner testa: Embryo flat. Leaves membranous, caducous, quite entire, lined with approximate parallel nerves.

37 *R. CAROLINIANUS* (Walt. car. p. 101.) erect; leaves oval-oblong, almost entire, smooth; umbels stalked; flowers hermaphrodite; berries globose.  $\frac{1}{2}$ . H. Native of North America, Virginia, and Carolina, in woods and swamps. Flowers greenish 4-cleft. Stigma 2-lobed. Berries black, 4-seeded.

*Carolinian* Buck-thorn. Fl. May, Ju. Clt. 1818. Sh. 6 feet.

38 *R. FRANGULA* (Lin. spec. 280.) leaves oval, quite entire, lined with 10 or 12 lateral nerves, and are, as well as the calyx, smooth; flowers hermaphrodite.  $\frac{1}{2}$ . H. Native of Europe, in woods and thickets. In England, but rare in Scotland. Flowers whitish, 5-cleft. Berries dark-purple, each containing 2 large seeds. Peduncles 1-flowered, aggregate. Smith, engl. bot. t. 250. Oed. fl. dan. t. 278. From a quarter to half an ounce of the inner bark or liber, boiled in water or beer, is violently purgative. In dropsies or constipation of the bowels in cattle it is a certain purgative. The berries gathered before they are ripe dye wool green and yellow, when ripe blue and green. The bark dyes yellow, and with preparations of iron black. The flowers are particularly grateful to bees. Goats devour the leaves voraciously, and sheep will eat them. Charcoal prepared from the wood is preferred by the makers of gunpowder. The berries are sometimes mixed by herb gatherers with those of the true Buck-thorn, *R. catharticus*, or substituted for them, but the smaller number of seeds betrays the deception. Their qualities perhaps differ very little.

*Breaking* or *Alder* Buck-thorn, or *Berry-bearing Alder*. Fl. May. Britain. Shrub 3 to 10 feet.

39 *R. LATIFOLIUS* (Lher. sert. 5. t. 8.) leaves elliptical, acuminate, quite entire, lined with 12 or 15 lateral nerves; younger leaves and calyxes villous; flowers hermaphrodite.  $\frac{1}{2}$ . G. Native of the Azores, on the mountains of St. Michael. Flowers greenish. Stigma slightly 3-cleft.

*Broad-leaved* Buck-thorn. Fl. July. Clt. 1778. Shrub 5 ft.

40 *R. SANGUINEUS* (Pers. ench. 1. p. 239.) leaves ovate or oblong, acuminate, quite entire, lined, and are, as well as the calyxes, smooth; flowers hermaphrodite, fascicled, axillary.  $\frac{1}{2}$ . H. Native of Galicia, on the banks of rivers. *R. sanguino*, &c. Ort. dec. 87. Young branches red. Flowers greenish.

*Bloody-branched* Buck-thorn. Shrub 6 feet.

41 *R. HUMBOLDTIANUS* (Schult. syst. 5. p. 295. H. B. et Kunth, nov. gen. amer. 7. p. 52. t. 618.) branches and leaves smooth, alternate, and opposite, oblong-elliptical, obtuse, rounded at the base, quite entire, beneath as well as the calyxes beset with glandular dots; peduncles axillary, 3-6-flowered; flowers somewhat umbellate; stigmas 2-lobed.  $\frac{1}{2}$ . S. Native of South America, between Totonilco el Grande and Actopan, near the village of Magdalena. *R. franguloides*, Willd. herb. but not of Michx. Fruit 2-celled, cells 2-seeded. Flowers white. This species differs from all the others in the cells of the fruit being 2-seeded, and in the leaves being for the most part opposite.

*Humboldt's* Buck-thorn. Tree.

SECT. III. ? *ANTIRHAMNUS* (from *anti* and *rhamnus*). D. C. prod. 2. p. 20. Leaves opposite, bistipulate. Flowers axillary. Fruit 2-celled.—Unarmed species not sufficiently known. Natives of Mexico. They should perhaps be joined with *Ceanothus* or separated into a distinct genus.

42 *R. UMBELLATUS* (Cav. icon. 6. p. 2. t. 504.) leaves ovate, acute, entire, lined with feather nerves, smoothish; peduncles axillary, bearing an umbel of 4 or 5 flowers.  $\frac{1}{2}$ . G. Native of Mexico. Segments of calyx each with 2 hollows inside. Flowers reddish.

*Umbel-flowered* Buck-thorn. Shrub 6 feet.

43 *R. BINIFLORUS* (Moc. et Sesse, fl. mex. icon. ined. D. C. prod. 2. p. 26.) leaves entire, oval, acute at both ends, lined with feather nerves; peduncles axillary, 2-flowered. *h. G.* Native of Mexico. This is perhaps sufficiently distinct from the preceding species.

*Twin-flowered Buck-thorn.* Shrub.

44 *R. TERNIFLORUS* (Moc. et Sesse, fl. mex. icon. ined. D. C. prod. 2. p. 26.) leaves somewhat acute, toothed, rusty beneath as well as the branchlets; pedicels 3, axillary, 1-flowered. *h. G.* Native of Mexico. Flowers greenish.

*Tern-flowered Buck-thorn.* Shrub.

† Species doubtful to what genus they belong, perhaps many of them should be placed in the genus *SEGERETIA* and some in *SCUTIA*.

\* Unarmed. Leaves entire.

45 *R. TETRAGONUS* (Lin. fil. suppl. 158.) leaves opposite, ovate, smooth, sessile; flowers terminal, somewhat panicled, incomplete; berries 1-celled, 1-seeded. *h. G.* Native of the Cape of Good Hope. Probably a species of *Scutia* or *Ceanothus*.

*Tetragonal-branched Buck-thorn.* Cult. 1816. Shrub 6 feet.

46 *R. POLIFOLIUS* (Vahl. symb. 1. p. 768.) leaves alternate, lanceolate, downy-white beneath, as well as the branches; flowers axillary, almost sessile, usually solitary, hermaphrodite, and usually trigynous. *h. G.* Native of New Zealand. Probably a species of *Pomaderris*.

*Poly-leaved Buck-thorn.* Shrub.

47 *R. ZIZYPHOIDES* (Spreng. syst. 1. p. 768.) leaves ovate-lanceolate, acute, hoary and downy beneath; flowers terminal, loosely panicled, hermaphrodite; capsules baccate, containing 3 nuts. *h. G.* Native of the Society Islands. Probably a species of *Segeretia*.

*Zizyphus-like Buck-thorn.* Shrub.

48 *R. MYRTINUS* (Burm. ind. p. 60.) leaves oblong-ovate, shining beneath. *h. S.* Native of Coromandel.

*Myrtle-like Buck-thorn.* Shrub.

49 *R. BRASILIENSIS* (Spreng. syst. 1. p. 768.) leaves oblong-lanceolate, tapering at both ends, coriaceous, shining above; peduncles axillary, 1-flowered, aggregate, rather hispid. *h. S.* Native of Brazil.

*Brazilian Buck-thorn.* Shrub.

50 *R. RAMIFLORUS* (Rich. act. soc. hist. nat. par. 107.) quite smooth; leaves lanceolate-oblong, shining; flowers minute in scattered bunches along the branches. *h. S.* Native of Cayenne.

*Branched-flowered Buck-thorn.* Shrub.

\*\* Unarmed. Leaves toothed or serrated.

51 *R. ? CASSINOIDES* (Lam. in Poir. dict. 4. p. 474.) leaves ovate, coriaceous, glaucous, obsoletely toothed; branches angular; flowers axillary, almost sessile, 5-cleft. *h. S.* Native of St. Domingo. Probably a species of *Cassine*.

*Cassine-like Buck-thorn.* Shrub.

52 *R. QUITENSIS* (Humb. et Bonpl. in Schult. syst. 5. p. 295.) leaves obovate-oblong, obtuse, mucronate, serrated, quite entire at the base, coriaceous; peduncles solitary, axillary; branches angular. *h. S.* Native of Peru in the province of Quito.

*Quito Buck-thorn.* Shrub.

53 *R. WILHOR* (Luce in ind. hort. Dorp. 1824. p. 6.) compare with Luce topogr. von. den. ins. æsel. Riga. 1823.

*Wilhor Buck-thorn.* Shrub.

54 *R. LANCEOLATUS* (Pursh, fl. amer. sept. 1. p. 166.) arborescent, unarmed; leaves lanceolate, serrulated, acute at both ends, pubescent beneath. *h. H.* Native of Tennessee on the sides of hills. Berries black.

*Lanceolate-leaved Buck-thorn.* Clt. 1812. Shrub.

• *Cult.* The hardy species are all proper for shrubberies, some are evergreen and some deciduous, these are usually increased by layers and seeds, which are produced in abundance. The stove and greenhouse kinds will grow in any light soil, and they are easily increased by cuttings, planted under a hand-glass.

IX. *SCUTIA* (from *scutum*, a shield, form of disk). Comm. mss. Brogn. mem. rhamn. p. 55. Séntis, Comm. in herb. Ceanothus, sect. 1. *Scutia*, D. C. prod. 2. p. 29.

LIN. SYST. *Pentandria, Monogynia*. Calyx pitcher-shaped, with an erect 5-cleft border (f. 6. A. a.). Petals nearly flat, emarginate (f. 6. A. b.). Stamens short; anthers ovate, 2-celled (f. 6. A. b.). Disk fleshy, covering the tube of the calyx (f. 6. A. c.), which closely girds the ovary, but not adnate to it. Ovary 2-3-celled (f. 6. A. g.). Style short, simple (f. 6. A. k.). Fruit trilocular (f. 6. A. l.), girdled at the base by the circumcised calyx (f. 6. A. h.). Smooth shrubs with alternate leaves approximating by pairs, and nearly opposite, quite entire or hardly serrulated, coriaceous, feather-nerved, bistipulate; stipulas minute, deciduous. Spines wanting or arched, about equal in length to the petioles, rising from the axillæ of the lower leaves. Flowers axillary, disposed in few-flowered simple umbellets, scarcely longer than the petioles.

1 *S. INDICA* (Brogn. mem. rhamn. p. 56.) branchlets twiggy, armed with sub-opposite, recurved prickles; leaves nearly opposite, obovate, retuse, toothletted towards the apex. *h. S.* Native of the East Indies, in forests. *Rhamnus circumcissus*, Lin. fil. suppl. 152. *Ceanothus circumcissus*, Gaert. fruct. 2. p. 111. t. 106. Shrub dividing into many long straggling scandent branches. Umbellets solitary, axillary. Fruit containing 5 seeds when all come to maturity.

*Var. β, pauciflorus* (D. C. prod. 2. p. 30.) pedicels 3-5. *h. S.* Native of the Mauritius. *Ceanothus*, nov. spec. Sieb. pl. exsicc. maur. no. 75.

*Indian Scutia.* Shrub straggling.

2 *S. LUCIDA*; branches armed with short, opposite, and solitary, recurved prickles; leaves opposite, from round to oblong, emarginate, entire, polished and firm; peduncles from 2-4-flowered; berries globular, usually 2-seeded. *h. S.* Native of the Mauritius. *Rhamnus lucida*, Roxb. fl. ind. 2. p. 353. A small much branched tree, with far spreading and straggling, somewhat climbing branches.

*Shining-leaved Scutia.* Tree 20 feet.

3 *S. COMMERSONI* (Brogn. in mem. rhamn. p. 56.) branches spreading, stiff; leaves almost opposite, approximate, distich, elliptical, quite entire. *h. S.* Native of the Island of Bourbon, as well as on the eastern coast of Africa. Séntis, Comm. herb. *Lycium Africanum*, Burm. herb. *Rhamni cathartici foliis spinosum*, Herm. cat. pl. Afr. p. 16. Called *Bois-senti* in Bourbon.

*Commerçon's Scutia.* Shrub 10 feet.

4 *S. CAPENSIS*; leaves cordate or ovate, very blunt, entire, smooth; prickles solitary, recurved. *h. G.* Native of the Cape of Good Hope. *Rhamnus Capensis*, Thunb. prod. 1. p. 44. fl. cap. 2. p. 73. *Ceanothus Capensis*, D. C. prod. 2. p. 30. Flowers whitish.

*Cape Scutia.* Fl. May, July. Clt. 1823. Shrub 4 feet.

5 *S. FERREA* (Brogn. mem. rhamn. p. 56.) leaves oblong-ovate, coriaceous, smooth, shining, quite entire; peduncles axillary, shorter than the petioles somewhat umbellate; flowers apetalous; calyx spreading. *h. S.* Native of the Antilles. *Rhamnus ferrea*, Vahl. symb. 3. p. 41. t. 58. *Ceanothus ferrea*, D. C. prod. 2. p. 30.

*Iron Scutia.* Shrub.

6 *S. SARCOMPHALUS* (Brogn. mem. rhamn. p. 56.) leaves ovate or oval, coriaceous, smooth, quite entire, blunt, or emar-

ginate; peduncles axillary, longer than the petioles, racemosely-corymbose. *h. S.* Native of Jamaica. *Sarcophallus*, P. Brown, Jam. 179. *Rhâmnus sarcophallus*, Lin. amœn. 5. p. 595. Kunth, nov. gen. amer. 7. p. 57. in a note. *Ceanothus sarcophallus*, D. C. prod. 2. p. 30. This differs from the other species in the petals being helmet-shaped, stamens turned outwards, and in the disk being thicker, as well as in the leaves being alternate, not approximating by pairs. This tree rises generally to a considerable height; the trunk is generally about 3 feet in diameter. The wood is hard, of a dark colour, and close grain; it is looked upon as one of the best timber woods in the island of Jamaica. The name is derived from *σαρξ*, *sarx*, *sarcos*, flesh, and *ομφαλος*, *omphalos*, a navel; resemblance in the ovary, surrounded by the disk.

*Sarcophallus* Scutia. Tree 30 feet.

+ *Species not sufficiently known.*

7 *S. LÆVIGATA*; leaves oblong, obtuse, quite entire, coriaceous, veinless, smooth; flowers axillary, 2-3 pedicellate. *h. S.* Native of Santa Cruz. *Rhâmnus lævigatus*, Vahl. symb. 3. p. 41. *Ceanothus lævigatus*, D. C. prod. 2. p. 30.

*Var. β, Guadalupe* (D. C. prod. 2. p. 30.) leaves oval, quite entire, coriaceous, with a middle nerve and a few lateral ones; flowers axillary, 3-5 pedicelled. *h. S.* Native of Guadeloupe.

*Smooth* Scutia. Clt. 1818. Shrub 10 feet.

8 *S. SPILERSPERMA*; leaves oblong, acuminate, serrated, smooth; peduncles axillary, subracemose, length of petiole; fruit pellucid, spherical; seeds trigonal. *h. S.* Native of Jamaica, among bushes. *Rhâmnus sphaerospermus*, Swartz, fl. ind. occ. 1. p. 499. *Ceanothus? sphaerocarpus*, D. C. prod. 2. p. 30. Flowers yellowish-green. Berry the size of a small peppercorn, either quite globular or obscurely 3-lobed, pellucid, pale-green, containing 1 or 3 seeds. Stigma in 2 deep, acute divisions.

*Round-seeded* Scutia. Clt. 1824. Shrub 10 feet.

9 *S. PAUCIFLORA*; leaves obovate-oblong, obtuse, smooth, entire, or a little toothed; racemes lateral, short, few-flowered. *h. G.* Native of Mexico. *Ceanothus pauciflorus*, Moc. et Sesse, fl. mex. icon. ined. D. C. prod. 2. p. 33. Flowers greenish-yellow?

*Few-flowered* Scutia. Shrub.

10 *S.? PANICULATA*; leaves roundish-oval, acuminate, serrated, pubescent; panicle terminal, with subcorymbose branches. *h. S.* Native of the East Indies. *Celastrus Rothianus*, Schult. syst. 5. p. 423. *Ceanothus paniculatus*, Roth. nov. spec. 154. Flowers white.

*Panicled* Scutia. Shrub.

*Cult.* Inconspicuous shrubs not worth cultivating, except in general collections; they will grow in any light soil, and are easily increased by young cuttings, planted under a hand-glass, in a moderate heat.

X. RETANILLA (the name of *R. obcordata* in Peru). Brogn. mem. rhamn. p. 57.—Molinæa, Comm. inss.—*Collètia* species, Vent. and D. C.

LIN. SYST. *Pentândria, Monogýnia*. Calyx pitcher-shaped, 5-cleft (f. 5. E. e.), internally fleshy. Petals 5, cucullate (f. 5. E. d.), sessile. Stamens inclosed; anthers kidney-shaped, 1-celled. Disk effuse, covering the whole inner surface of the calyx (f. 5. E. f.). Ovary free (f. 5. E. g.), 3-celled. Style simple, short. Stigma 3-toothed. Fruit adnate to the base of the calyx, indehiscent, containing a 3-celled woody nut (f. 5. E. i.). Seeds sessile (f. 5. E. i.).—Subshrubs with elongated, nearly simple naked branches, or with a few leaves at their base, these are opposite, quite entire, and small. Flowers small, villous on the outside (f. 5. E. e.), brownish, disposed in short, few-flowered, opposite spikes on the young branches (f. 5. E. a.).

1 *R. OBCORDATA* (Brogn. mem. rhamn. p. 58.) leaves obcordate, quite entire, 3-nerved; flowers sessile, spiked, rising from the axillæ of the scales. *h. G.* Native of Peru. *Rhâmnus Retanilla*, Domb. herb. *Collètia obcordata*, Vent. hort. cels. t. 92. Branches twiggy, flexile. Flowers white.

*Obcordate-leaved* Retanilla. Clt. 1822. Shrub 3 feet.

2 *R. EPHEDRA* (Brogn. mem. rhamn. 58.) leaves almost wanting; flowers sessile, disposed in glomerated spikes on the naked branches. *h. G.* Native of Peru. Branches erect, spiny at the apex. *Collètia Ephedra*, Vent. choix. t. 16. *Rhâmnus Ephedra*, Domb. herb. Flowers white.

*Ephedra-like* Retanilla. Clt. 1823. Shrub 2 feet.

*Cult.* These plants will thrive very well in a mixture of loam and peat; and cuttings of young wood will root freely, if planted in a pot of sand, placed under a hand-glass.

XI. COLLETIA (named by Commerson in honour of M. Collet, his friend and countryman; he wrote upon the plants of Brest). Kunth, nov. gen. amer. 7. p. 58. D. C. prod. 2. p. 28. Brogn. mem. rhamn. p. 58.

LIN. SYST. *Pentândria, Monogýnia*. Calyx campanulate, membranous, (f. 5. F. f.), coloured. Petals wanting, or very minute, linear. Stamens with ovate, 2-celled (f. 5. F. i.), or reniform, 1-celled anthers. Disk short, cup-shaped (f. 5. F. g.), adnate to the bottom of the calyx. Ovary free (f. 5. F. h.), 3-celled. Style simple, elongated (f. 5. F. e.). Stigma 5-lobed. Fruit girdled at the base by the permanent tube of the calyx, tricoecous (f. 5. F. k.), dehiscent (f. 5. F. k.). Seeds sessile.—Much-branched shrubs, almost destitute of leaves, with divaricating, decussately opposite branches and spiny branchlets. Leaves, if present, very minute, quite entire, opposite. Flowers axillary, fascicled, or racemose, or when the leaves are absent they rise from beneath the base of the spines (f. 5. F. a.).

1 *C. SERRATIFOLIA* (Vent. choix. t. 15.) leaves elliptical, sharply serrated; branches leafy; pedicels longer than the flowers; flowers usually solitary. *h. G.* Native of Peru. *Rhâmnus Spartium*, Domb. herb. Flowers yellowish.

*Saw-leaved* Colletia. Fl. May, July. Clt. 1823. Sh. 3 ft.

2 *C. CRUCIATA* (Gill. et Hook. bot. misc. 1. p. 152. t. 43.) leaves very few, elliptic, quite entire; stem very prickly; spines decussate, compressed laterally, broad, ovate, acute, decurrent. *h. G.* Native of Rio de la Plata, on sandy hills near Maldonado.

*Cross-spined* Colletia. Clt. 1824. Shrub 4 to 5 feet.

3 *C. SPINOSA* (Lam. ill. 2. p. 90. t. 129. Hook. bot. misc. 1. p. 153. t. 44. A.) leaves elliptic, quite entire; spines very strong, awl-shaped; fascicles of flowers scattered; calyx urceolate; filaments elongated, exserted. *h. G.* Native of Chili and Peru, also of Brazil. *C. polyacantha*, Willd.

*Var. a, glabra* (Hook. l. c.) smooth. *C. spinosa*, Lam. l. c. *C. hórrida*, Willd. spec. 1. p. 1113. *C. spinosissima*, Gmel. syst.

*Var. β, pubescens-incana* (Hook. l. c.) plant clothed with hoary pubescence.

*Spiny* Colletia. Fl. May, July. Clt. 1823. Shrub 3 to 4 ft.

4 *C. FERROX* (Gill. et Hook. bot. misc. 1. p. 154.) spines strong, awl-shaped; fascicles of flowers scattered; calyx oblong-cylindrical; anthers nearly sessile. *h. G.* Native of Chili, about Mendoza.

*Fierce* Colletia. Fl. May, July. Clt. 1823. Shrub 2 to 4 ft.

5 *C. ULICINA* (Gill. et Hook. bot. misc. 1. p. 155.) spines slender, very numerous; fascicles of flowers crowded at the tops of the branches; calyx elongated, cylindrical, with the filaments inserted in the tube. *h. G.* Native of Chili.

*Var. a, glabra* (Hook. l. c.) smooth.

*Var. β, pubescens-hirsuta* (Hook. l. c.) plant hairy, pubescent. *Furze-like* Colletia. Shrub 2 to 4 feet.

6 *C. CHACAYE*; leaves somewhat obovate, serrated; flowers fern; branches very leafy. *h. G.* Native of Peru. *Rhamnus Chacayæ*, Domb. herb. Flowers yellowish.

*Chacayæ* Colletia. Shrub 2 feet.

7 *C. TETRAGONA* (Brogn. mem. rhamn. p. 59.) branches almost naked, leafless, smooth; branchlets distant, simple, spiny, stiff, spreading; racemes axillary, rising beneath the spines, usually 6-flowered; fruit opposite on the branchlets, sessile on the branches, racemose. *h. G.* Native of Peru. Domb. Flowers yellowish.

*Tetragonal-branched* Colletia. Shrub 3 feet.

† *Allied species.*

8 *C. INFESTA* (Brogn. mem. rhamn. p. 59.) shrub much branched; branches almost opposite, cylindrical, ultimate ones spiny; spines simple, spreading, stiff, axillary; leaves opposite, oblong-linear, quite entire, smooth; almost nerveless; flowers axillary, solitary; peduncles slender, shorter than the leaves. *h. S.* Native of Mexico, in the plains near Gazave. *Ceanothus infestus*, H. B. et Kunth, nov. gen. amer. 7. p. 61. t. 614. D. C. prod. 2. p. 31. *Rhamnus linearis*, Moc. et Sesse, in herb. Lamb. Calyx hemispherical, with a spreading limb. Petals cucullate. Anthers cordate; cells confluent at top. Disk thin at the limit of the throat, incrusting the tube. Ovary semiadnate to the bottom of the tube of the calyx, 3-celled. Style simple, filiform, longer than the tube of the calyx. Stigma simple. Flowers white.

*Troublesome* Colletia. Cult. 1824. Shrub 3 feet.

9 *C. MULTIFLORA* (Moc. et Sesse, fl. mex. icon. jned. D. C. prod. 2. p. 29.) leaves entire, oblong; pedicels 1-flowered, 5-6, crowded together, length of flower; petals 5, cucullate. *h. G.* Native of Mexico. Disk extended even to the throat, and half adnate to the ovary. Branches spiny, bearing the flowers beneath the spines.

*Many-flowered* Colletia. Shrub 4 feet.

10 *C. ? DISPERMA* (D. C. prod. 2. p. 29.) leaves entire, oblong; pedicels 1-flowered, 2 or 3 in a fascicle, length of flowers; flowers 5-petalled; berries oblong, 2-celled. *h. G.* Native of Mexico. Branches unarmed. Calyx very short in this and preceding species.

*Two-seeded* Colletia. Shrub 3 feet.

11 *C. ? VELUTINA* (Spreng. syst. 1. p. 771.) leaves alternate, oblong, serrated, villous beneath; peduncles axillary, cymose, and downy, as well as the flowers. *h. S.* Native of Brazil.

*Velvety* Colletia. Shrub 2 feet.

*Cult.* See *Retanilla* for culture and propagation.

XII. *TREVOA* (*Trevo*, the name of some Spanish botanist). Meyers, mss. Hook, bot. misc. 1. p. 158.

LIN. SYST. *Pentándria, Monogýnia*. Calyx turbinate, 5-cleft, permanent, with reflexed segments. Petals cucullate, erect, inclosing the stamens. Anthers 1-celled, bursting by a kidney-shaped chink. Disk almost wanting. Ovary superior, large, hairy, 3-celled, cells 1-seeded. Style awl-shaped, much exserted, and very hairy, crowned by an acute simple stigma. Capsule membranous, 2-valved, 1-seeded, (2 of the cells being abortive) crowned by the permanent style. Seed erect, elliptical, compressed, marked by a conspicuous longitudinal furrow. Albumen sparing, fleshy. Embryo erect, cylindrical, with an inferior radicle.—Spiny shrubs with awl-shaped short spines, cruciately disposed. Leaves in fours, marked with longitudinal nerves. Fascicles of flowers rising from tubercles in the axils of the leaves and at the base of the spines.

1 *T. QUINQUENRVIS* (Gill. et Hook, bot. misc. 1. p. 158. t.

45. B.) hairy-pubescent; leaves oblong-elliptic, entire, 5-nerved, hoary beneath. *h. G.* Native of Chili on the Andes.

• *Five-nerved-leaved* *Trevoa*. Shrub 4 to 5 feet.

2 *T. TRINERVIS* (Gill. et Hook, bot. misc. 1. p. 159.) smooth; leaves elliptic, crenately-serrated, 3-nerved, green beneath. *h. G.* Native of Chili.

*Three-nerved-leaved* *Trevoa*. Clt. 1828. Shrub 4 to 6 feet.

*Cult.* For culture and propagation see *Retanilla*, p. 34.

XIII. *DISCARIA* (from *δίσκος*, *diskos*, a disk; disk broad). Hook, bot. misc. 1. p. 156.

LIN. SYST. *Tetra-Pentándria, Monogýnia*. Calyx short, campanulate, 4-5-cleft, coloured. Petals 4-5, smaller than the stamens. Anthers 2-celled, bursting lengthwise. Disk girding the base of the germ, bowl-shaped, fleshy, with a narrow, elevated, nearly entire, free margin. Ovary half superior. Style short, crowned by a 3-lobed stigma.—Spiny shrubs.

1 *D. AMERICANA* (Hook, bot. misc. 1. p. 156. t. 44. D.) calyx for the most part 5-cleft, with reflexed segments. *h. G.* Native of Buenos Ayres.

*American* *Discaria*. Shrub.

2 *D. AUSTRALIS* (Hook, l. c. p. 157. t. 45. A.) calyx 4-cleft, with erect segments. *h. G.* Native of New Holland at Cox's River to the south of Bathurst. Collétia pubescens, Brogn. mem. rhamn. p. 59. Branches almost leafless, pubescent; branchlets simple, spiny. Leaves few, opposite, obovate, minute, quite entire, pubescent. Racemes short, many-flowered, rising from beneath the spines. Petals small, linear, convolute.

*Southern* *Discaria*. Shrub.

*Cult.* For culture and propagation see *Retanilla*, p. 34.

FIG. 6.

XIV. *HOVENIA* (in honour of David Hoven, a senator of Amsterdam, who contributed to the success of the travels of Thunberg by his good offices). Thunb. jap. 101. D. C. prod. 2. p. 40. Brogn. mem. rhamn. p. 60.

LIN. SYST. *Pentándria, Monogýnia*. Calyx somewhat spreading, 5-cleft (f. 6. B. a.). Petals 5, obovate, unguiculate (f. 6. B. c.), convolute. Stamens inclosed in the petals; anthers ovate, 2-celled. Disk fleshy, flat (f. 6. B. f.). Ovary 3-celled. Style trifid. Stigmas 3, round. Fruit free, trilocular (f. 6. B. l.), seated on a thick fleshy peduncle (f. 6. B. h.).—Trees; with alternate, broad, cordate, serrated, 3-nerved leaves.

1 *H. DULCIS* (Thunb. jap. 101.) leaves cordate, ovate, acuminate, equal at the base, 3-nerved, smooth. *h. G.* Native of Japan, near Nagasaki, where it is called *Ken* and *Kenpokonus*. Kämpf. amœn. ex. 2. p. 809. with a figure. Flowers small, white, in axillary and terminal dichotomous panicles. Peduncles

sub-cylindrical, reflexed, smooth, an inch long, thickening after flowering, containing a sweet red pulp, which is eaten by the Japanese, and has a taste somewhat like a pear.

*Sweet Hovenia*. Fl. July, Aug. Clt. 1812. Tree 12 feet.

2 *H. INÆQUALIS* (D. C. prod. 2. p. 40.) leaves cordate, acuminate, rather hairy beneath, unequal at the base, 3-nerved. *h. G.* Native of Nipaul, at Katumanda, where it is called *Munko-Khoshee*. *H. acérba*, Lindl. bot. reg. t. 501. *H. dúlcis*, D. Don, prod. 189. Wall. fl. ind. 2. p. 414. Flowers small, white, disposed in axillary, rarely in terminal, dichotomous, villous cymes. Capsule round, size of a pea, seated on an enlarged peduncle, which is soft, and contains a red sweet pulp. This does not come to maturity till after the capsules are ripe.

*Unequal-leaved Hovenia*. Fl. Ap. Jul. Clt. 1820. Tree 30 ft. Cult. See *Retanilla* for culture and propagation, p. 34.

**XV. COLUBRINA** (from *coluber*, a snake, in allusion to the twisted stems). Rich. mss. Brogn. mem. rhamn. p. 61.—*Rhâmnus* and *Ceanòthus* species of authors.

**LIN. SYST.** *Pentândria, Monogynia*. Calyx spreading, 5-cleft (f. 6. D. a.). Petals 5, obovate, convolute (f. 6. D. b.). Stamens exserted (f. 6. D. c.); anthers ovate 2-celled. Disk fleshy, rather flat, pentagonal (f. 6. D. g.). Ovary immersed in and adnate to the disk (f. 6. D. e.), 3-celled. Style trifid (f. 6. D. a.). Stigmas 3. Fruit capsular, dehiscent, trilocular, girded at the base by the circumscribed calyx (f. 6. D. f.). Seeds furnished with a short stalk.—Shrubs, with alternate, quite entire or crenulated leaves, netted with distant feather nerves, smooth, but usually pubescent or rusty-villous. Flowers in axillary, short, crowded cymes, or in fascicles, with simple peduncles (f. 6. D.).

\* *South American species.*

1 *C. FERRUGINEA* (Brogn. mem. rhamn. p. 62.) leaves ovate, a little acuminate, entire, covered with rusty villi beneath, as well as the branchlets and flowers; flowers axillary, cymose, aggregate. *h. S.* Native of South America, in most of the West India Islands. *Rhâmnus colubrinus*, Lin. syst. 195. Jacq. hort. vind. 3. t. 50. *Ceanòthus colubrinus*, Lam. ill. no. 2684. *Ceanòthus arborescens*, Mill.—Comm. hort. 1. t. 90. Flowers greenish. Seeds ovate, shining, black. This tree is called *Bois couleur* or *Snake-wood* in Martinique; hence the generic name.

*Rusty Snake-wood*. Fl. May, Nov. Clt. 1762. Tree 30 feet.

2 *C. FERMENTUM* (Rich. ined. in Brogn. mem. rhamn. p. 62.) This species has not been described; it is therefore only known to Brogniart. It is a native of Guiana.

*Fermented Snake-wood*. Tree.

3 *C. RECLINATA* (Brogn. mem. rhamn. p. 62.) leaves elliptical, acute, quite entire, pubescent beneath, as well as the branches and flowers; branches flexible, pendulous; flowers axillary, aggregate, cymose. *h. S.* Native of the mountains of Jamaica, in bushy places, also in St. Domingo, where it is called *Palo-amargo*. *Rhâmnus ellipticus*, Ait. hort. kew. 1. p. 265. *Paliurus inermis*, Hort. par. *Zizyphus Domingensis*, Duham. ed. nov. 3. p. 55. ex Desf. *Ceanòthus reclinatus*, Lher. sert. p. 6.—Browne, jam. t. 29. f. 2. Flowers greenish.

*Reclined-branched Snake-wood*. Fl. Aug. Clt. 1758. Sh. 6 ft.

4 *C. GRANULOSA* (Brogn. mem. rhamn. p. 62.) leaves ovate-oblong, acuminate, somewhat serrated from the middle, smooth, shining, with the nerves at the base pubescent, as well as the petioles; peduncles axillary, short, dichotomous, umbellate. *h. S.* Native of Peru, in groves. *Ceanòthus granulatus*, Ruiz et Pav. fl. per. 5. t. 228. f. b. Flowers white. Capsules roundish, turbinate, with prominent ribs.

*Granular Snake-wood*. Tree 24 feet.

5 *C. TRIFLORA* (Brogn. in mem. rhamn. p. 62.) leaves acute, crenulated, rusty beneath; peduncles axillary, 3-flowered, or pedicels 3 together, 1-flowered. *h. G.* Native of Mexico. *Rhâmnus triflorus*, Moc. et Sesse in herb. Lamb. Flowers greenish-white.

*Three-flowered Snake-wood*. Shrub.

6 *C. CUBE'NSIS* (Brogn. mem. rhamn. p. 62.) leaves elliptical, oblong, acutish, quite entire, greenish-velvety above, hoary and downy beneath, as well as the branchlets and flowers; peduncles axillary, corymbose, longer than the petioles. *h. S.* Native of Cuba, in bushy places, as well as of St. Domingo. *Ceanòthus Cubensis*, Lam. Jacq. hort. vind. t. 49. *Rhâmnus Cubensis*, Lin. Flowers cream-coloured. Sepals fringed.

*Cuba Snake-wood*. Fl. ? Clt. 1820. Shrub 8 feet.

7 *C. ALAMA'NI*; leaves ovate, obtuse, serrulated, somewhat velvety and green above, hoary and downy beneath, as well as the branchlets and flowers; peduncles axillary, corymbose, length of petioles. *h. S.* Native of Mexico. *Ceanòthus Alamanii*, D. C. prod. 2. p. 31. Leaves both opposite and alternate in the same branch.

*Alaman's Snake-wood*. Shrub.

8 *C. ? MACROCARPUS*; leaves ovate, somewhat cordate at the base, roundish, serrated, downy beneath, as well as the branchlets; flowers axillary, glomerate; fruit pendulous. *h. S.* Native of New Spain. *Ceanòthus macrocarpus*, Cav. icon. 3. t. 276. Flowers white.

*Long-fruited Snake-wood*. Clt. 1824. Shrub 6 feet.

9 *C. ? PUBESCENS*; leaves ovate, acuminate, pubescent, acutely serrated; peduncles axillary, very short; dichotomous umbellate. *h. S.* Native of Peru, in groves. *Ceanòthus pubescens*, Ruiz et Pav. fl. peru, 3. p. 6. t. 228. f. a. Flowers white. Fruit round, black.

*Pubescent Snake-wood*. Tree 18 feet.

10 *C. ? MOCINIANA*; leaves oval, entire, 1-nerved, pubescent beneath, as well as the branchlets; peduncles lateral, dichotomous, few-flowered. *h. G.* Native of Mexico. *Ceanòthus Mocinianus*, D. C. prod. 2. p. 32. *Ceanòthus macrocarpus*, Moc. et Sesse, fl. mex. icon. ined. but not of Cav. Calyx spreading much after the time of flowering.

*Mocino's Snake-wood*. Clt. 1824. Shrub.

\* \* *Asiatic species.*

11 *C. ASIATICA* (Brogn. mem. rhamn. p. 62.) leaves ovate, acuminate, serrulated, glossy, 3-nerved at the base; peduncles axillary, branched, many-flowered, shorter than the leaves. *h. S.* Native of the East Indies, Ceylon, Mauritius, Nipaul, as well as on the western coast of equinoxial Africa. *Ceanòthus Asiaticus*, Lin. spec. 284. Cav. icon. t. 440. f. 1. Lam. ill. t. 129. *Tubanthèra*, Comm. mss.—Burm. zeyl. 111. t. 48. *Rhâmnus acuminatus*, Colebr. mss. Flowers small, yellowish-green, fragrant. Capsule round, obovate, about the size of a small gooseberry, 3-furrowed, 3-celled, 3-valved, 3-seeded. Seeds triangular, with a gibbous back.

*Asiatic Snake-wood*. Fl. July, Aug. Clt. 1691. Shrub 16 feet.

12 *C. NIPAULE'NSIS*; shrub erectish or rambling, with all the upper parts pubescent; leaves somewhat bifarious, oblong, acuminate; serrulated, smooth, and shining, with alternate nerves, the axillæ of which are hairy; racemes terminal, paniced, pubescent. *h. G.* Native of Nipaul. *Ceanòthus Nipaulensis*, Wall. fl. ind. 2. p. 375. Branches scabrous, and have a tendency to ramble over trees. Flowers small, green, fasciated, disposed in terminal racemes on the naked branches, interspersed with a number of small, lanceolate, floral leaflets, the whole forming a branchy panicle. Petals very small, yellowish, cucullate, concealing the stamens. Ovary 3-lobed. Style trifid. Fruit about the size of a pea at first, succulent, afterwards dry, con-

taining 3 nuts. This will probably prove to be a species of *Willemétia*.

*Nipaul Snake-wood*. Fl. May, Ju. Clt. 1820. Sh. rambling.

13 *C. ? TRIQUETRA*; leaves elliptical-ovate, finely acuminate, sharply serrated, acute at the base, with parallel pubescent ribs, villous at their axillæ beneath; peduncles axillary, short, fascicled, 1-flowered; capsules acutely 3-cornered. *h. G.* Native of Nipaul, at Shreenugur. *Ceanothus triquetrus*, Wall. fl. ind. 2. p. 376. Leaves pubescent when young.

*Triquetrous-capsuled Snake-wood*. Shrub.

14 *C. ? PUBIFLORA*; leaves elliptical-oblong, acute, serrated, smooth; flowers axillary, crowded, velvety, on short pedicels. *h. S.* Native of the island of Timor. *Ceanothus pubiflorus*, D. C. prod. 2. p. 30.

*Downy-flowered Snake-wood*. Shrub.

15 *C. LESCHENAU'LTII*; leaves ovate, long-acuminate, somewhat cordate at the base, crenulately-serrated, smooth above, hoary beneath from very minute down; cymes axillary, many-flowered, almost sessile, length of petioles. *h. S.* Native of Ceylon. *Ceanothus Leschenaultii*, D. C. prod. 2. p. 30. Branches minutely-pubescent at the top, as well as the calyxes.

*Leschenault's Snake-wood*. Shrub 10 feet.

\*\*\* *African species.*

16 *C. GUINEENSIS*; leaves elliptical-oblong, acutish at both ends, quite entire, on short stalks; cymes corymbose, many-flowered, axillary, hoary-velvety. *h. S.* Native of Guinea. *Ceanothus ? Guineensis*, D. C. prod. 2. p. 30. *Rhamnus paniculatus*, Thom.

*Guinea Snake-wood*. Shrub 6 feet.

17 *C. ? MYSTACINUS*; leaves cordate, obtuse, quite entire, smooth above, but rather hairy beneath; branches ending in a tendril; flowers axillary, umbellate. *h. G.* Native of Abyssinia. *Rhamnus mystacinus*, Ait. hort. kew. ed. 1. p. 266. *Ceanothus ? mystacinus*, D. C. prod. 2. p. 31. Stem weak, climbing to a considerable extent by means of tendrils from the upper part of the branches. Flowers greenish-white. Ovary immersed in a snow-white glandular disk, filling the tube of the calyx. Stigma trifid.

*Bearded Snake-wood*. Fl. Nov. Clt. 1775. Shrub cl.

*Cult.* These plants are not worth cultivating except in general collections. A mixture of loam and peat will suit them well, and cuttings of young wood will root readily if planted in sand, and placed under a hand-glass; those of the stove species require heat.

XVI. CEANO'THUS (*κεανωθος*, *keanothus*, a name employed by Theophrastus to designate a spiny plant, derived from *κεω*, *keo*, to cleave; however the modern genus has nothing to do with the plant of Theophrastus). Brogn. mem. rhamn. p. 62.—*Ceanothus* species, Lin. Juss. Lam. *Ceanothus*, sect. 2. *Euceanothus*, D. C. prod. 2. p. 31.

LIN. SYST. *Pentandria, Trigynia*. Calyx with a sub-hemispherical tube, and 5 connivent segments (f. 6. C. b.). Petals 5, unguiculate, cucullate (f. 6. C. c.), deflexed. Stamens with ovate 2-celled anthers (f. 6. C. b.). Disk spongy, annular (f. 6. C. d.). Ovary spherical, girded by the disk (f. 6. C. e.), 3-celled. Styles 3, diverging, terminated by small papiliform stigmas. Fruit tri-coccos (f. 6. C. f.), girded by the circumcised tube of the calyx (f. 6. C. g.). Seeds almost sessile (f. 6. C. e.).—Smooth or pubescent shrubs, natives of North America, with erect branches, alternate, serrated, 8-nerved leaves, and very slender, white, blue or yellow flowers, disposed in terminal panicles or in axillary racemes.

1 *C. AZUREUS* (Desf. cat. 1815. p. 232.) leaves ovate-oblong, obtuse, acutely-serrated, smooth above, hoary and downy be-

neath; thyrses elongated, axillary, with a downy rachis; pedicels smooth. *h. G.* Native of Mexico, on the road to St. Angelo. Ker. bot. reg. t. 291. *C. caruleus*, Lag. gen. et spec. 1816. p. 11. Lodd. bot. cab. t. 110. *C. bicolor*, Willd. in Schult. syst. 7. p. 65. ex fl. mex. icon. et descr. ined. Flowers pale-blue. The bark is febrifugal.

*Azure-flowered Red-root*. Fl. Ap. May. Clt. 1818. Sh. 10 ft.

2 *C. TARDIFLORUS* (Horn. hort. hafn. 230.) leaves cordate, ovate, serrated, downy beneath; thyrses elongated, axillary. *h. H.* Native of North America. Perhaps only a variety of the following. Flowers white.

*Late-flowering Red-root*. Fl. Sep. Nov. Clt. 1820. Sh. 6 ft.

3 *C. AMERICANUS* (Lin. spec. 284.) leaves ovate, acuminate, serrated, pubescent beneath; thyrses elongated, axillary, with a pubescent rachis. *h. H.* Native of North America, in dry woods, from Canada to Florida. Duham. arb. 1. t. 51. Mill. fig. t. 57. Sims, bot. mag. t. 1479. Flowers small, white. Fruit bluntly trigonal. In North America this shrub is commonly known by the name of *New Jersey tea*, or *Red-root*, having been actually used in the American war as a substitute for tea. The Canadians use the infusion of the root in gonorrhœa, and other authors attribute to it antisyphilitic properties. It will dye wool a fine strong nankin-cinnamon colour. A beautiful shrub when in flower.

*American Red-root* or *New Jersey tea*. Fl. June, July. Clt. 1713. Shrub 2 to 4 feet.

4 *C. OVATUS* (Desf. arb. 2. p. 381.) leaves ovate or oval, serrated, smooth on both surfaces, as well as the peduncles; thyrses short, axillary? *h. H.* Native of North America. Fruit somewhat globose, 6-ribbed. Flowers white. This plant is usually confounded in gardens with the preceding.

*Ovate-leaved Red-root*. Fl. Ju. July. Clt. 1818. Sh. 2 to 4 ft.

5 *C. PERE'NSIS* (Pursh. fl. amer. sept. 1. p. 167.) leaves oval, somewhat serrated, smooth; panicle thyrsoid, terminal, and axillary. *h. H.* Native of North America, on rocks near rivers, in Virginia and Carolina. *C. herbaceus*, Rafin. The stems scarcely ever remain over winter, but die down to the root. Flowers white or yellow.

*Perennial Red-root*. Fl. May, Ju. Clt. 1822. Pl. 2 feet.

6 *C. THYRSIFLORUS* (Eschscholtz, mem. acad. scienc. peters. 10. p. 281.) leaves oval, 3-nerved, serrated, smooth; stem many-angled; panicle thyrsoid in the axillary branches. *h. H.* Native of New California.

*Thyrses-flowered Ceanothus*. Shrub.

7 *C. INTERMEDIUS* (Pursh, fl. sept. amer. 1. p. 167.) leaves oblong-oval, acute, mucronately-serrated, triple-nerved, pubescent beneath; panicles axillary, on long peduncles, with loose corymbose pedicels. *h. H.* Native of North America, in the woods of Tennessee. Leaves not one-fourth the size of those of *C. Americanus*. Flowers white.

*Intermediate Red-root*. Fl. Ju. July. Clt. 1812. Sh. 2 to 4 ft.

8 *C. SANGUINEUS* (Pursh, fl. sept. amer. 1. p. 167.) leaves oblong-obovate, serrated, pubescent beneath; panicles axillary, thyrsoid, on very short peduncles; pedicels aggregate. *h. H.* Native of North America, near the Rocky Mountains, on the banks of the Missouri. Branches blood-red or purple. Panicles not longer than the leaves. Flowers white.

*Bloody-branched Red-root*. Fl. May, June. Clt. 1812. Shrub 2 to 3 feet.

9 *C. MICROPHYLLUS* (Michx. fl. bor. amer. 1. p. 154.) leaves oblong, obtuse, entire, minute, sub-fascicled, smooth; branches straight, somewhat decumbent; corymbs stalked, loose, terminal. *h. H.* Native of North America, in sandy woods, from Carolina to Florida. *C. hypericoides*, Lher. mss. Leaves 3-4 lines long. Fruit almost globular. Flowers white.

*Small-leaved Red-root*. Fl. May, June. Clt. 1806. Sh. 2 ft.

10 *C. SERPYLLIFOLIUS* (Nutt. gen. amer. 1. p. 154.) leaves small, elliptical-ovate, obtuse, serrulated; branches filiform, decumbent; panicles axillary, stalked, few-flowered; flowers conglomerated. *h. H.* Native of Florida, about St. Mary's. Flowers white.

*Wild-thyme-leaved Red-root.* Shrub decumbent.

11 *C. BUXIFOLIUS* (Willd. in Schult. syst. 7. p. 62. t. 615.) leaves ovate-elliptical, obtuse, glandularly-serrulated, 3-5-nerved, smooth; nerves covered with adpressed hairs on the under surface; branches round, smooth, with a few scattered spines; racemes solitary on the short branches. *h. G.* Native of Mexico, in woods, near Real del Monte. Flowers white.

*Box-leaved Red-root.* Shrub 6 to 8 feet.

*Cult.* Small neat shrubs, with large red roots; hence their English name. They will thrive well in any common garden soil, and are proper shrubs for the front of shrubberies. They are increased by layers or by seeds. The greenhouse species or those natives of Mexico only require to be protected from frosts during winter. Young cuttings of these will root if planted in a pot of sand, with a hand-glass placed over them.

XVII. WILLEMETIA (in honour of *C. L. Willemet*, author of *Herbarium Mauritianum*). Brogn. mem. rhamn. p. 63.—*Ceanothus* spec. Lin. and other authors.

LIN. SYST. *Pentandria, Monogynia*. Calyx urceolate (f. 6. *F. d.*), with the tube adnate to the ovary (f. 6. *F. c.*) at the base, but free at the top, with a 5-cleft limb (f. 6. *F. a.*). Petals 5, cucullate, sessile (f. 6. *F. b.*). Stamens inclosed in the petals; anthers ovate, 2-celled. Disk very thin, incrusting the tube of the calyx. Ovary half-inferior, 3-celled. Style simple, trigonal. Stigma 3-lobed. Fruit unknown.—A quite smooth shrub, with erect branches, alternate, oblong-lanceolate, serrated, feather-nerved leaves, and small white flowers, which are disposed in few-flowered, terminal or axillary panicles.

1 *W. AFRICANA* (Brogn. l. c.) *h. G.* Native of the Cape of Good Hope. *Ceanothus Africanus*, Lin. spec. 284.—Pluk. phyt. t. 126. f. 1.—Sch. thes. 1. t. 22. f. 6. Leaves shining. Branches purplish when ripe.

*African Willemetia.* Fl. July, Aug. Clt. 1712. Shrub 6 ft.

*Cult.* An elegant shrub. It will succeed well in an equal mixture of loam and peat, with a little sand, and young cuttings will root readily if planted in a pot of sand, with a hand-glass placed over them.

XVIII. POMADERIS (from *πομα*, *poma*, a lid, and *τερρις*, *terris*, a skin; in allusion to the peculiar membranous covering of the capsule). Labill. nov. holl. 1. p. 61. D. C. prod. 2. p. 33. Brogn. mem. rhamn. p. 64.—*Pomatoderris*, Schult. syst. 5. no. 985.—*Pomatiderris*, Kunth. nov. gen. amer. 7. p. 60.

LIN. SYST. *Pentandria, Monogynia*. Calyx with an adnate tube, and a 5-cleft (f. 6. *E. a.*), somewhat spreading limb. Petals 5, flat, unguiculate, somewhat cordate, or wanting. Stamens exserted (f. 6. *E. b.*); anthers ovate, 2-celled (f. 6. *E. b.*). Disk wanting. Ovary half adnate, 3-celled. Style trifid, rarely diverging (f. 6. *E. c.*). Fruit half inferior (f. 6. *E. g.*), trilocous; coccula each with a broad perforation at the base on the inside. Seeds each furnished with a short stalk (f. 6. *E. g.*).—Erect, branched shrubs, more or less covered with starry down. Leaves entire or serrated, villous on both surfaces, or smooth on the upper surface, feather-nerved. Flowers disposed in axillary or terminal, corymbose, or in expanded corymb-like panicles, flowering from the base to the apex, for the most part yellow or cream-coloured.

\* Flowers 5-petalled, disposed in corymbose cymes.

1 *P. PHYLLIROIDES* (Sieb. pl. exs. nov. holl. no. 215.)

cymes corymbose, crowded; calyxes and pedicels villous; leaves elliptical-oblong, quite entire, coriaceous, smooth above, clothed with hoary-velvety villi beneath. *h. G.* Native of New Holland. Leaves acutish. Flowers pale-yellow.

*Phyllæa-like Pomaderris.* Fl. May, June. Clt. 1818. Shrub 2 to 6 feet.

2 *P. LANIGERA* (Sims, bot. mag. t. 1823.) cymes somewhat paniced, woolly; leaves oblong-lanceolate, quite entire, coriaceous, velvety above, rusty and woolly beneath. *h. G.* Native of New Holland, on the eastern and southern coast. *Ceanothus laniger*, Andr. bot. rep. t. 569. *Pomaderris obscura*, Sieb. pl. exs. nov. holl. no. 216. Flowers pale-yellow.

*Var. β*; leaves smooth above. *P. ferruginea* and *P. viridifolia*, Sieb. pl. exs. nov. holl. no. 214 and 209.

*Wool-bearing Pomaderris.* Fl. April, June. Clt. 1806. Sh. 3 to 6 feet.

3 *P. ELLIPTICA* (Labill. nov. holl. 1. p. 61. t. 86.) cymes somewhat umbellate, hoary and velvety; leaves elliptical, obtuse, smooth above, clothed with very short, white tomentum beneath. *h. G.* Native of New Holland at Cape Van Diemen. Sims, bot. mag. t. 1510. Flowers cream-coloured.

*Elliptical-leaved Pomaderris.* Fl. May, July. Clt. 1805. Shrub 6 feet.

4 *P. DISCOLOR* (Vent. malm. t. 58.) cymes somewhat umbellately-corymbose, many-flowered, hoary and velvety from very short, scarcely manifest hairs; leaves ovate-lanceolate, acuminate, smooth above, but clothed with short, white down beneath. *h. G.* Native of New Holland. *P. acuminata*, Link. enum. 235. *P. malifolia* and *P. discolor*, Sieb. pl. exs. nov. holl. no. 208 and 213. Flowers whitish. An intermediate species between *P. elliptica* and *P. intermedia*, but hardly distinct from the former.

*Two-coloured-leaved Pomaderris.* Fl. May, June. Clt. 1814. Shrub 8 feet.

5 *P. INTERMEDIA* (Sieb. pl. exs. nov. holl. no. 210.) cymes corymbosely-panicled; calyxes and pedicels velvety-villous; leaves elliptical, acuminate at both ends, smooth above, but hoary and velvety beneath. *h. G.* Native of New Holland. Flowers pale-yellow.

*Intermediate Pomaderris.* Fl. May, June. Clt. 1825. Sh. 6 ft.

6 *P. ANDROMEDAFOLIA* (Cuning. in Field's new south wales, p. 351.) leaves oval-lanceolate, smooth above, but clothed beneath with white down; corymbs terminal, crowded; flowers with petals? *h. G.* Native of New Holland, on rocky parts of the Blue Mountains. Flowers pale-yellow.

*Andromeda-leaved Pomaderris.* Fl. April, June. Shrub 4 ft.

7 *P. LEDIFOLIA* (Cuning. l. c.) leaves oval or elliptical, smooth, silky-white beneath; corymbs few-flowered, terminal; stems twiggy. *h. G.* Native of New Holland, upon rocky hills at Cox's River. Flowers pale-yellow.

*Ledum-leaved Pomaderris.* Fl. May, Ju. Clt. 1824. Sh. 2 ft.

\* \* Flowers 5-petalled, corymbose, or racemosely-panicled. Seeds each furnished with a smaller perforation at the base than the rest of the species. Petals scarcely unguiculate.

8 *P. GLOBULOSA* (G. Don, in Loud. hort. brit. 84.) leaves obovate, quite entire, downy beneath, as well as the flowers and branches; peduncles axillary, corymbose; capsules opening from the base to the top. *h. G.* Native of New Holland, on the eastern coast. *Ceanothus globulosus*, Labill. nov. holl. 1. p. 61. t. 85. Flowers pale-yellow.

*Globular-fruited Pomaderris.* Fl. April, June. Clt. 1803. Shrub 8 feet.

9 *P. SPATHULATA* (G. Don, in Loud. hort. brit. p. 84.) leaves oblong-obovate, somewhat spatulate, obtuse, quite entire, downy beneath, as well as the branches and flowers; racemes

somewhat panicled; capsules opening from the base to the top. *h. G.* Native of New Holland, in Van Lewin's Land. *Ceanothus spatulatus*, Labill. nov. holl. 1. p. 60. t. 84. Flowers pale-yellow.

*Spatulate-leaved Pomaderris.* Fl. April, June. Clt. 1826. Shrub 6 feet.

10 *P. WENDLANDIANA* (G. Don, in Loud. hort. brit. p. 84.) leaves oblong-lanceolate, acute, smooth above, clothed with rusty down beneath; panicles terminal and axillary. *h. G.* Native of New Holland? *Ceanothus Wendlandianus*, Schult. syst. 5. p. 299. Habit of *P. elliptica*. Fruit unknown. Flowers yellowish.

*Wendland's Pomaderris.* Fl. April, Ju. Clt. 1810. Sh. 10 ft.

11 *P. ? CAPSULARIS* (G. Don, in Loud. hort. brit. p. 84.) leaves ovate, cordate, acuminate, serrated; capsules 3-valved, dehiscent. *h. G.* Native of the island of Tait in the South Seas. *Ceanothus capsularis*, Forst. prod. 112. Flowers yellowish.

*Capsular Pomaderris.* Fl. April, June. Clt. 1820. Shrub 6 feet.

\*\*\* Flowers apetalous, panicled, or racemose.

12 *P. APE'TALA* (Labill. nov. holl. 1. p. 52. t. 87.) panicles racemose, many-flowered; leaves ovate-lanceolate, acuminate, irregularly serrated, smooth above, or scabrous from starry down, clothed with hoary starry down beneath, with rather prominent nerves. *h. G.* Native on the western coast of New Holland, at Cape Van Diemen. Flowers greenish-yellow.

*Apetalous Pomaderris.* Fl. May, Ju. Clt. 1803. Sh. 6 ft.

13 *P. A'SPERA* (Sieb. pl. exs. nov. holl. no. 211.) panicles racemose, elongated; leaves ovate-lanceolate, acuminate, irregularly serrated, and scabrous from starry down, clothed with downy, hoary, starry villi beneath. *h. G.* Native of New Holland. Flowers greenish-yellow. Very like *P. apétala* and hardly distinguishable.

*Rough Pomaderris.* Fl. May, Ju. Clt. 1825. Shrub 6 ft.

14 *P. LIGUSTRINA* (Sieb. pl. exs. nov. holl. no. 212.) panicles few-flowered; leaves ovate-lanceolate, smooth above, but soft, downy, and velvety beneath from simple rather silky hairs, with scarcely prominent nerves. *h. G.* Native of New Holland, on the eastern coast. Calyxes woolly. Flowers greenish-yellow.

*Privet-like Pomaderris.* Shrub 4 feet.

15 *P. PHYLICIFOLIA* (Lodd. bot. cab. t. 120. Link. enum. 1. p. 232.) panicles racemose, leafy; leaves linear, rather scabrous above, hoary and downy beneath, with the middle nerve rather prominent. *h. G.* Native of New Holland. Flowers greenish-white. Stigma 3-4-cleft. Tube of calyx pubescent, with white oval lobes.

*Phylla-leaved Pomaderris.* Fl. May, Ju. Clt. 1819. Sh. 2 ft.

*Cult.* *Pomaderris* is a beautiful early flowering genus of shrubs. For culture and propagation see *Willemètia*, p. 38.

XIX. CRYPTANDRA (from *κρυπτος*, *cryptos*, hidden, and *ανρ ανδρος*, *aner andros*, a male; in allusion to the stamens being hidden by the petals). Smith, in Lin. trans. 4. p. 217. D. C. prod. 2. p. 38. Brogn. mem. rhamn. p. 65.

LIN. SYST. *Pentándria*, *Monogýnia*. Calyx coloured, campanulate, 5-cleft (f. 5. D. a. b.). Petals small, cucullate, sessile (f. 5. D. 2.). Stamens enclosed; anthers 2-celled. Disk wanting. Ovary half-adnate, 3-celled. Style simple. Stigma tridentate. Capsule half inferior, trilocular, crowned by the permanent calyx. Seeds each furnished with a short fleshy stalk.—Small, heath-like, much-branched, erect shrubs, with fastigiate branches, or short spreading branches, rarely spiny. Leaves small, quite entire, smooth, scattered. Flowers aggre-

gate at the tops of the branches or solitary, erect, or pendulous, calyculated at the base with 5 small imbricate scales (f. 5. D. d.).

1 *C. PYRAMIDALIS* (Brogn. mem. l. c.) branchlets pubescent, erect, pyramidal; leaves obovate-oblong, quite entire, smooth; stipulas setaceous; flowers solitary, erect; fruit oblong, rather pendulous. *h. G.* Native of New Holland. Flowers white.

*Pyramidal Cryptandra.* Fl. May, July. Shrub 1½ foot.

2 *C. ERICIFOLIA* (Smith, in Rees' cycl. Rudge, in Lin. trans. soc. 10. p. 294. t. 18.) stem somewhat silky at the apex; leaves linear, rather remote, acute, smooth; heads of flowers terminal: bractæas silky, toothed; style pilose. *h. G.* Native of New Holland, about Port Jackson. *C. capitata*, Sieb. pl. exs. nov. holl. no. 66. Flowers white, silky on the outside. Leaves 2-3 lines long.

*Heath-leaved Cryptandra.* Fl. May, Jul. Clt. 1821. Sh. 2 ft.

3 *C. AMARA* (Smith, in Rees' cycl. Rudge, in Lin. trans. 10. p. 295. t. 18. f. 2.) stem rather hoary at the apex; leaves dense, spatulate, obtuse; heads of flowers terminal; bractæas entire, and are as well as the style smooth. *h. G.* Native of New Holland, about Port Jackson. *C. ericæfolia*, Sieb. pl. exs. nov. holl. no. 67. Flowers white.

*Bitter Cryptandra.* Fl. May, June. Clt. 1821. Shrub 2 ft.

4 *C. SPIN'SCENS* (Sieb. pl. exs. nov. holl. no. 68.) smooth; branches spiny; leaves oblong, obtuse, tapering a little to the base; flowers usually solitary; bractæas brown, scarious, a little toothed, short; calyx covered with pressed, hoary-pubescent on the outside. *h. G.* Native of New Holland. Flowers white. Habit of *Condalia*.

*Spiny Cryptandra.* Fl. May, June. Clt. 1824. Sh. 1 to 2 ft.

*Cult.* See *Willemètia* for culture and propagation, p. 38.

XX. BARTLINGIA (in honour of C. Bartling, who, with Wendland, wrote an ingenious dissertation on *Diósma*). Brogn. in mem. rhamn. p. 66.

LIN. SYST. *Pentándria*, *Monogýnia*. Calyx furnished with 2 bractæas at the base, with a subhemispherical tube, and a 5-cleft limb; segments twice as long as the tube, oblong, obtuse, villous inside, imbricate in the bud. Petals 5, roundish, small, scale-formed, flat, inserted in the base of the calyx (perigynous or hypogynous). Stamens 10, 5 opposite the petals and 5 opposite the segments of the calyx, these last are longest: filaments filiform, short; anthers ovate-roundish, 2-celled: cells opening laterally by a longitudinal chink. Disk wanting. Ovary compressed, furrowed on one side, somewhat lanceolate, 1-celled, 1-seeded (or 2-seeded?); ovula fixed to the furrowed side. Style short, awl-shaped. Stigma small, simple. This genus should probably be removed to *Rosaceæ* after *Chrysobalanus*.

1 *B. OBOVATA* (Brogn. l. c.). *h. G.* Native of New Holland. *Cryptandra obovata*, Sieb. pl. exs. nov. holl. no. 129. Stem smooth; leaves alternate, stalked, obovate, thickish, smooth; heads few-flowered; bractæas entire. Calyx smooth. Flowers white.

*Obovate-leaved Bartlingia.* Fl. May, Ju. Clt. 1825. Sh. 2 ft.

*Cult.* See *Willemètia* for culture and propagation, p. 38.

XXI. SOLENANTHA (from *σωλην*, *solen*, a tube, and *ανθος*, *anthos*, a flower; in allusion to the petals converging into a tube).

LIN. SYST. *Pentándria*, *Monogýnia*. Calyx permanent, 5-cleft. Petals 5, conniving into a tube, deciduous. Disk? Anthers 5, 2-celled, each inserted under a scale. Ovary 2-lobed.—A stiff-branched spiny shrub with oblong-lanceolate, somewhat serrated leaves, scattered and in fascicles. Flowers axillary and lateral, white.

1 *S. SPINOSA*. *h. G.* Native of New Holland, on rocky

hills, Cox's River. *Cryptandra spinosa*, Cuning. in Field's new south wales, p. 352.

*Spiny Solenantha*. Fl. Ap. Ju. Clt. 1826. Shrub 1 to 2 feet.  
*Cult.* See *Cryptandra* for culture and propagation.

**XXII. TETRASPMA** (from *τετρας*, *tetras*, four, and *σκεπασμα*, *skepasma*, a veil or hood; in allusion to the four hooded petals veiling the stamens).

**LIN. SYST.** *Tetrandria*, *Monogynia*. Calyx 4-cleft. Petals 4, cucullate, inserted between the segments of the calyx. Anthers 4, inclosed within the petals. Stigma 3-lobed. Ovary 3-celled. —A rushy, shrubby plant, with brachiate strong thorns.

1 *JUNCÆA*. *h. G.* Native of New Holland, at Cox's River, Bathurst, and on the banks of the Macquarie. Flowers probably white.

*Rushy Tetrasma*. Shrub.

*Cult.* See *Willemetia* for culture and propagation, p. 38.

FIG. 7.

**XXIII. TRICOCEPHALUS** (from *τριχος*, *thrix trichos*, hair, and *κεφαλη*, *kephale*, a head; in allusion to the hairy heads of flowers). Brogn. mem. rhamn. p. 67. —*Phylica*, species of authors.

**LIN. SYST.** *Pentandria*, *Monogynia*. Calyx with a short urceolate tube (f. 7. E. a.), adnate to the ovary at the base, but free at the apex, having 5 long, bristle-like segments (f. 7. C. b.). Petals wanting or bristle-like. Stamens 5. Anthers kidney-shaped, 1-celled. Disk hardly distinct, covering the tube and segments of the calyx. Ovary inferior, 3-celled (f. 7. C. d.). Style simple, short. Stigma rather 3-lobed. Fruit half-inferior, trilocular (f. 7. C. c.). Seed propped by a short fleshy stalk (f. 7. C. d.). —Small, heath-like shrubs, natives of the Cape of Good Hope, with fastigiate downy branches. Lower surface of leaves villous, upper surface smooth, with convolute edges, on short petioles, stipulate or exstipulate. Flowers capitate; heads elongated (in *T. spicata*) or spherical, as in *T. stipularis*, very downy.

1 *T. STIPULARIS* (Brogn. l. c.) leaves alternate, lanceolate-linear, acutish, smooth above, hoary-vellvety beneath, with revolute edges; stipulas awl-shaped; heads of flowers terminal, sessile. *h. G.* Native of the Cape of Good Hope, on sandy hills. *Phylica stipularis*, Lin. mant. 208. Wendl. coll. t. 32. Spreng. berl. mag. 8. p. 104. t. 8. f. 3. Young branches hoary-vellvety. Bractes short, naked, usually bifid. Flowers white.

*Var. β*; leaves broader, somewhat cordate at the base. Flowers white.

*Stipular Tricocephalus*. Fl. May, Sept. Clt. 1786. Sh. 3 ft.  
2 *T. SPICATUS* (Brogn. mem. rhamn. l. c.) leaves cordate, oblong, acuminate, erect, smooth above, hoary beneath; spikes ovate-cylindrical, downy. *h. G.* Native of the Cape of Good Hope. *Phylica spicata*, Lin. fil. suppl. 153. Lam. ill. t. 127. f. 3. *P. pinea*, Thunb. fl. cap. ? Flowers white.

*Spiked Tricocephalus*. Fl. Nov. Dec. Clt. 1774. Sh. 2 ft.

3 *T. ? ELLIPTICA*; leaves opposite, elliptical, or somewhat ovate, thick, hard, hoary-villous beneath, concave; stipulas ovate, concave; peduncles axillary; heads of flowers hoary and velvety. *h. G.* Native of St. Helena, on the tops of the mountains, where it is called *Wild-olive*. *Phylica elliptica*, Roxb. in Beats. app. 316. Flowers white.

*Elliptical-leaved Tricocephalus*. Shrub 4 feet.

4 *T. RAMOSISSIMA*; leaves alternate, lanceolate, acute, shining above, hoary villous beneath, with revolute edges; stipulas awl-shaped; flowers axillary, almost sessile. *h. G.* Native of St. Helena, on the middle mountains, where it is called *Wild-rosemary*. *Phylica rosmarinifolia*, Roxb. in Beats. app. 316. but not of Lam. *P. ramosissima*, D. C. prod. 2. p. 34. Flowers white.

*Much-branched Tricocephalus*. Clt. 1810. Tree 12 feet.

*Cult.* These shrubs will grow well in sandy peat, and young cuttings will strike root freely in a pot of sand, with a hand-glass placed over them.

**XXIV. PHYLICA** (from *φυλλικος*, *phyllicos*, leafy; in allusion to the curious evergreen foliage). Lin. gen. no. 266. Lam. ill. t. 127. Gært. fruct. 1. t. 24. D. C. prod. 2. p. 34. Brogn. mem. rhamn. p. 68.

**LIN. SYST.** *Pentandria*, *Monogynia*. Calyx with a subcylindrical tube, adnate to the ovary below, but free at the apex, 5-cleft (f. 7. B. b.). Petals 5, cucullate (f. 7. B. c. d.). Stamens inclosed (f. 7. B. c.). Anthers ovate or kidney-shaped, 2-celled or 1-celled. Disk hardly distinct (f. 7. B. f.), covering the tube and segments of the calyx. Ovary inferior (f. 7. B. g.), 3-celled. Style simple. Stigma 3-lobed or 3-toothed (f. 7. B. i.), in some entire. Fruit inferior (f. 7. B. k.), crowned by the whole of the small permanent calyx (f. 7. B. i.), trilocular (f. 7. B. h.). Seeds propped by a short fleshy stalk (f. 7. B. k.). —Much branched, heath-like shrubs, with erect, fastigiate branches, scattered, linear, exstipulate leaves with revolute edges, having the lower surface villous, and the upper smooth or pubescent. Flowers capitate or spicately-capitate, girdled by short, villous, or longer feathery-pilose bractes (f. 7. B. a.).

**SECT. I. ERICOIDES** (plants with the habit of *Erica*). Brogn. mem. rhamn. l. c. Segments of the calyx ovate, acute, erect, or spreading a little, rather woolly on the outside. Petals roundish, concave, arched, cucullate. Anthers kidney-shaped, with confluent cells, or 1-celled, 2-valved. Stigma usually 3-lobed or 3-toothed. Leaves shining above, short, needle-shaped. Flowers crowded, in dense spherical heads.

1 *P. PARVIFLORA* (Lin. mant. 209.) leaves awl-shaped, acute, scabrous, somewhat pilose; branches panicled; heads of flowers small, downy. *h. G.* Native of the Cape of Good Hope, in sandy places. Petals white.

*Small-flowered Phylica*. Fl. April, Jul. Clt. 1790. Sh. 2 ft.

2 *P. ERICOIDES* (Lin. spec. 283.) leaves linear-lanceolate, bluntish, spreading, smooth, downy beneath; branches somewhat umbellate; heads of flowers hemispherical. *h. G.* Native of the Cape of Good Hope, in sandy fields. Comm. hort. amster. 2. t. 1. Sims. bot. mag. t. 224. Spreng. in berl. mag. 8. p. 103. t. 8. f. 1. Flowers pure white.

*Heath-like Phylica*. Fl. April, Sept. Clt. 1731. Sh. 3 ft.

3 *P. GLABRATA* (Thunb. fl. cap. 2. p. 77.) leaves lanceolate, acute, spreading, somewhat scabrous above but downy beneath; branches smoothish; heads of flowers globose, woolly. *h. G.* Native of the Cape of Good Hope. Flowers white.

*Smoothed Phylica*. Fl. May, June. Clt. 1817. Shrub 3 ft.

4 *P. ACEROSA* (Willd. enum. 252.) leaves linear, acute, downy-villous beneath; branches in whorls; heads downy, few-

flowered. *h. G.* Native of the Cape of Good Hope. Pluk. alm. t. 445. f. 1. ex Spreng. berl. mag. 8. p. 103. t. 8. f. 2. Hoffman's verz. 1824. p. 182. Flowers white.

*Acrose-leaved Phylica.* Fl. May, June. Clt. 1820. Sh. 3 ft.

5 *P. NITIDA* (Lam. ill. no. 2613.) leaves linear, acutish, spreading, smooth above, and shining, but downy beneath, floral ones as well as branches woolly; heads of flowers ovate, woolly. *h. G.* Native of the Cape of Good Hope. Flowers white.

*Var. β, eriophora* (Berg. cap. 52.) leaves rather hairy, lanceolate. *h. G.* Native of the Cape of Good Hope. This is probably identical with *P. nitida*.

*Shining Phylica.* Fl. Nov. Clt. 1774. Shrub 3 feet.

6 *P. SECUNDA* (Thunb. fl. cap. p. 82.) leaves linear, mucronate, erectly spreading, smooth above, but downy beneath; heads of flowers hairy. *h. G.* Native of the Cape of Good Hope. Flowers white.

*Secund Phylica.* Fl. May, June. Clt. 1817. Shrub 3 feet.

7 *P. AUSTRALIS* (Link. enum. 1. p. 230.) leaves lanceolate-linear, smooth above, but hoary-tomentose beneath; branches hairy; heads of flowers downy, small. *h. G.* Native of New Holland? Segments of calyx downy on the outside, ovate, very blunt. Flowers white. According to Sprengel this is the same as *P. parviflora*, and therefore a native of the Cape of Good Hope.

*Southern Phylica.* Fl. April, June. Clt. 1818. Shrub 3 ft.

8 *P. PUMILA* (Wendl. in Willd. enum. 1. p. 252.) leaves linear-lanceolate, spreading, strigosely-villous, white beneath; flowers axillary, subcapitate; segments of calyx lanceolate, reflexed, spreading. *h. G.* Native of the Cape of Good Hope. Flowers white.

*Dwarf Phylica.* Fl. May, June. Clt. 1823. Shrub 1 foot.

9 *P. EXCELSA* (Wendl. coll. 3. p. 3. t. 4.) leaves lanceolate, villous, lower ones spreading, upper ones erect, somewhat imbricate; floral ones short, villous, erect; flowers spiked. *h. G.* Native of the Cape of Good Hope. Segments of calyx obtuse. Flowers yellowish-green.

*Tall Phylica.* Fl. May, July. Clt. 1823. Shrub 6 feet.

10 *P. CALLOSA* (Lin. fil. suppl. 153.) leaves cordate, oblong, acutish, coriaceous, hoary beneath, young ones pilose, adult ones smooth, floral ones hairy, spreading, longer than the heads of flowers. *h. G.* Native of the Cape of Good Hope. *P. reflexa*, Lam. ill. t. 127. f. 3. *P. pinea*, Thunb. fl. cap. Flowers yellowish-green.

*Callous Phylica.* Fl. Mar. April. Clt. 1774. Sh. 3 feet.

† *Species doubtful whether they belong to this section.*

11 *P. ELONGATA* (Willd. in Schult. syst. 5. p. 449.) leaves lanceolate, smooth; heads of flowers terminal, downy. *h. G.* Native of the Cape of Good Hope. Flowers white.

*Elongated Phylica.* Shrub 3 feet.

12 *P. squamosa* (Willd. in Schult. syst. 5. p. 491.) leaves oblong, obtuse, close-pressed; heads of flowers terminal. *h. G.* Native of the Cape of Good Hope. Flowers white.

*Scaly-leaved Phylica.* Shrub 2 feet.

13 *P. RUBRA* (Willd. in Schult. syst. 5. p. 491.) leaves lanceolate, acute, downy beneath; heads of flowers terminal. *h. G.* Native of the Cape of Good Hope.

*Red Phylica.* Shrub 3 feet.

14 *P. MICROCEPHALA* (Willd. in Schult. syst. 5. p. 491.) leaves linear, spreading, with revolute edges; heads of flowers terminal. *h. G.* Native of the Cape of Good Hope.

*Small-headed Phylica.* Shrub 3 feet.

shaped segments, which are hairy on the outside. Petals oblong, complicately-eucullate. Anthers oblong, 2-celled; cells parallel, opening lengthwise by distinct chinks. Stigma awl-shaped or clavated, entire. Leaves pubescent, hairy, strigose or villous, linear. Flowers spiked or capitate, usually involucreated, with very long, villous, or feathery bracteas.

15 *P. bicolor* (Lin. mant. 208.) leaves linear, acutish, and erectish, pubescent, downy beneath; branches rather villous; heads of flowers ovate, dense, woolly. *h. G.* Native of the Cape of Good Hope, in sandy places. *P. strigosa*, Thunb. fl. cap. 2. p. 80. Adult leaves and branches naked. Flowers white.

*Two-coloured Phylica.* Fl. April, July. Clt. 1817. Sh. 3 ft.

16 *P. PINEA* (Thunb. fl. cap. 2. p. 83.) leaves lanceolate, mucronate, smooth above, downy beneath, upper ones smallest; flowers in racemose spikes. *h. G.* Native of the Cape of Good Hope. Flowers white.

*Pine-like Phylica.* Fl. Nov. Dec. Clt. 1774. Shrub 3 ft.

17 *P. ROSMARINIFOLIA* (Lam. ill. no. 2614.) leaves linear, erect, somewhat revolute, and imbricate, rather pilose above, hoary beneath; floral leaves somewhat ovate, shorter than the others; spikes of flowers ovate, dense. *h. G.* Native of the Cape of Good Hope. Lodd. bot. cab. t. 849. Flowers white.

*Rosmary-leaved Phylica.* Fl. April, Jul. Clt. 1815. Sh. 3 ft.

18 *P. VILLOSA* (Thunb. fl. cap. 2. p. 83.) leaves linear, spreading, lower ones smooth, rather scabrous, upper ones smaller; flowers in racemose spikes. *h. G.* Native of the Cape of Good Hope. Flowers white.

*Villous Phylica.* Fl. May, June. Clt. 1790. Shrub 3 feet.

19 *P. HORIZONTALIS* (Vent. malm. no. 57. obs. 3.) leaves linear, villous, hoary beneath; floral leaves longer than the others, and are as well as the branches spreading horizontally; heads of flowers small; flowers spreading. *h. G.* Native of the Cape of Good Hope. *P. plumosa*, Spreng. berl. mag. 8. p. 105. f. 7. Lam. ill. t. 127. f. 4. but not of Lin.

*Horizontal Phylica.* Fl. May, June. Clt. 1820. Sh. 3 ft.

20 *P. PLUMOSA* (Lin. spec. 283.) leaves linear, awl-shaped, smooth above, hoary beneath, upper ones hairy; heads of flowers small, woolly. *h. G.* Native of the Cape of Good Hope. Lodd. bot. cab. 253. — Pluk. mant. 342. f. 3. Flowers white.

*Feathery Phylica.* Fl. Mar. June. Clt. 1759. Shrub 3 ft.

21 *P. squarrosa* (Vent. malm. no. 57. obs. 3.) leaves linear-lanceolate, spreading, villous and hoary beneath, lower ones rather smooth; floral ones longer than the rest, spreading; heads of flowers roundish; calycine segments erect, acute. *h. G.* Native of the Cape of Good Hope. Lodd. bot. cab. t. 26. Flowers white.

*Squarrose Phylica.* Fl. Aug. Nov. Clt. 1800. Shrub 2 ft.

22 *P. CAPITATA* (Thunb. fl. cap. 2. p. 86.) leaves linear-lanceolate, somewhat villous, lower ones reflexed, smooth, coriaceous; floral ones very villous, spreading a little; heads of flowers roundish. *h. G.* Native of the Cape of Good Hope. Wendl. coll. 2. t. 50. Ker. bot. reg. t. 711. *P. pubescens*, Ait. hort. kew. 1. p. 268. — Burm. afr. t. 14. f. 3. Heads of flowers the size of a chestnut. Flowers white.

*Headed Phylica.* Fl. May, Aug. Clt. 1800. Shrub 2 feet.

23 *P. COMMELINI* (Spreng. berl. mag. 8. p. 104. t. 8. f. 6.) leaves linear-lanceolate, acute, spreading, villous, and hoary beneath; floral ones longer, also spreading; heads of flowers roundish. *h. G.* Native of the Cape of Good Hope. *P. pubescens*, Willd. enum. 252. but not of Aiton. Segments of calyx erect, ovate, acute. Flowers white.

*Commeline Phylica.* Fl. May, June. Clt. 1800. Sh. 3 ft.

24 *P. LANCEOLATA* (Thunb. fl. cap. 2. p. 79.) leaves linear-lanceolate, erectly-spreading, smooth above, downy beneath; heads of flowers roundish, hairy, involucreated with bracteas.

h. G. Native of the Cape of Good Hope, on hills. Flowers white.

*Lanceolate-leaved Phylica.* Fl. April, May. Clt. 1790. Sh. 3 ft.

25 *P. VILLÒSA* (Thunb. fl. cap. 2. p. 83.) leaves linear, spreading, lower ones smooth, rather rough, upper ones smaller; flowers in racemose spikes. h. G. Native of the Cape of Good Hope. Flowers white.

*Villous Phylica.* Fl. May, July. Clt. 1790. Shrub 2 feet.

26 *P. CYLINDRICA* (Wendl. coll. 1. t. 7.) leaves linear-lanceolate, strigosely-villous, white beneath, erect, but at length spreading, floral ones erect, imbricate, very villous; flowers in spikes.

h. G. Native of the Cape of Good Hope. Spreng. berl. mag. 8. p. 104. t. 8. f. 5. *P. pubescens*, Lam. ill. t. 127. f. 2. Flowers greenish-yellow.

*Cylindrical-headed Phylica.* Fl. April, Aug. Clt. ? Sh. 2 ft.

† *Species doubtful whether they belong to this section.*

27 *P. IMBEBRIS* (Lin. mant. 209.) leaves linear, blunt, scabrous, downy beneath; heads of flowers pubescent. h. G. Native of the Cape of Good Hope. — Seb. mus. 2. t. 49. *P. brunoides*, Lam. ill. no. 2620. Flowers white.

*Beardless Phylica.* Shrub 2 feet.

28 *P. PAPILLÒSA* (Wendl. coll. 3. p. 5. t. 71.) leaves linear, acerose, erect, papillose, hairy, floral ones downy; flowers disposed in terminal spikes. h. G. Native of the Cape of Good Hope. Flowers white.

*Papillose-leaved Phylica.* Fl. May, Jul. Clt. 1820. Sh. 2 ft.

29 *P. DIVARICATA* (Vent. malm. no. 57. obs. 2.) leaves lanceolate, scattered, flat, somewhat villous above, but velvety and cloth-like beneath; branches slender, elongated, decumbent. h. G. Native of the Cape of Good Hope. Flowers white. Probably identical with the following.

*Divaricated-branched Phylica.* Shrub decumbent.

30 *P. LEDIFÒLIA* (Desf. cat. hort. par. 1804. p. 203.) leaves scattered, oblong, acuminate at both ends, flat, spreading, shining above, covered with hoary down beneath, as well as the branchlets. h. G. Native of the Cape of Good Hope. The spikes of flowers are terminal and involucreted with bracteas, according to Lher.

*Ledum-leaved Phylica.* Fl. May, Jul. Clt. 1820. Sh. 2 ft.

31 *P. TRICHÒTOMA* (Thunb. fl. cap. 2. p. 82.) leaves trigonal, obtuse, smooth; stem trichotomous, hairy; heads of flowers terminal, hairy, about the size of a pea. h. G. Native of the Cape of Good Hope, in fields, but rare.

*Trichotomous-stemmed Phylica.* Clt. 1818. Shrub 3 feet.

32 *P. GLOBÒSA* (Thunb. fl. cap. 2. p. 87.) leaves ovate, concave above, smooth, imbricate; heads of flowers terminal, globose, about the size of a pea. h. G. Native of the Cape of Good Hope.

*Globose-headed Phylica.* Shrub 2 feet.

33 *P. ATRATA* (Licht. in Schult. syst. 5. p. 490.) leaves cordate, linear-lanceolate, with revolute edges, smoothish, but downy beneath; heads terminal, villous, woolly. h. G. Native of the Cape of Good Hope, on mountains. Flowers white. Branchlets clothed with dark villi.

*Dark-branched Phylica.* Fl. May, July. Shrub 3 feet.

*Cult.* Handsome shrubs, requiring the same treatment and culture as that recommended for *Trichocéphalus*, p. 40.

XXV. SOULANGIA (in honour of Soulangé Bodin, a nurseryman near Paris). Brogn. mem. rhamn. p. 70. — *Phylica*, species of authors.

*LIN. SYST.* *Pentándria, Monogýnia.* Calyx with an obconical tube adnate to the ovary (f. 7. D. f.), 5-cleft. Petals 5, cucullate (f. 7. D. c.). Stamens inclosed in the petals (f. 7. D. c.); anthers kidney-shaped, 1-celled. Disk epigynous (f. 7. D. d.),

pentagonal, fleshy. Ovary adnate to the tube of the calyx (f. 7. D. c.), and equal in length to it, 3-celled. Style simple, short, rather conical, rarely trifid at the apex, crowned by a 3-toothed stigma or by 3 stigmas. Fruit inferior (f. 7. D. i.), marked above by a large areola (f. 7. D. h. k.), tricoccous. Seeds propped by a short, thick, fleshy stalk (f. 7. D. e. j.). — Much branched shrubs, with alternate, exstipulate, quite entire, short stalked, ovate, cordate, or lanceolate, rarely linear leaves, which are usually smooth above and villous beneath. Flowers in the axillæ of the leaves or bracteas, solitary, spiked, or paniced, clothed with short down.

1 *S. AXILLARIS* (Brogn. mem. rhamn. p. 71.) leaves linear-lanceolate, spreading, with revolute edges, smooth above, hoary beneath; flowers in the axillæ of the upper leaves, on short pedicels, the whole constituting a leafy spike. h. G. Native of the Cape of Good Hope. *Phylica axillaris*, Lam. ill. no. 2615. Spreng. berl. mag. 8. p. 104. t. 8. f. 4. *P. rosmarinifolia*, Willd. enum. 253. but not of Lam. Flowers white.

*Axillary-flowered Soulangia.* Fl. May, June. Clt. 1812. Shrub 3 feet.

2 *S. OLEAFÒLIA* (Brogn. mem. rhamn. p. 71.) leaves ovate-oblong, mucronate, acute, coriaceous, flat, spreading, covered with hoary down beneath, but smooth above or pubescent; flowers in loose racemes at the tops of the branches, intermixed with bracteas. h. G. Native of the Cape of Good Hope. *P. oleafolia*, Vent. malm. no. 4. obs. 2. *P. spicata*, Lodd. bot. cab. t. 223. *P. oleoides*, D. C. prod. 2. p. 36. Flowers white.

*Olive-leaved Soulangia.* Fl. May, July. Clt. 1800. Sh. 3 ft.

3 *S. THYMIFÒLIA* (Brogn. mem. rhamn. p. 71.) leaves lanceolate, acuminate, spreading, smooth above, but hoary beneath, with rather revolute edges; flowers sessile, disposed in heads at the tops of the branches. h. G. Native of the islands in the Antarctic sea. *Phylica thymifolia*, Vent. malm. t. 57. Flowers white.

*Thyme-leaved Soulangia.* Fl. May, Jul. Clt. 1820. Sh. 3 ft.

4 *S. PANICULATA* (Brogn. mem. rhamn. p. 71.) leaves ovate-lanceolate, acuminate, spreading, shining above, downy white beneath; flowers disposed in leafy, terminal, paniced racemes. h. G. Native of the Cape of Good Hope. *Phylica paniculata*, Willd. spec. 1. p. 1112. *Phylica myrtifolia*, Poir. dict. 5. p. 293. Flowers white.

*Paniced-flowered Soulangia.* Fl. May, July. Clt. 1817. Shrub 2 to 3 feet.

5 *S. BUXIFÒLIA* (Brogn. mem. rhamn. p. 36.) leaves ovate, coriaceous, spreading, smooth above, but covered with hoary down beneath; flowers in heads at the tops of the branches. h. G. Native of the Cape of Good Hope. *Phylica buxifolia*, Lin. spec. 283. Wendl. coll. 1. t. 26. Lodd. bot. cab. t. 848. — Burm. afr. 119. t. 44. f. 1. Flowers greenish.

*Box-leaved Soulangia.* Fl. May, Sept. Clt. 1759. Sh. 6 ft.

6 *S. CORDATA* (Brogn. mem. rhamn. p. 71.) leaves cordate, ovate, coriaceous, acute, mucronate, smooth above, but covered with hoary down beneath; heads of flowers small, axillary, stalked. h. G. Native of the Cape of Good Hope. *Phylica cordata*, Lin. spec. 283. — Comm. præl. p. 62. t. 12. Flowers white.

*Cordate-leaved Soulangia.* Fl. May, Ju. Clt. 1789. Sh. 6 ft.

7 *S. PEDICELLATA*; leaves linear-lanceolate, rather erect, pubescent above and hoary beneath with revolute edges, especially when dried; flowers on pedicels in the axillæ of the leaves, the whole forming a terminal leafy corymb. h. G. Native of the Cape of Good Hope. *Phylica pedicellata*, D. C. prod. 2. p. 36. Flowers white.

*Pedicellate-flowered Soulangia.* Shrub 4 feet.

8 *S. RECLINATA*; leaves lanceolate, reclinate, silky, white beneath, bearded at the apex; flowers stalked in the axillæ of

the upper leaves, the whole forming a kind of umbel. *h. G.* Native of the Cape of Good Hope. *Phyllica reclinata*, Wendl. coll. 2. p. 49. t. 56. Flowers white.

*Reclinate-leaved Soulangia.* Fl. May, Jul. Clt. 1823. Sh. 3 ft.

9 *S.?* *ARBOREA*; leaves ovate-lanceolate, crowded, veinless, downy beneath, bearded at the apex; heads of flowers axillary.

*h. G.* Native of the island of Tristan d'Acunha. *Phyllica arborea*, Péc. Thouars. fl. trist. d'acun. p. 45. Carm. fl. in Lin. trans. p. 23. Trunk covered with a grey bark. Leaves half an inch long. Flowers white.

*Tree Soulangia.* Clt. 1817. Tree 12 feet.

10 *S. ORIENTALIS*; leaves ovate-lanceolate, smooth above but clothed with hoary down beneath; flowers in racemose panicles. *h. G.* Native of? *Phyllica orientalis*, Lois. herb. amat. t. 283. Flowers white.

*Eastern Soulangia.* Fl. May, July. Clt. 1820. Shrub 4 ft.

11 *S.?* *DIOICA*; leaves cordate; flowers dioecious; scales of calyx hairy. *h. G.* Native of the Cape of Good Hope. Allied to *S. buxifolia* and *cordata*. *Phyllica dioica*, Lin. mant. 312.

*Dioecious Soulangia.* Fl. Aug. Sept. Clt. 1817. Shrub 6 ft.

*Cult.* See *Trichocéphalus* for culture and propagation, p. 40.

XXVI. GOUANIA (in honour of Anthony Gouan, once Professor of Botany at Montpellier, author of *Hortus Monspelienensis*, &c.). Jacq. amer. 264. Lin. gen. no. 1167. Lam. ill. t. 845. D. C. prod. 2. p. 38. Brogn. mem. rhamn. p. 71.—*Retinaria*, Gært. fruct. 2. p. 187. t. 120. f. 4.

*LIN. SYST.* *Pentandria, Monogynia.* Calyx with an adhering tube and a somewhat spreading, 5-cleft limb (f. 7. A. a.). Petals convolute (f. 7. A. h.) or cucullate (f. 7. A. f.). Stamens enclosed (f. 7. A. h.). Anthers ovate, 2-celled (f. 7. A. k.). Disk epigynous (f. 7. A. e.), pentagonal or stellate (f. 7. A. c.). Ovary adnate to the tube of the calyx (f. 7. A. c.), 3-celled. Style trifid. Fruit inferior, trigonal, or 3-winged (f. 7. A. g.), tricoecous; coccula not joined, indehiscent, coriaceous. Seeds sessile.—Usually climbing shrubs, with the branchlets often naked from abortion and tendrilled. Leaves alternate, feather-nerved, lower nerves largest and arched, somewhat triple-nerved, toothed, rather pubescent, stipulate at the base. Flowers usually polygamous from abortion, disposed in glomerated spikes on the naked branchlets, rarely in the axillæ of the bractea-like leaves, as in *G. smilacina*.

\* *American species.* *Disk starry*; *flowers hermaphrodite*.

1 *G. INTEGRIFOLIA* (Lam. dict. 3. p. 5.) leaves quite entire, oval, smoothish, membranous. *h. G.* Native of? Branchlets and petioles pubescent. Flowers greenish-white. There are two varieties of this plant, the one with acute, the other with obtuse leaves.

*Entire-leaved Gouania.* Clt. 1800. Shrub cl.

2 *G. DOMINGENSIS* (Lin. spec. ed. 2. p. 1663.) leaves ovate, acuminate, smoothish, serrated. *h. G.* Native of St. Domingo, Jamaica, and Guadeloupe. *G. glabra*, Jacq. amer. t. 179. f. 40. *Banisteria lupuloides*, Lin. spec. ed. 1. p. 427.—Pluk. alm. t. 162. f. 3. and t. 201. f. 4. Fruit 3-winged. Flowers greenish-yellow?

*St. Domingo Gouania.* Clt. 1739. Shrub cl.

3 *G. STRIATA* (Rich. act. soc. hist. nat. 1. p. 113.) leaves ovate, smooth, nerved, crenate, emarginate; branches and rachis striated. *h. G.* Native of Guiana, in woods. *G. Domingensis*, Aubl. guian. 2. p. 934. Flowers greenish-yellow.

*Striated-stemmed Gouania.* Shrub cl.

4 *G. CANESCENS* (Rich. ex Poir. suppl. 2. p. 820.) leaves oval-

lanceolate, acute, hoary beneath; racemes axillary and terminal. *h. G.* Native of Guiana. Flowers greenish-yellow.

*Hoary Gouania.* Shrub cl.

5 *G. PUBESCENS* (Lam. ill. t. 845. f. 1. ex Poir. suppl. 2. p. 820.) leaves ovate, crenate, rather pubescent; racemes simple, terminal, disposed in a panicle, lower racemes axillary. *h. G.* Native of St. Domingo. Flowers greenish-yellow.

*Var. β, Martinicensis* (Poir. 1. c.) leaves almost smooth; branches tendrilled at the apex; racemes lateral. *h. G.* Native of Martinique. Probably a proper species.

*Pubescent Gouania.* Shrub erect.

6 *G.?* *PANICULATA* (Spreng. new. entd. 3. p. 49.) leaves ovate, coarsely toothed, smooth; racemes paniced, axillary, and terminal. *h. G.* Native of St. Domingo. This and the preceding species are erect and destitute of tendrils, therefore it is doubtful whether they belong to *Gouania* or not.

*Paniced Gouania.* Shrub erect.

7 *G. CRENATA* (Lam. dict. 3. p. 5.) leaves ovate, crenate, rather villous, on short petioles; tendrils terminal and axillary. *h. G.* Native of South America. Leaves 4 inches long and 2 broad. Flowers greenish-yellow.

*Var. β, cordifolia* (D. C. prod. 2. p. 39.) leaves cordate at the base, coarsely dentate-crenate. *h. G.* Native of St. Domingo.

*Crenate-leaved Gouania.* Shrub cl.

8 *G. TOMENTOSA* (Jacq. amer. 263.) leaves roundish-ovate, acuminate, bluntly serrated, downy beneath; racemes terminal and axillary; fruit 3-winged. *h. G.* Native of the Caribbee islands. Gært. fruct. 3. t. 183. f. 1. Fruit with rounded thin wings. Flowers greenish-yellow.

*Downy Gouania.* Clt. 1823. Shrub cl.

9 *G. STIPULARIS* (Moc. et Sesse, fl. mex. icon. ined. D. C. prod. 2. p. 39.) leaves ovate, smoothish, serrated, acuminate, somewhat cordate at the base; stipulas large, half-sagittate; fruit 3-winged. *h. G.* Native of Mexico. Stipulas truly distinct. Flowers greenish-yellow?

*Large-stipuled Gouania.* Shrub cl.

10 *G. CYCLOCARPA* (Smith in Rees' cycl. no. 3.) leaves elliptical-oblong, acute, obsolete serrated; younger ones silky and rusty, adult ones naked; fruit with narrow orbicular wings. *h. G.* Native of the West Indies?

*Circle-fruited Gouania.* Shrub cl.

11 *G. ALPTRA* (D. C. prod. 2. p. 39.) leaves ovate, acutish, somewhat cordate at the base, coarsely serrate-toothed, and are as well as the branches covered with soft villi. *h. G.* Native of South America. Tendrils on the tops of the branchlets as well as along the peduncles.

*Wingless-fruited Gouania.* Shrub cl.

\*\* *Brasiliana* (natives of Brazil). *Segments of calyx with membranous edges, plaited in the bud, forming 5 crests. Disk not stellate but pentagonal, not extended beyond the throat of the calyx. Flowers umbellate or racemose in the axillæ of the upper leaves, sometimes terminal.*

12 *G. SMILACINA* (Smith in Rees' cycl. 16. no. 8.) leaves cordate, acute, minutely serrated, sometimes pilose; stipulas awl-shaped; peduncles umbellate, hardly the length of the leaves. *h. G.* Native of Brazil. Branches flexuous. Leaves small. Flowers yellowish.

*Smilac-like Gouania.* Shrub cl.

13 *G. CORYLIFOLIA* (Raddi. mem. pl. bras. add. p. 16.) leaves roundish or somewhat ovate-cordate, with glandular toothlets, pubescent beneath; racemes axillary and terminal, very long. *h. G.* Native of Brazil, on Mount Cercovado, near Rio Janeiro. Capsules 3-winged, netted. Flowers yellowish?

*Hazel-leaved Gouania.* Shrub cl.

14 *G. CORDIFOLIA* (Raddi. mem. pl. bras. l. c.) leaves cordate, ovate, serrulated, rather hairy; flowers axillary and terminal, capitate, hairy.  $\frac{1}{2}$ .  $\odot$ . S. Native of Brazil; common about Rio Janeiro. Stipulas minute, almost linear. Flowers minute, yellow.

*Heart-leaved Gouania.* Clt. 1820. Shrub cl.

• • • *Asiaticæ* (natives of Asia). *Disk starry.* *Flowers polygamous.*

15 *G. DENTICULATA* (Smith, in Rees' cycl. 16. no. 4.) leaves ovate, entire, acuminate at the apex, with the acumen finely toothed, hairy beneath; racemes axillary; tendrils terminal.  $\frac{1}{2}$ .  $\odot$ . S. Native of the East Indies, in the island of Honimao. Flowers yellowish.

*Toothletted-leaved Gouania.* Shrub cl.

16 *G. MAURITIANA* (Lam. dict. 3. p. 4.) leaves ovate, acuminate, somewhat cordate at the base, subserrated, covered with silky down on both surfaces; racemes axillary, shorter than the leaves; tendrils and branches clothed with rusty villi.  $\frac{1}{2}$ .  $\odot$ . S. Native of the Mauritius. *G. Domingensis*, var. *Mauritiana*, Aubl. Wings of fruit rounded, thin, membranous. Flowers yellowish.

*Mauritian Gouania.* Clt. 1823. Shrub cl.

17 *G. RETINARIA* (D. C. prod. 2. p. 40.) leaves ovate, acutish, a little serrated, young ones rather pubescent, adult ones smooth; racemes terminal and axillary, much longer than the leaves; fruit winged, triquetrous.  $\frac{1}{2}$ .  $\odot$ . S. Native of the Mauritius. *Retinaria scandens*, Gart. fruct. 2. p. 187. t. 120. f. 4. Lam. ill. t. 845. f. 3. Flowers yellowish.

*Resinous Gouania.* Shrub cl.

18 *G. TILIAEFOLIA* (Lam. dict. 3. p. 5.) leaves cordate, ovate, acuminate, smoothish, with glandular serratures; racemes axillary and terminal, pubescent; fruit rather ovate, wingless.  $\frac{1}{2}$ .  $\odot$ . S. Native of the Island of Bourbon. *G. Stadtmanni*, Willem. herb. maur. 58. Flowers greenish-yellow.

*Lime-tree-leaved Gouania.* Fl. May, Jul. Clt. 1810. Sh. cl.

19 *G. LEPTOSTACHYA* (D. C. prod. 2. p. 40.) leaves ovate, acuminate, rather cordate, coarsely crenated, and are as well as the branchlets smooth; racemes axillary and terminal, very slender, elongated; flowers on very short pedicels, smoothish; fruit bluntly triquetrous, wingless.  $\frac{1}{2}$ .  $\odot$ . S. Native of the East Indies, on mountains, in many places. *G. tiliæfolia*, Roxb. cor. l. p. 67. t. 98. exclusive of the synonyms. Flowers greenish-yellow.

*Slender-spiked Gouania.* Fl. May, July. Clt. 1810. Sh. cl.

20 *G. MICROCARPA* (D. C. prod. 2. p. 40) leaves elliptical, acute, almost entire, and are as well as the branchlets smooth, upper ones oblong; racemes terminal, elongated; fruit triquetrous, winged.  $\frac{1}{2}$ .  $\odot$ . S. Native of the East Indies. *G. tiliæfolia*, Rottl. in herb. Puer. This species has the fruit of *G. retinaria*, but one half smaller. Leaves with oblique nerves.

*Small-fruited Gouania.* Shrub cl.

21 *G. OBTUSIFOLIA* (Vent. mss. in herb. Brogn. mem. rhamn. p. 72.) shrub erect, rusty-villous; leaves elliptical or ovate, obtuse, crenated, villous beneath, somewhat pubescent above; flowers in long simple spikes, emitting from their base one simple tendril, disposed in interrupted bundles, each propped by a bristle-like bractea; fruit with three semicircular wings.  $\frac{1}{2}$ . S. Native of Java. Flowers greenish-yellow.

*Blunt-leaved Gouania.* Shrub erect.

22 *G. NIPALENSIS* (Wall in fl. ind. 2. p. 417.) leaves oval, finely acuminate, rounded, or acute at the base, seldom subcordate, villous and strongly ribbed beneath; stipulas membranous, lanceolate, falcate; racemes very long, villous, terminal, or from the upper axilla of the leaves.  $\frac{1}{2}$ .  $\odot$ . G. Native of Nipaul, on the high mountains of Sheopore, Chundrugiri, &c.

Tendrils simple, terminal, or from the base of the racemes. Petioles furnished with a couple of evanescent glands at their base. Flowers greenish-yellow.

*Nipaul Gouania.* Fl. June, Oct. Shrub cl.

*Cult.* *Gouania* is a genus of insignificant shrubs, not worth cultivating, except in general collections. They will all grow freely in a mixture of loam and peat; and ripened cuttings will soon strike root if planted in a pot of sand plunged in heat, with a hand-glass placed over them.

XXVII. CRUMENARIA (from *crumena*, a purse; in allusion to the thin, papery capsule). Mart. nov. gen. bras. 2. p. 68. t. 160. Brogn. mem. rhamn. p. 73.

LIN. SYST. *Pentandria*, *Monogynia*. Calyx campanulate, 5-cleft, coloured above, with the tube connate to the ovary below. Petals hood-formed. Stamens with inclosed, 2-lobed anthers. Style 1. Stigmas 3. Capsule covered by the adnate calyx, papyraceous, tricoecous; coccula with winged margins, 1-seeded, fixed to the central, 3-parted, filiform receptacle.—A small, annual plant, with decumbent branches, alternate, stalked, cordate, quite entire leaves, furnished with twin stipulas at their base. Peduncles axillary, jointed, solitary, or twin. Flowers small, white.

1 *C. DECUMBENS* (Mart. l. c. t. 160.).  $\odot$ . S. Native of Brazil, in grassy places by the sides of woods. This genus does not differ from *Gouania*, unless in the calyx being campanulate, and in its tube being free at the apex, as well as in the disk being defective. However, it differs from every plant in the present order in the stems being annual.

*Decumbent Crumenaria.* Pl. decumbent.

*Cult.* This plant is not worth cultivating, unless in the gardens of the curious. The seeds should be sown in a pot of mould about the beginning of April, and placed in a hot-bed, and when the plants are of sufficient size, some may be planted in separate pots, others may be planted in the open border, where they will probably ripen their seed.

† *Genera allied to Rhamneæ, but are not sufficiently known.*

XXVIII. COUPIA (*Couepi* is the Guiana name of one of the species). Aubl. guian. 1. p. 296. D. C. prod. 2. p. 29.—*Cúpia*, Jaum. exp. Glossopétalum, Schreb. gen. no. 526.

LIN. SYST. *Pentandria*, *Tetra-Pentagynia*. Calyx small, 5-toothed, permanent, adhering to the base of the ovary. Petals 5, oblong, appendiculate inside. Stamens 5, very short. Ovary roundish, crowned by 4 or 5 sessile stigmas. Berry pea-shaped, 4-5-celled, 4-5-seeded.—Trees with alternate, feather-nerved, somewhat unequal stipulate leaves, axillary peduncles, bearing numerous, umbellate pedicels and small flowers. This genus should probably be placed in *Ruticææ*.

1 *G. GLABRA* (Aubl. guian. 1. t. 116.) leaves quite smooth.  $\frac{1}{2}$ . S. Native of Guiana, in the woods of Sinemari. Glossopétalum glabrum, Willd. spec. 2. p. 1521. Flowers yellow. Berries black. The natives of Guiana make canoes of the trunk of this tree.

*Smooth Coupia.* Tree 60 feet.

2 *G. TOMENTOSA* (Aubl. l. c.) leaves hairy on both surfaces.  $\frac{1}{2}$ . S. Native of Guiana, in woods. Glossopétalum tomentosum, Willd. spec. 2. p. 1521. The bark and leaves are bitter. The latter are used by the inhabitants of Guiana against inflammation of the eyes.

*Downy Coupia.* Tree 25 feet.

*Cult.* Loam, peat, and sand is a good mixture for this genus, and ripened cuttings will root if planted in sand under a hand-glass, in heat.

**XXIX. CARPODETUS** (from *καρπος*, *carpos*, a fruit, and *detos*, *detos*, tied; there is a ring round the middle of the fruit resembling a tie). Forst. gen. t. 17. D. C. prod. 2. p. 29.

**LIN. SYST.** *Pentándria, Monogýnia*. Calyx with a turbinate tube, adnate to the ovary, and a 5-cleft limb; lobes deciduous. Petals 5, small, inserted in the calyx. Stamens very short; anthers almost sessile. Style 1, filiform. Stigma depressed, capitate. Berry dry, globose, 5-celled, 5-seeded, girded by the tube of the calyx.

1 *C. serratus* (Forst. nov. gen. t. 17. Spreng. pug. 1. p. 20.) *h. G.* Native of New Zealand. Leaves oblong, with glandular serratures, puberulous above, pale, smooth, and netted beneath. Peduncles opposite the leaves. This plant is very little known.

*Serrate-leaved Carpodetus.* Shrub 12 feet.

*Cult.* See *Willemétia* for culture and propagation, p. 38.

**XXX. SCHÆFFERIA** (in honour of James Christian Schæffer, a German botanist, author of *Botanica Expedition in 1762*). Jacq. amer. 259. D. C. prod. 2. p. 40.

**LIN. SYST.** *Dia'cia, Tetrándria*. Flowers dioecious from abortion. Calyx 4-parted, blunt, permanent under the fruit, perhaps altogether free. Petals 4, alternating with the sepals. Stamens 4, opposite the petals. Ovary 2-celled. Style short or wanting. Stigmas 2. Berry dry, 2-parted, rarely 1-celled, usually 2-celled; cells 1-seeded. Seeds erect. Albumen fleshy. Embryo central, straight, flat.—Shrubs, with alternate, entire leaves, and numerous small, axillary, stalked flowers.

1 *S. frutescens* (Jacq. amer. 259.) style slender, 2-lobed at the apex; petals blunt; leaves elliptical, acuminate at both ends, and arc, as well as the branches, smooth. *h. S.* Native of St. Domingo, Jamaica, Carthage, and New Spain, in bushy places. *S. completa*, Swartz, fl. ind. occ. 1. p. 327. t. 7. f. a. Flowers white. Berries the size of a small pea, of a yellowish-red colour.

*Var. β, burifolia* (D. C. prod. 2. p. 41.) leaves broad, ovate, mucronate. *h. S.* Native of Jamaica. Sloan. hist. 2. p. 209. f. 1. *Shrubby Schæfferia.* Clt. 1793. Shrub 6 feet.

† *Doubtful species.*

2 *S. paniculata* (Spreng. neue. entd. 3. p. 49.) petals concave; flowers paniced; leaves spatulate, coriaceous, pubescent beneath, as well as the branches. *h. S.* Native of Brazil. Flowers whitish.

*Paniced Schæfferia.* Shrub.

3 *S. viridescens* (Moc. et Sesse, fl. mex. icon. ined. D. C. prod. 2. p. 41.) style none; stigmas 2, thick, sessile; petals acute. *h. S.* Native of Mexico. Leaves almost like those of *S. frutescens*, but more blunt. Fruit globose. Younger petals greenish on the outside, but of a dirty-white on the inside.

*Greenish-flowered Schæfferia.* Shrub 6 feet.

4 *S. racemosa* (Moc. et Sesse, fl. mex. icon. ined. D. C. prod. 2. p. 41.) style wanting; stigmas 3, thick, sessile; petals obtuse. *h. S.* Native of Mexico. Racemes lateral, many-flowered. Scales 4 between the stamens, or alternating with the petals. Fruit globose. This will probably form a distinct genus.

*Racemose-flowered Schæfferia.* Shrub.

*Cult.* This is a genus of insignificant shrubs; for the culture and propagation see *Coupia*, p. 44.

**XXXI. OLINIA** (the name of a town in Spain). Thunb. in Roem. arch. 2. p. 1. and p. 4. D. C. prod. 2. p. 41.

**LIN. SYST.** *Penta-Hexándria, Monogýnia*. Calyx with a cam-

panulate tube, and 5 or 6 blunt teeth. Petals 5, inserted in the calyx, alternating with the teeth, linear-lanceolate, permanent, furnished with rather concave scales on the inside at the base. Stamens 5 or 6, very short, inserted in the calyx; anthers concealed under the scales. Ovary free? Style very short. Stigma thickened, pentagonal. Fruit crowned by the calyx, 5-angled, 5-seeded.—A smooth, much branched shrub. Branches tetragonal. Leaves ovate, opposite. Flowers white, in axillary panicles.

1 *O. cymosa* (Thunb. l. c. and fl. cap. 194.) *h. G.* Native of the Cape of Good Hope, on the western side of the Table Mountain. *Sideroxylum cymosum*, Lin. fil. suppl. 1. p. 152. Flowers white, sweet-scented.

*Cymose-flowered Olinia.* Shrub 4 feet.

*Cult.* This shrub will grow in a mixture of loam and sandy peat, and ripened cuttings will root if planted in a pot of sand, with a hand-glass placed over them.

**XXXII. DAPHNIPHYLLUM** (from *δαφνη*, *daphne*, the Greek name for the laurel, and *φυλλον*, *phyllon*, a leaf; in allusion to the leaves resembling the laurel). Blum. bijdr. 1152.

**LIN. SYST.** *Dia'cia, Hexa-Decándria*. Flowers dioecious. Calyx inferior, small, crenulated. Corolla none. Male flowers, with 6-10 short stamens, which are connate at the base. Anthers erect, tetragonal. Female flowers with a 2-celled ovary, with the cells containing 2 ovula, and a bifid sessile stigma. Drupe oval, baccate, crowned by the stigma containing a 1-seeded fibrous nut. Embryo minute, inverted in a fleshy albumen.—A tree, with scattered, oblong-lanceolate, entire, smooth, exstipulate leaves, which are glaucous beneath. Racemes axillary, simple.

1 *D. glaucescens* (Blum. bijdr. 1153.) *h. S.* Native of Java, on the higher mountains of Salak and Gede.

*Glaucous-leaved Daphniphyllum.* Tree.

*Cult.* See *Coupia* for culture and propagation, p. 44.

**ORDER LXVIII. BRUNIA'CEÆ** (plants agreeing with *Brunia* in important characters). R. Br. in Lin. trans. 1818. D. C. prod. 2. p. 13. Brong. mem. brun. in ann. science. nat. par. august, 1826.

Calyx adhering to the ovary (f. 8. G. g. H. a.), rarely free (f. 8. C. h.), 5-cleft (f. 8. B. b. K. c.), or 5-toothed (f. 8. H. b.), imbricate in aestivation. Petals 5 (f. 8. G. b. C. d.) imbricate, inserted in the ovary, alternating with the segments of the calyx (f. 8. K. c. G. b.). Stamens 5 (f. 8. B. d.), alternating with the petals, epigynous; anthers fixed by the back, bursting inwards, 2-celled, opening lengthwise (f. 8. B. d.). Ovary half inferior (f. 8. F. l.), 1 (f. 8. A. g.) -3-celled (f. 8. E. g.); cells 1 (f. 8. C. g.) -2 (f. 8. E. g.) -seeded; ovula suspended from the central column of the ovary. Style simple or bifid (f. 8. D. l.). Stigma 1 or 2-3, small, papilliform. Fruit dry, biccous, or indehiscent, 1-seeded, inferior, or half inferior. Seeds with a small embryo, located in the apex of a fleshy albumen, with short cotyledons, and a long conical radicle. — Much branched, heath-like shrubs, with small, smooth, or hardly pilose leaves, which are usually callously-ustulate at the apex, stiff, quite entire, and are inserted in 5 rows, on the branches. Flowers small, capitate, or rarely paniced, spiked or terminal and solitary; heads of flowers naked or involucreted with larger leaves; flowers each furnished with 3 bractees at their base, lower bractea larger than the rest, lateral ones opposite, smaller, or wanting. In

villous; heads of flowers terminal, smooth, about the size of a walnut, or larger. *h. G.* Native of the Cape of Good Hope.

*Brunia globosa*, Thunb. fl. cap. 2. p. 90. Flowers white.

*Globose-headed Berzelia*. Fl. Ju. Aug. Clt. 1816. Sh. 1 to 2 ft. *Cult.* See *Brunia* for culture and propagation, p. 48.

II. BRUNIA (in honour of Corneille de Bruin, better known under the name of Le Brun, a Dutch traveller; he travelled through Persia to India in 1701 to 1708, and in Asia Minor, Egypt, &c. from 1673 to 1674). Lin. gen. 274. (exclusive of *Staavia*). Gært. fruct. 1. p. 152. t. 30. Thunb. fl. cap. 2. p. 89. —*Brunia* and *Barreria*, Adans. D. C. prod. 2. p. 43. Brogn. et Dum. mem. p. 16.

LIN. SYST. *Pentándria*, *Monogýnia*. Calyx adhering to the ovary (f. 8. K. g.). Ovary half inferior, 2-celled (f. 8. K. g. B. c.); cells 1-2-seeded. Styles 2, diverging (f. 8. B. d.) at the apex. Fruit indehiscent, 1-seeded from abortion (f. 8. K. h.). —Shrubs more or less branched, with the branches in whorls, erect or spreading. Leaves small, closely imbricate, and flowers capitate (f. 8. B. a.) in *B. alopecuroides*, *B. nodiflora*, and *B. virgata*; but in *B. racemosa* and *B. pinifolia*, the leaves are larger, fir or myrtle-like, spreading, and the flowers in panicles (f. 8. K. a.). Flowers furnished with 3 bracteas each, or sometimes deficient of the two lateral ones.

SECT. I. NODIFLORE (from *nodus*, a knot, and *flos*, a flower; flowers disposed in close heads or knots). Calyx hairy, with spatulate segments (f. 8. B. b.). Petals somewhat spatulate (f. 8. B. c.). Stamens exserted (f. 8. B. d.), unequal. Ovary 2-celled (f. 8. B. c.); cells 2-seeded. Fruit crowned by the permanent calyx, stamens, and petals.

1 *B. NODIFLORA* (Lin. spec. 288. mant. 343.) leaves lanceolate, awl-shaped, trigonal, acute, smooth, closely imbricate, not ustulate at the apex; heads of flowers globose, size of a cherry, on the top of the branches. *h. G.* Native of the Cape of Good Hope. Wendl. coll. t. 35.—Breyn. cent. 22. t. 10. Flowers white.

*Knot-flowered Brunia*. Fl. July, Aug. Clt. 1786. Sh. 1 to 2 ft.

2 *B. PASSERINOIDES* (Schlecht. in Linnæa, 6. p. 190.) dichotomously branched; branches erect, slender; leaves minute, obovate-elliptical, densely-imbricate, and pressed to the stem, callous at the points, concave outside, puberulous at first, but at length becoming smooth and shining; heads minute, few-flowered, terminal, solitary. *h. G.* Native of the Cape of Good Hope.

*Passerina-like Brunia*. Shrub 2 to 3 feet.

SECT. II. ALOPECUROIDEA (from *αλωπηξ*, *alopex*, a fox, and *ουρα*, *oura*, a tail; disposition of flowers like a fox tail). Calyx with scarious, smooth segments (f. 8. K. c.). Petals ovate (f. 8. K. a.), inclosing the stamens. Ovary 2-celled (f. 8. K. g.); cells 1 or 2-seeded. Fruit crowned by the calyx. Petals and stamens caducous.

3 *B. RACEMOSA* (Brogn. et Dum. mem. p. 18.) leaves spreading, sessile, ovate, acuminate, somewhat cordate, 3-nerved, rather pilose; flowers paniced; panicle composed of dense, distant, rather leafy racemes. *h. G.* Native of the Cape of Good Hope. *Phyllica racemosa*, Lin. mant. 209. D. C. prod. 2. p. 37. *Béckia cordata*, Burm. prod. 12. Flowers white.

*Racemose-flowered Brunia*. Fl. May, Sept. Clt. 1790. Shrub 5 feet.

4 *B. PINIFOLIA* (Brogn. et Dum. mem. p. 19.) leaves spreading a little, sessile, linear, blunt, 1-nerved, quite smooth, coriaceous, flat; panicle dense, composed of rather simple racemes; flowers scarious, approximate. *h. G.* Native of the Cape of Good Hope. *Phyllica pinifolia*, Lin. fil. suppl. 153. *Béckia Africana*, Burm. prod. 12. Flowers white.

*Pine-leaved Brunia*. Fl. May, Ju. Clt. 1789. Sh. 1 to 2 ft. 5 *B. IMBRICATA*; leaves imbricate, ovate, cordate, smooth or somewhat ciliated, flat; panicle composed of numerous racemes; branches hairy. *h. G.* Native of the Cape of Good Hope. *Phyllica imbricata*, Thunb. fl. cap. 85. Flowers white.

*Imbricate-leaved Brunia*. Fl. Aug. Nov. Clt. 1801. Shrub 1 to 3 feet.

6 *B. ALOPECUROIDES* (Thunb. fl. cap. 2. p. 93.) leaves awl-shaped, trigonal, acute, smooth, imbricate, incurved, ustulate at the apex; heads of flowers terminal, ovate-globose, dense, naked, smaller than a pea; bracteas shorter than the flowers. *h. G.* Native of the Cape of Good Hope. Flowers white.

*Fox-tail-like Brunia*. Fl. Ju. Aug. Clt. 1816. Shrub 1½ foot.

7 *B. VIRGATA* (Brogn. et Dum. mem. p. 20.) branches slender in whorls; leaves closely-pressed to the stem, sessile, lanceolate-awl-shaped, acute, ustulate at the apex, channelled, quite smooth; heads of flowers terminal, about the size of a small pea, few-flowered. *h. G.* Native of the Cape of Good Hope, on the top of the mountain called Rode-sand. *B. verticillata*, Thunb. fl. cap. 2. p. 92. ? fil. suppl. 158. ? Flowers white.

*Twiggy Brunia*. Shrub 1 to 2 feet.

8 *B. LA'XA* (Thunb. fl. cap. 2. p. 93.) leaves trigonal, blunt, closely-pressed to the stem, imbricate, smooth; branches loose, twiggy; heads of flowers spike-formed, smooth. *h. G.* Native of the Cape of Good Hope, in the interior of the coast. Flowers white.

*Loose-branched Brunia*. Fl. June, Aug. Clt. 1805. Sh. 2 ft.

† *Species not sufficiently known, therefore doubtful to which of the Genera of Bruniaceæ they belong, but they are most probably referable to the first section of the present genus.*

9 *B. LÆVIS* (Thunb. fl. cap. 2. p. 89.) leaves linear, convex, incurved, blunt, imbricate; heads of flowers terminal, downy, about the size of a filbert. *h. G.* Native of the Cape of Good Hope. Flowers white.

*Smooth Brunia*. Fl. June, Aug. Clt. 1822. Shrub 2 feet.

10 *B. DEUSTA* (Thunb. fl. cap. 2. p. 90.) leaves trigonal, blunt, smooth, black at the apex, imbricate-spreading; heads of flowers terminal, smooth, about the size of a pea. *h. G.* Native of the Cape of Good Hope. Flowers white.

*Burned-leaved Brunia*. Fl. June, Aug. Clt. 1804. Sh. 2 ft.

11 *B. COMOSA* (Thunb. fl. cap. 2. p. 91.) leaves trigonal, smooth, spreading, obtuse, ustulate at the apex; heads of flowers globose, terminal, and axillary, sessile, about the size of a pea. *h. G.* Native of the Cape of Good Hope. Flowers white.

*Tufted Brunia*. Fl. July, Aug. Clt. 1820. Shrub 1 to 3 ft.

12 *B. CAPITATA* (Thunb. fl. cap. 2. p. 91.) leaves trigonal, smooth, spreading, ustulate at the apex; heads of flowers terminal and axillary, about the size of a pea. *h. G.* Native of the Cape of Good Hope. Flowers white.

*Small-headed Brunia*. Shrub 1 to 3 feet.

13 *B. ARACHNOIDEA* (Wendl. coll. 2. p. 62.) leaves linear, thin, acuminate, somewhat trigonal, cobwebbed, fuscous at the apex, spreading, crowded; heads of flowers globose, small. *h. G.* Native of the Cape of Good Hope. Flowers white.

*Cobwebbed Brunia*. Fl. June, Aug. Clt. 1820. Sh. 1 to 3 ft.

14 *B. ERICOIDES* (Wendl. coll. 2. p. 57.) leaves linear, short, acute, trigonal, pilose in the middle, brown and callose at the apex, spreading; heads of flowers globose, about the size of a cherry. *h. G.* Native of the Cape of Good Hope. Flowers white.

*Heath-like Brunia*. Fl. July, Aug. Clt. 1804. Sh. 1 to 3 ft.

15 *B. MACROCEPHALA* (Willd. ex Spreng. syst. 1. p. 782.) leaves linear-lanceolate, crowded, hairy, erectly-spreading; heads of flowers terminal, solitary. *h. G.* Native of the Cape of Good Hope. Flowers white.

*Long-headed Brunia.* Fl. Ju. Aug. Clt. 1815. Sh. 1 to 3 ft.  
16 B. SUPERBA (Donn, hort. cant. Willd. spec. 1. p. 1143.)  
leaves semicylindrical, spreading, incurved, pilose, ending in  
spaceolate awns. *h. G.* Native of the Cape of Good Hope.  
B. speciosa, Hortulan. Flowers unknown.

*Superb Brunia.* Fl. May, July. Clt. 1791. Shrub 1 to 3 ft.

† *Species only known by name, from catalogues, without any description. These are probably identical with some of those described above.*

1 B. capitata (Desf.). 2 B. elegans (Dum. Cours). 3 B. formosa (Dum. Cours).

*Cult.* Elegant heath-like shrubs, but with insignificant flowers. A mixture of peat and sand suits them best, and young cuttings, planted in sand with a bell-glass placed over them, will strike root.

III. STAAVIA (in honour of Martin Staaff, a correspondent of Linnæus). Dahl. diss. Thunb. prod. 41. D. C. prod. 2. p. 15. Brogn. et Dum. mem. Brun. p. 22.—Levisæus, Schreb. gen. 377.—Astrocoma, Neck. elem. no. 196.

*Lin. syst.* Pentandria, Monogynia. Calyx adhering to the bottom of the ovary (f. 8. G. g.) but free at the top, ending in 5 awl-shaped callose lobes (f. 8. G. f.). Petals free (f. 8. G. c.). Ovary half-inferior, 2-celled (f. 8. G. k. g.); cells 1-seeded. Style simple. Stigma 2-lobed. Fruit bicocceous (f. 8. G. k.).—Small shrubs, with linear, spreading leaves, which are callose at the apex. Flowers collected into terminal, disk-like heads (f. 8. G. a.), involucred by numerous shining, whitish bractæas, which are either longer or shorter than the leaves. Receptacle of flowers villous or chaffy.

1 S. radiata (Thunb. fl. cap. 2. p. 96.) young branches and leaves pilose; leaves linear, acute, hardly keeled, spreading or deflexed, mucronate; heads of flowers corymbose; bractæas of involucre membranous, mucronate, arched, deflexed, white, a little longer than the flowers. *h. G.* Native of the Cape of Good Hope. Phyllia radiata, Lin. spec. ed. 2. p. 283. Brünia radiata, Lin. mant. 209.—Pluk. mant. t. 451. f. 7.—Brey. cent. t. 82. Flowers dusky.

*Rayed-flowered Staavia.* Fl. May, June. Clt. 1787. Shrub 1 to 2 feet.

2 S. glutinosa (Thunb. fl. cap. 2. p. 95.) branches and leaves quite smooth; leaves linear, trigonal, thickish, blunt, callose, ustulate, approximate, erect; heads of flowers usually solitary, terminal; bractæas of involucre erect or stiffly spreading, not arched, white, much longer than the flowers; flowers agglutinated with resinous juice. *h. G.* Native of the Cape of Good Hope, on the Table Mountain. Wendl. coll. 1. t. 22. Brünia glutinosa, Lin. mant. 210.—Pluk. mant. t. 431. f. 1. Flowers dusky.

*Glutinous-flowered Staavia.* Fl. April, May. Clt. 1793. Shrub 1 to 2 feet.

3 S. nuda (Brogn. et Dum. mem. p. 23.) branches fastigiate, and are as well as the leaves smooth; leaves oblong-linear, short, trigonal, erect, imbricate; heads of flowers solitary, terminal; involucre shorter, or equal in length to the leaves, and of the same colour. *h. G.* Native of the Cape of Good Hope. Flowers dusky?

*Naked Staavia.* Shrub 1 to 2 feet.

4 S. ciliata (Brogn. et Dum. mem. p. 24.) branches fastigiate, villous; leaves sessile, erect, imbricate, oblong-lanceolate, acute, smooth, keeled on the back, and ciliated with long hairs on the margins, and with callose points; heads of flowers discoid, woolly (bractæas and segments of the calyx very villous) involucre shorter than the flowers, imbricate, pilose, of the

same colour as the leaves. *h. G.* Native of the Cape of Good Hope. Brünia ciliata? Lin. spec. 288.

*Ciliated-leaved Staavia.* Fl. May, Jul. Clt. 1812. Sh. 1 to 2 ft.  
*Cult.* See Brünia for culture and propagation.

IV. RASPALIA (in honour of M. Raspal, who has written on the structure of grasses and the formation of fecula). Brogn. et Dum. mem. brun. p. 21.

*Lin. syst.* Pentandria, Digynia. Calyx free, 5-cleft (f. 8. C. c.). Petals and stamens inserted in the free ovary (f. 8. C. g.). Ovary 2-celled (f. 8. C. h.); cells 1-seeded. Styles 2 (f. 8. C. c.).—A subshrub, with twiggy, fastigiate branches, alternate, opposite, or whorled, short branchlets. Leaves small, rhomboid, keeled, closely pressed to the branchlets, quite smooth, spirally inserted. Heads of flowers solitary, twin, or tern (f. 8. C. a.), at the tops of the branches, downy, not involucred. Flowers small, white, with a spreading limb and enclosed anthers.

1 R. MICROPHYLLA (Brogn. et Dum. mem. p. 22. t. 37. f. 1.). *h. G.* Native of the Cape of Good Hope. Brünia microphylla? Thunb. fl. cap. 2. p. 94.

*Small-leaved Raspalia.* Clt. 1804. Shrub 1 to 2 feet.

*Cult.* For culture and propagation see Brünia.

V. BERARDIA (in honour of M. Berard, a professor of chemistry at Montpellier). Brogn. et Dum. mem. brun. p. 24. Brünia and Lincônia, species of authors.

*Lin. syst.* Pentandria, Digynia. Calyx adhering to the ovary at the base, but free at the apex, 5-cleft (f. 8. D. b.). Petals 5, coloring into a tube at the base. Stamens adhering to the petals more or less at the base. Ovary half inferior. Styles 2 (f. 8. D. l.). Fruit bicocceous (f. 8. D. i.).—Small shrubs, with erect, fastigiate, slender branches, awl-shaped, acute, close-pressed leaves, covering the stem on every side. Flowers capitate (f. 8. D. a.), involucred, with awl-shaped bractæas, which are longer than the leaves, each flower is furnished or propped by 3 bractæas, the lower one is twice the length of the flower (f. 8. D. c.), the two lateral ones are about equal in length to the flower.

1 B. PALEACEA (Brogn. et Dum. mem. p. 25.) leaves awl-shaped, acute, short, closely pressed to the stem, quite smooth, ustulate; heads of flowers corymbose; lower bractea twice as long as the flower, awl-shaped, ustulate, hairy at the base; segments of calyx shorter than the petals, villous; anthers ovate. *h. G.* Native of the Cape of Good Hope. Brünia paleacea, Thunb. prod. p. 41. Lin. mant. 559. Wendl. coll. t. 21. Flowers white.

*Chaffy Berardia.* Fl. June, Aug. Clt. 1791. Sh. 1 to 2 ft.

2 B. AFFINIS (Brogn. et Dum. mem. p. 25.) leaves awl-shaped, acute, closely pressed to the branches, smooth, or a little fringed; lower bractea awl-shaped, smooth, longer than the flowers; segments of calyx longer than the petals, smooth; anthers linear-oblong. *h. G.* Native of the Cape of Good Hope. Lincônia capitata, Banks. herb. Flowers white.

*Allied Berardia.* Shrub 1 to 2 feet.

3 B. FRAGARIOIDES (Schlecht. in Linnæa. 6. p. 188.) leaves linear-filiform, triquetrous, smooth, closely pressed to the stem with the margins and ribs densely ciliated. *h. C.* Native of the Cape of Good Hope. Brünia fragarioides, Willd. spec. 1. p. 1143.

*Strawberry-like Brunia.* Clt. 1794. Shrub 1 to 3 feet.

† *An allied species or a new genus.*

4 B. PHYLLIODES (Brogn. et Dum. mem. p. 25.) leaves ovate, obtuse, imbricate, convolute, in 5 rows, downy externally; heads

of flowers corymbose; bractæas downy, equal in length to the flowers; calyx and petals woolly on the outside. *h. G.* Native of the Cape of Good Hope. *Brünia phylicoides*. Thunb. fl. cap. 2. p. 94. Flowers white. This species differs from the preceding two in the petals being concave and free to the base, inclosing the stamens, as well as in the form of the calyx. The habit of the plant is altogether quite distinct.

*Phylla-like* Berardia. Fl. Ju. Aug. Clt. 1805. Sh. 1 to 2 ft. *Cult.* For culture and propagation see *Brünia*. p. 48.

VI. LINCONIA (Lincon, evidently the name of some botanist). Lin. mant. p. 147. Swartz, in berl. mag. 1810. p. 85. D. C. prod. 2. p. 45. Brogn. et Dum. mem. p. 26.

LIN. SYST. *Pentándria, Digýnia*. Calyx adhering to the ovary (f. 8. F. g.), with a 5-cleft limb; segments short, membranous (f. 8. F. a.), smooth. Petals oblong, convolute (f. 8. F. a.), inclosing the stamens; cells of anthers diverging at the base (f. 8. F. b. c.). Ovary half inferior, 2-celled (f. 8. F. l.); cells 2-seeded. Styles 2 (f. 8. F. m.). Fruit biccous (f. 8. F. m.).—Heath-like shrubs, with numerous, erect, fastigate branches. Leaves spirally inserted on all sides of the branches, spreading, or loosely imbricate, on very short stalks, coriaceous, quite smooth, or a little fringed on the margins, marked with a prominent nerve, ustulate at the apex. Flowers solitary, in the axillæ of the upper leaves, the whole forming a crowded leafy spike, each flower involucreted by 4 or 5 bractæas, which are about the length of the calyx.

1 L. ALOPECUROIDEA (Lin. mant. 216.) leaves spreading a little, linear, acute, almost sessile, with one prominent stiff nerve; flowers a little longer than the leaves; bractæas membranous with pilose edges, longer than the calyx. *h. G.* Native of the Cape of Good Hope. Swartz, in berl. mag. 1810. p. 86. t. 4. Brogn. mem. l. c. t. 37. f. 5. Flowers flesh-coloured or white.

*Fox-tail-like* Linconia. Fl. May, Ju. Clt. 1816. Sh. 1 to 2 ft.

2 L. THYMIFOLIA (Swartz. in berl. mag. 1811. p. 284. t. 7. f. 1.) leaves elliptical, keeled, tipped with black; bractæas naked. *h. G.* Native of the Cape of Good Hope, in the interior of the country. *Diósma deústa*, Thunb. phyt. blætt. p. 25, but omitted in his fl. cap. as well as the following species. *Brünia laxa*, Thunb. fl. cap. 2. p. 93. Flowers white.

*Thyme-leaved* Linconia. Fl. May, Ju. Clt. 1825. Sh. 2 ft.

3 L. CUSPIDATA (Swartz. in berl. mag. 1811. p. 284. t. 7. f. 1.) leaves spreading a little, oblong, obtuse, ustulate at the apex, keeled; flowers equal in length to the leaves; bractæas equal in length to the calyx, with fringed, pilose edges. *h. G.* Native of the Cape of Good Hope. *Diósma cuspidata*, Thunb. phyt. blætt. p. 24. Flowers white.

*Cuspidate-leaved* Linconia. Clt. 1825. Shrub 1 to 2 feet.

4 L. ? PERUVIANA (Lam. dict. 3. p. 527.) leaves in whorles, linear, sessile, hairy, connate at their base. *h. G.* Native of Peru. Fruit unknown. This is probably a species of *Margyricarpus*. It is certainly a very doubtful species of *Linconia*, being a native of Peru, and the leaves are said to be connate at the base; it is more likely they are many-parted.

*Peruvian* Linconia. Shrub.

*Cult.* See *Brünia* for culture and propagation. p. 48.

VII. AUDOUINIA (in honour of V. Audouin, a profound entomologist). Brogn. et Dum. p. 28.

LIN. SYST. *Pentándria, Monogýnia*. Calyx adhering to the ovary (f. 8. E. f.), 5-cleft; segments large, imbricate (f. 8. E. a.). Petals with a long, 2-keeled claw, and a spreading, roundish limb (f. 8. E. b. d.). Ovary half-inferior (f. 8. E. j.), 3-celled (f. 8. E. g.); cells 2-seeded. Style simple, terminated

by 3 small, papilliform stigmas.—A shrub with erect branches. Leaves spirally inserted, imbricate, a little keeled. Flowers purple, crowded into oblong, spike-like, terminal heads.

1 A. CAPITATA (Brogn. et Dum. mem. p. 28. t. 38. f. 1.).

*h. G.* Native of the Cape of Good Hope. *Diósma capitata*, Thunb. prod. 43. Lin. mant. 210. D. C. prod. 1. p. 717.

*Capitate-flowered* Audouinia. Fl. May, Ju. Clt. 1790. Shrub 1 to 2 feet.

*Cult.* See *Brünia* for culture and propagation. p. 48.

VIII. TITTMANNIA (in honour of J. A. Tittmann, who has wrote on the structure and evolution of the embryo of plants). Brogn. et Dum. mem. p. 29. t. 38. f. 2.

LIN. SYST. *Pentándria, Monogýnia*. Calyx with a spherical tube (f. 8. H. a.), wrinkled and glandular on the outside, adnate to the ovary, 5-cleft, with scarious, erect segments (f. 8. H. b.). Petals with the claws 2-keeled on the inside, and with ovate-roundish spreading lamina (f. 8. H. c.). Ovary inferior, spherical, 2-celled (f. 8. H. c.), with a membranous dissepiment, free at the edges; cells 2-seeded. Ovula pendulous, fixed to the dissepiment. Style simple, conical, crowned by a bidentate stigma. A small shrub with subumbellate, fastigate branches. Leaves linear, subcylindrical, wrinkled, incurved, erect, imbricate, callose at the apex. Flowers axillary, approximate towards the tops of the branches, bent to one side, and calyculated at the base by short scarious scales.

1 T. LATRIFLORA (Brogn. et Dum. mem. p. 30.). *h. G.* Native of the Cape of Good Hope.

*Side-flowered* Tittmannia. Shrub 1 to 2 feet.

*Cult.* See *Brünia* for culture and propagation. p. 48.

IX. THAMNEA (from *thaproc*, *thamnos*, a shrub). Sol. mss. Brogn. et Dum. mem. p. 30. t. 38. f. 3.

LIN. SYST. *Pentándria, Monogýnia*. Calyx adhering to the ovary at the base, but free at the apex, divided into 5 lanceolate, smooth, scarious, imbricate segments. Petals with 2-keeled claws, and an ovate, spreading limb. Ovary inferior, covered by a fleshy disk, 1-celled, many-seeded. Ovula hanging from the apex of the column. Style simple. Stigma entire.—A small shrub with filiform, erect, fastigate branches. Leaves very small, somewhat rhomboidal, short, blunt, keeled, closely pressed, spirally inserted; upper ones a little longer than the rest, forming an involucre to the flower. Flowers solitary, terminal, white.

1 T. UNIFLORA (Sol. mss. Brogn. et Dum. mem. p. 31.). *h. G.* Native of the Cape of Good Hope.

*One-flowered* Thamnea. Shrub 1 to 2 feet.

*Cult.* The whole of the plants belonging to this natural order are worth cultivating for their neatness. All the genera require the same treatment. A mixture of peat and sand suits them best, but they will require but a moderate supply of water. Young cuttings planted in a pot of sand, will strike root freely, with a hand-glass placed over them.

ORDER LXIX. SAMYDEÆ (plants agreeing with *Samýda* in important characters). Gaert. fil. carp. 3. p. 238. and 242. Vent. mem. inst. 1807. p. 2. p. 142. Kunth, nov. gen. amer. 5. p. 360. D. C. prod. 2. p. 17.

Calyx permanent, of 3-7, but usually of 5 sepals (f. 9. a.), connected together more or less at the base into a tube (f. 9. a.). Lobes imbricate in aestivation, rarely valvate, usually petal-like and coloured on the inside. Petals wanting, unless that the coloured inside of the calyx should be considered the lamina of the petals adhering to it. Stamens adnate to the tube of the

calyx (f. 9. a.), double, triple, or quadruple the number of the sepals; filaments monadelphous at the base and flat, but awl-shaped at the apex, sometimes they are all antheriferous, sometimes the alternate ones are sterile and shorter than the fertile ones, villous or fringed, the alternate ones bearing ovate, 2-celled, erect anthers inserted by their base. Style filiform. Stigma capitate or lobed. Capsule coriaceous, 1-celled, 3-5-valved, many-seeded (f. 9. d.); valves incompletely dehiscent, usually somewhat pulpy, and coloured inside. Seeds ovate, baccate, umbilicate, fixed to the papillose or pulpy part of the valves. Albumen fleshy. Embryo inverted, minute, with ovate, leafy, plaited cotyledons, and a blunt radicle, contrary to the external umbilicus.—Shrubs or little trees, natives of the warmer regions of the world. Leaves alternate, stipulate, usually somewhat distich, simple, quite entire or toothed, feather-nerved, permanent, usually full of pellucid dots, which are either round or oblong. Peduncles axillary, sometimes solitary, 1 or many-flowered. Sometimes aggregate, 1-flowered. This order agrees with *Bixineæ* and *Placourtiaceæ* in the structure of the fruit, but the situation of the stamens brings it between *Rhamnaceæ* and *Rosaceæ*, *Chrysobalanaceæ* or *Chaillotiaceæ*.

#### Synopsis of the Genera.

1 SAMYDA. Stamens 10-12, all antheriferous (f. 9. a.). Stigma globose.

2 CASEARIA. Stamens 12-30, monadelphous at the base, alternate ones antheriferous, sterile ones awl-shaped or spatulate.

3 CHETOCRATER. Calyx 5-parted. Stamens 20, monadelphous at the base, forming a cup-shaped tube, the 10 antheriferous ones shorter than the rest, the 10 sterile ones are bristle-like and hairy. Stigmas 3.

I. SAMYDA (*σαμύδα*, the Greek name of the birch, resemblance). Lin. gen. 543. Lam. ill. t. 355. D. C. prod. 2. p. 47.—Guidonia, Plum. gen. t. 24.

LIN. SYST. *Decandria*, *Monogynia*. Stamens 10-12, all bearing anthers. Stigma globose.

SECT. I. EUSAMYDA (from *eu*, *eu*, good, and *σαμύδα*; genuine species). D. C. prod. 2. p. 47. Calyx tubular at the base, cleft to the middle. Stamens 10 or 12. Flowers large.

#### \* Flowers decandrous.

1 S. GLABRATA (Swartz. fl. ind. occ. 2. p. 760.) peduncles axillary, solitary, 1-flowered; leaves ovate-lanceolate, obtuse, quite entire, shining. h. S. Native of Jamaica, on the mountains. Flowers white.

*Smooth-leaved Samyda*. Fl. May, Aug. Clt. 1800. Sh. 12 ft.

2 S. VILLOSA (Swartz. fl. ind. occ. 2. p. 758.) peduncles solitary, axillary, 1-flowered; leaves oblong, acute, a little serrated, oblique at the base, silky, villous beneath. h. S. Native of Jamaica on the mountains. Flowers white, downy. Pulp of seeds scarlet.

*Villous-leaved Samyda*. Fl. June, Aug. Clt. 1820. Sh. 6 ft.

3 S. SPINULOSA (Vent. choix. t. 43.) pedicels 2-3 together, axillary; leaves oval-oblong, acuminate, serrulated, coriaceous, quite smooth, but pubescent on the nerves beneath. h. S. Native of the islands of St. Thomas and Porto-Rico. Flowers one half smaller than those of the preceding species, white.

*Spiny Samyda*. Shrub 6 feet.

4 S. MACROCARPA (Moc. et Sesse, fl. mex. icon. ined. D. C. prod. 2. p. 48.) pedicels 2-3 together, very short, axillary; leaves ovate, acute, serrated, rather downy beneath. h. S. Native of Mexico. Flowers greenish-white. Capsules large, blood-red inside.

*Long-fruited Samyda*. Shrub 6 feet.

5 S. VELUTINA (D. C. prod. 2. p. 48.) flowers 5-cleft; pedicels numerous, axillary, very short; leaves obovate-oblong, mucronate, acutely serrated, clothed on both surfaces with velvety villi. h. S. Native of St. Domingo. Flowers probably white.

*Velvety Samyda*. Shrub 6 feet.

6 S. AFFINIS (Spreng. syst. 2. p. 354.) pedicels 1-flowered, numerous, axillary; leaves oblong, tapering at both ends, almost entire, opaque, smooth. h. S. Native of St. Domingo. Flowers white?

*Allied Samyda*. Shrub.

7 S. GRANDIFLORA (Spreng. syst. 2. p. 354.) pedicels 1-flowered, aggregate, axillary; leaves oblong, tapering to both ends, almost sessile, opaque above, but shining beneath. h. S. Native of Brazil. Flowers probably white.

*Great-flowered Samyda*. Shrub 8 feet.

8 S. DECURRENS (Spreng. syst. 2. p. 354.) cymes axillary, stalked, few-flowered; leaves oblong, tapering to both ends, running down the petioles at the base, crenulate, quite smooth, opaque. h. S. Native of Brazil.

*Decurrent-leaved Samyda*. Clt. 1820. Shrub 4 feet.

#### \* \* Flowers dodecandrous.

9 S. SERRULATA (Lin. spec. 758.) peduncles solitary, axillary, 1-flowered; leaves ovate-oblong, acute, with stiff serratures, rather puberulous above, but downy beneath, and netted with nerves. h. S. Native of the Caribbee Islands. Plum. ed. Burm. t. 146. f. 2. Jacq. coll. 2. p. 328. t. 17. f. 1. Flowers white.

*Serrulate-leaved Samyda*. Fl. June, Jul. Clt. 1723. Sh. 4 ft.

10 S. ROSEA (Sims. bot. mag. t. 550.) flowers 5-cleft; pedicels 1-flowered, numerous, axillary, very short; leaves oblong, blunt, finely serrated, clothed with soft pubescence on both surfaces. h. S. Native of St. Domingo. S. serrulata, Andr. bot. rep. t. 202. S. pubescens, Lin. spec. 557. exclusive of the synonyms. Flowers large, rose-coloured. (f. 9.)

*Rose-coloured-flowered Samyda*. Fl. June, Jul. Clt. 1793. Sh. 4 ft.

11 S. RUBRA (Moc. et Sesse, fl. mex. icon. ined. D. C. prod. 2. p. 48.) pedicels numerous, axillary, very short; leaves obovate, blunt, serrate-toothed, pubescent beneath. h. S. Native of Mexico. Flowers red, 6-cleft. This species is probably sufficiently distinct from the preceding.

*Red-flowered Samyda*. Shrub 6 feet.

12 S. TINIFOLIA (Vent. ex Spreng. syst. 2. p. 354.) pedicels axillary, 1-flowered, longer than the petioles; leaves obovate, smooth, quite entire. h. S. Native of the East Indies.

*Tinus-leaved Samyda*. Shrub.

#### \* \* \* Flowers polygamous, male ones decandrous.

13 S. ? SELLOI (Spreng. syst. 2. p. 354.) flowers polygamous, decandrous; pedicels aggregate, axillary; leaves ovate-oblong, serrulated, unequal at the base, shining above and smooth

FIG. 9.

beneath.  $\frac{1}{2}$ . S. Native of Brazil. *Bigelovia Brasiliensis*, Spreng. new. entd. Flowers white.  
*Sello's Samyda*. Shrub 6 feet?

SECT. II. GUIDONIA (named by Plumier in honour of Guido Crescentius Fagon, physician to Louis XIV., to whom Linnæus dedicated another genus *Guidonia*, see vol. 1. p. 770). D. C. prod. 2. p. 48. *Samyda dubia*, Kunth. Calyx almost divided to the base. Stamens 8, rarely 10. Flowers small. Intermediate between *Samyda* and *Casearia*.

\* *Flowers octandrous.*

14 S. MULTIFLORA (Cav. icon. 1. p. 48. t. 67.) flowers 4-parted; pedicels axillary, aggregate; leaves oblong, tapering to both ends, toothed, downy beneath.  $\frac{1}{2}$ . S. Native of St. Domingo. Flowers whitish.

*Many-flowered Samyda*. Shrub 4 feet.

15 S. ? MACROPHYLLA (Willd. spec. 2. p. 625.) flowers 5-cleft? revolute; corymbs terminal; leaves ovate, acute, smooth, obscurely crenated, villous in the axillæ of the veins beneath.  $\frac{1}{2}$ . S. Native of the East Indies. Flowers greenish. Anthers brown.

*Long-leaved Samyda*. Clt. 1820. Shrub 6 feet.

\*\* *Flowers decandrous and octandrous.*

16 S. NITIDA (Lin. spec. 557.) flowers octandrous and decandrous, 5-parted; pedicels axillary, crowded, 1-flowered; leaves cordate, smooth, somewhat serrated.  $\frac{1}{2}$ . S. Native of Jamaica, in the low lands. Lam. ill. t. 355. f. 2.—P. Browne, jnn. 217. t. 23. f. 3. Flowers white and red. There are small teeth between the stamens, therefore it comes near to *Casearia*. P. Browne calls this shrub the *Larger Cloven-berry-bush*.

*Shining-leaved Samyda*. Clt. 1793. Shrub 6 feet.

17 S. SPINESCENS (Swartz, fl. ind. occ. 2. p. 762.) flowers decandrous and octandrous, 5-parted, almost sessile, nearly terminal; leaves lanceolate-ovate, bluntly crenated, smooth; branches spreading, spinescent.  $\frac{1}{2}$ . S. Native of St. Domingo, where it flowers in December and January. Flowers pale, in short, dense, downy clusters or spikes.

*Spinescent Samyda*. Shrub 12 feet.

18 S. PUBESCENS (Hamilt. prod. fl. ind. occ. p. 37.) leaves ovate-oblong, tapering to both ends, remotely-serrated above, quite entire at the base, tomentosely-pubescent; flowers sub-alternate, axillary.  $\frac{1}{2}$ . S. Native of St. Domingo.

*Pubescent Samyda*. Shrub.

*Cult.* See end of order for culture and propagation.

II. CASEARIA (in honour of J. Casarius, who assisted Rheed in the Hortus Malabaricus). Jacq. amer. 132. Lin. gen. no. 544. D. C. prod. 2. p. 48.—Anavinga, Lam. dict. 1. p. 147. ill. t. 355.—Iroucàna and Pitumba, Aubl. guian. t. 127. Athenaea and Casearia, Schreb.—Melistaürum, Forst. gen. Casearia and Anavinga, Gaert. fil. Lindlèya, Kunth, malv. p. 10. but not of H. B. et Kunth, nov. gen. amer.

LIN. SYST. *Hexadecandria, Monogynia*. Stamens 12-30, monadelphous at the base, alternate ones bearing anthers, sterile ones awl-shaped or spatulate, usually villous or fringed. This genus ought probably to be divided into several genera, but the number of parts is not sufficient.

§ 1. *Hexanthère* (from ἕξ, *hex*, six, and ἀνθήρα, *anthera*, an anther). D. C. prod. 2. p. 48. Fertile stamens 6. Sterile ones 6. Leaves coarsely spiny-toothed.

1 C. ILICIFOLIA (Vent. choix. t. 44.) flowers 5-cleft; leaves ovate, with spiny angles, coriaceous, downy beneath.  $\frac{1}{2}$ . S. Native of St. Domingo.

*Holly-leaved Casearia*. Shrub.

• 2 C. COMOCLADIFOLIA (Vent. l. c. in a note) flowers 5-cleft; leaves roundish, with spiny angles, quite smooth.  $\frac{1}{2}$ . S. Native of St. Domingo.

*Comocladia-leaved Casearia*. Shrub.

§ 2. *Octanthère* (ὀκτώ, *octo*, eight, and ἀνθήρα, *anthera*, an anther). D. C. prod. 2. p. 49. Fertile stamens 8. Sterile ones 8. Leaves quite entire, or a little serrated.

3 C. CORIA'CEA (Vent. choix. t. 45.) flowers 7-8-anthered, 5-cleft; pedicels numerous, axillary, 1-flowered; leaves obovate, quite entire, coriaceous, smooth.  $\frac{1}{2}$ . S. Native of Batavia. Flowers small.

*Coriaceous-leaved Casearia*. Shrub.

4 C. GLOMERATA (Roxb. port. beng. 33. t.) flowers 5-cleft; pedicels very numerous, in fascicles, 1-flowered, very short; leaves oval-oblong, acuminate, smooth, a little serrated.  $\frac{1}{2}$ . S. Native of Bengal. Flowers small. There is a specimen of this plant in the Lambertian Herbarium, named *C. Anacraga*.

*Glomerated-flowered Casearia*. Shrub.

5 C. OVA'TA (Willd. spec. 2. p. 629.) flowers 6-8-anthered; 4-cleft; pedicels 1-flowered, axillary, usually solitary; leaves ovate, acuminate, a little serrated.  $\frac{1}{2}$ . S. Native of the East Indies. C. Anavinga, Pers. ench. 1. p. 185. Anavaga, Rheed. mal. 1. t. 49. Anavinga ovata, Lam. dict. 1. p. 148.

*Ovate-leaved Casearia*. Shrub.

6 C. RAMIFLORA (Vahl. symb. 2. p. 50.) flowers 8-anthered, 5-cleft; pedicels 1-flowered, rising in fascicles along the branches beneath the leaves; leaves elliptical, acute, serrated, smooth on both surfaces.  $\frac{1}{2}$ . S. Native of the West Indies and the shores of Guiana. Iroucàna Guianensis, Aubl. guian. 1. p. 329. t. 127. Athenaea, Schreb. gen. no. 661. Flowers white. Capsules green with a tinge of violet. Seed covered with a scarlet, pulpy, viscid membrane. The bark, leaves, and fruit have a sharp aromatic taste. The last is called *Caffè Diable* or *Devil's coffee*, by the creoles.

*Branch-flowered Casearia*. Clt. 1821. Shrub 4 feet.

7 C. NITIDA (Jacq. amer. 132. act. helv. 8. p. 58. with a figure) flowers 8-anthered, 5-parted; cymes stalked, axillary; leaves ovate, crenated, smooth, shining above.  $\frac{1}{2}$ . S. Native of Carthagenia, among bushes. *Samyda crenata*, Poir. dict. 6. p. 490. Flowers whitish. Pulp of fruit scarlet or purple.

*Shining-leaved Casearia*. Shrub 12 feet.

8 C. CORYMBOSA (H. B. et Kunth, nov. gen. amer. 5. p. 366.) flowers 8-anthered, bluntly 5-cleft; corymbs axillary, solitary, stalked, many-flowered, one-half shorter than the leaves; leaves oblong, acuminate, acutish at the base, sharply toothed, smooth, full of pellucid dots.  $\frac{1}{2}$ . S. Native of South America, on the banks of the river Magdalena, near Mompox and Honda. Calyx white inside.

*Corymbse-flowered Casearia*. Shrub 10 feet.

9 C. NITIDA (Swartz, fl. ind. occ. 2. p. 756.) flowers 8-anthered, 4-parted; pedicels crowded, 1-flowered; leaves ovate, serrated, hairy beneath.  $\frac{1}{2}$ . S. Native of Jamaica, in the low lands. *Samyda tomentosa*, Swartz, prod. 68. Flowers white inside but green outside. Filaments yellow.

*Hairy-leaved Casearia*. Shrub 7 feet.

10 C. SPINOSA (Willd. spec. 2. p. 626.) flowers 8-anthered, 5-parted; pedicels 1-flowered, crowded, axillary; leaves ovate, serrated, smooth; branches spiny.  $\frac{1}{2}$ . S. Native of St. Domingo and the island of Cuba, where it is called *Jia*. *Samyda spinosa*, Lin. spec. 557. C. aculeata, Jacq. amer. 133. The spines are strong and straight, they are only abortive indurated branches, as in *Cerasus spinosa*. Flowers white. Fruit greenish-purple.

*Spiny Casearia*. Shrub 7 feet.

11 *C. MARIQUITAENSIS* (H. B. et Kunth, nov. gen. amer. 5. p. 364.) leaves elliptic-oblong, acuminate, acute at the base, denticulated, smooth, full of pellucid dots; fruit solitary or twin, covered with fine tomentum.  $\frac{1}{2}$ . S. Native of New Granada, near Mariquita. Flowers unknown.

*Mariquito* Cascaria. Shrub 10 feet.

12 *C. ARGUTA* (H. B. et Kunth, nov. gen. amer. 5. p. 363.) branches finely tomentose; leaves elliptic-oblong, acuminate, rounded at the base, sharply serrated, smooth above, and pubescent on the nerves beneath, full of pellucid dots; fruit crowded, pubescent at the apex.  $\frac{1}{2}$ . S. Native of Mexico, near La Venta del Exido. Flowers unknown.

*Sharp-notched* Cascaria. Tree 20 feet.

13 *C. MULTIFLORA* (Spreng. syst. 2. p. 355.) flowers 8-anthered, 5-parted? panicles axillary, divaricate; leaves ovate-lanceolate, acute, quite entire, smooth; branches spinescent.  $\frac{1}{2}$ . S. Native of the East Indies. Flowers greenish-white. Sterile stamens cucullate. Fruit baccate, sub-4-celled.

*Marty-flowered* Cascaria. Shrub 8 feet.

§ 3. *Decanthèra* (from  $\delta\epsilon\kappa\alpha$ , *deka*, ten, and  $\alpha\theta\eta\rho\alpha$ , *anthera*, an anther). D. C. prod. 2. p. 49. Fertile stamens 10, with a sterile one between each. Leaves quite entire or serrated.

14 *C. PARVIFLORA* (Willd. spec. 2. p. 627.) flowers 10-anthered, 5-parted, small; pedicels 1-flowered, crowded, axillary; leaves oblong, acuminate, crenulate, smooth on both surfaces, shining, evidently full of pellucid dots.  $\frac{1}{2}$ . S. Native of the West Indies, in bushy places. *Samyda parviflora*, Lin. spec. 557.—Sloan. hist. 2. t. 211. f. 2. Flowers whitish. Pulp of fruit yellow.

*Small-flowered* Cascaria. Clt. 1818. Shrub 6 feet.

15 *C. SYLVESTRIS* (Swartz. fl. ind. occ. 2. p. 725.) flowers 10-anthered, 5-parted, small; pedicels 1-flowered, axillary, crowded; leaves ovate-oblong, long, and bluntly acuminate, quite entire, and smooth on both surfaces, shining, and evidently full of pellucid dots.  $\frac{1}{2}$ . S. Native of the West Indies, among bushes on the mountains. Flowers whitish. Fruit small, red.

*Var.  $\beta$ ? platyphylla* (D. C. prod. 2. p. 49.) leaves oval, with a short taper-point.  $\frac{1}{2}$ . S. Native of Porto-Rico and St. Thomas. *C. integrifolia*, Vahl. ined.

*Wild* Cascaria. Clt. 1823. Shrub 7 feet.

16 *C. INÆQUILATERA* (St. Hil. fl. bras. 2. p. 237.) branches smooth; leaves oblong or elliptic-oblong, very unequal-sided, narrowed at both ends, acuminate, serrate-toothed, full of pellucid dots, smoothish, shining; flowers smooth, umbellate; umbels nearly sessile; fertile stamens 10, exceeding the calyx; style trifid.  $\frac{1}{2}$ . S. Native of Brazil, in the province of Rio Janeiro.

*Unequal-sided-leaved* Cascaria. Shrub 4 to 5 feet.

17 *C. MICRANTHA*; branches puberulous at the apex; leaves oblong-lanceolate, narrowed at both ends, acuminate, serrulated, full of pellucid dots, smoothish, umbellate; umbels sessile; fertile stamens 10, equal with the calyx; style trifid.  $\frac{1}{2}$ . S. Native of Brazil, in the province of Minas Geraes, where it is called *Pioya*. *C. parviflora*, St. Hil. fl. bras. 2. p. 237. Calyx white inside.

*Small-flowered* Cascaria. Shrub 10 feet.

18 *C. GRANDIFLORA* (St. Hil. fl. bras. 2. p. 232. t. 126.) branches covered with yellowish tomentum; leaves oblong-lanceolate, acute, sharply serrated, dotless, smoothish above, but clothed with yellowish tomentum beneath; flowers clothed with yellowish tomentum, glomerate, sessile; fertile stamens 10, one-half shorter than the corolla; style undivided.  $\frac{1}{2}$ . S. Native of Brazil, in the province of Minas Geraes.

*Great-flowered* Cascaria. Shrub 4 to 5 feet.

19 *C. SESSILIFLORA* (St. Hil. fl. bras. 2. p. 231.) branches, smooth below and puberulous above; leaves elliptic, short-acuminate, obsolete serrulated, full of pellucid dots, smooth; flowers pubescent, glomerate, sessile; fertile stamens 10, 3-times shorter than the calyx; style undivided.  $\frac{1}{2}$ . S. Native of Brazil, in the province of Rio Janeiro. Calyx greenish-white.

*Sessile-flowered* Cascaria. Shrub 5 to 6 feet.

20 *C. ULMIFOLIA* (Vahl. in Vent. choix. no. 47. in a note. St. Hil. fl. bras. 2. p. 233.) flowers 10-anthered, 5-parted, umbellate; umbels on short stalks; style undivided; leaves oval-oblong, taper-pointed, acutely serrulated, puberulous, full of pellucid dots; branches smooth.  $\frac{1}{2}$ . S. Native of Porto-Rico and Brazil. Stamens smooth. Sterile filaments fringed, spatulate. Flowers whitish, a little larger than those of the two preceding species. In the province of Minas Geraes, in Brazil, the inhabitants employ this plant in domestic medicine. They boil the leaves, and apply them to wounds and to the bites of the most poisonous serpents.

*Elm-leaved* Cascaria. Shrub 4 to 6 feet.

21 *C. SERRULATA* (Swartz. fl. ind. occ. 2. p. 754.) flowers 10-anthered, 5-parted, small, a little fringed; pedicels axillary, crowded, 1-flowered; leaves ovate-lanceolate, blunt, serrulated; branches flexuous.  $\frac{1}{2}$ . S. Native of the West Indies, in the island of Nevis. *Samyda Nevisana*, Poir. dict. 6. p. 493. Flowers whitish.

*Serrulate-leaved* Cascaria. Clt. 1818. Shrub 4 feet.

22 *C. PARVIFOLIA* (Willd. spec. 2. p. 628.) flowers 10-anthered, 5-parted, spreading-reflexed; pedicels crowded, lateral, 1-flowered; leaves ovate, acuminate, crenate-serrated, smooth.  $\frac{1}{2}$ . S. Native of Martinique, Guadeloupe, and Porto-Rico. *C. decandra*, Jacq. amer. t. 85. *C. punctata*, Spreng. new. entd. 2. p. 154. Flowers whitish. Ovary conical, taper-pointed, hairy. Pulp of fruit yellow.

*Small-leaved* Cascaria. Clt. 1827. Shrub 6 feet.

23 *C. ACUMINATA* (D. C. prod. 2. p. 50.) flowers 10-anthered, 5-parted, small, quite smooth; pedicels axillary, crowded, 1-flowered; leaves ovate-lanceolate, taper-pointed, crenate-serrated, smooth, without dots.  $\frac{1}{2}$ . S. Native of French Guiana. Sterile filaments short, scarcely hairy. Flowers whitish.

*Acuminate-leaved* Cascaria. Shrub 6 feet.

24 *C. MACROPHYLLA* (Vahl. eel. 2. p. 32.) flowers 10-anthered, 5-parted, rather velvety; pedicels crowded, axillary, 1-flowered; leaves elliptical, taper-pointed, a little crenate, smooth on both surfaces.  $\frac{1}{2}$ . S. Native of Cayenne. *Pitumba Guianensis*, Aubl. guian. 2. app. 29. t. 385. *C. Pitumba*, Poir. dict. 6. p. 492. Fertile and sterile stamens villous. Leaves 6-8 inches long. Flowers 2-3 lines long, whitish? Fruit about the size of a walnut.

*Long-leaved* Cascaria. Shrub 8 feet.

25 *C. PAUCIFLORA* (St. Hil. fl. bras. 2. p. 235.) branches smooth at the bottom, but pubescently tomentose at the apex; leaves oblong-lanceolate, long-acuminate, nearly entire, dotless, puberulous; flowers pubescently-tomentose, umbellate; umbels sessile; fertile stamens 10, 3-times shorter than the calyx; style undivided.  $\frac{1}{2}$ . S. Native of Brazil, in the province of Minas Geraes. Flowers white inside.

*Few-flowered* Cascaria. Shrub 4 to 5 feet.

26 *C. OBLONGIFOLIA* (St. Hil. fl. bras. 2. p. 234.) branches smooth; leaves oblong, acute, nearly entire, full of pellucid dots, smooth; flowers puberulous, umbellate; umbels sessile; fertile stamens 10, 3-times shorter than the calyx; style undivided.  $\frac{1}{2}$ . S. Native of Brazil, in the province of Rio Janeiro.

*Oblong-leaved* Cascaria. Shrub 4 to 5 feet.

27 *C. LINGUA* (St. Hil. fl. bras. 2. p. 236.) branches puberulous; leaves oblong-lanceolate, roundish at the base, acuminate

ated, serrulated, full of pellucid dots, smoothish; flowers pubescent, umbellate; umbels sessile; fertile stamens 10, 3-times shorter than the calyx; style trifid. *h. S.* Native of Brazil, in the province of Minas Geraes, where it is called *Lingua de Fia*, and of the province of Goyaz, where it is called *Chu de frade*. A decoction of the leaves of this plant is used in the interior of Brazil in inflammatory diseases and malignant fevers.

*Lingua Casearia.* Shrub 4 to 6 feet.

28 *C. COMMERSIONIANA* (St. Hil. fl. bras. 2. p. 235.) branches smooth; leaves oblong-elliptic, narrowed at the base and apex, bluntly acuminate, obsolete crenate-serrated, smoothish, dotless; flowers pubescently-tomentose, umbellate; umbels sessile; fertile stamens 10, nearly equal in length to the calyx; style trifid. *h. S.* Native of Brazil near Rio Janeiro. Calyx white inside.

*Commerson's Casearia.* Shrub 4 to 6 feet.

29 *C. STIPULARIS* (Vent. choix. t. 46.) flowers 10-anthered, 5-parted, somewhat canescent; style undivided; pedicels disposed in a stalked, axillary umbel; leaves oblong-lanceolate, taper-pointed, smooth, and shining above, but clothed with hoary tomentum beneath, sharply serrated, full of pellucid dots; branches clothed with white tomentum. *h. S.* Native of Guiana, Porto-Rico, St. Domingo, and Brazil. *Samyda arborea*, Rich. act. soc. hist. nat. par. 1792. *C. incana*, Bert. ined. Stipulas linear, very long, deciduous. Flowers whitish.

*Stipular Casearia.* Shrub 4 to 8 feet.

30 *C. ZIZYPHOIDES* (H. B. et Kunth, nov. gen. amer. 5. p. 362.) flowers 10-anthered, 5-cleft; leaves ovate-oblong, taper-pointed, rounded at the base, crenate-serrulated, smooth; pedicels axillary, crowded in an umbel. *h. S.* Native of South America, between Cumana and Caraccas, near the city of New Barcelona. Calyx white inside.

*Zizyphus-like Casearia.* Shrub 6 to 8 feet.

31 *C. CELTIDIFOLIA* (H. B. et Kunth, nov. gen. et spec. amer. 5. p. 362.) flowers 10-anthered, 5-cleft; leaves oblong, taper-pointed, acute at the base, smooth, dentately-crenulate, teeth mucronate, middle nerve puberulous beneath; umbels axillary, many-flowered, on short stalks. *h. S.* Native of South America, on the banks of the river Orinoco, near Angustura and Charichana. Calyx white inside.

*Celtis-leaved Casearia.* Tree 20 feet.

32 *C. PRUNIFOLIA* (H. B. et Kunth, nov. gen. amer. l. c.) flowers 10-anthered, 5-parted; pedicels in glomerate, axillary fascicles; leaves oblong, taper-pointed, acute at the base, obsolete toothletted, smooth, membranous, without dots. *h. S.* Native of South America, in the province of Bracamora. Calyx white inside.

*Plum-leaved Casearia.* Tree 20 feet.

33 *C. MOLLEIS* (H. B. et Kunth, nov. gen. amer. 5. p. 362. t. 480.) flowers 10-anthered, 5-parted; pedicels crowded in axillary umbels; leaves elliptical-oblong, taper-pointed, rounded at the base, toothed, smoothish above, but covered beneath with rusty down. *h. S.* Native of Caraccas, in shady valleys, near Araguaen. Flowers whitish.

*Soft Casearia.* Shrub.

34 *C. RUFESCENS* (St. Hil. fl. bras. 2. p. 231.) branches clothed with rufescent tomentum; leaves elliptical, short, acuminate, serrulated, smooth above, but clothed with rufescent tomentum beneath, full of pellucid dots; flowers puberulous, umbellate; umbels sessile; fertile stamens 10, one-half shorter than the calyx; style undivided. *h. S.* Native of Brazil, in the province of Minas Geraes, in that part called Minas Novas.

*Rufescent Casearia.* Shrub 4 to 6 feet.

35 *C. HIRSU'TA* (Swartz. fl. ind. occ. 2. p. 755.) flowers 10-anthered, 5-parted, pubescently-villous; pedicels crowded, lateral, 1-flowered; leaves ovate, taper-pointed, serrate-toothed, hairy

above and villous beneath. *h. S.* Native of Jamaica and St. Domingo, on the mountains. Flowers whitish. Fruit trigonal.

*Var. β, glabrata* (D. C. prod. 2. p. 50.) leaves smooth on the upper surface, but smooth on both surfaces in the adult leaves.

*h. S.* Native of Porto-Rico.

*Hairy-leaved Casearia.* Clt. 1825. Shrub 6 feet.

36 *C. FRAGILIS* (Vent. choix. no. 47. in a note.) flowers 10-anthered, 5-parted, smooth; pedicels axillary, few, 1-flowered; leaves ovate-lanceolate, thickish, smooth, quite entire. *h. S.* Native of the East Indies, and the Mauritius. *Clásta fragilis*. Comm. ind. Flowers whitish inside.

*Brittle Casearia.* Shrub 6 feet.

37 *C. GUINEENSIS*; flowers 5-cleft, 10-anthered; leaves ovate-lanceolate, acuminate, serrated, 3-nerved at the base, very villous, as well as the branches; peduncles many-flowered, crowded, axillary. *h. S.* Native of Guinea. Flowers small, green.

*Guinea Casearia.* Shrub 4 to 6 feet.

38 *C. GREWLEFOLIA* (Vent. choix. no. 48. in a note.) flowers 10-anthered; pedicels axillary, 1-flowered; leaves cordate-oblong, serrulated, downy beneath. *h. S.* Native of Java.

*Grewia-leaved Casearia.* Shrub.

39 *C. ELLIPTICA* (Willd. spec. 2. p. 628.) flowers 10-anthered, 5-parted; pedicels axillary, crowded, 1-flowered; leaves elliptic-lanceolate, a little serrated, bluntish, young ones pubescent beneath. *h. S.* Native of the East Indies. *Anavinga lanceolata*, Lam. dict. 1. p. 146. ill. t. 355. f. 1. Flowers whitish.

*Elliptical-leaved Casearia.* Shrub 6 feet.

40 *C. OBLIQUA* (Spreng. syst. 2. p. 355.) flowers 10-anthered, 5-cleft, subsessile, axillary, solitary, very small; leaves oblong-lanceolate, triple-nerved, acuminate, unequal-sided, serrulated, smooth on both surfaces, shining above, and full of pellucid dots. *h. S.* Native of Brazil. Flowers whitish.

*Oblique-leaved Casearia.* Shrub.

41 *C. MELISTEURUM* (D. C. prod. 2. p. 51.) flowers 10-anthered, polygamous, 5-parted; lobes concave, obtuse, spreading; sterile stamens awl-shaped, pilose at the apex; style very short. *h. S.* Native of New Caledonia. *Melistaureum distichum*, Forst. gen. t. 72. *Samyda polyandra*, Willd. spec. 2. p. 626. The name is derived from *μελι*, honey, and *σαυρος*, a stake; the nectary bearing some resemblance to a fence of that kind.

*Melistaureum Casearia.* Shrub 6 feet.

42 *C. SAMYDA* (D. C. prod. 2. p. 51.) flowers 10-anthered; sterile filaments fringed; style very short; calyxes 5-parted; capsule 3-furrowed. *h. S.* Native of Porto Rico. *Anavinga Samyda*, Gaert. fil. 3. p. 240. t. 224. This is probably identical with one of the Decantherous species described above.

*Samyda-like Casearia.* Shrub 6 feet.

§ 1. *Dodecanthæra* (from *δωδεκα*, *dodeca*, twelve, and *ανθηρα*, *anthera*, an anther). D. C. prod. 2. p. 51. Fertile stamens 12-15, with an equal number of sterile ones.

43 *C. TINIFOLIA* (Vent. choix. t. 47.) flowers 12-anthered, sterile filaments awl-shaped; calyx 5-parted, spreading; pedicels solitary, axillary, 1-flowered; leaves obovate, smooth, quite entire, evidently full of pellucid dots. *h. S.* Native of Java. Flowers the size of those of *Samyda serrulata*, white.

*Timus-leaved Casearia.* Shrub.

44 *C. ADAMANTUM* (St. Hil. fl. bras. 2. p. 230. t. 125.) branches smooth above, but covered with rusty tomentum below; leaves obovate, short-acuminate, serrulated, full of pellucid dots; flowers umbellate; umbels sessile; fertile stamens 12, a little shorter than the calyx; style undivided. *h. S.* Native of Brazil, in the province of Minas Geraes, in that part called Distrito dos Diamantes.

*Adamant Casearia.* Shrub 5 feet.

45 *C. JAVITENSIS* (H. B. et Kunth. nov. gen. amer. 5. p. 366. t. 479.) flowers 15-anthered; sterile filaments hairy; style trifid; calyx 5-parted, reflexed; pedicels axillary, umbellately-crowded, 1-flowered; leaves elliptical-oblong, acuminate, remotely-toothed, smooth, shining, without dots.  $\frac{1}{2}$  S. Native of Cayenne and New Guiana. Lindleya glabra, Kunth. Flowers greenish-yellow. Perhaps a species of *Chætocrater*.

*Jarita Casearia.* Tree 20 feet.

† *Species not sufficiently known.*

46 *C. VIRIDIFLORA* (D. C. prod. 2. p. 51.) leaves ovate-elliptical, smooth, somewhat coriaceous, rather crenulated; flowers almost sessile, fascicled, axillary.  $\frac{1}{2}$  S. Native of the East Indies. *Samyda viridiflora*, Poir. dict. 6. p. 493. Flowers greenish.

*Green-flowered Casearia.* Clt. 1820. Shrub 6 feet.

47 *C. DENTATA* (Moe. et Sesse, fl. mex. icon. ined. D. C. prod. 2. p. 51.) flowers decandrous, 5-parted; pedicels axillary, very short, 1-flowered, 3 or 4 together; leaves oval, bluish, toothed, with the petioles and nerves pubescent.  $\frac{1}{2}$  S. Native of Mexico. This is probably identical with *C. hirsuta*.

*Toothed-leaved Casearia.* Shrub 6 feet.

48 *C. DUBIA* (Moe. et Sesse, fl. mex. icon. ined. D. C. prod. 2. p. 51.) flowers decandrous, 5-parted; peduncles axillary, in corymbose racemes, the length of the leaves; leaves ovate-lanceolate, serrated, acute, smooth.  $\frac{1}{2}$  S. Native of Mexico.

*Doubtful Casearia.* Shrub.

†† *Species only known by name, without any description being given.*

49 *C. VARECA* (Roxb. hort. beng. p. 33.)  $\frac{1}{2}$  S. Native of Silhet, in the East Indies. Its Bengal name is *Tittacheera*.

*Vareca Casearia.* Shrub.

50 *C. GLABRA* (Roxb. l. c.)  $\frac{1}{2}$  S. Native of the Moluccas.

*Smooth Casearia.* Shrub.

51 *C. TOMENTOSA* (Roxb. l. c.)  $\frac{1}{2}$  S. Native of the East Indies, among the Circars, where it is called *Garugoodoo*.

*Downy Casearia.* Shrub 6 feet.

52 *C. ESCULENTA* (Roxb. l. c.)  $\frac{1}{2}$  S. Native of the East Indies, among the Circars, where it is called *Kundajungira*.

*Esculent Casearia.* Shrub 6 feet.

*Cult.* See end of order for culture and propagation.

III. CHÆTOCRATER (from  $\chi\alpha\tau\eta$ , *chaite*, a head of hair, and  $\kappa\alpha\tau\eta\rho$ , *crater*, a cup; in allusion to the stamens being joined at the base into a cup-shaped tube). Ruiz et Pav. prod. fl. per. 61. t. 36. syst. p. 106. D. C. prod. 2. p. 52.—Cratæria, Pers. ench. 1. p. 485.

LIN. SYST. *Monadelphica*, *Decandria*. Calyx 5-parted. Stamens 20, joined at the base into a cup-shaped tube, 10 of which bear anthers, and are shorter than the rest, the 10 sterile ones are bristle-formed and hairy. Stigmas 3.

1 *C. FASCICULATUM* (Ruiz et Pav. fl. per. syst. 107.) leaves oblong, serrated, acuminate; flowers in fascicles.  $\frac{1}{2}$  S. Native of Peru, in the groves of Chinchao. Cratæria fasciculata, Pers. ench. 1. p. 485. Bark rather bitter, furnishing a cream colour.

*Fascicled-flowered Chætocrater.* Tree 24 feet.

2 *C. CAPITATUM* (Ruiz et Pav. fl. per. syst. 108.) leaves oblong, serrated, taper-pointed, full of dots; flowers capitate.  $\frac{1}{2}$  S. Native of Peru, in the groves of Cuchero. Cratæria capitata, Pers. ench. 1. p. 485.

*Headed-flowered Chætocrater.* Tree 18 feet.

*Cult.* All the genera of this order will thrive in a mixture of loam and peat, with a little sand; and cuttings will strike root readily if planted in a pot of sand, plunged in a moderate heat, with a hand-glass placed over them. The plants of the first section of *Samyda* are the most worthy of cultivation.

ORDER LXX. HOMALINEÆ (plants agreeing with *Homalium* in important characters). R. Brown. cong. p. 19. D. C. prod. 2. p. 53.

Flowers hermaphrodite. Tube of calyx short, obconical, usually, or perhaps always, adhering to the ovary; limb parted into pairs of lobes, from the number of 10 (f. 12. a.) to 30, outer lobes calyciform, larger than the inner ones (f. 12. a.), somewhat valvate in æstivation between themselves, alternate or inner ones smaller (f. 12. a.), petaloid, disposed in a similar mode to the outer ones in æstivation, all spreading when in flower. Petals wanting, but with sessile glands at the base (rarely in the middle) of the inner lobes of the calyx, and perhaps on the outer ones also. Stamens rising from the apex of the tube of the calyx between the glands, opposite the outer lobes of the calyx, sometimes equal in number with the lobes of the calyx, but usually 3 or 7 times that number disposed in fascicles, therefore more the number of the calycine lobes. Anthers 2-celled, didymous, opening by a double chink. Ovary conical, 1-celled, containing numerous ovula, usually adhering to the calyx at the base, but in part free. Styles 3-5, simple, filiform or awl-shaped. Pericarp capsular, or somewhat baccate, 1-celled. Placentas parietal, the same number as the styles, many-seeded. Seeds small, ovate, or angular. Embryo inclosed in a fleshy albumen.—Shrubs or trees, natives of the warmer regions of the world. Leaves alternate, stalked, simple, feather-nerved, toothed or quite entire. Stipulas deciduous, or probably for the most part wanting. Flowers spicate, racemose or panicled. This order agrees with *Rosaceæ* in the insertion of the stamens, but in the structure of the fruit it comes near to *Bixineæ* and *Flacourtiaceæ*. From the absence of the petals, and the insertion of the stamens, as well as in the structure of the fruit, it comes nearest to *Samydeæ*. Probably *Mauniv* should be referred to this order.

#### *Synopsis of the Genera.*

1 *HOMALIUM*. Tube of calyx obconical, with a 12 (f. 12. a.) -14-parted limb disposed in a double series, inner lobes narrowest. Stamens in fascicles, placed in front of the outer lobes of the calyx, each fascicle containing 3-6 stamens. Styles 3, filiform.

2 *NAPIMODA*. The character the same as in *Homalium*, but destitute of glands at the base of the inner lobes of the calyx.

3 *AZARA*. Calyx 4-5-parted. Stamens numerous, inserted in the bottom of the calyx. Styles 3, joined.

4 *PINEDA*. Calyx 8-10-parted, in a double series. Stamens indefinite in fascicles. Style simple. Stigma trigonal, sulcate. Berry 1-celled. Placentas 4, fleshy, adhering lengthwise to the parietes, many-seeded.

5 **BLACKWELLIA**. Tube of calyx short; limb 10-30-parted, inner lobes smallest. Stamens inserted in the calyx, at the base of the glandless lobes. Ovary conical above. Styles 3-5. Capsule 1-celled, many-seeded. Seeds fixed to the parietes.

6 **ILLIGERA**. Calyx 10-parted, in 2 series; inner segments petaloid. Stamens 5, inserted in the base of the calyx, and alternating with 5 glands. Style crowned by a peltate emarginate stigma. Ovary inferior, 1-celled, 1-ovulate.

7 **RHINANTHERA**. Calyx 10-parted; segments disposed in a double series. Stamens 5, inserted in the base of the calyx, alternating with 5 glands. Style crowned by a peltate emarginate stigma.

8 **ASTRANTHUS**. Tube of calyx short, limb 14-cleft, the 7 alternate lobes shortest. Stamens 7; anthers 3-celled. Ovary free. Styles 4. Fruit 1-seeded.

9 **NISSA**. Calyx turbinate, 10-12-cleft, in a double series. Stamens 5-6, opposite the inner lobes of the calyx. Ovary half adhering to the calyx. Styles 2-3. Fruit unknown.

10 **MYRIANTHIA**. Calyx campanulate, 10-cleft, the 5 inner lobes unguiculate and petaloid. Stamens inserted in the calyx, in 5 4-5 anthered fascicles. Ovary conical at the apex, inclosing 4 ovula. Styles 4. Fruit 1-seeded from abortion.

† *Genera allied to Homalineæ.*

11 **ASTEROPEIA**. Calyx large, 5-cleft; lobes oblong, expanded. Petals 5, deciduous, inserted in the calyx. Stamens 10, alternate ones shortest, adnate to the tube of the calyx. Ovary trigonal, 3-celled. Style short, 3-cleft. Stigmas capitate. Seeds fixed by their centre.

12 **NEYLIA**. Calyx campanulate, 5-cleft (f. 10. b.). Petals 5 (f. 10. d.), roundish, sessile, inserted in the throat of the calyx. Stamens numerous, inserted with the petals in a double series (f. 10. e.). Style one, obtuse. Capsule 1-celled, many-seeded. Seeds numerous, fixed to a single parietal placenta.

13 **ARISTOTELIA**. Calyx campanulate, 5-cleft. Petals 5, inserted in the bottom of the calyx. Stamens 15-18, in fascicles. Anthers bursting by 2 pores at the apex. Ovary free. Styles 3, connected at the base. Berry globose, 3-celled; cells 1-2-seeded. Seeds angular. Albumen fleshy. Embryo flat.

1. **HOMALIUM** (from *ὁμαλος*, *homalos*, equal, regular; the stamens are 21, and regularly divided into 3-stamened fascicles). Jacq. amer. 170. D. C. prod. 2. p. 53.—*Acōma*, Adans. fam. 2. p. 510.—*Racōubea*, Aubl. guian. 1. p. 590.

LIN. SYST. *Polyadelphia*, *Polyandria*. Calyx somewhat conical, adhering to the ovary; limb disposed in a double series, 10 (f. 12. a.)-14-parted, inner lobes narrowest (f. 12. a.). Glands 6-7, placed at the base of the inner lobes of the calyx. Stamens placed in front of the outer lobes between the glands, in fascicles (f. 12. a.), containing 3 (f. 12. a.) or 6 stamens each. Ovary conical above. Styles 3, filiform.—Small trees, with oval-oblong, acuminate, serrated leaves, and with the flowers disposed in spicate racemes.

1 **H. RACEMOSUM** (Jacq. amer. 170. t. 183. f. 72.) leaves membranous, serrated; racemes axillary and terminal; flowers pedicelled; fascicles triandrous. h. S. Native of Jamaica, Martinique, Guadalupe, and other parts of South America. Lam. ill. t. 483. f. 2. There is a variety of this tree with 4 styles. Leaves ovate, bluntly-acuminate, with coarse deep

serratures. Racemes length of leaves, perhaps always axillary. Flowers yellow? Jacq. amer. pict. t. 261. f. 43. A lofty tree, with habit and leaves of elm.

• *Racemose*-flowered *Homalium*. Fl. May, July. Clt. 1816. Tree 60 ft.

2 **H. RACOMBEA** (Swartz. fl. ind. occ. 991.) leaves coriaceous, toothed; racemes terminal; flowers almost sessile; fascicles of stamens triandrous. h. S. Native of Guiana. *Racōubea Guianensis*, Aubl. guian. 1. p. 590. t. 236. II. spicatum, Lam. dict. 1. p. 62. ill. 483. f. 1. Racemes much longer than the leaves; flowers sessile, yellowish. *Racombea* is derived from its Guiana name.

*Racombea Homalium*. Shrub 8 ft.

3 **H. ANGUSTIFOLIUM** (Smith in Rees' cycl. no. 3.) leaves elliptical-lanceolate, almost entire; racemes axillary; flowers almost sessile; inner lobes of calyx obovate. h. S. Native of Sierra Leone. Flowers yellowish?

*Narrow-leaved Homalium*. Tree.

4 **H. SENARIUM** (Moc. et Sesse, fl. mex. icon. ined. D. C. prod. 2. p. 54.) leaves ovate, coarsely-toothed; racemes axillary and terminal; flowers on pedicels; fascicles of stamens hexandrous. h. S. Native of Mexico.

*Six-stamened Homalium*. Shrub.

*Cult.* See end of order for culture and propagation.

**II. NAPIMOGA** (its Guiana name). Aubl. guian. 1. p. 592. t. 237. D. C. prod. 2. p. 54.

LIN. SYST. *Polyadelphia*, *Polyandria*. Character the same as *Homalium*, but destitute of the glands at the inner lobes of the calyx.—A tree, with elliptical-oblong, serrated leaves, and axillary and terminal spikes of small greenish flowers. Stamens 18.

1 **N. GUIANENSIS** (Aubl. guian. 1. c.) h. S. Native of Guiana, in woods. *Homalium Napimoga*, Spreng. syst. app. p. 210.

*Guiana Napimoga*. Tree 20 feet.

*Cult.* See end of order for culture and propagation.

**III. AZARA** (in honour of Joseph Nicholas Azara, a Spanish promoter of botany). Ruiz et Pav. fl. per. et chil. prod. 1. p. 76. t. 36. syst. p. 1. p. 137. D. Don, in edimb. new. phil. journ. for Jan. 1831.

LIN. SYST. *Polyandria*, *Monogynia*. Perianthium 4-5-parted. Petals wanting. Stamens indefinite, inserted in the base of the calyx. Anthers round, 2-celled, bursting outwards. Styles 3, joined, crowned by 3 minute stigmas. Berry globose, 1-celled, few-seeded from abortion, opening by a fissure at the base of the styles. Placentas 3, parietal, alternating with the stigmas, with lateral branches. Seeds covered with spongy aril when mature, albuminous, having 2 covers; umbilicus basilar, perforated. Embryo straight, with reniform leafy cotyledons, and a terete radicle.—Leafy trees, with alternate simple, stalked, stipulate leaves, which are bitter to the taste. Flowers disposed in corymbs or spikes, fragrant.

N. B. This genus has been inserted in *Bixineæ*, p. 297. vol. 1. of this work, but since that part of the work has been printed the genus has been discovered to belong to *Homalineæ*. We have therefore given a fresh character both of the genus and species.

SECT. I. **AZARA** (see genus for derivation). Perianthium 5-7-parted, spreading, with the segments somewhat imbricate in aestivation. Stamens indefinite, many sterile.

1 **A. DENTATA** (Ruiz et Pav. fl. per. et chil. syst. 1. p. 138. fl. per. 5. t. 465. f. a.) leaves ovate, serrated, scabrous, tomentose.

lose beneath; corymbs sessile, few-flowered; stipulas leafy, unequal, one of which is large, and the other small.  $\frac{1}{2}$  G. Native of Chili, in groves about Concepcion, where it is called *Corcolen*.

*Toothed-leaved Azara.* Fl. June, Sept. Shrub 12 feet.

2 *A. SERRATA* (Ruiz et Pav. fl. per. et chil. syst. 1. p. 137. gen. t. 36. fl. per. 5. t. 465. f. b.) leaves oblong, serrated, smooth; corymbs stalked, many-flowered.  $\frac{1}{2}$  G. Native with the first. Stipulas leafy, one much longer than the other.

*Serrate-leaved Azara.* Shrub 12 feet.

SECT. II. *ALMEJA* (a word of no meaning). D. Don, in edinb. new phil. journ. Jan. 1831. Perianth with a connivent 4-cleft limb, furnished with scales on the inside, valvate in aestivation. Stamens definite, all fertile, disposed in fascicles opposite the lobes of the perianth.

3 *A. INTEGRIFOLIA* (Ruiz et Pav. syst. fl. per. et chil. 1. p. 138. fl. per. 5. t. 466. f. a.) leaves obovate or oblong, entire, smooth; stipulas equal, permanent; flowers spiked.  $\frac{1}{2}$  G. Native with the others, where it is also called *Corcolen*.

*Entire-leaved Azara.* Fl. June, Aug. Shrub 12 feet.

† *A. doubtful species.*

4 *A. CELASTRINA* (D. Don, in edinb. new. phil. journ. for Jan. 1831.) leaves roundish-oval, subserrulated, smooth; stipulas small, equal; flowers axillary, in fascicled panicles.  $\frac{1}{2}$  G. Native of Chili.

*Celastrus-like Azara.* Shrub 10 feet.

*Cult.* See end of order for culture and propagation.

IV. *PINEDA* (in honour of Anthony Pinedo, a Spanish naturalist, who went round the world with Malespine: he died on the voyage in 1762). Ruiz et Pav. fl. per. prod. 76. t. 11. syst. 1. p. 133. D. C. prod. 2. p. 54.

LIN. SYST. *Polyandria, Tetragynia*. Perianth 8-10-parted, permanent with the segments, disposed in a double order, imbricate in aestivation, outer ones largest. Petals wanting. Throat of perianth furnished with an elevated densely pilose ring. Stamens very numerous, disposed in a multiple order, inserted in the throat of the perianth; filaments capillary, smooth; anthers roundish, 2-celled, bursting outwards lengthwise. Styles 3-4-5, joined in one, crowned by as many pruinose stigmas. Capsule or berry free, crustaceous, valveless, opening by a fissure under the styles. Placentas 4, rarely 3 or 5, narrow, parietal, with lateral branches, alternating with the stigmas. Seeds few at maturity from abortion, pedicellate, roundish-obovate, depressed at the apex, urillate, having a double covering with a little hole at the base perforated even to the embryo. Albumen fleshy, white. Embryo straight, with kidney-shaped, flat cotyledons, and a terete, thick, obtuse radicle. — An erect, branched shrub, with scattered, stalked, elliptic-oblong, or obovate, emarginate, tomentose leaves, rather serrated at the apex. Stipulas 2, small, awl-shaped. Flowers numerous, terminal, corymbose. Peduncles filiform, 1-flowered, tomentose. Perianth tomentose. Stamens yellow.

1 *P. INCANA* (Ruiz et Pav. fl. per. l. c.)  $\frac{1}{2}$  S. Native of Peru, among stones, where it is called *Lloqui*. Leaves oblong-obovate and lanceolate, serrated at the top. *Homalium incanum*, Pers. ench. 2. p. 82. A twiggy shrub.

*Hairy Pineda.* Shrub 12 feet.

*Cult.* See end of order for culture and propagation.

V. *BLACKWELLIA* (in honour of Elizabeth Blackwell, an English artist; she published in 1735 a collection of drawings, entitled *Curious Herbal*). Comm. mss. Juss. gen. p. 343. Lam. ill. t. 412. but not of Gart. D. C. prod. 2. p. 54.

LIN. SYST. *Dodecandria, Pentagynia*. Calyx with a short tube, adhering to the ovary more or less; limb 10-30-parted, with the lobes in pairs, the inner ones smallest, outer ones larger, bearing glands at their base, but rarely in the middle. Stamens rising from the tube of the calyx, alternating with the glands, and therefore opposite the petals. Ovary conical above. Styles 3-5. Capsule 1-celled, many-seeded. Seeds fixed to the parietes. — Small trees, with ovate-toothed leaves, and simple or paniced racemes of flowers, which are probably all whitish.

*Racemes paniced.*

1 *B. INTEGRIFOLIA* (Lam. dict. 1. p. 428. ill. t. 412. f. 2.) leaves ovate, blunt, smooth, for the most part quite entire; panicles terminal.  $\frac{1}{2}$  S. Native of the Mauritius. Flowers dodecandrous.

*Entire-leaved Blackwellia.* Clt. 1823. Tree.

2 *B. PANICULATA* (Lam. dict. 1. p. 428.) leaves ovate-roundish, toothed, smooth; panicles terminal; flowers decandrous.  $\frac{1}{2}$  S. Native of the island of Bourbon, where it is called *Bois à écorce blanche* from its white bark. *Vernonia decandra*, Comm. ined. ex Steud. nom. p. 111. Flowers white.

*Paniced-flowered Blackwellia.* Clt. 1820. Tree.

3 *B. GLAUCA* (Vent. choix. t. 55.) leaves ovate-oblong, obtuse, a little toothed, smooth, glaucous; racemes axillary, paniced; flowers with 7-8 anthers, and 5 styles.  $\frac{1}{2}$  S. Native of the Mauritius. Flowers white.

*Glaucous Blackwellia.* Clt. 1824. Shrub.

4 *B. NIPAUENSIS* (D. C. prod. 2. p. 54.) leaves oval, acuminate, serrate-toothed, smooth; racemes axillary, paniced; flowers 6-7-anthered.  $\frac{1}{2}$  G. Native of Nipaul. Branches terete, grey marked with lenticular, linear-oblong, white glands. Stipulas deciduous. Leaves 3 inches long, and an inch and a half broad. Racemes branched, many-flowered, a little shorter than the leaves. Flowers small, white.

*Nipaul Blackwellia.* Shrub.

5 *B. CERASIFOLIA* (Vent. choix. t. 56.) leaves elliptical, acuminate, toothed, smooth, shining; racemes axillary, paniced; flowers pentandrous; glands in the middle of the lobes of the calyx; ovary free.  $\frac{1}{2}$  S. Native of Madagascar. Leaves like those of the common laurel. Flowers white.

*Cherry-leaved Blackwellia.* Tree.

\* \* *Racemes simple, spike-formed.*

6 *B. AXILLARIS* (Lam. dict. 1. p. 428. ill. t. 412. f. 1.) leaves ovate, a little crenate, smooth; spikes axillary, long, simple, nodding.  $\frac{1}{2}$  S. Native of Madagascar. Flowers white.

*Axillary-racemed Blackwellia.* Clt. 1824. Tree.

7 *B. TOMENTOSA* (Vent. choix. t. 57.) leaves cuneiformly-obovate, toothed, downy beneath; spikes axillary and terminal, erect, very long, and simple; flowers 5-6-anthered.  $\frac{1}{2}$  S. Native of Java. Flowers white.

*Downy-leaved Blackwellia.* Tree.

8 *B. SPIRALIS* (Wall. in asmt. resear. vol. 13.) leaves obovate, with glandular teeth, rather pubescent beneath; spikes axillary, very long, nodding; flowers usually pentandrous.  $\frac{1}{2}$  S. Native of Pegu, in the East Indies. Leaves almost sessile, cuneate at the base, 6-8 inches long, 2-3 broad, with distant blunt serratures. Spikes longer than the leaves, slender, simple, perhaps nodding when fresh, but they are erect in the specimen. Flowers white.

*Var.  $\beta$ , glaberrima* (D. C. prod. 2. p. 55.) leaves smaller, and more coarsely crenate-serrated, smooth, coriaceous; spikes almost 3 times longer than the leaves.  $\frac{1}{2}$  S. Perhaps another species.

*Spiral Blackwellia.* Clt. 1820. Tree 20 feet.

9 *B. PADIFLORA* (Lindl. bot. reg. 1308.) leaves oval, denticulated, smooth; flowers hexandrous and tetragynous; racemes erect, shorter than the leaves. *h. G.* Native of China. Calyx 6-cleft. Petals 6, white. Perianth 12-parted, the inner segments ciliated, resembling very much an elaborately finished shuttlecock. The shrub will grow very well in the open border in summer.

*Bird-cherry-flowered Blackwellia.* Fl. Aug. Clt. 1824. Sh. 6 ft.  
*Cult.* See end of order for culture and propagation.

VI. ILLIGERA (in honour of C. W. Illiger, a naturalist). Blum. bijdr. 1155.

LIN. SYST. *Pentandria, Monogynia*. Calyx superior, 10-parted; segments disposed in 2 series, inner series petaloid. Stamens 5, inserted in the base of the calyx, and alternating with 5 glands. Filaments naked at the base or bauriculate. Anthers erect, bursting valvately at the sides by 2 cells, as in *Laurineæ*. Ovary inferior, 1-ovulate. Style crowned by a peltate emarginate stigma. Fruit unknown.—Sarmentose shrubs, with alternate, ternate, entire leaves, and axillary panicles of flowers.

1 *I. APPENDICULATA* (Blum. bijdr. 1153.) leaflets oval-oblong, bluntish, veiny, smooth; panicle tomentose; stamens bauriculate at the base. *h. S.* Native of Java, on the high mountains called Burangrany.

*Appendiculate-stamened Illigera.* Shrub straggling.

2 *I. PULCHRA* (Blum. bijdr. 1154.) leaflets oval-oblong, acuminate, veined transversely, and are, as well as the panicles, smooth; stamens without appendages. *h. S.* Native of Java.

*Pur Illigera.* Shrub straggling.

*Cult.* See end of order for culture and propagation.

VII. RHINANTHERA (from *ῥις*, *rhin*, a snout, and *ανθηρα*, *anthera*, an anther; in allusion to the anthers being beaked). Blum. bijdr. 1121.

LIN. SYST. *Icosandria, Monogynia*. Calyx 8-parted, permanent, with the segments disposed in 2 series, inner series largest and biglandular at the base. Corolla wanting. Stamens numerous, unequal; anthers beaked, 2-celled. Style 1, short, crowned by an obtuse 3-4-gonal stigma. Berry globose, beaked by the permanent style, 3-4-celled; cells 2-4-seeded. Embryo perhaps exalbuminous.—A branched spiny shrub, with alternate, ovate-oblong, serrulated, coriaceous, smooth leaves, which are biglandular at the base. Racemes axillary and terminal, short, tomentose. Flowers small, sweet-scented.

1 *R. ODORATISSIMA* (Blum. bijdr. l. c.) *h. S.* Native of Batavia, in boggy places.

*Sweet-scented Rhinanthera.* Shrub 6 feet.

*Cult.* A mixture of peat and sand will probably suit this plant; and ripened cuttings will perhaps root in sand under a hand-glass, in heat.

VIII. ASTRANTHUS (from *αστρον*, *astron*, a star, and *ανθος*, *anthos*, a flower; lobes radiating in a stellate manner). Lour. fl. cochin. D. C. prod. 2. p. 55. Sims, bot. mag. 2659.

LIN. SYST. *Heptandria, Tetragynia*. Calyx with a short tube, with the limb cleft into 14 parts, the 7 alternate ones shortest. Stamens 7-10; anthers 3-celled. Ovary free. Styles 4-5. Fruit 1-seeded (Lour.). This genus is considered to be the same as *Blackwellia*.

1 *A. COCHINCHINENSIS* (Lour. l. c.) *h. G.* Native of Cochinchina. Ker, bot. reg. 894. A tree, with ovate, serrated, lanuginous leaves. Spikes long, simple, axillary. Flowers white disposed in long, simple, axillary spikes.

*Cochin-china Astranthus.* Fl. Ju. July. Clt. 1823. Tree 15 ft.

*Cult.* See end of order for culture and propagation.

IX. NISA (meaning unknown). Pet. Th. gen. mad. no. 81. D. C. prod. 2. p. 55.

LIN. SYST. *Penta-Hexandria, Di-Trigynia*. Calyx turbinate, 10-12-cleft, in a double series; the inner ones are called petals by Pet. Th.; these are erect. Glands alternating with the inner lobes of the calyx. Stamens 5-6, opposite the inner lobes, alternating with the glands. Ovary half adhering to the calycine tube. Styles 2-3. Fruit unknown.—Shrubs, with sinuate-toothed leaves.

1 *N. NUDIFLORA* (D. C. prod. 2. p. 55.) flowers in naked spikes. *h. S.* Native of Madagascar.

*Naked-flowered Nisa.* Shrub.

2 *N. INVOLUCRATA* (D. C. prod. 2. p. 55.) flowers enveloped in a large, compressed, coloured involucre. *h. S.* Native of Madagascar.

*Involucrated-flowered Nisa.* Shrub.

*Cult.* See end of order for culture and propagation.

X. MYRIANTHEIA (from *μυριοι*, *myrios*, a myriad, and *ανθος*, *anthes*, a flower; flowers numerous). Pet. Th. gen. mad. no. 71. D. C. prod. 2. p. 55.

LIN. SYST. *Polyadelphia, Polyandria*. Calyx campanulate, 10-cleft, outer lobes oblong, connivent, calyciform, inner lobes shorter, unguiculate, petal-like. Stamens inserted in the calyx, polyadelphous, fascicles 5, containing from 4 to 5 slender filaments. Scales 5, alternating with the fascicles of the stamens. Ovary half adhering to the calyx, conical at the apex, including 4 ovula. Styles 4. Fruit 1-seeded from abortion.—Small elegant trees or shrubs, natives of Madagascar, with alternate, short, stalked, thick leaves. Flowers numerous, white, in axillary racemes. The character of this genus is taken from Pet. Th. l. c., but the species still remain unpublished.

*Cult.* See end of order for culture and propagation.

† *Genera allied to Homalineæ.*

XI. ASTEROPEIA (from *αστρον*, *astron*, a star; in allusion to the lobes of the calyx being disposed in a stellate manner). Pet. Th. gen. afr. aust. p. 51. t. 15. gen. mad. no. 73. D. C. prod. 2. p. 55.

LIN. SYST. *Decandria, Monogynia*. Calyx large, permanent, 5-cleft; lobes oblong, expanded. Petals 5, deciduous, inserted in the calyx, and alternating with its lobes. Stamens 10, the 5 alternate ones shortest, adnate to the urceolus of the calyx. Ovary trigonal, 3-celled. Style short, trifid. Stigmas capitate. Seeds fixed by their centre.—A middle-sized tree, with alternate, short-stalked, quite entire leaves, and numerous purplish flowers, which are disposed in divaricating panicles.—This genus is said to be allied to *Blackwellia* by the author Petit Thouars.

1 *A. MULTIFLORA* (Pet. Th. l. c.) *h. S.* Native of Madagascar, near Foul Point.

*Many-flowered Asteropeia.* Tree 20 feet.

*Cult.* See end of order for culture and propagation.

XII. NEILLIA (named by Mr D. Don, in honour of his friend Patrick Neill, of Edinburgh, F.R.S.E. and F.L.S., secretary of the Wernerian and Caledonian Horticultural societies of Edinburgh). D. Don, prod. fl. nep. p. 228.

LIN. SYST. *Icosandria, Monogynia*. Calyx campanulate (f. 10. b.), free, 5-cleft. Petals 5, roundish (f. 10. d.), sessile, inserted in the throat of the calyx. Stamens numerous, disposed in a double series (f. 10. c.), inserted with the petals; filaments smooth; anthers roundish, 2-celled (f. 10. h.), bursting lengthwise outwardly. Style terete, smooth, crowned by an obtuse stigma (f. 10. g.). Capsule follicular, 1-celled, opening on the inner

side, many-seeded, crowned by the permanent style, free within the calyx. Seeds spherical, shining, fixed to a single parietal placenta in a double series, having a double covering. Albumen fleshy. Embryo straight, with oval flat cotyledons, and a thick obtuse radicle. Plumule inconspicuous.—Shrubs, with the habit of *Spiræa*, with stipulate, simple, alternate, doubly-serrated, stalked leaves. Stipulas deciduous, membranous or leafy, acute. Flowers disposed in racemes, white, terminal or lateral.

1 *N. THYRSIFLORA* (D. Don, prod. fl. nep. 228.) leaves cordate, ovate, and 3-lobed, doubly-serrated; stipulas leafy, serrated; racemes spicate, disposed in a terminal thyrse; bracteoles toothed; calyx silky. *h. H.* Native of Nipaul. A much branched shrub, with the branches canescent, and with the leaves villous on the nerves beneath.

*Thyrse-flowered Neillia.* Shrub 6 feet.

2 *N. RUBIFLORA* (D. Don, prod. fl. nep. 229.) leaves cordate, 3-lobed, acuminate, doubly-serrated; stipulas entire, membranous; racemes terminal, solitary, many-flowered; bracteoles bluntish, entire; calyx tomentose; petals roundish. *h. H.* Native of Nipaul. Flowers twice the size of those of *N. thyrseflora*, and the calyx is furnished with pedicellate glands inside (f. 10.).

*Bramble-flowered Neillia.* Shrub 6 feet.

*Cult.* See end of order for culture and propagation.

FIG. 10.

XIII. ARISTOTELIA (named after Aristotle, the celebrated philosopher). Lher. stirp. p. 31. t. 16. D. C. prod. 2. p. 56. but not of Adans. nor Lour.

LIN. SYST. *Polyadelphica, Polyandria*. Calyx campanulate, profoundly 5-cleft. Petals 5, inserted in the base of the calyx, and alternating with its lobes. Stamens 15-18, especially 3 or 4 in each bundle, placed in front of the lobes of the calyx. Anthers opening by 2 pores at the apex. Ovary free. Styles 3, somewhat connected at the base. Berry globose, 3-celled, each cell containing 1-2-ovula. Seeds angular, with fleshy albumen, and a flat embryo.—A shrub, with diffuse branches. Leaves nearly opposite, stalked, oblong, acute, smooth, shining, dentate, permanent. Stipulas deciduous. Racemes axillary. Flowers small, greenish. Some of the stamens are sterile. From the disposition of the stamens this genus agrees with *Homalium*, but from the dehiscence of the anthers it comes nearer to *Eleocarpa*.

1 *A. MACQUI* (Lher. l. c.) *h. H.* Native of Chili, where it is called *Macqui*. Lam. ill. t. 399. Wats. dend. brit. t. 44. A. glandulosa, Ruiz et Pav. fl. per. syst. p. 126. Poir. suppl. 587. The berries are about the size of a pea, very dark purple, at length becoming black; they are acid and eatable. The inhabitants of Chili make a wine from them, which they give in malignant fevers. Dombey used this remedy with success in Chili against the plague in 1782.

*Macqui Aristotelia.* Fl. April, May. Clt. 1733. Sh. 6 ft.

*Cult.* The plants of this order are scarcely worth cultivating for ornament, as the flowers of all are extremely insignificant. The stove and greenhouse species will grow freely in a mixture of loam, sand, and peat; and cuttings nearly ripe will strike root if planted in a pot of sand, with a hand-glass placed over them; those of the former should be placed in a moderate heat. The

*Aristotelia Macqui* and the species of *Neillia* being hardy, and furnished with beautiful leaves, are worth cultivating in shrubberies, but they will require to be sheltered during winter by a mat, as the shoots are apt to be killed to the ground by frost. Any common garden soil will suit them, and ripened cuttings will root freely, planted under a hand-glass, and they may also be increased by layers.

ORDER LXXI. CHAILLETIACEÆ (plants agreeing with *Chaillètia* in important characters). D. C. prod. 2. p. 57. Chaillètia, R. Brown, cong. p. 23.

Calyx (perigone) permanent, 5-cleft (f. 11. a. d.) coloured inside, with the lobes imbricate in æstivation. Petals (or petal-like scales, or abortive stamens) rising from the bottom of the calyx and alternating with its lobes, situated almost in the same circle with the stamens (f. 11. b.), small, usually bifid (f. 11. b.), sometimes connected at the base with the stamens (f. 11. d.). Glands opposite, numerous. Stamens exserted from the calyx, and placed opposite its lobes (f. 11. d.), and therefore alternating with the petals; anthers roundish, 2-celled. Ovary free, hairy (f. 11. h.), 2-3-celled, each cell containing 2 ovula. Styles 2 (f. 11. g.), -3, short, free, or connected together. Stigmas somewhat capitate (f. 11. g.). Drupe (f. 11. k. i.), with a dry, coriaceous rind, containing a 2-3-celled nut, but usually 1-2-celled from abortion. Seeds solitary in each cell, hanging from the apex (f. 11. i.), destitute of albumen. Embryo thick, with a short superior radicle and fleshy cotyledons.—Shrubs with alternate, bistipulate, short, stalked, oval, acute, feather-nerved, entire leaves. Flowers axillary, white, usually with the peduncles adhering to the petioles. This order is furnished as if it were with a calyx and corolla.

#### Synopsis of the Genera.

1 CHAILLETIA. Calyx 5-lobed (f. 11. a.). Petals 5, bifid (f. 11. b.). Stamens 5. Ovary 2-3-celled (f. 11. f.). Styles 2 (f. 11. g.) -3, free, or joined. Drupe dry, containing a 2-3-celled nut (f. 11. i. k.).

2 LEUCOSIA. Calyx 5-cleft. Petals 5. Stamens 5. Ovary 3-seeded. Style 1. Drupe dry, containing a bony nut.

3 TAPURA. Calyx 5-parted; segments fringed. Petals 3, connate and connected with the filaments; they are divided. Stamens 3. Style 1, trifid.

I. CHAILLETIA (in honour of M. Chaillat, a Swiss botanist). D. C. ann. mus. 17. p. 153. with a figure, prod. 2. p. 57.—Patrisia, Rohr, ined.—Mestotes, Soland. mss. ined.

LIN. SYST. *Pentandria, Mono-Trigynia*. Calyx 5-lobed (f. 11. a.). Petals 5, bifid, or emarginate (f. 11. b.). Stamens 5. Ovary 2-3-celled, 2-3-styled (f. 11. f.). Styles free (f. 11. g.), or connected together. Shrubs with axillary cymes or racemes of flowers.

SECT. I. MESTOTES (from *μεστος*, *mesios*, full). D. C. prod. 2. p. 57. Styles distinct.

1 C. PEDUNCULATA (D. C. l. c.) leaves ovate, obtuse, and un-

equal at the base; peduncles dichotomous, corymbose, adnate at the base to the petiole; petals bifid; styles free. *h. S.* Native of Cayenne. Flowers white (f. 11.).

*Stalked-flowered Chaillètia.* Sh.

SECT. II. *DICHAPÉTALUM* (from *δίχα*, *dicha*, double, and *πέταλον*, *petalon*, a petal; in allusion to the petals being emarginate). D. C. prod. 2. p. 57. Styles connected together.

2 *C. TIMORÉNSIS* (D. C. prod. 2. p. 57.) leaves oval, acuminate at both ends; peduncles dichotomously corymbose, not adhering to the petiole; petals obtuse, emarginate; styles connected together. *h. S.* Native of the island of Timor. Leaves smooth on both surfaces. Calyx and peduncles white from villi. Flowers white.

*Timor Chaillètia.* Shrub 6 feet.

3 *C. DICHAPÉTALUM* (R. Brown, cong. p. 24.) branches climbing, almost leafless; flowers in bundles in the axillæ of the leaves; petals bifid; styles joined. *h. S.* Native of Madagascar. *Dichapétalum* Madagascariense, Pet. Th. gen. mad. no. 78. D. Thouarsianum, Rœm. et Schult. syst. 5. p. 324. *C. fasciculata*, Spreng. syst. 1. p. 931. Scales 5, at the base of the ovaries. Flowers white.

*Double-petalled Chaillètia.* Shrub.

4 *C. TOXICARIA* (G. Don, in edinb. phil. journ. 1824. oct. p. 348.) leaves oblong-lanceolate, acuminate, smooth, coriaceous, with wavy entire margins, on short stalks; racemes panicled, axillary, and terminal, pubescent; drupe ovate, pubescent. *h. S.* Native of the mountains of Sierra Leone, where it is called *rat-bane* by the colonists, the kernel of the fruit being used for poisoning rats. Flowers small, white. Fruit dry, the size of a plum.

*Var. β, compressa* (G. Don, l. c.) fruit roundish-compressed.

*Poisonous Chaillètia.* Fl. year. Clt. 1823. Shrub 4 feet.

5 *C. ERECTA* (G. Don, l. c.) branches elongated, erect; leaves oblong-lanceolate, obtuse, emarginate, entire, smooth, coriaceous, stiff; flowers axillary; drupe ovate, roundish, pubescent, dry. *h. S.* Native of Sierra Leone, on the mountains. Fruit rather larger than those of the preceding species.

*Erect Chaillètia.* Fl. Feb. Shrub 8 feet.

*Cult.* See end of order for culture and propagation.

II. *LEUCOSIA* (from *λευκος*, *leucos*, white). Pet. Th. gen. mad. no. 79. D. C. prod. 2. p. 58.—*Chaillètia*, spec. R. Br.

LIN. SYST. *Pentandria, Monogynia*. Calyx 5-cleft. Petals 5. Stamens 5. Ovary adhering to the calyx, 3-seeded. Style 1. Fruit trigonal, containing a wrinkled bony nut.

1 *L. THOUARSIANA* (Rœm. et Schult. syst. 5. p. 324.). *h. S.* Native of Madagascar. A small weak shrub with few-nerved scabrous leaves, which are white from down beneath. *Chaillètia Leucosia*, Spreng. syst. 1. p. 931.

*Petit Thouars's Leucosia.* Shrub 6 feet.

*Cult.* See end of the order for culture and propagation.

III. *TAPURA* (Tapura is the name of the tree in Guiana). Aubl. guian. 1. p. 126. t. 48. Rich. dict. p. 34. D. C. prod. 1. p. 58.—*Rôhria*, Schreb. no. 63.

LIN. SYST. *Triandra, Monogynia*. Calyx 5-parted, with unequal, fringed lobes. Petals 3, connected with the filaments at the base, emulating a monopetalous corolla; the two longest are

FIG. 11.

2-parted, the third is short and 3-parted. Stamens 3. Style 1, trifid at apex. Fruit unknown.

1 *T. GUIANENSIS* (Aubl. guian. l. c.). *h. S.* Native of Guiana, in woods on the Serpent Mountain. *Rôhria petioliflora*, Willd. spec. 1. p. 186. *Chaillètia sessiliflora*, D. C. ann. mus. 17. p. 153. t. 1. f. 2. Flowers yellow. The creoles call it *Bois de Gollet*.

*Guiana Tapura.* Shrub 8 feet.

*Cult.* The plants of this order are not worth cultivating but in the gardens of the curious, as neither their leaves nor flowers possess any beauty. They will grow in a mixture of loam and peat, and young cuttings will probably strike root in a pot of sand, under a hand-glass, in heat.

ORDER LXXII. *AQUILARINEÆ* (plants agreeing with *Aquilaria* in important characters). R. Brown, cong. p. 25. D. C. prod. 2. p. 59.

Calyx or perigone, turbinate, coriaceous, 5-lobed (f. 12. c.); segments ovate, acute, spreading, permanent (f. 12. h.). Urceolus adhering to the bottom of the perigone, 5-parted, with bifid lobes (f. 12. b. d.). Stamens 10 (f. 12. b.), with short filaments protruding between the lobes of the urceolus, bearing long versatile anthers (f. 12. c.). Ovary free (f. 12. c.), stipitate ovate, crowned by a short simple stigma. Capsule pear-shaped (f. 12. g.), 2-valved, 2-celled (f. 12. f.), with a dissepiment in the middle of each valve (f. 12. f.). Seeds solitary in the cells from abortion, arillate or tailed.—Trees, with alternate, feather-nerved, quite entire leaves. This order is not sufficiently known. It differs from *Samydaceæ* in the seeds being fixed to a dissepiment, not to the parietes; from *Chaillètiaceæ* in the seeds being erect, not inverted, as well as in the stamens being twice the number of the lobes of the perigone; from *Thymelææ* in the fruit being 2-valved, 2-celled, 2-seeded. The genera are badly defined, and the species are scarcely known.

#### Synopsis of the Genera.

1 *AQUILARIA*. Perigone 5-cleft (f. 12. c. h.). Urceolus 10-lobed (f. 12. d.). Stamens 10 (f. 12. b.). Anthers versatile (f. 12. c.). Style none. Seeds covered by a spongy substance.

2 *OPHISMA*. Perigone 6-parted. Urceolus 10-lobed. Stamens 10. Anthers adnate. Seed furnished on the side by a long scolloped wing.

3 *GARINOPS*. Perigone tubular, toothless. Seed furnished with a spongy, awl-shaped, triquetrous tail each.

I. *AQUILARIA* (from *aquila*, an eagle; the wood of *A. Malaccensis* is called Bois d'Aigle, or eagle-wood, in Malacca). Lam. dict. 1. p. 49. ill. t. 356. D. C. prod. 2. p. 59.

LIN. SYST. *Dicandria, Monogynia*. Perigone 5-cleft (f. 12. c. h.). Urceolus 5-lobed; lobes bifid (f. 12. d.). Stamens 10. Anthers versatile (f. 12. c.), fixed by the middle. Style none. Seeds covered by a spongy body.

1 *A. MALACCENSIS* (Lam. l. c.) leaves ovate, abruptly-acuminate. *h. S.*

FIG. 12.

S. Native of Malacca. *A. ovata*, Cav. diss. 7. p. 377. t. 224. Bois d'Aigle, Sonnerat. The wood is whitish-yellow. Branches rather villous. Petioles short, hairy. Stipulas wanting. Leaves quite smooth. For the history of this tree see Lam. dict. 1. p. 49.

*Malacca* Eagle-wood. Clt. 1823. Tree.

2 *A. AGALLOCHA* (Roxb. hort. beng. p. 33.) *h. S.* Native of the East Indies, where it is called *Ugoor* or *Ugooroo* by the natives, and by Europeans *Lignum-aloes* or *Aloe-wood*, but the *Aloëxylon Lourcieri* is a very distinct plant from this and the following. The wood has a fine scent, and is called *Agallochum*. This shrub is supposed to be the *Culambac* or *Agallochum* of the ancients.

*Agallochum* or *Aloe-wood*. Tree.

3 *A. SECUNDARIA* (D. C. prod. 2. p. 59.) *h. S.* Native of the Moluccas. *Agallochum secundarium*, Rumph. amb. 2. t. 10. This species, according to Lamarck, differs from the preceding in the leaves being gradually acuminate, not abruptly so. The wood of this tree has been long used as a perfume, and was formerly an article of the *Materia Medica*, under the names of *Agallochum*, *Lignum Aloes* or *Aloe-wood*. This wood in its natural state is white and inodorous. That which possesses the peculiar aroma, for which it is valued, is supposed to be the consequence of a diseased process in the tree, causing the oleaginous particles to stagnate and congregate into resin in the inner part of the trunk and branches, by which the natural appearance of the wood is altered, so as to be of a darker colour, and of a fragrant smell. At length the tree dies, and when split the resinous part is taken out. The perfumes which this wood affords are highly esteemed by the oriental nations. This perfume is said to be useful in vertigo and palsy, given in the form of powder; it is recommended to restrain vomitings and alvine fluxes. But it seems to contain little else than that camphoraceous matter common to many other vegetable substances. From its bitter taste it has the name of aloes. The above description may apply to all the species, or perhaps to *Aloëxylon Agallochum*. See *Leguminosæ*.

*Secondary Aloe-wood*. Tree.

*Cult.* See end of order for culture and propagation.

II. OPHISPERMUM (from *οφις*, *ophis*, a snake, and *σπέρμα*, *sperma*, a seed; in allusion to the twisted form of the seed). Lour. fl. coch. 281. D. C. prod. 2. p. 59.

LIN. SYST. *Decandria, Monogynia*. Perigone 6-parted. Urceolus 10-lobed, tomentose, placed in the orb at the base of the calyx. Stamens 10; anthers standing. Style longer than the stamens, bifid at the apex. Capsules compressed, opening at the apex. Seeds solitary, ovate, acuminate, furnished laterally by a long, somewhat terete, scolloped wing. This is a species of *Aquilaria* according to Mr. R. Brown.

1 *O. SINENSE* (Lour. l. c.) leaves lanceolate, wavy. *h. G.* Native of China. *Aquilaria Ophispermum*, Poir. dict. scienc. nat. 18. p. 161. *A. Chinensis*, Spreng. syst. 2. p. 356. Calyx and stamens remaining with the capsule. Perigone sometimes 5-parted.

*China* Snake-seed. Tree 60 feet.

*Cult.* See end of order for culture and propagation.

III. GYRINOPS (from *γυρος*, *gyros*, a circle, in allusion to the tail of the seed). Gært. fruct. 2. p. 276. t. 140. D. C. prod. 2. p. 60.

LIN. SYST. ? Perigone tubular, short, toothless. Genitals unknown. Seeds furnished with a spongy, corky, triquetrous, awl-shaped tail, descending towards the bottom of the capsule.

1 *G. WALLA* (Gært. l. c.) *h. S.* Native of Ceylon, where it is called *Walla*. No part but the fruit of this tree is known.

*Walla* Gyrinops. Tree.

*Cult.* The plants of this order are not worth cultivating unless in botanical gardens; the species will all grow in a mixture of loam and peat, and cuttings will strike root in sand under a hand-glass placed in heat.

ORDER LXXIII. TEREBINTHACEÆ. Juss. gen. 368. D. C. prod. 2. p. 61. in part. Anacardiaceæ, Lindl. introd. nat. syst. 127.

Flowers usually unisexual, rarely hermaphrodite. Calyx small and permanent, with 5, or occasionally 3-4 or 7 divisions. Petals equal in number to the divisions of the calyx, perigynous, sometimes wanting, imbricate in aestivation. Stamens equal in number to the segments of the calyx, perigynous, or twice that number, or even more, equal or alternately shorter, some of them sterile; filaments distinct, or in genera having no calycine disk, cohering at the base. Disk fleshy, annular, or cup-shaped, hypogynous, occasionally wanting. Ovary simple, very rarely 5-6, of which 4 or 5 are abortive, superior, rarely inferior, 1-celled. Styles 1-3, sometimes 4, and sometimes wanting, with an equal number of stigmas. Ovum solitary, attached by a cord to the bottom of the cell. Fruit indehiscent. Seeds exalbuminous. Embryo either with a superior or inferior radicle, but always directed towards the hilum, sometimes suddenly curved back, with leafy or fleshy cotyledons.—Trees or shrubs, full of resinous, gummy, caustic, highly poisonous, or even milky juice. Leaves alternate, simple, ternate, or pinnate, destitute of pellucid dots. Flowers terminal or axillary. All the orders broken off from *Terebinthaceæ*, are very nearly related to each other, and whatever affinity is borne by one of them will be participated in by all the others, in a greater or less degree. They are distinguished from *Rhamnaceæ* in their resinous juice, imbricate calyx, and stamens not opposite the petals; from *Celastrineæ* by several of the same characters and the want of albumen; from *Rosaceæ* and *Leguminosæ* by their dotted leaves, very minute stipulas, if any, resinous juice, solitary ovum, or by some one or other of these characters. Some of the trees contained in this order are celebrated for yielding a clammy juice, which is at first white and afterwards becomes black, and is used for varnishing in India.

The varnish from Silhet is chiefly procured from *Semecarpus*, one kind from *Anacardium*. All these varnishes are dangerous, they inflame the skin and produce painful swellings. A valuable black lac or varnish is obtained from *Stagmària verniciflua* (edin. phil. journ. 6. p. 400.). A black varnish, well known in India, is manufactured from the nuts of *Semecarpus* and the berries of *Holigàrnia longifolia*, and from the trunk of *Melanorrhæa*. The leaves of some species of *Schinus* are so filled with resinous fluid, that the least degree of unusual repletion of the tissue, causes it to be discharged; thus some of them fill the air with their fragrance after rain, and *S. molle* and some others expel their resin with much violence when immersed in water, so as to have the appearance of spontaneous motion, in consequence of recoil. *Schinus arroeira* is said by St. Hilaire to cause swellings on those who sleep under its shade. The fresh juicy bark of the *Arrucira* shrub, *S. molle*, is used in Brazil

for rubbing newly made ropes, which it covers with a very durable bright dark brown colour. The juice of the same plant is applied by the Indians in diseases of the eyes (Prince Maximil. trav. 270.). The fruit of *Semecarpus Anacardium* and *Anacardium occidentale* is said to exercise a singular effect on the brain (Verey. bull. pharm. 1814. p. 271.). The bark of *Rhus glabrum* is considered febrifugal, and is also employed as a mordant for red colours. Several species of *Comocladia* stain the skin black. The *Cashew* and the *Pistachia* are valuable for their nuts, which are well-known articles in the markets of Europe. The *Mango* is equally famous for its fruit within the tropics. Mastich is the produce of *Pistacia lentiscus* and Venetian turpentine that of *Pistacia terebinthus*. The bark of *Rhus coriaria* is a powerful means of tanning the skins of animals, and several of the species of the same genus produce excellent varnishes.

#### Synopsis of the Genera.

##### TRIBE I.

ANACARDIÆ or CASSUVIÆ. *Petals and stamens inserted in the calycine disk or in the calyx. Ovary 1, 1-celled, 1-ovulate. Seed sustained by a funicle, which is inflexed at the apex and rising from the bottom of the cell, exalbuminose. Cotyledons thick, replicate above the radicle.*

1 ANACARDIUM. Flowers polygamo-dioecious. Calyx 5-parted. Petals 5, linear. Stamens 10, unequal, some sterile. Style and stigma one. Nut kidney-shaped, seated on a pear-shaped fruit. Leaves simple.

2 RHINOCARPUS. Flowers polygamo-dioecious. Calyx 5-cleft. Petals 5, oblong. Stamens 10, 4 or 5 of which are only fertile. Style lateral. Nut oblique, compressed, seated on a thick pedicel. Leaves simple.

3 SEMECARPUS. Flowers polygamo-dioecious. Calyx 5-cleft. Petals 5, oblong. Ovary 1, sessile, 1-celled. Stamens 5, all fertile. Styles 3. Nut compressed, heart-shaped, seated on a thick depressed torus. Leaves simple.

4 HOLIGARNA. Male and hermaphrodite flowers on divisions of the same tree. Calyx 5-toothed. Petals 5, villous. Stamens 5. Ovary 1-celled, 1-seeded. Nut olive-formed, somewhat compressed. Leaves simple.

5 MANGIFERA. Flowers polygamous. Calyx 5-parted. Petals 5. Stamens 5, 4 of which are usually without anthers. Style 1. Drupe baccate, rather compressed (f. 13. b.), containing a fibry woody nut (f. 13. c.). Leaves simple.

6 BUCHANANIA. Flowers hermaphrodite. Calyx 5-cleft, rarely 3-4-cleft. Petals 5, inserted under the disk. Stamens 10. Disk 10-crenate. Ovaries 5 or concrete, 4 of which are barren, the styles are therefore 5, and the ovary 1. Drupe rather fleshy, 1-seeded. Leaves simple.

7 URNIOGETON. Flowers hermaphrodite. Calyx 5-parted. Petals 5. Stamens 10, equal. Ovaries 4-5, 1-styled, girded by a denticulated urceolus. Stigmas obtuse. Drupe solitary, containing a 1-seeded lenticular nut. Leaves simple.

8 PISTACIA. Flowers dioecious, apetalous, disposed in amentaceous racemes, each scale with 1 flower. Calyx 3-4-

cleft. Ovary 1-3-celled. Stigmas 3, thickish. Drupe rather dry, containing a bony, 1-celled, 1-seeded nut. Leaves pinnate.

9 ASTRONIUM. Flowers dioecious. Calyx of 5 coloured sepals. Petals 5. Glands 5 in the disk. Stamens 5. Ovary 1. Styles 3, reflexed. Pericarp membranous, 1-seeded. Leaves impari-pinnate.

10 MELANORRHEA. Flowers hermaphrodite. Sepals 5, caducous, cohering valvately. Petals 5, rarely 6, imbricate in æstivation. Stamens numerous, inserted in the torus. Style 1. Fruit indehiscent, depressedly kidney-shaped, stalked. Leaves simple.

11 COMOCLADIA. Flowers hermaphrodite or monoecious. Calyx 3-4-parted. Petals 3-4, long. Stamens 3-4, short. Ovary 1. Style none. Stigma 1. Drupe 1-celled, 1-seeded. Leaves impari-pinnate.

12 CYRTOCARPA. Flowers polygamous. Calyx 5-parted. Petals 5, sessile, imbricate in æstivation. Stamens 10. Disk large, 10-crenate. Style crowned by a 10-cleft stigma. Drupe obovate, having 5 tubercles above the middle, containing a hard nut. Leaves impari-pinnate.

13 SPATHELIA. Flowers dioecious or polygamous. Calyx 5-parted. Petals 5, hypogynous. Stamens 5, with tricuspidate filaments. Stigmas 3. Drupe 3-celled, trigonal, 3-winged, sometimes 2-celled and 2-winged. Cells 1-seeded. Leaves impari-pinnate. Perhaps belonging to *Sapindaceæ*.

14 PICRAMNIA. Flowers dioecious. Calyx 3-5-parted. Petals 3-5. Stamens 3-5. Stigmas 2, sessile. Drupe containing a 2-celled, 2-seeded nut. Leaves impari-pinnate.

15 BISCHOFIA. Flowers dioecious. Calyx 5-parted. Petals none. Stamens 5, connate. Ovary 3-celled; cells 2-ovulate. Stigmas 3, sessile. Fruit containing 3 1-seeded nuts. Leaves trifoliate.

16 SABIA. Flowers hermaphrodite. Calyx 5-cleft. Petals 5. Styles 2, contiguous, crowned by an obtuse stigma. Stamens 5, inserted in a 5-lobed disk. Drupe 2-lobed; lobes 1-seeded.

##### TRIBE II.

SUMACHINÆ. *Petals and stamens inserted in the calycine disk or in the calyx. Ovary 1, 1-celled, 1-ovulate. Seed pendulous, suspended from a funicle, which rises from the base, exalbuminous. Cotyledons leafy, with the radicle inflexed above them.*

17 RHUS. Calyx small, 5-parted. Petals 5. Stamens 5, all fertile, both in the male flowers and the hermaphrodite ones. Ovary 1, 1-celled, 1-seeded. Styles 3, short, or stigmas 3, sessile. Drupe nearly dry, 1-celled, containing a 1-celled, 1-2-3-seeded bony nut. Leaves variously compound, rarely simple.

18 MAURIA. Flowers hermaphrodite. Calyx 4-5-lobed, urceolate. Petals 4-5. Stamens 8-10, inserted under the annular disk. Ovary 1, sessile, 1-celled, 1-seeded. Style very short, crowned by a 3-4-angled stigma. Fruit compressed, rather fleshy. Leaves impari-pinnate.

19 STAGMAIRA. Flowers hermaphrodite. Calyx tubular, irregularly ruptured. Petals 5, inserted in the stipe of the ovary.

Stamens 5. Ovaries 1-3, 1-styled, only one of which comes to perfection. Berry 1-seeded.

20 DUVA'UA. Flowers monoecious or dioecious. Calyx 4-cleft. Petals 4, concave. Stamens 8, inserted under the disk, unequal. Disk urceolate, 8-toothed. Ovary sessile. Styles 3-4, very short, crowned by capitate stigmas. Drupe globose, containing a coriaceous 1-seeded nut. Leaves simple.

21 SCINTUS. Flowers dioecious. Calyx 5-parted. Petals 5. Stamens 10, with the filaments sterile in the male flowers. Ovary sessile. Stigmas 3-4, sessile, collected in a dot. Drupe with a thin fleshy epicarp, and a 1-seeded bony nut. Leaves impari-pinnate.

† Genera allied to *Terebinthaceæ*, tribe *Sumachineæ*, but are not sufficiently known.

\* Petals 4-5. Stamens usually 3-5.

22 TRICE'ROS. Calyx 5-parted. Petals 5. Stamens 5. Styles 3, simple. Berry coriaceous, 3-horned, 3-celled, containing 2-3-seeds. Leaves impari-pinnate.

23 TRATTINICKIA. Male and hermaphrodite flowers mixed. Calyx and corolla campanulate, and 3-toothed. Stamens 5, rising from the disk. Style subulate. Ovary 1. Leaves impari-pinnate.

24 HUE'RTA. Calyx 5-toothed. Petals 5, sessile. Stamens 5. Style bifid, acute. Drupe obovate, containing a 1-seeded, 1-celled nut. Leaves impari-pinnate.

25 RU'MPHIA. Calyx tubular, 3-cleft. Petals 3. Stamens 3. Style 1. Drupe coriaceous, turbinate, 3-furrowed, containing a 3-celled, 3-seeded nut.

26 BA'RBYLUS. Calyx 4-5-cleft, campanulate. Petals 4-5, rising from the margin of the calyx. Stamens 8-10, rising from the bottom of the calyx. Capsule 3-celled; cells 2-seeded. Leaves pinnate.

\*\* Petals wanting. Stamens 10-12.

27 LUNA'NEA. Flowers polygamous. Calyx coloured, 5-parted. Disk concave, 10-toothed. Stamens 10, inserted in the disk, and adnate to the outside of it. Ovary crowned by 5 stigmas. Capsule 1-celled, valveless (Rafin), half locular, 2-valved (Lunan). Leaves simple.

28 HETERODE'NDRON. Flowers hermaphrodite. Calyx 4-5-toothed. Stamens 10-12, hypogynous. Anthers 2-celled. Ovary bluntly 2-4-gonal, 2-4-celled, hairy. Style hardly any. Leaves simple.

29 STYLOBA'SIUM. Calyx urceolate, bluntly 5-lobed. Stamens 10, hypogynous. Anthers 2-celled. Ovary biovulate, bearing a filiform style laterally at the base, crowned by a capitate stigma. Drupe 1-celled, 1-seeded, girded by the calyx. Leaves simple. Flowers usually polygamous from abortion.

30 GNEO'RUM. Flowers hermaphrodite. Calyx 3-4-toothed. Petals 3-4, imbricate in æstivation. Torus subglobose. Stamens 3-4. Stigmas 3-4. Drupes 3-4, baccate, joined to an axis, each containing a 2-celled putamen; cells 1-seeded. Leaves entire.

31 SURIA'NA. Flowers hermaphrodite. Calyx 5-parted. Petals 5, hypogynous. Stamens 5-10, some of them usually abortive. Carpels 5, bearing each on the side laterally a filiform style. Seed exalbuminous.

### Tribe I.

ANACARDIÆ (trees agreeing with *Anacardium* in important characters) or CASSUVIÆ. R. Br. congo. p. 12. D. C. prod. 2. p. 62. Petals and stamens inserted in the calycine disk or in the calyx. Ovary 1 from abortion, 1-celled, containing 1 ovum. Seed sustained by a funicle rising from the bottom of the cell, which is inflexed at the apex, without albumen. Cotyledons thick, replicate above the radicle.

I. ANACARDIUM (from *ana*, without, and *καρδία*, *kardia*, a heart; the nut is heart-shaped, and borne on the outside of the fruit). Rottb. coll. hafn. 2. p. 252. D. C. prod. 2. p. 62. *Acajuba*, Gaert. fruct. 1. t. 40. *Acajou*, Tourn. inst. 135. *Cassuvium*, Lam. dict. 1. p. 22. ill. 322.

Lin. syst. *Polygamia, Diœcia*. Flowers polygamo-dioecious. Calyx 5-parted. Petals 5, linear, acuminate. Stamens 10, connate at the base, the tenth elongated and fertile. Style and stigma 1, lateral. Nut reniform, umbilicated, seated laterally on a fleshy, wide, pear-shaped peduncle, or what may be called a nut, seated on a fruit. Seed in conformity to the nut. Embryo erect, with half-moon-shaped cotyledons, and an exserted radicle.—Trees with entire, feather-nerved leaves, and terminal panicles of flowers.

1 A. OCCIDENTALE (Lin. spec. 548.) leaves oval, cuneated, very blunt, somewhat emarginate, obovate-oblong, entire, smooth; panicle terminal, divaricate. L. S. Flowers small, of a dirty red colour, sweet-scented.

*Var. α, Americānum* (D. C. prod. 2. p. 62.) peduncle thick, about 10-times larger than the nut; longest filament bearing a globe-shaped anther, which is a little dilated at the apex. L. S. Native of the West Indies, and of most parts of South America. Jacq. amer. 1. t. 181. f. 35. pict. t. 121. Black. herb. t. 369. Catesb. car. 3. t. 9.

*Var. β, Indicum* (D. C. prod. 2. p. 62.) peduncle thick, scarcely 3-times larger than the nut; longest filament bearing a thick anther, the rest abortive. L. S. Native of the East India Islands. Rumph. amb. 1. p. 177. t. 69. Rheed. mal. 3. t. 54. Probably the American plant is a distinct species.

The *Cashew-nut* never exceeds 20 feet in height; it commonly rises to 12 or 16 feet, with spreading branches. The fruit or apple, or what is called above the thickened peduncle, has an agreeable, somewhat acid flavour, with some degree of astringency. It is sometimes of a yellowish, sometimes of a red colour. The juice expressed from it and fermented, yields a pleasant wine, and distilled a spirit is drawn from it, far exceeding arrack or rum, making an admirable punch, and powerfully promoting urine. Some planters in the West Indies and elsewhere roast the ripe fruit, or slice one or two into a bowl of punch to give it a pleasant flavour. The astringency of the juice has recommended it as a very signal remedy in dropsical habits. The nut springs from one end of the apple or peduncle. It is of the size and shape of a hare's kidney, but is much larger at the end next the fruit than at the other. The outer shell is of an ash-colour and very smooth, under this is another which covers the kernel, between these there is a thick inflammable oil, which is very caustic, this will raise blisters on the skin and has often been very troublesome to those who have incautiously put the nuts into their mouths to break the shell. This oil has been used with great success in eating off ring-worms, cancerous ulcers, and corns, but it ought

to be applied with caution. The kernel, when fresh, has a most delicious taste, and abounds with a sweet milky juice. The broken kernels are sometimes imported for mixing with old Madeira wines, the flavour of which they improve. It is an ingredient in puddings, &c. &c. When older it is usually roasted, and in this state is not so proper for costive habits. Ground with cacao it makes an excellent chocolate. When kept too long it becomes shrivelled, and loses its flavour and best qualities. The thick oil of the shell tinges linen of a rusty iron colour, which can hardly be got out; and if any wood be smeared with the oil it prevents it from decaying. It would therefore be an excellent preserver to house timbers. From the body of the tree is procured by tapping or incision a milky juice, which will stain linen of a deep black that cannot be washed out again. The tree also annually exudes from 5 to 10 or 12 pounds weight of a fine semitransparent gum, similar to gum Arabic, and not inferior to it in virtue or quality, which perhaps renders it in some respects more valuable.

*Cashew-nut* or *Western Anacardium*. Fl. year. Clt. 1699. Tree 16 feet.

*Cult.* A light loamy soil answers the species of *Cashew-nut*, and ripened cuttings, with their leaves on, root freely in sand under a hand-glass, in heat.

II. RHINOCARPUS (from *ῥιν* *rhin*, a snout, and *καρπος*, *karpus*, a fruit; fruit ending in a snout). H. B. et Kunth, nov. gen. amer. 7. p. 5. t. 601.

LIN. SYST. *Polygamia, Diœcia*. Flowers polygamous. Petals oblong, reflexed. Stamens 10, very unequal, 2 or 4 bearing anthers, the rest sterile, with the filaments connate at the base and adnate to the petals. Style sublateral, crowned by an obtuse stigma. Fruit oblique, compressed? 1-seeded, on a thick fleshy pedicel.—A tree with the habit of *Anacardium*, having simple, scattered, entire, obovate, exstipulate leaves, and a terminal corymbose raceme of flowers, with racemose bracteate pedicels.

1 R. EXCELSA (Bert. ined. H. B. et Kunth, l. c.). ½ S. Native of South America in St. Martha, Tobago, and New Granada. *Anacardium rhinocarpus*, D. C. prod. 2. p. 62.

*Tall Rhinocarpus*. Tree 140 feet.

*Cult.* For culture and propagation see last genus.

III. SEMECARPUS (from *σημειον*, *semeion*, a mark, and *καρπος*, *karpus*, a fruit; use of juice). Lin. fil. suppl. 25. Kunth, gen. tereb. p. 5. D. C. prod. 2. p. 62.—*Anacardium*, Lam. dict. 1. p. 139. ill. t. 208. Gaert. fruct. 40.

LIN. SYST. *Polygamia, Diœcia*. Flowers polygamo-dioecious. Calyx flat, 5-cleft. Petals 5, oblong. Stamens 5, all bearing anthers. Disk urceolar in the bottom of the flower. Ovary 1, sessile, girded by a tumid ring, 1-celled? Styles 3. Stigmas obtuse, emarginate. Nut compressed, heart-shaped, seated on a depressed, thickened torus. Seed conforming to the nut. Embryo inverted, with fleshy cotyledons and a 2-leaved plumule, with a small radicle lying at the top between the cotyledons.—Trees with entire feather-nerved leaves and axillary and terminal panicles of flowers.

1 S. ANACARDIUM (Lin. fil. suppl. 182.) leaves oblong, bluntish, glaucous beneath, more or less covered on the nerves beneath with scabrous down; panicle terminal, tomentose. ½ S. Native of the East Indies, on mountains. *Anacardium orientale officinale*, *Anacardium officinarum*, Gaert. fruct. 1. p. 192.

*Var. α, angustifolium* (D. C. prod. 2. p. 62.) leaves taper-pointed at both ends. Rumph. amb. 1. t. 70. *Anacardium longifolium*, Lam. dict. 1. p. 140. S. Cassavium, Spreng. syst. 1. p. 936.

*Var. β, cuneifolium* (D. C. prod. 2. p. 62.) leaves wedge-shaped and acuminate at the base, blunt at the apex.

*Var. γ, obtusiusculum* (D. C. prod. 2. p. 63.) leaves obovate, blunt at both ends. Roxb. cor. 1. t. 12. *Anacardium latifolium*, Lam. dict. 1. p. 139.

¶ S. Perhaps all these varieties are as many species.

These are lofty trees with spreading branches. Leaves about eighteen inches long, and about 4 or 5 broad. Flowers small, of a greenish-yellow colour. Receptacle of the fruit when ripe yellow, about the size of the nut, which is black; the cover or shell is composed of 2 laminae, the inner hard, the outer less so and leathery, between them are cells, which contain the black, corrosive, resinous juice, for which this nut has been long known; the juice is of a pale milk-colour till perfectly ripe, when it becomes black. The wood of this tree is reckoned of no use, not only on account of its softness, but also because it contains much acrid juice, which renders it dangerous to cut down and work upon. The fleshy receptacles on which the seeds rest are roasted in the ashes and eaten by the natives; their taste is very like that of roasted apples: unroasted they taste astringent and acrid, leaving a painful sensation on the tongue for some time. The kernels are rarely eaten. The green fruit, well pounded into a pulp, makes good bird-lime. The pure, black, acrid juice of the shell is employed by the natives externally to remove rheumatic pains, aches, and sprains; in tender constitutions it often produces inflammation and swelling; but where it has not these effects it is an efficacious remedy. It is employed by the Telinga physicians in the cure of almost every kind of venereal complaint. It is in general use for marking cotton cloths; the colour is improved and prevented from running by a little mixture of quick-lime and water. This juice is not soluble in water, and is only diffusible in spirits of wine, for it soon falls to the bottom, unless the menstruum be previously alkalisied. The solution is then pretty complete, and of a deep black colour. It sinks in expressed oils, but unites perfectly with them: alkaline lixivium acts upon it with no better success than plain water.

Official *Anacardium* or Marking Fruit. Fl. July, Aug. Clt. 1820. Tree 50 feet.

*Cult.* For culture and propagation see *Anacardium*.

IV. HOLIGARNA (from the appellation of the tree in the language of Karnata). Roxb. hort. beng. p. 22. cor. 3. p. 79. t. 282. D. C. prod. 2. p. 63.

LIN. SYST. *Polygamia, Diœcia*. Flowers polygamous, male and female flowers in different divisions of the tree. Calyx 5-toothed. Petals 5, broadest at the base, and somewhat concrete, oblong, villous. Stamens 5, shorter than the corolla. Ovary in the hermaphrodite flowers adnate to the calyx, 1-celled, 1-seeded. Nut olive-formed, ovate, somewhat compressed, containing a valveless nut. Albumen wanting. Embryo inverted. Cotyledons thick. Radicle oblong, situated above the apex.—A tall Indian tree, with oblong, acuminate, feather-nerved, entire, smooth, coriaceous leaves, which are crowded towards the tops of the branches. Petioles short, bearing a bristle on each side. Panicles axillary. Flowers white. This genus is allied to *Semecarpus*.

1 H. LONGIFOLIA (Roxb. cor. 3. t. 282.) ½ S. Native of the East Indies, on the mountains of Malabar and Chittagong. Rheed. mal. 4. p. 20. t. 9. ex Roxb. and therefore referable to *Mangifera lacmōsa*, Lam. ill. 2. p. 113. The natives of Malabar by incision extract an exceedingly acrid juice, which they use as varnish. The nut is about the size of an olive, containing between the lamina numerous cells filled with black, rather thick, acrid fluid, as that of *Semecarpus*, which is also used as varnish.

*Long-leaved Holigarna*. Tree 60 feet.

*Cult.* For culture and propagation see *Anacardium*.

**V. MANGIFERA** (from *Mango*, the name of the fruit, and *fero*, to bear). Lin. gen. no. 278. Gært. fruct. 2. t. 100. Kuntii. gen. tereb. p. 3. D. C. prod. 2. p. 63.

**LIN. SYST.** *Polygàmia, Monœcia*. Flowers polygamous. Calyx 5-parted, deciduous. Petals 4-5. Stamens 5, 4 of these are usually barren. Style 1. Drupe baccate, somewhat compressed (f. 13. b.), containing a woody fibrous nut (f. 13. c.). Seed ovate-oblong. Embryo erect, with fleshy cotyledons, and a short radicle.—Indian trees, with long, entire, feather-nerved leaves, and terminal panicles of flowers. Fruit eatable.

FIG. 13.

1 *M. INDICA* (Lin. spec. 290.) leaves oblong-lanceolate, stalked; panicle terminal, erect; petals spreading at the apex; 1 stamen fertile, the rest abortive; drupe somewhat kidney-shaped, smooth. *h. S.* Native of the East Indies, but now cultivated in every part of the world within the tropics. Lam. ill. t. 138.—Rheed. mal. 4. t. 1 and 2. *M. A'MBA*, Forsk. descr. 205. *M. domestica*, Gært. l. c.—Rumph. amb. 1. p. 93. t. 95. The Mango tree is tall, with a spreading top, and when in flower not unlike sweet-chestnut. The wood is a little brown, and used only for indifferent works. The leaves are 7 or 8 inches long, and 2 or more broad, of a fine strong green, and grow in bunches at the extremity of the branches. The flowers are whitish, streaked with yellow; these are disposed in loose terminal bunches or panicles. The fruit when fully ripe is yellow and reddish, or speckled with black, replete with a fine agreeable juice; some are full of fibres, and the juice runs out of these on cutting, or with a little handling; but those which have few or no fibres are much the finest; they cut like an apple, but are more juicy, and some are said to be as large as a man's fist, but the most common are about the size and appearance of a small golden pippin apple. It is esteemed a very wholesome fruit, and is considered the finest tropical fruit, with the exception of mangostan, and some of the finest pine apples. In India jellies, preserves, tarts, &c. are made from the unripe fruit. Gentlemen within the tropics eat hardly any other fruit in the hot months, but if no wine be drunk with it, the Mango is apt to throw out boils, at least with new comers, which are, however, conducive to health. In Europe we have only the unripe fruit brought over in pickle. There are numerous varieties of the Mango, chiefly differing in the size, colour, flavour, and figure of the fruit, as apples and pears do in Europe. Retsius says, there are numerous species, the number of stamens being double in some, the racemes in others compound; the fruit kidney-shaped, globular, fleshy or almost juiceless. The fruit of the finest Mangos have a rich sweet-perfumed flavour, accompanied by a grateful acidity.

*Indian or Comm on Mango.* Fl. Ju. Sep. Clt. 1690. Tr. 50 ft.

2 *M. MACROCARPA* (Blum. bijdr. 1158.) leaves scattered on long stalks, elongated, linear-lanceolate; fruit large. *h. S.* Native of Java.

*Long-fruited Mango-tree.* Tree 60 feet.

3 *M. FOETIDA* (Lour. fl. cochin. 160.) leaves cuneated, lanceolate, acute, stiff, on short stalks; panicles of flowers erect, terminal, spreading; corolla funnel-shaped, with the segments at length, reflexed; drupe heart-shaped, downy. *h. S.* Native of Cochin-china, Java, and the Moluccas. Rumph. amb. 1. t. 38. Leaves about the size of those of the common mango, on long petioles, and scattered. Flowers red, disposed in terminal

panicles, usually monandrous. The fruit is fleshy, strong-scented, of an acid flavour, and unwholesome, but is eaten by the Malays. The wood, though not very good, is used for floors, and lasts very well if it be soaked a considerable time in water.

*Fetid Mango.* Clt. 1824. Tree 50 feet.

4 *M. GLAUCA* (Blum. bijdr. 1158.) leaves on short petioles, scattered, large, elliptic-oblong, tapering to both ends, glaucescent beneath; panicle terminal, divaricated, shorter than the leaves. *h. S.* Native of the Moluccas, where it is called *Mangu utan*.

*Glaucous Mango.* Fl. July. Tree 50 feet.

5 *M. LAXIFLORA* (Desr. in Lam. dict. 3. p. 97.) leaves broad-lanceolate, sessile; panicles loose, pendulous; flowers pentandrous; drupe roundish. *h. S.* Native of the Mauritius. This is probably referable to *M. pentandra* of Lour. Flowers white. Fruit eatable?

*Lax-flowered Mango.* Tree 40 feet.

6 *M. OPPOSITIFOLIA* (Roxb. hort. beng. 18.) leaves opposite, stalked, lanceolate, tapering to both ends; panicles axillary and terminal, shorter than the leaves; stamens 4-5, fertile; drupe smooth, compressed. *h. S.* Native of Pegu and Java, where it is called *Ganduria*, and *Meriam* at Rangoon. Flowers pale-yellow. Drupe pale-yellow, the size of a small pullet's egg, and is universally eaten in Burma.

*Opposite-leaved Mango.* Tree 30 feet.

7 *M. SYLVATICA* (Roxb. l. c. fl. ind. 2. p. 438.) leaves alternate, lanceolate, glossy; panicles terminal; flowers monandrous; drupe smooth, obliquely-conical, with the point turned to one side. *h. S.* Native of Silhet, in the East Indies. *Lukshmee* is the vernacular name of this tree in Silhet. The fruit is like that of the common mango, and yellow; and is eaten by the natives, though by no means so palatable as the worst kind of the common mango. It is also dried by the natives and kept for medicinal purposes.

*Wood Mango.* Tree.

8 *M. QUADRIFIDA* (Jack. mss. Wall. fl. ind. 2. p. 440.) leaves alternate, lanceolate, tapering to the base; panicles loose, axillary; flowers quadrifid, monandrous; petals 4, glandular in the middle. *h. S.* Native of Sumatra, &c. Flowers small, white. Nectary of 4 round fleshy lobes. Fruit roundish, becoming very dark.

*Quadrifid-flowered Mango.* Tree 60 feet.

9 *M. CESIA* (Jack. mss. Wall. fl. ind. 2. p. 441.) leaves alternate, stiff, broad-lanceolate, tapering to the base; panicle terminal, erect, tomentose, glaucous; flowers monandrous; petals erect; fruit oblong. *h. S.* Native of Sumatra. Corolla purple within, but paler without. Fruit oblong-ovate, of a pale-red colour.

*Grey Mango.* Tree 60 feet.

*Cult.* This is a fine genus of tropical fruit trees. Sandy loam, or a mixture of loam and peat, is the best soil for them. Fresh seed brought from the places of their natural growth will vegetate freely. The species may also be increased by ripened cuttings. In tropical countries, the best varieties are preserved by grafting, as apples are with us.

**VI. BUCHANANIA** (in honour of Francis Hamilton, M.D. formerly Buchanan, of Leny in Scotland, an excellent botanist, and great traveller in the East; formerly superintendent of the botanical garden at Calcutta). Roxb. hort. beng. p. 37. D. C. prod. 2. p. 63.—Lamunzan, Buch. in asiat. res. 5. p. 123.—*Buchanania* and *Cambessèdeæ*, Kunth. gen. tereb. p. 4 and 6.

**LIN. SYST.** *Decándria, Pentagynia*. Flowers hermaphrodite. Calyx 5-cleft, rarely 3-4-cleft, obtuse. Petals 5, inserted under the disk, oblong, revolute, imbricate in æstivation. Stamens 10, shorter than the petals. Disk furnished with 10 crenatures,

involving the ovary. Ovaries 5, concrete, or approximate, 4 of which are abortive, reduced to the styles. Styles therefore 5, and ovary single, almost covered by the disk. Drupe obovate, rather fleshy, 1-seeded. Seed recurved, resting on a funicle, which rises from the bottom of the cell.—Indian trees, with simple, quite entire, coriaceous, smooth, feather-nerved leaves, and axillary panicles of flowers, crowded at the tops of the branches. Flowers small, white. Fruit red. Nut oily. In the leaves this genus appears to be allied to *Mangifera*, but in the fruit it is more nearly allied to *Spôndias*.

1 *B. LATIFOLIA* (Roxb. hort. beng. 32.) branches of panicle hairy, crowded with flowers, assuming the appearance of a corymb at the tops of the branches.  $\frac{1}{2}$  S. Native of the East Indies. Leaves 6 inches long, and 3 broad, blunt at both ends. Fruit eatable?

. *Broad-leaved Buchananian*. Clt. 1820. Tree 30 feet.

2 *B. ANGUSTIFOLIA* (Roxb. hort. beng. 32.) branches of panicle smooth, rather loose, axillary.  $\frac{1}{2}$  S. Native of the East Indies, particularly in Mysore. *Mangifera axillaris*, Lam. dict. 3. p. 697. *Spôndias simplicifolia*, Rottl. in Willd. nov. act. nat. cur. ber. 4. p. 87. *Lúndia mangiferoides*, Puer. herb. Cambes-sède, Kunth, gen. tereb. p. 4. Leaves oval-oblong, 3-4 inches long,  $1\frac{1}{2}$  broad, blunt or emarginate at the apex. Fruit the size of a large cherry, and perhaps eatable.

*Narrow-leaved Buchananian*. Clt. 1820. Tree 50 feet.

3 *B. LANCEAFOLIA* (Roxb. l. c.)  $\frac{1}{2}$  S. Native of Chittagong, in the East Indies. This species is only known by name.

*Lance-leaved Buchananian*. Tree.

*Cult.* A light loamy soil is the best for these trees, and ripened cuttings will root freely in sand under a hand-glass, in heat.

VII. CONIOGETON (meaning unknown). Blum. bijdr. 1156.

LIN. SYST. *Decándria, Tetra-Pentagynia*. Calyx inferior, 5-parted. Petals 5. Stamens 10, equal. Ovaries 4-5, 1-styled, 1-ovulate, girded by a denticulated urceolus. Stigmas obtuse. Drupe solitary, baccate, containing a 1-seeded lenticular nut.—A tree, with alternate, simple, cuneate-oblong, obtuse, quite entire, smooth leaves; flowers in terminal panicles.

1 *C. ARBORESCENS* (Blum. bijdr. 1156.)  $\frac{1}{2}$  S. Native of Java.

*Arborescent Coniogeton*. Tree 30 feet.

*Cult.* For culture and propagation see *Buchanania*.

VIII. PISTACIA (*πιστακία* is altered from the Arabic word *foustaq*, the name of *P. vera*). Lin. gen. no. 1108. Lam. ill. t. 811. Kunth, gen. tereb. p. 7. D. C. prod. 2. p. 64.—*Terebinthus*, Juss. gen. 371.

LIN. SYST. *Diœcia, Pentándria*. Flowers dioecious, apetalous. Male ones disposed in amentaceous scaly racemes, with a flower to each scale. Calyx 5-cleft. Stamens 5; anthers almost sessile, tetragonal. Female flowers disposed in more loose racemes, with a 3-4-cleft calyx. Ovary 1-3-celled. Stigmas 3, thickish. Drupe dry, ovate, containing a somewhat bony nut, usually 1-celled, and 1-seeded, sometimes bearing laterally 2, abortive cells. Seeds solitary in the cells, fixed to the bottom of the cells, without albumen. Cotyledons thick, fleshy, oily, with a superior lateral radicle. Trees with pinnate leaves.

§ 1. *Leaves impari-pinnate, deciduous*.—*Terebinthus*, Tourn. inst. t. 345.

1 *P. VERA* (Lin. spec. 1454.) leaves pinnate; leaflets ovate, tapering a little to the base, rather mucronate at the apex; fruit ovate, pointed.  $\frac{1}{2}$  II. Native of Syria, from whence it has been

introduced to Italy by the emperor Vitellius, when he was legate in that province. It is now to be found throughout the whole region of the Mediterranean.—*Pistacia officinarum*, Hort. kew.—Black. icon. t. 461. Duh. ed. nov. 4. t. 17. Flowers small, brownish, green. Fruit panicle, about an inch long, ovate, with an oblique point, reddish, well known for the sake of its nut at our tables. The green internal hue of the kernel is remarkable. The *Pistachia* or *Pistach* nut is brought from several parts of Asia, chiefly from Aleppo and Persia. When wrapped in all its coats, it is the size of a green almond, but when stript of all but its shell it resembles a small nut. The kernel is red without, and green within, and its taste very agreeable. *Pistachias* have been reckoned aperitive, and proper to give vigour, and used in emulsions, &c. in phthisical and nephritical cases. They also enter into several ragouts, and are confited, made into conserves, &c. The fruit is rarely eaten raw, because of the ill effects it produces. There is a kind of false *Pistachia* nut brought from the West Indies, which is sometimes confounded with the real one.

*True Pistachia-nut-tree*. Fl. Ap. May. Clt. 1770. Tree 20 ft.

2 *P. RETICULATA* (Willd. spec. 4. p. 751.) leaves ternate and pinnate, with roundish, abrupt, somewhat pointed leaflets, which taper to the base, and are strongly reticulated with prominent veins; fruit roundish-oval, obtuse.  $\frac{1}{2}$  H. Native of Sicily and Syria. *P. trifolia*, Lin. spec. 1454. *P. Narbonensis*, Lin. spec. 1454.—Bocc. mus. 2. t. 93. Leaflets usually 5, rarely 3, when young downy at the margin. The fruit of this species is as good as the true *Pistachia*-nut.

*Reticulated-leaved Pistachia-nut*. Fl. April, Aug. Clt. 1752. Tree 20 feet.

3 *P. TEREBINTHUS* (Lin. spec. 1455.) leaflets usually numerous, ovate-lanceolate, rounded at the base, acute, and mucronate at the apex.  $\frac{1}{2}$  H. Native of the south of Europe, and north of Africa. Woody. med. bot. 415. t. 153.—Blackw. t. 478. Duh. arb. ed. 1. vol. 2. t. 87. *P. vulgaris*, Tourn. inst. 579. There is a fine female tree of this species in Chelsea garden, near the gate, which for want of male blossoms can never perfect its fruit. Leaves with 3 to 6 pair of leaflets, with an odd one. Their red hue when young is beautiful. Flowers in large compound panicles. Anthers dull-yellow. Stigmas crimson. Fruit hardly bigger than a large pea. Galls of the same shape are found on the leaves, and very large oblong ones like legumes are often produced from the young branches. The resin of this tree is the Chian or Cyprus-turpentine, generally preferred for medical use to what is obtained from the fir tribe, but it is scarcely to be had without adulteration. This resin is obtained by wounding the bark of the trunk in several places, during the month of July, leaving a space of about 3 inches between the wounds; from these the turpentine is received on stones, upon which it becomes so much condensed by the coldness of the night, as to admit of being scraped off with a knife, which is always done before sunrise; in order to free it from all extraneous admixture it is again liquified by the sun's heat, and passed through a strainer; it is then fit for use. The quantity produced is very inconsiderable, 4 large trees, 60 years old, only yielding 2 pounds 9 ounces and 6 drachms, but in the eastern part of Cyprus and Chio the trees afford somewhat more, though still so little as to render it very costly, and on this account it is commonly adulterated, especially with other turpentines. The best Chio turpentine is usually about the consistence of thick honey, very tenacious, clear, and almost transparent, white, inclining to yellow, and of a fragrant smell, moderately warm to the taste, but free from acrimony and bitterness. For the medicinal qualities of the turpentine, see *Pinus Larix*, vol. iv.

*Var. β, sphaerocarpa* (D. C. prod. 2. p. 64.) fruit larger, and rounder than in the species.—J. Bauh. hist. 1. p. 278. with a

figure. Native of the Levant, and is said to be cultivated in the garden of *Nemaus*.

*Turpentine Pistacia* or Venetian or Chian Turpentine-tree. Fl. June, July. Clt. 1656. Tree 30 feet.

1. *P. ATLANTICA* (Desf. atl. 2. p. 364.) leaflets usually 9, lanceolate, tapering to the base; petiole between the terminal pair a little winged. 2. *H.* Native of Barbary, very common in sandy uncultivated fields near Coffa, where many being in rows it is plain that this tree was cultivated at the foot of the mountains near Mayane and Tlemsen, &c. This is a large tree, with a thick roundish head. Leaflets 7 to 9. Male flowers disposed in terminal thyrse-like racemes. Stamens 5, but sometimes 7. Anthers deep red. Pollen yellow. Female flowers disposed in loose panicle racemes. Style purple. Drupe rather fleshy, about the size of a pea when ripe, blueish, containing a roundish nut. From the bark of the trunk and branches flows at different seasons of the year, but especially in summer, a resinous juice, hardening in the air, of a pale-yellow colour, of an aromatic smell, and taste that is not unpleasant, scarcely to be distinguished from oriental mastick, and known by the same name of *Heulc* among the Moors. It is inspissated into lamellæ round the branchlets, or into irregular globules, differing in thickness and shape, frequently as big as the end of the finger or thumb, some of which drop from the tree, and are found scattered on the ground. The Arabs collect this substance in autumn and winter, and make the same use of it as of the mastick from Chio, chewing it to give a pleasant smell to the mouth and brightness to the teeth. At the foot of Mount Atlas this tree is larger than any other which grows there, but the resinous juice is softer, and of a much less pleasant smell and taste than that which flows from the trees of the desert, which is probably occasioned by the climate being cooler, and the soil more moist and fertile. The leaves have often red galls on them resembling berries. The Moors eat the drupes, and bruise them to mix with their dates.

*Var. β, latifolia* (D. C. prod. 2. p. 64.) leaflets rounded and broader at the base than in those of the species. 2. *F.* Native of the island of Chio, and is said to be the same as that which grows about Constantinople.

*Atlas Mastick* or Turpentine-tree. Clt. 1790. Tree 40 feet.

5. *P. MEXICANA* (H. B. et Kunth. nov. gen. amer. 7. p. 22. t. 608.) leaflets 16-20, alternate and opposite, oblong, unequal-sided, acute at both ends, mucronate, membranous, smoothish, pubescent on the middle nerve beneath, as well as on the inside of the rachis; fruit turgid, lenticular. 2. *G.* Native of Mexico, near Chilpancingo.

*Mexican Turpentine-tree.* \* Tree 30 feet.

6. *P. FAGAROIDES* (Willd. enum. suppl. 66.) leaflets ovate, blunt; petioles winged. 2. *G.* Native of? Fruit unknown.

*Fagara-like Pistachia-tree.* Shrub 10 feet.

7. *P. OLEOSA* (Lour. fl. coch. 615.) leaves impari or abruptly pinnate; leaflets 4-7, ovate-lanceolate; young fruit echinated. 2. *G.* Native of Cochinchina, as well as the Moluccas. Cussambium, Rumph. amb. 1. t. 57. The nuts of fruit contain a yellow, bitterish, sweet-scented, thin oil, which thickens on exposure to the air. It is used to anoint the heads of the natives, and also to scent ointments.

*Oily Turpentine-tree.* Tree 20 feet.

§ 2. *Lentiscus* (from *lentesco*, to be clammy; it is from the *P. Lentiscus* that mastick is obtained, which comes from the word *mastico*, to chew; because it is thus used in Chio, and by the Turkish women to sweeten their breath). *Tourn. inst. p. 380.* Leaves permanent, abruptly pinnate.

§ 8. *P. LENTISCUS* (Lin. spec. 1455.) leaflets 8, lanceolate; petiole winged. 2. *H.* Native of the south of Europe and

north of Africa, both wild and cultivated in gardens. *Woodv. med. bot. t. 152. Blackw. t. 195. Duh. arb. ed. nov. 4. t. 18.* Leaves with 3 or 4 pairs of small leaflets. Both male and female flowers come out in loose racemes from the sides of the branches; they are of a green colour. The fruit when ripe is brownish. Fabricius remarks, that the male plant in time produces hermaphrodite flowers, with 6 stamens and 5 styles. It has been observed by Gouan that the buds are different from those of the other sorts, the branch-bearing buds being terminating, the flowering buds in both sexes axillary and in pairs; hence the aments are also in pairs. The leaves have sometimes 5 leaflets on each side. The petioles are so much winged that the leaves may be called articulately-pinnate; they are usually terminated by a thread instead of a leaflet. Desfontains informs us that the *Lentiscus* or Mastick-tree in Barbary is little if at all resinous, though the branches and bark of the trunk were wounded at different seasons; that the wood, however, yields an aromatic smell on burning; and that the berries yield an oil fit both for the lamp and the table. In the island of Chio the official mastick is obtained most abundantly by making transverse incisions in the bark of the tree, whence the mastick exudes in drops, which is suffered to run down to the ground, and after they are concentered, they are collected for use. These incisions are made at the beginning of August, when the weather is very dry, and are continued to the end of September. Mastick is a resinous substance, brought to us in small, yellowish, transparent, brittle grains or tears; it has a light agreeable smell, especially when rubbed or heated; on being chewed it first crumbles, soon after sticks together, and becomes soft and white like wax, without impressing any considerable taste. It totally dissolves, except the earthy impurities, which are commonly in no great quantity, in rectified spirit of wine, and then discovers a greater degree of warmth and bitterness, and has a stronger smell than the resin in substance. Boiled in water, it impregnates the liquor with its smell, but gives out little or nothing of its substance; distilled with water, it yields a small quantity of limpid essential oil, in smell very fragrant, in taste moderately pungent. Rectified spirit brings over also in distillation the more volatile odorous matter of the mastick. It is a common practice with the Turkish women to chew this resin, especially in the morning, not only to render their breath more agreeable, but to whiten the teeth, and strengthen the gums; they also mix it with their fragrant waters, and burn it with other odoriferous substances in the way of fumigation. It is used in Europe by japanners in some of their varnishes. As a medicine, mastick is considered to be a mild corroborant and astringent; and as possessing a balsamic power it has been recommended in hæmoptysis proceeding from ulceration, fluor albus, debility of the stomach, and in diarrhoeas and internal ulcers. Chewing this drug has likewise been said to be of use in pains of the teeth and gums, and in some catarrhal complaints; it is now, however, seldom used either externally or internally. The wood is received into the *Materia Medica* in some foreign Pharmacopœias, and is highly extolled in dyspeptic, gouty, hæmorrhagic, and dysenteric affections; but its chief fame at present is in Portugal, where it serves for toothpicks. These are rather neater than if made of common deal.

*Var. β, angustifolia* (D. C. prod. 2. p. 65.) leaflets almost linear. 2. *H.* *P. Massiliensis*, Mill. dict. *P. angustifolia* Massiliensis, Tourn. 580. This shrub scarcely ever exceeds 10 feet in height.

*Var. γ, Chia* (Duham. ed. nov. 4. p. 72.) leaflets ovate. 2. *F.* Native of the island of Chio. *P. Chia*, Desf. cat. hort. par. This is the tree from which they procure the resin called mastick. It is probably a distinct species from the true *Lentiscus*, which yields little or no resin. See the preceding account.

*Mastick-tree.* Fl. April, May. Clt. 1664. Tree 20 feet.

*Cult.* All the hardy species require to be planted in a sheltered situation, or against a wall; they may either be increased by seeds, layers, or ripe cuttings planted under a hand-glass. The greenhouse kinds grow well in a mixture of loam and sand, and ripened cuttings will root in sand under a hand-glass.

IX. ASTRONIUM (from *αστρον*, *astron*, a star; in allusion to the shape of the calyx when expanded). Jacq. amer. 261. t. 181. f. 96. Kunth. gen. tereb. p. 9. D. C. prod. 2. p. 65.

LIN. SYST. *Diœcia*, *Pentândria*. Flowers dioecious. Calyx of 5 coloured sepals. Petals 5, ovate. Male flowers with a spreading corolla and calyx. Glands 5 in the disk. Stamens 5. Calyx and corolla of the female flower connivent and permanent. Calyxes after flowering accrete, and stellately spreading. Petals much smaller. Ovary 1. Styles 3, reflexed. Pericarp membranous, indehiscent, oblong, acute, 1-seeded. Seed pendulous, destitute of albumen, with thick oblong cotyledons, and an oblique radicle.—A small tree, abounding every where in a nauseous clammy turpentine juice. Leaves impari-pinnate, smooth. Flowers in loose panicles. After the fruit in the female plants, and the flowers in the male plants have fallen off, new branches are put forth.

1 A. GRAVEOLENS (Jacq. l. c.) 2. S. Native of Carthage, in woods, and of St. Martha. Leaflets 3 pairs, with an odd one, stalked, ovate, acuminate, a little serrated.

*Strong-scented Astronium.* Tree 20 feet.

*Cult.* A mixture of loam and peat will answer this tree, and ripened cuttings will root in sand under a hand-glass in heat.

X. MELANORRHŒA (from *μελας*, *melas*, *melan*, *melan*, s. black, and *ρῆω*, *rheo*, to flow; the tree when wounded yields a black juice). Wall. pl. rar. asiat. 1. p. 9 t. 11, 12.

LIN. SYST. *Polyândria*, *Monogynia*. Flowers hermaphrodite. Sepals 5, cohering valvately into a 5-nerved caducous calyptra. Petals 5, rarely 6, imbricate in æstivation, permanent, borne beneath the fruit. Style 1, rather lateral in the vertex of the ovary, crowned by a small convex stigma. Fruit indehiscent, coriaceous, depressedly reniform, oblique, pedicellate, furnished with a stellately spreading corolla-like involucre. Seeds exalbuminous. Cotyledons fleshy, thick. Radicle lateral, lying in the fissure of the cotyledons. Large trees, with the habit of *Semecarpus*, full of viscid ferruginous juice, becoming black on exposure to the atmosphere, with large, simple, deciduous leaves, and panicles of flowers.

1 M. USITATA (Wall. l. c. p. 9.) leaves obovate, very blunt, villous. 2. S. Native of Hindostan, in a large valley called Kaddbu, in the kingdom of Manipur, Silhet, and Tipperah, as well as in the Burmese empire, on the banks of the Irrawadi, where it is called *Theet-tsee* or *Zit-si*. This is identical with the majestic *Kheu* or varnish-tree of Manipur, on the north-east frontier districts of Silhet and Tipperah. Mr. M. R. Smith, who has resided a long time in Silhet, considers this the same as the varnish-tree of the Chinese, in the eastern and north eastern provinces. It is procurable in great quantities from Manipur, where it is used for painting river craft, and for varnishing vessels destined to contain liquid. The drug is conveyed to Silhet for sale by the merchants. On being handled it occasions extensive erysipelatous swellings, attended with pain and fever, but never of long duration. In the neighbourhood of Prome a considerable quantity of varnish is extracted from the tree, but very little at Martaban, owing, it is supposed, to the pooriness of the soil, and partly also to there being none of the people in that part whose business is to perform the process, although it is very simple. Short joints of a thin sort of bamboo, sharpened at one end, and shut up at the other, are inserted in a slanting direction into holes made in the trunk and principal branches, and left there for 24 or 48 hours; after which they

are removed, and their contents emptied into a basket previously varnished over. Sometimes a hundred bamboos may be seen sticking into the tree at once during the collecting season, which lasts as long as the tree is destitute of leaves, namely, from January until April, and they are renewed as long as the juice will flow. In its pure state it is sold at Prome at the rate of one tical or 2s. 6d. the viss, and at Martaban 2 Madras rupees the viss, although of an inferior quality to that sold at Prome, being usually mixed with oil of Sesamun. A tree is reckoned to produce 2 to 3 or 4 viss annually, a viss being equal to 3½ lbs. Every article of household furniture destined to contain solid or liquid food is lacquered over with it. The article to be varnished with it must be prepared with calcined bones, after which the varnish is laid on thinly, either in its pure state or variously coloured. The process of drying is the most difficult part, being effected in a very slow and gradual manner by the articles thus varnished being placed in subterraneous vaults for several months. The drug is also used as a size glue in the process of gilding; nothing more being required than to besmear the surface of the article to be gilded with it, and immediately to apply the gold leaf. If it is considered how very extensively that art is practised by the Burma nation, it being among their most frequent acts of devotion and piety to contribute to the gilding of their numerous religious edifices and idols, it will be evident that a great quantity of the drug must be consumed for that purpose alone. Finally, the beautiful Pali writing of the religious order of the Burmas on ivory, palm-leaves, or metal, is entirely done with this varnish in its native and pure state.

*Useful Black varnish-tree.* Clt. 1828. Tree 100 feet.

*Cult.* For culture and propagation see *Astronium*.

XI. COMOCLADIA (from *κομη*, *kome*, a tuft, and *κλάδος*, *klados*, a branch; the leaves are crowded at the tops of the branches). P. Browne, jam. 124. Jacq. amer. 12. Lam. ill. t. 27. Kunth, gen. tereb. p. 9. D. C. prod. 2. p. 65.—*Dodonæa*, Plum. but not of Lin.

LIN. SYST. *Tri-Tetrandria*, *Monogynia*. Flowers hermaphrodite or monoecious. Calyx 3-4-parted, permanent. Petals 3-4, long, large. Stamens 3-4, short. Ovary 1. Style none. Stigma 1. Drupe ovate, 1-celled, 1-seeded. Ovary rather pendulous, fixed to the bottom of the ovary by a funicle which is curved at the apex. Albumen none. Cotyledons thick. Radicle superior, curved.—South American trees, abounding every where in clammy juice. Leaves impari-pinnate, with opposite leaflets. Flowers small, purple, sometimes 1-cleft, on short pedicels, disposed in loose branched panicles.

1 C. ILICIFOLIA (Swartz, 2. fl. ind. occ. 1. p. 75.) leaflets ovate or roundish, sessile, smooth, with spiny angles; spines 1-3 on each side. 2. S. Native of the West Indies, on calcareous rocks. Flowers small, of a deep red colour, without scent. Leaves long. *Dodonæa*, Plum. ed. Burm. t. 118. f. 1. Flex *Dodonæa*, Lin. spec. 182. C. *tricuspidata*, Lam. act. par. 1784. p. 347. and C. *ilicifolia*, Lam. ill. t. 27. f. 2. C. *angulosa*, Willd. spec. 1. p. 188. Petioles puberulous. There is a variety with angular leaves, not spiny.

*Var. β, glabra* (Schult. mant. 1. p. 350.) leaves smooth on both surfaces as well as the petioles. 2. S. Native of Porto Rico. C. *glabra*, Spreng. syst. 1. p. 176.

*Holly-leaved Maiden Plum.* Clt. 1778. Tree 20 feet.

2 C. ACUMINATA (Moc. et Sesse, fl. mex. icon. ined. D. C. prod. 2. p. 65.) leaflets sessile, lanceolate, acuminate, smooth, somewhat cordate at the base, with 6-7 spiny teeth on each side. 2. S. Native of Mexico. An intermediate species between C. *ilicifolia* and C. *dentata*. Flowers dark red. Stamens opposite the petals in the figure quoted above.

*Acuminate-leaved Maiden Plum.* Tree 20 feet.

3 *C. DENTA'TA* (Jacq. amer. 13. t. 173. f. 4.) leaflets on short footstalks, oblong, crosely-toothed, smooth above and downy beneath. *h. S.* Native of Cuba in woods, as well as of St. Domingo, where it is called *Guao*. H. B. et Kunth, nov. gen. amer. 7. p. 16. This species is very like *C. ilicifolia*. Leaflets from 6 to 10. The whole tree abounds in a milky glutinous juice, turning very black, not to be washed from cloth. If the tree be ever so slightly wounded it has a very unpleasant smell. The natives have a notion that it is dangerous to sleep under it.

*Toothed-leaved Maiden Plum.* Fl. Jul. Clt. 1790. Tree 20 ft.

4 *C. PROPINQUA* (H. B. et Kunth, nov. gen. amer. 7. p. 16.) leaflets lanceolate-oblong, acute, almost entire, smoothish above, hairy-pubescent beneath and ferruginous. *h. S.* Native of the island of Cuba near La Trinidad, where it is also called *Guao*.

*Allied Maiden Plum.* Tree 12 feet.

5 *C. MOLLISSIMA* (H. B. et Kunth, nov. gen. amer. 7. p. 16. t. 607.) leaflets small, oblong, acute, rounded at the base, downy-pubescent above, but clothed with soft silky tomentum beneath. *h. S.* Native of Mexico, between Acapulco and Venta del Exido. *C. tomentosa*, Willd. herb. ex Schult. mant. 1. p. 350.

*Very soft Maiden Plum.* Tree 20 feet.

6 *C. INTEGRIFOLIA* (Jacq. amer. 12.) leaflets stalked, lanceolate, quite entire, smooth. *h. S.* Native of Jamaica. Sloan. jam. 2. t. 222. f. 1. Lam. ill. t. 27. f. 1. Flowers small, deep red, without scent. Drupes black and succulent when ripe; they are eatable but not inviting. The wood is hard, of a fine grain, and reddish colour. Leaves about 2 feet long, with about 8 leaflets on each side. The whole tree abounds in a watery juice, slightly glutinous, which grows black in the air, and dies the hand of a deep black colour, that can hardly be washed out.

*Entire-leaved Maiden-plum.* Clt. 1778. Tree 20 feet.

† *Species not sufficiently known.*

7 *C. ? TAPA'CULO* (H. B. et Kunth, l. c. p. 66.) leaflets oblong, acuminate, acutish at the base, quite entire, smooth. *h. S.* Native on the banks of the river Orinoco, near Maypures and Carichana, where it is called *Tapacula*. The Indians near St. Fernando de Atabapo use a preparation of the leaves against chigars.

*Tapacula Maiden-plum.* Tree 50 feet.

8 *C. ? LOXE'XIS* (H. B. et Kunth, l. c.) leaflets oblong, somewhat acuminate, acute at the base, quite entire, shining, and smooth above, pubescent and downy beneath, with the middle nerve, rachis, and branches clothed with rufescent down. *h. S.* Native of New Granada, near Loxa, in woods.

*Loxa Maiden-plum.* Tree 30 feet.

*Cult.* See *Astronium* for culture and propagation, p. 67.

XII. CYRTOCARPA (from *κυρτος*, *kyrtos*, gibbous, and *καρπος*, *karpos*, a fruit; in allusion to the 5 gibbosities above the middle of the fruit). H. B. et Kunth, nov. gen. amer. 7. p. 19. D. C. prod. 2. p. 91.

LIN. SYST. *Polygamia, Dioecia*. Flowers polygamous? Calyx 5-parted, permanent, spreading. Petals 5, sessile, longer than the calyx, imbricate in æstivation. Stamens 10, length of calyx. Disk large, 10-crenate. Ovary 1. Style 1. Stigma 4-cleft. Drupe obovate-elliptical, with 5 tubercles above the middle, containing a hard nut.—An American tree, with impari-pinnate leaves and quite entire sessile leaflets. Flowers almost sessile, disposed in glomerated spikes, white. This tree has the appearance of a species of *Comocladia*.

1 *C. PRO'CERA* (H. B. et Kunth, l. c. t. 609.). *h. S.* Native of New Spain.

*Tall Cyrtocarpa.* Tree 60 feet.

*Cult.* See *Astronium* for culture and propagation, p. 67.

XIII. SPATHELIA (from *σπαθη*, *spathe*, a palm-tree; the upright habit and want of branches of *S. simplex* has caused it to be likened to a palm-tree). Lin. gen. no. 373. Gaert. fruct. 1. p. 278. t. 58. Kunth, gen. tereb. 25. D. C. prod. 2. p. 84.

LIN. SYST. *Dioecia, Pentandria*. Female flowers. Calyx 5-parted, membranous, coloured. Petals 5, hypogynous, imbricate in æstivation. Stamens 5, with short, 3-pointed filaments, which are dilated and villous at their base. Ovary somewhat conical, 3-angled, 3-celled, each cell containing 2 ova. Style wanting. Stigmas 3. Drupe oblong, 3-celled, trigonal, sometimes 2-angled, 2-celled; angles winged. Seeds oblong, solitary in the cells. Albumen fleshy. Embryo straight, inverted, with oblong-linear, thin cotyledons, and a short radicle.—Trees with impari-pinnate leaves, and subterminal racemose panicles of flowers. This genus perhaps does not belong to this order.

1 *S. SIMPLEX* (Lin. spec. 386.) leaves with about 20 pairs of oblong, toothed leaflets. *h. S.* Native of Jamaica. Ker. bot. reg. t. 670. Sloan. hist. 2. t. 171. Trunk hardly branched. Leaves like those of *Sorbus*. The habit of the plant that of *Comocladia*. The fruit is full of a resinous juice. The flowers are red.

*Simple-stemmed Spathelia.* Fl. July. Clt. 1778. Tr. 20 ft.

2 *S. ? RHIOFOLIA* (D. C. prod. 2. p. 84.) leaves with about 6 pairs of ovate, acuminate, quite entire leaflets. *h. G.* Native of Mexico. Rhûs pterocarpa, Moc. et Sesse, fl. mex. icon. ined.

*Red-leaved Spathelia.* Tree 20 feet.

*Cult.* See *Astronium* for culture and propagation, p. 67.

XIV. PICRAMNIA (from *πικραμος*, *picramos*, derived from *πικρος*, *picros*, bitter; the plants are bitter in every part). Swartz, fl. ind. 1. p. 218. t. 4. Schreb. gen. no. 1517. D. C. prod. 2. p. 66.

LIN. SYST. *Dioecia, Tri-Pentandria*. Flowers dioecious. Calyx 3 or 5-parted. Petals 3 or 5, oblong. Male flowers with exerted stamens, equal in number with the petals. Female flowers with an ovate ovary, and 2 sessile stigmas. Drupe ovate, containing a 2-celled, 2-seeded nut. Seeds oblong.—Small trees with impari-pinnate leaves, alternate, stalked, quite entire, ovate-lanceolate leaflets. Racemes of flowers elongated, pendulous, opposite the leaves. The character of the seed being unknown, the place which this genus should occupy in this order is truly doubtful.

1 *P. ANTIDESMA* (Swartz, fl. ind. occ. 1. p. 218.) flowers triandrous; racemes longer than the leaves; leaflets elliptical, acuminate. *h. S.* Native of Jamaica and St. Domingo, on mountains in woods. Sloane, hist. t. 208. f. 2. Flowers small, greenish-white. Fruit at first scarlet, but black when ripe, about the size of a gooseberry. Swartz informs us that the negroes in Jamaica look upon this shrub as antivenereal, and that they commonly use an infusion of it in colic. The whole plant is exceedingly bitter, and is called *Majo Bitters* in Jamaica.

*Antidesma-like Majo-bitters.* Fl. Aug. Clt. 1793. Sh. 8 ft.

2 *P. FESSONIA* (D. C. prod. 2. p. 66.) flowers triandrous; racemes shorter than the leaves; leaflets ovate, acuminate. *h. S.* Native of Mexico. Fessonia dependens, Moc. et Sesse, fl. mex. icon. ined. Flowers greenish-white? Fruit red, with 3 scales in the female flowers in place of the stamens.

*Fesson's Majo-bitters.* Shrub 8 feet.

3 *P. PENTANDRA* (Swartz, fl. ind. occ. 1. p. 220.) flowers pentandrous; racemes shorter than the leaves; leaflets ovate-elliptical, acuminate. *h. S.* Native of the islands of Montserrat and St. Domingo. *P. pseudo-Brazilium*, Hort. par. ? in Juß. gen. 370. and hence *Comocladia Brasilæstrum*, Poir. suppl. 2. p. 325. Flowers greenish-white.

*Pentandrous Majo-bitters.* CR. 1822. Shrub 8 feet.

4 *P. TARIRI* (D. C. prod. 2. p. 4.) flowers? leaflets broadly and unequally ovate, acuminate, with villous edges, and bearing glands in the axillæ of the veins.  $\frac{1}{2}$ . S. Native of Guiana in woods. *Tariri* Guianensis, Aubl. guian. suppl. p. 37. t. 390. It is called *Tariri* by Caribbees.

*Tariri* Majo-bitters. Shrub 10 feet.

*Cult.* See *Astronium* for culture and propagation, p. 67.

XV. *BISCHOFIA* (in honour of — Bischoff, of the Botanical Academy of Munich). Blum. bijdr. 1168.

LIN. SYST. *Diœcia*, *Pentândria*. Flowers dioecious. Calyx inferior, 5-sepalled. Corolla wanting. Male flowers with 5 short stamens, which are joined into an urceolus, hardly free at the apex. Anthers 2-celled. Female flowers with the rudiments of filaments scale-formed, sometimes 2. Ovary ovate, globose, 3-celled; cells 2-ovulate; ovula pendulous. Stigmas 3, sessile, linear, reflexed, approximate at the base. Fruit containing 3 1-seeded nuts.—A strong tree, with very hard red wood, alternate, trifoliate leaves, serrulated leaflets, axillary and lateral panicles of flowers, with each pedicel furnished with 13 bractæas at the base. This genus agrees better with *Rutaceæ* than *Terebinthaceæ*.

1 *B. JAVA'NICA* (Blum. bijdr. 1168.).  $\frac{1}{2}$ . S. Native of Java, in mountain woods in the western provinces, where it is called *Gadok*.

*Java* Bischofia. Fl. Sept. Tree 60 feet.

*Cult.* See *Astronium* for culture and propagation, p. 67.

XVI. *SA'BIA* (*Soobja* is the Bengalese name of one of the species). Colebr. in Lin. trans. 12. p. 351. and 355. Wall. in fl. ind. 2. p. 308.

LIN. SYST. *Pentândria*, *Monogýnia*. Calyx inferior, 5-cleft. Petals 5, lanceolate, imbricate in æstivation. Stamens 5, opposite the petals, inserted round the base of a perigynous 5-lobed disk. Anthers bursting by a dorsal longitudinal fissure. Style furrowed, or 2 contiguous, crowned by a blunt stigma. Drupe deeply 2-lobed; lobes kidney-shaped, 1-seeded, one of them usually abortive. Embryo erect, folded. Climbing shrubs, with simple exstipulate leaves, and axillary, 1 or many-flowered peduncles. Notwithstanding many anomalies in this genus, Dr. Wallich seems to think it belongs to the present tribe of *Terebinthaceæ*.

1 *S. LANCEOLA'TA* (Colebr. l. c. t. 14.) smooth; leaves oblong, lanceolate, slightly blistered; corymbs axillary and terminal.  $\frac{1}{2}$ . S. Native of Silhet. An extensively rambling shrub. Flowers very fragrant, marked with linear purple dots.

*Lanceolate-leaved* Sabia. Shrub cl.

2 *S. PARVIFLORA* (Wall. fl. ind. 2. p. 310.) young shoots slightly pubescent; leaves ovate, with membranous, waved margins; peduncles axillary, few-flowered; petals lanceolate.  $\frac{1}{2}$ . G. Native of Nipaul. An extensive climber. Flowers smaller than those of the last species, purple.

*Small-flowered* Sabia. Shrub cl.

3 *S. CAMPANULA'TA* (Wall. in fl. ind. 2. p. 311.) leaves oblong, with membranous margins; flowers solitary, axillary, cup-formed, with large, round, concave petals.  $\frac{1}{2}$ . G. Native of Sheopore, in Nipaul. Flowers green, large. Anthers 2-celled.

*Bell-flowered* Sabia. Shrub cl.

*Cult.* Loam and sand, with a little peat, is a good soil for this genus, and ripened cuttings will root in sand under a hand-glass. The species are not worth cultivating, except in botanical gardens.

#### Tribe II.

*SUMACHINÆÆ* (plants agreeing with *Sumach* in important characters). D. C. prod. 2. p. 66. Petals and stamens inserted

in the calycine disk or in the calyx. Ovary solitary (from abortion), 1-celled, containing only 1 ovulum. Seed pendulous, exalbuminous, sustained by a funicle rising from the base of the cell. Cotyledons leafy, with the radicle bent in above the fissure of the cotyledons.

XVII. *RHUS* (derived from *ρῶς* or *ρῶς*, in Greek, which is derived from *rhudd*, a synonyme of *rub* in Celtic, red; in allusion to the colour of the fruit and leaves of some species in autumn). Lin. gen. no. 369. Lam. ill. t. 207. Kunth, gen. tereb. p. 5. D. C. prod. 2. p. 66.

LIN. SYST. *Pentândria*, *Trigýnia*, or *Diœcia*, *Pentândria*. Calyx permanent, small, 5-parted. Petals 5, ovate, spreading. Stamens 5, all antheriferous, both in the male and female flowers. Ovary 1, somewhat globose, 1-celled. Styles 3, short, or stigmas 3, sessile. Drupe almost dry, 1-celled, containing a bony, 1-seeded nut from abortion, and sometimes 2 or 3 seeds. Seeds without albumen, sustained by a funicle rising from the bottom of the cell. Cotyledons leafy, with the radicle lying on the upper suture of the cotyledons. Gært. fruct. 1. p. 205. t. 44.—Shrubs with alternate, various, but usually compound leaves. Flowers usually polygamous, or dioecious from abortion.

SECT. I. *COTINUS* (*κοτινός*, *cotinos*, is a name under which Pliny speaks of a tree with red wood, which is supposed to grow in the Apennines). Tourn. inst. p. 380. D. C. prod. 2. p. 77. Flowers hermaphrodite. Drupe half cordate, veiny, smooth, containing a triangular nut. Leaves simple. Flowers loosely paniced, many of which are abortive, and of these the pedicels are elongated and hairy after flowering.

1 *R. COTINUS* (Lin. spec. 383.) leaves obovate.  $\frac{1}{2}$ . H. Native of the south of Europe from Spain to Caucasus, in places exposed to the sun. Jacq. aust. t. 210. Mill. fig. t. 270. *Cotinus Coggýgia*, Scop. carn. ed. 2. no. 368. Menth. meth. 73. 2. Lob. icon. 99. *Cotinus coriacea*, Duh. arb. 1. t. 78. Flowers greenish-yellow. This is rather an ornamental shrub, and the wood is much used by the modern Athenians for dyeing wool of a most beautiful and rich yellow. The whole plant is used for tanning in Italy, where it is called *Scotino*.

*Teus-Sumach* or Wild-olive. Fl. June, July. Clt. 1656. Shrub 4 to 6 feet.

2 *R. VELUTINA* (Wall. mss. in Lin. soc. herb.) leaves simple, oblong, on long petioles, repand-toothed, clothed beneath with velvety white pubescence, as well as the branches; peduncle racemose, terminal.  $\frac{1}{2}$ . G. Native of Kamoan, in the East Indies. Flowers small, white.

*Velvety* Sumach. Shrub.

3 *R. LEVIS* (Wall. mss. in herb. Lin. soc.) leaves simple, ovate, or obovate-oblong, mucronate at the apex on long petioles, entire, quite smooth, and rather glaucous beneath; panicle terminal.  $\frac{1}{2}$ . G. Native of the East Indies. Flowers small, white.

*Smooth* Sumach. Shrub.

SECT. II. *METOPIMUM* (*Metopion* is a name under which Pliny speaks of a resinous tree unknown to us; it is derived from *μετος*, juice). D. C. prod. 2. p. 67. Flowers hermaphrodite. Drupe ovate, rather oblong, dry, smooth, containing a large, ample membranous nut. Seed, according to Linnæus, arilate and 2-lobed. Leaves impari-pinnate, with 2 pairs of ovate, quite entire, long-stalked leaflets.

4 *R. METOPIMUM* (Lin. amœn. 5. p. 395.) leaves quite smooth.  $\frac{1}{2}$ . S. Native of Jamaica, in woods on the mountains. Sloan. hist. 2. t. 199. f. 5.—Browne, jam. 177. t. 13. f. 3. Drupes reddish. This tree yields a great quantity of gummy resin called Doctors' gum, which, when pure, is of a yellow colour, and after a short time, acquires a hard brittle consistence. It

is daily used in strengthening plaisters, for which it is deservedly much recommended. It is of a warm discutient nature, and may be used in all swellings arising from colds, both externally and internally. The gum, dissolved in water, is an easy purgative, and thought to be extraordinarily diuretic. In Jamaica the tree is frequent enough, and the hogs are said to have recourse to it when wounded in the woods.

*Metopium* or Hog gum-tree. Clt. 1823. Tree 20 feet.

SECT. III. SUMACH (*el-simac* or *es-simac* is the Arabian name of some species). D. C. prod. 2. p. 67.—*Rhus* and *Toxicodendron*, Tourn. inst. 381. Mœnch. meth. 72. Flowers polygamous, dioecious, or hermaphrodite. Drupe ovate-roundish, usually villous, containing a smooth or striped nut.—Shrubs with impari-pinnate leaves or palmately trifoliate ones. Petioles naked or a little winged. Flowers paniced.

§ 1. *Leaves impari-pinnate.*

\* *Petioles naked.*

5 *R. FILICINA* (Moc. et Sesse, fl. mex. icon. ined.) leaves 7-9 pairs; petiole naked; leaflets sessile, pinnatifid, pilose, oblong; lobes blunt, awned, with a hair.  $\frac{1}{2}$ . G. Native of Mexico, on the mountains, where it is called *Tetzlarian*, but it is not the *Tetzlarian* of Hern. mex. p. 153. Fruit covered with violet hairs.

*Fern-like Sumach.* Shrub.

6 *R. TYPHINA* (Lin. spec. 380.) leaves with 8 or 10 pairs of leaflets; petioles naked, and are as well as the branches hairy; leaflets lanceolate, acuminate, serrated, rather pilose beneath.  $\frac{1}{2}$ . II. Native of North America, from Canada to Carolina, in rocky dry situations. Duh. arb. ed. nov. 2. t. 47. Wats. dend. brit. t. 17. and 18. *R. Virginiana*, Bauh. pin. p. 517. The purple velvety berries appear in large close clusters. The leaves change in autumn first to a purplish, but just before they fall to a feuilemort colour. This species, as well as *R. coriaria* is used for tanning leather; and the roots are prescribed as a febrifugal medicine in the country of its natural growth.

*Var. a, arborescens* (D. C. prod. 2. p. 67.) leaves somewhat pubescent beneath.  $\frac{1}{2}$ . II. Willd. enum. 323. Tree 20 feet.

*Var. b, frutescens* (Willd. l. c.) leaves white, with pubescence beneath.  $\frac{1}{2}$ . II. Shrub 8 feet.

*Fever or Virginian Sumach.* Fl. July, Aug. Clt. 1629. Shrub 8 to 20 feet.

7 *R. VIRIDIFLORA* (Poir. dict. 7. p. 504.) leaves with 8-10 pairs of leaflets; petioles naked, and are as well as the branches pilose; leaflets lanceolate-oblong, serrated, pubescent beneath.  $\frac{1}{2}$ . H. Native of North America, in Pennsylvania and Virginia, on the edges of woods in dry sunny situations. *R. Canadensis*, Mill. dict. no. 5. Flowers yellowish-green, probably not much more than a variety of the following species. Racemes of flowers erect.

*Green-flowered Sumach.* Fl. July, Aug. Clt. ? Tree 15 ft.

8 *R. GLABRA* (Lin. spec. 380.) leaves with 8 or 10 pairs of leaflets, and are as well as the branches smooth; petioles naked; leaflets lanceolate-oblong, serrated, whitened beneath.  $\frac{1}{2}$ . II. Native of North America from New England to Carolina, common in old fields. Flowers greenish-red. Fruit silky, red. They are used for dyeing the same colour, and they are eaten by children with impunity, but they are very sour. On cutting the stem a yellow juice comes out between the bark and the wood. The bark boiled with the fruit affords a black ink-like tincture.

*Var. a, hermaphrodita* (D. C. prod. 2. p. 67.) flowers hermaphrodite, greenish. *R. glabra*, Willd. spec. 1. p. 1478.—Dill. elth. t. 243. f. 314.

*Var. b, dioica* (D. C. prod. 2. p. 67.) flowers dioecious, greenish. Lam. ill. t. 207. f. 1.

*Var. c, coccinea* (D. C. prod. 2. p. 67.) flowers dioecious, red. Fruit scarlet. *R. elegans*, Ait. hort. kew. 1. p. 162. *R. Carolinianum*, Mill. dict. no. 4.—Cat. car. app. t. 4. Native of South Carolina.

*Smooth or Scarlet Sumach.* Fl. July, Aug. Clt. 1726. Shrub 8 feet.

9 *R. PUMILA* (Mich. fl. bor. amer. 1. p. 182.) a humble shrub wholly covered with pubescence; leaves with many pairs of deeply-toothed oval leaflets, which are downy on the under surface; petioles?  $\frac{1}{2}$ . H. Native of Upper Carolina. Fruit silky. This is the most poisonous of the genus, according to information from Mr. John Lyon, who by collecting the seed of this species was poisoned all over his body and was lamed for a considerable time.

*Dwarf Sumach.* Fl. July. Clt. 1806. Shrub 1 foot.

10 *R. ACUMINATA* (D. C. prod. 2. p. 68.) leaves with 3 or 4 pairs of leaflets, and are as well as the branches smooth; petioles naked; leaflets oval, quite entire, with long taper-points, paler beneath, and full of parallel feather nerves.  $\frac{1}{2}$ . II. Native of Nipaul. Lateral veins of leaves 20-30, parallel. Panicle of flowers axillary, shorter than the leaves. Flowers dioecious.

*Acuminate-leaved Sumach.* Shrub.

11 *R. SUCCEDANEA* (Lin. mant. 221.) leaves with 5-7 pairs of leaflets, smooth, permanent; petioles wingless; leaflets ovate-lanceolate, taper-pointed, shining, netted with veins and glaucous beneath, self-coloured.  $\frac{1}{2}$ . G. Native of Japan, Fasi-no-Ki. Kœmpf. amœn. 793. t. 795.—Thunb. jap. 121. Drupe ovate, white, about the size of a cherry, containing a smooth nut. The oil of the seeds, expressed whilst warm, acquires the consistence of suet, and serves for making candles. The trunk yields a varnish, but in so small a quantity as not to be worth collecting. Osbeck informs us that this is called *Tuy-sha* in China.

*Succedaneous or Red Lac Sumach.* Fl. June, July. Clt. 1768. Shrub 10 to 15 feet.

12 *R. KODŌSA* (Blum. bijdr. 1164.) leaflets 3-4 pairs, ovate-oblong, entire, bluntly acuminate, a little obliquely attenuated at the base, smooth; petioles wingless, terete, geniculately knotted; panicle terminal, fastigiate.  $\frac{1}{2}$ . S. Native of Java, on the mountains of Salak, where it is called *Kadondang-aroy*.

*Knotted-petioled Sumach.* Tree.

13 *R. PUBIGERA* (Blum. bijdr. 1165.) leaflets 3-7 pairs, ovate-lanceolate, entire, acuminate, a little obliquely attenuated at the base, opaque on both surfaces, and are as well as the petioles somewhat pubescent; panicles axillary.  $\frac{1}{2}$ . S. Native of Java.

*Pubigerous Sumach.* Tree.

14 *R. VERNICIFERA* (D. C. prod. 2. p. 68.) leaves with 5-6 pairs of leaflets; petioles naked, and are as well as the branchlets clothed with soft down; leaflets elliptic, acute, quite entire, smoothish above, but velvety beneath from pubescence.  $\frac{1}{2}$ . G. Native of Japan, where it is called *Sitz* or *Urus* (ex Kœmpf. amœn. 791. t. 792.), and of Nipaul. *R. vernix*, Lin. mat. med. 151. Thunb. jap. 121. but not of others. *R. juglandifolia*, Wall. in Litt. D. Don, prod. vi. nœp. 248. but not of Willd. Leaves long, resembling those of a walnut. Thunberg affirms that the very best Japan varnish is prepared from this tree, which grows in great abundance in many parts of that country, and is likewise cultivated in many places on account of the great advantages derived from it. This varnish, which oozes out of the tree on being wounded, is procured from stems that are three years old, and is received in some proper vessel. At first it is of a lightish colour and of the consistence of cream, but grows thicker and black on being exposed to the air. It is so transparent when laid pure and unmixed upon boxes or sur-

niture, every vein of the wood may be clearly seen. For the most part a dark ground is spread underneath it, which causes it to reflect like a mirror, and for this purpose recourse is frequently had to the fine sludge, which is got in the trough under a grind-stone, or to ground charcoal; occasionally a red substance is mixed with the varnish, and sometimes leaf-gold, ground very fine. This varnish hardens very much, but will not endure any blows, cracking and flying almost like glass, though it can stand boiling water without any damage. With this the Japanese varnish over the posts of their doors, and most articles of household furniture, which are made of wood. It far exceeds the Chinese and Siamese varnish, and the best is collected about the town of Jassino. It is cleared from impurities by wringing it through very fine paper; then about a hundredth part of an oil called *toi*, which is expressed from the fruit of *Bignonia tomentosa* is added to it, and being put into wooden vessels, either alone or mixed with native cinnabar, or some black substance, it is sold all over Japan. The expressed oil of the seeds serves for candles. The tree is said to be equally poisonous with the *Rhus venenata*, or American poison-tree.

*Varnish-bearing Sumach* or *Japan Varnish-tree*. Clt. 1818. Tree 30 feet.

15 *R. VENENATA* (D. C. prod. 2. p. 68.) leaves with 6-7 pairs of smoothish deciduous leaflets; petioles naked; leaflets ovate-lanceolate, acuminate, quite entire, netted with veins beneath. *h. H.* Native of North America, from Canada to Carolina, in low copses, where it is called *Poison-sumach* or *Poison-wood*.—Dill. elth. t. 292. *R. vernix*, Lin. spec. 380. Big. med. bot. 1. p. 96. t. 10. Wats. dend. brit. t. 19. *Toxicodendron pinnatum*, Mill. dict. no. 5. Flowers dioecious, green. Fruit white, smooth, containing a furrowed nut. The milky juice of this tree stains linen a dark brown. The whole shrub is in a high degree poisonous, and the poison is communicated by touching or smelling any part of it. In forty-eight hours, inflammation appears on the skin in large blotches, principally on the extremities and on the glandulous parts of the body; soon after small pustules rise in the inflamed parts, and fill with watery matter, attended with burning and itching. In two or three days the eruptions suppurate, after which the inflammation subsides and the ulcers heal in a short time. It operates, however, somewhat differently on different constitutions; and some are incapable of being poisoned with it at all. Persons of irritable habits are most liable to receive it. Kalm gives much the same account of the American poison-tree or Swamp Sumach. An incision being made, a whitish-yellow juice, which has a nauseous smell, comes out between the bark and the wood; it is noxious to some persons, but does not in the least affect others. On himself it had no effect, except on a hot day, when being in some perspiration, he cut a branch and carried it in his hand for half an hour, smelling it now and then. It produced a violent itching in his eyelids and the parts thereabouts; during a week his eyes were very red, and the eyelids very stiff, but the disorder went off by washing the eyelids with very cold water. The Abbé Sauvages stained linen black with the juice of this tree, which it retained after a great number of washings in ley. The Abbé Mazeas made trial of that of *R. toxicodendron*. The instant, he says, the cloth was exposed to the sun, it became the finest black he had ever seen.

*Poison Sumach*, *Poison-wood*, or *Swamp Sumach*. Fl. July. Clt. 1713. Tree 20 feet.

16 *R. RUFESCENS* (Hamilt. prod. fl. ind. occ. p. 32.) rufescent; leaflets 5 pairs, nearly sessile, obliquely cordate, oblong, acuminate, adpressedly serrated, shining above, covered with rufescent tomentum beneath, with the veins parallel; flowers axillary, subcymose, tomentose. *h. S.* Native of Jamaica.

*Rufescent Sumach*. Tree 30 feet.

17 *R. COMMERSONI* (Poir. suppl. 5. p. 264.) leaves with 3-5 pairs of smooth leaflets; petioles? leaflets tapering to the base, but blunt at the apex, somewhat mucronated and quite entire. *h. S.* Native of Brazil. Like *R. venenata* or *vernifera*, ex Poir. *R. meridionalis*, Spreng. syst. 1. p. 936.

*Commerson's Sumach*. Clt. 1818. Tree 30 feet.

18 *R. ? PERNICIOSA* (H. B. et Kunth. nov. gen. amer. 7. p. 10.) leaves with 7-8 pairs of leaflets, and are smooth, as well as the branches, petioles naked; leaflets on long stalks, elliptical or rhomboid-ovate, quite entire, membranous. *h. S.* Native of New Spain, near St. Theresa and Tapeacuicula. Flowers, as well as fruit, unknown. This species resembles in its poisonous effects the *R. venenata*, no. 15.

*Pernicious Sumach*. Shrub 3 to 4 feet.

19 *R. JUGLANDIFOLIA* (Wald. in Schult. syst. 6. p. 649. but not of Wall.) leaves with 11-15 pairs of oblong, acuminate, quite entire, smooth (but rather pilose beneath) leaflets, which are rounded on the upper edge at the base, but narrowed at the lower edge; panicles axillary, much branched; calyxes smooth. *h. S.* Native of New Granada, where it is commonly called *Caspi de Pasto*. H. B. et Kunth. nov. gen. amer. 7. p. 6. t. 603 and 604. Allied to *R. copallina*, but the petioles are wingless. The juice is very acrid and poisonous.

*Walnut-leaved Sumach*. Shrub 5 to 6 feet.

20 *R. FRAXINFOLIA* (D. Don, prod. fl. nep. p. 248.) flowers hermaphrodite; leaflets 7, lanceolate, acuminate, serrated, glabrous, shining, oblique at the base; rachis rather terete, simple; panicle much branched, villous. *h. G.* Native of Nipaul. A large tree, with leaves nearly 2 feet long.

*Ash-leaved Sumach*. Clt. 1820. Tree 40 feet.

21 *R. STRIATA* (Ruiz et Pav. fl. per. 3. p. 29. t. 252.) leaves pinnate, with quite entire ovate-lanceolate leaflets, downy beneath; racemes large; fruit striated. *h. G.* Native of Peru, in the groves of Chincho. Flowers white.

*Striped-fruited Sumach*. Tree 20 feet.

\* \* Leaves with the petioles more or less winged.

22 *R. CORIARIA* (Lin. spec. 379.) leaves with 5-7 pairs of villous leaflets; petioles naked or somewhat marginate at the apex; leaflets elliptical, bluntly and coarsely toothed. *h. H.* Native of the south of Europe, on rocks in exposed situations, from Portugal to Tauria. Duh. ed. nov. 2. t. 46. Wats. dend. brit. t. 136. Blackw. t. 486. Plenck. icon. t. 232. Leaves of a yellowish-green colour. Flowers whitish-green, disposed in terminal panicles. The branches of this tree are used instead of oak bark for tanning leather, and it is said that Turkey leather is all tanned with it. The leaves and seeds are used in medicine, and are esteemed very restraining, stiptic, tonic, and cooling. The Tripoli merchants sell the seeds at Aleppo, and they are in common use there to provoke an appetite. The taste of the fruit is very acid and astringent, and does not possess the dangerous qualities for which some species of this genus are so remarkable.

*Hide or Elm-leaved Sumach*. Fl. July, Aug. Clt. 1629. Tree 20 feet.

23 *R. SEMIALATA* (Mur. comm. gætt. 6. 1784. p. 27. t. 3.) leaves with 5-7 pairs of leaflets; petioles naked or somewhat margined from the middle to the apex; leaflets ovate, acuminate, serrated, downy beneath. *h. G.* Native of the East Indies and Cochinchina. *R. Javanicum*, Lour. cochin. 183. Flowers white, bell-shaped. Leaflets clothed with rusty down on the under surface. The Chinese extract an oil from the berries by bruising them, and boiling them in water; they use it as a varnish, which is beautiful, but does not keep its polish so well as the true sort.

*Half-winged-petioled Sumach*. Clt. 1780. Shrub 6 feet.

24 *R. JAVA'NICA* (Lin. spec. 380.) leaflets 5-7 pairs, ovate-oblong, acuminate, bluntly-toothed, tomentose beneath; petioles submarginate; panicle terminal, tomentose. *h. G.* Native of Japan and China, but introduced to Java. *R. semialata*, var.  $\beta$ , *Osbéckii*, D. C. prod. 2. p. 67.

*Java Sumach.* Clt. 1799. Tree 30 feet.

25 *R. CHINE'NSIS* (Mill. dict. no. 7.) leaves with 3 or 4 pairs of leaflets; petioles membranous, and arc, as well as the branches, clothed with downy villi; leaflets ovate, bluntly-serrated. *h. G.* Native of China.

*Chinese Sumach.* Clt. 1800. Shrub 5 to 6 feet.

26 *R. AMELA* (D. Don, prod. fl. nep. 248.) leaves with 6-7 pairs of leaflets; petioles with a narrow wing; leaflets elliptical, acuminate, serrated, sessile, odd one only stalked, all covered with greyish-down beneath. *h. F.* Native of Nipaul, at Narainhetty. *R. Bucki-amèlam*, Roxb. hort. beng. p. 22. Flowers dioecious, disposed in large terminal panicles. Berries silky. Leaves 1-2 feet long. *Bucku-amela* is the vernacular name of the tree.

*Bucku-Amela Sumach.* Clt. 1823. Tree 40 feet.

27 *R. PAUCIFLORA* (Lin. fil. suppl. 183.) leaves pinnate; petioles winged, covered with very fine villi; leaflets alternate, wedge-shaped, serrated at the apex; panicles sessile, few-flowered. *h. G.* Native of the Cape of Good Hope. Thunb. fl. cap. 2. p. 225.

*Few-flowered Sumach.* Shrub 6 feet.

28 *R. OBLI'QUA* (Thunb. fl. cap. 2. p. 224.) leaves with many pairs of smooth, ovate, quite entire, dimidiate leaflets. *h. G.* Native of the Cape of Good Hope. Flowers and fruit unknown. Allied to *R. pauciflora*.

*Oblique-leafletted Sumach.* Clt. 1825. Shrub 6 feet.

29 *R. ALA'TA* (Thunb. fl. cap. 2. p. 225.) leaves pinnate; petioles winged, tomentose; leaflets alternate, ovate, serrated at the apex; peduncles axillary. *h. G.* Native of the Cape of Good Hope.

*Winged-petioled Sumach.* Clt. 1824. Shrub 10 feet.

30 *R. COPALLINA* (Lin. spec. 380.) leaves of 5-7 pairs of leaflets, which are smooth above, and rather pilose beneath; petioles winged, jointed; leaflets elliptic, quite entire. *h. H.* Native of North America, in dry fields and woods, particularly in a sandy soil, from New Jersey to Carolina. Jacq. hort. schœnb. 341.—Pluk. alm. t. 56. f. 1. Root stoloniferous. Flowers dioecious, yellowish-green. Berries red. The leaves of this species change to purple in the autumn, and are used as tobacco by the Indians of the Missouri and Mississippi.

Var.  $\beta$ , *leucantha* (Jacq. schœnb. t. 342.) root not stoloniferous; flowers white; panicles more contracted. *h. H.* Native of North America. Leaflets many pairs, narrow.

*Gum Copal-like or Lentiscus-leaved Sumach.* Fl. July, Aug. Clt. 1688. Shrub 8 feet.

31 *R. TRIJUGA* (Poir. dict. 7. p. 508.) leaves with 3 pairs of coriaceous ovate leaflets, which are pubescent beneath; petioles flat, striated. *h. S.* Native of Brazil, at Rio Janeiro. Fruit globose, shining.

*Three-paired-leaved Sumach.* Tree.

§ 2. *Toxicodendron* (from *τοξικον*, *toxikon*, poison, and *δενδρον*, *dendron*, a tree; tree very poisonous). *Tourn. inst. t. 381. Mœnch. meth. 73. but not of Gærtn. nor Thunb.—Pocóphorum*, Neck. clem. no. 964. Leaves pinnately trifoliate, with the middle leaflet stalked.

32 *R. RADICANS* (Lin. spec. 381.) leaflets ovate, smooth, entire. *h. H.* Native of North America, from Canada to Georgia, common in all woods, fields, and along fences. Berries white. Flowers dioecious, greenish.

Var.  $\alpha$ , *vulgaris* (D. C. prod. 2. p. 69.) plant climbing and

rooting; leaflets large, entire or rarely toothed, ovate. *R. Toxicodendron*, var.  $\alpha$ , *vulgare*, Pursh. fl. amer. sep. 1. p. 205. Sims, bot. mag. t. 1806. Duh. ed. nov. 2. t. 48. *Toxicodendron vulgare*, Mill. dict. This plant having in common with ivy the quality of not rising without the support of a wall, tree, or hedge; it is called in some parts of America creeping ivy. It will climb to the top of high trees in woods, the branches every where throwing out fibres, which penetrate the trunk of the tree which it grows on. When the stem is cut it emits a pale-brown sap, of a disagreeable scent, and so sharp that letters or marks made upon linen cannot be got out again, but grows blacker the more it is washed. Like *R. venenata* it is poisonous to some persons, but in a less degree. Kalin relates of two sisters, one could manage the tree without being affected by its venom, while the other felt its exhalation as soon as she came within 3 feet of it, or even when she stood to windward of it, at a greater distance; that it had not the least effect upon him, though he had made many experiments upon himself, and once the juice squirted into his eyes; but that on another person's hand, which he had covered very thick with it, the skin a few hours afterwards became as hard as a piece of tanned leather, and peeled off afterwards in scales.

Var.  $\beta$ , *volubilis* (D. C. prod. 2. p. 69.) stem climbing, scarcely rooting; leaflets ample, ovate. *Toxicodendron volubile*, Mill. dict.

Var.  $\gamma$ , *microcarpa* (D. C. prod. 2. p. 69.) leaflets oblong-ovate, with long taper points; fruit much smaller than in the two preceding varieties. *R. Toxicodendron microcarpon*, Pursh. fl. sept. amer. 1. p. 205.—Dill. elth. t. 291. f. 375.

These two last varieties possess the same poisonous qualities as the first, but in a less degree.

*Rooting Poison-oak or Sumach.* Fl. June, July. Clt. 1640. Shrub creeping or climbing.

33 *R. TOXICODENDRON* (Lin. spec. 381.) leaflets deeply-angled or sinuated, pubescent. *h. H.* Native of North America, along with *R. radicans*. *R. Toxicodendron quercifolium*, Michx. fl. bor. amer. 1. p. 182. Pursh. fl. sept. amer. 1. p. 205. *Toxicodendron pubescens*, Mill. dict. no. 2. According to Nuttall, this is a truly distinct species from the preceding. Perhaps the *T. serratum*, Mill. dict. is a variety of this plant. Flowers greenish. The juice of this tree is milky when it first exudes, but becomes jet black by exposure to the air. It is poisonous to the touch. It was first tried as a medicine by Dr. Alderson of Hull, in imitation of experiments of M. Fresnoi, with the *Rhus radicans*. He gave it in four cases of paralysis in doses of half a grain or a grain three times a day, and all his patients recovered to a certain degree the use of their limbs. The first symptom of amendment was always an unpleasant feeling of prickling or twitching in the paralytic limbs. Dr. Duncan has given it in larger doses without experiencing the same success; it was not however inactive. In one case the patient discontinued its use on account of the disagreeable prickling it occasioned, and in general it operated as a gentle laxative, notwithstanding the torpid state of the bowels of such patients.

*Common Poison-tree or Poison-oak.* Fl. June, July. Clt. 1640. Shrub creeping upon walls or trees.

34 *R. BAHAMENSIS*; leaflets ovate, acuminate, entire, lateral ones oblique at the base, pubescent beneath, especially on the nerves; petioles and branches hairy; racemes axillary, rather compound. *h. H.* Native of the Bahama Islands. The plant is poisonous like the two preceding.

*Bahama Poison-tree.* Fl. June, July. Shrub cr. or cl.

35 *R. LINEATIFOLIA* (Ort. dec. p. 89.) leaflets ovate, acuminate, toothed, quite entire at the base, lined, with the edges rather villous, lateral ones on short stalks, middle one on a long stalk; racemes axillary; berries striped. *h. S.* Native of the Island

of Cuba. *Rhamnus Cubensis*, Pers. ench. 1. p. 240. no. 35. *Rhamnus lineatifolius*, Schult. syst. 5. p. 294. *Rhus lineata*, Spreng. syst. Flowers cream-coloured.

*Line-leaved Sumach.* Clt. 1818. Shrub 2 feet.

§ 3. *Leaves palmately-trifoliate, that is to say, that the three leaflets rise from the top of the petiole.*

\* *Leaflets entire, more or less downy, as well as the petioles and branches.*

36 *R. GLAUCA* (Desf. arb. 2. p. 326.) leaflets obcordate, flat, usually covered with glaucous powder, smooth, quite entire. *h. G.* Native of the Cape of Good Hope. Pers. ench. 1. p. 326.

*Glaucous-leaved Sumach.* Fl. July. Clt. 1821. Shrub 4 ft.

37 *R. VILLOSA* (Lin. fil. suppl. 183.) leaflets obovate, bluntish, quite entire, rather hairy on both surfaces, as well as the petioles and branchlets; racemes axillary, much shorter than the leaves. *h. G.* Native of the Cape of Good Hope. *R. incana*, Mill. dict. no. 8.—Pluk. alm. t. 219. f. 8. In cultivation this species is sometimes smooth. It is perhaps not distinct from *R. æqualis*, Pers. ench. 1. p. 326. Flowers yellowish-green.

*Villous Sumach.* Fl. July. Clt. 1714. Shrub 6 feet.

38 *R. PYROLDES* (Burch. cat. 1796. voy. 1. p. 340.) leaflets subequal, obovate-oblong, quite entire, mucronated, and are, as well as the branchlets, covered with close-pressed pubescence; racemes axillary, shorter than the leaves, disposed in a terminal, elongated, leafless panicle. *h. G.* Native of the Cape of Good Hope. Leaves pale.

*Pear-like Sumach.* Clt. 1816. Shrub 6 feet.

39 *R. ATOMARIA* (Jacq. hort. schœnb. t. 343.) leaflets obovate, mucronate, quite entire, smoothish above, but clothed with velvety villi beneath, as well as the branches and petioles; panicle terminal, much branched. *h. G.* Native of the Cape of Good Hope. Flowers greenish-yellow. The leaves when bruised have the smell of turpentine.

*Atomed-leaved Sumach.* Fl. July. Clt. 1800. Sh. 6 to 8 ft.

40 *R. ELLIPTICA* (Thunb. fl. cap. 2. p. 214.) leaflets elliptical, entire, acute, downy beneath; petioles filiform; branches smooth; panicles axillary. *h. G.* Native of the Cape of Good Hope. Flowers greenish-yellow.

*Elliptical-leaved Sumach.* Fl. July. Clt. 1818. Shrub 6 feet.

41 *R. CILIATA* (Licht. in Schult. syst. 6. p. 661.) leaflets linear-lanceolate, quite entire, puberulous beneath, and fringed on the margins; branches spiny; panicle terminal. *h. G.* Native of the Cape of Good Hope. Burch. cat. 1946. Flowers greenish-yellow.

*Fringed-leaved Sumach.* Clt. 1816. Shrub 6 feet.

42 *R. BICOLOR* (Licht. in Schult. syst. 6. p. 661.) leaflets oblong, acute, downy beneath; racemes axillary. *h. G.* Native of the Cape of Good Hope.

*Two-coloured-leaved Sumach.* Shrub 6 feet.

43 *R. ANGUSTIFOLIA* (Lin. spec. 381. exclusive of Burmann's synonyme,) leaflets stalked, linear-lanceolate, quite entire, downy beneath. *h. G.* Native of Ethiopia. Pluk. phyt. t. 217. f. 6. *R. argentea*, Mill. dict. Panicles axillary. Flowers greenish.

*Narrow-leaved Sumach.* Clt. 1714. Shrub 7 feet.

44 *R. ROSMARINFOLIA* (Vahl. symb. 3. p. 50.) leaflets linear, acute, with revolute, quite entire edges, clothed with rusty down beneath; panicles axillary and terminal. *h. G.* Native of the Cape of Good Hope.—Burm. afr. t. 91. f. 1. *R. rosmarinifolia*, Thunb. fl. cap. 2. p. 212. is probably a distinct plant.

*Rosemary-leaved Sumach.* Clt. 1800. Shrub 6 feet.

\*\*\* *Leaflets entire, smooth, but the petioles and branchlets are more or less downy.*

45 *R. CIRRHIFLORA* (Lin. fil. suppl. 184.) leaflets obovate, quite entire, smooth; petioles pubescent; tendrils axillary, filiform; stem climbing. *h. G.* Native of the Cape of Good Hope, in woods. Thunb. fl. cap. 2. p. 218. Flowers yellowish-green.

*Tendril-flowered Sumach.* Shrub cl.

46 *R. PUBESCENS* (Thunb. fl. cap. p. 215.) leaflets obovate, quite entire, mucronate, smooth; petioles very short; branchlets pubescent. *h. G.* Native of the Cape of Good Hope. Flowers greenish-yellow.

*Pubescent Sumach.* Clt. 1800. Shrub 6 feet.

47 *R. PENDULINA* (Jacq. ex Willd. enum. 324.) leaflets lanceolate, quite entire, smooth on both surfaces, but fringed; petioles pubescent; branches pendulous; panicle racemose, terminal. *h. G.* Native of the Cape of Good Hope. Flowers greenish-yellow.

*Pendulous-branched Sumach.* Shrub 6 feet.

\*\*\* *Leaflets entire, and are, as well as petioles and branchlets, smooth.*

48 *R. THUNBERGIANA* (Schult. syst. 6. p. 651.) leaflets obcordate, glaucous, with revolute, smooth, quite entire edges. *h. G.* Native of the Cape of Good Hope. *R. glaucum*, Thunb. fl. cap. 2. p. 218. but not of Desf. Flowers greenish-yellow.

*Thunberg's Sumach.* Shrub 6 feet.

49 *R. LUCIDA* (Lin. spec. 382.) leaflets obovate, quite entire, very blunt, somewhat emarginate, smooth on both surfaces; racemes shorter than the leaves, in terminal panicles. *h. G.* Native of the Cape of Good Hope. *R. lucida*  $\beta$ , Ait. hort. kew. ed. 2. vol. 2. p. 166.—Comm. hort. 1. t. 93.—Pluk. phyt. t. 219. f. 9.—Burm. afr. 252. t. 91. f. 2. Flowers whitish. Fruit reddish.

*Var.  $\beta$ , subdentata* (D. C. prod. 2. p. 69.) some of the leaves are a little toothed. Jacq. hort. schœnb. t. 347.

*Shining-leaved Sumach.* Fl. July, Aug. Clt. 1694. Sh. 8 ft.

50 *R. CAVANILLESII* (D. C. prod. 2. p. 69.) leaflets obovate, very blunt, somewhat emarginate, quite entire, smooth on both surfaces; racemes longer than the leaves. *h. G.* Native of Mexico. *R. lucidum*, Cav. icon. 2. p. 27. t. 132. exclusive of the synonyms. Flowers greenish-yellow. Fruit reddish.

*Cavanilles's Sumach.* Fl. July, Aug. Clt. 1697. Shrub 6 ft.

51 *R. BURMANNI* (D. C. prod. 2. p. 69.) leaflets obovate, blunt, mucronate, quite entire, pale beneath, smooth on both surfaces, as well as the branches; racemes interrupted, a little shorter than the leaves. *h. G.* Native of the Cape of Good Hope. Burm. afr. p. 232. t. 91. f. 2. *R. lucidum*  $\alpha$ , Ait. hort. kew. ed. 2. vol. 2. p. 166. Flowers greenish-yellow or whitish.

*Burmann's Sumach.* Fl. July, Aug. Clt. 1797. Shrub 6 feet.

52 *R. PANICULATA* (Wall. mss. in herb. Lin. soc.) leaves palmately-trifoliate; leaflets smooth, coriaceous, obovate-oblong, emarginate at the apex; panicles axillary and terminal. *h. S.* Native of Asia.

*Panicle-flowered Sumach.* Shrub.

53 *R. NERVOSA* (Poir. suppl. 5. p. 264.) lateral leaflets small, cuneately-obovate, very blunt, mucronulate, shining on both surfaces, and are, as well as the branches, quite smooth; racemes rather shorter than the leaves, disposed in a terminal panicle. *h. G.* Native of the Cape of Good Hope. Burch. cat. no. 2871. Flowers greenish-yellow.

*Var.  $\beta$ , mucronata* (Thunb. fl. cap. 2. p. 216.) petioles very short; panicles axillary.

*Nerved-leaved Sumach.* Clt. 1800. Shrub 6 feet.

54 *R. LEVIGATA* (Lin. spec. 1672.) leaflets oblong, quite entire, acute at both ends, and are, as well as the petioles and branches, smooth; panicle terminal, elongated, loose. *h. G.*

Native of the Cape of Good Hope. *R. elongata*, Jacq. hort. schœnb. t. 345. Flowers yellowish-white.

*Smooth Sumach.* Fl. July, Sept. Clt. 1758. Sh. 7 ft.

55 *R. LANCEA* (Lin. fil. suppl. 184.) leaflets linear, acuminate at both ends, and are smooth, as well as the branches, lateral ones diverging in a straight angle; panicle loose, terminal. *h. G.* Native of the Cape of Good Hope. Thunb. fl. cap. 2. p. 212.

*Lance-leafletted Sumach.* Clt. 1810. Shrub 10 feet.

56 *R. VIMINALIS* (Vahl. symb. 3. p. 50.) leaflets linear-lanceolate, very long, quite entire, somewhat tapering to the base, and are, as well as the branches, quite smooth; panicles axillary, shorter than the leaves. *h. G.* Native of the Cape of Good Hope. Jacq. hort. schœnb. t. 344. Flowers greenish-yellow.

*Green-twiggy Sumach.* Fl. Sept. Nov. Clt. 1774. Sh. 8 ft.

57 *R. FRAGRANS* (Licht. in Schult. syst. 6. p. 661.) leaflets linear-lanceolate, mucronate, smooth. *h. G.* Native of the Cape of Good Hope. Probably quite distinct from *R. rigida*.

*Fragrant Sumach.* Fl. July, Sep. Clt. 1824. Shrub 6 feet.

58 *R. DENUDATA* (Licht. in Schult. syst. 6. p. 661.) leaflets lanceolate-linear, and are smooth, as well as the branches; panicles capillary, axillary, shorter than the leaves. *h. G.* Native of the Cape of Good Hope. Flowers greenish-yellow.

*Naked Sumach.* Shrub 6 feet.

59 *R. TRIDACTYLA* (Burch. cat. no. 1667. voy. 1. p. 340.) leaflets smooth, quite entire, linear, very blunt, broadest towards the base; branches stiff, spreading, unarmed. *h. G.* Native of the Cape of Good Hope. Flowers greenish-yellow.

*Three-fingered-leaved Sumach.* Clt. 1816. Shrub 6 feet.

\*\*\*\* *Leaflets toothed, crenate or serrated, more or less downy.*

60 *R. PARVIFLORA* (Roxb. hort. beng. p. 22.) leaflets obovate, crenate-toothed, somewhat velvety, and are as well as the petioles and branchlets velvety-villous beneath; middle one much larger than the rest; panicle terminal, villous. *h. G.* Native of Nipaul. This species is allied to *R. atomaria*, but the leaves are not entire. Flowers greenish-yellow.

*Small-flowered Sumach.* Shrub 6 feet.

61 *R. ALBIDA* (Schousb. murec. 128.) leaflets wedge-shaped, entire, or somewhat crenated, obtuse, whitish-glaucous, and lepidotod, smooth; petioles a little winged; panicles axillary and terminal. *h. G.* Native of Mogodor. *R. albicans*, Willd. enum. 325.

*Whitened-leaved Sumach.* Clt. 1816. Shrub 2 feet.

62 *R. OXYACANTHA* (Schousb. in act. soc. hafi. p. 71.) leaflets cuneate-obovate, usually entire, middle one longest, hoary on both surfaces, as well as the branches and petioles; branches unarmed; racemes axillary and terminal; flowers probably dioecious. *h. G.* Native of Mogodor. *R. cratægiforme*, Pers. ench. 1. p. 326. ? This species is perhaps sufficiently distinct from *R. dioica* and *R. albidula*. Flowers greenish-yellow.

*Sharp-spined Sumach.* Clt. 1823. Shrub 6 feet.

63 *R. SINUATA* (Thunb. fl. cap. 2. p. 222.) leaflets ovate, obtuse, sinuated, villous beneath, as well as the branches; panicles axillary. *h. G.* Native of the Cape of Good Hope. *Myrica trifoliata*, Lin. ex Thunb. ?

*Sinuate-leafletted Sumach.* Clt. 1820. Shrub 6 feet.

64 *R. MYSORENSIS*; leaflets obovate, middle one long, all retuse, sinuately-lobed, brown and pubescent beneath. *h. S.* Native of Mysore. Racemes paniced, axillary, and terminal.

*Mysore Sumach.* Shrub.

65 *R. DIMIDIATA* (Thunb. fl. cap. 2. p. 220.) leaflets sessile, smooth above but villous beneath, obovate, middle one 3-toothed, lateral one dimidiate, sinuately toothed. *h. G.* Native of the Cape of Good Hope. This species is allied to *R. tridentata*. Flowers greenish-yellow.

*Dimidiate-leaved Sumach.* Shrub 6 feet.

66 *R. TRIDENTATA* (Lin. fil. suppl. 184.) climbing; leaflets on short petioles, ovate, hoary, serrated; serratures 3-5; tendrils axillary. *h. G.* Native of the Cape of Good Hope. Thunb. fl. cap. 2. p. 220. Flowers yellowish-green.

*Three-toothed-leafletted Sumach.* Clt. 1816. Shrub cl.

67 *R. DISSECTA* (Thunb. fl. cap. 2. p. 223.) leaflets sharply cut, pinnatifid, smooth above, but clothed with white down beneath; branches smooth. *h. G.* Native of the Cape of Good Hope. Flowers greenish-yellow.

*Dissected-leaved Sumach.* Clt. 1820. Shrub 6 feet.

68 *R. TOMENTOSA* (Lin. spec. 382.) leaflets elliptical, acuminate at both ends, coarsely serrated from the middle to the apex, clothed with white down beneath, but smoothish above, as well as the branches; panicles terminal, downy. *h. G.* Native of the Cape of Good Hope. Comm. hort. amst. 1. t. 92. — Pluk. phyt. t. 219. f. 7. Flowers greenish-yellow.

*Downy-leaved Sumach.* Clt. 1691. Shrub 8 feet.

69 *R. INCISA* (Lin. fil. suppl. 183.) leaflets obovate, wedge-shaped, obtuse, deeply pinnatifid, clothed with white down beneath, but pubescent above, as well as the branches; calyxes downy. *h. G.* Native of the Cape of Good Hope. Flowers greenish-yellow.

*Incised-leaved Sumach.* Clt. 1789. Shrub 6 feet.

\*\*\*\*\* *Leaflets toothed, serrated, smooth, but the petioles and branchlets are sometimes downy.*

70 *R. EXCISA* (Thunb. fl. cap. 2. p. 216.) leaflets obovate or somewhat oblong, entire or a little cut, smooth; branches divaricate, smooth. *h. G.* Native of the Cape of Good Hope. Flowers and fruit unknown.

*Cut-leaved Sumach.* Clt. 1816. Shrub 6 feet.

71 *R. RIGIDA* (Mill. dict. no. 14.) leaflets linear, acuminate, smooth, stiff, entire, or with a few acute teeth; panicles terminal; branches smooth. *h. G.* Native of the Cape of Good Hope. Burch. cat. no. 2929. Flowers greenish-yellow.

*Stiff-leaved Sumach.* Clt. 1700. Shrub 6 feet.

72 *R. SERREFOLIA* (Burch. cat. no. 1697.) leaflets linear, acuminate, elongated, serrated, and are, as well as the branches, smooth; panicles terminal. *h. G.* Native of the Cape of Good Hope. Flowers greenish-yellow.

*Saw-leaved Sumach.* Clt. 1816. Shrub 6 feet.

73 *R. UNDULATA* (Jacq. hort. schœnb. t. 346.) leaflets obovate, tapering to the base, somewhat serrated, wavy; panicles axillary, length of leaves. *h. G.* Native of the Cape of Good Hope. Pers. ench. 1. p. 326. Flowers whitish-yellow.

*Wavy-leaved Sumach.* Clt. 1816. Shrub 6 feet.

74 *R. DIOICA* (Brouss. in Willd. enum. p. 325.) leaflets obovate, middle one largest, 3-5-toothed, cuneated at the base, smooth; branches spiny, smooth; racemes short, axillary; flowers dioecious. *h. G.* Native of Mogodor. *R. oxyacanthoides*, Dum. Cours. bot. cult. 6. p. 662. Flowers greenish-yellow.

*Dioecious Sumach.* Clt. 1825. Shrub 6 feet.

75 *R. LOBATA* (Poir. suppl. 5. p. 264.) leaflets wedge-shaped at the base, and entire, but furnished with lobe-like teeth at the apex, and are, as well as the branches, smooth; racemes axillary. *h. G.* Native of Teneriffe, in bushy places. This species is sometimes furnished with simple leaves, rising from the axillæ of the others. Flowers greenish-yellow.

*Lobed-leaved Sumach.* Clt. 1800. Shrub 6 feet.

76 *R. EROSA* (Thunb. fl. cap. 2. p. 212.) leaflets lanceolate, crenately-toothed, shining, and are, as well as the branches, quite smooth; panicles axillary. *h. G.* Native of the Cape of Good Hope. Flowers greenish-white.

*Erose-leaved Sumach.* Shrub 6 feet.

77 *R. CUNEIFOLIA* (Desf. cat. par. ed. 2. p. 227.) leaflets wedge-shaped, smooth, with 5 or 6 blunt teeth at the apex; branches pubescent. *h. G.* Native of the Cape of Good Hope. Perhaps the same as *R. cuneifolia*, Thunb. fl. cap. 2. p. 222. Flowers greenish-white.

*Wedge-leaved Sumach.* Clt. 1816. Shrub 6 feet.

78 *R. SAXATILIS* (Moc. et Sesse, fl. mex. icon. ined. D. C. prod. 2. p. 74.) leaflets ovate-lanceolate, acuminate, coarsely serrated, and are, as well as the branches, smooth; racemes axillary, length of petioles. *h. G.* Native of Mexico, on rocks, where it is called *Metzquiquilli*. Flowers whitish-green.

*Rock Sumach.* Shrub 6 feet.

79 *R. GRANDIDENTATA* (D. C. prod. 2. p. 72.) leaflets obovate, cuneate at the base, with 3 or 4 deep teeth at the apex; panicles terminal; fruit round, smooth. *h. G.* Native of the Cape of Good Hope. Burch. cat. no. 3079. Flowers whitish-green.

*Large-toothed-leaved Sumach.* Shrub 6 feet.

80 *R. MICRANTHA* (Thunb. fl. cap. 2. p. 221.) leaflets ovate, acute, toothed at the apex; panicles axillary, supra-decom-pound. *h. G.* Native of the Cape of Good Hope. Flowers greenish-white.

*Small-flowered Sumach.* Clt. 1818. Shrub 6 feet.

81 *R. DENTATA* (Thunb. fl. cap. 2. p. 219.) leaflets obovate, mucronately-toothed; stem covered with scabrous tubercles. *h. G.* Native of the Cape of Good Hope. Flowers yellowish-green.

*Toothed-leaved Sumach.* Clt. 1793. Shrub 6 feet.

82 *R. CRENATA* (Thunb. fl. cap. 2. p. 219.) leaflets wedge-shaped, crenately trifid at the apex, smooth, but rufous beneath; branches villous; racemes terminal. *h. G.* Native of the Cape of Good Hope. Flowers greenish-yellow.

*Crenate-leaved Sumach.* Clt. ? Shrub 3-6 feet.

83 *R. SPICATA* (Thunb. fl. cap. 2. p. 217.) leaflets obovate, toothed at the apex, and are, as well as the branches, smooth; flowers spicate. *h. G.* Native of the Cape of Good Hope. Perhaps this species is referable to section *Lobadium*.

*Spike-flowered Sumach.* Shrub 6 feet.

84 *R. AFRICANA* (Mill. dict. no. 11.) leaflets ovate, nerved, usually toothed, green on both surfaces. *h. G.* Native of the Cape of Good Hope. Flowers greenish-yellow.

*African Sumach.* Shrub 6 feet.

85 *R. MEERBURGHIANA* (Rœm. et Schult. syst. 6. p. 663.) leaflets linear-lanceolate, smooth. *h. G.* Native of? *R. pumilum*, Meerb. icon. pict. t. 14. but not of Michx.

*Meerburgh's Sumach.* Shrub 8 feet.

SECT. IV. *THEZERA* (from *θηζας*, *thezas*, a point; in reference to the prickles). D. C. prod. 2. p. 72. Flowers dioecious. Styles 3, distinct, short. Drupe roundish, marked with 3 tubercles at the apex, containing a compressed nut. Leaves palmately 3-5-foliate; leaflets sessile. Flowers disposed in short racemes.

86 *R. PENTAPHYLLA* (Desf. fl. atl. 1. p. 267. t. 77.) branches spiny; petioles a little winged; leaflets 3-5, linear-lanceolate, broadest at the apex, blunt, entire or 3-toothed. *h. II.* Native of Sicily and Barbary. *Rhamnus pentaphyllus*, Jacq. obs. 2. p. 27.—Bocc. sic. t. 21. *R. Thezera*, Pers. ench. 1. p. 325. Tin. pug. 1. p. 7. Flowers pale-yellow. Fruit red when ripe, with a subacid, rather pleasant taste. The bark dyes red, and is used for tanning leather.

*Five-leaved Sumach.* Clt. 1816. Shrub 10 feet.

87 *R. ZIZYPHINA* (Tin. pug. sic. 1. p. 8.) leaflets 3, wedge-shaped, toothed beyond the middle, smooth, shining above; branches spiny, divaricate; racemes terminal. *h. II.* Native of Sicily, on the mountains. Schrank. in flora, 1819. p. 384.

*Rhamnus tripartita*, Ucria and *Zizyphus tripartita*, Rœm. et Schult. syst. 5. p. 342. and 6. p. 663. Flowers yellowish.

*Zizyphus-like Sumach.* Clt. 1800. Shrub 4 feet.

SECT. V. *LOBADIUM* (from *loba*, a stalk of wheat; similarity in the dense aments of flowers). Rafin. in journ. phys. 89. t. 98. D. C. prod. 2. p. 73.—*Turpinia*, Rafin. in Desv. journ. 1809. 2. p. 170.—*Schmalzia*, Desv. journ. Flowers polygamous. Glands 2-lobed, alternating with the stamens under the ovary. Styles 3, short, distinct. Drupe somewhat compressed, villous, containing a smooth nut.—Aromatic shrubs, with palmately-trifoliate leaves, rising from the top of the common petiole, sessile, coarsely and deeply serrated. Flowers disposed in dense aments.

88 *R. SUAVEOLENS* (Ait. hort. kew. 1. p. 368.) leaflets sessile, ovate-rhomboid, deeply serrated, smooth. *h. II.* Native of Carolina. *Myrica trifoliata*, Hortul. and perhaps of Lin.? *Toxicodendron crenatum*, Lam. dict. no. 5. Flowers greenish-yellow.

*Sweet-scented Sumach.* Fl. May. Clt. 1759. Shrub 6 feet.

89 *R. AROMATICA* (Ait. hort. kew. 1. p. 367.) leaflets sessile, ovate-rhomboid, deeply serrated, covered with longish pubescence. *h. II.* Native of North America, in Pennsylvania, Carolina, and Kentucky, in rocky situations, about springs. Flowers yellow in catkins, as well as those of the preceding species, which give them quite a distinct appearance from the rest of the genus.

*Aromatic Sumach.* Fl. May, June. Clt. 1772. Shrub 6 ft.

† *Species not sufficiently known.*

\* *Leaves simple.*

90 *R. ANTIA* (Forst. prod. 112.) leaves simple, ovate-oblong; flowers polygamous. *h. G.* Native of New Caledonia.

*Atta Sumach.* Shrub.

91 *R. SÆNEB* (Forsk. suppl. 207.) leaves long, lanceolate, serrated, clothed with white down beneath; fruit globose, hispid, crowded. *h. F.* Native of Arabia, on the mountains about Hadia, where it is called *Sæneb*.

*Sæneb Sumach.* Shrub.

92 *R. MO'LLIS* (H. B. et Kunth, nov. gen. amer. 7. p. 10. t. 602.) leaves simple, oblong-elliptical, cordate, almost entire, coriaceous, and are, as well as the branchlets, clothed with soft hairs; racemes axillary, few-flowered; calyxes closed, covered with long pubescence. *h. G.* Native of Mexico, near Quaretero. The branches of this shrub, when immersed in water, turns it blue. Fruit unknown. This is probably a genuine species of the genus.

*Soft Sumach.* Shrub.

93 *R. CAUSTICA* (Hook. bot. Beech. p. 15. t. 7.) leaves simple, coriaceous, elliptical, quite entire, with cartilaginous margins; racemes subpanicle, axillary, and terminal; flowers dioecious, decandrous; fruit drupaceous, dry. *h. G.* Native of Chili, at Concepcion. *Laurus caustica*, Molina, Willd. and others.—Litri or Llithi, Feull. per. vol. 3. t. 23. A much branched shrub, of which there are two varieties; the one with rather pubescent branches and smooth leaves, the other with the branches pubescent, as well as the leaves beneath. This is so extremely poisonous that individuals resting or sleeping under it at certain times of the year are afterwards attacked with eruptions all over the body.

*Caustic Sumach or Llithi-tree.* Shrub 10 feet.

\*\* *Leaves pinnate.*

94 *R. ? HETEROPHYLLA* (D. C. cat. hort. monsp. 1813. p. 136.) leaves impari-pinnate, with 5-7 ovate, rarely 3 or 1, oblong, quite smooth leaflets; petioles a little winged at the apex; flowers dioecious from abortion. *h. G.* Native of? Fruit unknown. Stamens 5. Stigmas 3. Perhaps *R. heterophylla*,

Balb. cat. taur. 1813. p. 64. and Poir. suppl. 5. p. 262. is the same, or a distinct species. It is also probably the *R. variifolium*, Moc. et Sesse, fl. mex. icon. ined.

*Variable-leaved Sumach.* Shrub.

95 *R. DIGITATA* (Lin. fil. suppl. 184.) climbing; leaves pinnate; leaflets 5, oblong, quite entire, smooth, obtuse; tendrils axillary.  $\frac{1}{2}$ . G. Native of the Cape of Good Hope. Flowers and fruit unknown.

*Digitate-leaved Sumach.* Clt. 1820. Shrub cl.

\* \* \* *Leaves trifoliate.*

96 *R. ARBorea* (D. C. prod. 2. p. 73.) leaflets lanceolate, unequally serrated, downy beneath; petioles and branches pilosely-tomentose; stem arborescent.  $\frac{1}{2}$ . S. Native of Jamaica, on hills, as well as of Campeachy. *Toxicodendron arboreum*, Mill. dict. no. 8. Berry orange, smooth. Sloan. cat. 170.

*Tree Sumach.* Tree 20 feet.

97 *R. ARBORESCENS* (D. C. prod. 2. p. 73.) leaflets ovate-lanceolate, acuminate, smooth, oblique at the base; stem shrubby, branched; flowers dioecious.  $\frac{1}{2}$ . S. Native about Carthage. *Toxicodendron arborescens*, Mill. dict. no. 9.

*Arborescent Sumach.* Shrub 6 feet.

*Cult.* The hardy species of this genus are very proper for shrubberies; some of them are propagated freely from cuttings of the roots, and others from cuttings and layers. The greenhouse and stove species will grow in any kind of soil, and ripened cuttings of them root freely under a hand-glass in sand; those of the stove species require heat.

XVIII. MAURIA (in honour of Antonio Mauri, an Italian botanist, author of *Floræ Romanæ Prodrum*, 8vo. 1818). H. B. et Kunth, nov. gen. amer. 7. p. 11. gen. tereb. p. 6.

LIN. SYST. *Octo-Decandria*, *Monogynia*. Flowers hermaphrodite. Calyx 4-5-lobed, urceolate, permanent. Petals 4-5, broad at the base. Stamens 8-10, inserted under the disk. Disk annular. Ovary 1, sessile, 1-celled, 1-ovulate. Style very short. Stigma thick, 3-5-angled. Fruit obliquely-elliptical, compressed, rather fleshy. Seed without albumen, pendulous. Cotyledons flat. Radicle superior, hooked.—Peruvian trees, with simple or impari-pinnate leaves, and axillary and terminal panicles of flowers.

1 *M. SIMPLICIFOLIA* (H. B. et Kunth, l. c. t. 605.) leaves simple, somewhat elliptical.  $\frac{1}{2}$ . S. Native of South America. Flowers pale-red.

*Simple-leaved Mauria.* Tree 20 feet.

2 *M. HETEROPHYLLA* (H. B. et Kunth, l. c. t. 606.) leaves with 1 or 2 pairs of leaflets; with an odd one, which is oblong.  $\frac{1}{2}$ . S. Native of Peru, between Loxa and Ayavaca. Fruit unknown. Flowers pale-red.

*Variable-leaved Mauria.* Tree 20 feet.

*Cult.* For culture and propagation see the stove species of *Rhus*.

XIX. STAGMARIA (from  $\sigma\tau\alpha\zeta\omega$ , *stazo*, to run out; the bark exudes a resin). Jack, mal. misc. no. 1. p. 12.

LIN. SYST. *Pentandria*, *Mono-Trigynia*. Calyx inferior, tubular, deciduous, with the mouth irregularly ruptured. Petals 5, inserted in the stipe of the ovary. Stamens 5, alternating with the petals; filaments about the length of the corolla; anthers oblong. Ovary 3-lobed; lobes 1-seeded, 1-2 of which are usually abortive. Styles 1-3, rising from the tops of the lobes of the ovary. Stigmas obtuse. Berry kidney-shaped, furrowed, 1-seeded, warted. Seed exalbuminous. Embryo falsely monocotyledonous.—A tree, full of resinous juice, with simple exstipulate leaves, and panicles of flowers.

1 *S. VERNICIFLUA* (Jack, l. c.)  $\frac{1}{2}$ . S. Native of Sumatra and Borneo, and other East India Islands.—Rumph. amb. 2. p.

259. t. 86. A large tree, with alternate elliptic-lanceolate leaves. It is dangerous to handle, or even to sit or sleep under its shade. The bark exudes a resin, which soon becomes hard and black on exposure, and is collected and employed as a varnish. According to Rumphius, this is the celebrated varnish-tree of Japan, and probably the *Aúgia* of Lourieiro.

*Varnish-flowing Stagmaria.* Tree 50 feet.

*Cult.* For culture and propagation see stove species of *Rhus*.

XX. DUVAUA (in honour of M. Duvau, a French botanist). Kunth, gen. tereb. p. 8. D. C. prod. 2. p. 74.

LIN. SYST. *Monœcia* or *Diœcia*, *Octandria*. Flowers monoecious or dioecious. Calyx 4-cleft, permanent. Petals 4, concave. Stamens 8-10, inserted under the disk, alternate ones longer than the petals, they are barren in the female flowers. Disk urceolar, 8-toothed. Ovary sessile, conical, containing only one ovulum, sterile in the male flowers. Styles 3-4, very short. Stigmas capitate. Drupe globose, containing a coriaceous nut. Seed 1, pendulous, destitute of albumen, with flat cotyledons and a long superior radicle.—Smooth, somewhat spinous trees, natives of Chili, with simple, almost entire leaves, and axillary, many-flowered racemes. Flowers sometimes 5-cleft.

1 *D. DEPENDENS* (D. C. prod. 2. p. 74.) leaves ovate-lanceolate, entire, and sometimes trifid; racemes simple, length of leaves; flowers usually octandrous.  $\frac{1}{2}$ . F. Native of Chili, where it is called *Huinghan*. *Amyris polygama*, Cav. icon. 3. p. 20. t. 239. *Schinus dependens*, Ort. dec. 8. p. 102. Flowers yellowish-white. Berries black. The flowers are occasionally polygamous, monoecious, and dioecious.

*Dependent-branched Duvaua.* Clt. 1790. Tree 20 feet.

2 *D. DENTATA* (D. C. prod. 2. p. 74.) leaves lanceolate, toothed; racemes compound, a little longer than the leaves; flowers decandrous.  $\frac{1}{2}$ . F. Native of the island of Owhyhee. *Schinus dentatus*, Andr. bot. rep. t. 620. Flowers white, numerous, in compound axillary racemes. Berries black, the size of a small currant, with a sweet fleshy pulp, each having many cells, though generally perfecting but one seed.

*Toothed-leaved Duvaua.* Fl. May, Jul. Clt. 1795. Tr. 20 ft.

*Cult.* For culture and propagation see greenhouse species of *Rhus*.

XXI. SCHINUS ( $\sigma\kappa\iota\nu\omicron\varsigma$ , *schinos*, is the Greek name for the mastick; a resinous juice exudes from this tree similar to mastick). Lin. gen. no. 1130. Lam. ill. t. 822. Kunth, gen. tereb. p. 7. D. C. prod. 2. p. 74.

LIN. SYST. *Diœcia*, *Decandria*. Flowers dioecious. Calyx 5-parted. Petals 5. Male flowers with 10 stamens and the rudiment of an ovary. Female flowers with sterile stamens and one sessile ovary. Style wanting. Stigmas 3-4, collected into a dot. Drupe globose, with a thin epicarp, and very little pulp, containing a 1-seeded bony nut, having 6 hollows or cavities in the circumference. Seed without albumen, compressed, suspended by a funicle, which rises from the side of the parietes. Embryo with flat cotyledons and an inferior radicle.—Shrubs or little trees, natives of America, abounding in peppery, balsamiferous gum. Racemes or panicles axillary. Leaves impari-pinnate. This genus agrees with *Spôndias* in the radicle being inferior.

1 *S. MU'LLI* (Lin. spec. 1467.) leaves with numerous pairs of lanceolate, serrated leaflets, terminal one longest; flowers panicled.  $\frac{1}{2}$ . G. Native of Brazil and Peru. Mill. fig. t. 246. Lam. ill. t. 822. Flowers small, yellowish-green. Berries about as large as a pea, of a singularly beautiful rose-colour, and highly polished. The Peruvians are reported to make a vinous drink by boiling these berries, as well as a kind of honey, and a sort of vinegar, according to the mode of management. A resinous gum exudes from the stem, which par-

takes of the nature of mastic. The fresh leaves have a singular motion when immersed in water, and emit a turpentine odour when bruised. *Mulli* is the Peruvian name of the tree.

*Var. β, Arcira* (Lin. spec. 1467.) leaflets almost quite entire. *h. G.* Mölle, Clus. cur. post. p. 94. with a figure. Both varieties are beautiful shrubs in England, but they are said to grow to considerable trees in the places of their natural growth. The first variety stands in the open air in Sicily.

*Mulli* or Peruvian Mastic-tree. Fl. July, Aug. Clt. 1597. Tree 20 feet.

2 *S. TEREBINTHIFOLIUS* (Raddi, pl. bras. p. 20.) leaves impari-pinnate, with 7 somewhat serrated, almost equal leaflets; flowers racemose. *h. S.* Native of Brazil. *C. Aroçiri*, Marg. bras. p. 90. Flowers greenish-white.

*Terebinthus-leaved Schinus*. Clt. 1830. Tree 20 feet.

3 *S. HU'YGAN* (Mol. chil. ed. gall. 337.) leaves impari-pinnate; leaflets serrated; stalked; the odd one very short. *h. G.* Native of Chili, where it is called *Huinghan*. Flowers greenish-white.

*Huinghan Schinus*. Tree.

*Cult.* For culture and propagation see greenhouse and stove species of *Rhus*, p. 76.

† *Genera allied to Terebinthaceæ, Tribe Sumachiceæ, but are not sufficiently known.*

\* *Petals 4-5. Stamens usually 3-5.*

XXII. TRICEROS (from *τρεις*, *treis*, three, and *κερας*, *keras*, a horn; in allusion to the fruit being crowned by three horns). Lour. fl. coch. 181. D. C. prod. 2. p. 89.

LIN. SYST. *Pentandria, Trigynia*. Calyx 5-parted, permanent, spreading. Petals 5. Stamens 5. Ovary roundish. Styles 3, distant at the base and simple. Berry coriaceous, 3-horned, 3-celled. Seeds 2? roundish.—A tree with impari-bipinnate leaves, having 2 pairs of pinnae. Racemes loose, subterminal.

1 *T. COCHINCHINENSIS* (Lour. l. c.). *h. G.* Native of Cochinchina, on the mountains. Flowers white.

*Cochin-china Triceros*. Tree 25 feet.

*Cult.* See *Cucurum* for culture and propagation, p. 78.

XXIII. TRATTINICKIA (in honour of Trattinick, a German botanist). Willd. spec. 4. p. 975. but not of Pers. nor Esp. D. C. prod. 2. p. 89.

LIN. SYST. *Monœcia, Pentandria*. Male and female flowers mixed. Calyx campanulate, 3-toothed. Corolla campanulate, 3-toothed. Stamens 5, rising from the torus. Ovary 1, ovate. Style awl-shaped, simple. Fruit unknown.—A large tree, with the appearance of *Rhus*. Leaves impari-pinnate. Panicles of flowers terminal. From the petals being connected, it would appear that this tree is closely allied to *Hedvigia*.

1 *T. RHODIFOLIA* (Willd. l. c.). *h. S.* Native of Brazil, in the province of Para.

*Red-leaved Trattinickia*. Tree 66 feet.

*Cult.* See stove species of *Rhus*, for culture and propagation, p. 76.

XXIV. HUERTIA (in honour of Jerome Huerta, a Spaniard, who translated Pliny into his own language). Ruiz et Pav. fl. per. prod. 34. t. 6. syst. 1. p. 63. D. C. prod. 2. p. 90.

LIN. SYST. *Pentandria, Monogynia*. Calyx 5-toothed. Petals 5, ovate, sessile. Stamens 5. Ovary free. Style 1. Stigma bifid, acute. Drupe? obovate, containing a 1-celled, 1-seeded nut?—A tree with impari-pinnate leaves, and stalked, oval-lanceolate, serrated leaflets, which are villous at the origin of the veins beneath, bearing 2 glands at the base of each. Racemes axillary and terminal. Flowers yellow.

1 *H. GLANDULOSA* (Ruiz et Pav. fl. per. 3. p. 5. t. 227. f. a.). *h. S.* Native of Peru in groves.

*Glandular Huertia*. Tree 70 feet.

• *Cult.* See stove species of *Rhus*, for culture and propagation, p. 76.

• XXV. RUMPHIA (in honour of George Everard Rumphius, Consul of Amboyna, author of *Herbarium Amboinense*, 1750 in fol.; died 1706). Lin. gen. no. 47. Lam. ill. t. 25. D. C. prod. 2. p. 90.

LIN. SYST. *Triandria, Monogynia*. Calyx tubular, 3-cleft. Petals 3, oblong. Stamens 3, exserted equal with the petals. Ovary 1, somewhat trigonal. Style 1. Drupe coriaceous, turbinate, 3-furrowed, containing a 3-celled, 3-seeded nut.—A tree, with simple leaves and axillary racemes of white flowers. This genus is excluded from *Terebinthaceæ* by S. Kunth.

1 *R. TILLOFOLIA* (Lam. dict. 6. p. 352.). *h. S.* Native of Malabar, not of Amboyna. • *R. Amboinensis*, Lin. spec. 49. Rheed. mal. 4. t. 11. Leaves cordate, ovate, crenate, hairy, rough.

*Lime-tree-leaved Rumphia*. Tree 60 feet.

*Cult.* See stove species of *Rhus* for culture and propagation, p. 76.

XXVI. BARBYLUS (a name by which Theocritus and others have called the common damask prune). P. Browne, jam. 116. D. C. prod. 2. p. 91.—Barola, Adans. fam. 344.

LIN. SYST. *Octo-Decandria, Monogynia*. Calyx 4-5-cleft, campanulate. Petals 4-5, rising from the margin of the calyx. Stamens 8-10, rising from the bottom of the calyx. Ovary free. Style and stigma 1. Capsule 3-celled, each cell containing 2 seeds.—A tree with alternate, pinnate leaves, and racemes of white flowers. This genus is hardly known, but according to Adanson it is allied to *Terebinthaceæ*.

1 *B. JAMAICENSIS* (D. C. prod. 2. p. 91.) *h. S.* Native of Jamaica.

*Jamaica Barbylus*. Tree 20 feet.

*Cult.* See stove species of *Rhus* for culture and propagation, p. 76.

\* \* *Petals wanting. Stamens 10-12.*

XXVII. LUNANEA (in honour of John Lunan, author of *Hortus Jamaicensis*). D. C. prod. 2. p. 92.—*Edwardsia*, Rafin. speech. 1. p. 158, but not of Salisb.—Bichy, Lunan, hort. jam. 1. p. 86.

LIN. SYST. *Polygamia, Diœcia*. Flowers polygamous. Calyx coloured, 5-parted; lobes erectly-spreading, thick, and pilose on the outside. Petals wanting. Disk concave, 10-toothed. Stamens 10, exserted from the disk; anthers with coalescent teeth on the outside. • Ovary roundish, crowned by 5 stigmas. Capsule somewhat ovate, gibbous, 1-celled, valveless (ex Rafin), semilocular, 2-valved (ex Lunan). This genus is allied to *Poupártia*, according to Rafin. Seeds fixed by the back.

1 *L. BICHY* (D. C. prod. 2. p. 92.). *h. S.* Native of Guinea, from whence it has been introduced to the West Indies by the negroes, under the name of *Bichy*. *Edwardsia lûrida*, Rafin. l. c. *Amýris Lunani*, Spreng. syst. 2. p. 217. Leaves alternate, stalked, oblong, acuminate, smooth, waved, veiny, and compound racemes of yellow flowers, which are striped with purple and have an ungrateful smell.

*Bichy Lananía*. Tree.

*Cult.* For culture and propagation see stove species of *Rhus*, p. 76.

XXVIII. HETERODE'NDRON (from *ἕτερος*, *heteros*, variable, and *ἔνδρον*, *dendron*, a tree; tree variable in form). Dest. mem. mus. 4. p. 9. t. 3. D. C. prod. 2. p. 92.

LIN. SYST. *Decandria, Monogynia*. Flowers hermaphrodite.

Calyx small, permanent, sinuately 4-5-toothed. Petals wanting. Stamens 10-12, hypogynous; anthers 2-celled, inserted by the base. Ovary bluntly 2-4-sided, 2-4-celled, hairy. Style scarcely any. Fruit unknown.—A shrub, with the appearance of *Cneorum*. Leaves simple, oblong-lanceolate, quite entire. Flowers in axillary racemes.

1 H. *OLEÆFOLIUM* (Desf. l. c.). h. G. Native of New Holland. Flowers yellowish-green.

*Olive-leaved Heterodendron*. Shrub.

*Cult.* See *Cneorum* for culture and propagation.

XXIX. *STYLOBASIUM* (from *στυλος*, *stylos*, a style, and *βάσις*, *basis*, a base; style at the base of the ovary). Desf. mem. mus. 5. p. 37. t. 2. D. C. prod. 2. p. 92.

LIN. SYST. *Decándria, Monogýnia*. Calyx urceolar, bluntly 5-lobed (f. 14. a.), coloured. Petals wanting. Stamens 10 (f. 14. b.), hypogynous; anthers 2-celled (f. 14. g.). Ovary obovate (f. 14. f.), containing 2 ovula, bearing from the side at the base a filiform style (f. 14. f.), which is capitate at the apex (f. 14. c.). Drupe (f. 14. e.), 1-celled, 1-seeded, roundish, girded by the calyx.—A shrub,

FIG. 14.

with alternate, somewhat spatulate, quite entire, smooth leaves. Flowers usually polygamous from abortion, on short pedicels from the axillæ of the upper branches. This genus probably belongs to *Terebinthaceæ* near *Heterodendron* or perhaps to *Rosaceæ*, Tribe *CHRYSOBALANNEÆ*.

1 S. *SPATULATUM* (Desf. l. c.).

h. G. Native of New Holland, on the eastern coast.

*Spatulate-leaved Stylobasium*. Shrub 6 feet.

*Cult.* See *Cneorum* for culture and propagation.

XXX. *CNEORUM* (*κνέρον*, *cneoron*, a name given to some shrub resembling an olive by Hippocrates and Theophrastus). Lin. gen. no. 48. Lam. ill. t. 27. Kunth, gen. tereb. p. 25. D. C. prod. 2. p. 83.—*Chamælea*, Tourn. inst. t. 421.

LIN. SYST. *Tri-Tetrándria, Monogýnia*. Flowers hermaphrodite. Calyx 3-5-toothed, small, permanent. Petals 3-4, equal, imbricate in æstivation. Torus somewhat globose. Stamens 3-4. Stigmas 3-4. Drupes baccate, 3-4, joined together by the axis; putamen 2-celled; cells 1-seeded. Seed pendulous. Albumen fleshy. Radicle recurved downwards and beyond the cotyledons. Cotyledons semicylindrical (Gært. fruct. 1. t. 70).—Subshrubs, with entire linear-oblong, dotless leaves, and axillary, yellow flowers. This genus is perhaps more nearly allied to *Dodonæaceæ*.

1 C. *TRICOCCON* (Lin. spec. 49.) smooth; flowers axillary; pedicels free from the floral leaves. h. G. Native of Spain and the south of France, in gravelly and rocky places. Sims, bot. mag. icon. Lam. ill. 27.—Cam. epit. t. 973. Jaume, pl. fr. t. 5. Flowers usually 3-cleft. This is a dwarf spreading shrub with narrow leaves, having fruit resembling some species of *Euphórbia*.

*Three-berried Widow-wail*. Fl. April, Sept. Clt. 1793. Shrub 1 to 2 feet.

2 C. *PULVERULENTUM* (Vent. hort. cels. t. 77.) plant covered with greyish powder; flowers axillary; pedicels adhering to the base of the floral leaves. h. G. Native of Teneriffe, among rocks in hot situations. Flowers usually 4-cleft.

*Powdery Widow-wail*. Fl. April, Sept. Clt. 1822. Sh. 1 to 3 ft.

*Cult.* The species thrive well in a mixture of loam and peat,

or any light loamy soil. They will survive the winter in the open air in mild winters. Ripened cuttings root freely in sand, under a hand-glass. Seeds ripen in abundance.

XXXI. *SURIANA* (in honour of Joseph Donat Surian, once a physician at Marseilles, who accompanied Plumier in his travels). Plum. gen. 37. Lin. gen. no. 581. Lam. ill. t. 389. D. C. prod. 2. p. 91.

LIN. SYST. *Penta-Decándria, Pentagýnia*. Calyx 5-parted. Petals 5, hypogynous, or inserted in the bottom of the calyx. Stamens 5-10. Carpels 5, bearing each a filiform style on the inside laterally, ending in a valveless, indehiscent, coriaceous nut. Seed 1 from the base, obovate, kidney-shaped, destitute of albumen. Embryo replicate, with a terete radicle directed downwards, and flat incumbent cotyledons.—A shrub with simple, oblong, spatulate, thickish, rather velvety, exstipulate leaves, which are crowded at the tops of the branches, and yellow, bracteate, subterminal flowers. From the embryo this genus is allied to *Cneorum*, not to *Rosaceæ*, and perhaps with it and *Heterodendron* will constitute a distinct order. According to Kunth it is more nearly allied to *Geraniaceæ*.

1 S. *MARITIMA* (Lin. spec. 284.). h. S. Native of South America, by the sea-side as well as of India and New Caledonia, &c. Plum. ed Burm. t. 249. f. 1. Flowers yellowish.

*Sea-side Suriana*. Clt. 1733. Shrub 3 to 4 feet.

*Cult.* Loam and sand is a good mixture for this tree, and ripened cuttings will root in sand under a hand-glass, in heat.

ORDER LXXIV. *SPONDIACEÆ* (plants agreeing with *Spéndias* in important characters). Kunth in ann. scienc. nat. 2. p. 362. Lindl. introd. nat. ord. p. 362. *Terebinthaceæ*, Tribe III. *Spondiaceæ*, D. C. prod. 2. p. 74.

Flowers sometimes unisexual. Calyx 5-cleft (f. 15. a.), regular, permanent or deciduous. Petals 5 (f. 15. b.), inserted below the disk which surrounds the ovary, somewhat valvate or imbricate in æstivation. Stamens 10, perigynous, inserted with the petals. Disk annular in the male flowers, orbicular, 10-toothed. Ovary superior, sessile, from 2-5-celled, with one pendulous ovum in each cell. Styles 5, very short, crowned by obtuse stigmas. Fruit drupaceous (f. 15. d.), containing a 2-5-celled nut (f. 15. c.). Seeds exalbuminous. Cotyledons plano-convex. Radicle superior, pointing towards the hilum, but inferior in *Spéndias*, according to Gærtner.—Trees, with unequally-pinnate, alternate, dotless leaves, a few simple ones occasionally intermixed, all exstipulate. Flowers axillary and terminal, disposed in panicles or racemes.—This order comes very near *Terebinthaceæ* in the structure of its fruit, which is almost that of *Mangifera*, except that it is compound and not simple, destitute however of the resinous juice of that order.

#### *Synopsis of the Genera.*

1 *SPÉNDIAS*. Flowers sometimes unisexual. Calyx 5-cleft (f. 15. a.). Petals 5 (f. 15. b.), rather valvate in æstivation. Stamens 10, glandular, exserted from the disk. Ovary 1. Styles 5. Drupe (f. 15. d.) containing a 5-celled fibrous nut (f. 15. c.), each cell containing 2 ova, one of which only comes to maturity.

2 *POUPARTIA*. Flowers unisexual. Calyx 5-parted. Petals 5, imbricate in æstivation. Stamens 10. Ovary 5-celled? with some of the cells abortive. Styles 5. Drupe containing a 2-3-celled fibrous nut.

**I. SPO'NDIAS** (*σπονδίας*, *spondias*, one of the Greek names for the plum; the fruit exactly resembles a plum). Lin. gen. no. 577. Gært. fruct. 2. t. 104. Kunth. gen. tereb. p. 31. D. C. prod. 2. p. 74.

**LIN. SYST.** *Decándria*, *Pentagýnia*. Flowers sometimes of separate sexes. Calyx 5-cleft (f. 15. a.), coloured. Petals 5 (f. 15. b.), oblong, spreading, somewhat valvate in æstivation. Stamens 10, glandular, exserted, rising from the crenate disk. Ovary 1, ovate. Styles 5, erect, distant, simple. Drupe ovate (f. 15. d.) or roundish, crowned by the punctiform vestiges of the styles, containing a fibrous 5-celled nut (f. 15. c.), each cell containing 2 ovula. Seed solitary from abortion, without albumen. Embryo straight, with somewhat fleshy cotyledons, and an inferior radicle.—Trees, with impari-pinnate leaves, very rarely simple. Racemes axillary or terminal, simple or paniced. This genus agrees with *Schinus* in the radicle being inferior.

1 *S. PURPUREA* (Lin. spec. 613.) leaves impari-pinnate; petioles compressed. *h. S.* Native of the West Indies and South America. *S. Mombin*, Lin. syst. veg. 357. but not of Jacq. *S. myrobálanus*, Jacq. amer. t. 88. Gært. fruct. 2. p. 102. t. 104. —Sloan. jam. 2. p. 126. t. 219. f. 3, 4, and 5. Flowers small, red, in simple racemes. Fruit ovate or oblong, purple or variegated with yellow, an inch long; pulp yellow, with a singular, but agreeable acid aromatic flavour, but is not held in much esteem by Europeans. The tree is very variable in size; the boughs are set in the ground when in flower as hedges, and in the course of 2 or 3 months they are laden with fruit. It is called *Spanish plum-tree*.

*Purple-fruited Hog-plum* or *Spanish plum*. Clt. 1800. Tree 30 to 40 feet.

2 *S. ZANZEE*; leaves impari-pinnate, with entire leaflets; fruit small, black, edible; panicle terminal. *h. S.* Native of Guinea, where it is called *Zanzee*.

*Zanzee Hog-plum*. Tree 60 feet.

3 *S. LUTEA* (Lin. spec. 613.) leaves impari-pinnate, with 7-9 ovate, oblong, shining leaflets, which are gradually acuminate; petioles round. *h. S.* Native of South America and the West Indies, where it is called *Mombin*, *Hobo*, &c. *S. myrobálanus*, Lin. syst. 357. *S. Mombin*, Jacq. amer. 138. Gært. fruct. 2. p. 102.—Sloan. hist. t. 219. f. 1 and 2. Racemes in branched panicles. The fruit of this tree is yellow, and as large as a plum; the flesh is of an agreeable acid aromatic flavour, eaten by children and some of the inhabitants, but furnishing excellent food for hogs. There is a variety of this species in Jamaica, esteemed by some persons. As the branches grow very readily, the tree is used by some for hedges, and one or two is planted in pastures to afford shade for sheep.

*Yellow-fruited Hog-plum*. Clt. 1739. Tree 50 feet.

4 *S. OGHIGEE*; leaves impari-pinnate; leaflets ovate, acute, entire; panicle spreading, terminal; flowers pentandrous. *h. S.* Native of Guinea, where it is called *Oghigee*. Fruit about the size of a pigeon's egg, yellow, of a fine sweetish acid taste. Flowers small, white.

*Oghigee Hog-plum*. Tree 60 feet.

*Cult.* Loam and sand is a good mixture for the species of *Spéndias*, and large cuttings will root if planted in sand or mould,

FIG. 15.

**II. POUPA'RTIA** (the tree is called in the island of Bourbon *Bois de Poupert*). Comm. in Juss. gen. 372. Kunth. gen. tereb. p. 31. D. C. prod. 2. p. 75.

**LIN. SYST.** *Diæcia*, *Decándria*. Flowers of separate sexes. Calyx 5-parted, deciduous. Petals 5, spreading very much, imbricate in æstivation. Stamens inserted on the margin of a hypogynous disk. Ovary 5-celled? cells 1-seeded, with some of the cells usually abortive. Styles 5, approximate or subconate, crowned by obtuse truncate stigmas. Drupe baccate, containing a 2-5-celled nut; cells remote from the axis. Seeds flattish, without albumen, somewhat falcate. Embryo exalbuminous, inverted with plano-convex cotyledons, and a lateral or centrifugal radicle.—Trees, with impari-pinnate leaves, and quite entire acuminate leaflets, and subterminal panicles of flowers. This genus is said to belong to *Burseriaceæ* by R. Brown.

1 *P. BORBÓNICA* (Lam. dict. 5. p. 606.) leaves pinnate; racemes compound. *h. S.* Native of the island of Bourbon, where it is called *Bois de Poupert*. Leaves some of them simple, others with numerous leaflets, 11-19. Flowers dark-purple.

*Bourbon Poupert-wood*. Clt. 1825. Tree 40 feet.

2 *P. MANGÍFERA* (Blum. bijdr. 1160.) leaflets ovate or elliptic-oblong, acuminate, oblique at the base, quite entire, veiny, and smooth; panicle divaricate. *h. S.* Native of Java, and other parts of the East Indies, where it is called *Daho*. *Mangífera pinnata*, Lin. fil. suppl. 156. *Spéndias mangífera*, Pers. ench. p. 509. *Spéndias amara*, Lam. dict. 4. p. 261. The leaves of this tree are said by Rheede to be agreeably acid. The fruit oval, of a yellowish-green colour, an inch and a half long, eatable, and agreeably fragrant. The cat-ambalan of Rheed. mal. p. 93. appears to be a wild state of the same plant.

*Mango-bearing Poupertia*. Clt. 1820. Tree.

3 *P. DULCIS* (Blum. bijdr. 1161.) leaflets elliptic-oblong, acuminate, repandly-crenulate, smooth, with parallel veins; panicle divaricate. *h. S.* Native of Java, Moluccas, and the Society Islands. *Spéndias dulcis*, Forst. prod. 198. *Spéndias Cytheraea*, Sonn. itin. 2. t. 123. Lam. dict. 4. p. 160. ill. t. 384. Gært. fruct. 2. p. 101. t. 103. The fruit is large, and very smooth, of a golden-yellow colour, and a somewhat nauseous fetid smell, containing a sweet, aromatic, succulent pulp. The tree is cultivated to a great extent in the Society and Friendly Islands, especially in Otaheite, for the sake of its fruit, which is esteemed one of the most wholesome; it has almost the flavour of a pine-apple, and not only assuages thirst, but is given to the sick without distinction.

*Sweet Otaheite-apple*. Clt. 1793. Tree 30 feet.

*Cult.* For culture and propagation see *Spéndias*.

**ORDER LXXV. BURSERIACEÆ** (plants agreeing with *Bursèra* in important characters). Kunth, in ann. sci. nat. 2. p. 333. Lindl. introd. nat. ord. Terebinthaceæ, Tribe IV. D. C. prod. 2. p. 75. Terebinthaceæ, part. Juss. gen. 368.

Flowers hermaphrodite (f. 16.), but occasionally unisexual (f. 18.). Calyx permanent, nearly regular, with from 2-5 divisions (f. 16. a.). Petals 3-5 (f. 16. c.), inserted below the disk, rising from the calyx, usually valvate in æstivation. Stamens 2 (f. 16. d.), or 4 times as many as there are petals, perigynous, all fertile. Disk orbicular (f. 18. d.), or annular (f. 16. b.). Ovary 2-4-celled, superior, sessile (f. 16. e. f. 18. e.). Style short or wanting, with the stigmas equal in number to the cells of the ovary. Ovula in pairs, attached to the axis, collateral. Fruit drupaceous (f. 18. e.), 2-5-celled, with the outer part often splitting into valves. Seeds exalbuminous. Cotyledons either

wrinkled or plaited or fleshy. Radicle superior, straight, turned towards the hilum.—Trees or shrubs, abounding in balsamic resin or gum. Leaves alternate, unequally pinnate, occasionally stipulate, usually without pellucid dots. Flowers axillary or terminal, disposed in racemes or panicles. This order differs from *Terebinthaceæ*, to which it is closely allied, in the compound ovary and pinnate leaves, and also in the very generally valvate æstivation of the calyx. The plants abound in a fragrant resinous juice, which, however, is destitute of the acidity and staining properties of that of *Terebinthaceæ*. The resin of *Boswellia* is used in India as incense, and also as pitch. It is hard and brittle, and according to Dr. Roxburgh, is boiled with some low-priced oil to render it soft and fit for use. The native doctors prescribe it mixed with ghee (clarified butter) in cases of gonorrhœa, and also in what they call *ritta*. A substance like gum elemi is produced by *Leica Icicariba* and *I. Carana*, and a yellow essential oil by *Bursera acuminata*, which has the same properties as those of balsam of capaiva; the 3-horned nuts of *Canarium commune* are eaten in Java both raw and dressed, and an oil is expressed from them which is used at table when fresh, and for lamps when boiled. The raw nuts, however, are apt to bring on diarrhœa.

#### *Synopsis of the Genera.*

1 *BOSWELLIA*. Flowers hermaphrodite (f. 16.). Calyx 5-toothed (f. 16. a.). Petals 5 (f. 16. c.), with the edges incurbent in æstivation. Disk cup-shaped (f. 16. b.), crenated, stamiferous. Stamens 10 (f. 16. d.). Style crowned by a capitate stigma. Capsule trigonal (f. 16. e.), 3-valved, 3-celled. Seeds solitary in the cells, girded by a membrane.

2 *BALSAMODENDRON*. Flowers unisexual. Calyx 4-toothed. Petals 4, induplicate-valvate in æstivation. Stamens 8, inserted under the annular disk, with elevated warts between them. Ovary 1. Style 1, short, obtuse. Berry or drupe ovate, acute, marked by 4 sutures, 1-2-celled; cells 1-seeded.

3 *LEICA*. Flowers usually hermaphrodite. Calyx 4-5-toothed. Petals 4-5, inserted under the disk, valvate in æstivation. Stamens 8-10. Ovary 1-5-celled; cells 2-ovulate. Disk orbicular. Style short, crowned by 3-4 stigmas. Fruit coriaceous, 2-3-valved, containing 4-5 little, 1-seeded nuts involved in pulp.

4 *PRUTICUM*. Flowers unisexual. Calyx 5-cleft. Petals 5, inserted under the disk, valvate in æstivation. Stamens 10. Style 1. Disk truncate, 10-ribbed. Drupe indehiscent, containing 3 nuts, 2 of which are usually abortive.

5 *BURSERIA*. Flowers polygamous (f. 18.). Calyx small, 3-5-parted. Petals 3-5 (f. 18. b.), valvate in æstivation. Stamens 6-10 (f. 18. c.). Disk annular, 8-crenate (f. 18. d.). Ovary 2-celled. Style short, trifid. Drupe (f. 18. e.), 3-valved, containing 3 1-2-seeded nuts, 2 of which are abortive.

6 *MARIGNIA*. Flowers hermaphrodite. Calyx 5-cleft. Petals 5, valvate in æstivation. Disk entire. Stamens 10. Ovary 5-celled. Stigma nearly sessile, somewhat 5-lobed. Drupe containing 1-5 1-seeded nuts, covered with pulp.

7 *COLOPHONIA*. Calyx urceolate, 3-lobed. Petals 3, inserted under the disk, imbricate in æstivation. Stamens 6. Disk 6-toothed.

8 *CANARIUM*. Flowers dioecious or polygamous. Calyx 3-toothed. Petals 3, imbricate in æstivation. Stamens 6. Disk urceolate. Ovary 3-celled. Style short, crowned by 3 punctiform stigmas. Drupe baccate, containing a 3-celled nut.

9 *HEDWIGIA*. Flowers polygamous or hermaphrodite. Calyx 4-toothed. Petals 4, concrete to the middle, valvate in æstivation. Stamens 8, adnate to the corolla. Disk cup-shaped, 8-lobed. Ovary 4-celled, 8-furrowed. Stigma sessile, 4-furrowed. Berry 4-furrowed, containing 4 nuts, one of which only comes to maturity.

10 *SORINDEIA*. Flowers polygamo-dioecious. Calyx urceolate, 5-toothed. Petals 5, valvate in æstivation. Stamens about 20 (16-28), inserted in the bottom of the calyx in the male flowers, and 5 fertile in the hermaphrodite ones. Stigmas 3, sessile. Drupe containing a filamentose nut.

11 *GARUGA*. Flowers hermaphrodite. Calyx campanulate, 5-toothed. Petals 5, inserted in the calyx as well as the stamens, which are 10 in number, with 5 pairs of glands between the stamens. Style filiform, crowned by a 5-lobed stigma. Drupe fleshy, containing 5 irregular 1-seeded nuts, or only 2-3 from abortion.

12 *FLAPIOURUM*. Flowers hermaphrodite. Calyx 4-parted. Petals 4. Stamens 8. Style short, crowned by a bifid stigma. Capsule 1-celled, 1-seeded. Seeds covered with pulp.

13 *FAGARASTRUM*. Flowers hermaphrodite. Calyx 3-4-parted. Petals 3-4. Stamens 6-8, unequal. Ovary stipitate, with the stipe bearing the petals and stamens, tubercled, 3-4-lobed at the apex, 3-4-celled; cells 2-ovulate. Style 3-4-angled, 3-4-lobed at the apex.

I. *BOSWELLIA* (in memory of the late Dr. John Boswell, of Edinburgh). Roxb. cor. t. 207. hort. beng. p. 32. Kunth, gen. tereb. p. 16. D.C. prod. 2. p. 76.

LIN. SYST. *Dacrydium*, *Monogynia*. Flowers hermaphrodite (f. 16.). Calyx 5-toothed (f. 16. a.), permanent. Petals 5 (f. 16. c.), obovate-oblong, spreading, with the margins incurbent in æstivation. Disk cup-shaped, crenate (f. 16. b.), stamiferous, surrounding the base of the ovary. Stamens 10 (f. 16. d.). Ovary oblong, trigonal, 3-celled; cells 2-ovulate; ova attached to the axis. Style 1. Stigma capitate, 3-furrowed. Capsule trigonal (f. 16. e.), 3-valved, 3-celled, opening from the base. Seed solitary in the cells, girded by a broad membranous wing.—Indian trees abounding in balsam. Leaves imparipinnate, with opposite serrated leaflets. Flowers small, disposed in racemes or panicles. This genus differs from the rest of *Burseriaceæ* in the fruit being capsular, not drupaceous.

1 *B. GLABRA* (Roxb. cor. 3. p. 4. t. 207.) leaflets broad, lanceolate, blunt, serrated, smooth; racemes aggregate, simple, terminal, shorter than the leaves. h. S. Native of Coromandel and the Moluccas. Rumph. amb. 2. t. 50. ex Roxb. and therefore *Canarium balsamiferum*, Willd. spec. 4. p. 760. This is one of the largest trees on the coast of Coromandel, where it is called *Gugulapootschitto*. The wood is hard, heavy, and durable. The wounded bark yields a kind of resin, which is burnt as incense in the Hindî temples, and is also employed

with vegetable oil for the more useful purpose of marine pitch. Leaves crowded at the ends of the branches, a span long, deciduous. Flowers small, white, with a red nectary and yellow anthers.

*Smooth Boswellia.* Clt. 1823. Tree 70 feet.

2 *B. HIRSUTA* (Smith, in Rees' cycl. no. 2.) leaflets oblong-lanceolate, hairy, deeply serrated; racemes axillary, simple, many-flowered. *h. S.* Native of Amboyna. Rumph. amb. 2. t. 51. ex Smith, and therefore *Canarium hirsutum*, Willd. spec. 4. p. 760.

*Hairy Boswellia.* Tree 50 feet.

FIG. 16.

3 *B. SERRATA* (Stack: extr. bruc. p. 19. t. 3.) leaflets ovate-oblong, taper-pointed, serrated, pubescent; racemes axillary, simple. *h. S.* Native of the mountainous parts of India. From this tree is collected the gum *olibanum* ex Colebr. in asiat. res. 9. p. 377. with a coloured figure. *B. thurifera*, Roxb. hort. beng. p. 32. Flowers whitish-yellow. It is generally agreed that the gum resin, called *olibanum*, is the frankincense which was used in the religious ceremonies of the ancients, but there is not the same agreement as to the plant supposed to produce it. Linnæus has referred it to the Lycian juniper, and the chemical writers agree with him; but the French botanists deny it, and say that Linnæus made the assertion without proof. This remark is evidently well founded. A great degree of obscurity has always hung over this subject; and we learn from Theophrastus and from Pliny that the Greek writers differed in their description of the tree. *Olibanum* is named *Luban* and *Cundur* by the Arabs. But *benzoin* having been introduced into general use as incense, in place of *Olibanum*, the name of *Luban* is given to that fragrant balsam, but the Mahomedan writers of India on materia medica apply only the term *Cundur* to *Olibanum*. From the Hebrew *Lebonah* or Arabic *Luban*, the Greeks obtained their names for the tree and gum *Libanos* and *Libanotos*. They seem likewise to have been acquainted with the term *Cundur*, from which *κνδρῶ* is probably derived. The Hindoo writers on materia medica notice a fragrant resinous gum under the name of *Cundurū*, which their grammarians consider as a Sanscrit word, and accordingly date an etymology of it from a Sanscrit root. They concur in declaring it to be the produce of the *Sallaci*, a tree which they affirm to be vulgarly called *Salai*. The tree which is known by that name is the *Boswellia serrata*. Mr. Turnbull, who was surgeon to the residency of Nagpore in the East Indies, and on his return to the station of Mirzapore he had procured considerable quantities of the gum of the *Salai*, which he sent to Europe at different times, first without assigning the name of *Olibanum*, and afterwards under that designation. It was in England recognised for *Olibanum*, though offered for sale as a different gum; and annual consignments of it have been since regularly sold at the East India Company's sales. The experience of several years at a market such as that of London, where a mistake, if any had been committed, would have been soon discovered, seems to be conclusive. *Olibanum* is said to be principally collected in Arabia and brought from Mecca to Cairo, from whence it is imported into Europe. It consists of various brittle grains of different sizes, not larger than a chesnut, of a red or yellow-colour, having little taste and a peculiar aromatic smell. Newmann got from 480 grains, 346 alcoholic and 125 watery extract, and inversely 200 watery and 273 alcoholic. The distilled spirit and water both smelt of *Olibanum*, but no oil separated. *Olibanum* forms a transparent

solution with alcohol, and a milky fluid when triturated with water; it is not fusible but inflammable, and burns with an agreeable smell. It is said to be the frankincense of the ancients; and the diffusion of its vapour around the altar still forms part of the religious ceremonies of the Greek and Roman Catholic churches.

*Serrated-leaved Boswellia.* Clt. 1820. Tree 40 feet.

*Cult.* A mixture of loam, peat and sand will suit these trees, and ripened cuttings will root in sand, under a hand-glass, in heat.

II. *BALSAMODENDRON* (from *βάλσαμον*, *balsamon*, balsam, and *δένδρον*, *dendron*, a tree; the tree produces the balsam of Mecca). Kunth, gen. tereb. p. 16. D. C. prod. 2. p. 76. — Balsamea, Gled. act. soc. cur. nat. berl. 3. p. 127.

*LIN. SYST. Dicc'cia, Octándria.* Flowers of separate sexes. Calyx 4-toothed, permanent. Petals 4, linear-oblong, induplicate valvate in æstivation. Stamens 8, inserted under the annular disk, with elevated warts between the stamens. Ovary 1. Style 1, short, blunt. Berry or drupe ovate, acute, 1-2-celled, marked with 4 sutures; cells 1-seeded. — Eastern balsamiferous trees. Leaves with 3-5 sessile, dotless leaflets. This genus is not well known.

1 *B. GILEADENSE* (Kunth, l. c.) leaves palmately trifoliate; leaflets blunt, quite entire; pedicels 1-flowered, 3 together, shorter than the petiole. *h. G.* Native of Arabia, near Haes. *Amýris Gileadensis*, Lin. mant. 65. Vahl. symb. 1. p. 28. t. 11. *Amýris Opobalsamum*, Forsk. descr. p. 79. Flowers small, whitish. The tree which produces the balsam of Gilead has purplish branches, but whether it is obtained from the same tree as balsam of Mecca is very doubtful. This substance, which has also the names of *Balsamum Judaicum*, *Syriacum de Mecca*, and *Opobalsamum*, is a resinous juice obtained from an evergreen tree, growing spontaneously, particularly on the Asiatic side of the Red Sea, near Mecca. The true *Opobalsamum*, according to Alpinus, is at first turbid and white, of a very strong pungent smell, like that of turpentine, but much sweeter, and of a bitter, acrid, astringent taste; upon being kept for some time it becomes thin and limpid, of a greenish hue, then of a golden yellow, and at length of the colour of honey. The balsam is in high esteem among the eastern nations, both as a medicine and as an odoriferous unguent and cosmetic. But in Europe it is never obtained genuine, and as all the signs of its goodness are fallacious, it has been very rarely employed; nor need it be regretted, for any of the other resinous fluids will answer equally as well, such as the balsam of Canada or Capaiva. The dried berries were formerly kept under the title of *Carmo-balsamum*, and the wood under that of *Xylo-balsamum*.

*Balsam of Gilead.* Tree 20 feet.

2 *B. OPOBALSAMUM* (Kunth, l. c.) leaves with 1 or 2 pairs of acutish, quite entire leaflets; odd one sessile; pedicels 1-flowered, shorter than the petioles. *h. G.* Native of Arabia, P. Alp. eg. 2. t. 60. *Amýris Opobalsamum*, Lin. amœn. 7. p. 68. Ballessan, Bruce's trav. French ed. t. 25. This is probably only a variety of the first.

*Var. β, Meccanense* (D. C. prod. 2. p. 76.) leaves bipinnate. *Balsamea Meccanensis*, Gled. l. c. 3. p. 127. t. 3. f. 2.

The *Opobalsamum*, *Balsam of Mecca*, and *Balsam of Gilead* are supposed to be the produce of one and the same tree. Gerlach relates that the tree which produces the *Opobalsamum*, or *Balsam of Mecca*, grows near Bederhunin, a village between Mecca and Medina, in a sandy rocky soil, confined to a tract about a mile in length. In the beginning of April the trees drop their juice, from gashes which are made in the smaller branches, into vessels set under them to receive it. A tree will not yield more than 10 to 15 drachms in one season. The inhabitants use it as a sudorific, particularly in rheumatism, but it is adulterated upon the spot. Lady Mary Wortley Mon-

ague says that the *Balm of Mecca* of the best quality is not easy to be got, even at Constantinople; that on applying some of it to her face it became swelled and red during three days, but that her complexion was much mended by the operation; and that the ladies all use it in Constantinople, and have the loveliest bloom in the world. An inferior sort of balsam is prepared from boiling the twigs in a quantity of water, and the balsamic matter rises to the surface and is skimmed off. After they have thus procured all they can, it is said that they push the fire, and a large quantity of thicker balsam, like turpentine, rises, which is preserved by itself, and is that principally which we have in Europe. The other can only be obtained by presents; and that which naturally distils from the trees hardly supplying the seraglio and great officers, there is none of it sent out of the country. Hasselquist describes the *Balsam of Mecca* as being yellow and pellucid, with a most fragrant resinous balsamic smell, as being very tenacious, and drawing out into long threads; that it is taken to the quantity of 3 grains to strengthen a weak stomach, and that it is a most excellent remedy for wounds. To know whether it is adulterated, drop some in a glass, and if it remains still on the surface it is of little or no use, but if it extends itself over the surface it is then of the best kind. The drugs used to adulterate this balsam are oil of sesamum, Cyprus turpentine, and ostrich fat. According to Bruce the tree is 5 or 6 feet high, branching much, with the aspect of a standard cherry-tree, having red branches and white flowers. The young shoots were formerly cut off and tied up in faggots, and sent to Venice to make the Theriaca or Venice treacle, when bruised or drawn by fire. From very early ages great value has been set upon this drug in the East. We know from Scripture, that the Ishmaelites, or Arabian carriers and merchants, trafficking with Indian commodities to Egypt, brought with them balm as part of their cargo. Strabo alone, of all the ancients, has given us an account of the place of its origin. "Near to this," he says, "is the most happy land of Sabeans, and they are a very great people. Among them frankincense, myrrh, and cinnamon grow, and in the coast that is about Saba the balsam also. Among the myrrh trees behind Azab, all along the coasts to the straits of Babelmandeb is its native country." We need not doubt but that it was early transplanted into Arabia, that is into the south part of Arabia Felix, immediately fronting Azab. The first plantation that succeeded seems to have been at Petra, the ancient metropolis of Arabia, now called Beder or Beder Huncin. Afterwards being transplanted into Palestine, it obtained the name of *Balsamum Judaicum* and *Balm of Gilead*, and became an article of commerce there. There were three productions obtained from the tree much esteemed among the ancients, the first was called *Opobalsamum*, or juice of balsam, which was the finest kind, composed of the greenish liquor found in the kernel of the fruit; the next was *Carpobalsamum*, made by the expression of the fruit when at maturity; the third was *Xylobalsamum*, worst of all; it was an expression or decoction of the young twigs, of a reddish colour. But the principal quantity of balsam at all times was produced by incision, as at the present day. The wound is made by an axe when the juice is in its strongest circulation, in July and August. It is then received into small earthen bottles, and every day's produce is poured into a larger, which is kept closely corked. The *balsam of Judea* appears to be the same balsam adulterated.

*Opobalsamum* or Balsam of Mecca tree. Tree 14 feet.

3 B. KA'TAF (Kunth, l. c.) leaves palmately trifoliate; leaflets smooth, serrated at the apex; pedicels bifid; berry globose, umbilicate at the apex. h. G. Native of Arabia Felix. Amyris Kátaf, Forsk. descr. p. 80. Vahl. symb. 1. p. 28. Mart. akad. munch. 6. p. 178. This tree probably also pro-

duces *Balsam of Mecca*. There is a red sweet-scented powder obtained from it, which the women in Arabia use to wash and cleanse their heads.

*Kataf-tree*. Tree 14 feet.

4 B. KA'FAL (Kunth, l. c.) leaves palmately-trifoliate; leaflets serrated at the apex, younger ones villous; berry compressed, with a prominent dot at the apex. h. G. Native of Arabia, where it is called *Kafal*. Amyris Káfal, Forsk. eg. p. 80. The balsam obtained from this tree is purgative.

*Kafal-tree*. Tree 20 feet.

† A species perhaps allied to the present genus.

5 B. ? ZEYLANICUM (Kunth, l. c.) leaves impari-pinnate, with 5-7 stalked, ovate, acute leaflets; racemes of flowers interrupted, downy; flowers 3-petalled, hexandrous. h. S. Native of Ceylon. Amyris Zeylanica, Retz. obs. 4. p. 25. From this tree flows the Guin elemi of the East, but it is truly distinct from the American elemi. Calyx 3-toothed. Drupe dry, containing a 3-celled bony nut. Flowers glomerated, involucreted. This is probably a proper genus, or a species of *Colophonia*, judging from the number of parts.

*Ceylon Balsam-tree*. Tree.

*Cult.* See *Boswellia* for culture and propagation, p. 81.

III. ICICA (*Iceia* is the name of one of the species in Guiana). Aubl. guian. 1. p. 337. Juss. gen. 370. Kunth, gen. tereb. 17. D. C. prod. 2. p. 77.

LIN. SYST. *Octo-Decandria*, *Monogynia*. Flowers usually hermaphrodite. Calyx 4-5-toothed, permanent. Petals 4-5, broadest at the base, and inserted under the disk, valvate in aestivation. Stamens 8-10. Ovary 4-5-celled, each cell containing 2 ovula. Disk orbicular. Style short. Stigmas 4-5. Fruit coriaceous (f. 17. c.), 2-3-valved, including 4-5 little nuts (f. 17. d.), which are covered with pulp, each containing 1 seed. Seeds without albumen, resinous. Leaves impari-pinnate, free of dots. Racemes panicle, axillary, and terminal, usually simple. Flowers of all the species white.

1 I. ENNEANDRA (Aubl. guian. 1. p. 345. t. 134.) leaflets 3-5, stalked, ovate, entire, acuminate, tapering to the base, netted with veins; panicles racemose, longer than the petioles. h. S. Native of French Guiana in woods, where it is called *Arouaou*. Petals 5-6. Stamens 9. Amyris enneandra, Willd. spec. 2. p. 335. A very fragrant resinous juice flows from the bark of the tree.

*Nine-stamened Iceia*. Clt. 1822. Tree 30 feet.

2 I. HETEROPHYLLA (D. C. prod. 2. p. 77.) leaves ternate or pinnate; leaflets stalked, ovate, acuminate, entire, simply veined; racemes simple, rather shorter than the leaves. h. S. Native of Guiana, in woods at the river Courou, where it is called *Araouchini*. *Iceia Araouchini*, Aubl. guian. 1. p. 344. t. 133. Amyris heterophylla, Willd. spec. 2. p. 335. On the slightest incision being made in the bark of this tree, a yellow, balsamic, aromatic fluid resembling turpentine flows out in great quantities, which retains its fluidity a long time, even when exposed to the air. The inhabitants of Guiana use this fluid to cure wounds, and they carry with them always the little nuts of the fruit, which retain their scent, and which they name *Araouchini*. They send presents of them to their friends as something very precious. The Caribbees perfume with the balsam the oil

FIG. 17.

of carape and fecula of arnotta mixed together, with which they anoint their bodies as well as their hair, to preserve them against rain and against the bites of insects.

*Variable-leaved Icica.* Tree 50 feet.

3 *I. GUIANENSIS* (Aubl. guian. 1. p. 340. t. 131.) leaflets 3-5, nearly sessile, ovate, taper-pointed, entire; peduncles corymbose, many-flowered, much shorter than the petioles, furnished with scales at the base. *h. S.* Native of Cayenne, where it is called *Bois d'encens*. *Amýris Guianensis*, Willd. l. c. Flowers greenish. The balsam obtained from this tree has the same properties as that obtained from the next species, and is used for the same purposes.

*Guiana Icica.* Clt. 1823. Tree 50 feet.

4 *I. HEPTAPHYLLO* (Aubl. guian. 1. p. 337. t. 130.) leaflets 5-7, stalked, oblong, acuminate; racemes somewhat corymbose, few-flowered, 6-times or more shorter than the petiole. *h. S.* Native of the woods in Guiana, where it is called *Arbre d'encens*. *Amýris ambrosiaca*, Willd. spec. 2. p. 335. exclusive of the synonym of Marcg. Fruit ovate, 4-celled, resembling that of the laurel, with the nut involved in a brittle covering, containing 4 stones or 4 cells wrapped up in viscid pulp, which has a balsamic smell and taste, hardens into a grey resin, and is used to burn as a perfume. The whole tree is very sweet-scented, and pours out a very odorous clear balsam from the wounded trunk or branches, which is used in dysentery; the dose is one drachm in red wine; it is also used in houses and churches to burn as a perfume. The Caribbee name is *Arouaou*.

*Seven-leaved Icica.* Clt. 1826. Tree 30 feet.

5 *I. TACAMAHACA* (H. B. et Kunth, nov. gen. amer. 7. p. 33.) leaflets 5, elliptic-oblong, acuminate, somewhat coriaceous, shining; panicles axillary, 3-times shorter than the petioles; flowers octandrous. *h. S.* Native of South America, frequent near Calabozo in Los Llanos, where it is called *Tacamahaca*. Allied to *I. heptaphylla*. Branchlets angular, powdery.

*Tacamahac Icica.* Clt. 1819. Tree 30 feet.

6 *I. ICICARIBA* (D. C. prod. 2. p. 77.) leaflets 3-5, stalked, oblong, acuminate; flowers almost sessile, crowded in the axillæ of the leaves. *h. S.* Native of Brazil, where it is called *icicariba* and *Resina icica*. *Amýris ambrosiaca*, Lin. fil. suppl. 216. This tree produces sweet-scented gum like the rest, which is used as incense, and as a substitute for *gum elemi*.

*icicariba.* Tree 40 feet?

7 *I. DECAÏNDRA* (Aubl. guian. 1. p. 346.) leaflets 5, stalked, oblong, acuminate at both ends, entire; panicles loose, a little longer than the petioles. *h. S.* Native of Guiana, in woods, where it is called *Chipa*. *Amýris decandra*, Willd. spec. 2. p. 335. *I. pentandra*, Aubl. guian. 1. t. 135. When the bark of this tree is wounded, a whitish liquid flows out, which has the scent of citrons, when dry becoming a yellow transparent resin, which is found in small pieces under the bark. This resin is carried by the Caribbees to Cayenne, where it is employed in churches as incense.

*Decandrous Icica.* Tree 40 feet.

8 *I. MACROPHYLLO* (H. B. et Kunth, nov. gen. amer. 7. p. 33.) leaflets 7 (9-13) oblong, somewhat coriaceous, with short taper points; racemes axillary, crowded in fascicles, much shorter than the petioles; flowers decandrous. *h. S.* Native of South America, near Maraquita in New Granada, where the tree is called *Guacharaco*. Branchlets round, smooth. Very nearly allied to *I. altissima*, and probably the same.

*Long-leaved Icica.* Tree 80 feet.

9 *I. ALTÍSSIMA* (Aubl. guian. 1. t. 132.) leaflets 7, stalked, ample, ovate, bluntly acuminate; racemes simple, shorter than the petioles. *h. S.* Native of Guiana, in woods. *Amýris altissima*, Willd. spec. 2. p. 336. There are two varieties of this tree, the one called *Cedre blanc* the other *Cedre rouge*.

The wood of the *Cedre rouge* is considered more durable than the *Cedre blanc* for household furniture and for carpentering, and canoes and boats made with it last longer than those made with the other kind.

*Tall Icica.* Tree 100 feet.

† *Species not sufficiently known.*

10 *I. SERRATA* (D. C. prod. 2. p. 77.) leaflets almost sessile, oblong, acuminate, serrated; racemes simple, numerous, terminal. *h. S.* Native of Mexico, on the warmer mountains. *A. ambrosiaca*, Moc. et Sesse, fl. mex. icon. et descrip. ined. but not of Lin. Drupe oblong, acute, 2-celled.

*Serrated-leaved Icica.* Tree.

11 *I. ? CARANA* (H. B. et Kunth, nov. gen. amer. 7. p. 34.) leaves trifoliate (and pinnate?); leaflets oblong, acuminate, smooth, shining above, white and glittering beneath. *h. S.* Native of South America, near Javita, at the river Temi in the Mission of Orinoco, where it is called *Carana*. *Amýris Carana*, Humb. relat. 2. p. 421. and 435. Flowers and fruit unknown. A grateful white resin is found closely adhering to the bark of this tree, which at length becomes yellowish, and is used against bruises.

*Carana Icica.* Tree 50 feet.

12 *I. ? CUSPIDATA* (H. B. et Kunth, l. c.) leaves imparipinnate with 3 pairs of elliptical leaflets, having cuspidate points, which are smooth, and full of pellucid dots, shining above, but white and pruinose beneath. *h. S.* Native with the preceding species. Flowers and fruit unknown. Gluc is made of the resin of this tree mixed with tortoise oil.

*Cuspidate-leaved Icica.* Tree 100 feet.

13 *I. ACUMINATA* (D. C. prod. 2. p. 78.) leaflets 9, very large, lanceolate, acuminate; racemes short, lateral, crowded. *h. S.* Native of Cayenne. *Amýris acuminata*, Poir. suppl. 2. p. 136. but not of Roxb.

*Acuminate-leaved Icica.* Tree.

14 *I. ? DENTATA* (D. C. prod. 2. p. 78.) leaflets 9, stalked, ovate, acuminate, toothed; racemes axillary, simple; pedicels elongated. *h. S.* Native of the East Indies. *Amýris dentata*, Willd. spec. 2. p. 337.

*Tooth-leaved Icica.* Tree 60 feet.

15 *I. ? TIMORENSIS* (D. C. prod. 2. p. 78.) leaflets 11, stalked, ovate, acuminate, unequal at the base, almost quite entire; panicles racemose, shorter than the petioles. *h. S.* Native of the island of Timor.

*Timor Icica.* Tree.

*Cult.* For culture and propagation see *Boswellia*, p. 81.

IV. PROTIUM (meaning unknown). Burm. ind. 88. Kunth, gen. tereb. p. 18. D. C. prod. 2. p. 78.

LIN. SYST. *Diaëcia*, *Decandria*. Flowers of separate sexes. Calyx 5-parted. Petals 5, sessile, spreading inserted under the disk and valvate in aestivation. Stamens 10, shorter than the petals. Ovary 3-celled, each cell containing 2 ovula. Style 1, simple. Disk truncate, 10-ribbed. Drupe indehiscent, containing 3 nuts, two of which are usually abortive.—A tree from Java, with imparipinnate leaves and axillary panicles of flowers. This genus is hardly distinct from *Bursera*.

1 *P. JAVAÏNICUM* (Burm. l. c.). *h. S.* Native of Java. *Amýris Protium* Lin. mant. 65.—Rumph. amb. 7. t. 23. f. 1. Leaflets 7, stalked, oblong, acute, wavy.

*Java Protium.* Tree.

*Cult.* For culture and propagation see *Boswellia*, p. 81.

V. BURSERA (in honour of Joachim Burser, a disciple of Caspar Bauhin). Jacq. amer. 94. Lin. gen. no. 440. Swartz obs. 130. Kunth, gen. tereb. p. 18. D. C. prod. 2. p. 78.

LIN. SYST. *Polygamia*, *Diaëcia*. Flowers polygamous (f. 18.).

Calyx small, 3-5-toothed, with blunt teeth. Petals 3-5 (f. 18. b.), spreading, valvate in æstivation. Stamens 6-10 (f. 18. c.). Disk annular, with usually 6-10 teeth (f. 18. d.). Ovary ovate, 3-5-angled, 3-5-seeded. Style short, trifid at the apex. Drupe oblong, covered by a 3-valved succulent rind (f. 18. e.), containing 3-5 nuts, 2 or 4 of which are abortive, the fertile one is fleshy, and containing 1 seed or 1 nut. Seed baccate according to Swartz, pendulous, without albumen. Cotyledons leafy, corrugated, and plaited or 3-lobed, with a straight superior radicle.—American balsam-bearing trees, with impari-pinnate or simple leaves, and axillary and terminal racemes of flowers.

1 B. GUMMIFERA (Jacq. amer. 94. t. 65. Lin. spec. 741.) leaves deciduous, usually impari-pinnate; leaflets ovate, acute, membranous; racemes axillary; flowers hexandrous. *h. S.* Native of the West Indies.—Sloan. hist. t. 199. There are varieties of this plant with simple, trifoliate, and impari-pinnate leaves, with 5-9 leaflets. Nut not exactly trigonal, but rather roundish, very like *Pistachia*. The tree is common in all the sugar islands of the West Indies. The bark is very thick, and exudes a clear transparent resin, which soon hardens in the air, and looks like the mastick of the shops; but by incision it yields a considerable quantity of a more fluid substance, which has much the smell and appearance of turpentine, and may be used for the same purposes. In the French islands it is called *Gommier blanc*, and an infusion of the buds and young leaves is recommended in disorders of the breast.

*Var. β, polyphylla* (D. C. prod. 2. p. 78.) leaflets 11-13. Native of the Bahama islands. Cat. carol. 1. t. 30.

*Gum-bearing Bursera.* Clt. 1690. Tree 80 feet.

2 B. SERRATA (Wall. ex Coleh. in Lin. trans. vol. 15. t. 4. f. 1.) leaves impari-pinnate, with 3-5 pairs of broad-lanceolate, bluntly-acuminate, serrulated leaflets; petioles pubescent, as well as the pedicels and young roots; panicles axillary, shorter than the leaves; flowers decandrous. *h. S.* Native of the forests bordering on Bengal. The timber is close-grained and hard, and is much esteemed, and used for furniture by the inhabitants. It is as tough as oak, and heavier. Its vernacular name is *Najor* or *Neyor*.

*Serrated-leaved Bursera.* Clt. 1818. Tree 70 feet.

3 B. ACUMINATA (Willd. spec. 4. p. 1120.) leaves impari-pinnate; leaflets oblong, acute at the base, acuminate at the apex; racemes axillary. *h. S.* Native of Caraccas, as well as of Porto-Rico and St. Domingo. Flowers and fruit unknown. This tree contains a concrete yellow essential oil.

*Acuminate-leaved Bursera.* Tree 60 feet.

4 B. LEPTOPHYLLA (Mart. bot. zeit. July 1828.) trunk branched at the base; bark shining, smooth, papyraceous, soluble; leaves impari-pinnate, and are, as well as the branches, pubescent; leaflets 5-7, oblong, acute; lobed in front; racemes few-flowered, lateral and axillary. *h. S.* Native of Brazil. A tree full of thin resinous juice.

*Thin-jucced Bursera.* Tree 50 feet.

5 B. SIMPLICIFOLIA (D. C. prod. 2. p. 79.) leaves simple, oblong-obovate, obtuse, somewhat emarginate, coriaceous; racemes terminal, somewhat corymbose; nut exactly trigonal, with the angles a little winged. *h. S.* Cultivated in Jamaica.

*Simple-leaved Bursera.* Tree.

*Cult.* For culture and propagation see *Boswellia*, p. 81.

VI. MARIGNIA (meaning unknown.) Comm. ined. Kunth. nov. gen. tereb. p. 19. D. C. prod. 2. p. 79.—*Dammara*, Gært. fruct. 2. p. 100. t. 103. but not of Lam. nor Link.

LIN. SYST. *Decandria, Monogynia*. Flowers hermaphrodite. Calyx 5-cleft, permanent, with acute lobes. Petals 5, twice as long as the calyx, valvate in æstivation. Disk entire. Stamens 10, length of calyx. Ovary roundish, 5-celled. Stigma almost sessile, somewhat 5-lobed. Drupe crowned by the stigma, containing 1-5 1-seeded nuts, with the bark coriaceous, and perhaps soluble; nuts covered with pulp. Seed pendulous, without albumen. Cotyledons leafy, finely contortuplicate (Gært.), but flat in the immature seeds (Kunth.). Radicle superior.—Balsamiferous trees, with impari-pinnate leaves, and numerous coriaceous, variable leaflets. Racemes of flowers axillary and terminal.

1 M. OBTUSIFOLIA (D. C. prod. 2. p. 79.) leaflets obovate, obtuse. *h. S.* Native of the Mauritius, where it is called *Colophane Batard*. *Bursera obtusifolia*, Lam. dict. 2. p. 768. *Dammara graveolens*, Gært. fruct. 1. c. Leaflets blunt, glaucous, and shining above.

*Blunt-leaved Marignia.* Tree 50 feet.

2 M. ACUTIFOLIA (D. C. prod. 2. p. 79.) leaflets acute. *h. S.* Native of the Moluccas. *Dammara nigra*, Rumph. amb. 2. p. 160. t. 52.

*Acute-leaved Marignia.* Tree.

*Cult.* For culture and propagation see *Boswellia*, p. 81.

VII. COLOPHONIA (called in the Isle of France *Bois de Colophone*). Comm. ined. Kunth. gen. tereb. p. 20. D. C. prod. 2. p. 79.

LIN. SYST. *Hexandria, Monogynia*. Calyx urceolar, bluntly 3-lobed. Petals 3, inserted under the disk, roundish-ovate, imbricate in the bud. Stamens 6, one-half shorter than the petals, equal in length to the calyx. Disk 6-lobed. Ovary? —Resinous trees, with impari-pinnate, coriaceous, dotless leaves, and panicles of unisexual flowers.

1 C. MAURITIANA (D. C. prod. 2. p. 79.) *h. S.* Native of the Mauritius. *Bursera paniculata*, Lam. dict. 2. p. 768. Flowers purple. Fruit unknown. Leaflets 5-7, oval, acute, entire, smooth.

*Mauritian Colophonia.* Tree.

*Cult.* For culture and propagation see *Boswellia*, p. 81.

VIII. CANARIUM (derived from its vernacular name *Canari*, in the Malay language). Lin. mant. 127. Gært. fruct. 2. t. 102. Kæn. ann. bot. 1. p. 360. Kunth. gen. tereb. p. 20. D. C. prod. 2. p. 79.—*Pimela*, Lour. fl. coch. p. 407.

LIN. SYST. *Polygamia, Diaecia*. Flowers dioecious or polygamous. Calyx urceolate, 3-toothed. Petals 3, concave, connivent, imbricate in æstivation. Stamens 6, rarely 7-8, connate at the base into a tube girding the ovary. Ovary ovate-globose, 3-celled, 2 of which are usually abortive. Style short, thick, crowned by a trigonal stigma. Drupe baccate, containing a trigonal 3-celled nut, each cell containing 1 pendulous seed, but sometimes solitary from abortion, destitute of albumen. Cotyledons 2, each divided into 3 oblong, somewhat leafy lobes, which are twisted in various ways.—Indian trees, with impari-pinnate leaves and stalked leaflets; stipulas deciduous. Flowers racemose or paniced.

SECT. I. CANARIA (see genus for derivation). D. C. prod. 2. p. 79. Drupe containing a 1-celled nut when mature.

1 C. COMMUNE (Lin. mant. 127.) leaflets 7-9, on long stalks, ovate-oblong, bluntly acuminate, quite entire, smooth; stipulas toothed or undivided; panicle terminal; flowers glomerate, nearly sessile, bracteate; stamens connate into a membranous

tube at the base. *h. S.* Native of the East Indies, and the Moluccas, where it is also cultivated for the sake of its fruit. *C. vulgare*, Rumph. amb. 2. t. 47. *C. Mehenbethene*, Gært. fruct. 2. p. 102.—Koen. ann. bot. 1. p. 260. t. 7. f. 2. Flowers white. Fruit ovate, with a thin olive skin. When the nuts are mature, they contain a sweet kernel, which does not become rancid, and which resembles a sweet chesnut; they are eaten both raw and dressed by the inhabitants of the Moluccas, Banda, and New Guinea; and an oil is expressed from them, which is used at the table when fresh, and for lamps when stale; bread is also made from them, cakes, biscuits, &c. for the table. Eaten fresh, they are apt to bring on diarrhoeas and dysenteries, and to occasion an oppression of the breast.

*Var. β, Zephyrinum* (D. C. prod. 2. p. 79.) leaflets 13.—Rumph. amb. 2. t. 48.

*Common Canarium.* Tree 50 feet.

2 *C. SYLVESTRE* (Gært. fruct. 2. p. 99. t. 102.) leaflets 3-5, oblong, tapering to both ends, quite entire; flowers racemose, terminal. *h. S.* Native of Amboyna, on the mountains.—Rumph. amb. 2. t. 49. Flowers white. Fruit obovate, rounded, not 3-cornered. The kernels of the nuts are eatable, and it is difficult to get them out of the shell, on account of their brittleness and singular form.

*Wild Canarium.* Tree 50 feet.

3 *C. MICROCARPUM* (Willd. spec. 4. p. 760.) leaflets 5-9, ovate-lanceolate, acuminate, smooth, quite entire; racemes axillary, elongated, many-flowered; fruit drooping. *h. S.* Native of the Molucca Islands and Cochin-china.—Rumph. amb. 2. t. 54. *Amiris oleosa*, Lam. dict. 1. p. 362. *Pimela oleosa*, Lour. coch. 408. Flowers white. Drupe small, oval, of a bluish-black colour, not eatable. By incisions made in the trunk of the tree, a viscid, odorous, yellowish oil flows out, very like Capaiva, which is mixed with the Chinese varnish; used medicinally it is vulnerary and resolvent. It is frequently used in the naval yards, and is commonly called Damar; it is mixed with a little chalk, and used with oakum made of the bark of reeds to fill up the seams in ships and boats, and becomes as hard as a piece of stone.

*Small-fruited Canarium.* Tree 50 feet.

SECT. II. *PIMELA* (from *πῖμελις*, *pimeli*, fat; the trees yield a very fat oil and resin). D. C. prod. 2. p. 80. Drupe when mature containing a 3-celled nut.

4 *C. DECUMANUM* (Gært. fruct. 2. p. 99. t. 102.) leaflets 9-11, elliptical, quite entire, acute; racemes few-flowered, axillary; drupe containing a 3-celled putamen. *h. S.* Native of the Molucca Islands.—Rumph. amb. 2. t. 55. Flowers white. Fruit larger than the others; shell of nut 3-cornered.

*Huge Canarium.* Tree 80 feet.

5 *C. PIMELA* (Koen. ann. bot. 1. p. 361. t. 7. f. 1.) leaflets 9-11, oblong, acuminate, quite entire, somewhat unequal, smooth; stipulas wanting; racemes lateral, aggregate; flowers fascicled, naked; stamens connate into a membranous tube; drupe containing a somewhat 2-celled nut. *h. G.* Native of Cochin-china, China, and Java, in woods. *Pimela nigra*, Lour. fl. cochin. 407. Flowers white. Fruit black, sometimes pickled, and has somewhat the taste of an olive, but is heavy on the stomach.

*Fat Canarium.* Tree 50 feet.

6 *C. ALBUM* (Rausch. nom. D. C. prod. 2. p. 80.) leaflets 11-13, scabrous, ovate-lanceolate; racemes crowded, almost terminal; drupe containing a 3-celled nut. *h. S.* Native of China and Cochin-china, in woods. *C. Sinense*, Rumph. amb. 2. p. 154. *Pimela alba*, Lour. cochin. 408. Flowers white. Fruit greenish-yellow; it is pickled and used like olives, and is similar both in taste and form, and is reckoned very wholesome, and considered good for digestion and provoking the appetite. Leaflets half a foot long.

*White-fruited Canarium.* Tree 40 feet.

7 *C. DENTICULATUM* (Blum. bijdr. 1162.) leaflets elliptic-oblong, acuminate, obsoletely denticulated above, smoothish; stipulas stem-clasping, jagged; panicle subterminal; flowers glomerate, sessile, bibracteolate; stamens connate into a membranous tube at the base. *h. S.* Native of Java, in woods, on the mountains of Salak, Parang, &c. where it is called *Kipella*.

*Denticulated-leafletted Canarium.* Tree.

8 *C. HISPIDUM* (Blum. bijdr. 1163.) leaflets oblong, acuminate, subcordate at the base, quite entire, rather hispid beneath, as well as the fruit; stipulas petiolar, small; racemes subterminal, aggregate; flowers fascicled, naked; stamens seated on the margin of a villous disk. *h. S.* Native of Java, on the mountains about Bantam, where it is called *Surian*.

*Var. β, scabrum* (Blum. bijdr. 1163.) leaves larger, scabrous beneath; racemes compound. *h. S.* Native of Java, on the mountains of Salak.

*Hispid Canarium.* Tree.

9 *C. ALTISSIMUM* (Blum. bijdr. 1163.) leaflets oblong, cuspidate, subcordate at the base, quite entire, rather pilose on both surfaces, ciliated; stipulas petiolar, small, subulate; racemes axillary, simple; fruit hispid; stamens seated on the margin of a villous disk. *h. S.* Native of Java, on the mountains about Parang, where it is called *Kiharpan*.

*Very-tall Canarium.* Fl. Jan. Tree 70 feet.

10 *C. LITTORALE* (Blum. bijdr. 1164.) leaflets elliptic-oblong, acuminate, denticulated, tomentose on the veins beneath; stipulas none; panicle terminal, effuse; flowers densely glomerate, bracteate; stamens seated on the margin of a villous disk. *h. S.* Native of the Islands of Nusa and Kambanga on the sea shore.

*Shore Canarium.* Fl. Nov. Tree 50 feet.

*Cult.* For culture and propagation see *Bosnellia*, p. 81.

IX. *HEDWIGIA* (in honour of John Hedwig, the celebrated muscologist; died 1799.) Swartz, fl. ind. occ. 2. p. 670. t. 13. Kunth, gen. tereb. p. 21. D. C. prod. 2. p. 80. but not of Hedw. Tetragastris, Gært. fruct. 2. p. 130. t. 109.

*Lin. syst. Octandria, Monogynia.* Flowers polygamous or hermaphrodite. Calyx 4-5-toothed, permanent. Petals 4-5, valvate in aestivation, connected together to the middle into a 4-5-cleft corolla. Stamens 8-10, adnate to the base of the corolla. Disk cup-shaped, 8-lobed. Ovary 4-celled, 8-10-furrowed. Style wanting. Stigma 4-furrowed, blunt. Berry 4-furrowed, 4-lobed at the bottom, containing 4 1-celled nuts (or from abortion only 2-3), with a thin coriaceous flesh. Seed pendulous, destitute of albumen. Cotyledons thick, fleshy, plano-convex. Radicle retracted, superior.—Balsamiferous West Indian trees, with impari-pinnate leaves, and stalked, coriaceous, quite entire leaflets. Flowers in panicle racemes.

1. II. *BALSAMIFERA* (Swartz. l. c.) flowers 4-cleft, octandrous, with no glands between the stamens. *h. S.* Native of St. Domingo, in woods, on the mountains. Tetragastris O'ssea, Gært. fruct. l. c. *Bursera balsamifera*, Pers. ench. 1. p. 413. Bois cochon, Nich. hist. 169. Flowers small, whitish. This tree is called in its native country *Bois de Cochon* or *Wild-boar's-tree*, because those animals are, when wounded, reported to strip off its bark and heal their wounds with the gum which exudes from it. This exudation is, according to Sloane, of a balsamic nature, very like balsam of Capaiva, both in scent and virtues. It is given in complaints of the chest or lungs, and is copiously procured by wounding the trunk of the tree.

*Balsam-bearing Hedwigia.* Tree 60 feet.

2 II. *MEXICANA* (D. C. prod. 2. p. 80.) flowers 5-cleft, decandrous, with roundish glands between the stamens. *h. S.* Native of Mexico. *Knorrea Mexicana*, Moc. et Sesse, fl. mex. icon. ined. Flowers white. Fruit 4-seeded.

*Mexican Hedwigia.* Tree 56 feet.

*Cult.* For culture and propagation see *Boswellia*, p. 81.

X. SORINDEIA (meaning unknown). Pet. Th. gen. mad. p. 24. D. C. prod. 2. p. 80.

LIN. SYST. *Polygamia, Dioecia*. Flowers polygamo-dioecious. Calyx urceolate, 5-toothed. Petals 5, lanceolate, broadest at the base, valvate in the bud. Male flowers with about 20 stamens inserted in the bottom of the calyx (sometimes from 16 to 28). Hermaphrodite flowers with 5 fertile stamens? filaments short. Ovary conical. Stigmas 3, sessile. Drupe containing a thready, compressed, oblong nut. Embryo naked, thick.—African or East Indian shrubs, with impari-pinnate leaves, and alternate entire leaflets. Panicles branched, axillary or terminal. Flowers purple.

1 S. MADAGASCARIENSIS (D. C. prod. 2. p. 80.) *h. S.* Native of Madagascar, where it is called *Manguier à grappes*, from the fruit being similar to that of the Mango. A weak shrub, with alternate leaves, standing on woody petioles. Flowers small, in axillary racemes.

*Madagascar Sorindeia.* Clt. 1828. Shrub 12 feet.

2 S. AFRICA'NA (D. C. prod. 2. p. 80.) Native of the western coast of Africa, along the banks of the river Congo. See R. Br. cong. p. 12.

*African Sorindeia.* Tree.

*Cult.* For culture and propagation see *Boswellia*, p. 81.

XI. GARUGA (called *Garuga* or *Garogoo* by the Telingas). Roxb. hort. beng. p. 33. cor. 3. t. 208. D. C. prod. 2. p. 80.

LIN. SYST. *Decandria, Monogynia*. Flowers hermaphrodite. Calyx small, campanulate, 5-cleft. Petals 5, inserted in the calyx, connivent. Stamens 10, inserted with the petals. Glanels 5, inserted between the pairs of stamens. Ovary ovate. Style 1, filiform. Stigma 5-lobed. Drupe globose, fleshy, containing 2 or more 1-seeded nuts.—Trees, with impari-pinnate leaves; leaflets almost sessile, crenate. Flowers yellowish, in axillary panicles.

1 G. PINNATA (Roxb. cor. 3. t. 203.) leaves somewhat villous; leaflets oblong, lanceolate, bluntly crenate. *h. S.* Native of the East Indies, in mountainous districts.—Rheed. mal. 4. p. 69. t. 33. Rheed's and Roxburgh's plants may be distinct species. A deciduous tree, the wood of which being soft and spongy is very little used. The fruit is eaten raw by the natives, but is chiefly used for pickling; it has a rough austere taste, which renders it unpalatable as taken from the tree, though very fit for pickling.

*Pinnate-leaved Garuga.* Clt. 1808. Tree 60 feet.

2 G. JAVA'NICA (Blum. bijdr. 1165.) leaflets many pairs, oblong-lanceolate, acuminate, oblique at the base, serrated, tomentose beneath; flowers panicle; fruit densely villous. *h. S.* Native of Java, in mountain woods.

*Java Garuga.* Fl. May. Tree 60 feet.

3 G. MADAGASCARIENSIS (D. C. prod. 2. p. 81.) leaves smooth; leaflets acutely serrated. *h. S.* Native of Madagascar. This may be Roxburgh's *G. pinnata*?

*Madagascar Garuga.* Tree 50 feet.

*Cult.* For culture and propagation see *Boswellia*, p. 81.

XII. ELAPHRIUM (from *ελαφρος*, *elaphros*, contemptible; trees without beauty, and with wood of no value). Jacq. amer. 105. D. C. prod. 1. p. 723. H. B. et Kunth. nov. gen. amer. 7. p. 27.

LIN. SYST. *Octandria, Monogynia*. Calyx 4-parted, permanent. Petals 4, inserted in the disk, spreading, broadest at the base. Stamens 8, inserted in the disk. Anthers 2-celled.

Ovary superior, sessile, 2-celled, with 2 collateral ova in each cell attached to the central axis. Disk orbicular in the bottom of the calyx. Style short, crowned by a bifid stigma. Drupe pea-formed, 2-3-valved, soluble. Seeds suborbicular, with a double integument, without albumen. Cotyledons suborbicular, corrugated or plaited, with a superior radicle.—Unarmed balsamiferous trees or shrubs, having white smooth wood. Leaves crowded at the tops of the branches, impari-pinnate, and exstipulate, with dotless opposite leaflets, having the rachis usually winged. Racemes axillary, simple. Flowers insignificant, of a whitish-green colour or yellowish. Pedicels bracteate. Bark of the fruit containing balsam.

1 E. TOMENTOSUM (Jacq. amer. 105. t. 71. f. 1-2.) leaves tomentose; leaflets 9, ovate, toothed; racemes few-flowered, shorter than the leaves. *h. S.* Native of Curacoa and the islands adjacent, in rocky gravelly places. Lam. ill. t. 304. f. 1. *Fagara octandra*, Lin. mant. 40. *Amyris tomentosa*, Spreng. syst. 2. p. 219. A balsamic, glutinous, odorous resin flows from this tree, which much resembles that which flows from *Bursera*.

*Tomentose Elaphrium.* Tree 20 feet.

2 E. GLABRUM (Jacq. amer. 106. t. 71. f. 4.) leaves quite glabrous; leaflets oblong-lanceolate, bluntly toothed; racemes few-flowered, twice the length of the leaves. *h. S.* Native of Carthage, in bushy places by the sea side. Lam. ill. 304. f. 2. *Fagara Elaphrium*, Willd. spec. 1. p. 668. *Amyris Elaphrium*, Spreng. syst. 2. p. 219.

*Smooth Elaphrium.* Clt. 1818. Tree 20 feet.

3 E. PENICELLATUM (Moe. et Sesse, fl. mex. ined. D. C. prod. 1. p. 724.) leaves subglabrous; leaflets oval-oblong, acuminate, coarsely toothed; petioles pilose at the base, and with fascicles of hairs at the origin of the pairs of leaflets; racemes few-flowered, much shorter than the leaves. *h. S.* Native of Mexico. *Amyris penicellata*, Spreng. syst. 2. p. 219.

*Pencilled-haired Elaphrium.* Tree 20 feet.

4 E. FAGAROIDES (H. B. et Kunth, nov. gen. amer. 7. p. 27. t. 611.) branches angularly furrowed, flexuous, and are as well as the leaves smooth; leaflets 7, obtuse, serrate-crenate, terminal one elliptical-rhomboid, lateral ones unequal-sided; rachis wingless. *h. S.* Native of Mexico. Fruit 4-valved. *Amyris fagaroides*, Spreng. syst. append. 148.

*Fagara-like Elaphrium.* Tree 12 feet.

5 E. GLABRIFOLIUM (H. B. et Kunth, nov. gen. amer. 7. p. 28.) branches twisted and flexuous, terete, tomentose; leaflets 7-9, obtuse, coarsely crenate, smooth, shining above, terminal one elliptic-oblong, lateral ones unequal-sided; rachis winged; wing subdentate. *h. S.* Native of Mexico, between Pazuaro and the burning mount Jorullo, near Arrio. E. glabrum, Jacq. amer. 106.?

*Smooth-leaved Elaphrium.* Tree 12 to 20 feet.

6 E. JORULLENSE (H. B. et Kunth, nov. gen. 7. p. 28. t. 612.) branches round, smooth; leaflets 15-17, oblong, obtuse, doubly crenate, wrinkled, and tomentose on both surfaces, hoary above, and rufescent beneath; rachis winged; wings doubly crenate. *h. S.* Native of Mexico, at the bottom of Mount Jorullo.

*Jorullo Elaphrium.* Tree 20 feet.

7 E. JAQUINIANUM (H. B. et Kunth, nov. gen. amer.) branches terete, covered with rusty tomentum above; leaflets 7-9, coarsely crenate, wrinkled above, hairy and shining, but covered with rufescent tomentum beneath, younger ones rusty, terminal one rhomboid-ovate, lateral ones unequal-sided; rachis winged; wings entire. *h. S.* Native of South America, in the province of Venezuela, near La Victoria. E. tomentosum, Jacq. amer. 105. t. 71.? *Fagara octandra*, Lin.? A glutinous juice flows from this tree when cut or broken, which thickens to a resinous gum

on exposure to the air, which is generally used to erase cicatrices occasioned by ulcers or wounds. The wood and bark have a strong grateful scent.

*Jacquin's Elaphrium.* Tree 40 feet.

8 *E. EXCELSUM* (H. B. et Kunth, nov. gen. amer. 7. p. 30. t. 611.) branches terete, tomentose above; leaflets 5-9, obtuse, coarsely crenated, rugose, soft, pubescent above and rusty beneath, terminal one ovate-elliptic, lateral ones subelliptic, nearly equal at the base; rachis winged; wings crenate. *h. S.* Native of Mexico, between Acapulco and La Venta del Exido. *E. copalliferum*, Moc. et Sesse, fl. mex. ined. D. C. prod. 1. p. 724. *Amyris copallifera*, Spreng. syst. 2. p. 219. A fragrant resin flows spontaneously from this tree, which is called gum-copal in Mexico.

*Tall Elaphrium or Mexican Copal.* Tree 50 feet.

9 *E. ARIENSE* (H. B. et Kunth, nov. gen. amer. 7. p. 31.) branches angularly furrowed, villous; leaflets 5-7 pairs, oblong, somewhat acuminate, crenate-serrated, hairy above, and covered with canescent hairs beneath; rachis somewhat winged. *h. S.* Native of Mexico, between Pazuaro and Mount Jorullo, near Ario.

*Ario Elaphrium.* Tree 30 feet.

10 *E. GRAVEOLENS* (H. B. et Kunth, nov. gen. amer. 7. p. 31.) leaflets 7, oblong, acuminate, coarsely serrate-crenate, smooth; rachis winged at the top; wings entire. *h. S.* Native of South America, on the banks of the river Magdalena, where it is called *Cupa o Carani*. *Amyris graveolens*, Spreng. syst. append. 148.

*Strong-scented Elaphrium.* Tree 40 feet.

11 *E. LANUGINOSUM* (H. B. et Kunth, nov. gen. amer. 7. p. 31.) branches terete, rather flexuous, finely tomentose; branchlets woolly; leaflets 9-13, oblong, crenate, younger ones villously tomentose above, and white and woolly beneath. *h. S.* Native of New Spain.

*Woolly Elaphrium.* Tree 40 feet.

*Cult.* For culture and propagation see *Boswellia*, p. 81.

**XIII. FAGARASTRUM** (from *Fagara* and *astrum*, an affixed signification, like; resembling *Fagara*).

**LIN. SYST.** *Hexa-Octándria, Monogynia*. Flowers hermaphrodite. Calyx 3-4-parted, short. Petals 3-4. Stamens 6-8, alternate ones shortest; filaments thickened above the base. Anthers large. Ovary simple, tapering to the base into a stipe, which bears the petals and stamens at its base, tubercled, 3-4-lobed at the apex, 3-4-celled; cells 2-ovulate. Ovula suspended from the inner angle. Style prismatic, 3-4-angled, thick, smooth, 3-1-lobed at the apex. Fruit? Shrubs, with alternate, pinnate leaves, and alternate, oblique leaflets, full of pellucid dots. Flowers disposed in axillary panicles and racemes, with the peduncles and pedicels bracteate at the base.

1 *F. INÆQUALE*; petioles puberulous; leaflets stalked, ovate, irregularly crenate, glabrous; racemes few-flowered, much shorter than the leaves; flowers octandrous. *h. G.* Native of the Cape of Good Hope. *Elaphrium inæquale*, D. C. prod. 1. p. 724.—Burch. cat. 3082 and 3051. *Amyris inæqualis*, Spreng. syst. 2. p. 218.

*Unequal-leafletted Fagarastrum.* Shrub.

2 *F. CAPEENSE*; leaflets ovate, obtuse, erect, nearly sessile, crenate; branches prickly, flexuous; flowers octandrous. *h. G.* Native of the Cape of Good Hope. *Fagara Capensis*, Thunb. fl. cap. 1. p. 516. H. B. et Kunth, nov. gen. amer. 6. p. 6. *Elaphrium Capense*, D. C. prod. 1. p. 724. *Amyris Capensis*, Spreng. syst. 2. p. 218.

*Cape Fagarastrum.* Shrub.

3 *F. THUNBERGII*; prickly; leaflets sessile, ovate, finely crenate; petioles prickly, with a narrow margin; flowers oc-

tandrous? *h. G.* Native of the Cape of Good Hope. *Fagara armata*, Thunb. fl. cap. 1. p. 141. *Zanthoxylum Thunbergii*, D. C. prod. 1. p. 726.

*Thunberg's Fagarastrum.* Shrub.

4 *F. ANISATA*; leaflets 13, stalked, ovate-lanceolate, obsoletely toothed, unequal; panicles corymbose, axillary; flowers octandrous? *h. G.* Native of? *Amyris anisata*, Willd. spec. 2. p. 337.

*Anise-scented Fagarastrum.* Shrub.

*Cult.* For culture and propagation see *Boswellia*, p. 81.

**ORDER LXXVI. AMYRIDEÆ** (plants agreeing with *Amyris* in important characters). R. Br. cong. 431. Kunth. in ann. scienc. nat. 2. p. 353. Lindl. introd. nat. p. 364.—*Terebinthaceæ*, Tribe V. *Amyrideæ*, D. C. prod. 2. p. 81.—*Terebinthaceæ*, part. Juss. gen. 368.

Calyx small, regular, permanent, in 4-5 divisions. Petals 4- (f. 19. a.) 6, hypogynous, imbricate in aestivation. Stamens double the number of the petals, also hypogynous. Ovary superior, 1-celled, seated on a thickened disk, containing 2 pendulous ovula. Stigma sessile, capitate. Fruit indehiscent, somewhat drupaceous (f. 19. b.), 1-seeded, glandular. Seeds without albumen (f. 19. c.). Cotyledons fleshy. Radicle superior, very short.—Trees or shrubs, abounding in resinous juice, with opposite compound leaves, full of pellucid dots, and axillary and terminal panicles of flowers. Pericarp covered with granular glands, filled with aromatic oil. The general structure of this order is that of *Terebinthaceæ*, but the qualities more nearly resemble those of *Burseriaceæ*. In consequence of the leaves being full of dots filled with resinous oil, as well as in the hypogynous insertion of the petals and stamens, it comes nearer to *Aurantaceæ*. The order contains fragrant shrubs. Gum elemi of the Island of Nevis is related to *Amyris*, which Dr. Hamilton calls *Amyris hexandra*, prod. fl. ined. 35. The gum resin called Bdellium is probably produced by a species of *Amyris*, the Niouttout of Adanson, according to Verrey, hist. nat. des. med. 291. is probably also a species of *Amyris*. The layer of the liber or inner bark of a species of *Amyris* was found by M. Gailliaud to be used by the Nubian Mahomedans as paper, on which they write their legends. Delile. cart. 13. *Amyris ambrosiaca*? is said to be poisonous. The resin of Cunnia is the produce of *Amyris ambrosiaca*.

#### *Synopsis of the Genera.*

1 *AMYRIS*. Calyx 4-toothed. Petals 4 (f. 19. a.). Stamens 8.

2 *PACHYLOBUS*. Fruit egg-shaped, superior, 1-celled, containing a large embryo, with 3-parted, fleshy, angular, twisted cotyledons.

1. *AMYRIS* (from *a* intensive, and *myron*, *myron*, balm; the whole of the trees in this genus smell strong of balm or myrrh). Lin. gen. no. 473. exclusive of some species, Kunth. gen. tereb. p. 22. D. C. prod. 2. p. 81.

**LIN. SYST.** *Octándria, Monogynia*. Flowers hermaphrodite. Calyx 4-5-toothed, permanent. Petals 4 (f. 19. a.) -6, hypogynous, cuneate, unguiculate, imbricate in the bud. Stamens 8-12, shorter than the petals. Ovary 3-4-celled; cells 2-seeded, girded by a ring, seated on the thick disk-like torus. Style short,

crowned by an obtuse stigma. Drupe (f. 19. b.) containing a 1-seeded chartaceous nut (f. 19. c.), some of the cells full of diaphanous mucilage.—Trees or shrubs, abounding in a resinous fluid. Leaves compound; leaflets full of pellucid dots. Flowers white, disposed in panicles. Drupe turgid, with an aromatic oil.

§ 1. *Americanae*. Leaves with 1-3 pairs of opposite leaflets, odd one stalked or sessile.

1 *A. MARITIMA* (Jacq. amer. 107.) leaflets 3, sessile, odd one stalked, ovate, crenate, obtuse. *h. S.* Native of Jamaica and of Cuba, about the Havanna, on rocks by the sea-side. The shrub abounds in a juice which smells like rue.

*Sea-side Amyris*. Fl. June, July. Clt. 1810. Shrub 8 feet.

2 *A. FLORIDANA* (Nutt. in Sillim. journ. 5. 1822. p. 294.) leaflets 3, ovate, quite entire, obtuse, smooth; flowers somewhat paniced; berries almost globose, tapering to the base. *h. G.* Native of Eastern Florida. Leaves reticulately-veined, glandular resinous, and fragrant. Berries black, the size of black pepper.

*Florida Amyris*. Shrub 10 feet.

3 *A. SYLVATICA* (Jacq. amer. 107.) leaflets 3, ovate, acuminate, somewhat crenate, all stalked, odd one longest. *h. S.* Native of Carthage, St. Domingo, and St. Thomas, in shady woods by the sea-side. *A. cymosa*, Reich. in Sieb. pl. exsicc. fl. trinit. no. 29, is probably distinct from this. The whole shrub abounds in a turpentine juice, of a strong disagreeable smell. Gum elemi has erroneously been supposed to be yielded by this plant. Berry red, about the size of a pea.

*Wood Amyris*. Fl. June, July. Clt. 1793. Tree 15 feet.

4 *A. BRASILENSIS* (Spreng. syst. 2. p. 217.) leaflets lanceolate, tapering to the base, rounded at the apex, mucronate, quite entire, veiny, shining above, discoloured beneath; petioles triquetrous; panicles axillary, shorter than the leaves. *h. S.* Native of Brazil.

*Brazilian Amyris*. Clt. 1818. Tree.

5 *A. DYATRIPA* (Spreng. neue, entd. 3. p. 48.) leaflets 3, ovate, quite entire, obtuse, somewhat emarginate, all stalked, odd one longest. *h. S.* Native of St. Domingo. The specific name appears to be derived from *dys*, two, and *tripas*, having three feet; perhaps in allusion to the stalked leaflets.

*Dyatropa Amyris*. Shrub 10 feet.

6 *A. PLUMIERI* (D. C. prod. 2. p. 81.) leaflets 3-5, all stalked, somewhat serrated, ovate, acuminate, villous beneath. *h. S.* Native of the Antilles.—*Plum.* ed. Burm. t. 100. *A. elemifera*, Lin. spec. p. 495. ? but Catesby's figure is cited by the author, and therefore the country; this is referred to *Ptelea*. The fruit is the shape and size of an olive, but red, having an odoriferous pulp within it. Gum elemi is said to be extracted from this tree; it is brought to this country in roundish cakes, wrapped up in leaves. This resin is only used as an ingredient in a digestive ointment, called Unguentum elemi.

*Plumier's Amyris* or Gum-elemi-tree. Clt. 1820. Tree 20 ft.

7 *A. ? HEXANDRA* (Hamilt. prod. fl. ind. occ. p. 34.) branched; leaves impari-pinnate, with 3 pairs of quite entire, ovate, bluntly and obliquely acuminate leaflets, which are somewhat decurrent down the petiole, smooth above, and reticulately veined beneath; flowers paniced, small, greenish, always hexandrous;

panicles axillary and terminal; calyx cup-shaped, entire; petals 3, greenish, entire; ovary oblong, smooth, inferior; style short, with an obtuse stigma; drupe membranous, elliptic, acuminate at both ends, 1-valved. *h. S.* Native of the island of Nevis, in cold subhumid groves.—A tall tree, full of resinous fragrant juice, differing from *A. elemifera* in the leaves being smooth on both surfaces, not tomentose beneath. The tree is called *Gum Elemi-tree*, *Gum Elem-tree* in its native country.

*Hexandrous Amyris*. Fl. June, Sept. Tree 40 feet.

8 *A. TOXIFERA* (Willd. spec. 2. p. 336.) leaflets 5-7, stalked, ovate, somewhat cordate, acuminate; racemes simple, about the length of the petioles. *h. G.* Native of Carolina (Cat. car. 1. t. 40.), as well as the West India islands. *Lucinium*, Pluk. t. 201. f. 3. *A. balsamifera*, Lin. spec. 496. exclusive of the synonyme of Sloane. *Elemifera foliis pinnatis*, Lin. hort. cliff. 486. The fruit hangs in bunches, of the shape of a pear, of a purple colour. A juice distils from the trunk of the tree, as black as ink, which the inhabitants of Carolina say is poisonous. The Janca-tree is said to be a very valuable timber tree, the wood bears a fine polish, and has a pleasant smell. The berries have much the taste of balsam of Capaiva. An infusion of the leaves has a very pleasant flavour, is highly cephalic, and is particularly restorative to weak eyes.

*Poison-wood* or *White Candle-wood Amyris*. Clt. 1820. Tr. 50 ft.

9 *A. PINNATA* (H. B. et Kunth, nov. gen. amer. 7. p. 37. t. 610.) leaflets 5-7, ovate, somewhat crenate, terminal one roundish-elliptical; panicles axillary, much branched. *h. S.* Native of South America, between the tropics. Branchlets and petioles pubescent. Leaves membranous, smooth. Fruit unknown.

*Pinnate-leaved Amyris*. Tree 20 feet.

§ 2. *Asiaticae*. Leaflets alternate, all stalked.

10 *A. HEPTAPHYLLA* (Roxb. hort. beng. p. 28.) leaflets 3-4 pairs, simple, obliquely-lanceolate, acuminate, entire; panicles branched, axillary, and terminal. *h. S.* Native of the East Indies, on the mountains bordering Silhet, where it is called *Karum-phul*. Flowers whitish-yellow. Berry oblong, 1-celled. Seed filling the berry. Disk fleshy, contracted in the middle, the lower swelling receiving the petals and stamens.

*Seven-leaved Amyris*. Clt. 1823. Tree.

11 *A. NANA* (Roxb. l. c.) leaflets 7, ovate-lanceolate, serrated; racemes simple, axillary, nearly the length of the leaves. *h. S.* Native of Amboyna.

*Dwarf Amyris*. Clt. 1822. Shrub 6 feet.

12 *A. PUNCTATA* (Roxb. hort. beng. ex Colchr. in Lin. trans. 15. t. 5. f. 3.) branches spreading; bark smooth, rusty; leaflets about 20 pairs, obliquely-oblong, crenulate, full of glandular dots, terminal one largest; petioles rather hairy; panicles terminal. *h. S.* Native of Chittagong. Flowers small, white. Disk fleshy, bearing the petals and stamens. Ovary 4-celled, tetragonal. Berry 1-celled, 1-seeded.

*Dotted-leaved Amyris*. Shrub.

† *Species not sufficiently known.*

13 *A. ? TECOMACA* (D. C. prod. 2. p. 82.) leaves on long petioles, hanging down, trifoliate; leaflets oblong, acute, serrated; peduncles numerous, terminal, loosely paniced, dependent. *h. S.* Native of Mexico, where it is called *Tecomaca* and *Tacamahaca*, but it is distinct from the *Tacamahaca* of Hern. *A. maritima*, Moc. et Sesse, fl. mex. icon. ined.

*Tecomaca Amyris*. Clt. 1827. Tree 30 feet.

14 *A. ? PHILIPPÆA* (Lunan, hort. jam. 1. p. 149.) petioles margined; leaflets 3, obovate, shining, obliquely veined. *h. S.* Native of Jamaica.

*Philippine Amyris*. Tree.

15 *A. DENTATA* (Willd. spec. ? Blum. bijdr. 1160.) leaflets

FIG. 19.

**Native of the Cæsus (ex icon.).** ☉. ? S. Native of the Indies. p. 249. Pl. t. 55. Flowers rose-coloured.

**Car-seeded Indigo.** Pl. 1 foot.

19 *I. RU'SCA*; stem erect, beset with long brown hairs; leaves with 2 or 3 pairs of cuneated, mucronate, pilose leaflets; stipulas filiform, also pilose; spikes or racemes of flowers axillary or lateral; calyx and legume clothed with fuscous hairs. ☉. S. Native of Guinea, among grass. Flowers small, flesh-coloured.

**Fuscous-haired Indigo.** Fl. July, Aug. Clt. 1823. Pl. 1 ft.

80 *I. HIRSU'TA* (Lin. spec. 1062. but not of Jacq.) stem suffrutescent, erect; branches terete, and are as well as the petioles and peduncles hairy; leaves with 3-5 pairs of obovate-oblong, obtuse leaflets, which are villous on both surfaces; racemes longer than the leaves; legumes tetragonal, 6-seeded, pendulous, hairy. ☉. S. Native of the East Indies and Guinea. Lam. ill. t. 626. f. 3. *I. Indica*, Mill. dict. no. 4. but not of Lam.—Burm. zeyl. 37. t. 14. Rheed. mal. 1. t. 55. Flowers purple or red.

**Hairy Indigo.** Fl. July, Aug. Clt. 1823. Pl. 1 foot.

81 *I. ASTRAGALINA* (D. C. prod. 2. p. 228.) stem herbaceous, erect, rough from simple hairs; leaves having 4 pairs of obovate, very obtuse leaflets, which are villous on both surfaces and white beneath; racemes shorter than the leaves; legume tetragonal, pendulous, very hairy, 2-seeded. ☉. S. Native of Senegal. *Astragalus*, Perr. in litt. 1825. This species is very nearly allied to the preceding, but the hairs on the upper surface of the leaves are adpressed and scarcely or not bifurcate. Flowers red.

**Milk-vetch-like Indigo.** Pl. 1 foot.

82 *I. SENEGALENSIS* (Lam. dict. 3. p. 248.) stem herbaceous, decumbent; branches slender, angular; leaves with from 1-3 pairs of leaflets; leaflets oblong, beset with adpressed bristly hairs on both surfaces; racemes longer than the leaves; legumes pendulous, much compressed, puberulous, oblong, mucronate, 3-4-seeded. ☉. S. Native of Senegal. *I. tetrasperma*, Vahl. ex herb. Juss. Habit of a species of *E'reum*. This is a very distinct species. Flowers red.

**Senegal Indigo.** Pl. procumbent.

83 *I. PARVULA* (Gaillaud, voy. mer. part. bot. t. 3. f. 1.) branches diffuse; leaves pinnate, with 2 or 3 pairs of obovate, grey leaflets; stipulas awl-shaped; spike of flowers about equal in length to the leaves. ☉. F. Native of Nubia. Flowers red.

**Least Indigo.** Pl. diffuse.

84 *I. LINEARIS* (D. C. prod. 2. p. 228.) stems herbaceous, rather diffuse; branches slender, angular; leaves having 1 or 2 pairs of linear leaflets, which are beset with adpressed bristly hairs on both surfaces; racemes rather longer than the leaves; legumes pendulous, linear, mucronate, straight, much compressed, scabrous, and puberulous, 10-12-seeded. ☉. S. Native of Senegal. Flowers red.

**Linear-leafletted Indigo.** Pl. diffuse.

85 *I. HENDECAPHYLLA* (Jacq. icon. rar. t. 570. coll. 2. p. 358.)

FIG. 33.

stem herbaceous, prostrate; branches terete and are as well as the leaves slightly covered with cinereous pubescence on both surfaces; leaves with 4-5 pairs of obovate, oblong, cuneated, obtuse leaflets; racemes shorter than the leaves; legumes reflexed, terete, but slightly tetragonal, straight, villous, 8-10-seeded. ☉. S. Native of Guinea, particularly of Senegal and the island of St. Thomas. Ker. bot. reg. 789. Beau.

fl. d'ow. 2. t. 84. Flowers rose-coloured. The plants of this species which are cultivated in the gardens are almost smooth, except the under surface of the leaves.

**Eleven-leafletted Indigo.** Fl. July, Aug. Clt. 1824. Pl. pr.

86 *I. PERROTTE'II* (D. C. prod. 2. p. 228.) stems herbaceous, prostrate, young ones compressed, and clothed with villous pubescence; leaves with 3 or 4 pairs of oblong-obovate leaflets, clothed on both surfaces with canescent pubescence, besides being dotted beneath; racemes crowded with flowers, shorter than the leaves; legumes oblong, terete, straight, pubescent, 3-4-seeded. ☉. ? S. Native of Senegal. *I. prostrata*, Perr. in litt. but not of Willd. Very like *I. encephylla*, but the petioles are longer, the stipulas linear-subulate, and the legume 3-4-seeded. Flowers red.

**Perrotte's Indigo.** Pl. prostrate.

87 *I. SESSILIFLORA* (D. C. prod. 2. p. 228.) stem herbaceous, erect, much branched; branches terete, and are as well as the leaves clothed with adpressed silky pubescence; leaflets 3 or 4 pairs, obovate; spikes crowded with flowers, sessile in the axils of the leaves, and shorter than them; legume terete, pubescent, straight, 4-6-seeded. ☉. S. Native of Senegal. Root simple, cylindrical, rather fusiform. Flowers red.

**Sessile-flowered Indigo.** Pl. 1 foot.

88 *I. A'NCERS* (Vahl. in Poir. suppl. 3. p. 147.) stems herbaceous, compressed, 2-edged, glabrous; leaflets 9 or 11, alternate, obovate-oblong, obtuse, smoothish; racemes longer than the leaves; legumes pendulous, linear, compressed, acute, puberulous, 8-10-seeded. ☉. S. Native of Guinea. Flowers rose-coloured.

**Two-edged-stemmed Indigo.** Pl. prostrate.

89 *I. ALTERNANS* (D. C. prod. 2. p. 229.) branches filiform, and are as well as the leaves clothed with adpressed, bristly hairs; leaflets 7-11, alternate, obovate, or oblong, a little mucronulate; racemes longer than the leaves; calycine lobes ending each in a setaceous acumen, about equal in length to the corolla; legumes reflexed. ☉. ? G. Native of the Cape of Good Hope. Burch. cat. no. 2079. Flowers reddish. Perhaps the same as *I. punctata*, Thunb. prod. 133. fl. cap. 599. but there are nothing like dots on the present plant to be seen.

**Alternating-leafletted Indigo.** Pl. 1 foot.

90 *I. CAROLINIANA* (Walt. cat. 187.) stem herbaceous, erect; branches terete; leaves with 6 or 7 pairs of oval-oblong leaflets, which are slightly covered with adpressed pubescence; racemes slender, longer than the leaves; legumes pendulous, usually 2-seeded, reticulately veined. ☉. G. Native of North America, from Carolina to Florida. Mich. fl. bor. amer. 2. p. 68. Flowers blue.

**Carolinian Indigo.** Pl. 1 foot.

91 *I. LAGASCA'NA* (D. C. prod. 2. p. 229.) stems herbaceous, erect; branches terete, beset with adpressed bristly hairs, canescent at the apex; stipulas linear, acuminate, rufous, and scarious; leaves with 5 pairs of obovate or oblong, mucronate leaflets, young ones clothed on both surfaces with adpressed bristly hairs, the adult ones only on the under surface; racemes pedunculate, longer than the leaves; legumes reflexed. Native of Peru, at Cheuchim. Flowers red?

**Lagasca's Indigo.** Pl. 1 foot.

92 *I. PLUMOSA* (Spreng. syst. 3. p. 278.) plant decumbent and villous; leaflets usually about 8 pairs, spatulate, emarginate; racemes few-flowered, on long peduncles; calycine segments at length elongated, very villous and plumose. ☉. ? S. Native of?

**Feathery-calyxed Indigo.** Pl. decumbent.

93 *I. ASPERA* (Perr. in litt. D. C. prod. 2. p. 229.) stem herbaceous, erect, branched; branches terete; leaves and peduncles covered with adpressed strigæ; leaves with 1 or 2 pairs of linear, acute leaflets; racemes slender, longer than the leaves; legumes

reflexed. ☉. S. Native of Senegal, on plains near Richard-Tole. Flowers red. Habit nearly like that of *I. psoraleoides*, but differs in the leaves being pinnate.

*Rough Indigo*. Pl. 1 foot.

94 *I. JAMAICENSIS* (Spreng. syst. 3. p. 277.) herbaceous; leaves with 3 pairs of oblong, mucronate leaflets, and are as well as the erect angular branches beset with adpressed bristly hairs; racemes straight, exceeding the leaves; legumes reflexed, almost terete. ☉. S. Native of Jamaica. Flowers red.

*Jamaica Indigo*. Pl. 1 foot.

95 *I. SPICATA* (Forsk. descr. 13. Vahl. symb. 1. p. 56.) stem herbaceous, decumbent, villous; leaves with 4 pairs of obovate villous leaflets, outer ones largest; stipulas lanceolate-subulate, dry; spikes longer than the leaves; legume terete, torulose, pendulous.—Native of Arabia Felix. Flowers red. Allied to *I. hirsuta*.

*Spicate-flowered Indigo*. Pl. decumbent.

96 *I. SCABRA* (Roth, nov. spec. 359.) the whole plant is scabrous from adpressed strigæ: stem erect, tetragonal; leaves with 4 pairs of oval, mucronate leaflets; racemes elongated, loose, exceeding the leaves; legume pendulous, a little arched, strigose, and somewhat tetragonal. ☉. ? S. Native of the East Indies.

*Scabrous Indigo*. Pl. 1 foot.

97 *I. MICROCARPA* (Desv. journ. bot. 1814. 1. p. 79.) stem?; leaves with 4 pairs of leaflets, covered with white hairs; racemes shorter than the leaves; legume very short, white, 2-seeded. Native of Brazil.

*Small-fruited Indigo*. Pl. ?

§ 4. *Brachypoda* (from βραχυς, *brachys*, short, and πους, *pous*, *podos*, a foot; in reference to the petioles being very short). *D. C. prod.* 2. p. 229. Leaves impari-pinnate; leaflets approximate. Petioles very short.

98 *I. FRAGRANS* (Retz, obs. 4. p. 29.) stems terete, rather pilose; leaves with 1 or 2 pairs of leaflets; leaflets ovate, terminal one obovate and larger; racemes longer than the leaves, 3-5-flowered; legume linear, tetragonal. ♀. S. Native of the East Indies.—Pluk. phyt. t. 166. f. 1. Flowers red.

*Fragrant Indigo*. Fl. June, July. Clt. 1816. Pl. 1 foot.

99 *I. PUSILLA* (Lam. dict. 2. p. 248.) stems terete, beset with a few adpressed strigæ; leaflets 3 or 4, alternate, oval, clothed beneath with white hairs, terminal one oblong and longer; racemes a little longer than the leaves, few-flowered; legume deflexed, linear, rather terete, 4-6-seeded, hardly puberulous. ☉. ? S. Native of Madagascar and the Island of Bourbon. *I. tenella*, Vahl. mss. Flowers red.

*Small Indigo*. Pl. prostrate?

100 *I. GLABRA* (Lin. spec. 1062.) stem herbaceous, smoothish; leaves with 1 or 2 pairs of obovate leaflets, which are smooth above and pubescent beneath; racemes few-flowered, length of leaves; legumes horizontal, glabrous, terete, acute. ☉. H. Native of the East Indies.—Pluk. alm. t. 166. f. 1. Branches with a few long hairs. Stipulas setaceous. Flowers red.

*Glabrous Indigo*. Fl. July, Aug. Clt. 1820. Pl. 1 ft. ? or pr.

101 *I. ENNEAPHYLLA* (Lin. mant. 272.) stem herbaceous, procumbent, pubescent; branches compressed; leaves with 3-5 pairs of obovate-oblong, approximate leaflets; racemes sessile, length of leaves; legume straight, somewhat tetragonal, 2-seeded. ☉. S. Native of the East Indies. *Hedysarum prostratum*, Burm. ind. t. 55. f. 1.—Pluk. alm. t. 166. f. 2. Stipulas membranous, dilated at the base, acuminate at the apex. Corolla dark purple.

*Nine-leafletted Indigo*. Fl. July, Aug. Clt. 1776. Pl. pr.

102 *I. PENTAPHYLLA* (Lin. syst. veg. 564.) stems herbaceous, depressed; leaves with 2 pairs of oval leaflets; peduncles 2-flowered. ☉. S. Native of? Very like the preceding species. Flowers red.

*Five-leafletted Indigo*. Pl. prostrate.

103 *I. SEMITRILUGA* (Forsk. descr. 137. Vahl. symb. 1. p. 56.) stem suffruticose, prostrate; branches terete, clothed with hoary villi; leaves with 2 pairs of obcordate, mucronate leaflets; racemes longer than the leaves; legumes pendulous, oblong, torulose, 2-seeded. ♀. S. Native of Arabia and eastern Asia. Mart. acad. mon. 6. p. 189. The whole plant is very villous. Flowers red. Perhaps only a variety of *I. enneaphylla*.

*Var. β*; legumes 4-seeded. ♀. G. Native of Persia. *I. argentea*, Burm. fl. ind. 171. but not of Lin. *Coronilla Persica argentea*, Garcin. in herb. Burm.

*Half-three-paired-leafletted Indigo*. Shrub prostrate.

104 *I. PULCHRA* (Willd. spec. 3. p. 1239.) stems fruticose; branches terete, hairy; leaves with 1 to 3 pairs of oblong, acute, villous leaflets, those on the branches are sometimes simple; racemes ovate, villous, with rufous hairs, length of leaves, terminal, somewhat capitate; legume oblong, hairy, 2-3-seeded. ♀. S. Native of Guinea. *I. ferruginea*, Thonn. in herb. Puer. *I. rufescens*, Poir. suppl. 3. p. 148. Flowers red.

*Fair Indigo*. Shrub 1 foot.

105 *I. MINIATA* (Ort. dec. 98.) stems herbaceous, procumbent, and are as well as the leaves clothed with adpressed silky pubescence; leaves with 2-3 pairs of oblong-linear leaflets; racemes pedunculate, longer than the leaves; legumes linear, tetragonal, 4-seeded. ☉. S. Native of Cuba. Flowers vermilion-coloured.

*Vermilion-flowered Indigo*. Pl. procumbent.

106 *I. CYTISOIDES* (Thunb. prod. 133.) stem shrubby, erect; branches angular, and are as well as the leaves clothed with fine adpressed pubescence; leaves with 2 or 3 pairs of oblong, mucronate leaflets; racemes twice the length of the leaves; legumes somewhat cylindrical, and somewhat torulose. ♀. G. Native of the Cape of Good Hope. Jacq. hort. schœnbr. t. 235. Curt. bot. mag. 742. *I. mucronata*, Lam. dict. 3. p. 247. *Psoralea cytisoides*, Lin. spec. 1076.—Pluk. phyt. t. 185. f. 5. Racemes sometimes terminal from the abortive branches. Bractæas ovate, mucronate, large, deciduous. Flowers rose-coloured. Calyx hoary.

*Cytisus-like Indigo*. Fl. July, Aug. Clt. 1774. Sh. 3 to 5 ft.

107 *I. LOTODES* (Lam. dict. 3. p. 247.) stem shrubby, erect; branches terete, clothed with hoary pubescence; leaves with 2 pairs of lanceolate, velvety leaflets; racemes longer than the leaves; calyx short; legume linear, a little arched, velvety, rather torulose. ♀. G. Native of the Cape of Good Hope. Comm. hort. 2. t. 84. Flowers red. Very like the preceding species.

*Lotus-like Indigo*. Fl. July, Aug. Clt. 1800. Sh. 2 to 3 ft.

108 *I. NIGRICANS* (Vahl. in herb. Juss. Pers. ench. no. 46.) stem much branched, twiggy; leaves with 2 pairs of linear-cuneate leaflets; flowers panicked; legume short, strigose. ☉. ? S. Native of Guinea. Allied to *I. pulchra*, but differs in the pedicels rising from the axils of the superior leaves, solitary, 1-flowered, and therefore constituting a racemose panicle. Stems, pedicels, petioles, and under surface of leaves beset with white strigæ. Legume oval, 2-3-seeded, clothed with brown villi. Flowers purple.

*Blackish Indigo*. Pl. 1 foot.

109 *I. CAPILLARIS* (Thunb. prod. 133. fl. cap. 599.) stem suffruticose; branches slender, terete, glabrous; leaves with 2 or 3 pairs of filiform, acute, glabrous, approximate leaflets; racemes pedunculate, much longer than the leaves. ♀. G.

Native of the Cape of Good Hope. *J. tenuifolia*, Lam. dict. 3. p. 249. Flowers red.

*Capillary-leaved Indigo*. Shrub  $\frac{1}{2}$  foot.

110 *I. PERRINIA'NA* (Spreng. neue. entd. 2. p. 161.) branches terete, beset with adpressed pili; leaves with usually 4 pairs of linear, obtuse, mucronate leaflets, which are lined above, and silky beneath; racemes few-flowered; legumes linear, clothed with rusty villi.  $\odot$ . ? S. Native of South America.

*Perrin's Indigo*. Pl. 1 foot?

111 *I. ANGUSTIFOLIA* (Lin. mant. 272.) stem shrubby; branches terete, hoary; leaves with 2-3-4 or 5 pairs of approximate, linear, obtuse leaflets, which are canescent on the under surface, and somewhat revolute at the margins; racemes 3 times longer than the leaves; calyxes canescent.  $\mathfrak{h}$ . G. Native of the Cape of Good Hope. Thunb. fl. cap. 599. Sims, bot. mag. 465. *Polygala pinnata*, Burm. cap. 20. Corolla purplish.

*Narrow-leaved Indigo*. Fl. Ju. Oct. Clt. 1774. Sh. 1 to 2 ft.

112 *I. HUMBERTIA'NA* (Spreng. syst. 3. p. 276.) shrubby, erect, smoothish; leaves with 3 pairs of spatulate, mucronate leaflets, which are rather silky beneath; racemes exceeding the leaves; legumes pendulous, nearly terete.  $\mathfrak{h}$ . G. Native of Mexico. *I. mucronata*, Willd. herb. Flowers red.

*Humboldt's Indigo*. Shrub 2 to 3 feet.

113 *I. ORNITHOPODIODES* (Schlecht. and Cham. in Linnæa. 5. p. 577.) leaves with 2 pairs of leaflets; pili strigose, cinereous; stems diffuse, prostrate; racemes on long peduncles, few-flowered, exceeding the leaves; calycine segments subulately-acuminated, equal in length to the corolla; legume deflexed, 8-seeded, straight.  $\odot$ . S. Native of Mexico. Habit of *I. encaphylla*. Stipulas subulate. Flowers red.

*Ornithopus-like Indigo*. Pl. prostrate.

§ 5. *Digitata* (from *digitatus*, fingered, in reference to the leaflets all rising from a common centre, as the fingers of the hand). Leaflets 3 or 5, rising from the same dot or centre, either from the top of petioles, or directly from the branches.

114 *I. SULCATA* (D. C. prod. 2. p. 231.) branches angular and furrowed, rather canescent; petioles wanting; leaflets 3-5, linear, mucronate, stiff, with somewhat revolute margins, clothed with hoary villi beneath; flowers axillary, on short pedicels, in fascicles.  $\mathfrak{h}$ . G. Native of the Cape of Good Hope. Flowers red.

*Furrowed-stemmed Indigo*. Sh. 1 to 2 feet.

115 *I. ASPALATHOIDES* (Vahl. in herb. Juss. D. C. prod. 2. p. 231.) branches terete, hoary from adpressed down, which is fixed by the centre; petioles wanting; leaflets 3-5, linear, very slender, somewhat complicated, beset with adpressed hairs; pedicels axillary, solitary, 1-flowered; legumes straight, terete, 4-6-seeded, rather puberulous.  $\mathfrak{h}$ . S. Native of Ceylon and Malabar. *Aspalathus indica*, Lin. spec. 1001.—Burm. fl. ind. 155.—Pluk. phyt. t. 201. f. 1.—Rheed. mal. 9. t. 3. Flowers red? Habit of *Aspalathus*, but the stamens are diadelphous, and the down and the legumes are that of *Indigofera*.

*Aspalathus-like Indigo*. Fl. Ju. Jul. Clt. 1817. Sh. 1 to 2 ft.

116 *I. FILIFORMIS* (Thunb. fl. cap. 598.) branches terete, young ones rather hairy; petioles almost wanting; leaflets 5, oblong, cuneate, mucronate, strigose above, but white beneath, with the margins revolute; racemes pedunculate, much longer than the leaves; legumes straight, terete, spreading, glabrous, 8-10-seeded.  $\mathfrak{h}$ . G. Native of the Cape of Good Hope. *I. candicans*, Sieh. pl. exsic. cap. no. 55. Very like the following species, but differs in the flowers being loosely racemose, not capitate. Thunberg says his plant has terminal racemes of flowers; in ours they are axillary.

*Filiform Indigo*. Fl. Ju. Aug. Clt. 1822. Shrub 1 to 2 ft.

117 *I. ALOPECUROIDES* (D. C. prod. 2. p. 231.) branches

terete, young ones hairy; petioles very short; leaflets 5, elliptic-oblong, mucronate, clothed with adpressed strigæ on both surfaces; peduncles axillary, slender, 3 times longer than the leaves, bearing at the top an ovate head of flowers.  $\mathfrak{h}$ . ? G. Native of the Cape of Good Hope. *Lötus alopecuroides*, Burm. cap. p. 23. Flowers red.

*Fox-tail-like Indigo*. Shrub.

118 *I. CORIA'CEA* (Ait. hort. kew. 3. p. 68.) branches terete, hairy; petioles very short; leaflets 5, obovate, cuneate, somewhat emarginate and mucronate, beset with adpressed strigæ above, but hoary beneath; peduncles 3 times longer than the leaves; flowers disposed in dense heads; legumes straight, terete, glabrous.  $\mathfrak{h}$ . G. Native of the Cape of Good Hope. *Lötus Mauritanicus*, Lin. spec. 1091. *I. Mauritanica*, Thunb. fl. cap. 598. *Lötus fruticosus*, Berg. cap. 226. *Lötus racemoides*, Poir. suppl. 3. p. 508. *Indigofera*, Sieh. pl. exsic. cap. no. 54. This plant has very much the habit of *Dorjenum*. Flowers red or purple.

*Coriaceous Indigo*. Fl. July, Aug. Clt. 1774. Sh. 2 to 3 ft.

119 *I. SARMENTOSA* (Lin. fil. suppl. 334. Thunb. fl. cap. 596.) stem very short, much branched; branches filiform; leaves and calyxes clothed with adpressed strigose pubescence; petiole very short; leaflets ovate, small, mucronate; peduncles axillary, usually 2-flowered, much longer than the leaves; legumes cylindrical, glabrous.  $\mathfrak{h}$ . G. Native of the Cape of Good Hope. *Ononis filiformis*, Lin. mant. 266. *Lötus exstipulatus*, Berg. cap. 227. Flowers red.

*Var.  $\beta$ , microphylla* (Lam. dict. 3. p. 250.) leaves with 3-5 leaflets.

*Sarmentose Indigo*. Fl. June, July. Clt. 1786. Pl. straggling.

120 *I. DIGITATA* (Thunb. fl. cap. 598.) branches slender, angular at the apex, and are, as well as the leaves and calyxes, somewhat canescent from adpressed strigæ; leaves stalked, palmately 5-6-foliate; leaflets lanceolate-linear, acute, complicated; peduncles much longer than the leaves, bearing at the top of each a dense ovate-oblong spike of flowers.  $\mathfrak{h}$ . G. Native of the Cape of Good Hope. Flowers red.

*Digitate-leaved Indigo*. Shrub 1 to 2 feet.

121 *I. BURCHELLII* (D. C. prod. 2. p. 231.) branches slender, angular at the apex, and are, as well as the petioles and leaves, hoary from adpressed strigæ; leaves stalked, 4-5-foliate; leaflets obcordate, mucronate, hoary beneath, and rather strigose above.  $\mathfrak{h}$ . G. Native of the Cape of Good Hope. Burch. cat. no. 2918. Flowers red.

*Burchell's Indigo*. Shrub 1 to 2 feet.

122 *I. SESSILIFOLIA* (D. C. prod. 2. p. 231.) branches terete, young ones canescent, at length becoming spinose; petioles wanting; leaflets 3, obovate-cuneate, retuse, somewhat emarginate, pubescent beneath; spikes pedunculate, longer than the leaves; legumes compressed, rather arched, glabrous, 4-seeded.  $\mathfrak{h}$ . G. Native of the Cape of Good Hope. This species is nearly allied to *I. spinosa*, but differs in the leaves being all sessile, and in the legume being compressed, not terete. Flowers red.

*Sessile-leaved Indigo*. Shrub 1 to 2 feet.

123 *I. SPINOSA* (Forsk. descr. 137. Vahl. symb. 1. p. 55.) branches grey; leaves on short petioles, trifoliate; leaflets obovate, hoary; stipulas acrose; peduncles spinose, 2-3-flowered, twice the length of the leaves; legume terete, but somewhat tetragonal, scabrous.  $\mathfrak{h}$ . G. Native of Arabia Felix, and the East Indies. This plant has the habit of a species of *Alhagi*. Flowers red.

*Spiny Indigo*. Fl. May, July. Clt. 1820. Shrub 1 to 2 ft.

124 *I. CANDICANS* (Ait. hort. kew. 3. p. 67.) branches slender, angular, clothed with adpressed silky canescent down; leaves stalked, trifoliate; leaflets lanceolate-linear, silky beneath; stipulas small; spikes pedunculate, few-flowered, much longer than

the leaves; legumes cylindrical, straight.  $\frac{1}{2}$ . G. Native of the Cape of Good Hope. Flowers red. Curt. bot. mag. 198.

*White-leaved Indigo*. Fl. May, June. Clt. 1774. Sh. 1 to 2 ft.

125 *I. PSORALEOIDES* (Lin. syst. nat. 469.) branches angular, hardly pubescent; leaves petiolate, trifoliate; leaflets lanceolate, clothed with adpressed pubescence beneath; stipulas linear-subulate, elongated; racemes pedunculate, much longer than the leaves; legumes pendulous.  $\frac{1}{2}$ . G. Native of the Cape of Good Hope. Lam. ill. t. 626. f. 4. Sims, bot. mag. 476. *Cytisus psoraleoides*, Lin. spec. 1043. Burn. cap. prod. p. 22. *I. racemosa*, Lin. spec. 1062.—Pluk. phyt. t. 320. f. 3. ? but the racemes in the figure are shorter than the leaves. Flowers red.

*Psoralea-like Indigo*. Fl. Ju. Sept. Clt. 1758. Shrub 2 feet.

126 *I. CINEREA* (Willd. spec. 3. p. 1225.) branches rather angular, clothed with greyish silky pubescence; leaves petiolate, trifoliate; leaflets oblong-lanceolate, silky; racemes length of leaves; legumes spreading, linear, mucronate, silky.  $\frac{1}{2}$ . S. Native of the East Indies. Flowers small, red.

*Grey Indigo*. Shrub 2 feet.

127 *I. MOLUCCANA* (D. C. prod. 2. p. 232.) branches slender, terete, puberulous; leaves petiolate, trifoliate; leaflets oblong-lanceolate, pubescent beneath; flowers axillary, sessile; legumes spreadingly deflexed, puberulous, rather tetragonal, 4-6-seeded.  $\frac{1}{2}$ . ? S. Native of the Moluccas. The middle leaflet is on a short petiole. The flowers are probably red.

*Molucca Indigo*. Shrub.

128 *I. STIPULARIS* (Link. enum. 2. p. 250.) stem beset with short strigæ; leaves trifoliate; leaflets oval, with a few adpressed hairs; stipulas oval, acute; racemes longer than the leaves.  $\frac{1}{2}$ . G. Native of the Cape of Good Hope. Perhaps belonging to a different section. Flowers red.

*Stipular Indigo*. Fl. May, July. Clt. 1824. Sh. 1 to 2 feet.

129 *I. INCA'NA* (Thunb. prod. 132. fl. cap. 596.) stems decumbent, very much branched, suffrutescent at the base; branches clothed with silky pubescence; leaves petiolate, trifoliate; leaflets ovate, acute, silky; legume reflexed, silky.  $\frac{1}{2}$ . G. Native of the Cape of Good Hope. Flowers red.

*Hoary Indigo*. Fl. May, July. Clt. 1812. Shrub decumbent.

130 *I. ARCUATA* (Willd. spec. 3. p. 1228.) branches angular, clothed with hoary pubescence; leaves petiolate, trifoliate; leaflets elliptic, obtuse, mucronate, canescent beneath; racemes about equal in length to the petioles; legume arched, reflexed, tetragonal, canescent.  $\odot$ . ? S. Native of the East Indies. Flowers red.

*Arched-podded Indigo*. Pl.

131 *I. TRI'ITA* (Lin. fil. suppl. 335.) stem erect; branched at the base; leaves petiolate, trifoliate; leaflets ovate-lanceolate, acute; racemes shorter than the leaves.  $\odot$ . ?  $\delta$ . ? S. Native of the East Indies. Flowers red.

*Worn Indigo*. Fl. June, July. Clt. 1802. Pl. 1 foot.

132 *I. HEDYSAROIDES* (Lam. dict. 3. p. 250.) stem erect, branched at the base; leaves petiolate, trifoliate; leaflets ovate, obtuse; legume arched.  $\frac{1}{2}$ . G. Native of the East Indies, ex Rheed. mal. 9. t. 36. and perhaps of China if *I. coccinea*, Lour. coch. p. 457. be the same. Flowers deep red.

*Hedysarum-like Indigo*. Fl. June, Aug. Clt. 1822. Pl. 1 ft.

133 *I. ERECTA* (Thunb. prod. 133. fl. cap. 597.) stem herbaceous, nearly erect; leaves petiolate, trifoliate; leaflets obovate, acute, glabrous above, and clothed with fine pubescence beneath; legume cylindrical, acute, reflexed, pubescent.—Native of the Cape of Good Hope. Flowers red.

*Erect Indigo*. Pl. 1 foot.

134 *I. PROCUMBENS* (Lin. mant. 271.) stems flexuous, decumbent, compressed, smoothish; leaves petiolate, trifoliate; leaflets obovate, smooth above, but clothed with adpressed pubescence beneath; racemes much longer than the leaves.  $\frac{1}{2}$ . G.

Native of the Cape of Good Hope. Thunb. fl. cap. 597. Flowers blood-coloured, large for the size of the plant.

*Procumbent Indigo*. Fl. May, July. Clt. 1818. Pl. procumbent.

135 *I. PROSTRATA* (Willd. spec. 3. p. 1226.) stems filiform, prostrate, rather angular, and rather pubescent; leaves petiolate, trifoliate; leaflets obovate, whitish beneath; racemes shorter than the leaves; legumes pendulous, filiform. Native of the East Indies. Plant tufted. Flowers red.

*Prostrate Indigo*. Pl. prostrate.

† *Species not sufficiently known.*

136 *I. ROTUNDIFOLIA* (Lour. coch. p. 458.) stem twining, herbaceous, pilose; leaves trifoliate; leaflets roundish, tomentose on both surfaces; racemes axillary, short; legumes oblong, flat, acuminate, glabrous, 2-seeded.  $\odot$ .  $\odot$ . G. Native of China, near Canton. Flowers yellow.

*Round-leafletted Indigo*. Pl. twining.

137 *I. BUFALINA* (Lour. coch. p. 458.) stems suffruticose, climbing, glabrous; leaves trifoliate; leaflets ovate, glabrous; racemes axillary and terminal, on long peduncles; legumes straight, rather compressed, villous.  $\frac{1}{2}$ .  $\odot$ . G. Native of Cochin-china, among bushes. Flowers between white and purple.

*Ox Indigo*. Shrub cl.

138 *I. STRIGOSA* (Spreng. neue entd. 3. p. 54.) shrubby; stems filiform; leaves abruptly-pinnate? leaflets 5-7, linear, acute, strigose; stipulas cuspidate; racemes terminal? flaccid.  $\frac{1}{2}$ . G. Native of the Cape of Good Hope. Allied to *I. filiformis*.

*Strigose Indigo*. Shrub 1 foot.

139 *I. OXYCARPA* (Desv. journ. bot. 1814. vol. 1. p. 79.) stem angular, pentagonal, pilose; leaflets oblong-ovate, mucronate, pilose; spikes of flowers on long peduncles; legumes terete, a little incurved, acute.  $\frac{1}{2}$ . ? S. Native of the Antilles. Perhaps the leaves are pinnate or digitate.

*Sharp-fruited Indigo*. Shrub.

140 *I. DIFFUSA* (Desv. l. c.) branches diffuse; leaflets obovate, somewhat emarginate, pilose; spikes of flowers very short; legumes divaricate, rather pilose.  $\frac{1}{2}$ . ? S. Native of the African islands.

*Diffuse Indigo*. Shrub.

*Cult.* The whole of the species of this genus are rather elegant delicate plants, and all the green-house shrubby kinds are worthy of general cultivation; these grow best in a mixture of sandy loam and peat, and they are easily propagated by young cuttings planted in sand with a bell-glass placed over them. The stove kinds require to be grown in the same kind of soil as the green-house kinds, and to be propagated in the same manner. The seeds of the annual species require to be sown in a hot-bed in spring, and when the plants have grown a sufficient height they may be planted singly in separate pots, and placed again in the hot-bed, and some may be planted out in the open ground in a sheltered situation.

LXXX. OUSTROPIS (from *ovc*, *ous*, an ear, and *τροπις*, *tropis*, a keel; in reference to the keel of the flower being furnished with an auricle on each side).  $\odot$

LIN. SYST. *Diadelphia*, *Decandria*. Calyx hairy, tubular, 5-cleft; the segments subulate and acute, upper ones shortest. Vexillum broad, not emarginate, about equal in length to the wings, but longer than the keel. Keel furnished with an auricle on each side. Stamens diadelphous. Ovary pubescent, linear. Style glabrous. Stigma capitate and glandular. Legume short, cylindrical, and rather compressed, ending in the straight acute style, 3-seeded, the seeds lodged in as many cells.—A graceful small plant, with decumbent slender stems, which are slightly hairy; and small, trifoliate, rather hairy leaves, small subulate

stipulas; umbels of small rose-coloured flowers, on long axillary peduncles.

1 *O. MICROPHYLLUS*. 2. G. Native of the Cape of Good Hope. *Lötus microphyllus*, Hook, bot. mag. 2808.

*Small-leaved Outropis*. Fl. July. Clt. 1827. Pl. decumbent.

*Cult.* The seeds of this plant should be sown thinly in a pot of light mould, and placed in the green-house, where the plants will rise, flower and seed, the same season.

LXXXI. CLITORIA (from *clitoris*, an anatomical term, a resemblance to the subject of which has been fancied to exist in the flower). Lin. gen. no. 869. Lam. ill. 609. Gært. fruct. 2. p. 149. D.C. legum. mem. vi. prod. 2. p. 233.—*Ternatea*, Tourn. act. acad. par. 1706. t. 1.—*Clitorius*, Pet. in Rai. hist. 3. p. p. p.

LIN. SYST. *Diadelphia*, *Décandria*. Calyx furnished with 2 large bracteas at the base, 5-cleft (f. 34. a.). Vexillum large (f. 34. b.). Stamens diadelphous (f. 34. d.), inserted along with the petals above the base of the calyx. Style rather dilated at the apex. Legume linear, compressed (f. 34. c.), straight, 2-valved, acuminate by the base of the style, 1-celled, many-seeded. Seeds usually separated by cellular substance.—Climbing herbs, with impari-pinnate leaves, having 2 to 4 pairs of leaflets, but usually the leaves are pinnately-trifoliate; the leaflets usually stipellate. Flowers axillary, pedicellate, large, white, blue or purple, usually resupinate.

SECT. I. TERNA'TEA (in allusion to *C. Ternatea* being a native of the island of Ternate). Kunth, nov. gen. amer. 6. p. 415. D. C. prod. 2. p. 233. Calyx tubular. Vexillum spurless. Leaves impari-pinnate, having 2 to 4 pairs of leaflets.

1 *C. HETEROPHYLLA* (Lam. dict. 2. p. 51.) stems twining, slender, glabrous; leaves with 2 to 4 pairs of roundish, ovate, or linear leaflets; stipels none; pedicels solitary, 1-flowered; bracteoles small, acute. 2. G. S. Native of the Mauritius. Vent. choix. t. 26. Sims, bot. mag. 2111. Flowers blue.

*Variable-leaved Clitoria*. Fl. July, Aug. Clt. 1812. Pl. tw.

2 *C. TERNA'TEA* (Lin. spec. 1026.) stems twining, and rather pubescent; leaves with 2 to 4 pairs of oval or ovate leaflets; stipels subulate; pedicels solitary, one-flowered; bracteoles large, roundish; legumes smoothish. 2. G. S. Native of the East Indies, Mauritius, Arabia, Cuba, and usually cultivated in gardens in almost all parts of the world. Sims, bot. mag. 1542.—Rumph. amb. 5. t. 31.—Rheed. mal. 8. t. 38. *C. spectabilis*, Sal. prod. 336. *Lathyrus spectabilis*, Forsk. descr. 135. *Ternatea vulgaris*, H. B. et Kunth, nov. gen. amer. 6. p. 415. Plumule inconspicuous according to Gært. There are varieties of this plant with blue and white flowers, and also variegated with those colours.

*Var. β, bracteata* (Poir. suppl. 2. p. 301.) leaflets rather scabrous; legumes pubescent. 2. G. S. Native of? Flowers whitish-purple.

*Ternatea Clitoria*. Fl. July, Aug. Clt. 1739. Pl. tw.

SECT. II. EUCLITORIA (from *eu*, well or good, and *clitoria*; in reference to this section containing the true species of the genus). D. C. legum. mem. vi. prod. 2. p. 234. Calyx tubular. Vexillum spurless. Leaves pinnately trifoliate, that is, with only one pair of leaflets and an odd one.

3 *C. MARIA'NA* (Lin. spec. 1026.) stems twining, glabrous; leaflets ovate-lanceolate; pedicels solitary, 1-3-flowered; bracteoles lanceolate, and arc, as well as the calyxes, smooth; teeth of calyx nearly equal. 2. G. F. Native of North America, from Virginia to Carolina, in hedges by the sides of rivulets. Michx. fl. bor. amer. 2. p. 62. Flowers pale-blue, and flesh-coloured. Legume torulose. Seeds glutinous according to Michx.

*Maryland Clitoria*. Fl. Aug. Clt. 1759. Pl. tw.

4 *C. MEXICA'NA* (Link. enum. 2. p. 235.) stems twining; leaflets mucronate, glaucescent and pilose beneath; pedicels twin, 1-flowered; calyx cylindrical, much longer than the linear bracteoles; legume straight, hairy. 2. G. S. Native of Mexico. Flowers of an obscure purple colour. The plant is said to be nearly allied to the preceding species.

*Mexican Clitoria*. Fl. Sept. Nov. Clt. 1823. Pl. tw.

5 *C. ANGUSTIFOLIA* (H. B. et Kunth, nov. gen. amer. 6. p. 417.) stems twining, glabrous; leaflets linear-lanceolate, obtuse, and rather mucronate, rather scabrous above and glabrous beneath; pedicels usually solitary, 1-flowered; calyx smoothish, having the 4 superior teeth very short. 2. G. S. Native of South America, near Angustura. Flowers rose-coloured.

*Narrow-leaved Clitoria*. Pl. tw.

6 *C. FORMOSA* (H. B. et Kunth, nov. gen. amer. 6. p. 417.) stems twining, smoothish; leaflets oblong, obtuse, ending in a short mucrone each, glabrous; pedicels 1-4 together, 1-flowered; calyx urceolate, glabrous, having the 4 superior teeth very short. 2. G. S. Native on the banks of the river Orinoco. Flowers violaceous. Legume compressed, sessile, glabrous.

*Beautiful Clitoria*. Fl. July, Aug. Clt. 1823. Pl. tw.

7 *C. RACEMOSA*; stems twining, pilose; leaves pinnately trifoliate; leaflets ovate, entire, pilose; racemes axillary, spike-formed; legume curved. 2. G. S. Native of the island of St. Thomas, in the Gulf of Guinea. Flowers large, blue. Vexillum spurless?

*Racemose-flowered Clitoria*. Pl. tw.

8 *C. ? ALBA*; plant glabrous, twining; leaves pinnately trifoliate; leaflets oblique, entire, glabrous; peduncles 2-3-flowered. 2. G. S. Native of the island of St. Thomas, in the Gulf of Guinea. Flowers white. Vexillum spurless?

*White-flowered Clitoria*. Pl. tw.

9 *C. POITEAU* (D. C. prod. 2. p. 234.) stems erect, rather velvety; leaflets elliptic, glabrous above, but clothed with silky velvety pubescence beneath, as well as the peduncles and calyxes; racemes longer than the leaves, rather paniced, spicate, many-flowered; calycine lobes acuminate, nearly equal. 2. G. S. Native of French Guiana. Flowers large, red, and beautiful, disposed along the peduncles, sessile, and furnished with a bractea and 2 bracteoles each, appearing at first sight to be furnished with 3 bracteoles each; legume compressed, linear, glabrous, each standing on a stipe, which is equal in length to the calyx, 4 or 5 inches long, and 6 lines broad.

*Poiteau's Clitoria*. Pl. 2 feet?

SECT. III. CENTROSEMA (from *κεντρον*, *centron*, a spur, and *σημα*, *sema*, a standard or vexillum; in reference to the vexillum being furnished with a spur behind). D. C. legum. mem. vi. prod. 2. p. 234. Calyx campanulate, cleft into 5 beyond the middle. Vexillum furnished with a spur behind. Bracteoles striated lengthwise. Leaves pinnately trifoliate, having one pair of leaflets, and an odd one.

10 *C. VIRGINIA'NA* (Lin. spec. ed. 1. p. 753.) stems climbing, and arc, as well as the leaves, glabrous or puberulous; peduncles 1-4-flowered; bracteoles lanceolate, about the length of the calyx; legumes linear, compressed. 2. G. F. Native of Virginia, Carolina, Jamaica, St. Domingo, and Porto-Rico, growing in hedges. Flowers very large, purplish or blue. Lindl. bot.

reg. 1047. *C. calcarigera*, Sal. par. t. 51. Perhaps there are numerous species confounded under this name.

Var. *a. angustifolia* (D. C. prod. 2. p. 234.) leaflets linear.

Var. *β. elliptica* (D. C. l. c.) leaflets ovate-oblong or elliptic.

—Dill. hort. ethn. t. 76.

Var. *γ. ovata* (D. C. l. c.) leaflets ovate.—Pluk. alm. t. 90.

f. 1.

*Virginian Clitoria*. Fl. July, Aug. Clt. 1732. Pl. cl.

11 *C. BRASILIANA* (Lin. spec. 1026.) stems climbing, rather glabrous; leaflets ovate-oblong, glabrous; pedicels twin; 1-flowered; bracteas ovate, longer than the calyx, and hiding it; legume linear, compressed. *℥. S.* Native of Brazil and Cayenne, and of Maranham. *C. amœna*, Roth. cat. 2. p. 92. t. 3. ex Pers.—Breyer. cent. 78. t. 32. Flowers large, blue or white (ex Meyer.)

*Brazilian Clitoria*. Fl. July, Aug. Clt. 1759. Pl. cl.

12 *C. PLUMIERI* (Turp. in Pers. ench. 2. p. 303.) stems climbing; leaflets ovate-oblong, acuminate or ovate, glabrous; pedicels 1-3, somewhat racemose; bracteoles ovate, longer than the calyx; legumes linear, somewhat tetragonal. *℥. S.* Native of Mexico, St. Domingo, and perhaps of Peru. Ker. bot. reg. 268. *C. racemosa*, Moc. et Sesse, fl. mex. icon. ined. *C. calcarata*, Lher. in herb. Domb.—Plum. amer. 1. t. 108. Flowers large, white, but with the middle of the vexillum and wings of a rose-purple colour, tomentose.

*Plumier's Clitoria*. Fl. Sept. Nov. Pl. cl.

13 *C. SPECIOSA* (Cav. curs. 182. ex Lag. et Rod. in anal. sc. nat. 1802. vol. 5. p. 72.) stems climbing; leaflets 3; calyx shorter than the bracteoles, and furnished with a cucullate scale; stipulas spotted with purple. *℥. S.* Native of New Spain. Very like *C. Plumieri*.

*Sherry Clitoria*. Pl. tw.

14 *C. ARBORESCENS* (Ait. hort. kew. ed. 2. vol. 4. p. 302.) stem arborescent; leaflets 3; peduncles many-flowered; ovary tomentose; style villous. *℥. S.* Native of Trinidad. Flowers pink.

*Arborescent Clitoria*. Fl. Aug. Sept. Clt. 1824. Sn. 8 feet.

SECT. IV. GLYCINOPSIS (from *glycine* and *opsis*, resemblance; the plants contained in the section resemble species of *Glycine*). D. C. legum. mem. vi. prod. 2. p. 235. Calyx campanulate, 5-toothed. Corolla and stamens inserted almost at the base of the calyx. Style dilated at the apex. Bracteoles striated lengthwise. Leaves pinnately trifoliate, that is, with one pair of leaflets, and an odd one.

15 *C. BERTERIAANA* (D. C. legum. mem. vi. prod. 2. p. 234.) stems twining, and are, as well as the leaves, pubescent; leaflets ovate, acuminate; peduncles longer than the leaves, bearing a kind of raceme at the apex, containing 5 or 6 flowers; legumes linear, compressed, apiculate, straight; bracteoles longer than the calyx. *℥. S.* Native of St. Domingo. Flowers yellowish, with the vexillum pubescent on the outside.

*Bertero's Clitoria*. Pl. tw.

16 *C. COCCINEA* (Schrad. gætt. anz. 1821. p. 717.) stem twining; leaflets 3, elliptic-ovate or oblong, pubescent above, clothed with rusty villi beneath on the nerves, as well as on the petioles; peduncles elongated, usually 3-flowered; upper segment of the calyx truncate. *℥. S.* Native of Brazil. *C. falcata*, Nees in flora. 1821. p. 329. but not of Lamarck. Flowers large, scarlet.

*Scarlet-flowered Clitoria*. Fl. July, Aug. Clt. 1820. Pl. tw.

† Species not sufficiently known.

17 *C. VICTORDES* (Nees et Mart. nov. act. bonn. 12. p. 28.) branches angular; leaves pinnate, having 10 or 11 pairs of oblong-elliptic pubescent leaflets; racemes axillary, pedunculate; calyx 4-toothed; flowers resupinate. *℥. S.* Native of Bra-

zil, on the road to Felisbert. *Galactia vicieformis*, Spreng. syst. 8. p. 257. Corolla white. Vexillum broad and roundish.

*Vetch-like Clitoria*. Pl. tw.

*Cult.* The species of this genus are beautiful climbers and twiners, with large elegant pea-flowers, which are produced in abundance in hot seasons. The soil best adapted to them is a mixture of peat, loam, and sand. Cuttings will root under a bell-glass in heat; but the best method of increasing them is by seeds, which sometimes ripen in this country, and are generally received yearly from the places of their natural growth.

LXXXII. NEUROCARPUM (from *νευρον*, *neuron*, a nerve, and *καρπος*, *carpos*, a fruit; in reference to the valves of the pod being furnished with a strong longitudinal nerve each). Desv. journ. bot. 1814. 1. p. 75. H. B. et Kunth, nov. gen. amer. 6. p. 406. D. C. prod. 2. p. 235.—*Rhombifolium*, Rich. herb.

LIN. SYST. *Diadelphia, Decandria*. Calyx tubular, permanent, having 5 nearly equal acuminate teeth, furnished at the base with 2 lanceolate bracteas. Vexillum large, roundish. Keel obtuse. Wings 2. Stamens diadelphous. Legume stipitate, compressed, rather triquetrous, mucronate by the base of the style, the valves marked with a prominent nerve along the middle lengthwise. Stipe of legume girded by a sheath, which rises from the torus. Seeds 4 to 8, when young, generally separated by cellular substance.—Usually twining shrubs, with pinnately trifoliate leaves, and stipellate leaflets. Peduncles axillary, 1-2-flowered. Flowers large, white or purplish. Legume glabrous.

1 *N. SIMPLICIFOLIUM* (Kunth, mim. 213. t. 59. nov. gen. 6. p. 407.) shrubby, erect; leaves simple, ovate-elliptic, rounded at both ends, emarginate, glabrous, rather glaucous beneath, puberulous on the nerves and veins; peduncles 2-flowered. *℥. S.* Native of South America, on the banks of the river Orinoco. Flowers large, white.

*Simple-leaved Neurocarpum*. Clt. 1824. Shrub 2 feet?

2 *N. ANGUSTIFOLIUM* (Kunth, mim. p. 218. t. 60. nov. gen. amer. 6. p. 408.) shrubby, erect; leaves trifoliate; leaflets linear-lanceolate, obtuse, mucronate, ciliated, glabrous, glaucous beneath, and pilose on the nerves; peduncles solitary, 1-flowered. *℥. S.* Native of South America, in sandy places near Maypures, on the Orinoco, and of New Andalusia, near Que-tepe. Flowers large, white.

*Narrow-leaved Neurocarpum*. Shrub 2 feet.

3 *N. GLYCINOIDES* (Desv. obs. leg. in Schlecht. Linnæa. vol. 2. p. 510.) stems climbing, hairy; leaflets ovate-elliptic, mucronate, glabrous above, but pale and puberulous beneath along the nerves; racemes pedunculate, longer than the petioles, few-flowered; calyx clothed with adpressed villi, 5-cleft; the lobes acuminate, lowest one longest. *℥. S.* Native of Cayenne. Legume 6-8-seeded. Flowers red in a dried state. *Clitoria glycinoides*, D. C. prod. 2. p. 234.

*Glycine-like Neurocarpum*. Pl. cl.

4 *N. GUIANEENSE* (Desv. journ. bot. 1814. 1. p. 75.) stem erect, shrubby; leaves sessile, trifoliate; leaflets oblong, obtuse, and somewhat mucronate, and are, as well as the branches, pubescent; flowers 2-3, on very short peduncles. *℥. S.* Native of Guiana, in meadows. *Crotalaria Guianensis*, Aubl. guian. 2. p. 761. t. 305. *Crotalaria longifolia*, Lam. dict. 2. p. 201. *Rhombifolium canescens*, Rich. herb. Stamens diadelphous. Flowers purplish.

*Guiana Neurocarpum*. Fl. June, July. Clt. 1824. Pl. 1 foot.

5 *N. LAURIFOLIA* (Desv. obs. legum. ex Schlecht. Linnæa. 2. p. 510.) erect; leaves on short petioles; leaflets 3, oblong-lanceolate, reticulated, obtuse; flowers axillary, usually twin. *℥. S.* Native of Porto-Rico, in pastures. Corolla yellowish. *Clitoria laurifolia*, Poir. suppl. 2. p. 301.

*Laurel-leaved Neurocarpum*. Shrub erect.

6 *N. ELLIPTICUM* (Desv. l. c.) stems twining, rather herbaceous, pilose; leaves on longish petioles, trifoliate; leaflets elliptic, membranous, rather puberulous above, but glaucous beneath, and puberulous on the nerves; peduncles few-flowered, axillary, solitary; legume mucronate, resinous inside.  $\frac{1}{2}$ .  $\odot$ . S. Native of St. Domingo. *Crotalaria elliptica*, Poir. *Clitoria tetradena*, Poir. *Clitoria rubiginosa*, Pers. ench. no. 9.

*Elliptic-leafletted Neurocarpum*. Pl. tw.

7 *N. FALCATUM* (D. C. prod. 2. p. 236.) twining; branches hairy; leaves trifoliate; leaflets ovate, glabrous above, and hairy beneath; peduncles longer than the leaves, usually bearing about 3 flowers; legumes usually falcate.  $\frac{1}{2}$ .  $\odot$ . S. Native of St. Domingo and Porto-Rico. *Clitoria falcata*, Lam. dict. 2. p. 51. ex herb. Juss. *Phaseolus amplissimus magno-flore*, &c. Plum. spec. 8. mss. 2. t. 85. ex Lam. Flowers purplish.

*Falcate-podded Neurocarpum*. Pl. tw.

8 *N. ? JAVITENSE* (H. B. et Kunth, nov. gen. amer. 6. p. 409.) creeping, suffruticose; leaves trifoliate; leaflets elliptic-oblong, acuminate, rounded at the base, coriaceous, glabrous above, and rather pilose beneath.  $\frac{1}{2}$ . S. Native of South America, on the banks of the river Tuamini near Javita, at the missions of the Rio-Negro. Flowers purplish?

*Javita Neurocarpum*. Shrub creeping.

9 *N. ? MACROPHYLLUM* (H. B. et Kunth, l. c.) arboreous; leaves trifoliate; leaflets roundish-elliptic, acuminate, rather cuneate at the base, membranous, hairy above, and clothed with fine pubescence beneath; peduncles bifid, racemose.  $\frac{1}{2}$ . S. Native of New Granada, near Turbaco. Flowers red. Legume hairy. Perhaps this shrub ought to be removed from the genus.

*Large-leaved Neurocarpum*. Shrub 10 feet.

*Clt.* The climbing and twining species of this genus should be treated in the same manner as the species of *Clitoria*, see p. 216. The upright kinds like other common stove shrubs.

LXXXIII. MARTIUSIA (in honour of C. F. P. Von Martius, M.D. professor of botany at Munich, in Bavaria, and companion of Spix in his travels in Brazil; author of a splendid work on Brazilian palms, &c.) Schultes, mant. 1. p. 69. D. C. prod. 2. p. 236. — *Martia*, Leander, sacr. akad. munch. 7. p. 233. t. 12.

LIN. SYST. *Tetrandria*, *Monogynia*. Calyx tubular, permanent, somewhat bilabiate, having 5 acute teeth, the lower tooth longest. Corolla wanting. Stamens 4, 2 bearing anthers, and 2 sterile; filaments all distinct, one-half shorter than the ovary. Anthers somewhat ciliated. Legume stipitate, girded at the base by the calyx, with the stipe also sheathed, compressed, somewhat tetraquetrous; the valves furnished with a longitudinal nerve in the centre of each. Calyx, and especially the fruit, very like that of *Neurocarpum*. The want of petals, and the few distinct stamens, are the characters by which this genus can be known.

1 *M. PHYSALOIDES* (Schultes, l. c.)  $\frac{1}{2}$ .  $\odot$ . S. Native near Rio Janeiro, in fields, where it is called *cow poison* and *timbo*. *Martia physaloides*, Leand. l. c. Stems frutescent, twining, villous. Leaves pinnately trifoliate; leaflets ovate-oblong, mucronate, glabrous above, but pubescent beneath. Peduncles 2-flowered. This plant is supposed to be deleterious to cattle and sheep in Brazil.

*Physalis-like Martiusia*. Shrub tw.

*Cult.* See *Clitoria* for culture and propagation, p. 216.

LXXXIV. COLOGANIA (named by Kunth in honour of a family of the name of Cologan, residing at Port Orotavo, in Teneriffe, from whom men of science visiting that island experience the greatest hospitality). Kunth, mim. p. 205. H. B. et Kunth, nov. gen. amer. 8. p. 411. D. C. prod. 2. p. 236.

LIN. SYST. *Diadelphia*, *Decandria*. Calyx tubular, bibracteolate at the base, somewhat bilabiate; upper lip entire or bifid,

lower one 3-parted. Vexillum roundish. Stamens diadelphous, inserted with the petals in the base of the calyx. Ovary stipitate, linear, very hispid, girded at the base by an orbicular disk. Style glabrous, obtuse. — Stems procumbent or twining, beset with retrograde hairs. Leaves pinnately trifoliate, rarely unifoliate. Flowers axillary, twin, pedunculate, violaceous or purple. Perhaps sufficiently distinct from *Clitoria* and *Galactia*.

*Leaves simple.*

1 *C. PROCUMBENS* (Kunth, mim. 205. t. 57.) procumbent; leaflet oblong or oblong-lanceolate, obtuse, smooth above, but strigose beneath, as well as the calyxes.  $\frac{1}{2}$ . S. Native of South America, near Popayan.

*Procumbent Cologania*. Pl. procumbent.

*Leaves trifoliate.*

2 *C. OVALIFOLIA* (H. B. et Kunth, nov. gen. amer. 6. p. 412.) twining; leaflets ovate-elliptic, obtuse, mucronate, rounded at the base, strigulose on both surfaces, rather glaucescent beneath; calyxes pilose.  $\frac{1}{2}$ .  $\odot$ . S. Native of South America, on the banks of the river Amazon near Tomependa, in the province of Bracamora.

*Oval-leafletted Cologania*. Pl. tw.

3 *C. PULCHRELLA* (H. B. et Kunth, nov. gen. amer. 6. p. 413.) twining; leaflets elliptic-oblong, obtuse, rounded at the base, and somewhat cordate, rather strigose on both surfaces, glaucescent beneath; calyx pilose.  $\frac{1}{2}$ .  $\odot$ . S. Native of New Spain, near Pazuaro.

*Neat Cologania*. Pl. tw.

4 *C. INTERMEDIA* (H. B. et Kunth, nov. gen. amer. 6. p. 414.) twining; leaflets oblong or linear-oblong, glabrous above, paler beneath, and strigose, as well as the calyxes.  $\frac{1}{2}$ .  $\odot$ . S. Native of Mexico, in shady woods near Real del Monte.

*Intermediate Cologania*. Pl. tw.

5 *C. ANGUSTIFOLIA* (Kunth, mim. p. 209. t. 58.) twining; leaflets linear, obtuse, rather strigose on both surfaces; calyx covered with hispid pili.  $\frac{1}{2}$ .  $\odot$ . S. Native of Mexico, in temperate parts of hills and mountains.

*Narrow-leaved Cologania*. Clt. 1827. Pl. tw.

6 *C. BROUSSENETII* (D. C. prod. 2. p. 237.) twining; leaflets ovate-oblong, mucronate, rather strigose on both surfaces, paler beneath; flowers twin, on short pedicels; calyx villous, rather 5-cleft, the 2 superior lobes hardly connected, lower one longest.  $\frac{1}{2}$ .  $\odot$ . S. Native of? *Clitoria Broussonetii*, Balb. cat. taur. 1813. p. 26. Allied to *C. ovalifolia*, but is perhaps specifically distinct from all in the 2 superior lobes of the calyx being hardly connected.

*Broussonet's Cologania*. Clt. 1827. Pl. tw.

*Cult.* For culture and propagation see *Clitoria*, p. 216.

LXXXV. GALACTIA (from γαλα, *gala*, milk; the *G. pendula* yields a milky juice when cut or broke). P. Browne, jam. 298. Michx. fl. bor. amer. 2. p. 61. D. C. prod. 2. p. 237.

LIN. SYST. *Diadelphia*, *Decandria*. Calyx bibracteate, 4-cleft; the segments acute, and nearly equal. Corolla papilionaceous, having 5 oblong distinct petals; the vexillum broader than the rest, and incumbent. Stamens diadelphous. Style glabrous, crowned by an obtuse stigma. Legume terete or compressed, many-seeded, 2-valved, 1-celled, elongated. — Climbing subshrubs or herbs, with impari-pinnate or pinnately trifoliate leaves, with the leaflets stipellate. Racemes of flowers axillary.

1 *G. ? PENDULA* (Pers. ench. 2. p. 302. Ker. bot. reg. t. 269.) twining, pubescent; leaflets ovate-oblong, villous beneath, as well as the petioles; racemes longer than the leaves; flower twin, pendulous; petals 4 times longer than the leaves.  $\frac{1}{2}$ .  $\odot$

S. Native of Jamaica and Cayenne.—Sloane, jam. 1. t. 114. f. 4.—P. Browne, jam. 298. t. 32. f. 2. *Clitòria Galáctia*, Lin. spec. 1026. Flowers red. Shrub yielding a milky juice, and the legume is terete according to Sloane.

*Pendulous-flowered Galactia*. Fl. Jul. Aug. Clt. 1794. Sh. tw.

2 *G. SERÍCEA* (Pers. ench. 2. p. 302.) stem twining, pubescent: leaflets ovate, rather retuse, hoary and silky on both surfaces; racemes sub-spicate, axillary, shorter than the leaves; corolla a little longer than the calyx.  $\frac{1}{2}$ .  $\odot$ . S. Native of the Island of Bourbon. *Clitòria Phrync*, Comm. Juss. Legume glabrous, compressed, 4-5-seeded.

*Var.  $\beta$ , phrynoides* (D. C. prod. 2. p. 237.) leaves silky and rather hairy; pedicels axillary, and usually 1-flowered.  $\frac{1}{2}$ .  $\odot$ . S. Native of the Mauritius. Superior lobes of calyx a little broader than the rest. Perhaps a proper species.

*Silky Galactia*. Clt. 1824. Shrub tw.

3 *G. CUBE'NSIS* (H. B. et Kunth, nov. gen. amer. 6. p. 429.) stem twining, beset with retrograde pubescence; leaflets elliptic, rounded at both ends, membranous, puberulous above, but clothed with soft canescent pubescence beneath; calyxes and legumes silky.  $\frac{1}{2}$ .  $\odot$ . S. Native of Cuba, near the Havannah. Flowers purple.

*Cuba Galactia*. Pl. tw.

4 *G. PILÒSA* (Nutt. gen. amer. 2. p. 116.) stem twining, clothed with dense and soft pili; leaflets oval, obtuse, and pilose, paler beneath; racemes pedunculate, longer than the leaves; flowers nearly sessile; legume villous.  $\frac{1}{2}$ .  $\odot$ . F. Native of Carolina and Georgia. Flowers reddish.

*Pilose Galactia*. Pl. tw.

5 *G. MÓLLIS* (Michx. fl. bor. amer. 2. p. 61.) stem twining, clothed with soft villi; leaflets ovate-oblong, obtuse, glaucous beneath, and nearly glabrous, smooth above; racemes pedunculate, a little longer than the leaves; flowers pedicellate; calyxes acuminate; legumes compressed, pubescent.  $\frac{1}{2}$ .  $\odot$ . F. Native of Carolina and Georgia. Pursh. fl. sept. amer. 2. p. 486. *Hedysarum volubile*, Lin. spec. 1057.—Dill. hort. elth. 1. f. 170. Flowers purple, and variegated with yellow and white.

*Soft Galactia*. Fl. July, Aug. Clt. 1827. Pl. tw.

6 *G. GLABÉLLA* (Michx. fl. bor. amer. 2. p. 62.) stem prostrate and naked, twining, smoothish; leaflets elliptic-oblong, obtuse, emarginate at both ends, glabrous; racemes axillary, simple, short, few-flowered; flowers pedicellate; calyxes and legumes glabrous.  $\frac{1}{2}$ .  $\odot$ . F. Native of North America, from New Jersey to Carolina, in pine barrens and sandy places. *Ervum volubile*, Walt. car. 187. *Dólichos regularis*, Lin. spec. 1022. Flowers purple, red and white mixed.

*Smooth Galactia*. Fl. July, Aug. Pl. tw.

7 *G. PURSHII* (Desv. obs. leg. in Schlecht. Linnaea. 2. p. 510.) stem prostrate and somewhat twining, smoothish; leaflets elliptic-oblong, obtuse, emarginate at both ends, glabrous; racemes axillary, simple, short, few-flowered; calyx glabrous; legumes villous.  $\frac{1}{2}$ .  $\odot$ . F. Native of North America, from New Jersey to Carolina. *G. glabélla*, Pursh. fl. sept. amer. 2. p. 487. but not of Michx. Flowers purple, red, and white mixed. Roots fusiform.

*Pursh's Galactia*. Fl. July, Aug. Pl. tw.

8 *G. RADICA'TA* (D. C. prod. 2. p. 238.) stem weak, twining, smoothish; leaflets oblong-linear, obtuse, glabrous; flowers axillary, pedicellate, twin; legume pubescent.  $\frac{1}{2}$ .  $\odot$ . S. Native of Mexico. *Clitòria Mariàna*, Moc. et Scuss. fl. mex. icon. ined. but not of Lin. Flowers of a violet-purplish colour. Root woody, thick. Teeth of calyx 4, acute.

*Thick-rooted Galactia*. Pl. tw.

9 *G. TUBEROSA* (D. C. prod. 2. p. 238.) stem twining, villous; leaflets ovate; flowers axillary, twin, almost sessile, and with the upper abortive leaves mixed among the flowers so as to

give them the appearance of an interrupted spike of flowers; root tuberos, oblong.  $\frac{1}{2}$ .  $\odot$ . S. Native of Mexico. Very like the preceding species. Flowers purple.

*Tuberous-rooted Galactia*. Pl. tw.

10 *G. DU'BIA* (D. C. prod. 2. p. 238.) stem twining, terete, beset with strigose pili, as well as the under side of the leaves and petioles; leaflets elliptic, obtuse, somewhat emarginate, glabrous above; racemes axillary, about equal in length to the leaves; legumes linear, rather falcate, acute, clothed with adpressed hairs.  $\frac{1}{2}$ .  $\odot$ . S. Native of Guadaloupe. *Galèga dubia*, Balb. herb. Calyx when young strigose, but at length becoming smooth, having the lobes acuminate. Corolla copper-coloured in a dried state.

*Doubtful Galactia*. Shrub tw.

11 *G. JUSSIEA'NA* (Kunth, mim. 196. t. 55. nov. gen. amer. 6. p. 427.) stem creeping, suffruticose, clothed with silky tomentum; leaflets elliptic, rounded at both ends, rather coriaceous, silky-canescant above, but clothed with silky white tomentum beneath as well as the legumes; calyx clothed with silvery silky pubescence.  $\frac{1}{2}$ . S. Native of South America, on the banks of the river Orinoco, near Atures. Flowers rose-coloured.

*Jussieu's Galactia*. Shrub creeping.

12 *G. BERTERIA'NA* (D. C. prod. 2. p. 238.) stem twining, clothed with retrograde pili; petioles and leaves clothed with villous pubescence beneath; leaflets ovate, acutish, glabrous above; racemes spicate, longer than the leaves; calyxes glabrous, cleft into 4 beyond the middle: legume compressed, hooked at end, in consequence of the bent style, hairy in the middle of the valves, but glabrous on the margins.  $\frac{1}{2}$ .  $\odot$ . S. Native of Porto-Rico. Flowers purple.

*Bertero's Galactia*. Shrub twining.

13 *G. ANGUSTIFÓLIA* (Kunth, mim. t. 56. nov. gen. amer. 6. p. 428.) stem erect, clothed with silky tomentum; leaflets linear-oblong, rounded at both ends, with the margins undulately-repand, coriaceous, clothed above with silky pubescence, and beneath with silky silvery tomentum; calyxes silky.  $\frac{1}{2}$ . S. Native of New Andalusia, on the declivities of Mount Tumiriquiri. Flowers purple?

*Narrow-leafletted Galactia*. Pl. 1 to 2 feet.

14 *G. GLAUCE'SCENS* (H. B. et Kunth, l. c.) stem erect? smoothish; leaflets elliptic-oblong, obtuse at both ends, coriaceous, glabrous, shining above, but glaucescent beneath; calyxes and legumes clothed with silky pubescence.  $\frac{1}{2}$ . S. Native of South America, in the province of Quito, at the river Cuella. Flowers violaceous.

*Glaucous Galactia*. Shrub.

15 *G. CORIA'CEA* (Nees et Mart. nov. act. bonn. 12. p. 30.) shrubby, glabrous; leaflets ovate, cuspidate, glabrous, and reticulately veined beneath; racemes erect; pedicels tern; flowers pendulous.  $\frac{1}{2}$ . S. Native of Brazil. Calyx cylindrical, 4-cleft. Flowers of a beautiful red colour.

*Coriaceous-leaved Galactia*. Shrub 2 feet.

16 *G. MA'RTII* (D. C. prod. 2. p. 238.) stem prostrate, but twining at the apex; leaflets cordate-lanceolate, clothed beneath with yellowish silky pubescence, at length glabrous; racemes axillary; calyxes clothed with rufous villi.  $\frac{1}{2}$ .  $\odot$ . S. Native of Brazil, in fields. *Clitòria? angustifolia*, Nees. et Mart. nov. act. bonn. 12. p. 29. Calyx 4-cleft, in which particular it agrees with the rest of the species of this genus. Flowers bluish-purple.

*Martius's Galactia*. Pl. tw.

17 *G. ? NEESII* (D. C. prod. 2. p. 238.) stems twining, tomentose; leaflets oblong, obtuse, tomentose beneath; flowers somewhat capitate; bractees lanceolate; segments of calyx acuminate, villous.  $\frac{1}{2}$ .  $\odot$ . S. Native of Brazil, in fields. *Clitòria rubiginosa*, Nees et Mart. l. c. p. 29. but not of Pers. Corolla pale-blue. Calyx 4-cleft.

*Nees's Galactia.* Pl. tw.

18 G. ? *ELLIOTTII* (Nutt. gen. amer. 2. p. 117.) stems twining; leaves pinnate, with 3 pairs of oblong-elliptic, coriaceous, mucronulate, glabrous, shining leaflets, which are emarginate at both ends; racemes pedunculate, few-flowered, shorter than the leaves.  $\gamma$ .  $\alpha$ . F. Native of South Carolina. Flowers pale-red. Lower segments of the calyx elongated. Ell. sketch. 2. p. 240. Flowers pale-red.

*Elliott's Galactia.* Pl. tw.

*Cult.* These plants should be cultivated and propagated in the same manner as that recommended for *Clitoria*, p. 216. but those species natives of North America do not require any heat.

LXXXVI. ODONIA (from *ὀδὺς ὀδοντος*, *odous odontos*, a tooth; in reference to the wings being furnished with one tooth each on the upper side). Bertol. lucub. 1822. p. 35. D. C. prod. 2. p. 239.

LIN. SYST. *Diadélphia, Decándria.* Calyx bractless, 4-parted, shorter than the corolla, the segments undivided and nearly equal. Vexillum erectly spreading. Wings having each a single tooth on the upper side. Carina bipartite below, deflexed, remote from the vexillum. Stamens diadelphous. Style hooked at length. Legume compressed, 1-celled, usually 8-seeded.—A twining, sarmentose herb, with pinnately trifoliate leaves and axillary racemes of flowers, which are shorter than the leaves. This genus comes very near *Galactia*.

1 O. TOMENTOSA (Bertol. l. c.).  $\gamma$ .  $\alpha$ . S. Native of St. Domingo. Glycine velutina, Bertero, in herb. Balb. Young legumes clothed with velvety tomentum, adult ones almost glabrous.

*Tomentose Odonia.* Pl. tw.

*Cult.* See *Clitoria*, p. 216. for culture and propagation.

LXXXVII. STEGANO-TROPIS (from *στεγανος*, *steganos*, covered, and *τροπις*, *tropis*, a keel; in allusion to the keel being covered by the vexillum). Lehm. hort. sem. hamb. and nov. act. bonn. vol. 14. p. 820.

LIN. SYST. *Diadélphia, Decándria.* Calyx 5-toothed, bibracteate, permanent. Vexillum cucullate, bicallos at the base, and spurred behind, inclosing the wings and keel, which are membranous. Style membranous, dilated, and bearded at the apex. Legume linear, many-seeded.—A twining herb, with pinnately ternate leaves and 2-flowered peduncles.

1 S. CONJUGATUS (Lehm. in sem. hort. hamb. nov. act. bonn. xiv. p. 821.) stems villous; leaflets sessile, lanceolate, pubescent.  $\gamma$ .  $\alpha$ . S. Native of South America. Flowers greenish-yellow.

*Conjugate-flowered Steganotropis.* Fl. Ju. Jul. Clt. 1827. Pl. cl.

*Cult.* For culture and propagation see *Clitoria*, p. 216.

LXXXVIII. VILMORINIA (in honour of M. Vilmorin, Member of the Agricultural Society of Paris). D. C. prod. 2. p. 239.

LIN. SYST. *Diadélphia, Decándria.* Calyx bractless, cylindrical, obtusely 4-toothed, somewhat bilabiate. Corolla papilionaceous; petals oblong, with the wings shorter than the carina. Stamens diadelphous. Style glabrous, subulate, acute. Legume pedicellate, lanceolate, attenuated at the base, compressed, ending in a filiform point. Seeds 12-16.—An upright shrub, with impari-pinnate leaves. Stipulas broadish at the base, ending in a long subulate point. Racemes axillary. Flowers dark-red.

1 V. MULTIFLORA (D. C. prod. 2. p. 239.) stem erect, glabrous; leaves pinnate, with 5 or 6 pairs of ovate leaflets, which are pubescent on the under surface; racemes shorter than the leaves.  $\gamma$ . S. Native of the West Indies, particularly in St. Domingo. *Clitoria multiflora*, Swartz, fl. ind. occid. 3. p. 1253.

*Many-flowered Vilmorinia.* Clt. 1820. Shrub 6 feet.

*Cult.* For culture and propagation see *Clitoria*, p. 216.

LXXXIX. DIPLONYX (from *διπλος*, *diploos*, double, and *ὄνυξ*, *onyx*, a claw; in reference to the wings, which are furnished with two claws each). Rafin. ex Spreng. syst. 3. p. 154.

LIN. SYST. *Diadélphia, Decándria.* Calyx urceolate, bilabiate, upper lip bifid, lower one trifid. Vexillum bent, with the claw glandular. Wings biunguiculate. Legume terete, 1-celled, many-seeded.—A twining shrub, with impari-pinnate leaves, having 6 pairs of leaflets; leaflets hastate, tomentose beneath. Flowers violaceous, disposed in racemes.

1 D. ELEGANS (Rafin. ex Spreng. syst. 3. p. 277.).  $\gamma$ .  $\alpha$ . G. Native of Louisiana.

*Elegant Diplonox.* Shrub tw.

*Cult.* See *Clitoria* for culture and propagation, p. 216.

XC. BARBIERIA (in honour of J. B. G. Barbier, M. D. a French physician and naturalist, author of *Principes Generaux de Pharmacologie ou de Matière Medicale*, 1 vol. 8vo. Paris. 1806). D. C. leg. mem. vi. prod. 2. p. 239.

LIN. SYST. *Diadélphia, Decándria.* Calyx tubular, 5-cleft, bibracteate at the base; segments acuminate, equal. Corolla elongated; petals 5, on long stipes; wings shorter than the carina, and the carina shorter than the vexillum. Stamens diadelphous. Style filiform, bearded lengthwise at the apex. Stigma obtuse. Legume, judging from the ovary, linear, villous, 1-celled, many-seeded.—A shrub, with impari-pinnate leaves, having many pairs of stipellate leaflets. Racemes axillary, few-flowered, shorter than the leaves. Flowers of a scarlet-purplish colour. Stipulas and bracteas acuminate.

1 B. POLYPHYLLA (D. C. l. c. t. 39.).  $\gamma$ . S. Native of Porto-Rico. *Clitoria polyphylla*, Poir. suppl. 2. p. 300. *Galactia pinnata*, Pers. ench. 2. p. 302. Flowers 2 inches long. Leaves having 9 to 11 pairs of elliptic-oblong, mucronate leaflets; the young ones canescent beneath, the adult ones pubescent.

*Many-leafletted Barbieria.* Clt. 1818. Shrub.

*Cult.* See *Clitoria*, p. 216. for culture and propagation.

XCI. KIESERIA (in honour of Kieser, some botanist known to Reinwardt). Reinw. ex Spreng. syst. 3. p. 153.

LIN. SYST. *Diadélphia, Decándria.* Calyx campanulate, 5-toothed, gibbous at the base, the lowest tooth longest and carinate. Vexillum orbicular. Stamens diadelphous. Style villous in front. Legume linear, compressed, hooked at the apex, 1-celled, many-seeded.—A tomentose shrub, with impari-pinnate leaves, and terminal racemes of white flowers.

1 K. SERICEA (Reinw. ex Spreng. syst. 3. p. 245.).  $\gamma$ . S. Native of Java.

*Silky Kieseria.* Shrub.

*Cult.* For culture and propagation see *Clitoria*, p. 216.

XCH. GRO'NA (from *γρῶνη*, *gronc*, a cavern; in reference to the keel, which is hollowed beneath). Lour. coch. p. 459. D. C. prod. 2. p. 239.

LIN. SYST. *Diadélphia, Decándria.* Calyx permanent, 4-cleft; the lobes nearly equal, superior one emarginate. Corolla papilionaceous. Vexillum obcordate. Wings obtuse. Keel bent, concave below, joined with the wings as far as the middle. Stamens diadelphous, 9 joined together, and 1 free. Style filiform, crowned by a simple stigma. Legume straight, linear, compressed, many-seeded. Seeds kidney-shaped.—A suffruticose, creeping, prostrate plant, with simple, ovate, entire leaves, and subulate stipulas. Flowers purple, disposed in spikes, each bractea containing 2 flowers. Nearly allied to *Galactia*.

1 G. REPENS (Lour. l. c.).  $\gamma$ . G. Native of Cochinchina, on hills.

*Creeping Grona.* Pl. creeping.

*Cult.* A mixture of loam and sand will suit this genus, and cuttings will root freely in sand, under a hand-glass.

**XIII. COLLÆA** (in honour of Aloysio Colla, of Turin, an acute botanist, author of *Hortus Ripulensis*). D. C. ann. sc. nat. 1825. jan. p. 96. Leg. mem. vi. prod. 2. p. 240.

**LIN. SYST.** *Diadélphia, Decándria*. Calyx 4-cleft (f. 35. a.), rather coloured on the inside; lobes oval-lanceolate, equal in length, upper one rather the broadest. Petals on long claws (f. 35. f.); the vexillum having 2 auricles, and the rest of the petals having only 1 auricle (f. 35. f.), those of the keel free at the base, obtuse, and straight. Stamens monadelphous, with the tube cleft in front, one of the stamens almost free (f. 35. c.). Ovary linear-oblong, very villous. Style linear, glabrous. Stigma capitate (f. 35. b.). Legume compressed, oval-oblong (f. 35. e.), tomentose, 4-6-seeded.—Shrubs, with terete, woody branches, ovate free deciduous stipulas, palmately trifoliate leaves, on short stalks, large purple flowers on long pedicels, 3 or 4 of which stand on the top of each peduncle, which is axillary and very short. Branches, peduncles, and lower surface of leaves tomentose, as well as the outside of the calyxes.

1 *C. SPECIOSA* (D. C. l. c. t. 40. prod. 2. p. 240.) leaflets oblong, acutish, quite smooth above, but clothed with hoary tomentum beneath.  $\frac{1}{2}$ . S. Native of Peru, about Huasa-Huasi. *Cytisus speciosus*, Lois. in Duham. arb. ed. nov. 5. p. 160. *Odònia speciosa*, Spreng. syst. append. p. 279. Stamens 8, 5 of which bear anthers.

*Shewy Collæa.* Shrub.

2 *C. TRINERVIA* (D. C. l. c. t. 41.) leaflets elliptic, emarginate at the base, 3-nerved, obtuse, mucronulate, clothed with velvety pubescence, reticulated, and somewhat tomentose beneath.  $\frac{1}{2}$ . S. Native of the East Indies, on the Nelligery mountains. *Odònia trinervia*, Spreng. l. c. Stamens 10, diadelphous. Legume mucronated by the style, which is hooked at the base.

*Three-nerved-leafletted Collæa.* Shrub.

*Cult.* These shrubs will grow well in a mixture of loam and peat, and young cuttings will root freely in sand, under a bell-glass. They are both elegant shrubs when in flower.

**XCIV. OTOPTERA** (from *ὠς ὠτος*, *ous otos*, an ear, and *πτερον*, *pteron*, a wing; in allusion to the wings being furnished with an auricle on the unguis). D. C. legum. mem. vi. prod. 2. p. 240.

**LIN. SYST.** *Monadélphia, Decándria*. Calyx 5-cleft, with the tube attenuated at the base; lobes acuminate, somewhat unequal, 2 superior ones approximate. Corolla papilionaceous. Vexillum large, roundish. Wings oblong, furnished each with an incurved, acute auricle on the stipe. Carina 2-edged. Stamens joined into an entire tube. Ovary linear, straight, compressed, many-ovulate. Style incurved, thickened at the apex. Legume unknown.—A smooth Cape subshrub, with pinnately trifoliate leaves; leaflets lanceolate-linear, ending each in a long mucrone, the lateral ones furnished each with one little stipule, the terminal one with two. Peduncles axillary, longer than the leaves, 2-flowered. Perhaps allied to *Psoralea* or *Clitòria*.

1 *O. BURCHÉLLII* (D. C. leg. mem. vi. t. 42.).  $\frac{1}{2}$ .  $\infty$ . G. Native of the Cape of Good Hope. Branches terete, and perhaps twining. *Lebéckia Burchéllii*, Spreng. syst. app. 273.

*Burchell's Ooptera.* Shrub tw.?

*Cult.* For culture and propagation see *Clitòria*, p. 216.

**XCV. PUERARIA** (in honour of M. M. N. Puerari, a professor at Copenhagen). D. C. ann. sc. nat. 1825. jan. p. 29. Leg. mem. vi. prod. 2. p. 240.

**LIN. SYST.** *Monadélphia, Decándria*. Calyx campanulate, bluntly bilabiate, upper lip entire or hardly bidentate, lower one trifid. Corolla papilionaceous. Keel straight, obtuse. Vexillum obovate. Stamens monadelphous. Legume compressed, attenuated into a stipe at the base, and apiculated by the style, 2-valved, continuous, many-seeded.—Climbing Indian shrubs, with deciduous stipulas, distinct from the petiole. Leaves trifoliate; leaflets large, ovate, acute, reticulately nerved, stipellate at the base. Racemes compound, branched. Flowers pedicellate, twin, or tern, yellowish. Fruit not sufficiently known. A very distinct genus from *Hedysarum*.

1 *P. TUBEROSA* (D. C. l. c.) leaves pubescent on the upper surface, but clothed with silky villi on the under as well as the calyxes and pedicels.  $\frac{1}{2}$ .  $\infty$ . S. Native of the East Indies. Racemes of flowers nearly 2 feet long. *Hedysarum tuberosum*, Roxb. in Willd. spec. 3. p. 1197.

*Tuberous-rooted Pueraria.* Shrub cl.

2 *P. WALLICHII* (D. C. leg. mem. vi. t. 43.) leaves glabrous on the upper surface, but pubescent on the under as well as the calyxes and pedicels.  $\frac{1}{2}$ .  $\infty$ . G. Native of Nipaul. Racemes 3 or 4 inches long.

*Wallich's Pueraria.* Shrub cl.

*Cult.* For culture and propagation see *Clitòria*, p. 216.

**XCVI. DUMASIA** (in honour of M. Dumas, one of the editors of *Annales des Sciences Naturelles*). D. C. ann. sc. nat. jan. 1825. p. 96. leg. mem. vi. prod. 2. p. 241.

**LIN. SYST.** *Diadélphia, Decándria*. Calyx cylindrical, obliquely truncate, toothless, bibracteolate at the base. Corolla papilionaceous, the claws of the petals about equal in length to the calyx. Carina obtuse. Stamens diadelphous, permanent. Style dilated in the middle. Stigma terminal. Legume attenuated at the base, 2-valved, compressed, few-seeded, torulose.—Climbing herbs, which are perhaps suffruticose at the base. Leaves pinnately trifoliate; leaflets ovate. Racemes axillary, usually shorter than the leaves. Legumes velvety, from crowded short down. Bracteoles 2, small, subulate, under the calyx.

1 *D. VILLOSA* (D. C. l. c. t. 44. prod. 2. p. 241.) branches, petioles, peduncles, and young leaves, hairy; leaflets ovate-lanceolate, adult ones almost glabrous; legume 3-times longer than the calyx.  $\frac{1}{2}$ .  $\infty$ . G. Native of Nipaul. Flowers pale in a dried state, 5 lines long.

*Villous Dumasia.* Fl. Aug. Dec. Clt. 1824. Pl. tw.

2 *D. PUBESCENS* (D. C. l. c. t. 45. prod. 2. p. 241.) branches, petioles, peduncles, and leaves pubescent; leaflets ovate; legume 4-times longer than the calyx.  $\frac{1}{2}$ .  $\infty$ . G. Native of Nipaul. Flowers yellow. Lindl. bot. reg. 962.

*Pubescent Dumasia.* Fl. Aug. Dec. Clt. 1824. Pl. tw.

*Cult.* For culture and propagation see *Clitòria*, p. 216.

**XCVII. GLYCINE** (from *γλυκύς*, *glycys*, sweet; the leaves and roots of one or two of the species are sweet). D. C. leg. mem. vi. prod. 2. p. 241. Glycine species of authors.

**LIN. SYST.** *Diadélphia, Decándria*. Calyx 5-cleft, somewhat bilabiate; upper lip bifid, lower one trifid. Corolla papilionaceous; vexillum not bicallous at the base. Keel not spirally twisted. Stamens diadelphous. Style filiform, acute. Legume linear, compressed, straight, many-seeded, 2-valved, 1-celled, ending in a thickish, hooked mucrone from the style.—Climbing herbs, with pinnately trifoliate leaves, and with the

flowers rising in fascicles from the axils of the leaves or in racemes. Many genera are established from *Glycine*, as it formerly stood, as *Rhynchosisia*, *Kennedia*, *Apios Voandzèia*, *Ròthia*, *Amphicarpa*, *Wistaria*, and *Chaetodilyx*.

1 *G. HEDYSAROIDES* (Willd. spec. 3. p. 1062.) stem erect, tomentose; branches twining a little; leaflets ovate, obtuse, mucronate, pilose beneath; flowers axillary, usually 5 together; legume broadest at the apex, ending in a short, erect, obtuse mucrone.  $\hbar$ .  $\circ$ . S. Native of Guinea. Flowers purple.

*Hedysarum-like Glycine*. Fl. Ju. Jul. Clt. 1823. Pl. 2 ft. tw.

2 *G. CLANDESTINA* (Wendl. obs. Willd. spec. 3. p. 1054.) stem twining, filiform, villous; leaflets lanceolate, pubescent beneath; flowers axillary, tern; calyx closed, larger than the 3-petalled corolla; legume hardly pubescent.  $\hbar$ .  $\circ$ . G. Native of New Holland. Flowers small, pale-yellow. Valves of legumes rather convex.

*Clandestine-flowered Glycine*. Fl. July, Aug. Clt. 1824. Shrub tw.

3 *G. EMARGINATA* (Desv. herb. ex Hamilt. prod. fl. ind. occ. p. 50.) stem woody; leaflets 3, elliptic-oblong, emarginate, about 2 inches long, quite glabrous, reticulated; flowers in spikes; calycine segments subulate, elongated.  $\hbar$ . S. Native of St. Domingo.

*Emarginate-leafletted Glycine*. Shrub.

4 *G. DE'BILIS* (Ait. hort. kew. ed. 1. vol. 3. p. 54.) stem twining, filiform, beset with retrograde hairs; leaflets oval, pubescent beneath; flowers axillary, crowded; calyx silky, a little shorter than the corolla; legume glabrous, ending in a hooked style.  $\delta$ .  $\circ$ . S. Native of the East Indies. G. labialis, Lin. fil. suppl. 3. p. 325. Flowers small, copper-colored.

*Weak Glycine*. Fl. June, July. Clt. 1778. Pl. tw.

5 *G. MINIMA* (Willd. enum. 756.) stem twining, beset with retrograde pili; leaflets elliptic, acutish at both ends; flowers axillary, almost sessile, twin; legume glabrous, hooked at the apex.  $\mathcal{U}$ .  $\circ$ . G. Native of New Holland. Flowers purple.

*Least Glycine*. Fl. July, Aug. Clt. 1818. Pl. tw.

6 *G. ? LAGASCA'NA* (D. C. prod. 2. p. 241.) stems twining; leaves and legumes clothed with villous tomentum; leaflets oval; racemes sessile, axillary, very short, few-flowered; legume ending in a short, straight mucrone.  $\hbar$ .  $\circ$ . S. Native of? Legume an inch and a half long, 2-4 lines broad, 4-6-seeded; seeds intercepted by cellular substance.

*Lagasca's Glycine*. Shrub tw.

7 *G. STRIATA* (Lin. fil. suppl. 326. Jacq. hort. vind. t. 76.) stem twining; leaflets oblong, clothed with hoary, soft, pubescence; racemes axillary, length of leaves; legumes very hairy.  $\hbar$ .  $\circ$ . S. Native of South America. Flowers striped, purple.

*Striated-flowered Glycine*. Fl. Jul. Aug. Clt. 1818. Sh. tw.

8 *G. TENUIFLORA* (Klein, in Willd. spec. 3. p. 1059.) stem twining; leaflets oblong, mucronate, shining, pilose beneath; racemes axillary, filiform; legume linear, acute, rather falcate, and rather pilose.  $\hbar$ .  $\circ$ . S. Native of the East Indies, on hills about Pondicherry. Flowers small, twin, remote, purplish?

*Fine-flowered Glycine*. Shrub tw.

9 *G. PARVIFLORA* (Jam. dict. 2. p. 738.) stems twining, rather angular; branches clothed with retrograde villi; leaflets ovate, pubescent beneath; racemes axillary, shorter than the leaves; legume linear, smoothish, ending in a thick hooked mucrone.  $\delta$ . ?  $\circ$ . S. Native of the East Indies. Flowers small, red.

*Small-flowered Glycine*. Fl. Jul. Aug. Clt. 1812. Pl. tw.

10 *G. SENEGALE'NSIS* (D. C. prod. 2. p. 242.) stem twining, terete; branches clothed with retrograde villi; leaflets ovate, pubescent above, but at length smooth, villous beneath; racemes axillary, longer than the leaves; legume linear, glabrous,

ending in a thick hooked mucrone.  $\hbar$ .  $\circ$ . S. Native of Senegal. Flowers small, purplish?

*Senegal Glycine*. Shrub tw.

11 *G. SERICEA* (Willd. spec. 3. p. 1059.) stems twining; leaflets ovate, retuse, silky beneath; racemes longer than the leaves; legumes, when not mature, linear, acuminate, clothed with white silky pubescence.  $\hbar$ .  $\circ$ . S. Native of Guinea. Flowers of *Clitoria*, reddish, but the vexillum is narrow, oblong-obovate, and reflexed.

*Silky Glycine*. Shrub tw.

12 *G. GUINEE'NSIS*; plant twining and villous; leaves pinnately trifoliate; leaflets ovate-lanceolate, clothed with silky villi beneath; peduncles 3-4-flowered; legume compressed.  $\mathcal{U}$ .  $\circ$ . S. Native of the Island of St. Thomas, in the Gulf of Guinea. Flowers small.

*Guinea Glycine*. Pl. tw.

13 *G. BILORA* (Lindl. bot. reg. 1418.) stem twining, pilose; leaflets oval, mucronulate, pubescent; racemes axillary, many-flowered, erect, shorter than the leaves; vexillum 2-lobed.  $\mathcal{U}$ .  $\circ$ . S. Native of Mexico. Flowers violaceous.

*Two-lobed Glycine*. Fl. Nov. Clt. 1827. Pl. tw.

† *Species not sufficiently known*.

14 *G. ANGULATA* (Desv. journ. bot. 1814. vol. 1. p. 78.) stem angular; the angles hairy; leaflets ovate-oblong, obtuse, silky beneath; legumes linear, compressed, hairy. Native of North America.

*Angular-stemmed Glycine*. Pl. ?

15 *G. EMARGINATA* (Desv. l. c.) stems twining, woody; branches pubescent; leaflets quite smooth, emarginate at the apex; flowers racemose.  $\hbar$ .  $\circ$ . S. Native of the Antilles.

*Emarginate-leafletted Glycine*. Shrub tw.

16 *G. LEUCOSPERMA* (Desv. l. c.) stem twining, herbaceous, pubescent; leaflets elliptic, coriaceous, quite smooth; legume pilose.  $\hbar$ .  $\circ$ . S. Native of St. Domingo.

*White-seeded Glycine*. Shrub tw.

17 *G. LANCEIFOLIA* (Jacq. nov. gen. et spec. p. 24.) stem twining; leaflets narrow, lanceolate, glabrous, lateral ones oblique; peduncles axillary, solitary, racemously 4-flowered.  $\hbar$ .  $\circ$ . G. Native of the Canary Islands.

*Lance-leafletted Glycine*. Shrub tw.

18 *G. ERECTA* (Thunb. l. c.) stem erect, hairy; leaflets oblong, villous, having rather revolute margins; flowers usually 4 in an umbel.  $\hbar$ . G. Native of the Cape of Good Hope. Flowers rufescent.

*Erect Glycine*. Shrub 2 to 3 feet.

19 *G. HETEROPHYLLA* (Thunb. l. c.) stems decumbent and twining a little, glabrous; leaflets oblong and linear, glabrous; with somewhat revolute margins; flowers umbellate.  $\mathcal{U}$ .  $\circ$ . G. Native of the Cape of Good Hope. Flowers yellow.

*Variable-leaved Glycine*. Fl. July, Aug. Clt. 1816. Pl. tw.

20 *G. ARGENTEA* (Thunb. l. c.) stems twining, clothed with silky tomentum; leaflets ovate, somewhat mucronate, clothed with white tomentum beneath; peduncles axillary, 4-5-flowered; flowers umbellate.  $\mathcal{U}$ .  $\circ$ . G. Native of the Cape of Good Hope. Flowers yellowish.

*Silvery Glycine*. Pl. tw.

21 *G. MONNIERA* (D. C. prod. 2. p. 242.) stems diffuse, terete, glabrous; branches twining a little, clothed with adpressed pubescence; leaflets obovate or oval, rather acute, glabrous above, but clothed with adpressed pubescence beneath; peduncles longer than the leaves; flowers racemose, at length reflexed.  $\hbar$ . ?  $\circ$ . G. Native of the Cape of Good Hope. Monnièra trifolia, Burm. cap. prod. p. 20. exclusive of the synonymes.

*Monnier's Glycine*. Shrub cl.

22 *G. SECUNDA* (Thunb. prod. 131. fl. cap. 591.) stems decumbent, filiform, angular, pubescent; leaflets roundish, glabrous above; racemes pedunculate, axillary, many-flowered; flowers secund; legumes hairy.  $\mathcal{U}$ . G. Native of the Cape of Good Hope, in grassy places. Flowers yellow.

*Secund-flowered Glycine.* Fl. Jul. Aug. Clt. 1825. Pl. dec.

23 *G. JAVA'NICA* (Lin. spec. 1024.) stem twining, beset with retrograde villi as well as the petioles; peduncles length of leaves; flowers disposed in dense spikes, nodding; bractæas lanceolate, minute. Native of the East Indies and Japan. Thunb. in Lin. trans. vol. 2. p. 340. Flowers violaceous. The plant under this name in the herbarium of Retzius has 3-lobed repand leaflets, the middle lobe acute, the lateral ones short and very blunt; the peduncles are also longer than the leaves, and the flowers are disposed in rather loose spikes, also the calyx is acutely 5-toothed. It is, however, only the same species.

*Java Glycine.* Pl. tw.

24 *G. VILLOSA* (Thunb. fl. jap. 283.) stems twining, tomentose; leaflets 3-lobed, acute, tomentose; racemes pedunculate, axillary, 2-5-flowered; legume tomentose.  $\mathcal{U}$ . ?  $\mathcal{C}$ . G. Native of Japan. Flowers purplish?

*Villous Glycine.* Pl. tw.

*Cult.* See *Clitòria* for culture and propagation, p. 216.

XCVIII. CHÆTOCALYX (from  $\chi\alpha\iota\tau\eta$ , *chaite*, a bristle, and  $\kappa\alpha\lambda\upsilon\varsigma$ , *calyx*; in reference to the calyx being covered with spiny bristles). D. C. Leg. mem. vi. prod. 2. p. 243.

LIN. SYST. *Diadelphia*, *Decandria*. Calyx beset with glands and spiny bristles, bilabiate; segments subulate, those of the superior lip recurved, of the lower lip adpressed. Vexillum roundish, emarginate; keel conforming to the wings. Stamens diadelphous; filaments connected at the base. Ovary linear, many-seeded. Style compressed, filiform, villous. Legume unknown.—Frutescent twining plants, with impari-pinnate leaves, having 2 pairs of oval, mucronate, exstipellate leaflets. Stipulas lanceolate-linear, spreadingly deflexed. Pedicels filiform, 1-flowered, rising in numbers from the axils of the leaves. Flowers yellow. This genus has the habit of *Tephrosia*, but is perhaps more nearly allied to *Glycine*.

1 *C. VINCENTINA* (D. C. prod. 2. p. 243.) leaflets obovate, glabrous on both surfaces, but pale beneath.  $\mathcal{H}$ .  $\mathcal{C}$ . S. Native of the Island of St. Vincent. *Glycine Vincentina*, Lindl. bot. reg. 799.

*St. Vincent Chæto calyx.* Fl. May, Aug. Clt. 1823. Sh. tw.

2 *C. PUBESCENS* (D. C. prod. 2. p. 243.) leaflets oval, mucronate, clothed with velvety pubescence on both surfaces, as well as branches.  $\mathcal{H}$ .  $\mathcal{C}$ . S. Native of St. Domingo. *Glycine pubescens*, Bertero, in herb. Balb. The stamens which were examined in one young flower were seen to be almost distinct.

*Pubescent Chæto calyx.* Shrub tw.

*Cult.* See *Clitòria* for culture and propagation, p. 216.

SUBTRIBE IV. GALEGÆ (plants agreeing in some important characters with *Galega*). Bronn. l. c. exclusive of some genera, D. C. prod. 2. p. 243. Legume 1-celled (f. 36. c. f. 37. c.). Stamens diadelphous, rarely monadelphous. Stems herbaceous, shrubby, or arboreous. Leaves alternate or opposite, lower ones simple, the rest impari-pinnate.

XCIX. PETALOSTEMUM (from  $\pi\epsilon\tau\alpha\lambda\omicron\nu$ , *petalon*, a petal, and  $\sigma\tau\eta\mu\omega\nu$ , *stemon*, a stamen; in reference to the stamens being joined to the petals at the base). Michx. fl. bor. amer. 2. p. 48. D. C. prod. 2. p. 243.

LIN. SYST. *Monadelphia*, *Pentandria*. Calyx 5-cleft or 5-toothed. Petals 5, unguiculate, like each other in shape. Stamens 5, joined together into a tube. Vexillum conuplicate, free. Legume covered by the calyx, 1-seeded,

indehiscent.—Perennial North American herbs, beset with glandular dots, with impari-pinnate leaves, and with the flowers disposed in dense, pedunculate spikes, which are either opposite the leaves, or terminal from the upper branches becoming abortive.

SECT. I. PETALOSTEMON (see genus for derivation). D. C. prod. 2. p. 243.—*Dàlea*, with pentandrous flowers, Vent. Calyx 5-toothed; teeth short, not plumose. Petals on long claws, with roundish limbs. Spikes of flowers cylindrical; bractæas subulate.

1 *P. CA'NDIDUM* (Michx. fl. bor. amer. 2. p. 48. t. 37. f. 1.) spike cylindrical, on a long peduncle; bractæas longer than the flowers; leaves glabrous, with 3 pairs of lanceolate leaflets.  $\mathcal{U}$ . F. Native of Tennessee, in the Illinois region, and on the banks of the Missouri. *Dàlea cándida*, Willd. spec. 3. p. 1337. *Psoràlea cándida*, Poir. suppl. Flowers white.

*White-flowered Petalostemum.* Fl. July, Aug. Clt. 1811. Pl. 1 foot.

2 *P. CA'RNEUM* (Michx. l. c.) spikes cylindrical, pedunculate; bractæas subulate, length of calyx; bractæoles setaceous, permanent; calyxes glabrous; leaflets lanceolate.  $\mathcal{U}$ . F. Native of Georgia and Florida, in pine forests. Flowers pale flesh-coloured.

*Flesh-coloured-flowered Petalostemum.* Fl. July, Aug. Clt. 1811. Pl. 1½ foot.

3 *P. VIOLA'CEUM* (Michx. l. c. t. 37. f. 2.) spike cylindrical, on a short peduncle; bractæas about equal in length to the calyx; bractæoles spatulate, deciduous; calyxes silky; leaves having 2 pairs of linear leaflets.  $\mathcal{U}$ . F. Native of Tennessee, in the Illinois country, and in the prairies of the Missouri. *Dàlea violàcea*, Willd. spec. 3. p. 1337. *Dàlea purpùrea*, Vent. hort. cels. t. 40. *Psoràlea violàcea*, Poir. suppl. Sims, bot. mag. 1707. Flowers pale-purple.

*Vioaceous-flowered Petalostemum.* Fl. July, Sept. Clt. 1811. Pl. 1 foot.

4 *P. MACROSTA'CHYUM* (Torrey, in ann. lyc. 2. p. 176.) spike cylindrical, compact, very long; bractæas lanceolate; calyxes clothed with silky villi; leaves generally with 3 pairs of lanceolate-oblong glabrous leaflets.  $\mathcal{U}$ . H. Native of North America, about the forks of the Platte. Flowers small, white.

*Long-spiked Petalostemum.* Pl. 2 feet.

5 *P. ROSEUM* (Nutt. in Sillim. amer. journ. 5. p. 1822. p. 298.) plant glabrous; leaflets linear; bractæas subulate, very short, permanent; calyx striated, glabrous.  $\mathcal{U}$ . F. Native of Eastern Florida. Very like *P. violàceum*, but differs in the calyxes being perfectly glabrous, and in the petals being rose-coloured.

*Rose-coloured-flowered Petalostemum.* Pl. 1 foot.

6 *P. VILLOSUM* (Nutt. gen. amer. 2. p. 85.) plant villous, decumbent; spike cylindrical, nearly sessile; bractæas shorter than the woolly calyx; leaves having 7 pairs of linear-oblong leaflets.  $\mathcal{U}$ . F. Native in sandy places near the river Missouri about Fort Mandan, at the Knife river. Root fusiform. Petals pale-red.

*Villous Petalostemum.* Pl. decumbent.

SECT. II. KUHNISTE'RA (in honour of Adam Kuhn, a pupil of Linnæus. There is, however, a genus *Kühnia*, named by Linnæus in compliment to him; the different termination of the word is to distinguish it from that genus). Lam. dict. 3. p. 370. Vent. mem. soc. hist. nat. par. p. 113. D. C. prod. 2. p. 244.—*Cylipogon*, Rafin. in journ. phys. aug. 1819. p. 97. Calyx almost 5-parted; segments plumose. Petals linear, attenuated at the base. Flowers capitate. Bractæas scarious, roundish, forming as it were an involucre to the head of the flowers. Perhaps a proper genus.

7 *P. CORYMBOSUM* (Michx. ex Poir. in herb. Juss. D. C. prod. 2. p. 244.) flowers disposed in paniced corymbs; leaves having 2-3 pairs of linear, awnless, glabrous leaflets; segments of the calyx very villous. ♀. F. Native of Carolina and Georgia, in pine barrens. *Kuhnìa affinis*, Walt. car. 103. *Kuhnistèra Carolinensis*, Lam. dict. 1. c. *Dàlea Kuhnistèra*, Willd. spec. 3. p. 1337. *Cylipogon virgatum*, Rafin. 1. c. Petals white.

*Corymbose-flowered Petalostemum*. Fl. July, Sept. Clt. 1811. Pl. 1½ foot.

8 *P. ? CAPITATUM* (D. C. prod. 2. p. 244.) stem striated, silky; leaflets 5, oblong-cuneiform, obtuse, entire, silky; spike oblong, capitate, clothed with rufous villi; bractæas imbricated; stamens inclosed. ♀. F. Native of the plains of Missouri. *Cylipogon capitatum*, Rafin. 1. c. Flowers yellow. Stamens 8, connected together at the base in this, as well as the following species, according to Rafin. 1. c.

*Capitate-flowered Petalostemum*. Pl. 1 foot.

*Cult.* The species of this genus are very difficult to preserve in gardens. They should be grown in pots in a mixture of loam, leaf mould, and sand; and they are increased by seeds, or by dividing the plants at the roots.

C. DALEA (in honour of Thomas Dale, an English botanist of the last century). Lin. hort. cliff. 363. Michx. fl. bor. amer. 2. p. 56. D. C. prod. 244.—*Parosella*, Cav. elench. hort. madr.—*Dàlea*, with decandrous flowers, Vent. Willd.

LIN. SYST. *Monadèlphia, Decàndria*. Calyx 5-cleft (f. 36. a.) or 5-toothed, sometimes beset with glands. Wings and carina adhering to the tube of the stamens. Vexillum short, free (f. 36. b.). Stamens 10, monadelphous. Legume ovate, 1-seeded (f. 36. c.), shorter than the calyx.—American herbs, which are sometimes suffruticose at the base, beset with glandular dots in every part. Stipulas adhering to the petioles at the base. Leaves impari-pinnate, having the terminal leaflet sessile. Flowers disposed in pedunculate spikes, which are opposite the leaves.

1 *D. LAXIFLORA* (Pursh, fl. sept. amer. 2. p. 741.) plant quite glabrous; stem tall, branched; leaves with usually 4 pairs of linear-oblong leaflets; racemes few-flowered; flowers distinct, having 9 stamens; bractæas glabrous, acute; calycine segments acuminate, silky, and plumose. ♀. F. Native of Upper Louisiana, Nutt. gen. amer. 2. p. 101. *D. enneandra*, Fras. *Psoràlea laxiflora*, Poir. suppl. Flowers white. Leaves small, strong-scented. Calyx almost like that of *Petalostemum*, Sect. vi. *Kuhnistèra*. Root reddish, and rather fusiform.

*Loose-flowered Dalea*. Fl. Jul. Aug. Clt. 1811. Pl. 3 to 4 ft.

2 *D. AUREA* (Nutt. in Fras. cat. 1813. gen. amer. 2. p. 101.) plant clothed with silky villi; stem erect; leaves having 4 pairs of obovate leaflets, which are pilose beneath; spikes of flowers dense, cylindrical; bractæas rhomboid-ovate, about equal in length to the calyx; calyx densely clothed with wool; the teeth subulate. ♀. F. Native of Upper Louisiana, near White-river, on the Missouri. Pursh, fl. sept. amer. 2. p. 741. *Psoràlea aurea*, Poir. suppl. Flowers golden-yellow.

*Golden-flowered Dalea*. Fl. July, Aug. Clt. 1811. Pl. 2 ft.

3 *D. ALOPECUROIDES* (Nutt. gen. amer. 2. p. 101.) plant glabrous and erect; leaves having 10-15 pairs of linear-elliptic retuse leaflets; spikes of flowers ovate or cylindrical, pedunculate, beset with silky villi; bractæas length of calyx. ☉. H. Native of Georgia, Florida, and Louisiana. Lin. hort. cliff. t. 22. *Psoràlea Dalea*, Lin. D. Linnaei, Michx. fl. bor. amer. 2. p. 57. t. 38. *D. alopecuroides* and *D. Cliffortiàna*, Willd. spec. 3. p. 1336. *Petalostemum alopecuroides*, Pursh, fl. sept. amer. 2. p. 461. *Psoràlea alopecuroides*, Poir. Flowers having a white vexillum, and pale-violet wings and keel.

*Fox-tail-like-spiked Dalea*. Fl. Jul. Aug. Clt. 1812. Pl. 1 ft.

4 *D. PEDUNCULATA* (Pursh, fl. sept. amer. 2. p. 474.) plant smoothish; leaves with usually 6 pairs of linear, acute, mucronate leaflets; spikes of flowers oblong, axillary, rather crowded, and short; peduncles 3 times shorter than the leaves; bractæas minute, length of pedicels; teeth of calyx subulate. ☉. H. Native on the banks of the river Mississippi. Flowers rose-coloured. Perhaps the same as *D. alopecuroides*, ex Nuttall.

*Pedunculate-spiked Dalea*. Pl. 1 foot.

5 *D. LAEOPUS* (Willd. spec. 3. p. 1340.) plant glabrous, erect; leaves with 9-15 pairs of obovate-oblong obtuse leaflets; spikes of flowers pedunculate, cylindrical, beset with silky villi; bractæas ovate, acuminate, shorter than the calyx. ☉. H. Native of Mexico. *Psoràlea laeopus*, Cav. icon. 1. t. 86. *P. leporina*, Ait. hort. kew. ed. 1. vol. 3. p. 81. Spike about an inch long. Flowers violaceous.

*Hare's-foot Dalea*. Fl. Oct. Nov. Clt. 1780. Pl. 2 to 4 feet.

6 *D. ANGUSTIFOLIA*; plant herbaceous, smooth; leaflets 3 or 5 pairs, linear, pointless, glandular beneath; spike cylindrical; calyx downy, fulvous, with awl-shaped feathery teeth. ☉. H. Native of Mexico. Stipels obsolete. Spike of flowers 2 inches long. Bractæas ovate, acuminate, blackish. Flowers small, purple. (v. s. herb. Lamb.)

*Narrow-leafletted Dalea*. Pl. 1 foot.

7 *D. ALOPECURUS* (Sesse and Moc. mss.) plant herbaceous, simple, hairy; leaves with 5 pairs of lanceolate, acute leaflets; spikes ovate-cylindrical, on long peduncles; calyx very hairy, with awl-shaped, feathery teeth; stipulas long and narrow. ☉. H. Native of Mexico. Flowers large, purple. (v. s. herb. Lamb.)

*Fox-tail-spiked Dalea*. Pl. 1 foot.

8 *D. SERICEA* (Lag. nov. gen. et spec. p. 23.) plant ascending, clothed with adpressed silky villi; leaves with 4 or 5 pairs of oval-lanceolate acute leaflets; spikes of flowers ovate, on very long peduncles, silky-villous; bractæas oblong, acuminate, shorter than the calyx. ♀. S. Native of Mexico, near Guanajuato. *D. longipes*, Moc. et Sesse, fl. mex. icon. ined. *D. gracili*, Kunth, mim. 166. t. 48. H. B. et Kunth, nov. gen. amer. 6. p. 481. Flowers of a dark-violaceous colour. Peduncles 8 or 9 inches long.

*Silky Dalea*. Fl. July, Aug. Clt. 1824. Pl. 1½ foot.

9 *D. ACUTIFOLIA* (Moc. et Sesse, fl. mex. ined. D. C. prod. 2. p. 245.) plant glabrous, erect; leaves with 3 or 4 pairs of oblong-linear acute leaflets, the odd one longest; spike of flowers oblong, almost terminal, pedunculate; bractæas longer than the calyx. ☉. G. Native of Mexico, on the mountains of Chilapan, in humid places. Flowers mixed with white and purple.

*Acute-leaved Dalea*. Pl. 1 foot.

10 *D. HYPOGLOTTIDEA* (D. C. prod. 2. p. 245.) plant spreading, smoothish; leaves with 11-13 pairs of ovate leaflets; spikes of flowers ovate, on long peduncles, which are lateral and pubescent; bractæas length of calyx. ♀. S. Native of Mexico. Flowers purple. *D. astragalina*, Moc. et Sesse, fl. mex. ined.

*Under-tongued Dalea*. Pl. spreading.

11 *D. ASTRAGALINA* (H. B. et Kunth, nov. gen. amer. 6. p. 484.) plant shrubby, much branched; leaves with 8-11 pairs of lanceolate-oblong, mucronate leaflets, which are hardly scabrous above, but pubescent beneath, as well as the branches, and

somewhat glandular; spikes of flowers opposite the leaves, cylindrical, pedunculate; calyx glandular at the base, and with a hairy limb.  $\frac{1}{2}$ . S. Native of South America, near Quito, and on the mountains about Popayan. Flowers rose-coloured.

*Astragalus-like Dalea.* Shrub 4 to 6 feet.

12 *D. PECTINATA* (Kunth, *mem.* 169. t. 49. nov. gen. amer. 6. p. 483.) plant erect or procumbent, many-stemmed; leaves with 20-30 pairs of linear, acutish, canaliculately-concave, glabrous, glaucescent leaflets; spikes of flowers ovate-oblong, on long peduncles; bractæas subulate; calyx glandular and hairy.  $\frac{1}{2}$ . G. Native of Mexico, near Villalpando. Flowers violaceous, but yellow at the claws.

*Pectinated-leaved Dalea.* Pl. procumbent.

13 *D. LANATA* (Sesse et Moc. mss.) herbaceous, smooth; leaflets in many pairs, elliptic-oblong, blunt, glandular beneath; stipels obsolete; spike capitate; teeth of calyx awl-shaped, feathery.  $\odot$ . S. Native of Mexico. *D. lutescens*, Cerv. mss. Flowers large, white, tinged with purple. (v. s. herb. Lamb.)

*Woolly Dalea.* Pl.  $\frac{1}{2}$  foot.

14 *D. FULCHELLA*; herbaceous, smooth, with glandular, slightly warted branches; leaves with many pairs of obcordate leaflets, glandular on both surfaces, lower pair the largest and recurved; stipulas minute; spikes capitate; calyx very hairy, with bristle-shaped, feathered teeth.  $\odot$ . S. Native of Mexico. Leaflets very small. Flowers large, purple. A slender plant. (v. s. herb. Lamb.)

*Neat Dalea.* Pl.  $\frac{1}{2}$  to 1 foot.

15 *D. TUBERCULATA* (Lag. nov. gen. et spec. p. 23.) plant erect, suffruticose, glabrous; stem and branches beset with tubercles; leaves with 4 pairs of cuneate-oblong retuse leaflets, which are beset with dot-like tubercles beneath; spikes of flowers oblong-cylindrical, villous; bractæas ovate, shorter than the calyx.  $\frac{1}{2}$ . G. Native of Mexico. *Parosella tuberculata*, Cav. *clench.* hort. madr. 1805. *D. pendulina*, Moc. et Sesse, fl. mex. icon. ined. ? Flowers purple.

*Tubercled Dalea.* Fl. July, Aug. Clt. 1824. Shrub 1 to 2 ft.

16 *D. FORMOSA* (Torrey, in *ann. lyc.* 2. p. 177.) suffruticose, much branched, glabrous; leaves with 5 pairs of cuneate-oblong, retuse leaflets, which are beset with black dots beneath; spikes loose, few-flowered, on short peduncles; bractæas ovate, shorter than the calyx; calyx feathery, villous.  $\frac{1}{2}$ . G. Native of North America, on the Platte. Flowers large and showy bright-purple. Allied to *D. tuberculata*, Lag. but differs in its smooth stem and branches, and loose spikes of flowers.

*Showy Dalea.* Shrub 1 to 2 feet.

17 *D. CITRIODORA* (Willd. spec. 3. p. 1339.) plant erect, glabrous, branched; stems beset with a few tubercles; leaves with 9-11 pairs of elliptic-oblong, glandless leaflets; spikes of flowers ovate, pedunculate; calyx villous, 10 nerved; bractæas ovate, mucronate by a bristle, rather longer than the calyx, deciduous.  $\odot$ . H. Native of Mexico. *Psoralea citriodora*, Cav. icon. 3. t. 271. *Psoralea foliolosa*, Ait. hort. kew. ed. 1. vol. 3. p. 32. *Dalea latéripes*, Moc. et Sesse, fl. mex. icon. ined. Flowers mixed with white and purple. Plant when bruised smelling of lemon.

*Citron-scented Dalea.* Fl. Oct. Nov. Clt. 1780. Pl. 1 foot.

18 *D. LUTEA* (Willd. spec. 3. p. 1341.) plant decumbent, tomentose; leaves with 6 or 8 pairs of obovate, slightly emarginated leaflets, but the terminal one is longest; spikes of flowers ovate at first, but at length becoming cylindrical, pedunculate, villous; bractæas ovate, acute, shorter than the calyx.  $\frac{1}{2}$ . G. Native of Mexico. *D. ovalifolia*, Ort. dec. p. 30. t. 3. *Psoralea lutea*, Cav. icon. 4. t. 325. *D. flava*, Moc. et Sesse, fl. mex. icon. ined. Flowers yellow. Teeth of calyx awl-shaped, feathery.

*Yellow-flowered Dalea.* Pl. decumbent.

19 *D. MUTABILIS* (Willd. spec. 3. p. 1339.) erect, branched,

glabrous; leaves with 5-10 pairs of obovate or obcordate leaflets; spikes of flowers cylindrical, at length much elongated, pedunculate; peduncles hispid just under the spike; calyx glabrous, striated with 10 black nerves; bractæas ovate, terminated by a bristle, shorter than the calyx.  $\frac{1}{2}$ . S. Native of Mexico and of the island of Cuba. Sims, bot. mag. 2486. *D. bicolor*, Willd. hort. berl. t. 89. ex Sims. *D. obovatifolia*, Ort. dec. p. 31. *Psoralea mutabilis*, Cav. icon. 4. t. 394. *D. unguiculata*, Moc. et Sesse, fl. mex. icon. ined. Corolla at first white, but at length becoming of a violet colour.

*Changeable-flowered Dalea.* Fl. Oct. Nov. Clt. 1818. Pl.  $1\frac{1}{2}$  ft.

20 *D. UNCFERA* (Schlecht. et Cham. in Linnæa. 5. p. 580.) stem herbaceous, branched, beset with glandular hairs; leaves with 4 pairs of obovate, obtuse, mucronulate, stalked leaflets, which are dotted beneath and ciliated on the margins; stipulas filiform; spike terminal, ovate-cylindrical; bractæas navicular, longer than the calyx, ending each in a hooked acumen; calyx glandless.  $\odot$ . ? H. Native of Mexico. Corolla violaceous.

*Hook-bearing Dalea.* Pl.  $\frac{1}{2}$  foot.

21 *D. THYMOIDES* (Schlecht. et Cham. in Linnæa. 5. p. 580.) shrubby, clothed with cinereous pubescence, decumbent; branches erect, beset with black dots; leaves petiolate, with 4 pairs of elliptic-lanceolate, obtuse, petiolulate leaflets, beset with black dots beneath; stipulas setaceous; spikes terminal, conical, but becoming at length cylindrical and loose-flowered; bractæas lanceolate, acuminate, hardly exceeding the calyx, which is glandless; calycine segments subulate, nearly equal.  $\frac{1}{2}$ . S. Native of Mexico. Corolla purple, but with the vexillum pale and perhaps yellow.

*Thyme-like Dalea.* Shrub procumbent.

22 *D. VERBENACEA* (Schlecht. et Cham. in Linnæa. 5. p. 579.) leaves with 2-pairs of obovate-cuneate, mucronate leaflets, tomentose on both surfaces, and beset with black dots beneath; stipulas subulately-acuminate; spike terminal, ovate; bractæas exceeding the calyx.  $\frac{1}{2}$ . S. Native of Mexico. Flowers purple.

*Var.  $\beta$ , sericea* (Schlecht. et Cham. l. c.) leaves with 4-pairs of leaflets, densely clothed with silky tomentum.  $\frac{1}{2}$ . S. Flowers paler than in the species.

*Ferrain-like Dalea.* Shrub 1 to 2 feet.

23 *D. LEVIGATA* (Sesse et Moc. mss.) plant herbaceous, smooth; leaves with 8 pairs of oblong, slightly mucronulate glandular leaflets; spike elongated, loose; calyx hairy, with prominent ribs and lanceolate pointed teeth.  $\odot$ . H. Native of Mexico. Flowers large, purple. Stipulas and stipels minute. (v. s. herb. Lamb.)

*Smooth Dalea.* Pl. 1 foot.

24 *D. DORYCNIOIDES* (D. C. prod. 2. p. 245.) plant erect, rather suffruticose and velvety; leaves with 2, rarely with only one pair of obovate-cuneate retuse leaflets, beset with dots on both surfaces; spikes of flowers capitate, pedunculate; peduncles and branches tubercular; bractæas ovate, acute, length of calyx.  $\frac{1}{2}$ . S. Native of South America. The heads of flowers are smaller than in any other species.

*Dorycnium-like Dalea.* Shrub 1 to 2 feet.

25 *D. TRIPHYLLA* (Sesse et Moc. mss.) plant suffruticose, hairy; leaflets 3-lanceolate, acuminate; spike oblong; teeth of calyx and stipulas setaceous, feathery.  $\frac{1}{2}$ . S. Native of Mexico. Flowers large, yellow. (v. s. herb. Lamb.)

*Three-leafletted Dalea.* Shrub trailing.

26 *D. HUMILIS*; herbaceous, hairy; leaflets 5 or 7, lanceolate, acuminate; spikes ovate; teeth of the calyx awl-shaped, feathery.  $\odot$ . H. Native of Mexico. *D. herbacea*, Sesse et Moc. mss. Plant spreading. Flowers small, yellow.

*Humble Dalea.* Pl.  $\frac{1}{2}$  foot.

27 *D. LEPTOSTACHYA* (D. C. prod. 2. p. 246.) plant erect,

suffruticose, glabrous; leaves with 3 pairs of oval leaflets, which are acuminate at both ends; racemes cylindrical, slender, pedunculate; bractæas ovate, acuminate, glabrous, deciduous, rather shorter than the calyx, which is villously tomentose and 10-ribbed.  $\frac{1}{2}$ . S. Native of South America. Leaflets 8 lines long, and 3 lines broad, with the petioles covered with dot-like tubercles. Flowers spreading, rather distant, apparently somewhat distich.

*Slender-spiked Dalea*. Shrub 1 to 2 feet.

28 *D. VIRGATA* (Lag. nov. gen. et spec. p. 23.) shrubby; leaves with many pairs of elliptic retuse leaflets; spikes of flowers ovate, rather aggregate, terminal; calycine teeth hairy.  $\frac{1}{2}$ . S. Native of Mexico.

*Twiggy Dalea*. Shrub 1 to 2 feet.

29 *D. NU'TANS* (Willd. spec. 3. p. 1339.) plant erect, branched, quite smooth; leaves with 10-15 pairs of elliptic, glandularly-crenated leaflets, with the petiole rather dilated between the pairs of leaflets; racemes cylindrical; flowers rather loose, nodding; calyx 10-ribbed, and ornamented with rows of glands; calycine teeth 5, lower one longest.  $\odot$ . G. Native of Mexico. Flowers crimson. Leaflets stipellate; stipels minute, subulate, permanent. *D. melilotoides*, Moc. et Sesse, fl. mex. icon. ined. Calyx turbinate, with broad membranous teeth.

*Nodding-flowered Dalea*. Fl. July, Aug. Clt. 1824. Pl. 3 ft.

30 *D. PULCHERRIMA* (Sesse et Moc. mss.) herbaceous, smooth; branches glandular; leaflets many-pairs, linear-oblong, mucronulate, with the margins slightly crenate, together with the under surface glandular; stipels prominent; spike elongated, loose; calyx smooth, with prominent ribs, the teeth broad and membranous.  $\odot$ . S. Native of Mexico. Flowers large, crimson. *D. violacea*, Cervantes, mss. (v. s. herb. Lamb.)

*Ferry-fair Dalea*. Pl. 1 foot.

31 *D. BICOLOR* (Willd. hort. berl. 2. t. 89.) spikes terminal, elongated; leaves usually with 3-5 pairs of obovate leaflets; stem shrubby; stipulas subulate.  $\frac{1}{2}$ . G. Native of Mexico. Hook. exot. fl. t. 43. Flowers yellowish white, having the keel tipped with blue. Plant smooth.

*Two-coloured-flowered Dalea*. Fl. Oct. Nov. Clt. 1817. Sh. straggling.

32 *D. FLA'VO-RO'SEA* (Moc. et Sesse, fl. mex. icon. ined. D. C. prod. 2. p. 246.) plant erect, suffruticose, clothed with velvety pubescence; leaves with 5 pairs of oval obtuse leaflets; spikes ovate, pedunculate; bractæas length of calyx.  $\frac{1}{2}$ . S. Native of Mexico. Corolla with a yellow vexillum, but with the rest of the petals rose-coloured.

*Yellow-and-Red-flowered Dalea*. Shrub 1 to 2 feet.

33 *D. RECLINATA* (Willd. spec. 3. p. 1340.) plant procumbent or ascending, clothed with silky villi; leaves with 6 pairs of lanceolate mucronate leaflets; spikes of flowers dense, cylindrical, villous; bractæas linear-subulate, length of calyx; calycine segments linear-subulate, feathery, length of vexillum.  $\frac{1}{4}$ . S. Native of Mexico. *Psoralea reclinata*, Cav. icon. 1. t. 87. Corolla of a pale violet colour.

*Reclinate Dalea*. Fl. July, Aug. Clt. 1820. Pl. proc.

34 *D. TOMENTOSA* (Willd. spec. 3. p. 1341.) plant erect, villously-tomentose; leaves with 3 or 4 pairs of obovate mucronate leaflets; spikes of flowers ovate-cylindrical, almost terminal; bractæas filiform, longer than the calyx.  $\frac{1}{4}$ . S. Native of Mexico. Corolla pink. Perhaps *D. onobrychioides*, Moc. et Sesse, fl. mex. icon. ined. ex D. C. Stipels obsolete.

*Tomentose Dalea*. Pl. 1 to 3 feet.

35 *D. ARGENTEA*; shrubby, upright, densely silky; leaflets 3 or 5, obovate-oblong, mucronate, glandular beneath; spikes ovate; calyx downy, with lanceolate, pointed teeth.  $\frac{1}{2}$ . S. Native of Mexico, near Jalapa. An upright branched shrub, clothed with silky down. Flowers small, pink. (v. s. herb. Lamb.)

*Silvery Dalea*. Shrub 2 feet.

36 *D. VERRUCOSA*; shrubby, pubescent, with warty upright branches; leaflets 5 or 9, obovate, retuse, glandular beneath; spikes of flowers elongated, loose; calyx downy, with lanceolate pointed teeth.  $\frac{1}{2}$ . S. Native of Mexico. Spikes loose, 3 inches long. Flowers pale-purple. (v. s. herb. Lamb.)

*Warty-branched Dalea*. Shrub 1 foot.

37 *D. PROSTRATA* (Ort. dec. t. 69.) stems prostrate, clothed with canescent hairs, thickest towards the apex; leaves with 1 or 2 pairs of lanceolate leaflets, glabrous above, and pubescent beneath; spikes of flowers ovate, on short peduncles, recurved; bractæas lanceolate, length of the calyx, which is very villous.  $\odot$ . ? G. Native of Mexico. Flowers yellow.

*Prostrate Dalea*. Pl. prostrate.

38 *D. PROCUMBENS* (Moc. et Sesse, fl. mex. icon. ined. D. C. prod. 2. p. 246.) stems prostrate, pubescent, thickest at the base; leaves with 8 or 9 pairs of oval obtuse leaflets; spikes of flowers cylindrical, ascending, pedunculate; flowers drooping a little; vexillum very short.  $\odot$ . G. Native of Mexico, at Chilapa. Flowers white, but with the keel rather violaceous.

*Procumbent Dalea*. Pl. procumbent.

39 *D. MUCRONATA* (D. C. prod. 2. p. 246.) plant erect, branched; axillary branches bearing a spike of flowers, and one leaf in the middle of each; leaves with 5 or 6 pairs of elliptic-oblong mucronate leaflets, which are acute at both ends; spikes of flowers dense, ovate; calyx quite smooth, with short teeth; bractæas subulate, rather longer than the calyx.  $\frac{1}{4}$ . S. Native of Mexico. Flowers small, white.

*Mucronate-leafletted Dalea*. Pl. 1 foot.

40 *D. THOUINII* (Schrunk, hort. mon. t. 9.) plant erectish, glabrous; leaves with 3-5 pairs of obovate emarginate leaflets; spikes of flowers ovate, on short peduncles; bractæas ovate, acuminate, rather pilose, shorter than the calyx, which is rather hairy.  $\odot$ . S. Native of South America. The spikes of flowers according to the figure are sessile, but according to the description pedunculate. Perhaps the same as *Petalostemum sessile*, Moc. et Sesse, fl. mex. icon. ined. Perhaps a variety of *D. alopecuroides* only.

*Thouin's Dalea*. Fl. July, Aug. Clt. 1816. Pl. 1 foot.

41 *D. PHYMATODES* (Willd. spec. 3. p. 1338.) plant erect, shrubby, smooth; leaves with 7 or 8 pairs of obovate, somewhat mucronate leaflets, which are dotted beneath; spikes of flowers capitate, on short peduncles; bractæas lanceolate-subulate, ciliated, shorter than the calyx; calycine lobes subulate, long, and very villous.  $\frac{1}{2}$ . S. Native of Caracas. *Psoralea phymatodes*, Jacq. icon. rar. 3. p. 563. *Psoralea emphysodes*, Jacq. coll. 4. p. 144. Flowers at first white, but at length becoming violaceous.

*Impostume-like Dalea*. Fl. July, Aug. Shrub 2 to 3 feet.

42 *D. DOMINGENSIS* (D. C. prod. 2. p. 246.) erect, clothed with velvety pubescence; leaves with 6 or 7 pairs of obovate, obtuse, or emarginate leaflets, which are dotted beneath; spikes of flowers capitate, on short peduncles; bractæas ovate, acute, shorter than the calyx, which is villous; calycine lobes subulate.  $\frac{1}{2}$ . S. Native of St. Domingo. *D. encephylla*, Bert. in herb. Balb. This species comes very near *D. phymatodes*, but differs in the whole plant being clothed with velvety pubescence, not glabrous.

*St. Domingo Dalea*. Shrub 1 to 2 feet.

43 *D. AYAVACENSIS* (H. B. et Kunth, nov. gen. amer. 6. p. 486.) plant shrubby; branches villously-tomentose, and glandular; leaves with 7 or 8 pairs of oblong, somewhat mucronate leaflets, which are glabrous above, and pubescent beneath; spikes of flowers terminal, and opposite the leaves, oblong-cylindrical, pedunculate; calyx ornamented with rows of glands, with a hairy limb.  $\frac{1}{2}$ . S. Native of Peru, near Ayavaca. Flowers violaceous.

• G g

*Ayaraca* Dalea. Shrub 3 to 6 feet.

44 *D. ENNEAPHYLLA* (Willd. spec. 3. p. 1338.) plant erect, shrubby, glabrous; leaves with 4 pairs of oblong obtuse leaflets, which are dotted beneath; spikes of flowers dense, on short peduncles, which are about equal in length to the leaves; lobes of calyx setaceous.  $\frac{1}{2}$ . S. Native of Carthage, in bushy places. *Psoralea enneaphylla*, Lin. spec. 1076. *P. Carthagenensis*, Jacq. amer. 206. exclusive of the synonyme of Pluk. *P. enneaphylla* and *P. Carthagenensis*, Poir. dict. 5. p. 560. Perhaps Jacquin's plant and that of Linnæus are distinct species. Flowers small, reddish.

*Nine-leafletted* Dalea. Fl. June, Aug. Clt. 1772. Shrub 2 to 4 feet.

45 *D. ONORRYCHIS* (D. C. prod. 2. p. 247.) plant erect, glabrous; leaves with 4-6 pairs of elliptic, somewhat mucronate leaflets, which are covered with dots beneath; peduncles opposite the leaves, and 4-times longer than them; spikes of flowers ovate-cylindrical, dense, villous; bractæas ovate, concave, ending in a bristle-like mucrone, rather longer than the calyx, which is villous.  $\frac{1}{2}$ . ? S. Native of Peru. Flowers violaceous. Branches villous. Stipulas setaceous. Peduncles rather scabrous from a few tubercles.

*Saintfoin-like* Dalea. Pl. 1 to 2 feet.

46 *D. MUTISII* (Kunth, mim. 161. t. 47. nov. gen. amer. 6. p. 485.) plant erect, pubescent; leaves with 4-6 pairs of elliptic leaflets, which are beset with glandular dots and villi beneath, as well as the branchlets; spikes of flowers cylindrical, pedunculate, dense; bractæas ovate, ending in a long bristle point, longer than the flowers.  $\frac{1}{2}$ . S. Native of South America, at Santa Fe de Bogota. *Galèga cærulea*, Lin. fil. suppl. 335. *Tephrosia cærulea*, Pers. ench. 2. p. 329. Flowers blue.

*Mutis's* Dalea. Shrub 2 to 3 feet.

47 *D. CYLINDRICA* (Hook, bot. misc. 1. p. 213.) plant procumbent, smoothish; leaves with 6 pairs of obovate, somewhat mucronate leaflets, which are dotted beneath; peduncles opposite the leaves, and 3 times longer than them; spikes cylindrical, dense; bractæas ovate, concave, mucronate; calyx full of black dots, smooth, longer than the bractæa; segments broad-awl-shaped, ciliated.  $\frac{1}{2}$ . S. Native of Peru, in the valley of Canta. Flowers blue.

*Cylindrical-spiked* Dalea. Shrub.

48 *D. EXILIS* (D. C. prod. 2. p. 247.) plant erect, glabrous; leaves with 5-7 pairs of oblong acute leaflets, small, beset by dots beneath; spikes of flowers pedunculate, nearly globose, dense; bractæas ovate, glabrous, obtuse, mucronate, or acuminated, length of the calyx, which is villous.  $\frac{1}{2}$ . ?  $\frac{1}{2}$ . ? S. Native of Peru. Flowers violaceous. Bractæas differing in shape even in the same head of flowers. Leaflets a line and a half long.

*Lean* Dalea. Pl. 1 to 2 feet.

49 *D. MICROPHYLLA* (H. B. et Kunth, nov. gen. amer. 6. p. 482.) plant shrubby, procumbent; leaves with 9 or 10 pairs of glabrous, oblong, obtuse, thickish leaflets, beset with glandular dots beneath; spikes of flowers oblong-cylindrical; bractæas ending in a subulate acumen, beset with dots above, but silky beneath, length of calyx, which is clothed with glands and silky hairs.  $\frac{1}{2}$ . S. Native of Peru, on the mountains. Flowers yellow and red on the same plant according to Bonpland.

*Small-leaved* Dalea. Shrub procumbent.

50 *D. OVALIFOLIA*; herbaceous, spreading, smooth; leaflets 5, elliptic, glandular beneath; stipulas minute; spike long and slender, few flowered; calyx hairy, ribbed, with long-pointed recurved teeth.  $\odot$ . S. Native of Mexico. Plant much branched, spreading. Leaflets nearly an inch long. Spikes often a span long. Flowers white, stained with purple. (v. s. herb. Lamb.)

*Wool-leafletted* Dalea. Pl. 2 feet.

51 *D. CORONILLA*; herbaceous, upright, slightly villous; leaf-

lets 7-9, obovate, mucronulate, glandular beneath; stipulas long, setaceous; spikes of flowers oblong; calyx truncate, fringed with obsolete teeth.  $\odot$ . S. Native of Mexico. Flowers pale-purple. (v. s. herb. Lamb.)

*Coronilla-like* Dalea. Pl. 1 foot.

52 *D. FRUTICOSA*; shrubby, minutely pubescent; leaves with many-pairs of oblong leaflets, which are rounded at both ends, minutely mucronulate, coriaceous and veiny; stipels prominent; spikes of flowers loose, with short blunt teeth.  $\frac{1}{2}$ . S. Native of Mexico. Spikes about 2 inches long, thinly flowered, somewhat corymbose. Flowers small, yellow? (v. s. herb. Lamb.)

*Shrubby* Dalea. Shrub.

*Cult.* All the species of this genus grow best in a mixture of loam and peat, and the shrubby and perennial kinds are easily increased by young cuttings planted in sand, with a hand-glass placed over them; those of the stove species in heat. The seeds of annual kinds should be sown in pots, which should be placed in a hot-bed, and the plants separated and planted into other pots singly when they have grown a sufficient size for that purpose, and some of them may be planted out into the open border in a warm sheltered situation, where they will probably ripen their seeds. None of the species are worth cultivating except in botanical gardens.

CI. GLYCYRHIZA (from γλυκύς, *glycys*, sweet, and ῥίζα, *rhiza*, a root; the sweetness of the root of liquorice is well known). Tourn. inst. 210. Lin. gen. 882. D. C. prod. 2. p. 247.—Glycyrrhiza and Liquiritia, Mæneh. meth. 132 and 152. Pers. ench. 2. p. 313.

LIN. SYST. *Diadelphia*, *Décandria*. Calyx naked, tubular, 5-cleft, bilabiate; lobes, especially the 2 superior ones, joined together much farther than the others. Vexillum ovate-lanceolate, straight. Keel 2-edged or of 2 petals, straight, acute. Stamens diadelphous. Style filiform. Legume ovate or oblong, compressed, 1-celled, 1-4-seeded.—Perennial herbs, with long, perpendicular, sweet roots, impari-pinnate leaves, axillary racemes of blue, violaceous, or white flowers. This is the genus to which the various kinds of *liquorice* belong.

1 *G. GLABRA* (Lin. spec. 1046.) leaflets ovate, rather retuse, and somewhat clammy beneath, as well as the branches; stipulas wanting; spikes or racemes of flowers pedunculate, shorter than the leaves; flowers distant; legumes glabrous, 3-4-seeded.  $\frac{1}{2}$ . H. Native of the south of Europe, from Spain to Tauria, also of China, and cultivated in France, Italy, Germany, and England for the sake of its roots. Lam. ill. t. 625. f. 2. Wood. med. bot. 458. t. 167. *G. lævis*, Pall. itin. ed. gall. append. no. 364. *Liquiritia officinalis*, Mæneh. l. c. Roots long, perpendicular. Stem only terete at the apex. Leaves usually with 5 pairs of leaflets. Flowers pale-blue. The name *liquorice*, according to Du Theis, is said to be a corruption of the French word *Reglisse*, which is itself a corruption of *Glycyrrhiza*. It is more probable that the name *liquorice* has been given on account of the quantity of liquor the roots contain. *Liquorice* is much cultivated in Spain, and since Elizabeth's time has been grown in different parts of England. The soil most congenial to the growth of *liquorice* is a deep sandy loam trenched by the spade or plough, or with the aid of bow, to  $2\frac{1}{2}$  or 3 feet in depth, and manured if necessary. The plants are procured from old plantations, and consist of the side shoots which have eyes or buds. These may be taken off either in autumn, when a crop of *liquorice* is taken up for use, and laid in earth till spring, or taken from a growing plantation as wanted for planting. The planting season may be either October, or February, or March. In general the latter is preferred. The plants are dibbled in the rows 3 feet apart, and from 18 inches to 2 feet in the row, according to the richness or poverty of the soil. The after culture

consists of horse-hoeing, and deep-stirring in weeding, and in cutting down and carrying away the haulm every autumn, after it is completely withered. As the plants do not rise above a foot the first season after planting, a crop of onions is sometimes taken in the intervals. The plants must be three summers' growth, at the end of which the roots may be taken up by trenching over the ground. The roots are then either sold immediately to the brewers' druggists or to common druggists, or preserved like carrots or potatoes in sand, till wanted for use.

The roots of *liquorice* are externally brown, and internally yellow. Their taste is very sweet, combined with a slight degree of bitter when long kept in the mouth. The powder of *liquorice* usually sold is often mingled with flour, and perhaps also with substances not so wholesome. The best sort is of a brownish-yellow colour, the fine pale-yellow being generally sophisticated, and it is of a very rich sweet taste, much more agreeable than that of the fresh root.

Robiquet obtained from *liquorice-root*, 1. Amylaceous fecula. 2. A saccharine substance, having little resemblance to sugar. 3. A new crystalline substance. 4. A resinous oil, which is the cause of its acrimony in the decoctions. 5. Phosphate and malate of lime and magnesia. 6. Woody fibre.

The sweetness of *liquorice-root* depends upon a peculiar principle discovered by Robiquet, and called by him *glycyrrhizin* and *glycion*. He prepared it by subjecting a strong cold infusion of the root to ebullition, which separated a coagulable matter. It was then filtered, and acetate acid added, which gradually threw down an abundant, transparent, gelatinous magna, which being washed with a little cold water to separate any adhering acid, he considered as pure *glycion*. Its taste is peculiar, and intensely sweet, and its smell is not perceptible unless thrown upon hot coal, when it is resinous.

The predominant constituents of *liquorice* being saccharine and mucilaginous matter, its only action is that of a mild demulcent, and as such it is frequently used in catarrh, and in some stomach complaints, which seem to arise from a deficiency of the natural mucus, which should defend the stomach against the acrimony of the food and the fluids secreted into it. On account of its bulk it is rarely exhibited in substance, but more frequently in infusion or decoction.

The extract of *liquorice* is never prepared by the apothecary, but is commonly imported from other countries. It is imported in cylindrical rolls, covered with bay leaves. It should be perfectly black, brittle when cold, and break with a smooth and glassy fracture, have a sweet taste without empyreume, and be almost entirely soluble in water. It is prepared from the fresh roots by expression, decoction, and inspissation. The best foreign extract of *liquorice* is prepared in Catalonia. The refined *liquorice* sold in the shops in small cylindrical pieces not thicker than a goose quill, is a composition with mucilage of glue. The extract possesses the same properties with the root, and is used for the formation of several kinds of troches.

Common or *Smooth Liquorice*. Fl. June, Sept. Clt. 1562. Pl. 3 to 4 feet.

2 *G. GLANDULIFERA* (Waldst. et Kit. hung. 1. p. 20. t. 21.) leaflets oblong-lanceolate, clothed beneath with clammy pubescence, acute or emarginate; stipulas marcescent; spike of flowers pedunculate, shorter than the leaves; flowers distant; legumes 3-4-seeded, usually echinated with glands. 2. H. Native of Hungary and of Caucasus, on the banks of the river Don. Stems angular at the apex. *G. hirsuta*, Pall. itin. append. no. 363. ex Bieb. fl. taur. suppl. 1431. Flowers blue.

*Var. β*; legumes smoothish. 2. H. Native of Russia, on the banks of the Don. *G. glabra*, Pall. itin.

*Gland-bearing Liquorice*. Fl. June, Aug. Clt. 1805. Pl. 2 to 4 feet.

3 *G. LEPIDOTA* (Nutt. gen. amer. 2. p. 106.) leaflets oblong-lanceolate, acute, squamulose, under surface covered with glandular dots; stipulas linear-subulate; spikes of flowers pedunculate, shorter than the leaves, dense; legumes oblong, echinated by hooked bristles. 2. H. Native of North America, abundant around St. Louis, and on the alluvial banks of the Missouri to the mountains, and is in all probability the *liquorice* mentioned by Sir A. Mackenzie as indigenous to the coasts of the North Pacific Ocean. Sims, bot. mag. 2150. *Liquiritia lepidota*, Nutt. in Fras. cat. 1813. Root flagelliform, creeping, possessing the taste of the common liquorice in a considerable degree.

*Lepidoted Liquorice*. Fl. July, Aug. Clt. 1811. Pl. 3 to 5 ft.

4 *G. FÆTIDA* (Desf. atl. 2. p. 170. t. 199.) leaflets oblong, mucronate, rather lepidoted, the odd one on a short petiole; stipulas subulate; spikes of flowers dense, pedunculate, about equal in length to the leaves; legumes oval, mucronate, 2-seeded, echinated by bristles. 2. H. Native of Algiers and of Barbary, near Mayane. Leaflets 9-11. Root creeping. Flowers pale-yellow. The whole plant has a fetid scent when bruised.

*Fetid Liquorice*. Fl. July, Aug. Clt. 1817. Pl. 2 to 3 ft.

5 *G. ASPERRIMA* (Lin. fil. suppl. 330.) stems diffuse; leaflets obovate, retuse, or emarginate, usually mucronate, rather scarious beneath, as well as the petioles and stems; stipulas lanceolate; legumes rather terete, torulose, 3-8-seeded, glabrous. 2. H. Native of Siberia, on hills between the rivers Volga and Jaick, in the desert of Tartary, at the river Karaman, on the Ural mountains, and at Lake Inderskoi. *G. aspera* and *G. hispida*, Pall. itin. ed. gall. no. 365 and 366. t. 80 and t. 81. f. 1 and 2. Racemes axillary. Flowers pale-violet.

*Very-rough Liquorice*. Fl. July, Aug. Clt. 1795. Pl. 2 feet.

6 *G. URALENSIS* (Fisch. in litt. D. C. prod. 2. p. 248.) stem erect, covered with velvety pubescence; leaflets obovate, obtuse, almost glabrous; stipulas lanceolate; calyxes villous. 2. H. Native of Siberia, on the Ural mountains. Fruit unknown. Very nearly allied to *G. asperrima*. Flowers pale-violet.

*Ural Liquorice*. Fl. July, Aug. Pl. 2 feet.

7 *G. ECHINATA* (Lin. spec. 1046.) leaflets oval-lanceolate, mucronate, glabrous; stipulas oblong-lanceolate; spikes of flowers capitate, on very short peduncles; legumes oval, mucronate, 2-seeded, echinated by bristles. 2. H. Native of Apulia, on mount Gardano, and in the northern provinces of China, and of Tartary. Jacq. hort. vind. t. 95. Sims, bot. mag. 252. Schkuhr, handb. 225. Racemes not half so long as the leaves. Flowers purple. The whole plant is glutinous to the touch. Roots horizontal, in taste like the common liquorice.

*Echinated-podded Liquorice*. Fl. Ju. July. Clt. 1596. Pl. 3 ft.

8 *G. HIRUTA* (Lin. spec. 1046.) leaflets oblong-lanceolate; legumes hairy. 2. H. Native of the Levant. Tourn. cor. 26. Flowers purple.

*Hairy-podded Liquorice*. Fl. Ju. Sept. Clt. 1739. Pl. 2 to 3 ft.

9 *G. UNDULATA* (Ruiz et Pav. mss. in herb. Lamb.) leaves large, with 6 pairs of elliptic-oblong, undulated, acuminate, glabrous leaflets; panicles large, shorter than the leaves, spreading, composed of numerous racemes; rachis of flowers and calyxes pubescent; bractees tomentose, 1-flowered. 2. S. Native of Peru. Flowers purple.

*Waved-leaved Liquorice*. Shrub.

*Cult.* A deep light soil suits all the species of *Liquorice*, and they are easily increased by taking slips from the roots with eyes, and planting them in spring.

CII. GALEGA (from γαλα, *gala*, milk; supposed to increase the milk in animals eating of the herb). Tourn. inst. t. 222. Lam. ill. t. 625. Pers. ench. 2. p. 328.—*Galëga* species of Lin. and others.

Lin. syst. *Monadelphica*, *Decandria*. Calyx with 5 subulate, g g 2

equal teeth. Vexillum obovate-oblong. Keel obtuse. Stamens monadelphous, having the tenth one concrete, with the others one-half of its length. Style filiform, glabrous, crowned by a terminal dot-formed stigma. Legume rather terete, torulose, obliquely-striated. Seeds cylindrical.—Smooth, erect, perennial herbs, with impari-pinnate leaves, ovate or lanceolate, somewhat sagittate stipulas, and axillary, simple, many-flowered racemes. Flowers blue and white.

1 *G. OFFICINALIS* (Lin. spec. 1063.) leaflets lanceolate, mucronate, glabrous; stipulas broad-lanceolate; racemes longer than the leaves. *Æ. II.* Native of the south of Europe, in gravelly soils; also of Tauria and Barbary. Mill. fig. t. 137. *G. vulgaris*, Blackw. icon. t. 92.—Moris, hist. 2. p. 91. sect. 2. t. 7. f. 9. Flowers blue. Goat's-rue was formerly accounted cordial and sudorific; but is now out of repute. Mr. Boyle celebrated its virtues in pestilential and malignant fevers.

*Var. β, albiflora*; flowers white.

*Var. γ, Africana* (Mill. dict. no. 2.) leaflets broader and blunter; racemes longer.

*Official Goat's-rue.* Fl. Ju. Sept. Clt. 1568. Pl. 3 to 4 ft.

2 *G. PERSICA* (Pers. ench. 2. p. 328.) leaves usually with 5 pairs of ovate-oblong, rather retuse, mucronate, glaucescent leaflets; stem angular, flexuous; stipulas narrow-lanceolate, sagittate; bracteas linear-subulate, longer than the pedicels. *Æ. H.* Native of Persia. Sweet, fl. gard. 244. Flowers white.

*Persian Goat's-rue.* Fl. Ju. Sept. Clt. 1823. Pl. 2 to 3 ft.

3 *G. BI'LOBA* (Sweet, fl. gard. t. 159.) stem angularly striated, rather flexuous; leaves usually with 5-8 pairs of oblong, silky, pubescent leaflets, which are mucronate and 2-lobed at the apex; stipulas ovate-lanceolate, acute, acutely-serrated, sagittate; flowers crowded; bracteas subulate; twice the length of the pedicels. *Æ. II.* Native country unknown. Flowers bluish lilac.

*Two-lobed-leaved Goat's-rue.* Fl. June, Sept. Clt. 1823. Pl. 3 to 4 feet.

4 *G. ORIENTALIS* (Lam. dict. 2. p. 596.) leaflets ovate, acuminate, smooth; stipulas broad-ovate; racemes longer than the leaves; legumes pendulous; roots creeping. *Æ. II.* Native of Caucasus, and on all the oriental mountains. Sims, bot. mag. 2192. Ker. bot. reg. 326. *G. montana*, Schultes, obs. 154. Flowers blue. The creeping roots and simple flexuous stems are sufficient to distinguish this species from all the others.

*Oriental Goat's-rue.* Fl. June, Aug. Clt. 1801. Pl. 2 to 4 ft.

*Cult.* All the species of this genus are very elegant, and well adapted for ornamenting flower borders. They are all easily increased by dividing the plants at the root in spring, or by seeds.

CIII. CALLOTROPIS (from *καλλος*, *kallos*, beauty, and *τροπή*, *trope*, a keel; in reference to the keel being beautifully variegated). *Galëga* species, Hooker.

LIN. SYST. *Diadélphia*, *Décándria*. Calyx with 5 equal filiform teeth. Vexillum erect, ovate. Wings shorter than the keel. Keel incurved. Style incurved, tipped by a hairy stigma. Stamens diadelphous, joined ones incurved, the free one straight. Legume stipitate, compressed, rather terete, tapering to both ends, many-seeded.—A herb, clothed with pubescent pili, with impari-pinnate leaves, having 6-7 pairs of oblong-cuneate, pubescent, retuse, mucronulate leaflets, axillary racemes of drooping flowers, and lanceolate-subulate semisagittate stipulas.

1 *C. TRICOLOR.* *Æ. G.* Native of New Holland, on the north coast. *Galëga tricolor*, Hook. exot. fl. t. 185. Flowers pale blue, with the base of the wings and vexillum white, the latter tipped with yellow.

*Three-coloured-flowered Callotropis.* Fl. June, Sept. Clt. 1823. Pl. 2 to 3 feet.

*Cult.* An elegant plant when in flower. For its culture and propagation see *Galëga*. It requires to be protected in winter.

CIV. TEPHROSIA (from *τεφρος*, *tephros*, ash-coloured; in allusion to the colour of the foliage of some of the species, as those of *T. cinerea*, &c.) Pers. ench. 2. p. 328. Kunth, nov. gen. amer. 6. p. 458.—Cracca, Lin. fl. zeyl. 139. amœn. 3. p. 18.—Needhamia, Scop. but not of R. Brown, nor Cass.

LIN. SYST. *Monadélphia* or *Diadélphia*, *Décándria*. Calyx bractless, nearly equal, 5-toothed (f. 37. a.). Vexillum large (f. 37. b.), roundish, silky or pubescent on the outside, spreadingly reflexed. Wings adhering to the keel, which is obtuse. Stamens variously connected, monadelphous or diadelphous. Style filiform. Stigma terminal. Legume usually sessile, compressed, linear (f. 37. c.), many-seeded, with the valves flat. Seeds compressed.—Shrubs or herbs, with usually impari-pinnate leaves, lanceolate or subulate stipulas, which are distinct from the petiole, not sagittate. In the true *Tephrosias* the leaves are impari-pinnate; in the spurious ones trifoliate or palmate. Racemes axillary, rarely opposite the leaves. Flowers white or purplish. This genus will hereafter probably be divided into several genera, when the characters are better known.

SECT. I. MUNDU'LIA (from *mundulus*, delicate, handsome; appearance of plants). D. C. leg. mem. vi. prod. 2. p. 249.—Robinia, Roxb. hort. beng. 56. but not of Lin. Leaves impari-pinnate. Racemes axillary, erect, usually panicled. Calyx truncate, or with 5 short teeth. Stamens monadelphous. Style glabrous, or as in *T. candidum*, bearded.

1 *T. SUBEROSA* (D. C. prod. 2. p. 249.) leaves with 7-10 pairs of elliptic-oblong mucronulate leaflets, which are glabrous above, and clothed with adpressed pubescence beneath; carina straightish; style glabrous; legume canescent, irregularly coarctate between the seeds. *h. S.* Native of Bengal. Robinia suberosa, Roxb. l. c. Flowers rose-coloured. Vexillum hardly pubescent.

*Corky-barked Tephrosia.* Fl. Ju. Aug. Clt. 1818. Sh. 2 to 4 ft.

2 *T. CHINE'NSIS* (Lindl. hort. trans. 7. p. 38.) shrubby; leaves with 9-10 pairs of oblong, obtuse, pubescent leaflets; racemes axillary, horizontal, compressed, many-flowered; calyx bibracteolate; corolla pubescent; style glabrous; stigma capitate. *h. G.* Native of China. Stamens diadelphous. Flowers bright rose-coloured. Like *T. suberosa*.

*China Tephrosia.* Fl. June. Clt. 1822. Shrub 2 to 3 feet.

3 *T. FRUTICOSA* (D. C. prod. 2. p. 249.) leaves with 4 or 5 pairs of ovate-oblong, acute, glabrous leaflets, but are rather villous on the nerves beneath; petals and style glabrous; legume broadly oblong, compressed, velvety, drawn out downwards into a short acumen. *h. S.* Native of the East Indies. Robinia fruticosa, Roxb. l. c. Racemes panicled, short. Flowers small, red. Legume rusty.

*Shrubby Tephrosia.* Fl. June, Aug. Clt. 1816. Shrub cl.

4 *T. SOPHOROIDES* (D. C. in ann. sci. nat. 4. p. 99.) leaves with 3-5 pairs of elliptic-oblong, glabrous, acuminate leaflets; petals and style glabrous. *h. G.* Native of Nipaul. Flowers apparently white in a dry state, small.

*Sophora-like Tephrosia.* Shrub 2 to 4 feet.

5 *T. BRACHYSTACHYA* (D. C. l. c.) leaves with 7-8 pairs of elliptic, obtuse leaflets, the young ones clothed with adpressed silky pubescence on both surfaces, adult ones glabrous on the upper surface, but pubescent beneath; racemes panicled, shorter than the leafless part of the petiole; petals and style glabrous. *h. G.* Native of Nipaul. Flowers probably red.

*Short-spiked Tephrosia.* Shrub.

6 *T. SERICEA* (D. C. prod. 2. p. 249.) leaves with 6 pairs of oblong-lanceolate obtuse leaflets, which are glabrous above, but clothed with silky tomentum beneath; racemes nearly terminal. *h. S.* Native of Tranquebar. *Cytisus sericeus*, Willd. nov.

act. nat. cur. berl. 4. 1803. p. 204. spec. 3. p. 1121. Flowers red. Legume 2 inches long, compressed, silky.

*Silky Tephrosia.* Fl. July, Aug. Clt. 1800. Shrub 2 to 4 ft.

7 *T. CANDIDA* (D. C. prod. 2. p. 249.) leaves with 8-11 pairs of elliptic-oblong mucronate leaflets, which are glabrous above, and pale and covered with silky pubescence beneath; legume linear, much compressed, clothed with adpressed pubescence, apiculated by the long style. *h. S.* Native of Bengal. *Robinia candida*, Roxb. hort. beng. p. 56. Style curved into an angle, and the keel as if it were truncate. Vexillum silky on the outside. Flowers pale rose-coloured in a dried state.

*White-leaved Tephrosia.* Clt. 1816. Shrub 2 to 4 feet.

SECT. II. *BRISSEONIA* (in honour of M. Brisson, a French ornithologist). Neck. elem. no. 1348. D. C. prod. 2. p. 249.—*Erebinthus*, Mich. gen. 210. Leaves impari-pinnate. Lobes of calyx broadest at the base, but ending in an elongated acumen. Stamens monadelphous. Style bearded laterally. Legumes more or less velvety, or hispid.

\* *Flowers in fascicles, disposed in terminal racemes or panicles. Peduncles axillary.*

8 *T. TOXICARIA* (Pers. ench. 2. p. 328.) plant suffruticose, erect; leaves with 18 or 20 pairs of oblong-lanceolate, obtuse, somewhat mucronate leaflets, which are pubescent on the upper surface, but clothed with silvery-silky pubescence beneath; the down adpressed on both surfaces; legumes linear, rather terete, clothed with velvety villi, ending each in a short mucrone. *h. S.* Native of the West Indies and Cayenne, and said by Tussac to have been first imported from Africa.—*Plum. icon. t. 135.* *Galèga toxicaria*, Swartz, fl. ind. occid. 1278. *Tuss. ant. t. 20.* *Lam. dict. 2. p. 596.* *Galèga sinapon*, Buchoz, nat. hist. 10. dec. 10. t. 4. Flowers pale-red. The stamens, according to Swartz, are diadelphous, and the legume stipitate within the calyx, but in Plumier's specimen examined by De Candolle, the stamens are monadelphous, and the legume sessile; therefore, perhaps 2 distinct plants are here confused. The leaves and branches of this shrub well pounded, and thrown into a river or pond, very soon affects the water, and intoxicates the fish, so as to make them float on the surface as if dead; most of the large ones recover after a short time, but the greater part of the small fry perish on those occasions. It has been introduced to Jamaica and cultivated there on account of its intoxicating qualities.

*Poison Tephrosia.* Clt. 1791. Shrub 2 to 3 feet.

9 *T. VIRGINIANA* (Pers. ench. 2. p. 329.) plant herbaceous and erect; leaves with 8-11 pairs of oval-oblong acute leaflets, clothed beneath with white villi; calyxes woolly. *u. F.* Native from Canada to Florida, in dry sandy woods. *Galèga Virginiana*, Lin. spec. 1062. but not of hort. Cliff.—*Pluk. t. 23. f. 2.* Flowers reddish, handsome. Plant covered with hoary villi. This species is considered in America as a powerful vermifuge.

*Virginian Tephrosia.* Fl. Ju. Aug. Clt. 1765. Pl. 1 to 3 ft.

\* \* *Peduncles opposite the leaves.*

10 *T. HISPIDULA* (Pursh, fl. amer. sept. 2. p. 489.) plant herbaceous, trailing, slender, and pubescent; leaves having 6 or 7 pairs of oblong-oval, obtuse, mucronate leaflets; peduncles elongated. 3-5-flowered; legume oblong, falcate, rather hispid. *u. F.* Native from Virginia to Georgia, in pine woods, and on slate hills. *Galèga hispidula*, Michx. fl. bor. amer. 2. p. 68. *G. spicata*, Walt. Flowers pale red, and yellowish white.

*Hispid Tephrosia.* Pl. trailing.

11 *T. GRACILIS* (Nutt. gen. amer. 2. p. 119.) plant herbaceous, erect, slender, smoothish, dichotomous; leaves with 6-7 pairs of oblong-elliptic, acute, mucronated leaflets, the lower pair approximating the stem; peduncles length of leaves, usually 3-flowered; legume linear, hairy, rather incurved. *u. F.* Native of Carolina and Georgia. Flowers pale red.

*Slender Tephrosia.* Pl. 1 foot.

12 *T. PACIFOLIA* (Nutt. gen. amer. 1. c.) plant herbaceous and erect, simple, velvety, and pilose; leaves with 6-9 pairs of remote, cuneate-oval, very obtuse leaflets, which are villous on both surfaces; peduncles length of leaves, usually 3-flowered. *u. F.* Native of Georgia and Florida. Flowers purple. The leaves are far apart upon the stem.

*Few-leaved Tephrosia.* Pl. 2 feet.

13 *T. PROSTRATA* (Nutt. 1. c.) plant herbaceous, prostrate, pubescent; leaves with only 1 or 2 pairs of cuneate-obovate, coriaceous leaflets, which are glabrous above, but clothed with silky villi beneath, the lower ones approximating the stem; peduncles 3-flowered, longer than the leaves; legume linear, almost straight. *u. F.* Native of Georgia. Common about Savannah, in dry and sandy woods. *Galèga villosa*, Michx. fl. bor. amer. 2. p. 67. *T. chrysophylla*, Pursh, fl. amer. sept. 2. p. 489. Flowers purple.

*Prostrate Tephrosia.* Pl. prostrate.

14 *T. HISPIDA* (D. C. prod. 2. p. 250.) plant herbaceous, erect, dichotomous; stem and petioles beset with stiff ferruginous hairs; leaves with 5 pairs of cuneate-obovate leaflets, which are villous on both surfaces; peduncles 7-10-flowered, much longer than the leaves; flowers spicate, lower ones distant; legume linear, straight, rather hispid. *u. F.* Native of Carolina. Flowers purplish.

*Hispid Tephrosia.* Pl. 1 to 2 feet.

SECT. III. *CRACCOIDES* (*Cracca* and *idea*, similar; plants having the aspect of *Vicia cracca*). D. C. leg. mem. vi. prod. 2. p. 250. Leaves impari-pinnate. Lobes of calyx broadest at the base, ending in an elongated acumen. Stamens diadelphous. Style bearded. Disk in flower not manifest.

15 *T. OCHROLEUCA* (Pers. ench. 2. p. 329.) plant suffruticose, erect, pubescently-villous; stipulas subulate; leaves with 2-3 pairs of ovate leaflets; peduncles axillary, longer than the leaves; flowers racemose; legume straight, quite smooth, and very narrow, containing from 14 to 18 seeds. *h. S.* Native of the Caribbee islands. *Galèga ochroleuca*, Jacq. icon. rar. t. 150. *Galèga pubescens*, Lam. dict. 2. p. 597. Flowers cream-coloured, changing to reddish before fading. Legumes torulose.

*Cream-coloured-flowered Tephrosia.* Clt. 1799. Shrub 2 to 3 ft.

16 *T. MOLLIS* (H. B. et Kunth, nov. gen. amer. 6. p. 462.) herbaceous, clothed with soft pubescence; leaves with 4-6 pairs of stipellate elliptic-oblong leaflets, which are rounded at the apex, and mucronate, clothed with adpressed pubescence above, and silky-silvery down beneath; racemes axillary. *h. S.* Native of New Andalusia. Flowers rose-coloured.

*Soft Tephrosia.* Shrub 2 to 3 feet.

17 *T. ASTRAGALINA* (H. B. et Kunth, 1. c.) stem shrubby, tomentose; leaves with 8-9 pairs of stipellate, oblong, somewhat mucronate leaflets, which are rounded at both ends, and covered with adpressed pubescence above, but with canescent tomentum beneath, as well as the legumes; racemes axillary; flowers scattered. *h. S.* Native about Quito. Flowers white.

*Milk-etch-like Tephrosia.* Shrub 2 feet.

18 *T. ? OROBORDES* (H. B. et Kunth, nov. gen. amer. 6. p. 462. t. 578.) plant erect, shrubby, branched; leaves with 4-6-

FIG. 37.

pairs of lanceolate-linear, acute, pilosely-pubescent leaflets; pedicels axillary, elongated, 1-2-flowered, 1-leaved at the apex; legume terete, puberulous. *h. G.* Native of Mexico, near Guanajuato. Habit nearly of *T. stricta*.

*Var. β, leiocarpa* (D. C. prod. 2. p. 255.) young legumes glabrous; leaves with 4 pairs of lanceolate short leaflets.

*Orobus-like Tephrosia.* Shrub 2 to 3 feet.

SECT. IV. *REINERIA* (in honour of Joseph Reiner Von Hohenwarth, author of *Botanische reisa*, 1 vol. 8vo. 1796). *Mench. suppl.* p. 44. *D. C. prod.* 2. p. 251. Leaves imparipinnate. Teeth of calyx linear-subulate. Stamens sometimes somewhat monadelphous, and sometimes diadelphous. The species contained in this section are disposed in an artificial manner, some with many pairs of leaflets and some with few.

19 *T. CARIBÆA* (D. C. prod. 2. p. 251.) shrubby, branched, smooth; leaves with 10-12 pairs of oval, awnedly-mucronate leaflets; peduncles axillary, rather longer than the leaves, few-flowered; legume linear, deflexed, glabrous, furrowed between the seeds. *h. S.* Native of the Caribbee Islands. *Galèga Caribæa*, Jacq. *amer.* 212. t. 125. Flowers scentless, variegated with white and red. Stamens diadelphous.

*Caribbean Tephrosia.* Fl. June, July. Clt. 1786. Sh. 3 ft.

20 *T. EMARGINATA* (H. B. et Kunth, *nov. gen. amer.* 6. p. 461.) arborescent; branches tomentose; leaves with 14 pairs of linear-oblong leaflets, which are deeply emarginate at the apex, clothed with adpressed pubescence above, and silvery silky down beneath; racemes terminal; flowers in fascicles; legumes straightish, clothed with silky tomentum as well as the calyxes. *h. S.* Native of South America, in the missions of Orinoco. Stamens diadelphous. The root of this species is used to intoxicate fish, as *T. toxicaria*, which see, no. 8.

*Emarginate-leafletted Tephrosia.* Shrub 2 to 4 feet.

21 *T. GRANDIFLORA* (Pers. *ench.* 2. p. 329.) shrubby, erect, glabrous; leaves with 7-9 pairs of oblong, mucronate leaflets, which are pubescent beneath; stipulas ovate, acuminate; racemes opposite the leaves, and somewhat terminal, straight, bearing 4 flowers at the apex; bracteas ovate, concave, large, deciduous. *h. G.* Native of the Cape of Good Hope. *Galèga grandiflora*, Vahl. *ymb.* 2. p. 84. *Ker. bot. reg.* 769. *Lher. stirp.* 2. t. 44. *Galèga rosea*, Lam. *dict.* 2. p. 599. Flowers rose-coloured, larger than those of any other species in the genus.

*Great-flowered Tephrosia.* Fl. May, Sept. Clt. 1774. Sh. 2 to 3 feet.

22 *T. COCCINEA* (Wall. *pl. asiat. rar.* vol. 1. t. 60.) suffruticose, erect; branches terete, flexuous, and are as well as under surface of the leaves clothed with white and adpressed wool; leaves sessile, with 3-4 pairs of cuneiform-obovate, retuse leaflets; racemes axillary, on long peduncles; teeth of calyx lanceolate, acuminate; stamens diadelphous; style villous beneath; legume linear, pendulous. *h. S.* Native of the East Indies, on the left bank of the Irawaddi, near Yenangheum. Flowers scarlet.

*Scarlet-flowered Tephrosia.* Shrub 2 to 3 feet.

23 *T. VILLOSA* (Pers. *ench.* 2. p. 329.) plant herbaceous, branched, pubescent; leaves with 7-9 pairs of obovate-cuneated, retuse leaflets, which are silky-villous beneath and pilose above; stipulas setaceous; racemes opposite the leaves, nearly terminal, many-flowered; legumes linear, mucronate, densely villous, 4-5-seeded. *h. S.* Native of the East Indies. *Galèga villosa*, Lin. *spec.* 1063.—Pluk. *alm.* t. 59. f. 6.—Burm. *zeyl.* t. 33. Flowers white?

*Villous Tephrosia.* Fl. June, July. Clt. 1779. Pl. proc.

24 *T. SERICEA* (Hamilt. in Lin. *trans.* 13. p. 545.) leaves with 8-10 pairs of cuneated leaflets, silky beneath; racemes

opposite the leaves, sessile; stipulas subulate; legumes pubescent, arched, recurved. *h. S.* Native of the south of India. Flowers red. Stamens diadelphous. Calyx 5-toothed.

*Silky Tephrosia.* Shrub 2 feet.

25 *T. PURPUREA* (Pers. *ench.* l. c.) plant herbaceous, branched; leaves with 7-9 pairs of oblong-cuneated, somewhat mucronate leaflets, hardly pubescent beneath; stipulas subulate; racemes opposite the leaves or terminal; legume linear, much compressed, 5-8-seeded, finely pubescent. *h. S.* Native of the East Indies, and Ceylon. *Galèga purpurea*, Lin. *amœn.* 3. p. 19. *Roxb. hort. beng.* 57. *Sieb. fl. maur. exsic.* no. 156. *Burm. zeyl.* t. 32. but this differs from the plant of Linnæus in the legumes, which are said to be terete. Flowers purple. Stamens monadelphous. This plant is prescribed by Indian doctors in cases of dyspepsia, henterig, and tympanitis.

*Purple-flowered Tephrosia.* Fl. Jul. Aug. Clt. 1768. Pl. 2 ft.

26 *T. HIRTA* (Hamilt. in Lin. *trans.* 13. p. 546.) suffruticose, erect, tomentose; branches somewhat tetragonal; leaves with 4-8 pairs of cuneate, emarginate leaflets, which are glabrous above, but beset with long, adpressed hairs beneath; stipulas broad from the base; racemes opposite the leaves, leafy, pedunculate; legume falcate, pendulous, hairy, 6-seeded. *h. S.* Native of the East Indies. Flowers bluish, but with the keel white. Stigma bearded.

*Hairy Tephrosia.* Shrub 1½ foot.

27 *T. LANCEAFOLIA* (Link. *enum.* 2. p. 252.) plant suffruticose; leaflets obversely lanceolate, emarginate, mucronate, clothed with close-pressed hairs beneath; stipulas subulate; racemes terminal; legumes terminal, straight, spreading. *h. S.* Native country unknown. This species is said to be very like *T. purpurea*, but the flowers are cream-coloured, not purple. De Candolle has a specimen which was sent from the Calcutta Botanic Garden, under the name of *T. lanceafolia*, which is scarcely distinct from *T. purpurea*.

*Lance-leaved Tephrosia.* Fl. July, Aug. Clt. 1820. Shrub 2 to 3 feet.

28 *T. PROCUMBENS* (Hamilt. in Lin. *trans.* 13. p. 547.) plant suffruticose, procumbent, filiform, pilose; leaves with 4-5 pairs of stalked, cuneiform, hairy, mucronate leaflets; stipulas setaceous; racemes opposite the leaves, leafy; legume straight, pilose, compressed, 9-seeded. *h. S.* Native of the East Indies. Calyx 5-cleft, with setaceous segments, length of corolla.

*Procumbent Tephrosia.* Pl. procumbent.

29 *T. DOMINGENSIS* (Pers. *ench.* 5. p. 330.) plant herbaceous, branched, glabrous; leaves with 7-9 pairs of linear-cuneated, obtuse, mucronate leaflets, which are clothed with adpressed pubescence beneath; stipulas lanceolate-subulate; racemes axillary; legumes pendulous, minutely pubescent. *h. S.* Native of St. Domingo, in sterile places. *Galèga Domingensis*, Willd. *spec.* 3. p. 1249. Flowers small, pale red.

*St. Domingo Tephrosia.* Pl. 1 foot.

30 *T. PERRINIANA* (D. C. prod. 2. p. 251.) plant branched, hairy; leaflets linear-oblong, mucronate, ciliated, rather hairy; panicle hairy, terminal, cymose. Native of South America. *Galèga Perriniana*, Spreng. *neue. entd.* 2. p. 161. Said to be like *T. Domingensis*.

*Perrin's Tephrosia.* Pl. 1 foot

31 *T. MUCRONATA* (D. C. prod. 2. p. 251.) shrubby, erectish, branched, pubescent; leaves with 8 pairs of ovate, mucronate, villous leaflets; peduncles axillary, longer than the leaves, 1-2-flowered; legume pubescent. *h. G.* Native of the Cape of Good Hope. *Galèga mucronata*, Thunb. *fl. cap.* 609. Flowers probably red.

*Mucronate-leafletted Tephrosia.* Shrub.

32 *T. LEPTOSTACHYA* (D. C. prod. 2. p. 251.) plant herbaceous, erect, branched, hardly pubescent; leaves with 7 pairs

of oblong, rather cuneated, retuse, mucronate leaflets, the young ones silky beneath; stipulas subulate; racemes elongated, slender, opposite the leaves, or terminal; flowers distant, and are as well as the legumes erectish. ☉. S. Native of Senegal. Flowers purple. Stamens monadelphous.

*Slender-spiked Tephrosia.* Pl. 1 foot.

33 *T. MA'XIMA* (Pers. ench. 2. p. 329.) glabrous; leaflets oval-lanceolate, obtuse, mucronate, striated beneath; stipulas lanceolate; racemes terminal, very long; pedicels tern, rising from the axils of the bracteas, which are ovate and acuminate; calyxes and legumes glabrous. ♀. S. Native of Ceylon. *Galèga máxima*, Lin. spec. 1063. exclusive of the synonyme of Burman, which is said to have short, 2-flowered pedicels and abruptly pinnate leaves.

*Largest Tephrosia.* Shrub 1 to 2 feet.

34 *T. ARGENTEÀ* (Pers. ench. 2. p. 329.) suffruticose, clothed with silvery tomentum; leaves with 7-8 pairs of oblong, obtuse leaflets, which are silky beneath; stipulas ovate, but subulate at the apex, nerved; racemes almost terminal; pedicels twin; calyxes villous. ♀. S. Native of the East Indies. *Galèga argentea*, Lam. dict. 2. p. 599. *Galèga bárba-jòvis*, Burm. ind. 172.—Pluk. alm. t. 52. f. 1. Flowers purple.

*Var. β, glabrúscula* (D. C. prod. 2. p. 252.) branches and leaves sparingly pubescent. ♀. S. Native of the East Indies. Stipulas 3-nerved.

*Silvery Tephrosia.* Shrub 2 feet.

35 *T. COLUTEA* (Pers. ench. 2. p. 329.) shrubby, branched, hoary-tomentose; leaflets 5-7 pairs, oblong-obovate, retuse; stipulas lanceolate, tomentose; peduncles axillary and terminal; legume straight, erect. ♀. S. Native of the East Indies. *Galèga Colutea*, Burm. ind. 172.—Pluk. alm. t. 166. f. 3. Flowers purple. Stamens diadelphous.

*Colutea-like Tephrosia.* Shrub 2 feet.

36 *T. VENU'STULA* (H. B. et Kunth, nov. gen. amer. 6. p. 459.) shrubby; leaves with 5-7 pairs of lanceolate, obtuse, mucronate leaflets, and are as well as the calyxes clothed with adpressed canescent pubescence; stipulas ovate, acuminate; racemes opposite the leaves, furnished with one leaf at the base; flowers in fascicles; legume somewhat cultriform, pubescent. ♀. S. Native of Cumana, about Borbones. Flowers red.

*Pretty Tephrosia.* Shrub 1 to 2 feet.

37 *T. PISCATORIA* (Pers. ench. 2. p. 329.) shrubby; leaves with 5-6 pairs of oblong, obtuse leaflets, which are rather pilose beneath; stipulas subulate; peduncles 2-edged; legume straight, ascending, rather villous. ♀. S. Native of the East Indies, and in the islands of the Pacific ocean. *Galèga littoralis*, Forst. prod. no. 277. *G. piscatoria*, Ait. hort. kew. 3. p. 71. Flowers purple. This species is used to intoxicate fish in the East Indies, as the *T. toxicaria* is in the West Indies.

*Fisher's Tephrosia.* Fl. June, July. Clt. 1778. Pl. 2 feet.

38 *T. REFLEXA* (D. C. prod. 2. p. 252.) shrubby, pubescent; branches rather triquetrous; leaves with 5 pairs of oblong leaflets, each ending in a reflexed mucrone; peduncles axillary, generally 1-flowered, longer than the leaves; legumes rather hairy. ♀. S. Native country unknown. Flowers red. Stamens monadelphous. *Reinèria refléxa*, Mœench. suppl. 45.

*Reflexed-pointed leaved Tephrosia.* Shrub 1 to 2 feet.

39 *T. LEUCANTHIA* (H. B. et Kunth, nov. gen. amer. 6. p. 460. t. 577.) shrubby; leaves with 3-8 pairs of oblong-lanceolate, obtuse, mucronate leaflets, which are clothed with adpressed pubescence on both surfaces, but canescent beneath; racemes terminal, usually twin; flowers in fascicles; calyxes covered with silky strigæ; legume tomentose. ♀. S. Native of Mexico, near Guanajuato. Said to be allied to *T. Virginiana*. Flowers white.

*White-flowered Tephrosia.* Shrub 2 feet.

40 *T. CORONILLÆFOLIA* (D. C. prod. 2. p. 252.) shrubby; clothed with cinereous pubescence; branches angular; leaves with 5 pairs of obovate-cuneated, obtuse, mucronate leaflets; racemes axillary; legumes rather villous. ♀. S. Native of Bourbon. *Galèga coronillæfolia*, Desf. cat. hort. par. 194. Poir. suppl. 2. p. 699. *Brissônia coronillæfolia*, Desv. journ. 1814. vol. 1. p. 78. Perhaps distinct from *T. refléxa*.

*Coronilla-leaved Tephrosia.* Shrub 1 to 2 feet.

41 *T. COLONTIA* (Hamilt. Lin. trans. 13. p. 545.) legumes glabrous, arcuately-recurved; leaves with 8-10 pairs of smooth leaflets; racemes opposite the leaves, sessile; stipulas subulate. ♀. S. Native of the East Indies. Stamens diadelphous. Calyx pilose, 5-toothed. Indigo is obtained from this plant in India, and it is cultivated for that purpose.

*Colonil Tephrosia.* Fl. June, July. Clt. 1818. Shrub 2 feet.

42 *T. TINCTORIA* (Pers. ench. 2. p. 329.) shrubby, glabrous; leaves with 5 pairs of oblong, obtuse, emarginate leaflets, silky and villous beneath; peduncles axillary, spicate, length of leaves; legumes straight, pendulous. ♀. S. Native of Ceylon, where it is called *Anil*. Cracca, no. 302. Lin. fl. zeyl. *Galèga tinctoria*, Lin. spec. 1063. Flowers purple or flesh-coloured. It is from this plant that the inhabitants of Ceylon prepare their indigo, which yields a dye of a pale blue colour.

*Dyers' Tephrosia or Ceylon Indigo.* Shrub 1 to 3 feet.

43 *T. CAPE'NSIS* (Pers. ench. 2. p. 330.) plant suffruticose, decumbent, glabrous; leaves with 4-5 pairs of oblong, mucronate leaflets; stipulas lanceolate-subulate; peduncles opposite the leaves, very much elongated; flowers racemose, distant; legumes erect, pubescent. ♀. G. Native of the Cape of Good Hope. *Galèga Capensis*, Thunb. fl. cap. 602. Jacq. icon. rar. t. 574. Flowers purple. Stamens monadelphous.

*Cape Tephrosia.* Fl. July, Aug. Clt. 1825. Sh. decumbent.

44 *T. TOMENTOSA* (Pers. ench. 2. p. 329.) plant clothed with villous tomentum; leaves with 4-6 pairs of linear, obtuse, somewhat mucronate leaflets, which are glabrous above; stipulas subulate; racemes opposite the leaves; pedicels in threes; legume straight, ascending. ♀. G. Native of Arabia Felix. *Galèga tomentosa*, Vahl. symb. 2. p. 84. *Lathyrus tomentosa*, Forsk. descr. 135. but not of Cav. Flowers blue, with a white keel.

*Tomentose Tephrosia.* Shrub 1 to 2 feet.

45 *T. CINEREA* (Pers. ench. 2. p. 328.) plant herbaceous, decumbent, clothed with cinereous, silky down; leaves with 4-6 pairs of linear, obtuse, mucronate-leaflets, which are covered with silky villi beneath; stipulas lanceolate; racemes opposite the leaves; pedicels solitary; legumes straight, spreading. ☉. S. Native of Jamaica and St. Domingo. *Galèga cinerea*, Lin. amœn. 5. p. 403. Jacq. icon. rar. t. 575. Flowers violaceous.

*Cinereous Tephrosia.* Fl. June, July. Pl. decumbent.

46 *T. LITTORALIS* (Pers. ench. 2. p. 329.) plant herbaceous, decumbent, clothed with cinereous canescent down; leaves with 5 pairs of oblong-cuneated, emarginate or obtuse leaflets; stipulas subulate; racemes opposite the leaves, terminal, and 3 times longer than them; pedicels aggregate; legume straight, spreading, rather pubescent. ♀. S. Native of Carthage and the Caribbee Islands. *Galèga littoralis*, Lin. syst. 565. *Vicia littoralis*, Jacq. amer. t. 124. Flowers purple. Stamens monadelphous.

*Shore Tephrosia.* Fl. July, Aug. Clt. 1824. Pl. decumb.

47 *T. BRACHYSTACHIA* (D. C. prod. 2. p. 253.) plant suffruticose, erect, pubescent; leaves with 5 pairs of oblong-cuneated, emarginate leaflets, which are silky beneath, lower pairs approximating the stem; racemes axillary, shorter than the leaves; legume straight, spreadingly-pendulous, 8-10-seeded. ♀. S. Native of the East Indies. Flowers purple. Stamens monadelphous. Legumes hardly pubescent even when young.

*Short-spiked Tephrosia.* Pl. 1 to 2 feet.

48 *T. HYPARGYREA* (D. C. in ann. scienc. nat. 4. p. 99.) plant suffruticose, erect; stem angular, rather velvety; leaves with 2-4 pairs of leaflets, which are glabrous above but clothed beneath with silky-silvery down; the lower leaflets roundish and approximating the stem, superior ones oval-oblong, terminal one very large; peduncles axillary; legumes straight, secund, rather deflexed, 10-seeded, pubescent. *h. S.* Native of the East Indies. *T. heterophylla*, Fisch. cat. hort. gor. This is a very beautiful and distinct species. The flowers are small and purple, and the stamens are monadelphous. Peduncles sometimes shorter, sometimes longer than the leaves.

*Silvery-leaved Tephrosia.* Fl. June, July. Clt. 1825. Shrub 1 to 2 feet.

49 *T. MARIA'NA* (D. C. prod. 2. p. 253.) plant suffruticose, erect; stem terete, villous; leaves with 4 pairs of oblong leaflets, which are glabrous above, and silky-silvery beneath, the lower ones approximating the stem; stipulas lanceolate, elongated, villous; flowers axillary, crowded, almost sessile, and disposed in a somewhat terminal raceme, legume straight, erect, velvety-villous, 10-12-seeded. *h. S.* Native of the Marianne Islands. Leaflets nearly 2 inches long.

*Marianne Island Tephrosia.* Shrub.

50 *T. LAGASCA'NA* (D. C. prod. 2. p. 253.) plant clothed with cinereous tomentum; branches terete; leaves with 4 pairs of obovate-oblong, obtuse, rather mucronate leaflets; lower pair approximating the stem; stipulas subulate; peduncles opposite the leaves, almost terminal, and longer than them; legume ascending, straight, velvety, 10-12-seeded. *h. S.* Native country unknown.

*Lagasca's Tephrosia.* Shrub 2 feet.

51 *T. STRICTA* (Pers. ench. 2. p. 329.) plant suffruticose, clothed with cinereous tomentum; branches terete; leaves with 4 pairs of oblong or cuneate leaflets, each ending in a recurved mucrone, lower leaflets approximating the stem; stipulas subulate; flowers few, almost sessile, axillary; legumes spreading, velvety, 6-8-seeded. *h. G.* Native of the Cape of Good Hope. *Galèga stricta*, Ait. hort. kew. 3. p. 70. *Galèga mucronata*, Thunb. fl. cap. 601. *G. pulchella*, Scop. insub. 1. t. 3. *Indigofera stricta*, Lin. fil. suppl. 334. ex Jacq. hort. schœnbr. t. 263. Flowers small, purplish. Stamens diadelphous.

*Straight Tephrosia.* Fl. May, June. Clt. 1774. Sh. 2 to 3 ft.

52 *T. SENNA* (H. B. et Kunth, nov. gen. amer. 6. p. 458.) branches rather angular, glabrous; leaves with 4 pairs of somewhat obovate-oblong, emarginate, mucronate, puberulous, rather glaucous leaflets; racemes opposite the leaves, furnished at the base with one leaf; flowers in fascicles; legumes erectish, and are as well as the calyxes covered with strigose pubescence. *h. S.* Native of Popayan, on the banks of the river Cauca, near Buga, where the leaves are used in place of senna by the inhabitants.

*Buga Senna.* Shrub.

53 *T. LINEARIS* (Pers. ench. 2. p. 330.) branches pubescent; leaves with 4-5 pairs of linear, narrow leaflets, which are silky beneath; stipulas filiform; racemes axillary, much elongated; flowers distant; bracteas conforming to the leaves; legume narrow, and is as well as the vexillum pubescent. *h. S.* Native of Guinea, among grass. *Galèga linearis*, Willd. spec. 3. p. 1248. *Indigofera angustifolia*, Perr. in litt. Stem flexuous. Flowers red.

*Linear-leafletted Tephrosia.* Fl. July, Aug. Clt. 1823. Shrub 1½ foot.

54 *T. FLEXUOSA*; stem suffruticose, erect, flexuous, branched, pubescent; leaves with 5 pairs of linear, emarginate, mucronate, soft, pilose leaflets; stipulas subulate; flowers somewhat spicate, terminal; legume compressed, clothed with soft pili. *h. S.*

Native of the island of St. Thomas, in the Gulf of Guinea, among grass. Flowers flesh-coloured.

*Flexuous-stemmed Tephrosia.* Shrub 1 foot.

55 *T. PALLENS* (Pers. ench. 2. p. 329.) shrubby, pubescent; leaves with 4-5 pairs of oblong, acute leaflets, which are pubescent beneath; stipulas subulate; legume straight, spreading, ciliated. *h. G.* Native of the Cape of Good Hope. *Galèga pallens*, Ait. hort. kew. 3. p. 71. *G. humilis*, Thunb. fl. cap. 601. but the legume is said to be recurved. Flowers pink.

*Pale-flowered Tephrosia.* Fl. July, Aug. Clt. 1787. Sh. 2 to 3 feet.

56 *T. SENTICOSA* (Pers. l. c. 330.) shrubby; leaves with 4 pairs of emarginate leaflets, clothed with fine silky down beneath; legumes twin, lateral, glabrous. *h. S.* Native of Ceylon. *Galèga senticosa*, Lin. amœn. 3. p. 19. Cracca, no. 303. Lin. fl. zeyl. p. 141.

*Brambly Tephrosia.* Shrub.

57 *T. PUMILA* (Pers. ench. 2. p. 330.) plant herbaceous, diffuse, rather pilose; leaves with 3-4 pairs of cuneiform, emarginate leaflets, villous beneath, and ending each in a recurved mucrone; stipulas subulate, villous; peduncles axillary, very short, 1-2-flowered; legume erect, villous. *h. S.* Native of Madagascar, at Fort Dauphin. *Galèga pumila*, Lam. dict. 2. p. 599. Flowers purple.

*Dwarf Tephrosia.* Pl. diffuse.

58 *T. APOLLINEA* (D. C. prod. 2. p. 254.) suffruticose, diffuse, clothed with adpressed pubescence; leaves with 2-3 pairs of obovate-oblong, emarginate leaflets, which are silky beneath; racemes opposite the leaves, length of leaflets; legume erectly-spreading, 6-7-seeded, rather pubescent. *h. G.* Native of Egypt, in corn fields. *G. Apollinea*, Delil. fl. arg. p. 144. t. 53. f. 5. Flowers blue. Stamens diadelphous according to the figure.

*Apollinean Tephrosia.* Fl. Jul. Aug. Clt. 1816. Sh. 1 to 2 ft.

59 *T. SPINOSA* (Pers. ench. 2. p. 330.) shrubby; branches canescent; stipulas spinose; leaves with 3 or 4 pairs of cuneate, emarginate, smoothish leaflets; flowers few, axillary, nearly sessile; legume falcate, 5-6-seeded, beset with adpressed very minute pubescence. *h. S.* Native of Coromandel, Timor, and Java, on the margins of fields. *Galèga spinosa*, Lin. fil. suppl. 335. Stamens monadelphous.

*Spiny Tephrosia.* Shrub.

60 *T. TIMORÆNSIS* (D. C. prod. 2. p. 254.) plant herbaceous, diffuse, clothed with canescent hairs; leaves with 3-4 pairs of obovate-oblong, obtuse leaflets, clothed with silky villi beneath, and each terminated in a straight mucrone; stipulas linear-subulate; peduncles 2-3, axillary, very short, 1-flowered; legume erect, straight, velvety, 8-10-seeded. *h. S.* Native of the Island of Timor. Perhaps sufficiently distinct from *T. pumila*.

*Timor Tephrosia.* Pl. diffuse.

61 *T. PINNATA* (Pers. ench. 2. p. 330.) plant herbaceous, decumbent, glabrous; leaves with 4 pairs of oblong, acute leaflets, which are dotted beneath; stipulas ovate; peduncles axillary; flowers umbellate; legumes ensiform, pubescent. *h. G.* Native of the Cape of Good Hope. *Galèga pinnata*, Thunb. fl. cap. 602. Flowers purple.

*Pinnate-leaved Tephrosia.* Shrub decumbent.

62 *T. BIFLORA* (D. C. prod. 2. p. 254.) plant shrubby, hardly pubescent; leaves with 2 or 3 pairs of oval-lanceolate, obtuse leaflets, which are silky beneath, lower ones smallest, terminal one very large; stipulas subulate, villous; flowers twin, almost sessile, axillary; legume pubescent, rather incurved at the apex. *h. S.* Native country unknown. *Galèga biflora*, Poir. suppl. 2. p. 699. Flowers purple. Calyx very villous. Very like *T. hypargyrea*, and especially *T. nervosa*.

*Two-flowered Tephrosia.* Fl. Jul. Aug. Clt. 1816. Sh. 1 to 2 ft.

63 *T. NERVOSA* (Pers. ench. 2. p. 328.) branches angular, pubescent; leaves with 1-2 pairs of elliptic-obtuse leaflets, which are narrowest at the base, quite glabrous above, and pinnately veined, but clothed with white tomentum beneath, the terminal leaflet largest; peduncles axillary, length of leaves, furnished with one leaf under the head of flowers; legumes linear, smoothish. *h. S.* Native of Madagascar.

*Nerved-leaved Tephrosia.* Shrub 2 to 3 feet.

† *Species not sufficiently known.*

\* *Leaves impari-pinnate.*

64 *T. STIPULARIS* (D. C. prod. 2. p. 254.) shrubby, quite smooth; leaflets oblong-linear, acute; stipulas large, almost opposite, connate, acute, nerved; legume linear-lanceolate. *h. S.* Native of South America. *Brissonia stipularis*, Desv. Journ. bot. 1814. 1. p. 74.

*Stipular Tephrosia.* Shrub.

65 *T. TRAPEZICARPA* (D. C. prod. 2. p. 255.) stems elongated, decumbent, quite smooth; leaflets oblong, pilose beneath; pili stiff and few; legume compressed, pilose, trapeziform. *h. ? S.* Native of the East Indies. *Brissonia trapeziformis*, Desv. l. c.

*Trapezium-fruited Tephrosia.* Shrub decumbent.

66 *T. UNIFLORA* (Pers. ench. 2. p. 329.) leaflets oblong, rather retuse, mucronate; calyx villous; legumes compressed, villous, a little arched, solitary, axillary. Native of Senegal.

*One-flowered Tephrosia.* Pl. 1 foot.

67 *T. CAPITULATA* (Link. enum. 2. p. 329.) leaflets obversely lanceolate, obtuse, emarginate, silky beneath; racemes terminal, short, furnished with a leaf; legumes hairy. *h. S.* Native of the Island of Owhyhee.

*Headed Tephrosia.* Pl. 1 foot.

68 *T. STRIATA* (Pers. ench. 2. p. 328.) herbaceous, erect, glabrous below, villous above; leaflets alternate, oblong, obtuse, mucronate, finely pubescent; racemes terminal, drooping. *h. ? G.* Native of the Cape of Good Hope. *Galèga striata*, Thunb. fl. cap. 602.

*Striated Tephrosia.* Pl. 1 to 2 feet.

69 *T. MYRTIFOLIA* (D. C. prod. 2. p. 255.) plant herbaceous, flexuous, glabrous; leaves with 3 pairs of elliptic-oblong, obtuse, somewhat mucronate, striated leaflets; stipulas subulate; racemes opposite the leaves; legumes linear, glabrous, spreading. *h. G.* Native of the Cape of Good Hope. *Coronilla myrtifolia*, Burm. cap. 22.

*Myrtle-leaved Tephrosia.* Pl. 1 foot.

70 *T. RHEEDI* (D. C. prod. 2. p. 255.) suffruticose, branched, diffuse; leaves with 4-5 pairs of oblong, somewhat obovate, obtuse, mucronate leaflets; peduncles longer than the leaves, few-flowered. *h. S.* Native of Malabar, in sandy places. *Man-Todda-vaddi*, Rheed, mal. 9. t. 22. *Rochèa*, Scop. introd. 296. no. 1340. Flowers apparently with only 3 petals, in consequence of the carina being very short, pale yellow.

*Rheede's Tephrosia.* Sh. 1 foot.

\* \* *Thermoideæ* (from *θερμος*, *thermos*, a lupine, and *ἰδέα*, *idea*, like; plants resembling the lupine in having palmate leaves). *Leaves palmately 5-foliate, having 2 little stipulas at the top of the petiole. Stipulas and stipels becoming hard and spinescent. Leaflets complicate, margined with a nerve. Flowers unknown. Perhaps a proper genus.*

71 *T. LUPINIFOLIA* (D. C. prod. 2. p. 255.) plant shrubby, pubescent; stipulas lanceolate, spreading; leaflets 5, oblong, cuneated, obtuse, clothed beneath with adpressed silky down. *h. G.* Native of the Cape of Good Hope. *Galèga lupinifolia*, Burch. cat. afr. austr. no. 2488.

*Lupine-leaved Tephrosia.* Shrub 1 to 2 feet.

VOL. II.

72 *T. DIGITATA* (D. C. prod. 2. p. 255.) plant suffruticose with hispid slender branches; stipulas lanceolate, spreading; leaflets 5, oblong-linear, acuminate at both ends, sparingly pubescent beneath; racemes axillary, and are as well as the petioles very long. *h. S.* Native of Senegal. Petioles 5 inches long. Flowers distant, usually twin. Calyx permanent, with acuminate segments. Corolla and stamens unknown. Legume linear, compressed, pubescent, 5-6-seeded.

*Digitate-leaved Tephrosia.* Shrub 1 foot.

\* \* \* *Glycinoideæ* (from *glycine* and *idea*, similar; the plants contained in this division agree with *Glycine* in having trifoliate leaves). *Leaves either pinnately or palmately trifoliate.*

73 *T. TOTTA* (Pers. ench. 2. p. 328.) plant herbaceous, clothed with hairs like tomentum, ascending; leaflets oblong, mucronate, longer than the petiole; stipulas ovate, opposite the leaves; flowers terminal, tern, somewhat umbellate. *h. G.* Native of the Cape of Good Hope. *Galèga Totta*, Thunb. fl. cap. 601.

*Hottentot Tephrosia.* Pl. ascending.

74 *T. SERICEA* (Pers. ench. 2. p. 328.) stem suffruticose, very short; branches tomentose, as well as the leaflets, which are ovate; flowers axillary, solitary; legumes lanceolate, villous. *h. G.* Native of the Cape of Good Hope. *Galèga sericea*, Thunb. fl. cap. 603. but not of Lam.

*Silky Tephrosia.* Shrub 1 foot.

75 *T. FALCATA* (Pers. ench. 2. p. 328.) plant herbaceous, erect, hairy; branches filiform; leaflets sessile, oblong, acute; flowers terminal, solitary; legumes falcate, erect, silky. *h. ? G.* Native of the Cape of Good Hope. *Galèga falcata*, Thunb. fl. cap. 602.

*Falcate-podded Tephrosia.* Pl. 1 foot.

76 *T. PUSILLA* (Pers. l. c.) plant herbaceous, erect, pubescent; leaflets sessile, ovate, mucronate, silky beneath, longer than the petiole; flowers lateral, pedunculate, solitary; legume elliptic. *h. ? G.* Native of the Cape of Good Hope. *Galèga pusilla*, Thunb. fl. cap. 602.

*Small Tephrosia.* Pl. 1 foot.

77 *T. TRIFOLIATA* (D. C. prod. 2. p. 256.) plant frutescent, erectish, pubescent; leaflets sessile, ovate, silky, convolute; calyx, corolla, and legume tomentose; flowers terminal, on very short peduncles. *h. G.* Native of the Cape of Good Hope. *Sophora trifoliata*, Thunb. prod. p. 79. *Galèga trifoliata*, Thunb. fl. cap. 600. Stamens diadelphous.

*Trifoliate Tephrosia.* Shrub.

78 *T. TERNATA* (D. C. prod. 2. p. 256.) shrubby, erect; branches villous; leaflets sessile, lanceolate, silky; flowers axillary, sessile; calyxes and corollas tomentose. *h. G.* Native of the Cape of Good Hope. *Sophora ternata*, Thunb. prod. 79. *Galèga ternata*, Thunb. fl. cap. 601. Stamens monadelphous.

*Ternate-leaved Tephrosia.* Shrub 1 to 3 feet.

79 *T. FILIFOLIA* (Pers. ench. 2. p. 328.) plant herbaceous, erectish, glabrous below; leaflets filiform, glabrous; flowers 2-3 in an umbel, terminal; calyx hairy. *h. ? G.* Native of the Cape of Good Hope. *Galèga filifolia*, Thunb. fl. cap. 602.

*Thread-leaved Tephrosia.* Pl. 1 foot.

80 *T. ULIGINOSA* (Spreng. syst. 3. p. 232.) shrubby, climbing; leaflets oblong, acuminate, glabrous; flowers racemose; peduncles 3-flowered. *h. S.* Native of the East Indies. *Robi-neia uliginosa*, Roxb. and Willd.

*Bog Tephrosia.* Shrub cl.

81 *T. VELUTINA* (Spreng. syst. 3. p. 232.) shrubby, twining; leaflets oblong, obtuse, villous on both surfaces; racemes few-flowered; legumes lanceolate, pubescent. *h. S.* Native of St. Domingo.

*Velvety Tephrosia.* Shrub tw.

82 *T. LONGIFOLIA* (Pers. ench. 2. p. 328.) plant shrubby, twining; leaflets lanceolate, obtuse; racemes few-flowered; *h. H h*

legumes villous.  $\frac{1}{2}$ . S. Native of South America. Galèga longifolia, Jacq. icon. rar. 3. t. 572. Flowers purple. Legume linear. Racemes few-flowered.

*Long-leaved Tephrosia.* Clt.? Shrub tw.

\*\*\*\*\* *Mimosoideæ* (from *Mimosa* and *idea*, like; the plants resemble some species of *Mimosa* in having abruptly-pinnate leaves). *Leaves abruptly pinnate.*

83? T. MIMOSOIDES (Pers. ench. 2. p. 330.) plant suffruticose, scandent; leaves with 12 pairs of linear, obtuse, mucronate leaflets, beset with adpressed pili on both surfaces; racemes axillary, pedunculate; legumes pendulous, compressed.  $\frac{1}{2}$ . S. Native of the East Indies. Galèga mimosoides, Willd. spec. 3. p. 1249. Flowers probably red.

*Mimosa-like Tephrosia.* Shrub cl.

\*\*\*\*\* *Simplicifoliæ* (from *simplex*, simple, and *folium*, a leaf; the leaves are simple). *Leaves simple.*

84 T. FRUTESCENS (D. C. prod. 2. p. 256.) stem shrubby; leaves ovate-roundish; flowers lateral, panicle.  $\frac{1}{2}$ . S. Native of Campeachy. Galèga frutescens, Mill. dict. no. 3. Flowers scarlet.

*Frutescent Tephrosia.* Shrub.

*Cult.* All the species of this genus grow best in a mixture of loam and peat, and are easily propagated by seeds, or by young cuttings planted in sand, with a bell-glass placed over them; those of the stove species in heat.

CV. AMORPHIA (from  $\alpha$ , priv. and  $\mu\omicron\rho\phi\eta$ , *morphe*, form; in reference to the deformity of the corolla, from the want of the vexillum and keel). Lin. gen. 369. Lam. ill. t. 621. D. C. prod. 2. p. 256.—Bonafidia, Neck. elem. no. 1364.

LIN. SYST. *Monadelphina*, *Decandria*. Calyx 5-toothed, obconically campanulate. Vexillum ovate, concave. Wings and keel wanting. Style filiform, straight, glabrous. Stamens exserted, monadelphous at the very base. Legume compressed, ovate, or lunulate, 1-celled, 1-2-seeded.—North American shrubs, with impari-pinnate leaves, many pairs of leaflets, which are full of pellucid dots, and usually furnished with stipels at the base. Stipulas of the stem deciduous. Racemes spicate, elongated, usually in fascicles at the tops of the branches. Flowers blue or violet, or bluish-violet.

1 A. FRUTICOSA (Lin. spec. 1003.) shrub glabrous, or a little villous; leaflets elliptic-oblong, lower ones distant from the stem; calyx rather villous, with 4 of the teeth obtuse, and 1 acuminate; vexillum glandless; legume few-seeded.  $\frac{1}{2}$ . H. Native of North America, in Carolina and Florida, on the banks of rivers. Schkuhr, handb. t. 197. Mill. icon. t. 27. Ker. bot. reg. 427. There are varieties of this plant with mucronate, emarginate or narrower leaflets. This species was once used in Carolina as an indigo plant, but is now neglected.

*Shrubby Bastard Indigo.* Fl. Ju. Jul. Clt. 1724. Sh. 6 ft.

2 A. GLABRA (Desf. cat. hort. par. 192.) shrub glabrous; leaflets elliptic-oblong, lower ones distant from the stem; calyx glabrous, with 4 of the teeth obtuse, and 1 acuminate; vexillum glandular on the outside; legume few-seeded.  $\frac{1}{2}$ . H. Native of North America.

*Glabrous Bastard Indigo.* Fl. July, Aug. Clt. 1810. Sh. 3 to 6 feet.

3 A. NA'NA (Nutt. in Fras. cat. 1813. nov. gen. amer. 2. p. 91.) a smoothish dwarf shrub; leaflets elliptic, mucronate; calyx glabrous, with all the teeth setaceously acuminate; legume 1-seeded.  $\frac{1}{2}$ . H. Native on grassy hills, near the river Missouri. A. microphylla, Pursh, fl. bor. amer. 2. p. 466.

*Dwarf Bastard Indigo.* Fl. Jul. Aug. Clt. 1811. Sh.  $\frac{1}{2}$  to 1 ft.

4 A. HERBACEA (Walt. car. 179. Nutt. gen. amer. 2. p. 91.) plant dwarf, herbaceous, pubescent; leaflets elliptic, mucronate,

lower ones approximating the stem; calyx pubescent, with all the teeth acute and short; legume 1-seeded.  $\frac{1}{2}$ . F. Native of Carolina, Georgia, and Florida, in dry sandy pine woods. A. pumila, Michx. fl. bor. amer. 2. p. 64. A. pubescens, Willd. spec. 3. p. 970. Lodd. bot. cab. 689. Spike a foot long.

*Herbaceous Bastard Indigo.* Fl. June, July. Clt. 1803. Pl. 2 to 3 feet.

5 A. FRAGRANS (Sweet, fl. gard. 241.) shrubby, pubescent; leaves with 6-8 pairs of elliptic-oblong, mucronate leaflets, obtuse at both ends, young ones pubescent; calyx pubescent, pedicellate, superior teeth obtuse, lower one acute; style hairy.  $\frac{1}{2}$ . F. Native of North America. A. nana, Sims, bot. mag. 2112. but not of others. Flowers dark purple.

*Fragrant Bastard Indigo.* Fl. June, July. Clt. 1800. Sh. 7 to 8 feet.

6 A. CRŒCO-LANA'TA (Wats. dend. brit. t. 139.) plant clothed with tawny pubescence; racemes branched; leaves with 6-8 pairs of oblong-elliptic, mucronate, downy leaflets; the 3 upper teeth of calyx ovate, acute, the 2 lower ones very short and rounded.  $\frac{1}{2}$ . H. Native of North America. Flowers bluish-purple.

*Copper-woolled Bastard Indigo.* Fl. July, Aug. Clt. 1820. Shrub 3 to 5 feet.

7 A. CANESCENS (Nutt. in Fras. cat. 1813. gen. amer. 2. p. 92.) plant suffruticose, humble, every part clothed with hoary villi; leaflets ovate-elliptic, mucronate, lower ones approximating the stem; calyx tomentose, with the teeth ovate, acute, and equal; ovary containing 2-ovula; legume 1-seeded.  $\frac{1}{2}$ . H. Native on the banks of the Missouri and Mississippi.

*Canescent Bastard Indigo.* Fl. Jul. Aug. Clt. 1812. Sh. 3 ft.

*Cult.* *Amorpha* is a genus of elegant flowering shrubs, and are well adapted for small shrubberies, or the front of large ones. They thrive well in common garden soil. They may be increased by layers, or cuttings taken off at a joint, and planted in a sheltered situation early in autumn will strike root. Some of the species are rather tender, and require protection in severe weather.

CVI. EYSENHARDTIA (in honour of Charles William Eysenhardt, M.D. a professor in the University of Königsberg, in Prussia). H. B. et Kunth, nov. gen. amer. 6. p. 489. t. 592. D. C. prod. 2. p. 257.

LIN. SYST. *Diadelphina*, *Decandria*. Calyx obconically-campanulate, 5-toothed, upper teeth rather remote, lower one longest. Petals 5, disposed in a papilionaceous manner. Vexillum oblong, and the two keel petals distinct. Stamens diadelphous. Ovary biovulate. Style filiform, hooked at the apex. Legume unknown.—An unarmed tree, with impari-pinnate leaves, composed of many pairs of stipellate leaflets, and are, as well as the calyxes beset with glands. Racemes terminal, cylindrical. Flowers white. This genus comes very near *Amorpha*.

1 E. AMORPHOIDES (H. B. et Kunth, l. c.).  $\frac{1}{2}$ . G. Native of Mexico, near St. Augustin de las Guevas and Guanaxuato. Dalbergia amorphoides, Spreng. syst. app. 268.

*Amorpha-like Eysenhardtia.* Tree 12 to 20 feet.

*Cult.* A mixture of loam and peat will suit this shrub, and young cuttings will strike root in sand, under a bell-glass, in heat.

CVII. NISSOLIA (in honour of William Nissole, an industrious French botanist. He was a member of the Academy of Montpellier, and author of some papers in its Transactions: he was born in 1647 and died in 1735.). Jacq. amer. 198. Lin. gen. no. 853. Lam. ill. t. 600. D. C. prod. 2. p. 257. but not of Tourn.

LIN. SYST. *Monadelphina*, *Decandria*. Calyx campanulate, 5-toothed. Corolla papilionaceous. Stamens 10, monadelphous, with a dorsal fissure or diadelphous. Legume stipitate, 1 or

few-seeded, 1-celled, or transversely few-celled, ending in a leafy, membranous wing, which is either ligulate or cultriform.—Usually climbing shrubs, with impari-pinnate leaves. Perhaps this genus is more nearly allied to *Hedyosarea* or *Dalbérgea*.

SECT. I. NISSOLIA'RIA (an alteration from the generic name). D. C. prod. 2. p. 257. Nissolia, Gärtn. fruct. 2. p. 309. t. 145. Pers. ench. 2. p. 276. Calyx 5-toothed, naked on the outside, the teeth acute. Petals of keel connected. Stamens monadelphous, with a dorsal fissure. Legume, according to Gärtner, terete below the wing, separating transversely into 2 or 3 1-seeded cells, but according to Jacquin the legume is 1-celled and 1-seeded. Pedicels 1-flowered, in fascicles.

1 *N. FRUTICOSA* (Jacq. amer. 198. t. 145. f. 44. hort. vind. 167.) stems twining, and are smoothish as well as the petioles; leaflets oval, mucronate, smoothish; pedicels 3-4, aggregate, axillary; teeth of calyx setaceous.  $\frac{1}{2}$ .  $\odot$ . S. Native of Carthage in woods, and in the plains of Mexico, near Queretaro. ex H. B. et Kunth, nov. gen. amer. 6. p. 504. Flowers yellow.

*Shrubby Nissolia.* Fl. July, Nov. Clt. 1766. Sh. cl.

2 *N. HIRSU'TA* (D. C. prod. 2. p. 257.) stems twining, and are as well as the petioles hairy; leaflets oval, mucronate, rather hairy beneath and on the margins; pedicels 15-20, aggregate, axillary; teeth of calyx setaceous, very short.  $\frac{1}{2}$ .  $\odot$ . S. Native of Mexico, near Guanajuato.

*Hairy Nissolia.* Shrub tw.

3 *N. RACEMOSA* (D. C. prod. 2. p. 257.) stems twining, and are as well as the leaves smoothish; leaflets oval-oblong, acute, tapering to the base; pedicels numerous, in fascicles; fascicles disposed in elongated racemes; teeth of calyx almost wanting;  $\frac{1}{2}$ .  $\odot$ . S. Native of St. Martha. Racemes numerous, axillary, and terminal. Nissolia polypérma, Bert. ined. Flowers white.

*Racemose-flowered Nissolia.* Fl. Ju. Aug. Clt. 1800. Sh. tw.

SECT. II. GOMEZ'IZUM (in honour of Juan Gomez, a Portuguese botanist). Calyx naked on the outside, with 5 rounded lobes. Petals of keel connected at the apex only. Stamens diadelphous. Legume indehiscent, 1-seeded. Perhaps a proper genus.

4 *N. ARBOREA* (Jacq. amer. 199. t. 174. f. 48.) stem arborescent, erect, leaflets 1-2 pairs with the odd one oblong and acuminate, rather pubescent beneath; flowers sessile.  $\frac{1}{2}$ . S. Native of Carthage and Martinico in woods. Segments of the calyx roundish. Flowers white?

*Arboreous Nissolia.* Shrub 12 feet.

5 *N. GLABRA'TA* (Link. enum. 2. p. 221.) stem erect; leaflets 1-2 pairs, with an odd one, oval, acuminate, quite smooth; flowers pedicellate, racemose.  $\frac{1}{2}$ . S. Native country unknown. Flowers white. Nearly allied to *N. arborea*.

*Smoothish Nissolia.* Clt. 1823. Shrub 6 to 12 feet.

SECT. III. MACHÆRIUM (an alteration from the Guiana name of *N. ferruginea*.) Pers. ench. 2. p. 276. D. C. prod. 2. p. 258. Calyx with 5 rounded lobes, girded by 2 concave, roundish bracteoles at the base. Petals of keel connected a little at the apex. Stamens monadelphous with a fissure on the upper side, or diadelphous. Legume indehiscent, 1-seeded. Perhaps a proper genus.

6 *N. DIADELPHA* (D. C. prod. 2. p. 258.) leaflets 5-7, somewhat alternate, oval-oblong, mucronate, clothed beneath with rusty velvety down; flowers panicled, diadelphous; legume somewhat incurved, rather velvety.  $\frac{1}{2}$ .  $\odot$ . S. Native of Cayenne. Legume 3-4 inches long and 5 lines broad, standing on a stipe 3 or 4 lines long.

*Diadelphous Nissolia.* Shrub tw.

7 *N. FERRUGINEA* (Willd. spec. 3. p. 900.) leaflets 7-11, alternate, oblong, mucronate, clothed with rusty velvety down be-

neath; flowers panicled; monadelphous; legume straightish, rather velvety.  $\frac{1}{2}$ .  $\odot$ . S. Native of Guiana, on the banks of rivers. *N. quinata*, Aubl. guian. 2. p. 743. t. 297. Lam. ill. t. 600. f. 4. Flowers violaceous.

*Rusty Nissolia.* Shrub tw.

8 *N. ACUMINATA* (D. C. prod. 2. p. 258.) leaflets 5, alternate, oblong, ending each in a very long acumien, membranous, glabrous; legume rather cultriform, falcate below.  $\frac{1}{2}$ .  $\odot$ . S. Native of the province of Caraccas, near Hacienda del Tuy, between San Pedro and La Vittoria. *Machærium acuminatum*, H. B. et Kunth, nov. gen. amer. 6. p. 391.

*Acuminated Nissolia.* Shrub tw.

9 *N. LEIOPHYLLA* (D. C. prod. 2. p. 258.) leaflets 7, nearly opposite, oval-lanceolate, acuminate, glabrous on both surfaces; petioles, panicles, and calyxes clothed with rusty velvety down; flowers monadelphous; legumes quite smooth, straightish.  $\frac{1}{2}$ . S. Native of Guiana. A very distinct species.

*Smooth-leaved Nissolia.* Shrub.

10 *N. ROBINIIFOLIA* (D. C. prod. 2. p. 258.) leaflets 19-21, oblong, obtuse, glabrous; flowers panicled; legume pubescent, incurved at the base.  $\frac{1}{2}$ . S. Native of the Island of St. Vincent. Flowers unknown.

*Robinia-leaved Nissolia.* Clt. 1824. Shrub.

11 *N. POLYPHYLLA* (Poir. suppl. 4. p. 98.) leaflets 23-25, elliptic-oval, obtuse, tomentose beneath, lower ones smallest; flowers panicled; legumes pubescent at the base and at the sutures, rather cut at the base of the wing.  $\frac{1}{2}$ . S. Native of French Guiana. Bractes velvety. Calyx glabrous. Seeds elongated. Flowers probably white.

*Many-leaved Nissolia.* Shrub.

12 *N. MICROPTERA* (Poir. suppl. 4. p. 98.) leaflets usually 5, ovate, obtuse, clothed beneath with cinereous pubescence, almost sessile; legume glabrous, bicarinated on the back, ending in a short wing.  $\frac{1}{2}$ . G. Cultivated in the gardens of Teneriffe. Flowers white?

*Small-winged-podded Nissolia.* Clt. 1820. Sh.

† *Species not sufficiently known.*

13 *N. STIPITATA* (D. C. in ann. sc. nat. 4. p. 99.) leaves unknown; legumes oblong, incurved, obtuse, quite smooth, standing on a stipe, which is as large and as broad as the pod.  $\frac{1}{2}$ . S. Native of Brazil at Rio Janeiro, where it is called *Arasseiro*, not in Madagascar. Nissolia punctata, Lam. ill. t. 600. f. 1. Poir. dict. 4. p. 492. *Machærium punctatum*, Pers. ench. 2. p. 276. Flowers probably white.

*Stipitate-fruited Nissolia.* Shrub sarmentose.

14 *N. RETICULATA* (Lam. ill. t. 600. f. 2. dict. 4. p. 492.) leaflets obtuse; legumes on short stipes, rather cut at the base of the wing.  $\frac{1}{2}$ .  $\odot$ . S. Native of Madagascar. *Machærium reticulatum*, Pers. ench. 2. p. 276. Flowers unknown.

*Reticulated Nissolia.* Shrub tw.

15 *N. ACULEATA* (D. C. prod. 2. p. 258.) petioles furnished with 2 rather hooked prickles at the base of each; leaflets 31-33, alternate; flowers racemose; legumes hairy.  $\frac{1}{2}$ .  $\odot$ . S. Native of Brazil, on hills by the sea-side, at Rio Janeiro. *Machærium aculeatum*, Raddi, pl. bras. add. p. 19.

*Prickly Nissolia.* Clt. 1824. Shrub tw.

16 *N. DUMIA* (Poir. suppl. 4. p. 99.) leaflets 5, almost glabrous, lanceolate, acute at both ends; flowers racemose; pedicels in fascicles, pubescent; legume hardly stipitate.  $\frac{1}{2}$ . S. Native of Cayenne.

*Doubtful Nissolia.* Shrub.

17 *N. RETUSA* (Willd. enum. 742.) leaflets glabrous on both surfaces, ovate-oblong, emarginate, lower ones roundish.  $\frac{1}{2}$ .  $\odot$ . S. Native of South America.

*Retuse-leafletted Nissolia.* Clt. 1819. Shrub tw.

18 *N. SCA'NDENS* (König. ex Spreng. syst. 3. p. 191.) shrubby, scandent; leaves with 2 pairs of ovate-oblong, acute, rather coriaceous, smooth leaflets; flowers panicle.  $\frac{1}{2}$ . S. Native of the East Indies.

*Climbing Nissolia.* Shrub cl.

*Cult.* For culture and propagation see *Eysenhårdtia*, p. 234.

CVIII. MULLERA (in honour of Otto Frederick Muller, a Danish botanist, and one of the editors of *Flora Danica*). Lin. fil. suppl. 53. D. C. prod. 2. p. 259.

LIN. SYST. *Monadelphica*, *Decandria*. Calyx campanulate, 5-toothed, apparently cut round about at the base after the teeth have fallen. Petals 5, papilionaceous, caducous. Stamens 8-10, monadelphous, having the tube compressed, falling off along with the calyx. Ovary sessile. Style filiform. Legume moniliform, having 1-5 1-celled 1-seeded, indehiscent, distinct joints. Seeds compressed, reniform. Flowers almost like those of a species of *Robinia*, but the stamens are monadelphous, the fruit almost like that of *Sophora*, and the habit of *Pterocarpus*.

1 *M. MONILIFORMIS* (Lin. fil. l. c.) leaves impari-pinnate; joints of legume smooth.  $\frac{1}{2}$ . S. Native of Surinam and of French Guiana. *Goublandia frutescens*, Aubl. guian. 4. p. 937. t. 356. Leaves with 2 pairs of ovate, acute, glabrous, petiolulate leaflets. Racemes axillary, simple. Bracteas subulate, small, caducous. Flowers pale-yellow.

*Necklace-formed-podded Mullera.* Clt. 1782. Sh. 6 to 7 ft.

*Cult.* See *Eysenhårdtia*, p. 234. for culture and propagation.

CIX. LONCHOCARPUS (from  $\lambda\omicron\nu\chi\eta$ , *lonche*, a lance, and  $\kappa\alpha\rho\tau\omicron\varsigma$ , *karpos*, a fruit; in reference to the lance shape of the pods). H. B. et Kunth, nov. gen. amer. 6. p. 383. D. C. prod. 2. p. 259.

LIN. SYST. *Mona-Diadelphia*, *Decandria*. Calyx campanulately-urceolate, obsoletely 5-toothed. Corolla papilionaceous. Vexillum somewhat orbicular, spreadingly-reflexed. Wings, vexillum, and keel about equal in length. Stamens diadelphous and monadelphous. Legume on a short stipe, oblong-lanceolate, straight, flat, membranous, 2-4-8-seeded. Seeds compressed, reniform. Radicle uncinately inflexed. Unarmed trees, from the West Indies and South America, with impari-pinnate leaves, opposite, exstipellate, stalked leaflets, and purplish flowers. This genus is not sufficiently defined. Perhaps the diadelphous species should be separated from the monadelphous ones, but the habit of both are very similar.

1 *L. PUNCTATUS* (H. B. et Kunth, nov. gen. amer. 6. p. 383.) leaves with 5-7 oblong, obtuse, glabrous leaflets, full of pellucid dots, shining above, having the middle nerve rather prominent below; calyx glabrous; lower peduncles of raceme 2-flowered.  $\frac{1}{2}$ . S. Native of South America, near Cumana. *Dalbergia punctata*, Spreng. syst. app. 3. p. 268. Legumes unknown.

*Dotted-leaved Lonchocarpus.* Tree 20 feet.

2 *L. MACROPHYLLUS* (H. B. et Kunth, l. c.) leaves with 9 elliptic-oblong, acuminate, dotless, glabrous leaflets, shining above, having the middle nerve and primary veins rather prominent; calyx clothed with brownish tomentum.  $\frac{1}{2}$ . S. Native of South America, near Angostura de Carara, on the banks of the river Magdalena. *Dalbergia macrophylla*, Spreng. syst. app. 268. This species is nearly allied to *L. Domingensis*.

*Long-leaved Lonchocarpus.* Clt. 1818. Tree 40 feet.

3 *L. DOMINGENSIS* (D. C. prod. 2. p. 259.) leaves with 11 oval, acuminate, glabrous, petiolate leaflets; racemes axillary, shorter than the leaves; calyx somewhat truncate, bibracteate at the base, and are as well as the legumes pubescent.  $\frac{1}{2}$ . S. Native of St. Domingo. *Dalbergia Domingensis*, Pers. ench. 2. p. 276. *L. Turpinii*, Kunth, l. c. Stamens monadelphous. Legume 1-2-seeded. Flowers red.

*St. Domingo Lonchocarpus.* Clt. 1820. Tree 20 feet.

4 *L. VIOLA'CEUS* (H. B. et Kunth, l. c. in a note) leaves with from 7-11 ovate, obtuse, rather emarginate, glabrous leaflets, full of pellucid dots, membranous, with the middle nerve rather prominent; calyxes glabrous; peduncles of racemes 2-flowered.  $\frac{1}{2}$ . S. Native of Carthage and Guadaloupe, in bushy places. *Robinia violacea*, Jacq. amer. 210. t. 177. f. 49. pict. 103. t. 262. f. 61. Flowers diadelphous, violaceous, large, having the scent of violets. Stamens somewhat monadelphous, the tenth one only free at the base.

*Violaceous-flowered Lonchocarpus.* Clt. 1799. Tr. 12 ft.

5 *L. PENTAPHYLLUS* (H. B. et Kunth, l. c. in a note) leaves with 5-7 nerved, bluntly acuminate, quite glabrous leaflets; racemes shorter than the leaves; legumes lanceolate, glabrous, 1-3-seeded.  $\frac{1}{2}$ . S. Native of Porto-Rico. *Dalbergia pentaphylla*, Poir. suppl. 2. p. 145. Flowers unknown.

*Five-leafletted Lonchocarpus.* Tree 20 feet.

6 *L. HEPTAPHYLLUS* (D. C. prod. 2. p. 259.) leaves with 7 lanceolate, obtusely mucronate, glabrous leaflets, pale beneath, and with the nerve and lateral veins rather prominent; racemes a little longer than the leaves; calyx 5-toothed; legumes oblong, narrow at the base, slender, glabrous, 2-3-seeded.  $\frac{1}{2}$ . S. Native of St. Domingo. *Dalbergia heptaphylla*, Poir. l. c. suppl. 2. p. 446. Perhaps sufficiently distinct from *L. pentaphyllus* and *L. violaceus*. Flowers purple.

*Seven-leafletted Lonchocarpus.* Tree 20 feet.

7 *L. LEONE'NSIS*; an erect, branched tree; leaflets oblong, mucronate, undulated, entire; racemes axillary and terminal; flowers on short pedicels.  $\frac{1}{2}$ . S. Native of Sierra Leone. Corolla violaceous.

*Sierra Leone Lonchocarpus.* Tree 20 feet.

8 *L. ALBIFLORUS*; leaflets 7, ovate, acuminate, glabrous, entire; flowers on long peduncles or racemose, axillary; legume flat, pubescent.  $\frac{1}{2}$ . S. Native of the Island of St. Thomas, in the Gulf of Guinea. Flowers white.

*White-flowered Lonchocarpus.* Fl. Oct. Tree 50 feet.

9 *L. FORMOSI'ANUS* (D. C. prod. 2. p. 260.) leaflets 7, coriaceous, glabrous, oval, obtusely acuminate, having the nerve and lateral veins rather prominent; racemes panicle; pedicels usually 2-flowered; calyx truncate, and is as well as the petals and legumes clothed with silky pubescence.  $\frac{1}{2}$ . S. Native of Africa, on the banks of the river Formosa. *Robinia violacea*, Beauv. fl. d'ow. 2. p. 28. t. 76. *Dalbergia Guineensis*, Spreng. syst. app. 3. p. 266. Stamens monadelphous. Flowers violet.

*Formosa Lonchocarpus.* Tree 20 feet.

10 *L. SERICEUS* (H. B. et Kunth, l. c.) leaflets 7-11, oval, acuminate, coriaceous, glabrous above, but clothed with rufous, silky pubescence beneath, as well as the calyxes, pedicels, and branches; racemes erect, length of leaves; pedicels very short, usually twin or 2-flowered; petals clothed with silky-silvery pubescence on the outside.  $\frac{1}{2}$ . S. Native of the Islands of Montserrat, St. Christopher, and Trinidad. *Robinia sericea*, Poir. diet. 6. p. 226. *R. mollis*, Vahl. in herb. Puer. Calyx truncate. Legume unknown. Stamens monadelphous.

*Silky Lonchocarpus.* Clt. 1826. Tree 20 feet.

11 *L. PYXIDA'RIVUS* (D. C. prod. 2. p. 260.) leaflets 7, ovate, acuminate, glabrous above, but clothed with adpressed villous-pubescent beneath; petioles, peduncles, and calyxes clothed with short velvety down; racemes erect, shorter than the leaves; vexillum clothed with adpressed silky down on the outside.  $\frac{1}{2}$ . S. Native of Cuba, where it is called *Palo de Caja* or box-wood. Stamens monadelphous. This species comes very near to *L. sericeus*.

*Box Lonchocarpus.* Clt. 1820. Tree 20 feet.

12 *L. LATIFOLIUS* (H. B. et Kunth, l. c.) leaflets 7, ovate, short-acuminate, glabrous, pale beneath, having the nerve, and lateral veins rather prominent; racemes axillary, much longer

than the leaves, and arc, as well as the pedicels and calyxes, pubescent; corolla glabrous. *h. S.* Native of Porto-Rico. *Amerimum latifolium*, Willd. spec. 4. p. 611. exclusive of the synonyme, and therefore the same as *Pterocarpus latifolius* of Poir. dict. 4. p. 611. Calyx 5-toothed. Flowers of a purplish-violet colour. Stamens monadelphous. Ovary pubescent, linear, tapering to both ends.

*Broad-leaved Lonchocarpus.* Clt. 1808. Tree 12 to 20 ft.

13 *L. PUBESCENS* (D. C. prod. 2. p. 260.) leaflets 11-13, ovate-lanceolate, acuminate, glabrous, pubescent beneath; racemes axillary, filiform, length of leaves. *h. S.* Native of Caraccas. *Amerimum pubescens*, Willd. spec. 3. p. 909. *Pterocarpus pubescens*, Poir. dict. 5. p. 740. The legume is said to be 2-valved and many-seeded, and the stamens monadelphous. Flowers small, violet.

*Pubescent Lonchocarpus.* Clt. 1824. Tree 20 to 30 feet.

14 *L. ROSEUS* (D. C. prod. 2. p. 260.) leaflets 13-15, lanceolate, acuminate, glabrous, shining above, but rather pale beneath; racemes erect; pedicels 1-flowered; calyx truncate; young legumes clothed with rufous-velvety down. *h. S.* Native of South America. *Pseudo-acacia latifolia*, Plum. spec. 19. *Robinia rosea*, Mill. dict. no. 4. but not of Ell. *Robinia latifolia*, Poir. dict. 6. p. 224. but not of Mill. Flowers large, showy, rose-coloured, ex Plum. Legume oblong, acute, 1-4-seeded, tapering to the base.

*Rose-coloured-flowered Lonchocarpus.* Clt. 1700. Tree 20 to 30 feet.

15 *L. ? PTEROCARPUS* (D. C. prod. 2. p. 260.) leaflets 5, oval-oblong, acuminate, quite smooth, shining above, but glaucescent beneath; racemes axillary, length of leaves; legume oblong, acuminate at both ends, winged on the upper suture. *h. S.* Native of French Guiana. Flowers unknown. Legume 2 or 3 inches long, and 1-2-seeded from abortion.

*Wing-fruited Lonchocarpus.* Tree 20 to 30 feet.

16 *L. SEPIMUM* (D. C. prod. 2. p. 260.) leaflets 11-15, ovate, bluntly acuminate, membranous, rather puberulous above, but glabrous and pale beneath; racemes shorter than the leaves; pedicels 1-flowered; calyx truncate; legumes glabrous, oblong-obtuse, compressed, callous at the sutures. *h. S.* Native of St. Martha, and at Carthage, where it is used for hedges to gardens. *Robinia sepium*, Jacq. amer. 211. t. 129. f. 101. Flowers rose-coloured. Stamens diadelphous. Legume about 4 inches long, 4-seeded.

*Hedge Lonchocarpus.* Clt. 1821. Tree 30 feet.

17 *L. MACULATUS* (D. C. prod. 2. p. 260.) leaflets 17, oblong, obtuse, beset with adpressed pili above, but glaucescent and spotted with black beneath; calyx campanulately urceolate, nearly entire, puberulous; legume linear, compressed, with thickened margins. *h. S.* Native about Campeachy. *Robinia maculata*, H. B. et Kunth, nov. gen. amer. 6. p. 394. This plant, along with the preceding species, may form a distinct genus, which may be called *Glyciridia*.

*Spotted-leaved Lonchocarpus.* Tree 30 feet.

18 *L. SWARTZII* (D. C. prod. 2. p. 261.) leaflets 5-7, oval, bluntly acuminate, glabrous, pale beneath; racemes shorter than the leaves; pedicels 2-flowered; calyx truncate; legumes glabrous, elliptic-oblong, compressed, few-seeded, rather callous at the sutures. *h. S.* Native of St. Domingo. *Robinia sepium*, Swartz, prod. 106. Flowers rose-coloured. This species differs from *L. sepium* in the flowers being smaller and monadelphous, not diadelphous.

*Swartz's Lonchocarpus.* Tree 20 feet.

19 *L. NICOÛ* (D. C. prod. 2. p. 261.) leaflets 7, ovate, acuminate, glabrous; branches sarmentose, rather climbing; racemes spike-formed; pedicels 1-flowered; calyx 5-toothed; legume elongated, glabrous, 4-seeded, rather callous at the

sutures. *h. S.* Native of French Guiana, in bushy places. *Robinia Nicou*, Aubl. guian. 2. p. 771. t. 308. *R. scandens*, Willd. spec. 3. p. 1134. Flowers purple, diadelphous. There is a plant native of Cayenne which differs from the plant of Aublet in the leaflets being silky-pubescent beneath, and in the spikes being longer than the leaves. The twigs are cut and thrown into ponds and rivers for the purpose of intoxicating fish, in order to take them, as those of *Tephrosia toxicaria*, see p. 229. *Nicou* is the Caribbee name of the tree.

*Nicou Lonchocarpus.* Shrub cl.

20 *L. OXYCARPUS* (D. C. prod. 2. p. 261.) leaflets 7, oval, abruptly, acutely, and mucronately acuminate, glabrous, palish beneath; racemes shorter than the leaves; pedicels 2-3-flowered; calyx usually 5-toothed; legume oblong, acuminate at both ends, compressed, few-seeded, not tumid at the sutures. *h. S.* Native of Guadeloupe. Flowers purple, monadelphous.

*Sharp-fruited Lonchocarpus.* Tree 12 to 20 feet.

21 *L. ? AMERIMNUM* (D. C. prod. 2. p. 261.) leaflets 7, ovate, acuminate on long petioles, glabrous; racemes simple, loose, shorter than the leaves; calyx 5-toothed. *h. S.* Native about Carthage, in woods. *Amerimum pinnatum*, Jacq. amer. 200. t. 177. f. 50. Flowers yellow, monadelphous.

*Amerimum-like Lonchocarpus.* Tree 14 feet.

*Cult.* For culture and propagation see *Eysenhardtia*, p. 234.

**CX. ROBINIA** (in honour of Jean Robin, a French botanist, once herbalist to Henry IV. of France, author of *Histoire des Plantes*, 12mo. Paris, 1620. printed also with the second edition of Lonicier's *History of Plants*. His son Vespasian was subdemonstrator at the *Jardin du Roi*, and was the first person who cultivated the *Pseudacacia* in Europe). D. C. mem. leg. vi. prod. 2. p. 261.—*Pseudacacia*, Tourn. inst. t. 417. Mæch. meth. 145.—*Robinia* species of Lin. and others.

**LIN. SYST.** *Diadelphia*, *Decandria*. Teeth of calyx 5, lanceolate, 2 upper ones shorter and approximate. Corolla papilionaceous. Vexillum large. Keel obtuse. Stamens diadelphous, deciduous. Ovary 16-20-ovulate. Style bearded in front. Legume compressed, almost sessile, many-seeded, with the valves thin and flat, margined at the seminiferous suture.—North American trees, usually furnished with stipular spines. Leaves impari-pinnate; leaflets petiolulate, and furnished with stipels at the base. Flowers white or rose-coloured, disposed in axillary, usually nodding racemes.

1 *R. PSEUDACACIA* (Lin. spec. 1043.) spines stipular; branches twiggy; racemes loose, pendulous, and arc, as well as the legumes smooth; leaflets ovate. *h. H.* Native of North America, from Canada to Carolina. Lam. ill. t. 666. f. 1. Duham. arbr. ed. nov. 2. t. 16. *Æschynomene pseudacacia*, Roxb. *Pseudacacia odorata*, Mæch. l. c. Flowers white, sweet-scented. Roots creeping, the fibres sometimes bearing tubercles. The *Common, False, or Bastard Acacia*, called *Locust-tree* in America, grows very fast whilst young, so that in a few years from seed the plants rise to 8 or 10 feet high, and it is not uncommon to see shoots of this tree 6 or 8 feet long in one summer. The branches are armed with stipular hooked prickles. The leaves have 8 or 10 pairs of bright green leaflets. The flowers come out from the sides of the branches in pretty long bunches, hanging down like those of *Laburnum*, white, and smelling very sweet; they appear in June, and when the trees are full of flowers they make a very fine appearance, and perfume the air round them, but they seldom continue more than one week. The wood is valued in North America for its durability. Most of the houses which were built at Boston in New England on the first settling of the English, were constructed of this timber. The tree being very liable to be broken by high winds, and the leaves not appearing till late in the summer, and

falling off early in the autumn, makes it less valuable for ornamental plantations. The wood when green is of a soft texture, but becomes very hard when dry, of a close grain, and finely veined, and is more valued in America by cabinet-makers than any other native timber whatever. It is as durable as the best white oak, and is esteemed preferable for axletrees of carriages, trenails for ships, and many other mechanical purposes. It has been employed with success in Virginia for ship-building, and found to be far superior to American oak, elm, ash, &c. for that purpose. Posts for rail-fencing made of this tree stand wet and dry in the ground better than any other in common use, almost as well as posts of the swamp-cedar. It makes excellent fuel, and its shade is less injurious to grass than that of most other trees. The leaves afford wholesome food for cattle. A gentleman in New England sowed several acres of it for that purpose. Being very apt to throw out suckers from the running roots, and as it stolls freely, it seems peculiarly calculated for coppice woods. A locust-tree in New England 40 years old was in 1782 60 feet high and 4 feet 10 inches in girth at 3 feet from the ground. A cubic foot of *Acacia* in a dry state weighs from 48 to 53 pounds avoirdupoise. If we compare its toughness in an unseasoned condition with that of oak, it will not be more than 8-100 less. Its stiffness is equal to 99-100 of oak, and its strength nearly 96-100, but were it properly seasoned, it might possibly be found much superior to oak in strength, toughness, and stiffness. A piece of unseasoned *acacia* 2 feet 6 inches long, and an inch square in the vertical section, broke when loaded with a weight of 247 pounds avoirdupoise. Its medium cohesive force is about 11,500 pounds. (Diet. of Archi.)

*Var. β, inermis* (D. C. prod. 2. p. 261.) spines wanting or nearly obsolete; leaflets flat. D. C. cat. hort. monsp. 136. *R. spectabilis*, Dum. Cours. bot. cult. 6. p. 140.

*Var. γ, crispa* (D. C. l. c.) spines wanting; leaflets all or for the most part undulately curled.

*Var. δ, umbraculifera* (D. C. cat. hort. monsp. 157.) spines wanting; branches much crowded, smooth; leaflets ovate. This plant is common in gardens, but has not yet flowered. *Robinia inermis*, Dum. Cours. 6. p. 140. Commonly called *Parasol Acacia*. This variety is said to have been raised from the seed of *R. pseudacacia*, but it is more of a shrub than a tree.

*Var. ε, tortuosa* (D. C. prod. 2. p. 261.) branches much crowded, and twisted. *h. H.* *R. pseudacacia tortuosa*, D. C. cat. hort. monsp. 136. Racemes similar to those of *R. pseudacacia*, but are smaller and fewer flowered.

Bastard *Acacia*, *False Acacia*, or American Locust-tree. Fl. May, June. Clt. 1640. Tree 30 to 60 feet.

2 *R. du'RIA* (Fouc. in Desv. journ. bot. 4. p. 204. but not of Poir.) spines very short; branches, petioles, peduncles, and calyxes furnished with a few glands, rarely clammy; leaflets ovate; racemes loose, pendulous; bractees concave, caducous, ending each in a long bristle. *h. H.* Said to be a hybrid between *R. pseudacacia* and *R. viscosa*. *R. hybrida*, Audib. *R. ambigua*, Poir. suppl. 4. p. 690. and perhaps *R. echinata*, Mill. dict. no. 2. Flowers sweet-scented, pale rose-coloured. The pods, according to Miller, are thickly beset with short prickles.

*Doubtful*, Bastard, or False *Acacia*. Fl. May, Ju. Tree 60 ft.

3 *R. viscosa* (Vent. hort. cels. t. 4.) spines very short; leaflets ovate; branches and legumes glandular and clammy; racemes crowded, erect; bractees concave, deciduous, each ending in a long bristle; the 3 lower teeth of calyx acuminate. *h. H.* Native of North America, on the mountains of Georgia and Carolina, near rivers. Duh. arbr. ed. nov. 2. t. 17. *R. glutinosa*, Curt. bot. mag. 560. Flowers pale red mixed with white, scentless. Roots creeping.

*Clammy False Acacia*. Fl. June, Aug. Clt. 1797. Tree 30 to 40 feet.

4 *R. hispida* (Lin. mant. 101.) spines wanting; leaflets obovate; branches hispid; racemes loose, hispid; the 3 lower teeth of calyx acuminate; legumes hispid. *h. H.* Native of Virginia and Carolina, on high mountains. Mill. fig. t. 244. Curt. bot. mag. 311. *R. rosea*, Duh. l. c. t. 18. *R. montana*, Bartr. voy. 2. p. 128. *Æschynomene hispida*, Roxb. Flowers large, rose-coloured, showy, scentless. Perhaps many species are confused under the name of *R. hispida*. This is one of the most elegant of the species when in flower, it is usually grafted on the common sort, and flowers even when it is about 2 or 3 feet high, which renders it a very valuable plant for ornamental shrubberies, but it requires to be grown in a sheltered situation, otherwise the branches are very liable to be shattered or blown off by high winds. In young trees grafted above ground, the fracture commonly takes place at the graft, so that a good preventive is to graft on a root, a little below the surface. Grafts in this manner are also much more certain of success.

*Var. β, nana* (D. C. prod. 2. p. 262.) plant hardly a foot high. Native of Carolina, in pine woods.

*Hispid Bastard* or *Rose Acacia*. Fl. May, Sept. Clt. 1743. Shrub 3 to 6 feet.

5 *R. rosea* (Ell. sketch. 2. p. 213.) spines wanting; leaflets obovate, alternate; branches and racemes smoothish. *h. H.* Native of Georgia, in pine woods. *R. hispida* var. *β rosea*, Pursh. fl. sept. amer. 2. p. 488. Flowers large, rose-coloured, scentless. The 3 lower teeth of calyx acuminate.

*Upright Rose* or *Bastard Acacia*. Fl. May, Sept. Sh. 6 feet.

6 *R. macrophylla* (Schrad. in litt.) spines wanting; leaflets ovate-roundish; branches and peduncles glabrous, the 3 lower teeth of calyx acuminate. *h. H.* Native of North America. Flowers large, rose-coloured, scentless. *R. hispida* var. *γ macrophylla*, D. C. prod. 2. p. 262.

*Long-leaved Rose* or *Bastard Acacia*. Fl. May, June. Shrub 6 to 10 feet.

† *Trees and shrubs referred to Robinia by authors, which appear not to belong to the genus, and ought to be referred to some other genera; but they are not so sufficiently known as to enable us to refer them to their proper genera.*

7 *R. amara* (Lour. coch. p. 455.) unarmed; leaves imparipinnate, usually with 5 pairs of ovate-oblong leaflets, which are white beneath; racemes long, erect; pedicels tern; legume almost terete, acuminate, glabrous. *h. G.* Native of Cochinchina and China. Flowers violaceous. Root very bitter, of a yellowish brown-colour.

*Bitter-rooted Robinia*. Shrub 4 feet.

8 *R. glycyphylla* (Poir. dict. 6. p. 227.) unarmed; leaves imparipinnate, with 6-9 pairs of glabrous, ovate, obtuse, discoloured leaflets; stipulas subulate, stiff; racemes elongated; calyx tubular; legume linear, compressed, obtuse, stipitate. *h. S.* Native of Martinique. Flowers small, white. Perhaps a species of *Lonchocarpus*.

*Sweet-leaved Robinia*. Tree 20 feet?

9 *R. guineensis* (Willd. ex Steud. D. C. prod. 2. p. 262.) unarmed; leaves imparipinnate, with 5-6 pairs of elliptic, mucronate, glabrous leaflets; stipulas linear-subulate; racemes 5-6-flowered; branchlets and calyxes hispid. *h. S.* Native of Guinea. *Cytisus hispidus*, Willd. spec. 3. p. 1121.

*Guinea Robinia*. Clt. 1822. Tree 40 feet.

10 *R. latifolia* (Mill. dict. no. 9. but not of Poir.) unarmed; leaves imparipinnate, with 6-7 pairs of oblong acuminate leaflets, which are shining above, and pale beneath; racemes elongated; legumes 1-2-seeded, oblong-ovate. *h. S.* Native of Campeachy. Flowers rose-coloured. Perhaps a species of *Lonchocarpus*.

*Broad-leaved Robinia*. Tree 20 to 30 feet.

11 *R. GLABRA* (Mill. dict. no. 5.) unarmed; leaves imparipinnate; leaflets oblong-obovate, obtuse, glabrous; peduncles racemose, crowded. *h. S.* Native of Campeachy. Flowers small, yellowish-red. Perhaps a species of *Lonchocarpus*.

*Glabrous Robinia.* Tree.

12 *R. PENDULA* (Ort. dec. p. 26.) unarmed; leaves imparipinnate, with 6-8 pairs of oval mucronulate leaflets; stipulas subulate; racemes twice the length of the leaves; pedicels twin, 1-flowered. *h. S.* Native of Peru, at the town called Huariaca. Flowers pale violet-coloured.

*Pendulous-flowered Robinia.* Tree.

13 *R. PURPUREA* (Link. enum. 2. p. 242.) petioles somewhat spinescent; leaves imparipinnate; leaflets lanceolate, mucronate, pubescent; pedicels 1-flowered. *h. S.* Native country unknown. Flowers purple.

*Purple-flowered Robinia.* Fl. July, Aug. Clt. 1810. Tree.

14 *R. RUBIGINOSA* (Mart. et Nees, nov. act. bonn. 12. p. 31. exclusive of the synonyme of Poir.) shrub unarmed, diffuse; leaves imparipinnate; leaflets 19-21, elliptic, obtuse, somewhat emarginate, pubescent beneath; racemes axillary, compound, and are, as well as the branches, clothed with rusty villi. *h. S.* Native of Brazil, about Tamburil and Valos. Flowers small, violaceous. Ovary crenulated.

*Rusty Robinia.* Shrub 10 to 12 feet.

15 *R. CUBENSIS* (H. B. et Kunth, nov. gen. amer. 6. p. 392.) arboreous; leaflets 9, ovate-oblong, obliquely falcate, glabrous; racemes in fascicles, pendulous; calyx urceolate, 5-toothed, pubescent. *h. S.* Native of Cuba, near Batabana. Flowers pale rose-coloured. Fruit unknown.

*Cuba Robinia.* Tree 40 feet.

16 *R. FERRUGINEA* (H. B. et Kunth, nov. gen. amer. 6. p. 395.) arboreous; branches glabrous, unarmed; racemes rising before the leaves; calyx urceolate, 5-lobed, somewhat bilabiate, clothed with rusty tomentum. *h. S.* Native of Caraccas. Flowers rose-coloured or white.

*Ferruginous Robinia.* Tree 20 feet.

17 *R. FLAVA* (Lour. coch. 456.) unarmed; leaves abruptly pinnate, usually with 8 pairs of oblong acutish leaflets; peduncles 3 together, each bearing 3 flowers. *h. G.* Native of the north of China. Root yellow, bitter. Flowers white. Perhaps a species of *Caragana*. The roots in decoction are febrifugal.

*Yellow-rooted Robinia.* Shrub 1 to 2 feet.

18 *R. PYRAMIDATA* (Mill. dict. no. 7.) unarmed; leaves bipinnate; leaflets ovate, sessile, shining above, but pale beneath; panicles spicately pyramidal, erect. *h. S.* Native of Campeachy. Flowers red. Perhaps a species of *Cæsalpinia*.

*Pyramidal-flowered Robinia.* Tree.

*Cult.* All the true species of *Robinia* are very handsome when in flower, and are very proper plants for ornamental shrubberies; the taller species to be placed at the back, and the shorter ones in front; they are either propagated by layers or by grafting the rarer on the commoner sorts, most commonly on the *R. pseudacacia*. Most of the species may be raised from seeds, which in some kinds ripen in plenty. The stove and greenhouse kinds, which are certainly very doubtful species of the genus, should be treated in the same manner as the genus *Sabinea*.

**CXI. POITÆA** (in honour of — Poiteau, a French botanist and traveller in South America, author of *Flore Parisienne*, in conjunction with Turpin, and author of many botanical memoirs in the *Annales du Muséum*). D. C. prod. 2. p. 263.—Poitæa, Vent. choix. t. 36.

*LIN. SYST.* *Diadelphia, Decandria.* Calyx obliquely truncate, 5-toothed; teeth very short, especially the 2 upper ones. Petals 5, disposed in a papilionaceous manner, conniving, oblong; vex-

illum retuse, shorter than the wings. Keel longer than the wings. Stamens somewhat exerted, diadelphous. Style filiform, glabrous. Stigma terminal. Legume stipitate, linear, compressed, many-seeded, mucronulate; valves flat. Seeds lenticular.—Shrubs, natives of St. Domingo, with the habit of *Galèga* and *Robinia*. Stipulas setaceous. Leaves imparipinnate; leaflets exstipellate. Flowers white or rose-coloured, disposed in axillary racemes. Legumes glabrous.

1 *P. GALEGIFORMIS* (Vent. choix. t. 36.) petioles wingless; leaflets 12-15 pairs, oblong, mucronate, and are, as well as the branches, clothed with adpressed pubescence; flowers and legumes nodding. *h. S.* Native of St. Domingo. *Galèga Berteri*, Spreng. in herb. Balb. *P. galegiformis*, Spreng. syst. 3. p. 272. Leaflets 3 lines long, and a line and a half broad. Flowers of a rose-purple colour.

*Goat's-rue-like Poitæa.* Shrub.

2 *P. VICIFOLIA* (D. C. in ann. sc. nat. 4. p. 99.) petiole with a very narrow wing; leaves with 16-18 pairs of oblong mucronate leaflets, which are clothed with hairy pubescence, as well as the branchlets; flowers and legumes erect. *h. S.* Native of St. Domingo. *Robinia vicifolia*, Bert. in herb. Balb. Flowers of a rose-purple colour. Leaflets an inch long, and about 3 or 4 lines broad.

*Fetch-leaved Poitæa.* Shrub.

3 *P. CAMPANILLA* (D. C. prod. 2. p. 263.) petiole terete, filiform; leaves with 4 pairs of distant, ovate-oblong, rather mucronulate leaflets, which are glaucous beneath, but smooth on both surfaces, as well as the branches and petioles. *h. S.* Native of St. Domingo, where it is called *Campanilla*. *Robinia latifolia*, Bertero in herb. Balb. Flowers white or pale rose-coloured. Leaflets an inch long, and half an inch broad, on long petioles.

*Campanilla Poitæa.* Shrub.

*Cult.* See *Sabinea* for culture and propagation.

**CXII. SABINEA** (named by De Candolle, in honour of Joseph Sabine, F.R.S. F.L.S. &c. who was a long time Secretary of the Horticultural Society of London). D. C. in ann. sc. nat. 1. jan. 1825. p. 92. prod. 2. p. 263.

*LIN. SYST.* *Diadelphia, Decandria.* Calyx cup-shaped, campanulate, with a truncate, nearly entire border. Corolla papilionaceous. Keel obtuse, rather shorter than the vexillum. Stamens diadelphous, the free one and 4 others shorter than the rest. Style filiform, glabrous, circimutely incurved, as well as the stamens. Legume stipitate, compressed, linear, elongated, many-seeded, mucronate by the style.—Unarmed Caribbean shrubs, with abruptly-pinnate leaves, glabrous mucronate leaflets, axillary fascicles of 1-flowered pedicels, and purplish flowers.

1 *S. FLORIDA* (D. C. l. c.) leaflets 8-9 pairs, elliptic-oblong; flowers rising before the leaves. *h. S.* Native of the American Islands, in St. John, Krabben Island, and St. Thomas. *Robinia florida*, Vahl. symb. 3. p. 89. t. 70.

*Flowery Sabinea.* Shrub 2 to 4 feet.

2 *S. DUBIA* (D. C. l. c.) leaflets 10-12 pairs, elliptic-oblong; flowers rising after the leaves. *h. S.* Native of Martinique and Porto-Rico. *Robinia dubia*, Lam. ill. t. 606. f. 2. Poir. dict. 6. p. 227. but not of Fouc. *Robinia Martinicensis*, Pers. ench. 2. p. 312. Perhaps sufficiently distinct from the preceding.

*Doubtful Sabinea.* Shrub 2 feet.

*Cult.* A mixture of loam, peat, and sand will answer the species of *Sabinea*, and young cuttings will root if planted in a pot of sand with a hand-glass placed over them in heat.

**CXIII. COURSETIA** (in honour of Dumont de Courset.

author of the *Botaniste Cultivateur*, 5 vols. in 8vo. Paris, 1802. and one of the editors of the *Bon Jardinier*). D. C. in ann. sc. nat. 4. jan. 1825. p. 92. prod. 2. p. 264.

**LIN. SYST.** *Diadelphia, Decandria*. Calyx 5-cleft, with nearly equal acute segments, 2 superior ones rather the shortest, and joined together a little higher up than the rest. Vexillum obcordate, shorter than broad. Keel obtuse, shorter than the wings. Stamens diadelphous. Style incurved, thick at the base and glabrous, but filiform at the apex and bearded with villi on all sides. Stigma capitate, terminal, smoothish. Legume compressed, 1-celled, 5-8-seeded, tapering to the apex, and mucronate by the style.—Tomentose shrubs, with subulate stipulas, abruptly-pinnate leaves, with many pairs of ovate small leaflets, the common petiole sometimes terminating in a bristle, but rarely in an odd leaflet. Flowers yellow. "This genus is allied to *Robinia* and *Caragana*, not to *Lathyrus* or *Æschynomene*.

1 *C. TOMENTOSA* (D. C. l. c.) the whole plant clothed with velvety tomentum; leaves with from 30-35-pairs of leaflets; racemes 2-3-flowered, shorter than the leaves; calyx 5-cleft. *h. S.* Native of Peru. *Lathyrus fruticosus*, Cav. icon. t. 84. *Orobis tomentosus*, Desf. cat. hort. par. ed. 1. p. 195. *Vicia fruticosa*, Willd. spec. 3. p. 1102. *Orobis fruticosus*, Pers. Flowers yellow.

*Tomentose Coursetia*. Shrub 2 feet.

2 *C. ? DUBIA* (D. C. prod. 2. p. 264.) branches clothed with white villi; leaflets elliptic, acutish, usually about 30 pairs, puberulous above, and villously tomentose beneath, and canescent; racemes 15-20-flowered, length of leaves; calyx 5-toothed. *h. S.* Native on the Andes about Pasto, near the river Guaritaria. *Sesbania dubia*, H. B. et Kunth, nov. gen. amer. 7. p. 268. t. 660. *Hymenopron Pastoensis*, Spreng. Flowers rose-coloured.

*Doubtful Coursetia*. Shrub 3 to 6 feet.

3 *C. VIRGATA* (D. C. l. c.) plant smoothish; leaflets 10-15 pairs; racemes 8-10-flowered; calyx 5-toothed. *h. S.* Native of New Spain. *Æschynomene virgata*, Cav. icon. t. 293. *Agati virgata*, Desv. journ. bot. 3. p. 120. Legume glabrous, compressed, somewhat torulose, not articulated, apiculated by the thick style. Calyx not bipartite. Stamens not equally diadelphous. Perhaps a proper species of *Coursetia*. Corolla yellow.

*Twiggy Coursetia*. Shrub 2 feet.

*Cult.* See *Sabinca* for culture and propagation, p. 239.

**CXIV. SESBANIA** (*Sesban* is the Arabic name of the first species). Pers. ench. 2. p. 316. Desv. journ. bot. 3. p. 120. t. 4. f. 5.—*Sésban*, Poir. dict. 7. p. 127.—*Sesbana*, R. Br. in hort. kew. 4. p. 330.—*Æschynomene* species of Lin. and others.—*Coronilla* species of Willd.

**LIN. SYST.** *Diadelphia, Decandria*. Calyx 5-cleft or 5-toothed (f. 38. a.) with the lobes nearly equal. Vexillum roundish, complicated, larger than the keel (f. 38. b.). Keel obtuse, 2-edged at the base. Stamens diadelphous, having the tube or sheath rather auricled at the base. Legume elongated, slender (f. 38. c.), compressed, or somewhat cylindrical; the sutures thickened, not truly articulated, but rather torulose.—Shrubs or herbs, having the cauline stipulas lanceolate. Leaves abruptly pinnate, with many pairs of leaflets, having the petioles drawn out into a bristle at the apex instead of an odd leaflet. Peduncles axillary. Flowers racemose, usually yellow. Perhaps this genus, with the three following, ought to have been referred to Tribe *Hedysæreæ*.

1 *S. ÆGYPTIACA* (Pers. ench. 2. p. 316.) shrubby, glabrous; leaflets 10 pairs, oblong-linear, obtuse, and rather mucronate; racemes many-flowered; legumes compressed, and rather terete, torulose, twice the length of the petiole. *h. S.* Native of Senegal, Egypt, and the East Indies. *Sésban*, P. Alp. 82. with a figure. *Æschynomene Sésban*, Lin. spec. 1061. *Coronilla*

*Sésban*, Willd. spec. 3. p. 1147. *Æ. Sésban* and *Æ. Indica*, Burm. fl. ind. 169 and 170. Vexillum roundish and dotless. Flowers yellow.

*Egyptian Sesban*. Fl. July, Aug. Clt. 1680. Shrub 5 feet.

2 *S. OCCIDENTALIS* (Pers. ench. 2. p. 316.) shrubby, glabrous; leaves with 12-15 pairs of elliptic leaflets; racemes few-flowered; legumes terete, straight, 3-times longer than the petioles. *h. S.* Native of South America or the Caribbee Islands. *Coronilla occidentalis*, Willd. spec. 3. p. 1147.—Plum. ed Burm. t. 125. f. 1. Corolla hairy according to Plumier, yellow.

*Occidental Sesban*. Fl. July, Aug. Clt. 1816. Shrub 4 feet.

3 *S. CASSIODES*; shrubby, smooth; leaves with from 20-35 pairs of lanceolate, obtuse, mucronate leaflets; stipulas subulate; peduncles axillary, 2-3-4-flowered; legumes long-linear, terete, longer than the leaves. *h. S.* Native of Guaiacul. *Æschynomene cassioides*, Ruiz et Pav. in herb. Lamb.

*Cassia-like Sesban*. Shrub 2 to 3 feet.

4 *S. EXASPERATA* (H. B. et Kunth, nov. gen. amer. 6. p. 534.) shrubby; branches angular, and are, as well as the rachis, prickly; leaves with about 30 pairs of linear, mucronate, rather falcate, glabrous leaflets, but with the nerves and margins beset with adpressed down; peduncles usually 3-flowered, one-half shorter than the leaves. *h. S.* Native of South America, in sand at the river Apures, and near La Laguna de Valencia. Corolla glabrous, yellow. Legume very long and cylindrical.

*Rough Sesban*. Shrub 3 to 4 feet.

5 *S. ACULEATA* (Pers. ench. 2. p. 316.) plant herbaceous and glabrous; rachis of leaves rather prickly; leaves having about 25 pairs of linear, obtuse, rather mucronate leaflets; racemes few-flowered; legumes filiform, one-half shorter than the petioles. *h. S.* Native of Malabar. *Æschynomene Sesban*, Jacq. coll. 2. p. 283. *Æ. hispidosa*, Jacq. icon. rar. t. 564. *Coronilla aculeata*, Willd. l. c.—Rheed. mal. 9. t. 27. Burm. zeyl. t. 41. There is a variety of this plant having only 12-15 pairs of leaflets. Flowers orange.

*Prickly Sesban*. Fl. July, Aug. Clt. 1690. Pl. 5 to 6 feet.

6 *S. PERUVIANA*; shrubby, smooth; leaves with 4-6 pairs of obovate, obtuse, mucronate leaflets, which are glaucous beneath; racemes short, few-flowered; stipulas ovate, subulate at the apex; petioles prickly; legumes longer than the leaves, elongated, terete. *h. S.* Native of Peru. *Æschynomene* spec. nov. Ruiz et Pav. in herb. Lamb.

*Peruvian Sesban*. Shrub 3 to 4 feet.

7 *S. CANNABINA* (Pers. l. c.) plant herbaceous, glabrous; rachis of leaves smooth; peduncles 1-flowered, twin; legume filiform, compressed. *h. S.* Native of Malabar. *Æschynomene cannabina*, Retz; obs. 5. p. 26. *Coronilla cannabina*, Willd. spec. 3. p. 1148. Flowers small, yellow. This plant, if treated as hemp, may be used for the same purposes.

*Hemp Sesban*. Fl. July, Aug. Clt. 1800. Pl. 2 to 4 feet.

8 *S. AFFINIS* (Schrad. sem. hort. goett. 1819.) plant herbaceous, smoothish; leaflets 12-18 pairs, oblong-linear, very blunt, mucronulate; rachis of leaves smooth; racemes few-flowered; legumes compressed, pendulous, length of rachis. *h. S.* Native of the East Indies. *Æschynomene cannabina*, Hortul. Flowers yellow.

*Allied Sesban*. Fl. July, Aug. Clt. 1800. Pl. 2 to 4 feet.

9 *S. PUNCTATA* (D. C. prod. 2. p. 264.) plant herbaceous,

FIG. 38.

glabrous; leaves having 10-30 pairs of oblong-linear, very blunt, mucronate leaflets; petioles pubescent above; racemes many-flowered; corolla 6-times longer than the calyx; legumes compressed, somewhat torulose, 3 or 4 times the length of the petiole. ☉. ? S. Native of Senegal. Flowers yellow, 8-9 lines long, having the vexillum spotted with purple on the outside.

*Spotted-flowered Sesban.* Fl. July, Aug. Clt. 1825. Pl. 2 to 3 feet.

10 *S. PACHYCARPA* (D. C. prod. 2. p. 265.) plant herbaceous, glabrous; leaflets oblong-linear, very blunt, and rather mucronate; petioles smooth; racemes 4-6-flowered, somewhat corymbose; corolla 3-times longer than the calyx; legumes rather terete, thick, 3-times the length of the rachis. ☉. ? S. Native of Senegal. Flowers yellow, but with the vexillum variegated with purple spots. Legume acuminate, 6-8 inches long.

*Thick-fruited Sesban.* Pl. 2 to 3 feet.

11 *S. PICTA* (Pers. ench. 27 p. 316.) plant herbaceous, glabrous; leaves with 12-16 pairs of oblong-linear obtuse leaflets; racemes many-flowered, nodding; corolla 3-times the length of the calyx; legumes filiform, when young terete, but at length becoming compressed, torulose, twice the length of the petioles. ♂. S. Native of New Spain. *Æschynomene picta*, Cav. icon. 4. p. 7. t. 314. *Coronilla picta*, Willd. l. c. Corolla yellow, having the vexillum variegated with black dotted lines. There is a variety of this plant with 1-flowered peduncles, but this is very rare.

*Painted-flowered Sesban.* Fl. July, Aug. Clt. 1823. Pl. 4 to 6 feet.

12 *S. MACROCARPA* (Muhl. ex Ell. sketch. 2. p. 221.) plant herbaceous, glabrous; leaflets elliptic, glaucescent beneath, many-pairs; racemes axillary, few-flowered; legumes rather terete, elongated. ☉. H. Native of Louisiana, and in the island of Paris. Flowers yellowish. Racemes shorter than the leaves.

*Long-fruited Sesban.* Fl. July, Aug. Clt. 1820. Pl. 3 ft.

13 *S. PUBESCENS* (D. C. prod. 2. p. 265.) plant herbaceous, clothed with adpressed villous pubescence; leaflets oblong-linear, obtuse, mucronate, about 20 pairs; racemes 7-8-flowered; legumes filiform, shorter than the petiole. ☉. S. Native of Guinea. *Æschynomene pubescens*, Vahl. ined. Flowers yellow.

*Pubescent Sesban.* Pl. 2 to 3 feet?

14 *S. PALUDOSA* (Jacq. hort. vind. ex sem. miss. D. C. pl. rar. jard. gen. prod. 2. p. 265.) plant herbaceous, glabrous; leaflets elliptic-linear, obtuse, mucronate, 10-20 pairs; racemes usually 2-flowered; legume terete, rather compressed, and somewhat torulose, length of rachis. ☉. S. Native of the East Indies. Corolla yellow, but with the vexillum rather brownish, and the top of the keel purplish. Perhaps the same as *Æschynomene paludosa* of Roxb.

*Marsh Sesban.* Fl. July, Aug. Clt. 1816. Pl. 2 to 4 feet.

15 *S. GRACILIS* (Schrader. cat. sem. gett. 1819. D. C. prod. 2. p. 265.) plant glabrous; leaves with 12-15 pairs of oblong-linear, obtuse, mucronulate leaflets; rachis of leaves smooth; racemes few-flowered; legumes compressed, rather torulose, erect, twice the length of the rachis, apiculated by the style, which is twice the length of the ultimate joint. ☉. S. Native country unknown. Very nearly allied to the following species.

*Slender Sesban.* Fl. July, Aug. Clt. 1820. Pl. 2 to 3 feet.

16 *S. LEPTOCARPA* (D. C. prod. 2. p. 265.) plant herbaceous, glabrous; leaves with about 20 pairs of linear, obtuse, mucronate leaflets; racemes few-flowered, erect; legumes filiform, terete, torulose, twice the length of the rachis; style shorter than the ultimate joint of the pod. ☉. ? S. Native of Senegal. Flowers yellow, but with the vexillum dotted with black, as in *S. picta*.

*Slender-fruited Sesban.* Fl. 2 to 3 feet.

VOL. II.

17 *S. LONGIFOLIA* (D. C. prod. 2. p. 265.) plant shrubby, glabrous; leaves with from 7-18 pairs of ovate lanceolate, mucronulate, glaucous leaflets; racemes many-flowered; legumes linear, torulose, acute. ♀. S. Native of New Spain. *Æschynomene longifolia*, Ort. dec. 9. p. 70. Flowers yellow. Stems and fruit purplish.

*Long-leaved Sesban.* Shrub 4 to 6 feet.

18 *S. SERICEA* (D. C. prod. 2. p. 266.) plant herbaceous; leaflets lanceolate, acute, mucronate, narrowest at the base, silky beneath. ☉. S. Native country unknown. *Coronilla sericea*, Willd. enum. 773. Said to be nearly allied to *S. cannabina*.

*Silky Sesban.* Fl. July, Aug. Clt. 1818. Pl. 2 to 3 feet.

19 *S. COCHIN-CHINENSIS* (D. C. prod. 2. p. 266.) stem suffruticose; leaves with 15 pairs of oblong, obtuse, mucronulate leaflets; peduncles 3-flowered; legumes filiform, torulose, erect. ♀. S. Native of Cochin-china. *Coronilla Cochinchinensis*, Lour. coch. p. 452. Flowers yellow.

*Cochin-China Sesban.* Shrub 4 feet.

*Cult.* All the species of this genus require a heat of 70 degrees of Fahrenheit, or they will not thrive. The shrubby kinds are increased by cuttings, and the annual species by seeds, which sometimes ripen in this country.

CXV. AGATI (*Touri* or *Agati* is the name of *A. grandiflora* in the Sanscrit language). Rheed. hort. mal. t. 51. Adans. fam. 2. p. 326. Desf. journ. bot. 3. p. 120. t. 4. f. 6.

LIN. SYST. *Diadelphina*, *Décandria*. Calyx campanulate, truncate, obtusely 5-toothed, repand. Vexillum oval-oblong, shorter than the wings. Wings oblong. Keel large, straightish, with its petals free at the base and apex. Stamens diadelphous, somewhat exserted, with the sheath furnished with large auricles above the base. Style filiform, straightish. Legume tapering into a stipe, compressed, linear, 2-valved, transversely many-celled inside, but with the upper suture prominent and truncate, not truly articulated. Seeds ovate, solitary in the cells.—Indian trees, with lanceolate stipulas, abruptly-pinnate leaves, having many pairs of leaflets; large flowers; few-flowered racemes, and with legumes a foot and a half long.

1 *A. GRANDIFLORA* (Desv. l. c.) leaflets glabrous; legumes evidently compressed. ♀. S. Native of the East Indies, where it is called *Tauri* or *Agati*. Rheed. mal. 1. p. 95. t. 51. Rumph. amb. 1. t. 76. *Æschynomene grandiflora*, Lin. spec. 1050. *Coronilla grandiflora*, Willd. spec. 3. p. 1145. *Sesbania grandiflora*, Poir. dict. 7. p. 127. *Dolichos arboreus*, Forsk. descr. 134. Flowers of a rusty-yellow colour according to Forsk, but according to Roxb. they are white or rose-red. The seeds are agreeable to domestic birds. The bark is bitter and tonic.

*Great-flowered Agati.* Fl. July, Aug. Clt. 1768. Tree 14 to 26 feet.

2 *A. COCCINEA* (Desv. l. c.) leaflets powdery; legumes rather terete. ♀. S. Native of the East Indies and the Society Islands. *Æschynomene coccinea*, Lin. fil. suppl. 330. *Coronilla coccinea*, Willd. l. c. *Sesbania coccinea*, Poir. l. c.—Rumph. amb. 1. t. 77. Flowers red, rather smaller than those of the other species, but similar.

*Scarlet-flowered Agati.* Fl. July, Aug. Clt. 1768. Tree 20 to 30 feet.

*Cult.* See *Sabinea* for culture and propagation, p. 239.

CXVI. GLOTTIDIUM (from γλωσσα or γλωττα, *glotta*, a tongue; in reference to the valves of the legume separating into two membranes each, which has been compared to the superior opening of the larynx). Desv. journ. bot. 3. p. 119. t. 1. D. C. prod. 2. p. 266.

II

**LIN. SYST.** *Diadelphia, Decandria*. Calyx 5-toothed, somewhat bilabiate, lower teeth rather the longest. Vexillum reniform, very short, and broad. Stamens diadelphous. Legumes on long stipes, compressed, flat, 2-valved, 2-seeded, 1-celled; the valves separating into 2 membranes when mature, outer membrane coriaceous, inner one membranous and covering the seeds. Seeds compressed, transversely oblong.—Annual smooth herbs, having the primordial leaves ovate and simple, and the rest abruptly-pinnate, of many-pairs of leaflets. Racemes axillary, pedunculate. Flowers few, loose, yellow.

1 *G. FLORIDANUM* (D. C. prod. 2. p. 266.) ☉. F. Native of Florida and Carolina. *Robinia vesicaria*, Jacq. icon. rar. 1. t. 148. *Phaca Floridana*, Willd. spec. 3. p. 1252. *Sesbania platycarpa*, Michx. *Sesbania dispersa*, Pursh. fl. amer. sept. 2. p. 485. *Dalbergia polyphylla*, Poir. suppl. 2. p. 446. Peduncles 4-5-flowered.

*Florida Glottidium*. Fl. July, Aug. Clt. 1816. Pl. 5 to 7 ft. **Cult.** The seeds of this plant require to be sown in a pot filled with peat and sand, and placed in a hot-bed, and when the plants have grown 2 or 3 inches high, they should be planted into separate pots in the same kind of soil, and shifted into larger pots as they grow.

**CXVII. PISCIDIA** (from *piscis*, a fish, and *cædo*, to kill or destroy; the leaves, bark, and twigs bruised are thrown into ponds or rivulets for the purpose of intoxicating fish, by which means they are easily taken). Lin. gen. 856. D. C. prod. 2. p. 267.—*Piscipula*, Læf. itin. 275.—*Ichthyomethia*, P. Browne, jam. 276.

**LIN. SYST.** *Monadelphina, Decandria*. Calyx campanulate, 5-cleft. Corolla papilionaceous. Keel obtuse. Stamens monadelphous, the tenth one free from the rest at the base. Style filiform, glabrous. Legume pedicellate, linear, furnished with 4 membranous wings; the seeds separated by spongy substance. Seeds ovate, compressed, having a lateral hylum. Embryo curved, with elliptic-oblong thickish cotyledons, and a hooked radicle.—West Indian trees, with broad impari-pinnate leaves, and terminal panicles of white and blood-coloured flowers mixed.

1 *P. ERYTHRINA* (Lin. spec. 993. Jacq. amer. 206.) leaflets ovate; legume standing on a stipe, which is thrice the length of the calyx; wings interrupted. *h. S.* Native of New Spain and Jamaica on the mountains, where it is called *Dog-wood* by the English. Swartz, obs. 277. Lunan. hort. jam. 1. p. 269. Kunth. nov. gen. amer. 6. p. 382. *Erythrina piscipula*, Lin. spec. ed. 1. p. 107. Sloane, jam. 2. t. 176. f. 4 and 5. Lam. ill. t. 605. f. A. Leaves rather coriaceous, adult ones smooth. Flowers rising before the leaves, of a dirty-white colour. The bark of the root (leaves and twigs, Jacq.) is used with the same effects as the leaves and branches of Surinam poison. It is pounded and mixed with the water in some deep and convenient part of a river or creek, whence it may spread itself; in a few minutes the fish that lie hidden under the rocks or banks rise to the surface, where they float as if they were dead; most of the larger ones recover after a time, but the smaller fry are destroyed. Jacquin observes that this quality of intoxicating fish is found in many other South American plants. The tree is considered in Jamaica as a good timber tree; the wood is hard and resinous, and lasts almost equally in or out of water. It is of a light-brown colour, coarse, cross-grained, and heavy. It makes excellent piles for wharfs. The stakes soon form a good living fence. The bark of the trunk is very restraining; a decoction of it is said to stop the immoderate discharge of ulcers, especially when it is combined with the mangrove bark; it is said to cure the mange in dogs, and it would probably answer well for tanning leather.

*Red Piscidia* or *Jamaica Dog-wood*. Fl. May, June. Clt. 1690. Tree 30 feet.

2 *P. CARTHAGENSIS* (Jacq. amer. 210. Lin. spec. 993.) leaflets obovate; stipe of legume hardly longer than the calyx; wings continuous. *h. S.* Native of Jamaica, Guadaloupe, and Carthage, on the mountains. *Piscidia erythrina* of Ait. hort. kew, according to a specimen in the herbarium of L. Heritier, which has the underside of the leaves villous, and the young leaves very villous, and the lower leaflets ovate, but the terminal one is obovate.—Plum. ed. Burm. t. 133. f. 2. Lam. ill. t. 605. f. B and C. Flowers dirty-white, rising after the leaves. Lunan, hort. jam. 1. p. 270.

*Carthage Piscidia*. Fl. May, June. Clt. 1690. Tree 30 ft.

**Cult.** Sandy loam suits these trees best, and cuttings may be rooted in sand under a hand-glass in heat.

**CXVIII. DAUBENTONIA** (in honour of M. Daubenton, a celebrated naturalist). D. C. legum. mem. vi. prod. 2. p. 267.—*Piscidia* species, Willd.

**LIN. SYST.** *Diadelphina, Decandria*. Calyx campanulate, rather truncate, with 5 small teeth. Corolla papilionaceous. Keel very blunt. Vexillum roundish, stipitate. Stamens diadelphous, having the free filament, as well as the stamiferous sheath, as if they were jointed at the base. Style filiform, glabrous. Legume on a long pedicel, oblong, compressed, coriaceous, ornamented with 4 wings rising near the margins of the sutures, and furnished with spongy substance between the seeds. Seeds ovate.—Mexican shrubs, with oblong stipulas, abruptly-pinnate leaves, and simple racemes of flowers. This genus is nearly allied to *Piscidia*, but the stamens are diadelphous, and the leaves are abruptly, not impari-pinnate. Perhaps this genus is allied to *Coursètia*.

1 *D. PUNICEA* (D. C. prod. 2. p. 267.) leaves with 8-10 pairs of oblong obtuse leaflets; racemes almost 3-times shorter than the leaves. *h. S.* Native of New Spain. Flowers scarlet. *Piscidia punicea*, Cav. icon. 4. t. 316. *Æschynomene miniata*, Ort. dec. p. 28.

*Scarlet-flowered Daubentonia*. Fl. July, Aug. Clt. 1820. Shrub 2 to 3 feet.

2 *D. LONGIFOLIA* (D. C. prod. 2. p. 267.) leaves having 11-12 pairs of lanceolate acute leaflets; racemes a little shorter than the leaves. *h. S.* Native of New Spain. Flowers yellow. *Æschynomene longifolia*, Cav. icon. 4. t. 315. *Piscidia longifolia*, Willd. spec. 3. p. 920.

*Long-leaved Daubentonia*. Fl. June, Aug. Clt. 1820. Sh. 6 ft.

**Cult.** To be propagated and cultivated in the same manner as that recommended for *Piscidia*.

**CXIX. CORYNELLA** (a diminutive of *κορυνη*, *koryne*, a club; in reference to the club-shaped style). D. C. in ann. sc. nat. 4. jan. 1825. p. 93. prod. 2. p. 267.

**LIN. SYST.** *Diadelphina, Decandria*. Calyx bilabiate, 5-toothed; teeth spreading, linear, subulate, 2 superior ones hardly shorter than the rest. Corolla papilionaceous; all the petals on very short claws. Keel obtuse. Stamens diadelphous, about equal in length to each other. Style glabrous, club-formed. Legume lanceolate, compressed, 3-angled, many-seeded.—St. Domingo shrubs, with abruptly-pinnate leaves, having the petioles and stipulas ending in spiny mucrones, and the leaflets exstipellate. Young branches pubescent. Pedicels 1-flowered, in fascicles. Flowers purplish.

1 *C. POLYANTHA* (D. C. l. c.) leaves with 5-7 pairs of oblong leaflets, which are glabrous above, and clothed with hoary hairs beneath. *h. S.* Native of St. Domingo among bushes, on the mountains. *Robinia polyantha*, Swartz, fl. ind. occid. 2. p. 1260. *Coryntis polyantha*, Spreng. syst. append. 280.

*Many-flowered Corynella.* Shrub 5 to 6 feet.

2 *C. PAUCIFOLIA* (D. C. l. c.) leaves with 2-3 pairs of elliptic leaflets, which are glabrous above, but puberulous on the nerves beneath. *h. S.* Native of St. Domingo. *Robinia Domingensis*, Spreng. in herb. Balb. *Corynitis Domingensis*, Spreng. syst. append. 280. Perhaps sufficiently distinct from the preceding.

*Few-leaved Corynella.* Shrub 5 to 6 feet.

*Cult.* See *Sabinea* for the culture and propagation, p. 239.

CXX. CARAGANA (*Caragan* is the name of *R. arborescens* among the Monguls). Lam. dict. 1. p. 611. ill. t. 607. f. 1-2. D. C. prod. 2. p. 268.

LIN. SYST. *Diadélphia*, *Decándria*. Calyx short, tubular, 5-toothed. Corolla obtuse, straight; the wings and vexillum about equal in length. Stamens diadelphous. Style glabrous. Stigma terminal, truncate. Legume sessile, young ones compressed, at length somewhat cylindrical and many-seeded, mucronate by the style. Seeds somewhat globose.—Trees or shrubs, natives of Siberia and the East, with abruptly-pinnate leaves, mucronate leaflets, having the common petiole ending in a bristle or a spine, and axillary 1-flowered pedicels, which are usually in fascicles. Flowers usually yellow, perhaps in all except *C. jubata*, which are white and reddish. The stipulas usually spinose.

1 *C. ALTAGANA* (Poir. suppl. 2. p. 89.) leaves having 6 or 8 pairs of glabrous, obovate-roundish, retuse leaflets; petiole unarmed; stipulas spinescent; pedicels solitary; legumes rather compressed. *h. H.* Native of Dahuria, in sandy places. *Robinia Altagana*, Pall. fl. ross. t. 42. exclusive of the variety. Lher. stirp. t. 76. *Caragana microphylla*, Lam. dict. 1. p. 615. Flowers yellow. *Altagana* is the vernacular name of the shrub. Root with somewhat of the smell and taste of liquorice.

*Altagana Caragana.* Fl. April, July. Clt. 1789. Shrub 2 to 3 feet.

2 *C. MICROPHYLLA* (D. C. prod. 2. p. 268.) leaves with 6-7 pairs of hoary retuse leaflets; petioles and stipulas rather spinescent at the apex; root creeping. *h. H.* Native of Siberia, in the desert of Baraba, and in the tract of the river Selenga. *Robinia microphylla*, Pall. fl. ross. t. 42. f. 1-2. *Caragana Altagana* var. Poir. suppl. 2. p. 89. Flowers yellow.

*Small-leaved Caragana.* Fl. April, June. Clt. 1819. Shrub 2 to 3 feet.

3 *C. ARBORESCENS* (Lam. dict. 1. p. 615.) leaves with 4-6 pairs of oval-oblong villous leaflets; petiole unarmed; stipulas spinescent; pedicels in fascicles. *h. H.* Native of Siberia. *Robinia Caragana*, Lin. spec. 1044. Duham. arb. ed. nov. 2. t. 19. Pall. ross. 1. t. 42. middle figure. Flowers yellow. The wood of this tree is hard and compact, very tough, yellow on the outside, but waved and striped with bay and red within. The leaves are said to be good food for cattle, and it is suggested that they contain a blue colouring matter like indigo. The seeds are good for poultry. The bark is tough, and fit for tying; the twigs may also be used as withes.

*Arborescent Caragana.* Fl. April, May. Clt. 1752. Tree 15 to 20 feet.

4 *C. CHAMLAGU* (Lam. dict. 1. p. 616.) leaves with 2 pairs of distant, oval, or obovate, glabrous leaflets; stipulas spreading, and are as well as the petioles spinose; pedicels solitary; flowers pendulous. *h. H.* Native of China. *Robinia Chamlagu*, Lher. stirp. t. 77. Duham. arb. ed. nov. 2. t. 21. Flowers large, yellow, at length becoming reddish. Root smelling like liquorice. *Chamlagu* is the Chinese name of the shrub.

*Chamlagu* or Chinese Caragana. Fl. May, June. Clt. 1773. Shrub 2 to 4 feet.

5 *C. FRUTESCENS* (D. C. prod. 2. p. 268.) leaves having 2 pairs of leaflets, approximating the top of the petiole, they are obovate-cuneate; stipulas membranous; petiole furnished with a short spine at the apex; pedicels solitary, twice the length of the calyx. *h. H.* Native of Siberia, on the banks of the Volga, as well as of Tartary, and Tauria. Sweet, fl. gard. t. 227. *Robinia frutescens*, Lin. spec. 1044. Pall. fl. ross. t. 43. *C. digitata*, Lam. dict. 1. p. 616. Flowers yellow, resupinate. Leaves with a yellow hue.

*Var. a, latifolia* (D. C. prod. 2. p. 268.) leaflets glabrous, broadly obovate. Frequent in gardens. There is a variety of this with 2-flowered peduncles.

*Var. β, angustifolia* (D. C. prod. 2. p. 268.) leaflets oblong-cuneate, glabrous. Native about Odessa.

*Shrubby Caragana.* Fl. April, May. Clt. 1752. Sh. 2 to 3 ft.

6 *C. MOLLI* (Bess. enum. pl. volh. p. 29.) leaves with 2 pairs of oblong-cuneate leaflets, approximating the top of the petiole, clothed with soft villi; petiole ending in a short spine; pedicels solitary. *h. H.* Native of Tauria and Podolia. *Robinia mollis*, Bieb. fl. taur. suppl. 477. *Robinia tomentosa*, Fisch. hort. gor. 1812. Flowers yellow.

*Soft Caragana.* Fl. April, May. Clt. 1818. Sh. 2 to 3 ft.

7 *C. GRANDIFLORA* (D. C. prod. 2. p. 268.) leaves with 2 pairs of oblong-cuneate leaflets, approximating near to the top of the petiole, which is very short; stipulas and petioles spinose; pedicels solitary, almost the length of the calyx, which is gibbous at the base. *h. H.* Native of the south of Iberia, near Tiflis. *Robinia grandiflora*, Bieb. fl. taur. 1. p. 168. Young leaves pubescent, adult ones hoary, ex. Bieb., but according to a specimen sent by Steven to De Candolle, the adult leaves are pale and glabrous. Legume terete, acute, brown, glabrous. Flowers an inch long, yellow.

*Great-flowered Caragana.* Fl. June, July. Clt. 1823. Sh.

8 *C. PYGMÆA* (D. C. prod. 2. p. 268.) leaves with 2 pairs of linear, glabrous leaflets, approximating at the top of the petiole, which is very short; stipulas and petioles spinescent; pedicels solitary, nearly the length of the calyx; calyx nearly equal at the base. *h. H.* Native of Siberia, on the Altaian mountains, and of Dahuria. *Robinia pygmæa*, Lin. spec. 1044. Pall. ross. 1. t. 45. Amm. ruth. t. 35. Leaflets acute, crowded, usually in the axils of trifid spines. Flowers yellow.

*Var. β, arenaria* (Fisch. in litt.) leaflets linear-cuneate; pedicels rather longer than the calyx. *h. H.* Native of Siberia, on the banks of the river Tschuia.

*Pygmy Caragana.* Fl. April, May. Clt. 1751. Sh. 1 to 2 ft.

9 *C. ARENARIA* (Donn. hort. cant. Sims, bot. mag. 1886.) leaves with usually 4 pairs of obcordate leaflets; pedicels usually twin, shorter than the flowers; stipulas subulate. *h. H.* Native of Siberia. Flowers yellow.

*Sand Caragana.* Fl. April, May. Clt. 1802. Sh. 1 to 2 ft.

10 *C. REDÓWSKI* (D. C. legum. t. 11. f. 45.) leaves with 2 pairs of ovate, acute, smooth leaflets; stipulas spinose. *h. H.* Native of Siberia. Flowers yellow. This plant has not been seen by us unless in a seedling state.

*Redowski's Caragana.* Fl. April, May. Clt. 1827. Shrub.

11 *C. SPINOSA* (D. C. prod. 2. p. 269.) leaves with 2-4 pairs of cuneate-linear, glabrous leaflets; stipulas small, spinose; adult petioles permanent, strong, and spinose, twice the length of the leaflets; flowers solitary, almost sessile. *h. H.* Native of Siberia, near the Selenga and Kiacha in dry sandy places on mountains. Lindl. bot. reg. 1021. *Robinia spinosa*, Lin. mant. 269. *Robinia ferox*, Pall. ross. 1. t. 44. itin. t. E. e. f. 2. and 3. *Robinia spinosissima*, Laxm. nov. act. pet. 15. t. 30. f. 4. *C. ferox*, Lam. dict. 1. p. 315. Flowers yellow. Legume rather compressed. This shrub is well adapted to make impenetrable hedges, on account of its long branches and strong thorns. It is

said also to be a native of China, about Peking, where they stick the bushes in clay on the tops of their walls, to prevent persons from getting or looking over them.

*Spiny Caragana.* Fl. April, May. Clt. 1775. Sh. 4 to 6 ft.

12 *C. TRAGACANTHOIDES* (Poir. suppl. 2. p. 90.) leaves with 2-4 pairs of oblong-lanceolate, silky leaflets, each ending in a little spine; stipulas spiny; adult petioles permanent, strong, and spinose, twice the length of the leaflets; pedicels solitary, short, legume hoary-villous.  $\gamma$ . H. Native of Siberia, among granite rocks beyond the Baikal. *Robinia tragacanthoides*, Pall. nov. act. petr. 10. t. 7. astr. 115. t. 86. *Robinia macracantha*, Lodd. cat. Flowers yellow, drooping.

*Goats'-thorn-like Caragana.* Fl. April, May. Clt. 1816. Sh.

13 *C. JUBATA* (Poir. suppl. 2. p. 89.) leaves with 4 or 5 pairs of oblong-lanceolate, lanuginously-ciliated leaflets; stipulas setaceous; petioles somewhat spinose, adult ones deflexed, filiform, permanent; pedicels solitary, very short; legume glabrous.  $\gamma$ . H. Native of Siberia, at Lake Baikal. *Robinia jubata*, Pall. in act. petr. 10. t. 6. astr. p. 113. t. 85. Lodd. bot. cab. 522. Flowers white, few, suffused with red.

*Matted-leafletted Caragana.* Fl. April, May. Clt. 1796. Shrub 1 to 2 feet.

† *A species not sufficiently known.*

14 *C. FRUTICOSA* (Bess. cat. hort. crem. p. 116.) said to be allied to *C. arborescens*, but differs in the flowers being larger and solitary, and in the young legumes being red.  $\gamma$ . S. Native of the Russian empire. Perhaps *Robinia Mongolica* of Fisch. and *R. speciosa* of Swartz ex Besser.

*Shrubby Caragana.* Shrub 2 to 3 feet.

*Cult.* All the species of this genus are well adapted for shrubberies. They are usually propagated by layers and by seeds. The species are all deciduous.

CXXI. HALIMODENDRON ( $\alpha\lambda\iota\mu\omicron\varsigma$ , *halimos*, maritime, and  $\delta\epsilon\upsilon\delta\rho\omicron\nu$ , *dendron*, a tree; in reference to the shrub, which grows in dry naked salt fields by the river Irtysh, in Siberia). Fisch. in litt. D. C. legum. mem. vi. prod. 2. p. 269. Halodendron, D. C. mem. ined. in soc. phys. gen. march, 1824. but not of Petit Thouars.

LIN. SYST. *Diadelphia, Decandria.* Calyx urceolately-campanulate, with 5 short teeth. Keel obtuse, straightish. Wings very acute and auricled. Stamens diadelphous, about equal in length. Style filiform, glabrous. Stigma terminal. Legume stipitate, inflated, bladdery, hard, ovate, and few-seeded, depressed at the seminiferous suture. Seeds oval, somewhat compressed, small, and smooth.—Siberian shrubs, with the habit of *Caragana*. Leaves abruptly pinnate, with 2 pairs of leaflets. Petioles and stipulas spinose. Peduncles 2-3-flowered. Flowers purplish. The shrubs are deciduous.

1 *H. ARGENTEUM* (D. C. prod. 2. p. 269.) leaves hoary; peduncles 2-flowered.  $\gamma$ . H. Native of Siberia, in dry salt fields at the river Irtysh, and of Iberia. *Robinia halodendron*, Lin. fil. suppl. 330. Pall. fl. ross. t. 36. itin. 2. t. W. ed gall. append. no. 360. t. 83. f. 1. *Caragana argentea*, Lam. in Pall. ed gall. l. c. This is an elegant silky shrub, it thrives well in the gardens, but seldom or never flowers, probably from the want of the saline principle in which it naturally grows.

*Var. a, vulgare* (D. C. prod. 2. p. 269.) leaves between hoary and silvery; vexillum length of keel. Sims, bot. mag. 1016.

*Var. b, brachysëma* (D. C. l. c.) leaves hoary and silvery; vexillum one half shorter than the wings and keel; style short. Perhaps only a monster raised in gardens.

*Silvery Salt-tree.* Fl. May, Jul. Clt. 1779. Sh. 4 to 6 ft.

2 *H. SUBVIRESCENS*; leaves greenish; vexillum length of

carina; pedicels 3-flowered.  $\gamma$ . H. Native of Siberia, in salt fields. *Robinia triflora*, Lher. stirp. nov. 162. *H. argenteum b*, subvirescens, D. C. prod. 2. p. 169.

*Greenish Salt-tree.* Fl. May, Ju. Clt. 1779. Sh. 4 to 6 ft.

*Cult.* See last genus for culture and propagation. They are elegant deciduous shrubs, and deserve to be cultivated in gardens.

CXXII. DIPHYSA (from  $\delta\iota\varsigma$ , *dis*, twice, and  $\phi\upsilon\varsigma\alpha$ , *physa*, a bladder; in reference to the legume, which is furnished with a large membranous bladder on each side of the legume, rising from the sutures). Jacq. amer. 208. Schreb. gen. no. 1104. Lam. ill. t. 605. D. C. prod. 2. p. 269.

LIN. SYST. *Diadelphia, Decandria.* Calyx 5-cleft, 2 superior lobes roundish, 3 lower ones acute. Vexillum obovate-oblong, reflexed; wings flat. Keel sickle-shaped. Stamens diadelphous. Legume linear, compressed, furnished on both sides with a large membranous bladder, which rises from the sutures, and are therefore opposite each other, 1-celled, 5-6-seeded.—A small unarmed tree, with impari-pinnate leaves, composed of 5 pairs of leaflets and an odd one, axillary 2-3-flowered peduncles, and yellow flowers. The place which this genus should occupy in the order is very doubtful, in consequence of the structure of the legume being imperfectly known.

1 *D. CARTHAGENENSIS* (Jacq. amer. 208. t. 180. f. 51.)

$\gamma$ . S. Native of Carthage, in bushy places, where it is called *Vivacca*.

*Carthagea Diphysa.* Clt. 1827. Shrub 6 to 10 feet.

*Cult.* For the culture and propagation of this shrub see *Sabinea*, p. 239.

CXXIII. CALOPHACA (from  $\kappa\alpha\lambda\omicron\varsigma$ , *kalos*, beautiful, and  $\phi\alpha\kappa\eta$ , *phake*, a lentil; in allusion to the beauty of the plant). Fisch. med. D. C. prod. 2. p. 270.

LIN. SYST. *Diadelphia, Decandria.* Calyx 5-cleft, the lobes acuminate. Keel obtuse. Stamens diadelphous. Style villous and straight at the base, but glabrous incurved at the apex. Stigma terminal. Legume sessile, oblong, somewhat cylindrical, mucronate, 1-celled; valves concave, beset with soft hairs, as well as with stiff, glandular bristles, mixed.—A deciduous shrub, with lanceolate stipulas, impari-pinnate leaves, and axillary pedunculate racemes of yellow flowers. This genus differs from *Cytisus* in the stamens being diadelphous, and in the pinnate leaves.

1 *C. WOLGARICA* (Fisch. in litt.).  $\gamma$ . H. Native of Siberia, on dry hills, and in arid places about the Volga. *Cytisus nigricans*, Pall. itin. 3. p. 764. t. G. g. f. 3. ed gall. append. no. 358. t. 101. f. 1. *Cytisus pinnatus*, Pall. fl. ross. 1. t. 47. *Cytisus Wolgaricus*, Lin. fil. suppl. 327. Duham. arb. ed. nov. t. 48. *Colutea Wolgarica*, Lam. *Adenocarpus Wolgensis*, Spreng. syst. 3. p. 226. Leaflets 6 or 7 pairs, orbicular, velvety beneath as well as the calyxes.

*Volga Calophaca.* Fl. May, June. Clt. 1786. Sh. 2 to 3 ft.

*Cult.* This shrub is well adapted for the front of shrubberies, and is increased by layers or by seeds. Being rather tender it should be protected by a mat in winter.

CXXIV. COLUTEA (said to be from  $\kappa\omicron\lambda\omicron\upsilon\omega$ , *koloio*, to amputate; the shrubs are said to die if the branches are lopped off. *Kolourtea* is also the name of a plant in Theophrastus). R. Br. in hort. kew. ed. 2. vol. 4. p. 325. *Colutea* species of Lin. and others.

LIN. SYST. *Diadelphia, Decandria.* Calyx 5-toothed. Vexillum flat, bicallous, larger than the keel, which is obtuse. Stamens diadelphous. Stigma lateral, hooked under the top of the style. Style bearded longitudinally behind. Legume stipitate, ovate, boat-formed, inflated, scarious.—Deciduous

shrubs, with small stipulas, impari-pinnate leaves, and axillary few-flowered racemes, which are a little shorter than the leaves.

1 *C. ARBORÆSCENS* (Lin. spec. 1045.) leaflets elliptic, retuse; peduncles usually bearing about 6 flowers; gibbositities on the vexillum short; legume closed.  $\gamma$ . H. Native of middle and south Europe, in hedges and bushy places, on Mount Vesuvius, even in the ascent to the crater, where hardly any other vegetable is to be found. D. C. astr. no. 1. Duham. arbr. ed. nov. 1. t. 22. Curt. bot. mag. t. 81. *C. hirsuta*, Roth. fl. germ. 1. p. 305. Flowers yellow. The *C. arboræscens* of Burm. fl. cap. 22. is probably a species of *Tephrosia*. The leaves are recommended as answering all the purposes of senna, and Allioni gives particular directions for the preparation of them. A larger dose seems to be required to produce the same effect. The seeds to the quantity of a drachm or two excite vomiting.

*Arborescent Bladder-Senna.* Fl. June, Aug. Clt. 1568. Shrub 6 to 10 feet.

2 *C. CRUENTA* (Ait. hort. kew. 3. p. 55.) leaflets obovate, emarginate, glaucous; peduncles 4 or 5-flowered; vexillum with small, obtuse gibbositities; legume gaping at the apex.  $\gamma$ . H. Native of the islands in the Archipelago, Iberia, and the Levant. D. C. astr. no. 3. Lher. stirp. nov. 2. t. 41. *C. orientalis*, Lam. dict. 1. p. 353. ill. 624. f. 3. Duham. ed. nov. 1. t. 23. *C. sanguinea*, Pall. *C. aptera*, Schmidt, arb. t. 119. *C. humilis*, Scop. Flowers of a reddish-copper colour, but with the vexillum having a yellow spot at the base. This species differs from the foregoing in the smaller different coloured flowers, in the wings being shorter than the keel, and in the pod being open at the apex.

*Bloody-flowered or Oriental Bladder-Senna.* Fl. June, July. Clt. 1731. Shrub 4 to 8 feet.

3 *C. HALÉPPICA* (Lam. dict. 1. p. 353. ill. t. 624. f. 2.) leaflets roundish-elliptic, very obtuse, mucronate; peduncles 3-flowered; gibbositities of vexillum elongated and ascending; legumes closed.  $\gamma$ . H. Native of fields about Aleppo. D. C. astr. no. 2. *C. Pocockii*, Ait. hort. kew. 3. p. 55. Schmidt, arb. t. 129. *C. Istria*, Mill. dict. no. 2. t. 100. *C. procumbens*, Lher. stirp. nov. 2. t. 42. Flowers yellow. A smaller shrub than *C. arboræscens*.

*Aleppo Bladder-Senna.* Fl. Ma. Oct. Clt. 1752. Sh. 3 to 6 ft.

4 *C. MEDIA* (Willd. enum. 771.) leaflets obovate, glaucescent; peduncles usually 6-flowered; legumes closed at the apex.  $\gamma$ . H. Native of Europe. Wats. dend. brit. 110. Flowers orange-coloured.

*Intermediate Bladder-Senna.* Fl. June, Aug. Sh. 6 to 8 feet.

5 *C. NIPAULENSIS* (Hook. bot. mag. 2622.) leaflets roundish-elliptic, retuse; racemes drooping, few-flowered; callosities of vexillum papilliform; legumes rather coriaceous, pubescent.  $\gamma$ . H. Native of Nipaul. Flowers yellow.

*Nipaul Bladder-Senna.* Fl. Aug. Sept. Clt. 1822. Shrub 5 to 10 feet.

† *Species not sufficiently known.*

6 *C. ? ÆSCHINOMENOIDES* (Scop. insub. 3. p. 22. t. 12.) plant herbaceous; leaflets large, ovate, obtuse, glabrous, acuminate by the nerve.  $\gamma$ . ? G. Native of the Bahama Islands. Perhaps a species of *Pictetia*.

*Æschinomene-like Bladder-Senna.* Pl. 2 feet.

7 *C. AMERICANA* (Mill. dict. no. 5.) shrubby; leaves with 3 pairs of oval leaflets; peduncles 2-3-flowered; legumes compressed.  $\gamma$ . S. Native of Vera Cruz. Perhaps a species of *Cæsalpinia*. Flowers yellow.—Pluk. alm. 111. t. 165. f. 3.

*American Bladder-Senna.* Shrub 6 to 8 feet.

*Cult.* The species of *Bladder-Senna* are proper for shrubberies, as they flower in great profusion, and continue in flower

the most of the season. They thrive in any common soil, and are increased by seeds, which ripen in abundance, or by cuttings, planted in the autumn. The two last species require to be sheltered in a greenhouse.

CXXV. SPHÆROPHYSA (from *σφαῖρα*, *sphaira*, a sphere, and *φύσα*, *physa*, a bladder; in reference to the shape of the legumes, which are spherical and bladdery). D. C. legum. mem. vi. prod. 2. p. 270.—Phæa species of Pallas.

LIN. SYST. *Diadelphia*, *Decandria*. Calyx 5-toothed. Vexillum flat. Carina obtuse. Stamens diadelphous. Style bearded lengthwise. Legume stipitate, inflated, spherical, hardish, 1-celled, mucronated by the style.—Oriental perennial herbs, with impari-pinnate leaves, small stipulas, and axillary, elongated racemes of red flowers.

1 *S. SALSULA* (D. C. prod. 2. p. 271.) stem erect, rather hoary; leaves with 6 or 7 pairs of oblong, ovate leaflets, which are glabrous above, but rather hoary beneath from adpressed bristly hairs.  $\gamma$ . H. Native of Daburia, in salt fields, about Lake Tarei. Phæa *salsula*, Pall. itin. 1. t. 9. f. 1 and 2. ed. gall. append. no. 387. t. 88. f. 1 and 2. Lin. fil. suppl. 336. *Colutea Daburica*, Spreng. syst. 3. p. 242. Flowers very red, almost like those of a species of *Lathyrus*.

*Salt Sphærophysa.* Pl.  $\frac{1}{2}$  to 1 foot.

2 *S. CASPICA* (D. C. prod. 2. p. 271.) stems erect, and are as well as the leaves clothed with adpressed pubescence; leaves with 8 pairs of oval, obtuse, mucronate leaflets.  $\gamma$ . H. Native of the plains between Caucasus and the Caspian Sea. *Colutea Caspica*, Bieb. fl. taur. suppl. 1429. Phæa *salsula*, Bieb. casp. 210. Flowers of a dirty pale-purple colour, and marked with more obscure veins. Perhaps only a variety of the first, according to Steven in litt.

*Caspian Sphærophysa.* Fl. Jul. Aug. Clt. 1818. Pl.  $1\frac{1}{2}$  ft.

*Cult.* The species of this genus succeed in common garden soil, or in pots in a mixture of loam and peat; they are very difficult to preserve in gardens on account of the want of that saline principle in which they grow in the places of their natural growth; and in order to preserve them in the gardens, they require to be watered with salted water occasionally. They are increased by seeds, which occasionally ripen in this country.

CXXVI. SWAINSONIA (in honour of Isaac Swainson, F.R.S. F.L.S. who was a great cultivator of plants about the end of the last century. His garden was at Twickenham in Middlesex. The present superintendent of the Cambridge Botanical Garden, Mr. Biggs, was gardener to Mr. Swainson for many years). Salisb. par. no. 28. R. Br. in hort. kew. ed. 2. vol. 4. p. 326. D. C. prod. 2. p. 271. *Loxidium*, Vent.

LIN. SYST. *Diadelphia*, *Decandria*. Calyx bicallous at the base, 5-toothed. Vexillum flat, large. Stamens diadelphous, Carina obtuse, rather longer than the wings. Stigma terminal. Style bearded longitudinally behind but beardless in front. Legume turgid.—Suffrutescent plants, natives of New Holland, having the habit of *Lessertia*, with impari-pinnate leaves, and elongated, axillary racemes of purple or scarlet flowers.

1 *S. GALEGIFOLIA* (R. Br. in hort. kew. ed. 2. vol. 4. p. 326.) suffrutescent, erect; leaves with 9 pairs of oval, somewhat emarginate leaflets; pedicel of legume evidently longer than the permanent filaments.  $\gamma$ . G. Native of New South Wales. *Vicia galegifolia*, Andr. bot. rep. t. 319. *Colutea galegifolia*, Sims, bot. mag. t. 792. Flowers red.

*Galea-leaved Swainsonia.* Fl. June, Aug. Clt. 1800. Sh. 1 to 3 feet.

2 *S. ALBIFLORA*; stem shrubby, erect; leaves with 5-11 pairs of oval obtuse leaflets; racemes longer than the leaves.  $\gamma$ . G.

Native of New Holland. *S. galegifolia*, var. *albiflora*, Lindl. bot. reg. 994. Flowers white.

*White-flowered Swainsonia*. Fl. July, Aug. Clt. 1826. Sh. 1 to 3 feet.

3 *S. coronillæfolia* (Salish. par. no. 28.) suffruticose, erect; leaves with 9-11 pairs of obovate, emarginate leaflets; pedicel of legume a little shorter than the permanent filaments.  $\frac{1}{2}$  G. Native of New South Wales. Sims, bot. mag. 1725. Leaves smaller than those of the other species. Flowers of a violaceous purple colour.

*Coronilla-leaved Swainsonia*. Fl. June, Aug. Clt. 1802. Shrub 1 to 3 feet.

4 *S. lessertiiæfolia* (D. C. in ann. sc. nat. 4. p. 99.) stems rather herbaceous, erect; leaves with 6-7 pairs of elliptic-oblong, rather obtuse leaflets; pedicel of legume very short.  $\frac{1}{2}$  G. Native of New Holland, on the southern coast. *S. astragalifolia*, Hortul. Peduncles 2 or 3 times longer than the leaves. Stipules ovate, obtuse. Younger leaves clothed with hoary pubescence, adult ones almost glabrous. Flowers red, smaller than those of the other species.

*Lessertia-leaved Swainsonia*. Fl. July, Aug. Clt. 1824. Sh. 1 to 2 feet.

*Cult.* All the species are elegant, delicate shrubs, which deserve to be cultivated in every greenhouse. They grow freely in a mixture of loam, peat, and sand, and young cuttings root readily if planted in a pot of sand, with a bell-glass placed over them, or they may be raised from seeds, which are often produced in gardens.

CXXVII. LESSE'RTIA (in honour of Benjamin Delessert, of Paris, a great promoter of botany, author of *Icones*, in 2 vols. folio, Paris, 1823). D. C. astrag. p. 37. prod. 2. p. 271. R. Br. in hort. kew. ed. 2. vol. 4. p. 327.—Sulitra, Medic and Mœnch.

LIN. SYST. *Diadelphia*, *Decandria*. Calyx half 5-cleft. Vexillum flat. Keel obtuse. Stamens diadelphous. Stigma capitate. Style bearded transversely in front at the apex, but beardless behind. Legume scarious, indehiscent, compressed, or inflated, the uppermost side the shortest.—Herbs, rarely subshrubs, natives of the Cape of Good Hope, with impari-pinnate leaves, and axillary peduncles bearing racemes of purplish nodding flowers.

1 *L. annua* (D. C. l. c. prod. 2. p. 271.) leaves with 8-10 pairs of leaflets, which are glabrous above, the lower ones oblong and emarginate and the upper ones linear; racemes longer than the leaves; calyxes bibracteate, beset with black hairs.  $\odot$ . G. Hook. exot. fl. t. 84. *Colutea herbacea*, Lin. spec. 1045. *Colutea annua*, Murr. comm. goet. 5. p. 40. t. 7. f. 12 and 13.—Comm. hort. amst. 2. t. 44. Flowers red.

*Annual Lessertia*. Fl. June, July. Clt. 1731. Pl. 1 foot.

2 *L. diffusa* (R. Br. in hort. kew. ed. 2. vol. 4. p. 327.) stems diffuse, herbaceous; leaves with 8-10 pairs of elliptic-linear, rather emarginate leaflets, which are rather hairy on both surfaces; racemes pedunculate, longer than the leaves; calyxes bractless, beset with black hairs.  $\odot$ . G. *Galèga dubia*, Jacq. icon. rar. 3. p. 576. Flowers purple.

*Diffuse Lessertia*. Fl. July, Aug. Clt. 1792. Pl. prostrate.

3 *L. perennans* (D. C. astrag. p. 37.) stem herbaceous, erect; leaflets oval, silky beneath, pubescent above; calyxes bractless; racemes longer than the leaves, loose, elongated, pedunculate; flowers numerous, drooping.  $\frac{1}{2}$  G. *Colutea perennans*, Jacq. hort. vind. 3. t. 3. Murr. comm. goet. nov. 5. p. 38. t. 7. *Colutea fistulosa*, Hortul. Legume stipitate, compressed. Corolla with a pale base and red or purple apex.

*Perennial Lessertia*. Fl. Aug. Clt. 1776. Pl. 1 foot.

4 *L. pulchra* (Sims, bot. mag. 2064.) stem erect, suffrutescent; leaves with 7 pairs of ovate, acute, smoothish leaflets; racemes pedunculate, somewhat capitate, longer than the leaves; flowers secund.  $\frac{1}{2}$  G. Flowers red or purplish. Legume unknown.

*Fair Lessertia*. Fl. May, July. Clt. 1817. Shrub  $1\frac{1}{2}$  foot.

5 *L. macrostachya* (D. C. in ann. sc. nat. 4. p. 100.) stem erectish, suffruticose at the base; leaves with 4-6 pairs of elliptic-oblong, obtuse leaflets, which are rather pubescent on both surfaces, the terminal leaflet is longest; racemes pedunculate, loose-flowered, 2 or 3 times longer than the leaves.  $\frac{1}{2}$  G. Burch. cat. geogr. afr. aust. 2356. Flowers red or purple. Young legumes compressed, pendulous, few-seeded.

*Long-spiked Lessertia*. Shrub 1 to 2 feet.

6 *L. brachystachya* (D. C. legum. mem. vi. prod. 2. p. 272.) stem erect, suffruticose at the base; leaves with 6-8 pairs of linear-oblong, obtuse leaflets, which are rather pubescent beneath, the terminal leaflet longer than the others; racemes much shorter than the leaves; legumes oblong, straight, pendulous, 10-seeded.  $\frac{1}{2}$  G. Burch. cat. geogr. afr. austr. no. 3353. Flowers red or purplish. Legumes secund, membranous, pubescent, about an inch long, each standing on a short stipe.

*Short-spiked Lessertia*. Fl. June, Aug. Clt. 1826. Sh. 1 ft.

7 *L. falciformis* (D. C. legum. mem. vi. t. 46.) stem erect; leaves with 8 pairs of elliptic-oblong, obtuse leaflets, which are pubescent beneath; racemes 3-4-flowered, one half shorter than the leaves; legume oblong, falcately curved, 10-seeded.  $\frac{1}{2}$  ? G. Flowers purple or red. Legumes like those of the preceding species, but falcate, therefore the species is intermediate between *L. brachystachya* and *L. annularis*.

*Falciform-podded Lessertia*. Fl. June, Aug. Clt. 1826. Shrub 1 foot.

8 *L. fruticosa* (Lindl. bot. reg. 970.) stem erect, suffruticose; leaves with 5-6 pairs of linear obtuse leaflets; stem, petioles, and peduncles, as well as the branches, pilose; racemes erect, loose-flowered, a little longer than the leaves; legumes oblong, sessile, 4-seeded.  $\frac{1}{2}$  G. Flowers purple.

*Shrubby Lessertia*. Fl. Jul. Aug. Clt. 1826. Sh. 1 to 3 ft.

† *Species not sufficiently known.*

9 *L. annularis* (Burch. cat. no. 1597. voy. 1. p. 304.) stem erect, a span high; legume flat, contracted into the form of a ring.  $\odot$ . ? G. Flowers red or purple.

*Ring-podded Lessertia*. Fl. June, Aug. Clt. 1816. Pl.  $\frac{1}{2}$  ft.

10 *L. rigida* (D. C. prod. 2. p. 272.) stem shrubby, erect; leaves with 5-6 pairs of lanceolate, acute, glabrous leaflets; racemes very long.  $\frac{1}{2}$  G. *Colutea rigida*, Thunb. fl. cap. edit. Schult. p. 603. Legume ovate, compressed, tumid, glabrous. Flowers yellowish. Compare it with *L. macrostachya*.

*Stiff Lessertia*. Shrub  $1\frac{1}{2}$  foot.

11 *L. pubescens* (D. C. prod. 2. p. 272.) stem herbaceous, erect, pubescent; leaves with many pairs of lanceolate, villous leaflets; racemes oblong; calyxes hairy.  $\odot$ . ? G. *Colutea pubescens*, Thunb. l. c. Legume oblong, glabrous, hardly an inch long. Corolla rufescent.

*Pubescent Lessertia*. Pl. 1 foot.

12 *L. prostrata* (D. C. prod. 2. p. 272.) stem herbaceous, diffuse, pubescent; leaves with many pairs of lanceolate, acute, villous leaflets; peduncles usually 2-flowered.  $\odot$ . ? G. *Colutea prostrata*, Thunb. l. c. Legume ovate, pubescent, hardly stipitate.

*Prostrate Lessertia*. Pl. prostrate.

13 *L. excisa* (D. C. prod. l. c.) stem herbaceous, decumbent, pubescent; leaves with many pairs of obovate, cut leaflets; racemes usually terminal.  $\odot$ . ? G. *Colutea excisa*,

Thunb. l. c. Corolla blood-coloured. Legume ovate-acinaciform, slightly pubescent.

*Cut-leaffletted Lessertia.* Pl. decumbent.

14 *L. obtusata* (D. C. l. c.) stem frutescent, erect; leaves with many pairs of linear, obtuse, hairy leaflets; racemes nearly terminal.  $\frac{1}{2}$  G. Calyxes clothed with cinereous pubescence. Legume glabrous. *Colutea obtusata*, Thunb. l. c.

*Obtuse-leaffletted Lessertia.* Shrub 1 to 2 feet.

15 *L. linearis* (D. C. l. c.) stem herbaceous, erect, glabrous; leaves with many pairs of linear, acute leaflets; racemes elongated.  $\odot$ ? G. *Colutea linearis*, Thunb. l. c. Legume ovate, glabrous, not half an inch long.

*Linear-leaffletted Lessertia.* Pl. 1 ft.

16 *L. vesicaria* (D. C. l. c.) stem herbaceous, decumbent, villous; leaves with many pairs of ovate, mucronate leaflets; legumes globose, bladdery, dehiscent at the apex.  $\odot$ ? G. *Colutea versicaria*, Thunb. l. c.

*Bladdery-podded Lessertia.* Pl. decumbent.

17 *L. tomentosa* (D. C. l. c.) stem herbaceous, very short, and tomentose; leaves with 6-7 pairs of ovate, hoary leaflets; racemes ovate; calyxes hairy.  $\odot$ ? G. *Colutea tomentosa*, Thunb. l. c. Legume ovate, inflated, hairy.

*Tomentose Lessertia.* Pl.  $\frac{1}{2}$  foot.

18 *L. procumbens* (D. C. l. c.) stem suffrutescent, procumbent; leaves with 12-14 pairs of ovate-linear, tomentose leaflets; peduncles very long, 3-4-flowered.  $\frac{1}{2}$  G. Flowers purple. Legume compressed, falcate. *Colutea procumbens*, Thunb. l. c.

*Procumbent Lessertia.* Fl. June, July. Clt. 1753. Pl. proc.

*Cult.* This is a genus of delicate little shrubs and herbs. Their culture and propagation is the same as for *Swainsonia*. The seeds of the annual kinds should be sown in pots early in the spring, and placed in the greenhouse, where the plants will soon rise, and when they have grown 2 inches high, they should be planted separately in small pots, and shifted into larger ones as they grow.

CXXVIII. SUTHERLANDIA (in honour of James Sutherland, one of the first superintendants of the Royal Botanical Garden at Edinburgh, and author of a catalogue of the plants grown in that garden in his time). R. Br. hort. kew. ed. 2. vol. 4. p. 327. D. C. prod. 2. p. 273.

LIN. SYST. *Diadelphina*, *Decandria*. Calyx 5-toothed, nearly equal. Vexillum with replicate sides, short. Keel oblong. Wings very short. Stamens diadelphous. Stigma terminal. Style bearded lengthwise behind and transversely at the apex. Legume inflated, scarious.—Cape shrubs, with impari-pinnate leaves and axillary racemes of large scarlet flowers.

1 *S. frutescens* (R. Br. l. c.) leaflets elliptic-oblong, and are as well as the calyxes and branches canescent from adpressed pubescence; peduncles few-flowered.  $\frac{1}{2}$  F. *Colutea frutescens*, Lin. spec. 1045. Curt. bot. mag. 181. Burm. cap. prod. 22. Mill. fig. t. 99. A hoary shrub, with large elegant shewy scarlet flowers.

*Frutescent Sutherlandia.* Fl. June, Aug. Clt. 1683. Sh. 2 to 4 feet.

2 *S. microphylla* (Burch. cat. pl. afr. austr. no. 1510. ined. D. C. prod. 2. p. 273.) leaflets oblong-linear, and are, as well as the branches and calyxes, pubescent; peduncles 2-3-flowered.  $\frac{1}{2}$  G. Flowers purple or scarlet.

*Small-leaved Sutherlandia.* Shrub 2 to 3 feet.

*Cult.* The species of *Sutherlandia* are very shewy when in flower, being profusely clothed with large scarlet pea blossoms. A mixture of loam and peat is the best soil for them, and they may be propagated by young cuttings in sand under a bell-glass, but the easiest and best method is by seeds, which ripen plentifully in the gardens. The *S. frutescens* will stand the

winter if planted in a sheltered situation, protected by a mat in severe weather.

SUBTRIBE V. *ASTRAGALEÆ* (plants agreeing with *Astragalus*, in the legumes being transversely 2-celled, in consequence of the upper suture being bent in so much). Adans. fam. l. c. D. C. prod. 2. p. 273. Legume (f. 39. c. f. 40. c.) longitudinally 2-celled or half 2-celled, in consequence of the upper suture being bent in so much. Stamens diadelphous, with 9 joined and one free. Stems herbaceous or suffrutescent. Leaves pinnate; primordial ones alternate.

CXXIX. PHACA (from *φαγω*, *phago*, to eat, or *φακη*, *phace*, a lentil; a name adopted from Dioscorides for this genus). Lin. gen. no. 891. D. C. astrag. no. 111. R. Br. in hort. kew. ed. 2. vol. 4. p. 358. D. C. prod. 2. p. 273.

LIN. SYST. *Diadelphina*, *Decandria*. Calyx 5-toothed (f. 39. a.), 2 superior teeth more remote than the others. Carina obtuse (f. 39. b.). Stamens diadelphous. Style beardless. Stigma capitate. Legume rather turgid (f. 39. c.), 1-celled, having the superior suture tumid.—Herbs, with impari-pinnate leaves, axillary pedunculate racemes of flowers. The mature legume usually resupinate.

\* *Flowers white or cream-coloured.*

1 *P. bœrica* (Lin. spec. 1064.) stem erect, pilose; stipulas lanceolate; leaves with 7-10 pairs of ovate mucronate leaflets, which are villous beneath; keel longer than the vexillum; legume oblong, boat-formed, compressed.  $\frac{1}{2}$  H. Native of Spain, Portugal, and Mauritania. D. C. astr. no. 1. *Astragalus Lusitanicus*, Lam. dict. 1. p. 312.—Moris. oxon. sect. 2. t. 8. f. 1. Flowers white, about the size and shape of those of *Sutherlandia*. The seeds are roasted and ground, and used as a substitute for coffee in Hungary.

*Bœtic Bastard-Vetch.* Fl. Sept. Clt. 1640. Pl. 1 to 2 feet.

2 *P. frigida* (Lin. fl. succ. 2. p. 657.) stem erect, glabrous, almost undivided; stipulas ovate-oblong, large, leafy; leaves with 4-6 pairs of ovate-oblong, rather ciliated leaflets; legumes stipitate, oblong, inflated, rather hairy.  $\frac{1}{2}$  H. Native of Siberia, Altai, Lapland, Norway, Sweden, Austria, Switzerland, and Savoy, on the frigid parts of mountains. *P. alpina*, Lin. spec. 1064. Oed. fl. dan. t. 856. Jacq. austr. 166. *P. ochreata*, Crantz. austr. 419. t. 2. f. 2. Flowers cream-coloured.

*Frigid Bastard-Vetch.* Fl. July. Clt. 1795. Pl. 1 foot.

3 *P. alpina* (Jacq. icon. rar. 1. t. 151.) stem erect, branched, pubescent; stipulas linear-lanceolate; leaves with 9-12 pairs of oblong, obtuse, pubescent leaflets; legumes compressed, half ovate, acute, smoothish.  $\frac{1}{2}$  H. Native of the Alps of Europe, the Pyrenees, and of Siberia. D. C. astr. no. 3.—Gmel. sib. 4. t. 14. *Astragalus penduliflorus*, Lam. fl. fr. Flowers yellow.

*Var.  $\beta$ , Dahurica* (Fisch. in litt. 1825.) plant more firm and more erect, and the legume is harder.  $\frac{1}{2}$  H. Native of Dahuria. *P. membranacea*, Fisch. in litt. 1822.

*Alpine Bastard-Vetch.* Fl. July. Clt. 1759. Pl. 1 foot.

4 *P. triflora* (D. C. astr. no. 7. t. 1.) stem almost erect, pubescent; stipulas acuminate, rather concrete at the base; leaves with 5-6 pairs of ovate, obtuse, pubescent leaflets; peduncles rather shorter than the leaves, few-flowered; legumes

FIG. 39.

semi-elliptic-oblong, turgid, depressed, pubescent. ☉. II. Native of Peru. Flowers 3-6 in a raceme, yellowish. P. Candolleana, H. B. et Kunth, nov. gen. amer. 6. p. 495. t. 586.

*Three-flowered* Bastard-Vetch. Pl.  $\frac{1}{2}$  to 1 foot.

5 P. VILLOSA (Nutt. gen. amer. 2. p. 97.) plant almost stemless, hairy; leaflets oblong-oval, glabrous above; peduncles shorter than the leaves, or equal in length to them; spike few-flowered, somewhat capitate; legume clothed with canescent villi, terete, and cymbiform. ☿. H. Native of Carolina and Georgia, in sandy pine-woods, and on hills about the Missouri, as well as of China. Astragalus villosus, Michx. fl. bor. amer. 2. p. 67. Flowers cream-coloured.

*Villos* Bastard-Vetch. Pl.  $\frac{1}{2}$  foot.

6 P. CÆSPITOSA (Nutt. gen. amer. 2. p. 98.) stemless, tufted, and clothed with canescent villi; leaves with 3-5 leaflets, which are disposed in a digitate manner, and are acute at both ends; flowers aggregate, without a scape; stipulas membranous, without any regular or decided form; legume pubescent, sub-cylindrical. ☿. II. Native of North America, on hills at the confluence of the rivers Sawnee and Missouri. Astragalus triphyllus, Pursh. fl. amer. sept. 2. p. 740. but not of Pall. Flowers cream-coloured. Leaflets lanceolate.

*Tufted* Bastard-Vetch. Pl.  $\frac{1}{2}$  to  $\frac{3}{4}$  foot.

7 P. ARENARIA (Pall. it. 4. t. 19. f. 3-4. ed. gall. append. no. 388. t. 91. f. 3-4.) stems spreading, ascending, glabrous; stipulas membranous, concrete; leaves with 5-6 pairs of linear-lanceolate acute leaflets, having the terminal one sessile; peduncles about the length of the leaves; legumes inflated, glabrous. Native of Siberia, about the Uda Selenga and the Baikal. Flowers cream-coloured. Pallas's plate exhibits 2 plants under this name, the one with ovate, and the other with globose legumes; the first belongs to *Phaca*, but the second is referrible to *Sphærosphyra*.

*Sand* Bastard-Vetch. Fl. July, Aug. Clt. 1796. Pl. ascending.

\* \* Flowers purplish, sometimes painted with white and violet.

8 P. MOLLISS (H. B. et Kunth, nov. gen. amer. 6. p. 496. t. 585.) stems short, diffuse, clothed with soft tomentum; leaves with 7-8 pairs of oblong, obtuse, silky, tomentose leaflets; racemes on long peduncles, of a cylindrical-oblong form, dense, and many-flowered; calyxes soft and silky. ☿. G. Native of Mexico, in valleys near Casave. Flowers purplish. The legume being unknown the genus is doubtful.

*Soft* Bastard-Vetch. Pl. diffusely procumbent.

9 P. DENSIFOLIA (Smith in Rees' cyclop. 27. no. 9.) stems decumbent, branched, and smooth; stipulas ovate, concave; leaves with 16-20 pairs of obovate emarginate leaflets, which are villous beneath; peduncles length of leaves; racemes dense, oblong; legumes ovate, turgid, almost smooth. ☿. II. Native of California. Flowers drooping, reddish.

*Dense-leaved* Bastard-Vetch. Pl. decumbent.

10 P. GLABRA (Clap. bull. philom. no. 61. D. C. astr. no. 4.) stem branched, prostrate, glabrous; stipulas broad, ovate; leaves with 6-7 pairs of oval-oblong, acute, glabrous leaflets; peduncles longer than the leaves; wings of flowers entire; legume stipitate, turgid, glabrous. ☿. II. Native of Provence, on the Lower Alps. Corolla white, tipped, and margined with violet.

*Glabrous* Bastard-Vetch. Fl. July. Clt. 1818. Pl. prostrate.

11 P. GERARDI (Vill. dauph. 3. p. 474.) stem diffuse, branched, prostrate; leaves and stipulas clothed with velvety pubescence, and ciliated; peduncles rather longer than the leaves; wings of flower oblong, and rounded at the apex; legumes ovate, rather velvety. ☿. H. Native of Dauphiny. Flowers white, having the carina tipped with purple.

*Gerardi's* Bastard-Vetch. Fl. July. Pl. prostrate.

12 P. AUSTRALIS (Lin. mant. 103. and 448.) stem branched, tufted, ascending, glabrous; stipulas ovate; leaves with 6-8 pairs of linear-lanceolate, glabrous leaflets, having the terminal one sessile; peduncles longer than the leaves; wings bifid at the apex, longer than the keel; legumes stipitate, ovoid, at length glabrous. ☿. H. Native of the alps of Europe and the Pyrenees. Jacq. misc. 2. t. 3. D. C. astr. no. 8. Lodd. bot. cab. 490. P. Halleri, Vill. dauph. 4. p. 473. Colutea australis, Lam. dict. 1. p. 354. Corolla pale, having the keel tipped with purple.

*Var. β, Altaica* (Fisch. in litt.) stem almost erect. ☿. H. Native of the Altaian mountains. Perhaps a proper species.

*Southern* Bastard-Vetch. Fl. May, July. Clt. 1779. Pl. asc.

13 P. ASTRAGALINA (D. C. astr. no. 9.) stems short, procumbent, smoothish; stipulas ovate, acute; leaves with 9-10 pairs of ovate leaflets, which are beset with adpressed pubescence on both surfaces; peduncles about the length of the leaves; wings entire, shorter than the keel; legumes stipitate, pendulous, when young beset with black hairs. ☿. H. Native of the alps of Switzerland, Savoy, Austria, Pyrenees, and on the Altaian mountains in Siberia. In July, 1831, this plant was found in plenty by Dr. Graham and others in Scotland on the Clova mountains, north of Forfar in Angushire. Astragalus alpinus, var. Lin. spec. 1070. Oed. fl. dan. 1. t. 51.—Lodd. bot. cab. 429. Flowers white, tipped with lilac. Root creeping.

*Astragalus-like* Bastard-Vetch. Fl. May, July. Scotland. Pl. procumbent.

14 P. LAPTONICA (D. C. prod. 2. p. 374.) stems elongated, ascending, glabrous; stipulas ovate, acute; leaves with 9 pairs of oval leaflets, which are glabrous above, and clothed with adpressed pubescence beneath; peduncles longer than the leaves; wings entire, longer than the keel; legumes stipitate, pendulous, half-bilocular, when young beset with black hairs. ☿. II. Native of the alps of Lapland and Sweden, and of Dahuria near Ochotsk. Astragalus alpinus, var. Lin. l. c. P. Lappónica, Wahlb. Flowers purplish. This I fear is not distinct from the last.

*Lapland* Bastard-Vetch. Fl. June, Jul. Clt. 1816. Pl. 1 ft.

15 P. OROBOIDES (D. C. prod. 2. p. 274.) stem elongated, ascending, glabrous; stipulas ovate, acute; leaves with 5-7 pairs of oval-oblong leaflets, which are glabrous above and hardly pubescent beneath; peduncles longer than the leaves; racemes elongated; wings entire, longer than the keel; legumes sessile, semi-bilocular, pendulous, when young beset with black hairs. ☿. II. Native of the alps of Norway and Lapland. Astragalus oroboides, Horn. in fl. dan. 8. t. 1396. Astrag. leontinus, Wahl. fl. lap. p. 191. t. 12. f. 4. but not of Jacq. Flowers purplish.

*Oroboides-like* Bastard-Vetch. Fl. Ju. Jul. Clt. 1820. Pl. asc.

16 P. BRACHYTROPIS (Stev. mem. soc. hist. nat. mosc. 4. p. 53.) stems ascending, smoothish; stipulas broad, short, and bluntish; leaves with 6 pairs of oblong-elliptic leaflets, which are smoothish above and rather pubescent beneath; peduncles longer than the leaves; racemes short; wings entire, longer than the keel; legumes on short pedicels, when young hairy. ☿. H. Native of Eastern Caucasus, Bieb. suppl. 485. Flowers purplish.

*Short-keeled* Bastard-Vetch. Pl. ascending.

† A species not sufficiently known.

17 P. TRIFOLIATA (Lin. mant. 270.) stem branched, filiform; stipulas lanceolate; leaves trifoliate; leaflets oval, obtuse; legumes semi-orbicular. ☉. II. Native of China. Smith, in Rees' cycl. Perhaps a species of *Glycine* or *Flemingia*, according to Smith. Perhaps a species of *Crotalaria*, according to the specimen in Delessert's herbarium at Paris.

*Trifoliolate-leaved Bastard Vetch.* Pl. procumbent.

*Cult.* Most of the species grow well in the open borders in common garden soil; the dwarfer kinds are well adapted for ornamenting rock-work, but the rarer and more tender species should be grown in pots in a mixture of sand, peat, and loam. They are all increased by dividing the plants at the root, or by seeds, which generally ripen in this country, which last is by far the best method. The seeds of the annual kinds only require to be sown in the open border in spring.

CXXX. OXYTROPIS (from *ὄξυς*, *oxys*, sharp, and *τροπή*, *tropis*, a keel; in reference to the keel of the flower ending in an exserted mucrone on the back at the apex). D. C. astr. no. 4. ed. maj. p. 19. and 53. prod. 2. p. 275.—*Astragalus* species of Lin. and others.

LIN. SYST. *Diadelphia*, *Dicandria*. Calyx 5-toothed (f. 40. a.). Keel of corolla ending in an exserted mucrone on the back at the apex (f. 40. b.). Stamens diadelphous. Legume (f. 40. c.), bilocular, or half bilocular in consequence of the upper suture being bent in so much.—Herbs with impari-pinnate leaves, axillary or radical peduncles, bearing spikes of flowers. There are a number of species with inflated legumes, which would constitute a good section of the genus, but from the fruit of most of the species being but slightly known or altogether unknown, it is at present impossible to separate them, and consequently they are here arranged according to habit.

§ 1. *Acaulis* (from *acaulis*, stemless; in reference to the species contained in this division being without stems). D. C. prod. 2. p. 275. Plants without stems or with very short ones. *Stipulas adnate to the petiole. Leaves with many opposite pairs of leaflets, not verticillate.*

\* *Flowers purplish or white.*

1 O. MONTANA (D. C. astr. no. 1.) plant almost stemless, villous, the hairs on the petioles and scape spreading; leaflets elliptic-lanceolate; scapes a little longer than the leaves; racemes short; bracteas one half shorter than the calyxes; legumes erect, terete-oblong, villous, acuminate by the style, half bilocular. 2. H. Native of Europe, on the mountains. *Astragalus montanus*, Lin. spec. 1070. Jacq. austr. t. 167. Curt. bot. mag. 483. Scop. carn. t. 45. *Phaca montana*, Crantz. austr. 422. Flowers of a bluish-purple colour, almost like those of *Phaca astragalina*. Calyx purplish.

*Mountain Oxytropis.* Fl. July, Aug. Clt. 1581. Pl.  $\frac{1}{2}$  ft.

2 O. MOREALIS (D. C. prod. 2. p. 275.) plant almost stemless, the hairs on the scapes and stipulas spreading and stiff, on the petioles there are but few; leaflets elliptic-lanceolate, glabrous beneath and pilose above; scapes length of leaves; flowers capitate; bracteas length of calyx, which is beset with black stiff hairs. 2. H. Native of Tschuktschor Land, in the Bay of St. Lawrence, and Kotzebue's Sound. Stipulas pale.

*Northern Mountain Milk-vetch.* Pl.  $\frac{1}{2}$  foot.

3 O. CYANÆA (Bieb. fl. taur. suppl. 502.) plant almost stemless, hoary, and pilose; the hairs on the petioles and scapes are adpressed; leaflets elliptic-lanceolate; scapes longer than the leaves; racemes short; bracteas one-half shorter than the calyxes; legumes oblong, ovate, villous, at length spreading. 2. H. Native of Iberia. *Astragalus montanus*, Bieb. fl. taur. 2. p. 197. exclusive of the synonyms. O. montana, Stev. mem. soc. mosc. 4. p. 54. Flowers spreading, blue, larger than those of O. montana, and the keel ending in a longer mucrone.

*Var. β, Albana* (Stev. l. c.) scapes declinate; legumes ovate, pubescent. 2. H. Native of the alps about Chinalug.

*Azure-flowered Mountain Milk-vetch.* Fl. July, Aug. Clt. 1818. Pl.  $\frac{1}{2}$  foot.

4 O. ARGYRÆA (D. C. prod. 2. p. 276.) plant almost stem-

less; stipulas white, membranous, hairy; leaflets elliptic-oblong, clothed with adpressed, silky, silvery down on both surfaces; petioles, scapes, and calyxes beset with spreading villi; scapes twice the length of the leaves; flowers erect, disposed in capitate spikes; bracteas linear, length of calyx. 2. H. Native of the Altaian mountains. Flowers deep-purple. Legumes unknown.

*Silvery Mountain Milk-Vetch.* Pl. 1 foot.

5 O. URALENSIS (D. C. prod. 2. p. 276.) plant stemless, clothed with silky hairs in every part; leaflets ovate, acute; scapes solitary or twin, longer than the leaves; calyx clothed with silky down, as well as the leaflets; heads of flowers round and dense; bracteas oblong, one to each flower; legumes oblong, tumid, pointed, shaggy, erect, bilocular. 2. H. Native of Siberia, on the Ural Mountains, Alps of Austria, Pyrenees, &c. In Scotland on mountains in sandy soil; plentiful near Burnt Island in Fife-shire. *Astragalus Uralensis*, Lin. spec. 1071. Smith, engl. bot. t. 466. Jacq. misc. 1. p. 150. Light. fl. scot. 401. t. 17. Pall. astrag. t. 42. f. A. *Phaca Uralensis*, Wahl. carp. 737. Flowers of a rich bluish-purple colour, rarely white. This is an elegant plant. The Siberian plant is more villous than silky; it may perhaps be a distinct species. The plant is also a native of Arctic America.

*Ural Mountain Milk-Vetch.* Fl. July, Scotland. Pl.  $\frac{1}{2}$  foot.

6 O. CORYLEA (D. C. astr. no. 2.) plant stemless and silky; leaflets lanceolate; scapes nearly twice the length of the leaves; flowers spicate, lower ones drooping a little; legumes ovate, ventricose, almost 1-celled, acuminate, glabrous. 2. H. Native of Siberia, on high mountains about Lake Baikal. *Astragalus coryleus*, Pall. itin. 3. p. 293. *Astr. Baicalensis*, Pall. astrag. p. 64. t. 52.—Gmel. sib. 4. t. 26. f. 2. Flowers blue. Mucrone of keel equal in length to the wings.

*Blue-flowered Mountain Milk-Vetch.* Pl.  $\frac{1}{2}$  foot.

7 O. ARCTICA (R. Br. chl. inelv. p. 20.) plant almost stemless, silky; leaflets opposite and alternate, ovate-oblong; heads sub-umbellate, few-flowered; legumes erect, oblong, and are, as well as the calyxes, clothed with black pubescence. 2. H. Native of Melville Island in the Arctic sea, &c. This species approaches O. Uralensis, but the leaflets are smaller, acute or obtuse, and much more numerous, and the flowers are disposed in umbels, not in spikes.

*Arctic Mountain Milk-Vetch.* Pl.  $\frac{1}{2}$  foot.

8 O. LEUCANTHA (Pers. ench. 2. p. 331.) plant stemless and glabrous; leaflets lanceolate; scapes hardly longer than the leaves, rather pilose; spikes almost globose; bracteas shorter than the calyx; the 2 upper teeth of the calyx shorter, and more distant than the rest. 2. H. Native of Eastern Siberia, among rocks. Flowers white, but according to Pallas's figure they are reddish. Legume unknown.

*White-flowered Mountain Milk-Vetch.* Pl.  $\frac{1}{2}$  foot.

9 O. ARGENTATA (Pers. ench. 2. p. 331.) plant almost stemless; leaflets lanceolate, silvery white on both surfaces; scapes hoary-pubescent, hardly longer than the leaves. 2. H. Native of Siberia, in the Kirghisean Steppe. *Astragalus argentatus*, Pall. astr. p. 60. t. 48. Flowers white, but with a tinge of blue. Legume unknown.

*Silvered Mountain Milk-Vetch.* Pl.  $\frac{1}{2}$  foot.

10 O. AMBIGUA (D. C. astr. no. 4.) plant stemless and hairy or smoothish; leaflets ovate, with rather villous margins; scapes longer than the leaves; spikes of flowers oblong; bracteas lanceolate, and are, as well as the calyxes, hairy; legumes erect, ovate, acuminate, somewhat bilocular. 2. H. Native throughout Siberia. *Astragalus ambiguus*, Pall. astr. p. 54. t. 43.—Gmel. sib. 4. t. 30. Flowers purplish-blue.

*Ambiguous Mountain Milk-Vetch.* Fl. May, July. Clt. 1817. Pl.  $\frac{1}{2}$  foot.

K k

11 *O. FILIFÓRMIS* (D. C. astr. no. 16. exclusive of the synonymes,) plant almost stemless, glabrous; leaflets lanceolate-linear; scapes 2 or 3 times longer than the leaves; flowers spicate, lower ones distant; teeth of calyx short; beak of keel shorter than the wings.  $\mathcal{U}$ . II. Native of Dahuria in deserts, near the river Amoor, and on mount Odon-Tschelon. Flowers small, bluish-purple. Very nearly allied to *O. cærúlea*, but differs in the plant being glabrous, the flowers being one-half smaller, and in the beak of the keel being shorter than the wings.

*Filiform Mountain Milk-Vetch.* Pl.  $\frac{1}{2}$  foot.

12 *O. SETÓSA* (D. C. astr. no. 5.) plant stemless; leaflets lanceolate, glabrous, but pilose on the edges; scapes hardly longer than the leaves, clothed with hoary hairs; heads of flowers ovate-roundish; bracteas pilose, about equal in length to the calyx, which is woolly; calycine teeth unequal, subulate, elongated.  $\mathcal{U}$ . H. Native of Siberia, on the higher Altaian mountains. *Astrágalus setosus*, Pall. astr. p. 5. Flowers purplish.

*Bristly Mountain Milk-Vetch.* Pl.  $\frac{1}{2}$  foot.

13 *O. LAMBERTI* (Pursh, fl. amer. sept. 2. p. 740.) plant stemless, silky and pilose in every part; leaflets lanceolate, acute, rather remote; scape rather longer than the leaves; flowers spicate or capitate; bracteas lanceolate-linear, rather shorter than the silky calyx.  $\mathcal{U}$ . II. Native of North America, on woodless hills about the river Missouri. Sims, bot. mag. 2147. Lindl. bot. reg. t. 1054. *Astrágalus Lamberti*, Spreng. syst. 3. p. 308. Flowers large, blue and white mixed.

*Lambert's Mountain Milk-Vetch.* Fl. Aug. Sept. Clt. 1811. Pl.  $\frac{1}{2}$  to 1 foot.

14 *O. GRANDIFLÓRA* (D. C. astr. no. 6.) plant stemless; leaflets oblong-lanceolate, clothed with adpressed silky down; scapes twice the length of the leaves; flowers disposed in loose spikes; wings obovate, dilated; legumes oblong, membranous, acuminate by the style, pubescent, bilocular.  $\mathcal{U}$ . H. Native of Siberia, especially beyond the Baikal. *Astrágalus grandiflorus*, Pall. astr. p. 57. t. 46. Willd. spec. 3. p. 1311. Flowers large, of a deep rose-colour. Bracteas shorter than the calyx. Vexillum emarginate.

*Var.  $\beta$ , cárnea* (D. C. prod. 2. p. 277.) flowers flesh-coloured, having the vexillum obtuse, not emarginate.  $\mathcal{U}$ . H. Native of Dahuria. *Astrágalus Dahúricus*, Patrin, ined.

*Var.  $\gamma$ , leptóptera* (D. C. l. c.) wings of flower oblong; vexillum obtuse; bracteas shorter than the calyx.  $\mathcal{U}$ . H. Native of Siberia, at Nerstinsky Savod near Doroninsk. *O. grandiflora*, Fisch. in litt. Flowers bluish-purple, not rose-coloured. Perhaps a proper species, or the same as *O. Lamberti*.

*Great-flowered Mountain Milk-Vetch.* Fl. June, Aug. Clt. 1818. Pl.  $\frac{1}{2}$  foot.

15 *O. CÁNDICANS* (D. C. astr. no. 7.) plant stemless, canescent; leaflets ovate-lanceolate, pubescent; scapes twice the length of the leaves; spikes ovate-oblong; bracteas length of calyx; legumes oblong-linear, erect, half-bilocular, hardly pubescent, ending each in a long inflexed acumen.  $\mathcal{U}$ . II. Native of Eastern Siberia, at the river Lena. *Astrágalus cándicans*, Pall. astr. p. 61. t. 49. Flowers very pale blue.

*White-leaved Mountain Milk-Vetch.* Pl.  $\frac{1}{2}$  foot.

16 *O. CAUDÁTA* (D. C. astr. no. 8.) plant stemless; leaflets oblong, acute, pubescent beneath, and almost glabrous above; scapes erect, twice the length of the leaves; spikes of flowers oblong, dense; bracteas shorter than the calyx, which is cylindrical.  $\mathcal{U}$ . H. Native of Siberia, on the Altaian mountains. *Astrágalus spicatus*, Pall. itin. 2. append. no. 118. t. 10. ed. gall. append. no. 741. t. 84. *Astr. caudatus*, Pall. astr. p. 62. t. 50. Flowers purple. Legume half bilocular.

*Tailed-legumed Mountain Milk-Vetch.* Pl.  $\frac{1}{2}$  foot.

17 *O. SONGÁRICA* (D. C. astr. no. 9.) plant stemless; leaflets

lanceolate, silky; scapes erect, twice the length of the leaves; flowers distant, in spikes, the lower ones almost opposite; bracteas shorter than the calyx.  $\mathcal{U}$ . II. Native of Siberia, in elevated fields at the Altaian promontory. *Astrágalus Songáricus*, Pall. astr. p. 63. t. 51. Flowers violaceous. Legume ovate, acute, pubescent.

*Songarian Mountain Milk-Vetch.* Fl. June, July. Clt. 1824. Pl.  $\frac{1}{2}$  foot.

18 *O. SYLVÁTICA* (D. C. astr. no. 18.) plant stemless; leaflets oval, acute, clothed with silky down; scapes longer than the leaves; spikes ovate, dense; bracteas longer than the calyx; legumes inflated, membranous, clothed with brown pili.  $\mathcal{U}$ . H. Native of Dahuria and Siberia, on the Altaian mountains in pine woods, and on their margins. *Phaca sylvatica*, Pall. itin. ed. gall. append. no. 381. t. 86. f. 1. *Astrágalus*, Willd. spec. 3. p. 1300. *Astr. sylvicolus*, Pall. astr. p. 95. t. 78. Flowers purplish. There is a variety of this species having 3 or 4 leaflets in a whorl.

*Wood Mountain Milk-Vetch.* Pl.  $\frac{1}{2}$  foot.

19 *O. LONGIRÓSTRA* (D. C. astr. no. 17. t. 5.) plant stemless, and rather silky; leaflets linear-oblong, acuminate; scapes twice the length of the leaves; spikes ovate; bracteas shorter than the calyx; keel of flower furnished with a long mucronate acumen.  $\mathcal{U}$ . H. Native of Siberia, at Lake Baikal, in the fissures of rocks. Flowers purplish. *O. Gmelini*, Fisch. ex Steven.

*Long-beaked-keeled Mountain Milk-Vetch.* Fl. June, July. Clt. 1820. Pl.  $\frac{1}{2}$  foot.

20 *O. BREVIRÓSTRA* (D. C. astr. no. 19. t. 6.) plant almost stemless; leaflets 23-29, lanceolate, glabrous; scapes hairy, about equal in length to the leaves; spikes ovate, dense; bracteas about equal in length to the calyx; legumes ovate, inflated, almost 1-celled, apiculated by the style, and are, as well as the calyxes, beset with black pubescence.  $\mathcal{U}$ . II. Native of Siberia, on the Altaian mountains, and in pine woods. *Astrágalus Altaicus*, Pall. astr. p. 56. t. 45. *O. Altaica*, Pers. *Stipulas* large, membranous, joined together. Flowers bluish-purple.

*Short-beaked Mountain Milk-Vetch.* Fl. July, Sept. Clt. 1802. Pl.  $\frac{1}{2}$  foot.

21 *O. LEPTOPHYLLA* (D. C. astr. no. 12.) plant stemless, glabrous; leaflets 9-13, linear-filiform; scapes reclinate, length of leaves; flowers few, almost capitate; bracteas shorter than the calyx, which is hairy; legume inflated, membranous, almost 1-celled, pubescent.  $\mathcal{U}$ . II. Native of Siberia, on high plains between the rivers Onon and Argun. Flowers of a deep rose-colour. *Astrágalus leptophyllus*, Pall. astr. p. 83. t. 66. f. A. but not of Desf. Gmel. sib. 4. t. 24. B.

*Slender-leaved Mountain Milk-Vetch.* Fl. July, Aug. Clt. 1818. Pl.  $\frac{1}{2}$  foot.

22 *O. CÆSPITÓSA* (Pers. ench. 2. p. 333.) plant stemless; leaflets from 13-15 in number, oblong, glabrous; scapes bearing about 5 flowers, about equal in length to the leaves; bracteas shorter than the calyx, which is villous; legumes inflated, ovate, acuminate, pubescently-tomentose, almost 1-celled.  $\mathcal{U}$ . H. Native of Dahuria, on rocks and among gravel. *Astrágalus cæspitosus*, Pall. astr. p. 70. t. 57. *Astr. vesicarius*, Pall. itin. but not of Linnæus. *O. physodes* var. *glabra*, D. C. astr. no. 14. f. 1. Flowers purple.

*Tufted Mountain Milk-Vetch.* Fl.  $\frac{1}{2}$  foot.

23 *O. AMPULLÁTA* (Pers. ench. 2. p. 333.) plant stemless; leaflets from 7-13 in number, lanceolate, and silky; scapes usually bearing about 3 flowers each, equal in length to the leaves; bracteas shorter than the calyx; legumes inflated, ovate-globose, tomentose, almost 1-celled.  $\mathcal{U}$ . H. Native of Siberia, on rocks at the river Yenesee, and about the Baikal. *Astrágalus ampullatus*, Pall. astr. p. 69. t. 56. f. B. *O. physodes* var. *villósa*, D. C. astr. no. 14. t. 2. f. 2.

*Cruet-shaped-podded Mountain Milk-Vetch.* Pl.  $\frac{1}{2}$  foot.

24 *O. NIGRESCENS* (Fisch. in litt. D. C. prod. 2. p. 278.) plant almost stemless, having numerous procumbent scapes; leaflets 7-11 in number, elliptic, acutish, villous; stipulas and calyxes beset with black hairs; peduncles 2-flowered, length of leaves; legumes oblong, inflated, pubescent, 1-celled. (Pall.) *U. H.* Native of the north-east of Siberia between the Aldan and the ocean, and in the island of St. Lawrence. Flowers bluish-purple, rather large; the keel furnished with a small mucrone, which is hardly evident. *Astragalus nigrescens*, Pall. astr. p. 65. t. 53.

*Blackish-haired Mountain Milk-Vetch.* Pl. procumbent.

25 *O. TRIPHYLLA* (Pers. ench. 2. p. 333.) plant almost stemless; leaflets 3, lanceolate, glabrous, ciliated; scape longer than the leaves, bearing 2-3 flowers at its apex; calyx very hairy. *U. H.* Native of Siberia, on islands in Lake Baikal, and of Dahuria on a granite hill between Ozeri and Kachira. *Astragalus triphyllus*, Pall. astr. p. 68. t. 56. f. A. but not of Pursh. Leaves sometimes furnished only with one leaflet. Flowers large, purple.

*Three-leafletted Mountain Milk-Vetch.* Pl.  $\frac{1}{2}$  foot.

\* \* *Flowers cream-coloured.*

26 *O. CAMPÉSTRIS* (D. C. astr. no. 10.) plant stemless; leaflets many pairs, lanceolate, acute, hoary, and rather hairy; scapes hairy, about equal in length to the leaves; spikes ovate-oblong, dense-flowered; flowers erect; bracteas a little shorter than the calyx, which is hairy; legumes ovate, inflated, erect, hairy, half-bilocular. *U. H.* Native of Europe, on the Alps. In Scotland upon a high rock on one of the mountains at the head of Clova, Angus-shire, near the White-water, in great abundance. *Astragalus campéstris*, Lin. spec. 102. Smith, engl. bot. vol. 36. 2522. *Astr. sordidus*, Willd. spec. 1313. with erroneous remarks. *A. sordidus*, Pers. ench. 2. p. 333. *Astr. Uralensis*, Oed. fl. dan. 1041. *Phaca campéstris*, Wahl.—Hall. helv. t. 13.—Scheuchz. trav. alp. 4. p. 330. with a figure. In size and habit much like *O. Uralensis*, but the leaflets are narrower, more numerous, much less silky, being only besprinkled with shining hairs, and sometimes quite smooth, except on the mid-rib. Flowers cream-coloured, the keel and wings tinged with purple.

FIG. 40.

*Field Mountain Milk-Vetch.* Fl. July, Aug. Scotland. Pl.  $\frac{1}{2}$  to  $\frac{3}{4}$  foot.

27 *O. SULPHUREA* (Fisch. in litt.) plant stemless; leaflets from 37-41 in number, lanceolate, when young clothed with adpressed silky pubescence, at length only besprinkled with a few hairs; scape a little longer than the leaves; spikes capitate; flowers spreading; bracteas about equal in length to the calyx; legume hairy? *U. H.* Native of Siberia, on the Altaian mountains at the metal mines. *O. campéstris*  $\gamma$  *sulphurea*, D. C. prod. 2. p. 278. Flowers cream-coloured. This species is very like the European *O. campéstris*, but differs in the leaflets being more numerous, and in the flowers being larger.

*Sulphur-coloured-flowered Mountain Milk-Vetch.* Fl. July. Clt. 1820. Pl.  $\frac{1}{2}$  foot.

28 *O. VISCOSA* (Vill. dauph. 3. p. 469. t. 43.) plant stemless; leaves with about 20 pairs of linear, acute, rather clammy leaflets; scapes and leaves erect; flowers 7-9 at the top of each scape; calyx clothed with clammy pubescence; legumes oblong, recurved, velvety. *U. H.* Native of Switzerland and Dauphiny.

*O. campéstris* var.  $\beta$ , *viscosa*, D. C. astr. no. 10. Flowers white.

*Clammy Mountain Milk-Vetch.* Fl. July. Clt. 1817. Pl.  $\frac{1}{2}$  ft.

29 *O. FÆTIDA* (D. C. astr. no. 11.) plant stemless; leaves with many pairs of lanceolate-linear, clammy, glabrous leaflets; scapes rather longer than the leaves, woolly at the apex; spikes capitate, few-flowered; bracteas shorter than the calyx; legumes erect, terete, inflated, rather incurved, pubescent. *U. H.* Native of the Alps of Dauphiny, Switzerland, and Piedmont. *Astragalus fætidus*, Vill. dauph. 3. p. 468. t. 43. *Astr. Halleri*, All. pedem. no. 1276.—Hall. helv. no. 407. Flowers cream-coloured.

*Fetid Mountain Milk-Vetch.* Fl. June, Aug. Clt. 1819. Pl.  $\frac{1}{2}$  to  $\frac{3}{4}$  foot.

30 *O. SQUAMULOSA* (D. C. astr. no. 15. t. 3.) plant stemless and glabrous; leaves with many pairs of linear leaflets; scapes shorter than the leaves, each bearing usually 2 or 3 flowers at the apex; calyxes covered with little scales; bracteas shorter than the calyx, and are, as well as the stipulas, ciliated; legumes ovoid. *U. H.* Native of Dahuria, in arid fields at the river Courba. Flowers cream-coloured.

*Scaly-calyx Mountain Milk-Vetch.* Pl.  $\frac{1}{2}$  to  $\frac{3}{4}$  foot.

§ 2. *Verticillaris* (from *verticillatus*, whorled, or in a whorl; in reference to the leaflets being disposed somewhat in whorls on the petiole). D. C. prod. 2. p. 279. *Leaflets all or for the most part somewhat verticillate, or with 2-3 or 6 rising from the same centre, or dot from the petiole.*

31 *O. SPLENDENS* (Dougl. mss.) plant stemless, clothed with silky villi; leaflets ovate-lanceolate, acute, crowded; scapes much longer than the leaves; flowers in interrupted spikes; bracteas lanceolate-linear, longer than the calyx, silky, as well as the calyxes. *U. H.* Native of North America, about the Red river. Flowers blue, and probably mixed with white. Leaflets rising 2-3-4 together from the petiole.

*Splendid Mountain Milk-Vetch.* Pl. 1 foot.

32 *O. MICROPHYLLA* (D. C. astr. no. 20.) plant stemless; leaflets rising in pairs from the petiole, or somewhat verticillate, oblong, obtuse, hairy beneath; scape longer than the leaves; spikes ovate; calyxes rather mucronated, and woolly. *U. H.* Native of Siberia, in sandy islands in the river Selenga, and in Lake Baikal. *Astragalus microphyllus*, Pall. astr. 92. t. 76. *Phaca microphylla*, Pall. itin. ed. gall. in 8vo. append. no. 382. t. 90. f. 1. *Astr. polyphyllus*, Willd. spec. 3. p. 1300. Flowers large, purple. This appears to be intermediate between the character of this and the preceding division of the genus.

*Small-leaved Mountain Milk-Vetch.* Fl. June, July. Clt. 1819. Pl.  $\frac{1}{2}$  foot.

33 *O. BAICALIA* (Pers. ench. 2. p. 333.) plant stemless; leaflets lanceolate, clothed with silky wool, disposed somewhat verticillately; scapes pilose, rather longer than the leaves; flowers few, capitate; legumes ovate, inflated, acuminate, membranous, pubescent. *U. H.* Native of Siberia, about Lake Baikal. *Astragalus baicalia*, Pall. astr. 93. t. 77. f. 1. Flowers whitish, tinged with blue.

*Baikal Mountain Milk-Vetch.* Pl.  $\frac{1}{2}$  to  $\frac{3}{4}$  foot.

34 *O. INARIA* (D. C. prod. 2. p. 279.) plant stemless; leaflets linear, acute, pubescent, in pairs, or 3 or 4 in a whorl; scape erect, about equal in length to the leaves; spike capitate, few-flowered; bracteas rather longer than the calyx, which is pubescent. *U. H.* Native of Siberia, at the river Ina on the mountains of Tegerek, but very rare. *Astragalus inarius*, Willd. spec. 3. p. 1302. *Astr. inarius*, Pall. astr. p. 94. t. 77. f. 2. Flowers purple. Stipulas large, sheathing, silky.

*Ina Mountain Milk-Vetch.* Pl.  $\frac{1}{2}$  to  $\frac{3}{4}$  foot.

35 *O. PUMLA* (Fisch. in litt. D. C. prod. 2. p. 279.) plant

stemless, dwarf, clothed with silky white hairs; leaves in pairs, or 3 or 4 in a whorl, linear, acute; scapes decumbent, longer than the leaves; spike capitate; bracteas white and membranous, rather longer than the calyx, which is villous. *Æ. H.* Native of Siberia, at the river Ina. Flowers blue, one-half smaller than those of *O. Inaria*. The legume, according to Fischer, is ovate, inflated, mucronate, and pubescent.

*Dwarf Mountain Milk-Vetch.* Pl. decumbent.

36 *O. LANATA* (D. C. astr. no. 26.) plant with a short suffrutescent stem; leaflets oblong, clothed with silky down, 4 in a whorl; stipulas joined together; scape shorter than the leaves; flowers capitate; legumes ovate, turgid, villous, and woolly, hardly bilocular. *Æ. F.* Native of Siberia, on hills. *Phæa lanata*, Pall. itin. ed. gall. in 8vo. append. no. 386. t. 87. f. 2. *Phæa Sibirica*, Lin. fil. suppl. 326. *Astragalus dasypyllus*, Pall. astr. p. 91. t. 75. Flowers purple.

*Woolly Mountain Milk-Vetch.* Pl.  $\frac{1}{2}$  foot.

37 *O. VERTICILLARIS* (D. C. astr. no. 25.) plant stemless; leaflets linear, acute, acuminate, clothed with silky villi, disposed 4 or 6 in a whorl on the petiole; scape hairy, longer than the leaves; spikes ovate; legumes erect, ovate, acuminate, hardly half-bilocular. *Æ. H.* Native of Siberia. *Astragalus verticillaris*, Lin. mant. 275.—Amm. ruth. t. 19. f. 1. Flowers flesh-coloured.

*Whorled-leafletted Mountain Milk-Vetch.* Fl. July. Clt. 1819. Pl.  $\frac{1}{2}$  foot.

38 *O. PROSTRATA* (D. C. astr. no. 22.) plant stemless; leaflets linear, inflexed, rather villous, disposed 3 or 4 in a whorl on the petiole; stipulas very villous; scapes decumbent, rather longer than the leaves; flowers capitate; bracteas shorter than the calyx, which is hairy. *Æ. H.* Native of Siberia, in sandy, gravelly, salt fields about Lake Tarei. *Phæa prostrata*, Lin. fil. suppl. 336. Pall. itin. ed. gall. 8vo. append. no. 303. t. 87. f. 1. *Astragalus Dahuricus*, Pall. astr. p. 88. t. 72. Legume unknown. Flowers purple or flesh-coloured.

*Prostrate Mountain Milk-Vetch.* Pl. prostrate.

39 *O. MYRIOPHYLLA* (D. C. astr. no. 24.) plant stemless; leaflets subulate, pilose, disposed 4 or 6 in a whorl on the petiole; scapes erect, longer than the leaves; flowers disposed in a spike, lower ones rather remote; bracteas about equal in length to the calyx, which is cylindrical and villous; legumes erect, cylindrical, acuminate, tomentose, half bilocular. *Æ. H.* Native of Siberia, on mountains in sandy places. *Phæa myriophylla*, Pall. voy. append. no. 384. t. 86. f. 2. *Astragalus myriophyllus*, Pall. astr. p. 87. t. 71. *Astr. verticillaris*, Lin. mant. 275. Willd. spec. 3. p. 1299. There are varieties of this plant with dark-purple, blue, flesh-coloured, and white flowers, and sometimes variegated with these colours.

*Myriad-leaved Mountain Milk-Vetch.* Fl. July, Aug. Clt. 1818. Pl.  $\frac{1}{2}$  foot.

40 *O. OXYPHYLLA* (D. C. astr. no. 21.) plant stemless; leaflets linear-lanceolate, clothed with silky pubescence, disposed 4 or 5 in a whorl, on the petiole; scape hairy, about equal in length to the leaves or longer than them; spikes ovate-oblong; legumes ovate, inflated, acuminate, pubescent, 1-celled. *Æ. H.* Native of Siberia and Dahuria, on hills. *Phæa oxyphylla*, Pall. itin. ed. gall. append. no. 380. t. 87. f. 3. *Astragalus oxyphyllus*, Pall. astr. p. 90. t. 74. There are varieties of this species with purple and pale flowers.

*Sharp-leafletted Mountain Milk-Vetch.* Fl. July, Aug. Clt. 1816. Pl.  $\frac{1}{2}$  foot.

41 *O. MURICATA* (D. C. astr. no. 23.) plant stemless; leaflets linear, glabrous, disposed 4-8 in a kind of whorl on the petiole, young ones mucronated beneath as well as the petioles and legumes; scapes glabrous, about equal in length to the leaves; bracteas rather longer than the calyx; spikes of flowers ovate;

legumes lanceolate, arched, acuminate. *Æ. H.* Native of Siberia, on mountains at the river Yenesee, and at lake Baikal. *Phæa muricata*, Lin. suppl. Pall. itin. ed. gall. append. no. 385. t. 89. f. 1. *Astragalus muricatus*, Pall. astr. p. 89. t. 73. Flowers yellow, ex Lin.

*Mucronated Mountain Milk-Vetch.* Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

§ 3. *Tragacanthoides* (from *τραγος*, *tragos*, a goat, *ἀκανθα*, *akantha*, a thorn, and *ἰδέα*, *idea*, similar; in reference to the plants contained in this section resembling the *Goat's-thorn*, in being spiny). *D. C. prod.* 2. p. 280. *Stems elongated, shrubby. Stipulas adnate. Petioles permanent, at length becoming spines.*

42 *O. TRAGACANTHOIDES* (Fisch. in litt. D. C. prod. 2. p. 280.) stem erect, branched; petioles becoming hardened into strong spines; leaves with 5 or 6 pairs of elliptic-oblong leaflets, which are clothed with adpressed silky down on both surfaces; peduncles few-flowered, length of leaves; calyx clothed with soft hairs, at length becoming inflated. *Æ. F.* Native of the Altaian mountains, at the river Baschka-us, where it was detected by Mardofkin, in July 1822. This is a very elegant plant, having larger flowers than any other species, they are purple. The keel is furnished with a long beak. The legumes, according to Fischer, are bladdery, almost globose, acuminate, and hairy.

*Tragacanth-like Mountain Milk-Vetch.* Shrub 1 foot.

§ 4. *Caulescentes* (a diminutive of *caulis*, a stem; the plants contained in this section are furnished with stems). *D. C. prod.* 2. p. 280. *Stems elongated. Stipulas not adnate to the petiole. Leaflets rising in pairs from the petiole, not in whorls.*

\* *Flowers cream-coloured.*

43 *O. PILOSA* (D. C. astr. no. 27.) stems erect, beset with soft hairs as well as the rest of the plant; leaflets lanceolate, acute; peduncles axillary, longer than the leaves; spikes ovate-oblong; legumes erect, terete, hooked at the apex, villous. *Æ. H.* Native of Europe, Tauria, and of Siberia, on mountains near the river Oby. Sims, bot. mag. 2483. *Astragalus pilosus*, Lin. spec. 1065. Jacq. austr. t. 51. Pall. astr. t. 80. Lodd. bot. cab. 544.—Gmel. sib. 4. t. 16. Flowers pale-yellow.

*Pilose Mountain Milk-Vetch.* Fl. June, Aug. Clt. 1732. Pl. 1 foot.

44 *O. PALLASII* (Pers. ench. 2. p. 334. Bieb. fl. taur. suppl. 502.) plant caulescent, prostrate, pubescent or villous; leaflets oblong-elliptic, acutish; peduncles rather longer than the leaves; spikes capitate; legumes erect, oblong-terete, mucronate, hairy. *Æ. H.* Native of Tauria, among stones near Sudak. *Astragalus lanatus*, Pall. astr. p. 108. t. 81. Bieb. fl. taur. 2. p. 188. Flowers very pale cream-coloured, much more so than the last species.

*Pallas's Mountain Milk-Vetch.* Fl. July, Aug. Clt. 1818. Pl. prostrate.

\*\* *Flowers purple or white.*

45 *O. TERES* (D. C. astr. no. 28.) plant caulescent, erect, almost glabrous; leaflets linear-oblong, acute, rather pubescent; peduncles twice the length of the leaves; flowers few, about 7 or 8, disposed in a loose spike; legumes erect, cylindrical, mucronate, glabrous. Native of Siberia, at the river Oby, at the place where the Irtysh falls into it. Corolla purplish-blue.

*Terete-podded Mountain Milk-Vetch.* Pl. 1 foot.

46 *O. FLORIBUNDUS* (D. C. astr. no. 30.) plant caulescent, erect, rather pilose; leaflets linear, acute at both ends, pubescent; stipulas lanceolate; peduncles axillary, at first shorter than the leaves, but at length longer; flowers spicate; le-

gumens oblong-subulate, 1-celled, pubescent. ♂. H. Native of Siberia, in sandy places along the banks of the river Irtysh. *Astragalus floribundus*, Pall. astr. p. 47. t. 37. Flowers numerous, elegant, of a purplish rose-colour.

*Bundle-flowered Mountain Milk-Vetch.* Pl.  $\frac{1}{2}$  to 1 foot.

47 O. GLABRA (D. C. astr. no. 31. t. 8.) plant caulescent, prostrate, glabrous; leaflets lanceolate-elliptic, acuminate; peduncles much longer than the leaves; flowers in spikes, remote; legumes pendulous, pubescent. ♀. H. Native of Siberia, Altai, and Dahuria. Very like the following. The hairs on the legume are blackish, but the other parts of the plant are clothed with adpressed pubescence or smooth.

*Glabrous Mountain Milk-Vetch.* Fl. June, Aug. Clt. 1823. Pl. prostrate.

48 O. DEFLEXA (D. C. astr. no. 32.) plant rather pilose; stems ascending; leaflets ovate-lanceolate, pubescent; peduncles much longer than the leaves; flowers disposed in spikes; legumes pendulous, hairy, 1-celled, gaping at the apex. ♀. H. Native of Siberia, about the Baikal on the mountains in cold springs, and North America on the banks of the Saskatchewan. *Astragalus deflexus*, Pall. act. petr. 1776. t. 15. Lher. stirp. t. 80. A. hians, Jacq. icon. rar. t. 153. Astr. parviflorus, Lam. Astr. retroflexus, Pall. astr. t. 27. Tium hians, Moench. meth. 162. Flowers purple.

*Deflexed-podded Mountain Milk-Vetch.* Fl. June, Jul. Clt. 1800. Pl. 1 foot.

49 O. FISCHERI (D. C. prod. 2. p. 281.) plant caulescent, assurgent, or procumbent, pubescent; stipulas distinct; leaflets oblong-linear, rather obtuse; peduncles longer than the leaves; flowers spicate, rather distant; wings obtuse, somewhat emarginate; mucrone of keel elongated, about equal in length to the wings. ♀. H. Native of Siberia, on the Altaian mountains. Flowers small, bluish-purple. O. versicolor, Fisch. in litt. but very distinct from *Astragalus versicolor*.

*Var. β, macrantha* (D. C. l. c.) flowers larger and rose-coloured; leaves and calyxes much more villous. ♀. H. Native of Siberia. Perhaps a proper species.

*Fischer's Mountain Milk-Vetch.* Fl. July, Aug. Pl. proc.

50 O. VAGINATA (Fisch. in litt. D. C. prod. 2. p. 281.) plant caulescent and ascending, sparingly pubescent; stipulas concrete; leaflets elliptic; peduncles a little longer than the leaves; spikes of flowers somewhat capitate; wings retuse; beak of keel equal in length to the wings. ♀. H. Native of Siberia, on the Altaian mountains at the metal mines. Flowers large, blue. It differs from *O. Fischeri macrantha* in the stipulas being joined into one. Legumes unknown.

*Sheathed-stipuled Mountain Milk-Vetch.* Pl. ascending.

51 O. TENELLA (Fisch. in litt. D. C. prod. 2. p. 281.) stems short, diffuse, or procumbent, pubescent; stipulas concrete; leaflets elliptic or oblong-linear, acutish, clothed on both surfaces with adpressed silky down; peduncles longer than the leaves; flowers disposed in a spike, rather distant; wings entire; mucrone of keel about equal in length to the wings; legumes nearly terete, acute, straight, 1-celled. ♀. H. Native of Seythia. Flowers small, bluish-purple.

*Tender Mountain Milk-vetch.* Pl. diffuse.

52 O. DICHOPTERA (D. C. astr. no. 33. exclusive of the synonymes) plant caulescent, ascending, pubescent; stipulas joined; leaflets oblong, acute; peduncles equal in length to the leaves; flowers capitate; wings emarginate; mucrone of keel small. ♀. H. Native of Siberia. Flowers blue.

*Fork-winged Mountain Milk-Vetch.* Fl. July. Clt. 1815. Pl. ascending.

*Cult.* All the species of this genus are very elegant when in bloom, and being for the most part dwarf evergreen plants, are very proper for ornamenting rock-work, or the front of flower-

borders. For this purpose the seeds of the species, whether perennial or annual, should be sown where the plants are to remain, especially those which are intended for rock-work, as it has been observed that no species of this genus thrives after being transplanted. The rarer kinds may be kept in pots, well drained with sherds, in a mixture of peat, sand, and a little loam, and treated as other alpine plants.

CXXXI. ASTRAGALUS (from *αστραγαλος*, *astragalos*, vertebra or talus; the seeds in the legumes in some species being squeezed into a squarish form in the legume, or perhaps *αστηρ*, *aster*, a star, and *γαλα*, *gala*, milk. It is also the name of a shrub of Greek writers). D. C. astrag. no. 5. ed. maj. p. 22. and p. 79. prod. 2. p. 281.—*Astragalus* species of Linnæus and others.

LIN. SYST. *Diadelphina*, *Decandria*. Calyx 5-toothed. Keel of flower obtuse. Stamens diadelphous. Legume bilocular or half bilocular, from the upper suture being bent in so much.—Herbs or subshrubs. The species of this genus are very distinct, but are very difficult to define. The following sections and divisions have been adopted with a view to define them more completely, viz.

I. PURPURASCENTES. Stipulas free from the petiole. Flowers purplish. This section contains the following divisions: *Hypoglottidei*, *Dissitiflori*, *Onobrychoidei*, *Sesamei*, *Vesicarii*, and *Annulæres*, see species 1 to 94.

II. OCHROLEUCI. Stipulas free from the petiole. Flowers cream-coloured. To this section belongs the following divisions: *Bucerates*, *Synochreati*, *Ciceroidei*, *Galegiformes*, *Alopecuroidei*, *Christiani*, see species 95 to 154.

III. TRAGACANTHACEI. Stipulas adnate to the petiole. Petioles permanent, usually becoming hardened into spines. To this section belong two divisions, viz. *Tragacanthæ* and *Chronopodii*, see species 155 to 196.

IV. PODOCHREATI. Stipulas adnate to the petioles. Petioles never becoming indurated. To this section the following divisions belong, viz. *Anthyllodei*, *Caprini*, *Incani*, and *Radiciflori*, see species 197 to 257.

SERIES I. PURPURASCENTES (so called from the flowers being purple or purplish). D. C. prod. 2. p. 281. Stipulas free from the petiole. Flowers purplish.

§ 1. *Hypoglottidei* (ὕπο, *hypo*, under, and γλωττα, *glotta*, a tongue; in reference to the shape of the pods). D. C. prod. 2. p. 281. Flowers purplish or white. Stipulas free from the petiole, but joined together, therefore they appear as if they were bifid at the apex and opposite the leaves.

I A. HYPOGLOTTIS (Lin. mant. 274.) stems prostrate, rather hairy; stipulas ovate, concrete; leaves with numerous, little, ovate, obtuse, dark-green leaflets, sometimes rather emarginate; heads of flowers roundish; peduncles longer than the leaves, ascending; bractæas one half shorter than the tube of the calyx; the hairs on the calyxes as well as those on the peduncles are black and white mixed; legumes ovate, deeply channelled along the back, compressed, hairy, hooked at the point, bilocular; cells 1-seeded. ♀. H. Native of Europe, on hills and mountains, also of Barbary, Tauria, Siberia, North America; and in Britain, on open mountainous heaths, in a chalky or sandy soil, also on the sea-coast; upon Newmarket and Royston heaths, on Swaffham heath, Norfolk; Gogmagog hills. Plentiful near Doncaster, on several parts of the sea-coast of Scotland, particularly beyond Newhaven, Edinburgh. D. C. astr. no. 18. t. 14. Smith. engl. bot. 274. A. arenarius, Huds. 323. Oed. fl. dan. 614. Pall. astr. t. 34. A. Dancicus, Retz. obs. fasc. 3. p. 41. Hoffm. A. glaucus, Vill. Oxytropis montana, Spreng. fl. hal. 207. with a figure, ex. Wallr. sched. 329. A. epiglottis, Dicks. hort. sic. fasc. 1-13.

—Raii, syn. 326. t. 12. f. 3. Flowers variegated with purplish, blue, and white. Root creeping, woody, though slender.

*Tongue-under-tongue* or *Purple Milk-Vetch*. Fl. June, July. Britain. Pl. prostrate.

2 *A. DASYGLÖTTIS* (Fisch. in litt. D. C. prod. 2. p. 282.) plant diffuse, nearly glabrous; stipulas concrete, opposite the leaves; leaflets elliptic-oblong, somewhat emarginate; spikes of flowers capitate; peduncles a little longer than the leaves; bracteas about equal in length to the tube of the calyx; calyx beset with white hairs; legumes erect, ovate-triangular, hairy, disposed in heads; cells 1-seeded. *Æ. H.* Native of Siberia, on the Altaian mountains. Root creeping. Flowers purple, blue, and white mixed. Very nearly allied to *A. hypoglottis*.

*Thick-tongued* or *Thick-podded Milk-Vetch*. Fl. June, July. Clt. 1818. Pl. diffuse.

3 *A. PURPUREUS* (Lam. dict. 1. p. 314.) plant diffuse, procumbent, rather villous; stipulas concrete, opposite the leaves; leaflets obovate, bidentate at the apex; spikes of flowers capitate; peduncles longer than the leaves; legumes erect, ovate-triangular, hairy, disposed in heads; cells 3-seeded. *Æ. H.* Native of Provence, on the mountains, Piedmont, and the Apennines. D. C. astr. no. 17. t. 12. Flowers purplish blue.

*Purple-flowered Milk-Vetch*. Fl. June, July. Clt. 1820. Pl. prostrate.

4 *A. TENUIFOLIUS* (Desf. atl. 2. p. 186. D. C. astr. no. 10. but not of Lin.) plant decumbent, hoary, and villous; stipulas concrete, opposite the leaves; leaflets elliptic-linear, about 15 or 17 pairs; peduncles shorter than the leaves; spikes capitate; vexillum elongated. *Æ. H.* Native of Barbary, near Cafza, in sand. Flowers rose-coloured. Legumes unknown.

*Fine-leaved Milk-Vetch*. Pl. decumbent.

5 *A. LOTOIDES* (Lam. dict. 1. p. 316.) plant prostrate, glabrous; stipulas not known; leaves with about 4 or 5 pairs of obovate, nearly orbiculate leaflets; flowers 4 or 5 in an umbel; peduncles length of leaves; legumes prismatic, triquetrous, erect, subulate at the apex. *Æ. H.* Native of China. *A. Sinicus*, Lin. mant. 103. Sims, bot. mag. 1350. Flowers rose-coloured. Lamarck's name has been adopted in preference to that of Linnæus in consequence of its being more expressive of the habit of the plant, and to prevent its being confounded with *A. Chinensis*. The specimen in the Linnean herbarium under the name of *A. Sinicus* is certainly a species of *Coronilla* very near *C. varia*.

*Lotus-like Milk-Vetch*. Fl. June, July. Clt. 1763. Pl. pr.

6 *A. VICIÆFORMIS* (D. C. astr. no. 19.) plant trailing and clothed with adpressed pubescence; stipulas half-concrete; leaves with from 10-15 pairs of obovate or orbiculate leaflets; spikes 5-7-flowered; peduncles angular, a little longer than the leaves; legumes oblong, acute, erect, villous. *Æ. H.* Native of Capadocia. *A. humifusus*, Willd. spec. 3. p. 1286. Flowers bluish-purple.

*Vicia-formed Milk-Vetch*. Pl. trailing.

7 *A. ONOBRYCHIOIDES* (Bieb. casp. 185. fl. taur. 2. p. 181.) plant rather diffuse, suffrutescent at the base, clothed with adpressed pubescence; stipulas concrete, opposite the leaves; leaves with 8-10 pairs of elliptic leaflets; spikes of flowers capitate, on long peduncles; vexillum linear, longer than the wings; legumes ovate-oblong, erect, villous, terminating in a hooked point. *Æ. H.* Native of Iberia, Persia, and Caucasus. *A. canescens*, D. C. astr. no. 39. t. 16. *A. cephalotes*, Pall. astr. no. 32. t. 24. Flowers beautiful purple.

*Saint-John-like Milk-Vetch*. Fl. July. Clt. 1819. Pl. diff.

8 *A. BICOLOR* (Lam. dict. 1. p. 317.) plant almost stemless, suffrutescent, hoary; stipulas concrete, opposite the leaves; leaves with from 6-9 pairs of oblong-linear leaflets; spikes of flowers capitate; peduncles twice the length of the leaves; ca-

lyxes villous, 5-cleft; legumes villous. *Æ. H.* Native of Armenia, D. C. astr. no. 41. Flowers white and purple in the same head, according to Tournefort, cor. 28.

*Two-coloured-flowered Milk-Vetch*. Pl.  $\frac{1}{2}$  foot.

9 *A. NANUS* (D. C. astr. no. 40. t. 17.) plant almost stemless, frutescent, canescent; stipulas concrete, opposite the leaves; leaves with 6-7 pairs of ovate leaflets; spikes of flowers capitate, on short peduncles; legumes ovate-oblong, pubescent. *Æ. H.* Native of Syria. Flowers purple.

*Dwarf Milk-Vetch*. Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

10 *A. PSORALEOIDES* (Lam. dict. 1. p. 317.) plant with short stems, ascending, suffrutescent and canescent; stipulas concrete, opposite the leaves; leaves with 6-9 pairs of linear-oblong leaflets, flowers capitate at first, but at length spicate, longer than the leaves; legumes oblong, very hairy. *Æ. F.* Native of the Levant. D. C. astr. no. 42. t. 18. f. 2. Flowers blue or purplish blue.

*Psoralea-like Milk-Vetch*. Pl.  $\frac{1}{2}$  foot.

11 *A. ALLYSOIDES* (Lam. dict. 1. p. 317.) plant with short, ascending, suffrutescent stems, hoary; stipulas concrete, opposite the leaves; leaves with from 5-10 pairs of linear-oblong leaflets; spikes of flowers somewhat cylindrical, on peduncles, which are twice the length of the leaves; legumes ovate, acute, pubescent, 4-seeded. *Æ. F.* Native of the Levant. D. C. astr. no. 43. t. 18. f. 1. Flowers small, of a dirty-white colour.

*Madwort-like Milk-Vetch*. Pl.  $\frac{1}{4}$  foot.

12 *A. LASIOGLÖTTIS* (Stev. in Bieb. suppl. 486.) plant ascending, hoary from adpressed hairs; stipulas concrete, opposite the leaves; spikes of flowers capitate, on long peduncles; vexillum elongated, emarginate; legumes rather ovate-globose, acute, woolly. *Æ. F.* Native of Caucasus, in stony, exposed places. Flowers purple. Allied to *A. onobrychioides*.

*Woolly-tongued Milk-Vetch*. Pl. ascending.

13 *A. LEONTINUS* (Jacq. icon. rar. 1. t. 153.) plant diffuse, suffrutescent at the base, clothed with hairs, which are fixed by their centre; stipulas concrete, but usually free at length; leaves with 6-12 pairs of ovate leaflets; flowers disposed in heads; peduncles trigonal, longer than the leaves; legumes ovate, villous. *Æ. H.* Native of Austria and Switzerland, on mountains. D. C. astr. no. 20. Lodd. bot. cab. 432. Flowers blue. Vexillum a little longer than the wings.

*Lion's-tail Milk-Vetch*. Fl. May, June. Clt. 1816. Pl. diff.

14 *A. UNIFOLIUS* (Lher. stirp. 158.) plant decumbent, suffrutescent, hoary from villi; stipulas concrete, opposite the leaves; leaves with from 11-14 pairs of oblong, obtuse leaflets; racemes pedunculate, length of leaves; legumes erect, compressed, villous. *Æ. F.* Native of Peru and Chili. D. C. astr. no. 9. t. 10. Calyxes rather bladdery, clothed with adpressed, black down. Flowers purplish.

*Single-propped Milk-Vetch*. Pl. decumbent.

15 *A. PROCUMBENS* (Hook. in Beech. voy. p. 18.) plant clothed with hirsute tomentum in every part; stems prostrate, branched; stipulas concrete; leaves with 11-14 pairs of elliptic, retuse leaflets; peduncles racemose, longer than the leaves; wings of flowers not half so long as the keel; legumes, in an immature state, linear, hairy, and reflexed. *Æ. F.* Native of Chili, about Concepcion. Flowers pale-purple.

*Procumbent Milk-Vetch*. Pl. procumbent.

16 *A. BIDENTATUS* (H. B. et Kunth, nov. gen. amer. 6. p. 493. t. 584.) plant ascending and somewhat pubescent; stipulas joined together to the middle; leaves with from 9-11 pairs of linear-oblong leaflets, which are emarginately bidentate at the apex; racemes roundish, pedunculate, longer than the leaves. *Æ. S.* Native of South America. Very like *A. unifolius*. Flowers pale-purple.

*Bidentate-leafletted Milk-Vetch*. Pl. ascending.

17 *A. GARBANCILLO* (Cav. icon. 1. t. 85.) plant erect, suffrutescent, and rather villous; stipulas concrete, opposite the leaves; leaflets 10-12 pairs, oblong, obtuse; racemes pedunculate, longer than the leaves; legumes inflated, pilose. *h. S.* Native of Peru, in the valley of Canta. Flowers pale violet. The plant is said to be noxious to cattle. *Garbancillo* is the vernacular name of the plant in Peru. Calyx covered with black hairs.

*Garbancillo* Milk-Vetch. Shrub 1½ foot.

18 *A. DONIA'NUS* (D. C. prod. 2. p. 283.) plant prostrate, beset with a few scattered adpressed hairs; leaves with 8-10 pairs of oval, alternate, mucronulate leaflets, which are pubescent beneath, but when young silky; stipulas connate; peduncles axillary, few-flowered, twice the length of the leaves; legumes subulate, silky. *q. H.* Native of Nipaul, in Gosaingsthan. Flowers purple, having a broad vexillum. Root long, thick, and woody, dividing into many arms at the base. *A. macrorhizus*, D. Don, prod. fl. nep. 245.

*Don's* Milk-Vetch. Fl. Ju. Jul. Clt. 1818. Pl. pr.

19 *A. ARENARIUS* (Lin. spec. 1069.) plant diffuse, tomentose from white adpressed down; stipulas concrete, opposite the leaves; leaflets linear-obtuse; peduncles few-flowered, rather shorter than the leaves; legumes stipitate, rather tumid, tomentose, thrice the length of the breadth. *q. H.* Native of Denmark and Sweden, in sandy places. Retz. obs. 2. no. 73. p. 3. t. 3. D. C. astr. no. 1. Corolla blue. The stems are erect, according to Retzius, but according to Willdenow and Linnaeus they are prostrate. Root creeping.

*Sand* Milk-Vetch. Fl. June, July. Clt. 1800. Pl. ½ foot.

20 *A. BAYONNE'NSIS* (Lois. fl. gall. 247.) plant diffusely-procumbent, somewhat tomentose from white, adpressed down; stipulas concrete, opposite the leaves; peduncles 4-6-flowered, about equal in length to the leaves; legumes almost sessile, rather tumid, tomentose, twice the length of the breadth. *q. H.* Native of the west of France, in sand by the sea-coast, at Bayonne. D. C. fl. fr. suppl. 573. *A. Austriacus*, Thore, but not of Lin. Flowers bluish-purple.

*Bayonne* Milk-Vetch. Fl. July, Aug. Clt. 1816. Pl. pr.

21 *A. VERRUCOSUS* (Moris, elench. sard. p. 12.) plant pilose and decumbent; stipulas concrete, opposite the leaves, lanceolate-subulate; leaves with 10-12 pairs of ovate-oblong leaflets; racemes longer than the leaves, many-flowered; legumes arched, oblong, acuminate, rather mucronulate, pilose. *q. H.* Native of Sardinia. Flowers purple.

*Warted-podded* Milk-Vetch. Pl. decumbent.

22 *A. MACROPTERUS* (D. C. prod. 2. p. 283.) plant erect and smoothish; young stipulas concrete and opposite the leaves, but at length becoming free; leaflets linear-lanceolate, acute; peduncles 2 or 3 times the length of the leaves; flowers nodding, disposed in interrupted spikes; wings much longer than the keel, and about equal in length to the vexillum; legumes oval-linear, straight, glabrous, apiculated by the style, hardly double the length of the calyx. *q. H.* Native of Dahuria and Siberia. *Astragalus* and *Oxytropis macroptera*, Fisch. in litt. but there is no mucrone on the keel to be seen. Flowers purple.

*Long-winged* Milk-Vetch. Pl. 1 foot.

23 *A. VAGINATUS* (Pall. astr. no. 49. t. 36.) plant erect, pubescent; stipulas concrete, opposite the leaves; leaflets linear-lanceolate, acute; peduncles longer than the leaves; flowers drooping, disposed in dense spikes; legumes linear, straight. *q. H.* Native of Siberia, at the Uba, Jenesee, and Baikal. Flowers of a whitish-purple colour, or white and purple mixed. This species is very nearly allied to *A. versicolor*, and probably only the same. The plant is also a native of North America.

*Sheathed-stipuled* Milk-Vetch. Pl. 1 foot.

24 *A. VERSICOLOR* (Pall. astr. no. 48. t. 35.) plant erect and glabrous; stipulas concrete, opposite the leaves; leaflets linear,

acute; peduncles bearing a crowded spike of flowers each, which is longer than the leaves; flowers drooping; legumes triquetrous, erect, glabrous. *q. H.* Native of eastern Siberia, on rocks. Flowers pale-blue at first, but at length changing to a deeper blue. It is probably not distinct from *A. vaginatus*.

*Partly-coloured-flowered* Milk-Vetch. Pl. ½ to 1 foot.

25 *A. TAURI'CUS* (Pall. astr. no. 51. t. 38. exclusive of the synonymes) plant spreading and tufted, clothed with adpressed silky down; leaflets linear, acute; stipulas membranous, concrete, opposite the leaves; peduncles spicate, thrice the length of the leaves; legumes ovate, acute, 2-4-seeded. *q. H.* Native of Tauria, in gravelly or chalky places. Flowers purple, varying to white, ex Bieb. taur. 2. p. 192. *Oxytropis Tauricus*, Pers. ench. exclusive of the synonymes. *A. cretæus*, Pall. ined. taur.

*Taurian* Milk-Vetch. Fl. Ju. Jul. Clt. 1826. Pl. ¼ to ½ ft.

§ 2. *Dissitiflora* (from *dissitus*, distant, and *flos*, a flower; in reference to the flowers being distant in the racemes). D. C. prod. 2. p. 284. *Stipulas distinct, not adhering to the petiole. Flowers purplish or white, distant in the racemes. Legumes straight.*

26 *A. AUSTRIACUS* (Lin. spec. 1070.) plant diffusely procumbent; leaflets glabrous, linear, truncately-emarginate; racemes pedunculate, longer than the leaves; wings of corolla bifid; legumes somewhat triquetrous, pendulous. *q. H.* Native of Spain, Dauphiny, Austria, Italy, Tauria, in dry exposed places, and of Russia, on the banks of the Volga. Jacq. austr. 195. Vind. 263. D. C. astr. no. 1. *A. dichópterus*, Pall. astr. t. 39. Allied to *Oxytropis dichóptera*. Flowers with a blue-vexillum, but the rest purple.

*Austrian* Milk-Vetch. Fl. May, June. Clt. 1640. Pl. diff.

27 *A. OLÓPTERUS* (D. C. prod. 2. p. 284.) plant diffuse; leaves with 6-7 pairs of linear, glabrous, entire, acutish leaflets; racemes pedunculate, twice or thrice the length of the leaves; wings of corolla obtuse. *q. H.* Native of the Altaian mountains, and in the Kirghisean steppe. *A. Austriacus*, Fisch. in litt. The plant is very like the *A. Austriacus*, but differs in the wings of the corolla being entire; also like *A. melilotoides*, but differs from it in the leaves having many pairs of leaflets. The flowers are pale, according to the dried specimen.

*Entire-winged* Milk-Vetch. Fl. Ju. Jul. Clt. 1817. Pl. diff.

28 *A. MELILOTIDES* (Pall. itin. ed. gall. t. 33. f. 1. and 2. astr. t. 41.) plant erect, glabrous; leaflets 5, oblong, emarginate; racemes pedunculate, thrice the length of the leaves; wings of corolla entire; legumes erect, ovate, didymous, 2-seeded, wrinkled. *q. H.* Native of Siberia, Altaia, Dahuria, and China. D. C. astr. no. 37. Flowers purple.

*Melilot-like* Milk-Vetch. Pl. 2 to 3 feet.

29 *A. SULCATUS* (Lin. spec. 1065.) plant erect, glabrous; stem furrowed; leaflets linear-lanceolate; racemes pedunculate, longer than the leaves; wings of corolla entire; legumes erect, rather triquetrous, half bilocular. *q. H.* Native of Siberia, in grassy places, and the Tartarian desert. Jacq. hort. vind. t. 40. D. C. astr. no. 35. *Tium lineare*, Moench. *A. leptostachys*, Pall. astr. t. 40. but not of Willd. Flowers pale-violet but with a white keel, tipped with brown.

*Furrowed-stemmed* Milk-Vetch. Fl. July. Clt. 1783. Pl. 2 to 3 feet.

30 *A. CRA'CCA* (D. C. astr. no. 2. t. 9.) plant diffuse; leaflets oval-oblong, emarginate, pubescent; racemes pedunculate, about equal in length to the leaves; wings of corolla entire; legumes pendulous, stipitate, ovate-oblong, compressed, half-bilocular. *q. G.* Native of Peru.

*Cracca-like Milk-Vetch.* Pl. diffuse.

31 *A. PROSTRATUS* (Hook. in Beech. voy. p. 18.) plant diffuse; leaflets pubescent, obtuse; stipulas concrete, but free from the petiole; racemes pedunculate, much longer than the leaves; flowers loose, almost sessile; calyxes clothed with black pubescence.  $\mathcal{A}$ .  $\mathcal{G}$ . Native of Chili, about Conception. Flowers purple.

*Prostrate Milk-Vetch.* Pl. prostrate.

32 *A. GRACILIS* (Nutt. gen. amer. 2. p. 100.) plant erect, slender, pubescent; leaflets oblong-linear, remote; racemes pedunculate, longer than the leaves; legumes very short, drooping, elliptic-ovate, rather triquetrous, pubescent, 1-celled, usually containing 4 seeds.  $\mathcal{A}$ . II. Native of North America, on the plains on the banks of the Missouri. *A. tenellus*, Pursh. fl. amer. sept. 2. p. 473. *Ervum multiflorum*, ibid. p. 739. *Dalea parviflora*, ibid. p. 474. according to Nuttall. *Psoralea parviflora*, Poir. suppl. 4. p. 590. Flowers pale purple.

*Slender Milk-Vetch.* Fl. June, July. Clt. 1821. Pl. 2 ft.

33 *A. FLEXUOSUS* (Doug. mss.) plant erect, flexuous, downy in a young state; stipulas distinct; leaflets distant, linear, obtuse, beset with close-pressed hairs beneath; flowers distant, racemose; calyx smoothish; bracteas not much longer than the pedicels.  $\mathcal{A}$ . II. Native of North America, near the Columbia river. Flowers purple. Plant with the habit of *Vicia cracca*.

*Var.  $\beta$ , alba* (Doug. mss.) flowers white.

*Flexuous-stemmed Milk-Vetch.* Pl. 1 foot.

34 *A. INFLEXUS* (Doug. mss.) plant white and woolly; stems flexuous; stipulas distinct; leaves with numerous pairs of oblong-lanceolate leaflets; racemes pedunculate, longer than the leaves; flowers remote; bracteas subulate, longer than the tube of the calyx; legumes curved upwards, very woolly.  $\mathcal{A}$ . II. Native of North America, on the banks of the Columbia river. Flowers large, purple.

*Inflexed-podded Milk-Vetch.* Pl. 1 foot.

35 *A. COLLINUS* (Doug. mss.) plant puberulous, erect; stipulas joined? leaves with numerous pairs of obovate-lanceolate emarginate leaflets; racemes on long peduncles; flowers distant; bracteas subulate, twice the length of the pedicels; legumes straight, between terete and compressed.  $\mathcal{A}$ . II. Native of North America, near the Columbia river. Flowers purple.

*Hill Milk-Vetch.* Pl. 1 to 2 feet.

36 *A. SUCULENTUS* (Rich. in Frankl. trav. p. 226.) plant prostrate, pubescent; leaflets 21-25, oblong-obovate, slightly emarginate; stipulas distinct; racemes shorter than the leaves; flowers remote; bracteas ovate, acute, longer than the pedicel; calyx beset with black hairs.  $\mathcal{A}$ . II. Native of North America, in the vicinity of the Saskatchewan river, and in the Arctic region. Lindl. bot. reg. 1324. Flowers large, purplish, with an oblong vexillum.

*Succulent Milk-Vetch.* Fl. June. Clt. 1826. Pl. prostrate.

37 *A. SUBULATUS* (Bieb. fl. taur. no. 1480. but not of Desf.) plant diffuse and hoary from white pili; leaflets linear; racemes pedunculate, loose, longer than the leaves; the lower flowers remote; legumes subulate, triquetrous, rather arched, erectish, 5 times the length of the calyx.  $\mathcal{A}$ . II. Native of Tauria and Siberia, in fields. *A. subuliformis*, D. C. astr. no. 33.

*Var.  $\alpha$ , major* (D. C. prod. 2. p. 284.) flowers approximate, purple. Pall. astr. t. 20.

*Var.  $\beta$ , macilentus* (D. C. l. c.) flowers fewer, remote, and purple. Pall. astr. t. 20.

*Var.  $\gamma$ , Tartariensis* (D. C. l. c.) flowers fewer, and cream-coloured. Native of Caucasus, on the banks of the Volga and the Don. Perhaps a distinct species.

*Subulate-podded Milk-Vetch.* Fl. Ju. Jul. Clt. 1820. Pl. dif.

38 *A. CORNICULATUS* (Bieb. pl. ross. cent. 1. t. 45. ex suppl. fl. taur. 492.) plant procumbent, suffruticose, hoary, and pilose;

leaflets linear; peduncles longer than the leaves, few-flowered; flowers umbellate; legumes subulate, triquetrous, rather arched, and much spreading.  $\mathcal{A}$ .  $\mathcal{h}$ . H. Native of Bessarabia, about Odessa, and of the south of Podolia. Flowers purple.

*Horned-podded Milk-Vetch.* Pl. procumbent.

39 *A. CERATOIDES* (Bieb. suppl. 492.) plant depressed, clothed with silky villi; leaflets oblong-elliptic; peduncles longer than the leaves; racemes somewhat capitate; legumes subulate, triquetrous, erect, 4-times longer than the calyx, clothed with adpressed bristles.  $\mathcal{A}$ . H. Native of Siberia, on the Altaian mountains. *A. subulatus Altaicus*, Pall. astr. no. 27. t. 20. A. Flowers purple.

*Horn-like-podded Milk-Vetch.* Pl. depressed.

40 *A. MACROLOBUS* (Bieb. suppl. 493.) plant depressed, clothed with white adpressed hairs; leaflets oblong-elliptic; peduncles rather longer than the leaves; racemes somewhat capitate; legumes subulate, triquetrous, erect, beset with adpressed bristles, thrice the length of the calyx.  $\mathcal{A}$ . H. Native of Siberia, on the Altaian mountains, and on the banks of the Yenesee, in the Kirghisean-steppe. Flowers white.

*Long-podded Milk-Vetch.* Pl. depressed.

41 *A. VIRGATUS* (Pall. astr. t. 18. exclusive of the synonymes,) plant erect, suffruticose, rather canescent; leaves with about 6 pairs of linear-lanceolate acute leaflets; racemes spicate, much elongated; the lower flowers very remote; legumes oblong, triquetrous, twice the length of the calyx.  $\mathcal{h}$ .  $\mathcal{A}$ . II. Native of Hungary, Tauria, Tartary, at the Volga, and at the Caspian sea, in sandy places. *A. varius*, Gmel. jun. trav. 2. p. 116. t. 17. D. C. astr. no. 34. *A. virgatus*, Bieb. fl. taur. and suppl. no. 465. Flowers purple.

*Var.  $\beta$ , Uralensis* (D. C. prod. 2. p. 285.) stems shorter than the peduncles; racemes few-flowered.  $\mathcal{h}$ .  $\mathcal{A}$ . II. Native of the Ural mountains. *A. subulatus, Uralensis*, Pall. astr. t. 20. C. ex Bieb. suppl. 493. Perhaps a proper species.

*Twiggy Milk-Vetch.* Fl. May, Aug. Clt. 1806. Pl. 1 to 3 feet.

42 *A. HYRCANUS* (Pall. astr. no. 29. t. 22.) plant erect, suffruticose, pubescent; leaves with 3 pairs of linear acute leaflets; racemes usually 5-flowered, hardly longer than the leaves; legumes oblong, mucronate, villous, twice the length of the calyx.  $\mathcal{A}$ .  $\mathcal{h}$ . II. Native on the shores of the Caspian sea, at Derbent. Flowers purple. Perhaps only a variety of *A. virgatus* according to Bieberstein.

*Hyrcanian Milk-Vetch.* Pl. 1 to 2 feet.

43 *A. BRACHYLOBUS* (D. C. prod. 2. p. 285.) plant erectish; shrubby at the base, clothed with adpressed silky white down; leaves with 2-3 pairs of linear acute leaflets; racemes pedunculate, much longer than the leaves, 6-8-flowered; legumes oblong, pubescent, mucronate by the style, hardly longer than the calyx.  $\mathcal{h}$ . H. Native of Siberia, at Lake Inderskoi. Flowers purple? Allied to *A. virgatus* according to Fischer. Leaflets 12-15 lines long.

*Short-podded Milk-Vetch.* Pl. 1 foot.

44 *A. ANNUUS* (D. C. astr. no. 25.) plant rather diffuse, and rather glabrous; leaflets linear; racemes longer than the leaves; flowers spreading; vexillum twice the length of the wings.  $\odot$ . II. Native country as well as the legumes unknown. Perhaps belonging to a different section of the genus.

*Annual Milk-Vetch.* Pl. diffuse.

45 *A. BIFLORUS* (Viv. fl. lyb. 44. t. 20. f. 1.) plant erect, clothed with canescent hairs; stipulas very short; leaves with 5-6 pairs of elliptic leaflets; peduncles longer than the leaves, usually bearing only 2 flowers; calyx covered with stiff black hairs.  $\odot$ . II. Native of Cyrenaica. Flowers blue. The legume being unknown, the place which the plant should occupy in the genus is doubtful.

*Two-flowered Milk-Vetch.* Pl.  $\frac{1}{2}$  to 1 foot.

§ 3. *Onobrychoidei* (from *onobrychis*, *saintfoin*, and *idea*, like. The plants contained in the division agree with *Saintfoin* in habit). D. C. prod. 2. p. 285. *Stipulas distinct, and free from the petioles. Flowers purplish, disposed in dense spikes or heads. Vexillum of flowers linear and elongated. Legumes straight, rarely falcate. Roots perennial.*

\* *Legumes curved.*

46 A. LEPTOPHYLLUS (Desf. atl. 2. p. 188. t. 207.) plant procumbent, suffrutescent, and rather pubescent; leaflets obcordate; racemes longer than the leaves; legumes pendulous, falcate, compressed, when young pubescent.  $\mathcal{U}$ . II. Native of Barbary, on the mountains. A. Tunetanus, Willd. spec. 3. p. 1277. Flowers white.

*Slender-leaved Milk-Vetch.* Fl. June, July. Clt. 1811. Pl. procumbent.

47 A. ORNITHOPODIODES (Lam. dict. 1. p. 312.) plant suffrutescent, tufted and diffuse, hoary and villous; leaflets ovate; racemes longer than the leaves; legumes pendulous, falcate, compressed.  $\mathcal{U}$ . H. Native of Armenia. Flowers yellowish. D. C. astr. no. 4.

*Ornithopus-like Milk-Vetch.* Pl. diffuse.

48 A. DAHURICUS (D. C. prod. 2. p. 285.) plant herbaceous, erect, pilose; stipulas lanceolate-subulate; leaflets oblong, mucronate, 7-9 pairs; racemes longer than the leaves; legumes erect, incurved, linear, compressed, rather pilose.  $\mathcal{U}$ . II. Native on the banks of rivers from Dauria to China. *Galèga Dahurica*, Pall. itin. 3. append. no. 107. t. W. f. 1. ed. gall. append. no. 369. t. 81. f. 3. Flowers purple. The teeth of the calyx are subulate, as in *Galèga*, but the stamens are diadelphous, and the legumes are bilocular.

*Dahurian Milk-Vetch.* Fl. July. Clt. 1822. Pl. 1 to 2 feet.

49 A. LENTIGINOSUS (Dougl. mss.) plant smooth, prostrate; stipulas membranous, distinct; leaflets obovate-roundish; racemes about the length of the leaves; legumes smooth, inflated, curved at the end, and ending in a long beak.  $\mathcal{U}$ . II. Native of North West America, on the Blue mountains. Flowers apparently purple.

*Freckled Milk-Vetch.* Pl.  $\frac{3}{4}$  foot.

50 A. STEVENIANUS (D. C. prod. 2. p. 285.) plant erect, glabrous, slender, few-leaved; leaflets linear, distant, 4 or 5 pairs; spikes pedunculate, few-flowered, longer than the leaves; flowers rather distant; legumes linear, elongated, falcate, slender, acute, and glabrous.  $\mathcal{U}$ . H. Native of Iberia, Caucasus, and Asia Minor. A. gracilis, Stev. ined. but not of Nutt. Flowers purple, almost like those of *A. onobrychis*, but the habit of the plant is that of *A. varius*.

*Steven's Milk-Vetch.* Pl. 1 foot.

\* \* *Legumes straight.*

51 A. MACROSTACHYUS (D. C. astr. no. 38. t. 15.) plant shrubby, erect, pubescent; leaves with about 12 or 14 pairs of linear leaflets; spikes pedunculate, elongated, many-flowered, much longer than the leaves; vexillum longer than the wings; legumes ovate, compressed, hairy.  $\mathcal{U}$ . II. Native of Armenia. A. hedysaroides, Willd. spec. 3. p. 1264. Pers. ench. 2. p. 337. no. 46. and *Oxytropis hedysaroides*, Pers. ench. 2. p. 334. no. 44. Calyx tubular, pilose. Flowers purple.

*Long-spiked Milk-Vetch.* Pl.  $\frac{1}{2}$  foot.

52 A. LINEARIFOLIUS (Pers. ench. 2. p. 336.) plant erect, pubescent; leaflets linear, acute, about 10 or 12 pairs; racemes much longer than the leaves; vexillum broad, twice the length of the wings.  $\mathcal{U}$ . II. Native of Siberia. Sweet, fl. gard. t. 73. A. *Onobrychis angustifolius*, D. C. astr. no. 24. A. tenuifolius, Lin. spec. 1065. Flowers purple.

VOL. II.

*Linear-leafletted Milk-Vetch.* Fl. July, Aug. Clt. 1780. Pl. 1 foot.

53 A. PECTINATUS (Dougl. mss.) plant erect, pubescent; leaflets filiform; racemes dense-flowered, pedunculate, longer than the leaves; bractæas a little longer than the pedicels.  $\mathcal{U}$ . H. Native of North America, in the pastures of the Saskatchewan, &c. *Phaca pectinata*, Hook. fl. bor. amer. 141. t. 54. Flowers large, purple.

*Pectinated-leaved Milk-Vetch.* Pl. 1 foot.

54 A. ONOBRYCHIS (Lin. spec. 1070.) plant diffuse or erect, pubescent; leaves with 7-16 pairs of oblong leaflets; spikes of flowers oblong-ovate, pedunculate, longer than the leaves; vexillum linear, twice the length of the wings; legumes ovate, triquetrous, rather villous, erect, twice the length of the calyx, ending in a straight point; cells 4-seeded.  $\mathcal{U}$ . II. Native of Europe and Siberia. D. C. astr. no. 24. Bieb. fl. taur. no. 1482. Flowers purple. An elegant plant. Of all the varieties there are white flowers.

*Var. a, alpinus* (D. C. prod. 2. p. 286.) plant dwarf; leaflets linear; spikes ovate.  $\mathcal{U}$ . H. Native of Austria. Jacq. fl. austr. t. 38. Plant procumbent.

*Var. b, Moldavicus* (D. C. l. c.) plant dwarf; leaflets ovate-oblong, glabrous; spikes of flowers ovate.  $\mathcal{U}$ . II. Native of Moldavia. Plant procumbent.

*Var. c, microphyllus* (Bess. in litt. D. C. l. c.) plant dwarf; leaflets linear; spikes of flowers ovate-oblong.  $\mathcal{U}$ . H. Native of Podolia. Plant procumbent.

*Var. d, major* (D. C. l. c.) plant erect; leaflets ovate or oblong; spikes of flowers oblong.  $\mathcal{U}$ . H. Native of Siberia. A. *onobrychis stipulaceus et maximus*, D. C. astr. no. 24. Gmel. sib. 4. t. 21.

*Saintfoin-like Milk-Vetch.* Fl. June, July. Clt. 1610. Pl.  $1\frac{1}{2}$  foot, or procumbent.

55 A. ADPERCUS (Bieb. fl. taur. 2. p. 195. plant. ross. cent. 2. t. 80.) plant diffuse and hoary; leaves with 5-10 pairs of elliptic small leaflets; spikes short, pedunculate, longer than the leaves; vexillum much longer than the wings; legumes ovate-oblong, rather villous, ending in a long oblique acumen.  $\mathcal{U}$ . II. Native of Caucasus, among broken rocks. Flowers purple. Very like the preceding species.

*Hooked-podded Milk-Vetch.* Fl. June, July. Clt. 1819. Pl. diffuse.

56 A. FLACCIDUS (Bieb. fl. taur. 2. p. 196.) plant procumbent and villous; leaves with 8 or 10 pairs of elliptic, somewhat emarginate leaflets; spikes few-flowered, pedunculate, about equal in length to the leaves; vexillum much longer than the wings; legumes triquetrous, prismatic, erect, acute, hairy.  $\mathcal{U}$ . II. Native of Iberia, very common. A. hybridus, Gmel. trav. 1. t. 18. ? A. *vimineus* var. Pall. astr. no. 28. Flowers purple. Legume bent downwards at the apex.

*Flaccid Milk-Vetch.* Pl. procumbent.

57 A. VIMINEUS (Pall. astr. no. 28. t. 21.) plant erect, suffrutescent; leaves with 4-6 pairs of lanceolate acute leaflets; spikes somewhat capitate, pedunculate, longer than the leaves; vexillum much longer than the wings; legumes spreading; oblong-lanceolate, villous, apiculated by the style.  $\mathcal{U}$ . II. Native of Siberia, Iberia, and about Odessa. A. cornutus, Pall. itin. 2. app. p. 499. no. 122. A. *Odessanus*, Bess. enum. no. 944. ex cont. 2. no. 1575. Stems glabrous. Leaves beset with adpressed pubescence. Calyx clothed with black hairs. Corolla purple? Legume clothed with white hairs.

*Twiggy Milk-Vetch.* Fl. June, Aug. Clt. 1816. Pl. 1 foot.

58 A. FRUTICOSUS (Pall. astr. no. 26. t. 19. but not of Forsk.) plant shrubby, erect; leaves with 8-10 pairs of linear-lanceolate acute leaflets; spikes capitate, few-flowered, pedunculate, longer than the leaves; vexillum much longer than the wings;

L 1

legumes erect, oblong-lanceolate, villous, apiculated by the style.  $\frac{1}{2}$  F. Native of Eastern Siberia, and beyond the Baikal. D. C. astr. no. 27.—Gmel. sib. 4. t. 24. f. A. Flowers white, tipped with purple. Very like the preceding species.

*Shrubby Milk-Vetch.* Fl. June, July. Clt. 1804. Sh. 1 ft.

59 A. ARBUSCULA (Pall. astr. no. 24. t. 17.) plant erect, shrubby; leaves with 3 pairs of linear acute leaflets; spikes of flowers capitate, pedunculate, twice the length of the leaves; vexillum much longer than the wings; legumes spreading, elongated, linear, channelled on the back, clothed with adpressed pubescence.  $\frac{1}{2}$  F. Native of Siberia, in the Kirghisean steppe. Flowers purple. Habit of the two preceding species.

*Little-tree Milk-Vetch.* Shrub.

60 A. SUFFRUTICOSUS (D. C. astr. no. 5. exclusive of the synonymes,) plant diffuse, suffruticose, villous; leaflets ovate-oblong, 7-10-pairs; spikes capitate, few-flowered, pedunculate, about equal in length to the leaves; vexillum a little longer than the wings; calyx rather inflated and villous.  $\frac{1}{2}$  F. Native of Siberia, beyond the Baikal. Flowers purple. Perhaps this species belongs to a different section.

*Suffruticose Milk-Vetch.* Shrub.

61 A. ABORIGINORUM (Richards. in Frankl. journ. append. p. 746.) plant suffruticose, erect; leaves with 5 pairs of lanceolate-linear hoary-pubescent leaflets; racemes axillary, loose, exceeding the leaves.  $\frac{1}{2}$  H. Native of Arctic America. Flowers white or bluish; the keel decidedly blue. The roots are long and yellow like liquorice. The Crees and Stone Indians gather them in the spring as an article of food.

*Aborigin's Milk-Vetch.* Shrub 1 foot.

62 A. ADSURGENS (Pall. astr. no. 44. t. 31.) plant ascending, smoothish; leaves with 11-12 pairs of lanceolate acute leaflets; stipulas acuminate, length of leaves; spikes of flowers oblong, pedunculate, longer than the leaves; vexillum longer than the wings; legumes oblong, terete, and somewhat tetragonal, sulcate on the back, apiculated by the style, erect, clothed with adpressed pubescence.  $\frac{1}{2}$  H. Native of Siberia beyond the Baikal. Flowers bluish purple.

*Var.  $\beta$ , prostratus* (Fisch. hort. gor.) stems prostrate.  $\frac{1}{2}$  H. Native of Siberia about Irkutsk.

*Assurgent Milk-Vetch.* Fl. June, July. Clt. 1818. Pl. asc.

63 A. LAXMANNI (Jacq. hort. vind. 3. p. 37.) plant erect or diffuse, smoothish; leaves with 11-13 pairs of oblong-lanceolate leaflets; spikes of flowers pedunculate, oblong, longer than the leaves; vexillum much longer than the wings; legumes oblong, trigonal, mucronate, having a furrow on the back.  $\frac{1}{2}$  H. Native of Siberia and North America, on the plains of the Missouri river. Flowers pale-purple or pale-blue. A. Laxmanni of Pall. astr. t. 30. differs in its more rigid habit. The American plant appears to be upright. Jacquin's one is procumbent.

*Laxmann's Milk-Vetch.* Fl. July, Aug. Clt. 1804. Pl.  $1\frac{1}{2}$  foot or procumbent.

64 A. AGRESTIS (Dougl. mss.) stem erect, smooth; leaflets ovate-lanceolate, obtuse, beset with adpressed hairs; peduncles elongated, longer than the leaves; spikes of flowers capitate; calyx villous; bractæ lanceolate, not half so long as the calyx.  $\frac{1}{2}$  H. Native of North America, near the Columbia river in fields. Flowers purple.

*Field Milk-Vetch.* Pl. 1 foot.

65 A. DORYENIODES (Dougl. mss.) plant erect, densely clothed with hoary silky villi; leaflets obovate-linear, obtuse; calyx smooth; racemes longer than the leaves.  $\frac{1}{2}$  H. Native of North America, near the Columbia river. Flowers purple. An elegant plant.

*Doryenium-like Milk-Vetch.* Pl. 1 foot.

66 A. MICROCARPUS (D. C. astr. no. 29.) plant erect, glabrous; leaves with 10-12 pairs of elliptic leaflets; spikes of

flowers capitate, pedunculate, equal in length to the leaves; vexillum oblong, a little longer than the wings; legumes ovate, compressed, pubescent, rather acute.  $\frac{1}{2}$  H. Native of Siberia, in plains near the river Ob. Flowers purple.

*Small-fruited Milk-Vetch.* Pl. 1 foot.

67 A. BARBATUS (Lam. dict. 1. p. 314.) plant erect, clothed with canescent hairs; leaves with 6-8 pairs of linear-lanceolate leaflets; spikes of flowers ovate, on short peduncles; teeth of calyx subulately-filiform, longer than the corolla, clothed with stiff villi; vexillum linear, much longer than the wings.  $\frac{1}{2}$  H. Native of Armenia. D. C. astr. no. 12. A. hispidus, Labill. syr. dec. 1. t. 8. Flowers purple.

*Bearded Milk-Vetch.* Pl.  $\frac{1}{2}$  foot.

68 A. LABRADORICUS (D. C. prod. 2. p. 287.) plant procumbent, clothed with minute pubescence; leaflets ovate; spikes of flowers pedunculate; legumes secund, straight, acuminate at both ends, pendulous.  $\frac{1}{2}$  H. Native of the north of Canada and of Labrador. A. secundus, Michx. fl. bor. amer. 2. p. 67. but not of D. C. Flowers of a deep purple-colour. Perhaps belonging to a different section.

*Labrador Milk-Vetch.* Pl. procumbent.

69 A. MISSOURIENSIS (Nutt. gen. amer. 2. p. 99.) plant almost stemless, rather diffuse, clothed with canescent villi; stipulas ovate; leaves with 5-10 pairs of small obovate-elliptic leaflets; spikes of flowers capitate, standing on peduncles, which are a little longer than the leaves; calyx covered with black hairs; legumes oblong, acuminate, transversely-dilated, nearly glabrous, half-bilocular.  $\frac{1}{2}$  H. Native of Upper Louisiana, on hills about the Missouri. Oxýtropis argentatus, Pursh, fl. sept. amer. 2. p. 473. exclusive of the synonymes. Flowers purple, but there is a variety with white flowers also. Perhaps belonging to a different section.

*Missouri Milk-Vetch.* Pl.  $\frac{1}{2}$  foot.

70 A. CARYOCARPUS (Ker. bot. reg. t. 176.) plant having numerous, prostrate, assurgent stems, rising from the same root, clothed in every part with hoary-silky down; stipulas ovate, acute; leaves with 9-12 pairs of elliptic leaflets; peduncles shorter than the leaves; racemes loose-flowered; legumes nut-formed, inflated, fleshy, mucronate, glabrous, many-seeded.  $\frac{1}{2}$  H. Native of Louisiana. A. crassicaerpus, Fras. cat. 1813. A. carnosus, Nutt. gen. amer. 2. p. 100. but not of Pursh. Flowers of a pale-violet colour. Perhaps belonging to a different division of the genus.

*Nut-fruited Milk-Vetch.* Fl. June, July. Pl. prostrate.

§ 4. *Sesamei* (Sensen is the Arabic name of some species). D. C. prod. 2. p. 287. Stipulas distinct, not adhering to the petiole. Flowers purplish, disposed in dense spikes or heads. Legumes straight. Roots annual.

71 A. PENTAGLÓTTIS (Lin. mant. 274.) plant diffusely-procumbent, rather villous; stipulas ovate; leaves with 4-9 pairs of obovate retusely-emarginate leaflets; peduncles rather longer than the leaves; legumes half-ovate, somewhat triquetrous, echinated with tubercles, which are usually piliferous, disposed in heads; cells 1-celled.  $\odot$  H. Native of Spain and Barbary, on hills. D. C. astr. no. 16. Cav. icon. t. 188. A. cristatus, Gouan. ill. 59. A. echinatus, Lam. A. procumbens, Mill. A. dasyglóttis, Pall. Flowers blue and white.

*Five-tongued or Five-podded Milk-Vetch.* Fl. Ju. Jul. Pl. pr.

72 A. GLAUX (Lin. spec. 1097.) plant procumbent, clothed with canescent villi; stipulas ovate-lanceolate; leaves with 8-13 pairs of small, oblong, acutish leaflets; peduncles longer than the leaves; vexillum linear; legumes erect, ovate, triquetrous, mucronate, villous, disposed in heads; cells 1-seeded.  $\odot$  H. Native of Spain and the south of France, in arid places. D. C. astr. no. 22.—Clus. hist. 2. p. 242. with a figure. Allied to the smaller

variety of *A. hypoglôttis*, but differs in the stipulas being free, not connate. Flowers purplish.

*Milwort Milk-Vetch.* Fl. June, July. Clt. 1596. Pl. procumbent.

73 *A. OXYGLÔTTIS* (Stev. in Bieb. fl. taur. 2. p. 102.) plant diffuse, puberulous; stipulas subulate; leaves having 5-9 pairs of oblong emarginate leaflets; peduncles length of leaves, or rather shorter; legumes sulcate, acute, rather hoary, disposed in stellate heads; cells 6-seeded. ☉. H. Native of Tauria, on hills about Sudak. *A. sesàmæus*, Pall. astr. no. 104. exclusive of the synonymes. Flowers unknown, but probably blue.

*Sharp-tongued or Sharp-podded Milk-Vetch.* Fl. June, July. Clt. 1817. Pl. diffuse.

74 *A. PSILOGLÔTTIS* (Stev. in litt. D. C. prod. 2. p. 288.) plant diffuse or rather procumbent; stipulas linear-subulate; leaflets cuneated, emarginate, 6 or 8 pairs, smoothish; peduncles one-half shorter than the leaves, and are, as well as the stems, hoary; legumes spreading, crowded, furrowed, acute, glabrous; cells 3-4-seeded. ☉. H. Native about Astracan. Flowers probably purplish. Perhaps this and the preceding species are referrible to division six, *Annulâres*.

*Smooth-tongued or Smooth-podded Milk-Vetch.* Pl. spread.

75 *A. CRUCIATUS* (Link. enum. 2. p. 256.) plant procumbent, hoary, and villous; stipulas lanceolate; leaves with 6-8 pairs of oblong-linear acutish leaflets; peduncles a little shorter than the leaves; legumes between terete and compressed, dilated at the base, clothed with adpressed villi, and disposed in stellate heads; cells 5-7-seeded. ☉. H. Native of Egypt and Siberia. *A. stëlla*, Bieb. fl. taur. 2. p. 191. ex Fisch. in litt. Flowers violaceous?

*Cross-podded Milk-Vetch.* Fl. June, July. Clt. 1820. Pl. procumbent.

76 *A. STËLLA* (Gouan. ill. 50.) plant diffusely procumbent, clothed with hoary villi; stipulas lanceolate; leaves with 8-10 pairs of elliptic-oblong leaflets; peduncles length of leaves or shorter; legumes almost terete, furrowed on the back, mucronate, hairy, at first in a head, but at length becoming stellately disposed; cells 5-10-seeded. ☉. H. Native of the south of France and of the north of Africa, in arid places. D. C. astr. no. 7.—Lob. icon. 2. t. 83. Flowers bluish-purple. There is a variety of this plant with acute leaflets.

*Star-podded Milk-Vetch.* Fl. Jul. Aug. Clt. 1658. Pl. pr.

77 *A. TRIBULOIDES* (Delill. ill. fl. ægypt. p. 22.) plant diffusely procumbent, or almost stemless, clothed with hoary villi; stipulas lanceolate; leaves with 7-9 pairs of elliptic-oblong leaflets; heads of flowers axillary, sessile; legumes nearly terete, hairy, furrowed on the back, disposed in stellate heads; cells 5-7-seeded. ☉. H. Native of Egypt, in deserts. Perhaps distinct from *A. tribuloides* of Roth. in Horn. hort. hafn. 2. p. 703. Flowers purplish.

*Caltrop-like Milk-Vetch.* Fl. June, Jul. Clt. 1817. Pl. pr.

78 *A. SESA'MEUS* (Lin. spec. 1068.) plant diffuse, villous, and rather canescent; stipulas lanceolate; leaves with 9-10 pairs of elliptic, emarginate leaflets; heads of flowers axillary, sessile; legumes erect, nearly terete, acuminate, villous, furrowed on the back, disposed in heads; cells 7-8-seeded. ☉. H. Native of the south of Europe and the north of Africa. D. C. astr. no. 8. *A. stellatus*, Riv. tetr. irr. t. 106.—Garid. aix. t. 12. Flowers bluish purple.

*Sesame-like Milk-Vetch.* Fl. June, Jul. Clt. 1816. Pl. diff.

§ 5. *Vesicari* (from *vesica*, the bladder; in reference to the calyxes in all the species contained in this division being inflated). D. C. prod. 2. p. 288. *Stipulas distinct, not adhering to the petiole. Flowers purplish or white. Calyxes bladdery.*

79 *A. LINEATUS* (Lam. dict. 1. p. 314.) plant diffusely pros-

trate, clothed with villous pubescence; leaves with 8-10 pairs of elliptic-oblong leaflets; peduncles longer than the leaves; calyxes bladdery, rather villous, lined, and contracted at the mouth, inclosing the legume, which is pilose. ☉. H. Native of the Levant. Vahl. symb. 1. p. 59. D. C. astr. no. 14. t. 11. f. 1. Flowers purplish.

*Lined-calyxed Milk-Vetch.* Pl. prostrate.

80 *A. MEGALANTHUS* (D. C. astr. no. 58. t. 20.) plant diffuse, rather hoary from adpressed down; leaflets oblong-elliptic; peduncles shorter than the leaves; calyxes inflated, clothed with black adpressed down; legumes very hairy, length of calyx. ♀. H. Native of Siberia, about Zmeof. *Cajanus megalanthus*, Spreng. Flowers large, pale. Stipulas sometimes joined together at the very base. Said to be nearly allied to *A. unifolius*.

*Large-flowered Milk-Vetch.* Pl. diffuse.

81 *A. VESICARIUS* (Lin. spec. 1071.) plant diffusely procumbent, hoary from adpressed silky down; leaves with 5-7 pairs of elliptic leaflets; peduncles longer than the leaves; calyx bladdery, clothed with black adpressed down, and long white spreading hairs; legumes hairy, a little longer than the calyx. ♀. H. Native of the south of France, Hungary, and Tauria, in rugged exposed places. Vill. dauph. t. 42. f. 1. D. C. astr. no. 15. Alf. pedem. no. 1269. t. 80. f. 1. *A. albidus*, Walld. et. kit. pl. hung. 1. t. 40. *A. glaucus*, Bieb. fl. taur. 2. p. 186. *A. dealbatus*, Pall. astr. t. 23. f. 1. Flowers having the vexillum purple, the wings yellow, and the keel white, tipped with yellow, rarely with all the petals cream-coloured.

*Bladdery-calyxed Milk-Vetch.* Fl. July, Aug. Clt. 1737. Pl. diffuse.

82 *A. ALBICATUS* (D. C. astr. no. 59. t. 21.) plant tufted and erectish, suffruticose at the base, canescent from adpressed down; leaves with 3-4 pairs of ovate leaflets; peduncles a little longer than the leaves; calyxes bladdery, clothed with adpressed black down; legumes hairy, ovate, compressed. ♀. H. Native of Russia, between the Volga and the Don, at Sarepta, also of Caucasus and Tauria. *A. dealbatus*, Pall. astr. no. 30. t. 23. f. 2 and 3. Willd. spec. 3. p. 1263. Bieb. fl. taur. no. 1463. *Oxytropis dealbatus*, Pers. Flowers white or pale yellow.

*White-stemmed Milk-Vetch.* Pl.  $\frac{1}{2}$  foot.

83 *A. ARGENTUS* (Bertol. ined. ex Vis. pl. dalm. in bot. zeit. p. 18.) plant silky; stems diffusely procumbent, herbaceous, permanent at the base; peduncles terminal, very long, and loosely racemose; leaves with 5-7 pairs of linear leaflets; stipulas distinct; wings entire, shorter than the vexillum; legume straight, terete, acuminate. ♀. H. Native of Dalmatia. Nearly allied to *A. vesicarius* but differs in the legumes being terete and silky.

*Silvery Milk-Vetch.* Pl. procumbent.

§ 6. *Annulâres* (from *annularis*, of a ring; in reference to the shape of the legumes which are twisted into the form of a ring). D. C. prod. 2. p. 289. *Stipulas distinct, not adhering to the petiole. Flowers purplish or white. Legumes arched. Roots annual.*

84 *A. NUTTALLIANUS* (D. C. prod. 2. p. 289.) plant decumbent; leaflets elliptic, emarginate; peduncles 2-flowered, longer than the petioles; legumes falcate, having 2 keels, glabrous; seeds truncate. ☉. ? ♂. ? ♀. ? H. Native of North America, in plains at Rod river. *A. micranthus*, Nutt. in journ. sc. nat. philad. 1821. p. 122. but not of Desv. Stem a span long. Flowers blue.

*Nuttall's Milk-Vetch.* 11. June, July. Clt. 1822. Pl. dec.

85 *A. CYMBECARROS* (Brot. fl. lus. 2. p. 167. phyt. p. 143. t. 59.) plant herbaceous, procumbent, rather pilose; leaflets orbiculate, cuneated; peduncles length of leaves; legumes gla-

brous, warted, beaked, arched, and most tumid at the base.  $\odot$ . H. Native of Portugal, in barren sandy places. Corolla sometimes white and sometimes purple.

*Boat-fruited Milk-Vetch*. Fl. June, Jul. Clt. 1800. Pl. pr.

86 *A. STRIATELLUS* (Bieb. fl. taur. 2. p. 189.) plant diffuse, glabrous; leaflets cuneiform, somewhat emarginate; peduncles 3-flowered, shorter than the leaves; legumes ovate-oblong, tumid, glabrous, deflexed, a little arched.  $\odot$ . H. Native of Tauria, about Sudak. Bieb. pl. ross. cent. 1. t. 20. ex suppl. no. 1472. Corolla blue or white. Vexillum hardly longer than the wings, and obtuse keel.

*Striped Milk-Vetch*. Pl. diffuse.

87 *A. ANNULARIS* (Forsk. ægypt. 139.) plant diffuse, clothed with cinereous villi; leaflets few, obovate; peduncles few-flowered, length of leaves; young legumes straight, subulate, pubescent, adult ones glabrous, spotted, resupinate and arched.  $\odot$ . H. Native of Egypt. D. C. astr. append. no. 6. t. 7. *A. maculatus*, Lam. dict. 1. p. 316. *A. subulatus*, Desf. fl. atl. 2. p. 186. but not of Pall. Flowers small, rose-coloured.

*Angular-podded Milk-Vetch*. Fl. June, July. Clt. 1800. Pl. diffuse.

88 *A. TRIMORPHUS* (Viv. fl. lyb. p. 44. t. 10. f. 2.) plant erect, and clothed with canescent hairs; lower leaves with 1-3 leaflets, upper ones impari-pinnate, with a few pairs of elliptic-oblong, acute leaflets; peduncles 2-3-flowered, a little longer than the leaves; legumes cylindrical, incurved, clothed with adpressed villi.  $\odot$ . H. Native on the shores of Lybia, in the Great Syrtis. Flowers purple.

*Three-formed Milk-Vetch*. Fl. Ju. Jul. Clt. 1827. Pl.  $\frac{1}{2}$  ft.

89 *A. HISPIDULUS* (D. C. astr. no. 30. t. 13.) plant tufted and rather diffuse, pilose; leaflets elliptic-oblong; peduncles few-flowered, length of leaves; legumes slender, erect, hispid, when young they are straight, but when mature they are arched.  $\odot$ . H. Native of Egypt, in the desert. Flowers pale, with the vexillum elongated.

*Hispid-podded Milk-Vetch*. Pl.  $\frac{1}{4}$  foot.

90 *A. SCORPIOIDES* (Pouff. in Willd. spec. 3. p. 1280.) plant erectly-spreading, pubescent; leaflets oblong, obtuse, emarginate; stipulas lanceolate; flowers axillary, 1-2, almost sessile; legumes hooked, subulate, pubescent.  $\odot$ . H. Native of Spain, about Madrid. *A. subbiflorus*, Lag. Flowers blue. This plant, when growing in a dry place, hardly exceeds an inch in height, but when growing in moist rich places it rises to a foot. Perhaps not distinct from *A. canaliculatus*, of Willd. enum. suppl. 52.

*Scorpion-like-podded Milk-Vetch*. Fl. June, July. Clt. 1816. Pl. 1 inch to 1 foot.

91 *A. MAREOTICUS* (Delil. fl. ægypt. 113. t. 39. f. 3.) plant diffusely-prostrate, rather hispid; leaflets obovate, emarginate; peduncles 3-4-flowered, shorter than the leaves; legumes hooked and arched, almost cylindrical, glabrous, furrowed on the back, almost bilocular.  $\odot$ . H. Native about Alexandria, and in the Marcotic marsh. Flowers lilac.

*Marcotic Milk-Vetch*. Fl. June, July. Clt. 1817. Pl. pr.

92 *A. CORRUGATUS* (Bert. amœn. 38. rar. dec. 3. p. 33.) plant erectly-spreading, rather pubescent; leaflets oblong-cuneate, emarginately bidentate at the apex; peduncles usually 1-flowered, about equal in length to the leaves; legumes arched, furrowed on the back, quite smooth, transversely and reticulately wrinkled.  $\odot$ . H. Native of Egypt. *A. cruentus*, Balb. cat. taur. append. 1. p. 8. *A. crenatus*, Schultes, obs. 186. Flowers blue or purplish.

*Wrinkled-podded Milk-Vetch*. Pl.  $\frac{1}{2}$  foot.

93 *A. RETICULATUS* (Bieb. suppl. fl. taur. 491.) plant diffuse and glabrous; leaflets oblong-cuneate and emarginate; peduncles usually 5-flowered, shorter than the leaves; legumes hooked,

subulate, furrowed on the back, quite smooth, transversely and reticulately veined.  $\odot$ . H. Native of Middle Iberia, at Sarepta. Flowers blue. A very small plant.

*Reticulated-podded Milk-Vetch*. Fl. June, July. Clt. 1828. Pl.  $\frac{1}{8}$  foot.

94 *A. CANALICULATUS* (Willd. enum. suppl. 52.) stems erect; leaflets oblong, retuse; stipulas ovate; flowers axillary, solitary, nearly sessile; legumes hooked, profoundly channelled on the back.  $\odot$ . H. Native of Europe. Flowers white.

*Channelled Milk-Vetch*. Fl. June, July. Clt. 1816. Pl. 1 to 2 feet.

SERIES II. *OCHROLEUCI* (from *ωχρος*, *ochros*, yellow, and *λευκος*, *leucos*, white; the colour of the flowers is between white and yellow, that is cream coloured). D. C. prod. 2. p. 290. Stipulas free from the petiole. Flowers cream-coloured.

§ 7. *Bucerates* (from *βους*, *bous*, an ox, and *κερας*, *keras*, a horn; in reference to the form of the pods). D. C. prod. 2. p. 290. Stipulas neither adhering to the petioles nor together. Flowers cream-coloured. Legumes usually arched. Roots annual.

95 *A. CONTORTUPPLICATUS* (Lin. spec. 1068.) plant procumbent, villously-pubescent; leaflets obovate, emarginate; racemes pedunculate, 4-times shorter than the leaves; legumes contortuplicate, channelled on the back, villous.  $\odot$ . H. Native of Siberia, Tauria, and Hungary, in grassy places. Pall. astr. t. 79.—Gmel. sib. 4. t. 28. D. C. astr. no. 29.—Buxb. cent. 3. p. 22. t. 39. Flowers pale yellow. This plant varies wonderfully in size, according to the soil in which it grows.

*Contortuplicate-podded Milk-Vetch*. Fl. July, Aug. Clt. 1783. Pl. procumbent.

96 *A. TRIMESTRIS* (Lin. spec. 1073. but not of Bieb.) plant diffuse, villously-pubescent; leaflets elliptic, emarginate; peduncles 2-5-flowered, a little shorter than the leaves; legumes hooked, subulate, rather pubescent, broadly furrowed on the back, and 2-keeled.  $\odot$ . H. Native of Egypt and the island of Scio. Jacq. hort. vind. 174. D. C. astr. no. 50. *A. membranaceus*, Moench. *A. hamosus*  $\beta$ , Pall. Flowers pale yellow.

*Three-Monthly Milk-Vetch*. Fl. Ju. July. Clt. 1777. Pl.  $\frac{1}{2}$  ft.

97 *A. HAMOSUS* (Lin. spec. 1067.) plant diffuse, pubescent; leaflets cuneate, emarginate, glabrous above; peduncles usually 6-flowered, shorter than the leaves; legumes hooked, furrowed on the back, almost terete, subulate at the apex, when young pubescent, but when adult smooth.  $\odot$ . H. Native of dry exposed places, from Spain to Tauria, and of Mauritania. Gart. fruct. t. 154. D. C. astr. no. 51.—Moris. oxon. sect. 2. t. 9. f. 10. *A. Austriacus*, Delarb. *A. buceras*, Willd. enum. suppl. p. 51. according to Link. and Fischer. The plant is either prostrate or diffuse, and the peduncles bear from 2-8 flowers; they are pale-yellow. It goes commonly under the name of caterpillars in the gardens, in reference to the shape of the pods.

*Var.  $\beta$ , macrocarpus* (D. C. prod. 2. p. 290.) plant decumbent or erect; peduncles equal in length to the leaves. Led. hort. dorp. p. 23. Legumes 3-times larger than those of the species.

*Hooked-podded Milk-Vetch*. Fl. June, Aug. Clt. 1640. Pl. diffuse.

98 *A. AGICERAS* (Willd. enum. suppl. 52.) plant diffuse and pubescent; leaflets elliptic, emarginate; stipulas lanceolate, acuminate; racemes 8-10-flowered, pedunculate, twice or thrice shorter than the leaves; legumes hooked, compressed at the apex, somewhat pubescent, channelled on the back.  $\odot$ . H. Native country unknown. Flowers pale yellow. Sometimes the plant is erect.

*Goat's-horn-podded Milk-Vetch*. Fl. June, Jul. Clt. 1818. Pl. 1 foot or diffuse.

99 *A. BRACHY CERAS* (Ledeb. cat. hort. dorp. 1822. p. 3.) plant procumbent; leaflets elliptic, mucronate; stipulas ovate; racemes pedunculate, shorter than the leaves; legumes nearly erect, incurved, subulate. ☉. H. Native of the North of Persia, and probably of the south of Tauris. *A. triméstris*, Bieb. fl. taur. 2. p. 190. Legumes much shorter than those of *A. hamdani*, and the plant is also much smaller. Flowers pale yellow.

*Short-horned or podded Milk-Vetch.* Fl. June, July. Clt. 1828. Pl. procumbent.

100 *A. GENICULATUS* (Desf. atl. 2. p. 186. t. 205.) plant diffuse, hoary from villi; stipulas lanceolate; leaves with 5-8 pairs of oblong-elliptic leaflets; peduncles shorter than the leaves, when bearing the fruit they are deflexed; legumes depressed, trigonal, mucronate, a little arched, channelled on the back, hairy. ☉. H. Native of Barbary, near Mascar on hills. D. C. astr. no. 52. Flowers pale yellow.

*Jointed Milk-Vetch.* Pl. diffuse.

101 *A. TUBERCULOSUS* (D. C. astr. no. 60. t. 22.) plant erect, hispid at the apex; stipulas lanceolate; leaflets obovate, emarginate, about 11-12 pairs; racemes pedunculate, longer than the leaves; legumes depressed, ending each in a long mucrone, arcuately hooked upwards, tubercular, and puberulous. ☉. ? H. Native of Syria and Cappadocia. The fruit of the Cappadocian plant is much larger than those of the Syrian one. Flowers pale yellow.

*Tubercular-fruited Milk-Vetch.* Pl. 1 foot.

102 *A. EPIGLOTTIS* (Lin. mant. 274.) plant procumbent, clothed with hoary villi; stipulas lanceolate, and are, as well as the calyxes, clothed with black villi; leaves with 6-7 pairs of oblong-linear leaflets; spikes of flowers capitate, on very short peduncles; legumes depressed, somewhat cordate, acuminate, with somewhat replicate margins, spreading, and pubescent. ☉. H. Native of Spain, Barbary, the Levant, and south of France. D. C. astr. no. 56.—Herm. lugd. bot. p. 77. Riv. tetr. 109. f. 1. Flowers pale yellow.

*Var. β, asperulus* (D. C. prod. 2. p. 291.) stems rather rigid, and rough. ☉. H. Native of Spain, on hills about St. Philip. *A. asperula*, Dufour, ann. gen. sc. 7. p. 295.

*Sword-tongued or Sword-podded Milk-Vetch.* Fl. June, July. Clt. 1737. Pl. procumbent.

103 *A. TRIANGULARIS* (D. C. prod. 2. p. 291.) stem erect, smoothish, trigonal; stipulas membranous, acuminate, villous; leaves with 8-10 pairs of elliptic-oblong, obtuse, emarginate leaflets; spikes of flowers pedunculate, longer than the leaves; legumes pendulous, triquetrous, few-seeded, straight, incompletely 2-celled. ☉. H. Native country unknown. *Phaca triangularis*, Zea in Horn. hort. hain. suppl. 63. Flowers pale yellow.

*Triangular-stemmed Milk-Vetch.* Fl. July, Aug. Clt. 1818. Pl.  $\frac{3}{4}$  foot.

104 *A. BæTICUS* (Lin. spec. 1068.) plant procumbent, pubescent; stipulas membranous, ovate, acuminate; leaves with 10-15 pairs of obovate retuse leaflets; spikes of flowers on very short peduncles; legumes erect, triquetrously-prismatic, glabrous, straight, but hooked at the apex. ☉. H. Native of Spain, Barbary, Sicily, and the Levant. *A. micinatus*, March. *A. triangularis*, Munt. phyt. t. 110.—Riv. tetr. irr. t. 105.—Bocc. sic. t. 4. Flowers pale yellow. The plant under this name in the gardens is erect; it is therefore perhaps the preceding species. In Hungary the seeds are roasted, ground, and used as a substitute for coffee.

*Bætian Milk-Vetch.* Fl. June, Aug. Clt. 1759. Pl. proc.

§ 8. *Synochreàti* (from *συν*, *syn*, together, and *ωχρος*, *ochros*, yellow; the stipulas are joined together, and the flowers are yellow). D. C. prod. 2. p. 291. *Stipulas free from the petiole, but joined together.* Flowers cream-coloured. Root perennial.

105 *A. EMARGINATUS* (D. C. astr. no. 47.) plant almost stemless and ascending, clothed with somewhat tomentose villi; stipulas membranous, concrete; leaves with 20-25 pairs of ovate emarginate leaflets; spikes of flowers ovate, dense, on radical peduncles or scapes, which are much longer than the leaves; legumes roundish, hairy. ♀. H. Native of the Levant. Flowers pale yellow.

*Var. α, densifolius* (Lam. dict. 1. p. 317.) leaflets small, much crowded. Rauw. hodgep. 123. t. 29.

*Var. β, Billardièrii* (D. C. l. c.) leaflets larger, and rather distant. *A. emarginatus*, Labill. syr. dec. 1. p. 19. t. 9.

*Emarginate-leafletted Milk-Vetch.* Fl. June, July. Clt. 1825. Pl.  $\frac{1}{4}$  foot.

106 *A. CAPITATUS* (Lin. spec. 1064.) plant caulescent, erect; leaflets emarginate; spikes capitate, on elongated peduncles. ♀. H. Native of the Levant. Flowers purple.

*Capitate-flowered Milk-Vetch.* Fl. July, Aug. Clt. 1759. Pl. 1 foot.

107 *A. FRAGRANS* (Willd. spec. 3. p. 1294.) plant procumbent, and almost stemless, glabrous; stipulas concrete, marcescent; leaves with 8-10 pairs of elliptic acute leaflets, which are pubescent beneath; peduncles about equal in length to the leaves; spikes of flowers ovate; bractees ovate, membranous; legumes glabrous. ♀. H. Native of Cappadocia. *A. glaber*, D. C. astr. no. 44. but not of Michx. *A. orientalis minimus foliis vicie et floribus ex viridi-flavescentibus odoratissimis*, Tourn. cor. 29. Flowers greenish yellow.

*Fragrant Milk-Vetch.* Pl. procumbent, an inch long.

108 *A. MICROPHYLLUS* (Lin. spec. 1067. ? Willd. spec. 3. p. 1277.) plant diffuse, smoothish; lower stipulas free, upper ones concrete; leaves with 15-18 pairs of puberulous leaflets, the lower ones oblong and emarginate, the upper ones linear and retuse; peduncles longer than the leaves; legumes erect, crowded in spikes, inflated, ovate, hairy. ♀. H. Native of Siberia in pastures; also of Thuringia and Hercynia, if the synonyme of Willd. be rightly attached. The fruit is that of *A. ciccr*, but the leaves and stipulas are different. Flowers pale yellow. The specimen in the Linnean herbarium is pubescent, with 6-7 pairs of roundish emarginate leaflets.

*Small-leaved Milk-Vetch.* Fl. June, July. Clt. 1773. Pl. 1 foot long, diffuse.

109 *A. SEMIBILOCLARIS* (D. C. astr. no. 61. t. 23.) plant erect, rather ascending, smoothish; lower stipulas concrete, upper ones distinct; leaves with 9-11 pairs of elliptic-oblong acute leaflets; peduncles longer than the leaves; legumes erect, disposed in heads, oblong-triquetrous, half-bilocular. ♀. H. Native of Siberia, about Zincof. Flowers pale yellow.

*Half-bilocular-podded Milk-Vetch.* Fl. July, Aug. Clt. 1804. Pl. 1 foot.

110 *A. RESUPINATUS* (Bieb. fl. taur. suppl. p. 193.) plant with short diffuse stems, and clothed with adpressed pubescence in every part; stipulas concrete; leaves with 5-10 pairs of elliptic acutish leaflets; peduncles about equal in length to the leaves; legumes oblong, nearly terete, arched, resupinate, and rather pilose. ♀. H. Native of middle Iberia. *A. physodes* var. *perpusilla*, Bieb. fl. taur. 2. p. 198. Flowers pale yellow.

*Resupinate-podded Milk-Vetch.* Pl.  $\frac{1}{4}$  foot.

111 *A. REPTANS* (Willd. hort. berl. 2. t. 88.) plant procumbent, creeping, glabrous; some of the stipulas concrete, and others free; leaves with 12-13 pairs of linear, lanceolate, obtuse, mucronate leaflets; raceme pedunculate, hardly shorter than the leaves; legumes lanceolate, pubescent, half-bilocular. ♀. G. Native of Mexico. Flowers white. Allied to *A. odoratus*, according to Link. There is a specimen in the Lambertian herbarium, which agrees with this in every particular, but the leaves

are hairy on the under surface, and the peduncles are equal in length to the leaves.

• *Creeping Milk-Vetch*. Fl. Ju. Jul. Clt. 1818. Pl.  $\frac{1}{2}$  creeping.

112 *A. ODORATUS* (Lam. dict. 1. p. 311.) plant erect, and rather ascending, pubescent; stipulas concrete; leaves with 11-14 pairs of oblong acute leaflets; peduncles length of leaves; bracteas smaller than the calyx; legumes oblong, terete, glabrous, spreadingly reflexed.  $\mathcal{A}$ . H. Native of the Levant. D. C. astr. no. 67. t. 24. Habit of *A. uliginosus*, but differs in the stipulas being concrete. Flowers pale yellow, sweet-scented.

*Sweet-scented-flowered Milk-Vetch*. Fl. June, July. Clt. 1820. Pl.  $\frac{1}{2}$  foot.

113 *A. STIPULATUS* (D. Don, prod. fl. nep. p. 246. and in bot. mag. 2380.) plant erect, glabrous; stipulas concrete, foliaceous, large; leaves with 8-16 pairs of oval-oblong, or obovate mucronulate leaflets; peduncles about the length of the leaves; flowers disposed in loose spikes, at first erect, but at length drooping; legumes compressed, stipitate, glabrous, drooping.  $\mathcal{A}$ . H. Native of Upper Nipaul at Corasan. Corolla greenish-white, tinged with red. *A. lanceolatus*, Hamilt. in herb. Lamb. *Coronilla stipulata*, ibid. Habit of *A. glycyphyllos*. Stipulas 2 inches long, and half an inch broad.

*Large-stipuled Milk-Vetch*. Fl. June, July. Clt. 1822. Pl. 2 to 3 feet.

114 *A. MUCRONATUS* (D. C. astr. no. 68. t. 25.) plant erect, rather pubescent; stipulas concrete, lanceolate; leaves with 7-17 pairs of oblong-elliptic mucronate leaflets; peduncles length of leaves; legumes compressed, arched, channelled on the back, when young pubescent.  $\mathcal{A}$ . H. Native of the Levant. *A. orientalis altissimus*, &c. Tourn. cor. p. 29. Flowers yellow.

*Mucronate-leafletted Milk-Vetch*. Fl. June, Aug. Pl. 2 to 3 ft.

115 *A. FRAXINFOLIUS* (D. C. astr. no. 71.) plant erect, smoothish; stipulas concrete, marcescent; leaves with 6-7 pairs of ovate acuminate leaflets, which are pubescent beneath; peduncles shorter than the leaves; legumes pendulous, subulate, triquetrous, sessile, a little arched and glabrous.  $\mathcal{A}$ . H. Native of the Levant. Tourn. cor. 29. Flowers yellow. Like *A. stipulatus* and *A. glycyphyllos*.

*Ash-leaved Milk-Vetch*. Pl. 2 to 3 feet.

§ 9. *Ciceroidei* (from *cicer*, the chick-pea, and *idea*, similar; plant similar to the chick-pea in habit). D. C. prod. 2. p. 292. *Stipulas neither adhering to the petioles nor to each other, Flowers cream-coloured, disposed in pedunculate spikes. Roots perennial. Legumes sessile.*

116 *A. GLYCYPHYLLOS* (Lin. spec. 1067.) plant prostrate, glabrous; stipulas ovate-lanceolate, entire; leaves with 4-5-7 pairs of oval, bluntish, smooth leaflets; peduncles shorter than the leaves; spikes of flowers ovate-oblong; legumes almost terete, obscurely triangular, with a slight longitudinal furrow, curved upwards, pointed, smooth, and even.  $\mathcal{A}$ . H. Native of Europe and Siberia. In Britain in woods, thickets, borders of fields, or on the sides of hills, on a chalky or gravelly soil. Smith, engl. bot. t. 203.—Riv. tetr. irr. t. 103. Flowers sulphur-coloured. The leaves have at first a sweetish taste, soon changing on the palate to a nauseous bitter. Cattle are not fond of them, nor is this plant applied to any agricultural use.

*Sweet-leaved or Lignorice-Vetch*. Fl. June, July. Britain. Pl. prostrate, 2 to 3 feet long.

117 *A. GLYCYPHYLLOIDES* (D. C. prod. 2. p. 292.) plant procumbent, pubescent; stipulas oblong, leafy, rather stipitate; leaves with 7 pairs of oval leaflets; peduncles shorter than the leaves; spikes of flowers ovate; flowers secund; calyx acutely 5-toothed; legumes spreading, disposed in something like a spike, subulate, triquetrous, straight, glabrous.  $\mathcal{A}$ . H. Native of Iberia. Flowers pale yellow.

*Glycyphyllos-like Milk-Vetch*. Fl. June, July. Clt. 1818. Pl. prostrate.

118 *A. SECUNDUS* (D. C. astr. no. 55.) plant procumbent, glabrous; stipulas ovate-oblong, with pubescent margins, and are, as well as the bracteas, leafy; leaves with 4-5-pairs of ovate leaflets; peduncles longer than the leaves; flowers secund, spreading; calyx truncate; legumes stipitate, compressed, oblong, glabrous.  $\mathcal{A}$ . H. Native of the south of Siberia. Flowers pale yellow. Allied to *A. glycyphyllos*.

*Secund-flowered Milk-Vetch*. Pl. prostrate.

119 *A. SERICEUS* (D. C. astr. no. 45.) plant almost stemless and suffrutescent, clothed with silky pubescence; stipulas lanceolate; leaves with 11-13 pairs of oblong-elliptic leaflets; peduncles a little longer than the leaves; spikes capitate; legumes ovate, silky, acute from the style.  $\mathcal{A}$ . H. Native of the Levant. *A. orientalis minimus flore glomerato virescente*. Tourn. cor. 29. Flowers greenish yellow.

*Silky Milk-Vetch*. Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

120 *A. STRIGULOSUS* (H. B. et Kunth, nov. gen. amer. 6. p. 494.) stems herbaceous, procumbent, clothed with strigose pubescence, as well as the under side of the leaves, but they are glabrous above; leaves with 9-10 pairs of oblong obtuse leaflets; stipulas ovate-oblong, acuminate; racemes cylindrically oblong, on long peduncles; calyx beset with black strigæ.  $\mathcal{A}$ . H. Native of Mexico, in temperate parts. Flowers pale-yellow. Perhaps belonging to a different division.

*Strigose Milk-Vetch*. Pl. procumbent.

121 *A. KAHNRIUS* (D. C. prod. 4. p. 292.) plant diffuse, tomentose; stipulas broad, short, acute; leaves having 5-7 pairs of orbicular leaflets; peduncles length of leaves; flowers disposed in spicate racemes, erect; calyx when in fruit inflated; legumes stipitate, ovate, smooth.  $\mathcal{A}$ . F. Native of Egypt, between Cairo and Souda. *A. longiflorus*, Delil. fl. ægypt. 112. t. 39. f. 2. but not of Pall. Flowers pale yellow.

*Cairo Milk-Vetch*. Pl. diffuse.

122 *A. PERGRINUS* (Vahl. symb. 1. p. 57.) plant diffuse, clothed with hairy tomentum; stipulas lanceolate; leaves having 11-13 pairs of obovate emarginate leaflets; peduncles length of leaves or shorter than them; flowers disposed in spikes, lower ones remote; legumes somewhat triquetrous, a little arched, hairy.  $\mathcal{A}$ . H. Native of Egypt. D. C. astr. no. 72. t. 27. Flowers pale-yellow. There is a variety of this plant with fewer flowers, which are sessile in the axils of the leaves.

*Foreign Milk-Vetch*. Pl. diffuse.

123 *A. DEPRESSUS* (Lin. spec. 1073.) plant almost stemless or diffuse, clothed with canescent pubescence; stipulas ovate, membranous; leaflets 9-11 pairs, obovate; peduncles shorter than the leaves; legumes terete, depressed, straight, drooping, glabrous.  $\mathcal{A}$ . H. Native of the south of Europe, in rugged exposed places, and on mountains. All. ped. no. 1277. t. 19. f. 3. D. C. astr. no. 48. Lodd. bot. cab. 680. Flowers cream-coloured. *A. helminthocarpus*, Vill. mosp. 42. t. 25. f. 2. dauph. 3. p. 456. t. 42. f. 2. but Villars describes his plant as having no peduncle, the leaflet hoary, cut at the apex, and the legume oblong-elliptic and thickening.

*Depressed Milk-Vetch*. Fl. June, July. Clt. 1772. Pl. depressed.

124 *A. LEUCOPHYLLUS* (Smith, in Lin. trans. 1. p. 252.) plant prostrate, clothed with canescent villi; stipulas ovate, trapezoid, membranous; leaves with 12-14 pairs of obcordate leaflets; peduncles shorter than the leaves; legume terete, depressed, acute, deflexed, glabrous.  $\mathcal{A}$ . H. Native country unknown. Very like the preceding species, but the flowers are nearly white at first, but at length changing to a dirty purplish colour.

*Dusky-flowered Milk-Vetch*. Fl. May, Aug. Clt. 1777. Pl. prostrate.

125 *A. GLABER* (Michx. fl. bor. amer. 2. p. 66. but not of D. C.) plant low and smoothish; leaves with 10-11 pairs of elliptic-oblong, obtuse or emarginate leaflets; peduncles longer than the leaves; flowers disposed in racemose spikes; legumes distant, spreading, depressed, incurved. *℥. H.* Native of Georgia and South Carolina, in sandy woods. Flowers white.

*Smooth Milk-Vetch.* Pl.  $\frac{1}{2}$  to 1 foot.

126 *A. CÏCER* (Lin. spec. 1067.) plant diffusely procumbent, rather pubescent; stipulas lanceolate; leaves with 10-13 pairs of elliptic-oblong mucronate leaflets; peduncles longer than the leaves; flowers disposed in spike-like heads; legumes inflated, hairy, mucronate. *℥. H.* Native of Europe, in mountain meadows and hedges. D. C. astr. no. 67. var. *α.* Jacq. austr. 3. t. 251.—All. pedem. no. 1266. t. 41. f. 2.—Riv. tetr. irr. t. 108.—Moris. oxon. sect. 2. t. 9. f. 9. Corolla pale-yellow.

*Chick-pea Milk-Vetch.* Fl. July, Aug. Clt. 1570. Pl. proc.

127 *A. ULIGINOSUS* (Lin. spec. 1066.) plant erect, somewhat diffuse, and rather pubescent; stipulas membranous, lanceolate, acuminate; leaves with 10-11 pairs of elliptic oblong leaflets; peduncles about equal in length to the leaves; flowers disposed in spikes; bracteas about equal in length to the calyx; legumes rather reflexed, terete, glabrous, with a longitudinal furrow on the back. *℥. H.* Native of Siberia, in rather humid meadows. Pall. astr. t. 26. D. C. astr. no. 66.—Gmel. sib. 4. t. 17, 18. Flowers pale yellow, the top of the keel violet-coloured.

*Bog Milk-Vetch.* Fl. July, Aug. Clt. 1772. Pl. diffuse.

128 *A. MICRANTHUS* (Desv. journ. bot. 1814. 1. p. 78. but not of Nutt.) plant diffuse, rather pubescent; stipulas ovate, acute; leaves having 11-12 pairs of elliptic, obtuse leaflets; peduncles twice the length of the leaves; flowers disposed in spikes; bracteas shorter than the calyx; legumes deflexed, somewhat trigonal, smoothish. *℥. H.* Native country unknown. Flowers pale yellow.

*Small-flowered Milk-Vetch.* Fl. June, July. Clt. 1800. Pl. diffuse.

129 *A. CANADENSIS* (Lin. spec. 1066.) plant erectish, rather pubescent; stipulas lanceolate, acuminate; leaves having 10-12 pairs of elliptic-oblong, bluntish leaflets; peduncles about equal in length to the leaves; flowers disposed in spikes; bracteas shorter than the calyx; legumes erect, oblong, terete, glabrous. *℥. H.* Native of North America, from Canada to Carolina. D. C. astr. no. 65. Dodart. icon. t. 65.—Dill. elth. 46. t. 39. f. 45. Corolla yellow. Root creeping.

*Canada Milk-Vetch.* Fl. July. Clt. 1732. Pl. 2 to 3 feet.

130 *A. CAROLINIANUS* (Lin. spec. 1066.) plant erect, glabrous; stipulas ovate, acuminate; leaves with 20 pairs of oblong leaflets, which are pubescent beneath; peduncles longer than the leaves; flowers disposed in spikes; bracteas length of pedicels; legumes erect, ovate, tumid, beaked. *℥. H.* Native of Virginia and Carolina, on mountains.—Dill. elth. t. 39. f. 45. Flowers pale yellow.

*Carolinian Milk-Vetch.* Fl. Jul. Aug. Clt. 1732. Pl. 2 to 3 ft.

131 *A. FALCATUS* (Lam. dict. 1. p. 310. but not of Desf.) erect, rather pubescent; stipulas lanceolate, acuminate; leaves having 16-20 pairs of elliptic-oblong, acute leaflets; peduncles rather longer than the leaves; legumes pendulous, rather trigonal, acute, falcate, glabrous, disposed in racemes. *℥. H.* Native of Siberia, in wet, grassy places. Pall. astr. t. 31. D. C. astr. no. 70. t. 26. *A. virescens*, Ait. hort. kew. 3. p. 73. *A. Isétensis*, Hortul. Flowers greenish yellow.

*Falcate-podded Milk-Vetch.* Fl. Ju. Jul. Clt. ? Pl. 1 to 2 ft.

132 *A. FALCIFORMIS* (Desf. amend. atl. D. C. astr. no. 69.) plant erect, glabrous; stipulas lanceolate, acuminate; leaves with 10-15 pairs of elliptic, obtuse, leaflets; peduncles rather shorter than the leaves; legumes compressed, drooping, falcate, rather stipitate. *℥. H.* Native of Algiers, at the foot of

Mount Atlas. *A. falcatus*, Desf. fl. atl. 2. p. 188. t. 206. Flowers pale yellow or greenish yellow.

*Falciform-podded Milk-Vetch.* Fl. June, July. Clt. 1816. Pl. 2 feet.

133 *A. ASPER* (Jacq. icon. rar. 1. t. 152.) plant erect, straight, rough from hairs, which are fixed by their centre; stipulas linear-lanceolate; leaves with 12-15 pairs of lanceolate leaflets; peduncles much longer than the leaves; flowers spicate, erect; legumes oblong, triquetrous, acuminate, clothed with adpressed pubescence. *℥. H.* Native of Siberia, Tauria, Caucasus, Hungary, &c. D. C. astr. no. 63. *A. chloranthus*, Pall. astr. no. 34. t. 25. Flowers greenish yellow, tipped with orange.

*Rough Milk-Vetch.* Fl. Jul. Aug. Clt. 1796. Pl. 3 to 4 ft.

134 *A. CHLOROSTACHYS* (Lindl. mss.) this plant comes very near *A. stipulatus* and *A. galegiformis*, both in habit and character. It is cultivated in the English gardens, but we have not been able to procure a specimen, and therefore the description remains a desideratum. *℥. H.* Native of Nipaul. Flowers greenish-yellow. *A. malachophyllus*, Hort.

*Green-spiked Milk-Vetch.* Fl. Sept. Oct. Clt. 1824. Pl. 3 to 5 feet.

135 *A. PALLESCENS* (Bieb. fl. taur. suppl. p. 489.) plant ascending, canescent; stipulas lanceolate; leaves with 5-6 pairs of linear-elliptic leaflets; peduncles much longer than the leaves; flowers disposed in spicate racemes, rather distant; legumes erect, oblong, and somewhat triquetrous, clothed with adpressed pubescence, acuminate, mucronate. *℥. H.* Native of Siberia, between the Don and the Volga. Flowers cream-coloured. This plant would have been brought into the division *Dissitiflora*, if it had not been for the colour of the flowers.

*Pale-flowered Milk-Vetch.* Fl. Ju. Jul. Clt. 1818. Pl. asc.

§ 10. *Galegiformes* (from *Galèga*, goats'-rue, and *fôrma*, form; plants with the habit of Goats'-rue, *Galèga*). D. C. prod. 2. p. 294. *Stipulas neither adhering to the petiole nor to each other. Flowers cream-coloured or white. Legumes stipitate.*

136 *A. CHINENSIS* (Lin. fil. dec. 1. t. 3.) plant erect, glabrous; leaves with 12-13 pairs of elliptic-oblong leaflets; peduncles longer than the leaves; flowers pendulous, racemose; legumes ovate, inflated, hardly mucronate. *℥. H.* Native of China. Flowers pale yellow, but finally become white.

*China Milk-Vetch.* Fl. Jul. Aug. Clt. 1795. Pl. 2 to 4 ft.

137 *A. GALEGIFORMIS* (Lin. spec. 1066.) plant erect, glabrous; leaves with 12-13 pairs of elliptic-oblong leaflets; peduncles longer than the leaves; flowers pendulous, racemose; legumes triquetrous, mucronate at both ends. *℥. H.* Native of Siberia, and Iberia. Pall. astr. no. 38. t. 29. D. C. astr. no. 61. Flowers pale yellow.

*Goats'-rue-formed Milk-Vetch.* Fl. June, July. Clt. 1729. Pl. 3 to 5 feet.

138 *A. DRUMMONDI* (Dougl. in Hook, fl. bor. amer. p. 153. t. 57.) plant glabrous; stems flexuous; leaves with 10-12 pairs of ovate-lanceolate, obtuse, mucronate leaflets; bracteas subulate, about the length of the pedicels, or perhaps longer; peduncles a little longer than the leaves, pubescent as well as the petioles, and under side of the leaves as well as the calyxes. *℥. H.* Native of North America. Flowers yellow. Like *A. galegiformis*.

*Drummond's Milk-Vetch.* Pl. 2 feet.

139 *A. SUCCUMBENS* (Dougl. mss.) plant strong and very villous; stems flexuous; leaflets obovate, obtuse; stipulas broad, triangular; bracteas subulate, about the length of the tube of the calyx; racemes about the length of leaves. *℥. H.* Native of North America, on the barren grounds of the Columbia. Flowers apparently yellow. Legumes flat, smooth.

*Crouching Milk-Vetch.* Pl. 1 foot.

140 *A. RACEMOSUS* (Pursh, fl. sept. Amer. p. 740.) plant erect, rather pubescent; leaves with 10 pairs of lanceolate leaflets; peduncles longer than the leaves; racemes dense-flowered; legumes pendulous, inflated, triquetrous. *Æ. H.* Native of Upper Louisiana. *A. galegoides*, Nutt. gen. amer. 2. p. 100. Flowers white. Plant disagreeably scented.

*Racemose-flowered Milk-Vetch.* Pl. 2 to 3 feet.

141 *A. PTEROSTYLIS* (D. C. prod. 2. p. 294.) plant almost erect, glabrous; leaves with 6-7 pairs of elliptic, emarginate leaflets; peduncles longer than the leaves; flowers erect, racemose; legumes pendulous, ovate, depressed, reticulately veined. *Æ. ? S.* Native of New Holland, on the eastern coast, and the island of Timor. The cauline stipulas are distinct, and deeply bi or tridentate. The style is compressed, ensiform, and bearded at the apex on the upper side. Legume on a short stipe, with the cells 2-seeded. Perhaps this plant will constitute a new genus.

*Winged-styled Milk-Vetch.* Pl. 1 foot.

§ 11. *Alopecuroides* (from *αλωπηξ*, *alopex*, a fox, *ουρα*, *oura*, a tail; and *εἶδος*, *eidos*, form; in reference to the shape of the spikes of flowers, which has been likened to a fox's tail). *D. C. prod. 2. p. 294.* Stipulas not adhering to the petioles. Stems erect, straight. Flowers yellow, disposed in thick dense spikes, which are either sessile, or on very short peduncles, in the axils of the leaves.

142 *A. ALOPECIAS* (Pall. astr. p. 12. t. 9.) plant erect; leaflets elliptic, villous; stipulas lanceolate; spikes sessile, cylindrical, almost the length of the leaves; tube of calyx woolly, somewhat globose, with the segments subulate, and rather longer than the corolla. *Æ. H.* Native of Siberia, at Lake Alagul, in the Songarian desert. Flowers pale yellow.

*Fox-tail-spiked Milk-Vetch.* Fl. Jul. Aug. Clt. 1800. Pl. 3 ft.

143 *A. MAXIMUS* (Willd. spec. 3. p. 1258.) plant erect; leaflets lanceolate, pubescent; stipulas oblong-lanceolate; spike sessile, cylindrical, nearly terminal; teeth of calyx capillary, woolly, shorter than the corolla. *Æ. H.* Native of America. Flowers yellow. Very like the next species.

*Largest Milk-Vetch.* Fl. June, July. Clt. ? Pl. 2 to 3 ft.

144 *A. ALOPECUROIDES* (Lin. spec. 1064. Mill. fig. t. 28.) plant erect; leaflets ovate-lanceolate, pubescent; stipulas ovate-lanceolate, acuminate; spikes of flowers ovate-oblong, stalked; calycine segments setaceous, shorter than the tube, but about equal in length to the corolla. *Æ. H.* Native of Siberia. *A. alopecuroides* and *A. alopecurus*, D. C. astr. no. 66. and 67. *A. alopecurus*, Pall. astr. t. 8. Flowers yellow.

*Fox-tail-like-spiked Milk-Vetch.* Fl. June, July. Clt. 1737. Pl. 2 to 3 feet.

145 *A. NARBONENSIS* (Gouan. ill. 49. Pall. astr. t. 10.) plant erect, villous; stipulas lanceolate; leaflets oblong-linear; spikes of flowers somewhat globose; calycine teeth setaceous, shorter than the corolla, but about the same length as the tube. *Æ. H.* Native about Narbonne and Madrid. Flowers yellow.

*Narbonne Milk-Vetch.* Fl. Ju. Jul. Clt. 1789. Pl. 2 to 3 ft.

146 *A. PONTICUS* (Pall. astr. p. 14. t. 11.) plant erect; stem rather villous; leaflets oblong, smoothish; stipulas lanceolate; spikes of flowers sessile, almost globose, when in fruit ovate; segments of the calyx linear, much shorter than the tube and the corolla. *Æ. H.* Native of Tauria and Bessarabia. Flowers yellow. In the specimen sent under this name to De Candolle, by Steven from Tauria, the leaflets are not emarginate, nor the teeth of the calyx ovate, as described by Willdenow.

*Pontic Milk-Vetch.* Fl. July, Aug. Clt. 1820. Pl. 2 feet.

147 *A. VULGINES* (Willd. spec. 3. p. 1259.) plant erect; stem glabrous; leaflets obovate, obtuse, or emarginate, rather velvety; spikes of flowers nearly globose, on very short peduncles; teeth

of calyx setaceous, length of tube, but a little shorter than the corolla. *Æ. H.* Native about Astracan, and in the sand of the Caspian desert, as well as of the desert of Kuma. *A. alopecuroides*, Pall. astr. p. 9. t. 7. Flowers pale yellow.

*Fox Milk-Vetch.* Fl. June, July. Clt. 1815. Pl. 2 to 3 ft.

148 *A. MACROCEPHALUS* (Willd. spec. 3. p. 1260.) plant erect; stem glabrous; leaflets oblong-elliptic, glabrous; stipulas large, acuminate; spikes of flowers globose, pedunculate; teeth of calyx subulate, length of tube, but shorter than the corolla. *Æ. H.* Native of Iberia, on hills, and of Galatia, in fields. Bieb. fl. taur. 2. p. 183. *A. orientalis*, Pers. ? Flowers yellow.

*Large-headed Milk-Vetch.* Pl. 3 to 4 feet.

149 *A. OBTUSIFOLIUS* (D. C. prod. 2. p. 295.) plant erect; stem and leaves clothed with velvety villi; leaflets broadly obovate, very obtuse; stipulas narrow-lanceolate; spikes globose, containing about 8 or 10 flowers, pedunculate; calycine teeth subulate, length of tube, but shorter than the corolla. *Æ. H.* Native of the Levant, between Mossul and Bagdad. Leaflets 11-15, never more, by which it is easily distinguished from all the other species of this division.

*Obtuse-leaved Milk-Vetch.* Pl. 2 to 3 feet.

§ 12. *Christiani* (so called from the similarity of the species to *A. Christianus* of Lin., which is called by Dioscorides *Christiana-radix* or *Christian-root*; in reference to the country in which it grows wild). *D. C. prod. 2. p. 295.* Stipulas adnate to the petiole, but not joined together. Flowers cream-coloured, disposed in glomerate, almost sessile racemes in the axils of the leaves.

150 *A. MACROCARPUS* (D. C. astr. no. 73. t. 28. but not of Pall.) plant erect, hairy; stipulas lanceolate; leaves with 11-14 pairs of ovate-oblong leaflets; flowers glomerate, almost sessile, axillary; legumes inflated; ovate-globose, mucronate, glabrous, large. *Æ. H.* Native of the Levant. Flowers pale yellow.

*Long-fruited Milk-Vetch.* Pl. 2 to 3 feet.

151 *A. SIEVERSII* (Pall. astr. no. 18. t. 12.) plant erect, rather hairy; stipulas ovate-lanceolate, acuminate; leaves having 10-12 pairs of ovate-oblong leaflets; flowers glomerate, almost sessile, axillary; legumes inflated, ovate-globose, mucronate, callous, tomentose. *Æ. H.* Native of the south of Siberia, at the river Ultehaar. Flowers pale yellow.

*Sievers's Milk-Vetch.* Pl. 2 to 3 feet.

152 *A. CHRISTIANUS* (Lin. spec. 1064.) plant erect, hairy; stipulas membranous, lanceolate, acuminate; leaves with 12-24 pairs of elliptic-orbicular leaflets; flowers glomerate, sessile in the axils of all the leaves; legumes ovate, wrinkled, glabrous. *Æ. H.* Native of Judea, and between Aleppo and Mossul, and of Armenia. Tour. voy. 2. p. 254. with a figure. *A. floridus*, Scop. ins. 2. p. 108. Flowers yellow.

*Christian Milk-Vetch.* Fl. Jul. Clt. 1737. Pl. 2 to 3 ft.

153 *A. TOMENTOSUS* (Lam. dict. 1. p. 312.) plant erect, clothed in every part with soft tomentum; stipulas lanceolate; leaves with 20-25 pairs of ovate-orbicular, somewhat emarginate leaflets; flowers glomerate, almost sessile in the axils of the leaves; legumes oblong, terete, acuminate, callous, hairy. *Æ. H.* Native of Egypt. D. C. astr. no. 80. t. 29. *A. fruticosus*, Forsk. ægyp. 139. Flowers yellow.

*Tomentose Milk-Vetch.* Fl. July. Clt. 1800. Pl. 1½ foot.

154 *A. SIEBERI* (D. C. prod. 2. p. 295.) stem erect, clothed with hoary, silky, adpressed hairs; stipulas membranous, acuminate; leaves having 20-25 pairs of elliptic, obtuse leaflets, when young clothed with canescent villi; flowers axillary, almost sessile; legumes triquetrous, acuminate, pubescent. *Æ. ? Æ. ? F.* Native of Egypt. *A. trigonus*, Sieb. pl. exsic. but not of D. C. Flowers pale-yellow. Allied to the preceding

species, and like it having the petioles permanent, and therefore falls into section *Tragacanthæ*.

SERIES III. *TRAGACANTHA* CEI (from *τραγος*, *tragos*, a goat, and *ακανθα*, *akantha*, a spine; in reference to the similarity of the species to *A. tragacantha*, which is vulgarly called goat's-thorn). D. C. prod. 2. p. 295. Stipulas adnate to the petioles. The petioles are permanent, and at length become hardened spines.

§ 13. *Tragacanthæ* (see series for derivation). D. C. l. c. *Petioles permanent, becoming as hard as spines. Stipulas adnate to the petioles.*

\* *Flowers sessile in the axils of the leaves.*

155 *A. TRIGONUS* (D. C. astr. no. 81.) flowers axillary, sessile, solitary, concealed under the stipulas; legumes trigonal, acuminate, hoary from pubescence; leaflets with 6-7 pairs of leaves, which are clothed with hoary wool. *h. F.* Native of Egypt. Flowers yellowish.

*Trigonal-fruited Goat's-Thorn.* Shrub  $\frac{1}{2}$  to 1 foot.

156 *A. CRYPTOCAEPUS* (D. C. astr. no. 82.) flowers solitary, axillary, latent; legumes ovate, hairy, 2-seeded; leaves having 4-6 pairs of linear leaflets, which are as well as the stipulas quite glabrous. *h. F.* Native of Armenia. *Trag. orientalis humillima foliis viciæ*, &c. Tourn. cor. 29. Flowers pale yellow?

*Hidden-fruited Goat's-Thorn.* Shrub  $\frac{1}{2}$  foot.

157 *A. BARBA JÖVIS* (D. C. astr. no. 83.) flowers solitary, latent; calyxes 5-parted, very villous; legumes ovate, glabrous, almost 1-celled, 1-2-seeded; leaves having 3-5 pairs of oblong, acute, hoary-tomentose leaflets. *h. F.* Native of Armenia. *Trag. orientalis humillima argentea*, &c. Tour. cor. 29. *Tragacantha argentea*, Mill. Corolla purplish?

*Jupiter's-beard Goat's-Thorn.* Shrub  $\frac{1}{2}$  to  $\frac{1}{2}$  foot.

158 *A. MICROCEPHALUS* (Willd. spec. 3. p. 1332.) flowers axillary, sessile, somewhat capitate; calyxes woolly, 5-cleft; leaves having 4 pairs of lanceolate, hoary, mucronate leaflets. *h. F.* Native of Armenia.

*Small-headed Goat's-Thorn.* Shrub  $\frac{1}{2}$  foot.

159 *A. ERIOCAULOS* (D. C. astr. no. 84.) flowers axillary, solitary, latent; calyxes usually hardly 5-cleft; leaves with 4-5 pairs of oblong acute leaflets, which are woolly, as well as the stems. *h. F.* Native of Armenia. *Trag. orientalis foliis incanis caule et ramulis tomentosus*, Tourn. cor. 29. Corolla cream-coloured? Legume unknown.

*Woolly-stemmed Goat's-Thorn.* Shrub  $\frac{1}{2}$  foot.

160 *A. CAUCASICUS* (Pall. astr. p. 2. t. 2.) flowers 2-3-together, axillary, sessile; calyxes 5-cleft, clothed with woolly villi; legumes 1-celled, 4-seeded; leaves having 5-7 pairs of oblong-linear leaflets, which are clothed with hoary tomentum. *h. H.* Native of Caucasus, on barren rocks. Flowers white (Bieb.), cream-coloured (Pall.). Stipulas when young clothed with white tomentum, but at length becoming glabrous. Bieb. fl. taur. 2. p. 205. Willd. spec. 3. p. 1331. exclusive of the synonyme of Tournefort.

*Caucasian Goat's-Thorn.* Fl. June, July. Clt. 1824. Sh.  $\frac{1}{2}$  ft.

161 *A. GUMMIFER* (Labill. journ. phys. 1790. p. 46. with a figure,) flowers 3-5-together, axillary, sessile; calyxes 5-cleft, and are, as well as the legumes, woolly; leaves having 4-6 pairs of oblong-linear glabrous leaflets. *h. F.* Native of Mount Lebanon. Flowers yellow, rising from the axils of all the leaves, as well as in the preceding species, and therefore they appear in something like a spike. Gum tragacanth flows from this plant, but more sparingly than from *A. verrus*. D. C. astr. no. 85. exclusive of the synonyme of Tournefort.

VOL. II.

*Goat-bearing Goat's-Thorn.* Fl. June, July. Sh.  $\frac{1}{2}$  to 1 ft. 162 *A. VERUS* (Oliy. voy. 3. t. 44.) flowers 2-5-together, axillary, sessile; calyxes tomentose, obtusely 5-toothed; leaves having 8-9 pairs of linear hispid leaflets. *h. F.* Native of the

Levant. *A. gummifer* var.  $\beta$ , hispidulus, D. C. astr. no. 85. Young stipulas clothed with silky villi, adult ones glabrous. According to Olivier, a traveller in the Levant, the greater part of the gum-tragacanth which is imported into Europe is obtained from this plant. *Tragacanth* exudes from it naturally from July to September, either from wounds made in the shrub by animals, or from fissures occasioned by the force of the juice during the great heats of summer. According as the juice is more or less abundant, tragacanth exudes in twisted filaments, which sometimes assume the form of a small worm, elongated, rounded, and compressed, rolled up upon itself or twisted. The finest and purest tragacanth assumes this form. It is almost transparent whitish, or of a yellowish white. It also exudes in large tears, which preserve more or less of a vermicular form. This is more of a reddish colour, and more contaminated with impurities. The quantity of tragacanth furnished by Persia is very considerable. Much is consumed in that country in the manufacture of silk, and the preparation of comfits. It is exported to India, Bagdad, and Bussorah. Russia also gets some by way of Bakou. *Tragacanth*, though generally called a gum, differs very much from gum Arabic in its properties. It is opaque, white, difficultly pulverizable, unless when thoroughly dried, and the mortar heated, or in frost, and it cannot be said to be properly soluble in water, for it absorbs a large quantity of that fluid, and increases in bulk. It is totally insoluble in alcohol. Its mucilage differs from that of gum-Arabic in being precipitated by the superacetate of lead and oxymuriate of tin, and not by silicized potass, or the oxymuriate of iron. In pharmacy tragacanth is employed for forming powders into troches, and rendering them tough cohesive substances, by heating them with mucilage of tragacanth, and then drying the mass. For electuaries it is improper, as it renders them slimy on keeping. It is also an improper adjunct to active powders, as it swells up on attempting to mix them with water. It is a demulcent, and may answer the purposes of gum-arabic, being better adapted for allaying tickling cough, and sheathing the fauces in catarrhal affection, owing to its great viscosity.

*True Tragacanth or Goat's-Thorn.* Shrub  $\frac{1}{2}$  to 3 feet.

163 *A. SETIFERUS* (D. C. prod. 2. p. 296.) flowers and leaflets unknown, but the last fall very soon off the plant; there are fascicles of silky bristles, rising from the axils of the spines. *h. F.* Native of the Levant. This species is hardly known, but from the habit it is allied to the preceding plant, but it differs from it in having axillary fascicles of bristles.

*Bristle-bearing Goat's-Thorn.* Shrub  $\frac{1}{2}$  foot.

164 *A. ERIANTHUS* (Willd. spec. 3. p. 1332.) flowers axillary, sessile, aggregate; calyxes globose, woolly; leaves with 5 pairs of oblong, acute, glabrous leaflets. *h. F.* Native of Armenia. Petioles yellowish.

*Woolly-flowered Goat's-Thorn.* Shrub  $\frac{1}{2}$  foot.

165 *A. BREVIFLORUS* (D. C. astr. no. 89. t. 31.) flowers axillary, sessile, somewhat capitate; calyx 5-cleft, rather longer than the corolla, having woolly, plumose, filiform lobes; leaves with 6-7 pairs of lanceolate villous leaflets. *h. F.* Native of Armenia. Lodd. bot. cab. 1388. *Trag. orientalis foliis angustissimis, flore purpurascens*, Tourn. cor. 29. *A. eriocéphalus*, Willd. spec. 3. p. 1333. Flowers purple.

Var.  $\beta$ , *glaber* (D. C. l. c.) leaflets longer and glabrous. *h. F.* Native of Persia. Perhaps a distinct species.

*Short-flowered Goat's-Thorn.* Fl. May, Jul. Clt. 1826. Sh.  $\frac{1}{2}$  ft.

166 *A. AUREUS* (Willd. act. berl. 1794. p. 29. t. 1. f. 3.) flowers axillary, sessile, disposed in globose heads; calyx 5-

M m

parted, with plumose segments, shorter than the corolla; leaves with 5-6 pairs of oblong-linear smoothish leaflets. *h. F.* Native of Armenia. D. C. astr. no. 90. t. 32. f. 1. *Trag. orientalis humilis floribus luteis dense congestis, &c.* Tour. cor. 29. Flowers yellow.

*Golden-flowered Goat's-Thorn.* Shrub  $\frac{1}{2}$  foot.

167 *A. PLUMOSUS* (Willd. spec. 3. p. 1333.) flowers axillary, sessile, aggregate; calyx cleft into 5 parts beyond the middle; lobes filiform, bearded, plumose, shorter than the corolla; leaflets elliptic-lanceolate, ending each in a spine-like mucrone, and clothed beneath with adpressed silky villi. *h. F.* Native of Galatia (Willd.). Troade (Oliv.). Flowers purple. Very like the two preceding species, but differs from them in the form of the leaflets.

*Feathery-calyxed Goat's-Thorn.* Shrub  $\frac{1}{2}$  foot.

168 *A. COMPACTUS* (Willd. in act. berl. 1794. p. 29. t. 1. f. 1.) flowers axillary, sessile, 4-5, aggregate; calyx 5-parted; the lobes filiform, and bearded with wool, shorter than the corolla; leaves with 4-5 pairs of oblong, mucronate, hoary-villous leaflets. *h. F.* Native of Armenia and Caucasus. D. C. astr. no. 86. t. 32. f. 2. Bieb. fl. taur. suppl. p. 500. *A. pycnophyllus*, Stev. in soc. mosq. 4. p. 57. Flowers white.

*Compact Goat's-Thorn.* Shrub  $\frac{1}{2}$  foot.

169 *A. ARNACANTHA* (Bieb. fl. taur. 2. p. 205.) flowers axillary, 2-3-together; calyx 5-parted, with setaceous woolly segments, which are shorter than the corolla; leaflets lanceolate, ending each in a spiny mucrone, and clothed with hoary hairs. *h. F.* Native of Tauria and Caucasus, on barren hills. *A. Poterium*, Pall. astr. p. 1. t. 1. but not of Vahl. *A. compactus* var.  $\beta$ , D. C. Willd. Flowers flesh-coloured. The legume is 1-celled according to Pallas.

*Lamb's-Thorn.* Shrub  $\frac{1}{2}$  foot.

170 *A. OLEAFOLIUS* (D. C. astr. no. 87.) flowers axillary, sessile, disposed in globose whorls around the branches; calyx 5-cleft, woolly, villous; leaves with 6-10 pairs of oblong, glaucescent, smoothish leaflets. *h. F.* Native of the Levant. *Trag. orientalis foliis olæ, &c.* Tourn. cor. 29. *A. pugniiformis*, Willd. spec. 3. p. 1334. but not of Lher. Flowers yellowish.

*Olive-leaved Goat's-Thorn.* Shrub  $\frac{1}{2}$  foot.

171 *A. LONGIFOLIUS* (Lam. dict. 1. p. 322.) flowers axillary, sessile, disposed in somewhat globose whorls; calyx 5-parted, woolly, a little shorter than the corolla; leaves with 9-12 pairs of oblong glabrous leaflets, each ending in a spine-like mucrone. *h. F.* Native of Armenia. D. C. astr. no. 88. t. 30. *A. pugniiformis*, Lher. stirp. 170. *Trag. orientalis*, Pocock, trav. 3. t. 88.

*Long-leaved Goat's-Thorn.* Shrub  $\frac{1}{2}$  to 1 foot.

172 *A. DENUATUS* (Stev. mem. mosq. 4. p. 57.) flowers axillary, sessile, glomerate; calyx 5-parted, with setaceous woolly lobes; leaves with 7 pairs of lanceolate, mucronate, green, pubescent leaflets. *h. F.* Native of Eastern Caucasus, on the higher mountains. Bieb. fl. taur. suppl. p. 501. Corolla small, with the vexillum striated. Young leaves rather tomentose in winter, but becoming smooth in summer.

*Naked-leaved Goat's-Thorn.* Shrub  $\frac{1}{2}$  foot.

173 *A. PSEUDO-TRAGACANTHA* (Pall. astr. p. 3. t. 3.) flowers axillary, sessile, 7-8-together; calyxes woolly, with setaceous lobes, which are longer than the tube; leaves with 8-9 pairs of oblong, acutish, awnless leaflets, clothed with hoary pili. *h. F.* Native of Eastern Caucasus, in subalpine places among rocks. Flowers yellowish. This plant is very like *A. aristatus*, but differs in the flowers being sessile.

*False Goat's-Thorn.* Shrub  $\frac{1}{2}$  foot.

174 *A. CRÉTICUS* (Lam. dict. 1. p. 321.) flowers axillary, sessile, aggregate; calyxes 5-parted, with setaceous plumose lobes, which are a little longer than the corolla; leaves with 5-8

pairs of oblong, acute, tomentose leaflets. *h. F.* Native of Candia, on Mount Ida. D. C. astr. no. 91. t. 33. *Trag. Crética incana, &c.* Tourn. cor. 29. Flowers purple, striped. Gum tragacanth also flows from this shrub, but very sparingly.

*Cretan Goat's-Thorn.* Shrub  $\frac{1}{2}$  to 1 foot.

175 *A. SICULUS* (Biv. giorn. palerm. no. 4. Rafin. car. p. 72.) flowers axillary, sessile, aggregate; calyx 5-parted, very villous, shorter than the corolla; leaves with 4-8 pairs of oblong acute leaflets, which when young are villous, but afterwards become glabrous. *h. F.* Native of Sicily, on high mountains, especially on Mount Etna. Flowers white, or tinged with purple (Rafinisque). *A. tragacantha*, Bern. Ucr. hort. panorm. p. 316.

*Sicilian Goat's-Thorn.* Shrub  $\frac{1}{2}$  foot.

176 *A. ECHINUS* (D. C. astr. no. 92. t. 34.) flowers axillary, sessile, twin; calyx woolly and villous, 5-toothed, shorter than the corolla; leaves with 4-5 pairs of oblong-lanceolate, acutish, hoary leaflets. *h. F.* Native of the Levant on rocks, and of Eastern Caucasus. *A. Cáspicus*, Bieb. fl. taur. 2. p. 204. suppl. 500. *A. Crétensis*, Pall. astr. p. 6. exclusive of the synonymes. Flowers white, with the vexillum striped with purple.

*Hedgehog Goat's-Thorn.* Shrub  $\frac{1}{2}$  foot.

\* \* \* *Flowers axillary, pedunculate.*

177 *A. ECHIORDES* (Lher. stirp. 170.) peduncles 2-flowered, shorter than the leaves; calyxes hardly pubescent, 5-toothed; leaves with 4-5 pairs of linear-lanceolate hoary leaflets. *h. F.* Native of Candia. *A. echoides*, Willd. spec. 3. p. 1326. *A. Créticus*, Willd. acad. berl. 1794. p. 23. t. 2. f. 2. exclusive of the synonymes. Flowers white, but the vexillum is marked with red lines.

*Bugloss-like Goat's-Thorn.* Shrub  $\frac{1}{2}$  foot.

178 *A. OLYMPICUS* (Pall. astr. p. 4. t. 4.) peduncles very short; calyx ovate, tubular, silky, 5-toothed; leaves with 6 pairs of oblong, bluntish, hoary leaflets; legumes cylindrical, mucronate, twice the length of the calyx. *h. F.* Native of Armenia, on Mount Olympus. *A. leucophyllus*, Willd. spec. 3. p. 1331. Flowers white, almost sessile. Legumes distinctly pedunculate.

*Olympic Goat's-Thorn.* Shrub  $\frac{1}{2}$  to 1 foot.

179 *A. POTERIUM* (Vahl. symb. 1. p. 63.) peduncles very short, usually 2-flowered; calyx cylindrical, 5-toothed; leaves with 4-5 pairs of oblong acute leaflets, which are glabrous above and villous beneath; legumes tomentose, ovate, 1-seeded, length of calyx. *h. H.* Native of Granada, in dry places. *Poterium*, Cluss. hist. 1. p. 108. with a figure. Moris. oxon. sect. 2. t. 13. f. 2. *A. Granatensis*, Lam. dict. 1. p. 321. *A. tragacantha*  $\beta$ , Lin. spec. 1073. Flowers white. The odd leaflet usually permanent. Perhaps *A. Poterium* of Willd., a native of the Levant, is distinct from the plant of Vahl.

*Poterium-like Goat's-Thorn.* Fl. June, July. Clt. 1640. Shrub  $\frac{1}{2}$  foot.

180 *A. MASSILIENSIS* (Lam. dict. 1. p. 320. D. C. astr. no. 96.) peduncles usually 4-flowered, about equal in length to the leaves; calyxes cylindrical, with 5 short blunt teeth; leaves with 9-11 pairs of elliptic hoary leaflets. *h. H.* Native about Marseilles and Narbonne, in sandy places, as well as of Corsica and Mauritania. *A. tragacantha* var.  $\alpha$ , Lin. spec. 1073. *A. tragacantha*, Pall. astr. t. 4. f. 1, 2. Duh. arb. 2. t. 100. Woody. med. bot. 267. t. 98. Wats. dent. brit. 84.—Lob. icon. 2. t. 27.—Garid. aix. 469. t. 104, &c. Flowers white. This plant is usually grown for tragacanth, from which the gum is obtained, but it certainly produces nothing like gum tragacanth.

*Marseilles Goat's-Thorn.* Fl. May, July. Clt. 1640. Shrub  $\frac{1}{2}$  to 1 foot.

181 *A. ARISTATUS* (Lher. stirp. 170.) peduncles very short, usually 6-flowered; calyxine teeth long and setaceous; leaves with 6-9 pairs of oblong-linear, mucronate, pilose leaflets; legumes

hardly half-bilocular. *h. H.* Native of the alps of Europe and the Pyrenees. *A. sempervirens*, Lam. dict. 1. p. 320. *Phaca tragacantha*, All. pedem. 1257.—Garid. aix. t. 104. Flowers white or pale red. Peduncles usually 4-flowered.

*Awed-calyxed Goat's-Thorn.* May, Jul. Clt. 1791. Sh.  $\frac{1}{2}$  ft.

182 *A. GENARGENTEUS* (Moris. elench. sard. p. 11.) peduncles usually 5-flowered, shorter than the leaves; teeth of calyx narrow, acute, very short; leaves with many pairs of elliptic, canescent leaflets. *h. H.* Native of Sardinia, on the heights of Genargentum. Flowers cream-coloured, with the keel tipped with dark purple. Like *A. Massiliensis* and *A. aristatus*.

*Genargentum Goat's-Thorn.* Shrub  $\frac{1}{2}$  foot.

183 *A. BRACTEOLATUS* (D. C. astr. no. 102.) peduncles rather longer than the leaves, bearing ovate spikes of flowers; calyx clothed with adpressed pubescence, cylindrical, with lanceolate-subulate teeth; leaves with 7-8 pairs of oblong leaflets, which when young are clothed with silky pubescence, but at length becoming glabrous. *H. h.* Native of Galatia, on hills. *A. püngens*, Willd. spec. 3. p. 1325. *Trag. orientalis humillima se spargens, floribus spicatis*, Tourn. cor. 29. Bracteas linear-subulate. Flowers white in the dried specimens.

*Bracteolate Goat's-Thorn.* Shrub  $\frac{1}{2}$  to 1 foot.

184 *A. ANGUSTIFOLIUS* (Lam. dict. 1. p. 321.) peduncles 6-flowered, somewhat corymbose, about equal in length to the leaves; calyx cylindrical, rather villous, acutely 5-toothed; leaves with 7-9 pairs of lanceolate leaflets, glabrous in the adult state. *h. F.* Native of Armenia, Willd. act. berol. 1794. p. 25. D. C. astr. no. 98.—Tourn. cor. 29. Flowers yellow.

*Narrow-leaved Goat's-Thorn.* Shrub  $\frac{1}{2}$  foot.

185 *A. RETUSUS* (Willd. act. berol. 1794. p. 24. t. 2. f. 3. exclusive of the synonyme) peduncles 4-flowered, shorter than the leaves; calyxes clothed with adpressed, silky villi, cylindrical, 5-toothed; the teeth lanceolate; leaflets obovate, and somewhat retuse. *h. F.* Native of the Levant. Flowers reddish in a dried state. Like *A. Massiliensis*.

*Retuse-leafletted Goat's-Thorn.* Shrub  $\frac{1}{2}$  foot.

186 *A. DAMASCENUS* (D. C. prod. 2. p. 198.) peduncles 4-6-flowered, somewhat spicate, rather longer than the leaves; calyxes cylindrical, clothed with adpressed silky villi, 5-toothed, the teeth lanceolate; bracteas ovate, membranous, shorter than the tube of the calyx; leaves with 15-16 pairs of elliptic, somewhat mucronate leaflets, which are villous on both surfaces. *h. F.* Native about Damascus. Flowers white in the dried specimens. *A. retusus*, D. C. astr. no. 99. t. 35. but not of Willd.

*Damascus Goat's-Thorn.* Shrub  $\frac{1}{2}$  foot.

187 *A. LAGOPIDES* (Lam. dict. 1. p. 312. var.  $\beta$ , D. C. astr. no. 103.) spikes of flowers ovate, pedunculate, longer than the leaves; calyxes very hairy, 5-cleft, the lobes setaceous; bracteas ovate, acuminate, deciduous, membranous, longer than the tube of the calyx; leaves with 7-8 pairs of oblong leaflets, ending each in a spine-like mucrone, and clothed with adpressed villi. *h. F.* Native of Armenia. *A. lagopodioides*, Vahl. symb. 1. p. 64. Willd. in act. berol. 1794. p. 28. t. 1. f. 4. Flowers purple, spreading.

*Var.  $\beta$ , Persicus* (D. C. prod. 2. p. 299.) calyxes rather bladdery; spikes of flowers on long peduncles; flowers imbricated; leaflets broader. *h. F.* Native of Persia, between Kermancha and Amadan. Perhaps a proper species.

*Hare's-foot-like Goat's-Thorn.* Shrub  $\frac{1}{2}$  foot.

188 *A. LAGURUS* (Willd. act. berol. 1794. p. 28. t. 1. f. 2.) spikes of flowers ovate, pedunculate, longer than the leaves; calyxes very villous, at length a little inflated, 5-cleft; the segments subulate, about equal in length to the corolla; bracteas membranous, ovate, acuminate, length of flowers; leaves with 4-5 pairs of oblong-leaflets, each ending in a spine-like mucrone, and clothed with adpressed villi. *h. F.* Native of Armenia.

D. C. astr. no. 104. t. 36. *A. lagopoides*  $\alpha$ , Lam. Flowers imbricated, yellow.

*Hare's-tail-spiked Goat's-Thorn.* Shrub  $\frac{1}{2}$  foot.

189 *A. VAGINATUS* (D. C. astr. no. 105. t. 37.) spikes of flowers ovate, dense, pedunculate, longer than the leaves; calyxes at length inflated, villous, acutely 5-toothed; bracteas equal in length to the calyx; stipulas acuminate, very long, sheathing; leaves with 7-10 pairs of oblong leaflets, each ending in a spiny mucrone, and clothed with pubescence beneath. *h. F.* Native of the Levant. Flowers cream-coloured. Petioles almost unarmed.

*Sheathing-stipuled Goat's-Thorn.* Shrub  $\frac{1}{2}$  foot.

190 *A. CEPHALANTHUS* (D. C. astr. no. 106. t. 38.) flowers disposed in round pedunculate heads, 3-times longer than the leaves; calyxes clothed with silky hairs, 5-toothed; bracteas small; leaves with 7-9 pairs of oblong-linear leaflets, which are clothed with hoary, adpressed, silky villi. *h. F.* Native of Persia. Petioles almost unarmed.

*Headed-flowered Goat's-Thorn.* Shrub  $\frac{1}{2}$  foot.

191 *A. TRICHOLOBUS* (D. C. prod. 2. p. 299.) spikes of flowers ovate-roundish, pedunculate, twice or thrice longer than the leaves; calyxes a little inflated, hairy; the segments subulate, longer than the tube of the corolla; bracteas ovate, acuminate, deciduous, length of corolla; leaves with 5-6 pairs of linear leaflets, each ending in a spine-like point, and clothed with adpressed hoary villi. *h. F.* Native of the Levant. Flowers pale in the dried specimens, adult ones without the bracteas.

*Hair-lobed-calyxed Goat's-Thorn.* Shrub  $\frac{1}{2}$  foot.

192 *A. TUMIDUS* (Willd. act. berol. 1794. p. 26.) flowers usually solitary, on short peduncles; calyxes villous, inflated, contracted at the mouth, 5-toothed; leaves with 4-6 pairs of oblong leaflets, which are clothed with adpressed pubescence. *h. H.* Native of Spain, in the province of Aragon, Egypt, and the Levant, in sandy places. Russ. alepp. t. 5. *A. Rauwolfii*, Vahl. *Colutea spinosa*, Forsk. descr. Spines long. Axillary leaves small, with a few pairs of leaflets, which are about equal in length to the pedicels. Flowers pale yellow.

*Var.  $\beta$ , armatus* (D. C. prod. 2. p. 299.) leaves with 8 pairs of linear, acute leaflets. *h. F.* Native of Mauritania. *Anthyllis tragacanthoides*, Desf. fl. atl. 2. p. 150. t. 194. but not of Labill. *Ast. armatus*, Willd. spec. 3. p. 1330.

*Tumid-calyxed Goat's-Thorn.* Fl. May, July. Clt. 1816. Shrub  $\frac{1}{2}$  to 1 foot.

193 *A. TORTUOSUS* (D. C. prod. 2. p. 299.) peduncles a little longer than the leaves; flowers 3-8, distant, disposed in a kind of raceme; bracteas membranous, length of pedicels; calyxes villous, 5-toothed, cylindrical, at length a little inflated; leaves with 10 pairs of obovate, hairy, small leaflets. *h. F.* Native of the Levant, between Bagdad and Kermancha. This plant is very like *A. anthylloides*, but differs in the petioles being spiny. Flowers probably purple.

*Twisted Goat's-Thorn.* Shrub  $\frac{1}{2}$  to 1 foot.

194 *A. COLUTEOIDES* (Willd. act. berol. 1794. p. 27.) peduncles a little longer than the leaves, each bearing 4-5 distant flowers in a kind of spike; bracteas setaceous, very short; calyxes villous, inflated, 5-toothed; leaves with 15-20 pairs of obovate, small, hoary, hairy leaflets. *h. F.* Native on Mount Lebanon. Rauw. trav. 281. with a figure. *Anthyllis tragacanthoides*, Labill. dec. syr. 2. p. 16. t. 9. Flowers purple.

*Bladder-scenna-like Goat's-Thorn.* Shrub  $\frac{1}{2}$  foot.

§ 14. *Chronopodii* (from *χρονος*, *chronos*, time, and *πους ποδός*, *pous podos*, a foot; in reference to the permanent nature of the footstalks of the leaves). D. C. prod. 2. p. 299. *Petioles permanent, but never hardening into spines. The odd leaflets remaining a long time on the end of the petiole, after the lateral*

leaflets have fallen. *Stipulas* not adnate to the petioles. Stamens distinct or diadelphous, with a short sheath. Perhaps a proper genus.

195 *A. AMA'RUS* (Pall. astr. p. 8. t. 6.) plant erect, glabrous; stipulas spreading, lunate, leafy; leaves with 2-5 pairs of ovate, remote leaflets; spikes pedunculate, elongated, thinly flowered; calyx almost cylindrical; stamens distinct.  $\frac{1}{2}$  F. Native of the Caspian desert, on the gypsaceous hills called Arsagar. This plant agrees with *A. coluteoides* in the inflorescence, but differs in the calyx not being inflated, and from all the species in the stamens being distinct, but of this rare plant the fruit has not been seen.

*Bitter Milk-Vetch.* Shrub 1 foot?

196 *A. GIBBOSUS* (D. C. prod. 2. p. 300.) plant erect, canescent from adpressed villi; stipulas wanting; leaves with 8-10 pairs of remote, ovate leaflets; spikes elongated, pedunculate, thinly-flowered; calyx gibbous at the base; stamens diadelphous, joined at the base but a very little way.  $\frac{1}{2}$  F. Native between Mossul and Bagdad. Very like *A. amarus*, but very distinct, and with it will form perhaps a connecting genus to *Astragalus*.

*Gibbous-calyxed Milk-Vetch.* Shrub.

SERIES IV. *PODOCHREA'TI* (πους ποδος, *pous podos*, a foot, and *ωχρος*, *ochros*, yellow; in reference to the footstalks of leaves or petioles never hardening into spines, as those of the last series, but remaining weak and pliable, and in the flowers being usually yellow). D. C. prod. 2. p. 300. Stipulas adnate to the petioles. Petioles permanent, but never hardening into spines.

§ 15. *Anthylloides* (from *Anthyllis*, and *idea*, similar; plant resembling *Anthyllis* in habit). D. C. prod. 2. p. 300. Stipulas adnate to the petioles. Petioles unarmed. Calyxes *Uladery*, inclosing the legume.

\* Corollas yellowish, rarely purple.

197 *A. CALYCINUS* (Bieb. fl. taur. 2. p. 199. pl. cent. ross. 1. t. 9. ex suppl. p. 496.) plant stemless, rather glaucous and canescent from adpressed pili, which are fixed by their centre; leaves with from 5-13 pairs of obovate leaflets, the lower ones remote; scapes longer than the leaves; spikes of flowers oval-oblong; calyxes inflated; legumes somewhat triquetrous, acute, many-seeded.  $\frac{1}{2}$  II. Native of Caucasus and at the river Kuma. Flowers cream-coloured. Calyx sometimes beset with hairs, like those on the leaves.

*Large-calyxed Milk-Vetch.* Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

198 *A. HALICACABUS* (Lam. dict. 1. p. 320.) plant stemless, glabrous; leaves with 21-31 lanceolate-linear leaflets; scapes longer than the leaves; flowers spicate, remote; calyxes globose, bladdery; legumes hardly half-bilocular, 2-seeded.  $\frac{1}{2}$  II. Native of Armenia. Phaca vesicaria, Schreb. dec. p. 5. t. 3. Flowers yellowish. Calyxes veiny, contracted at the mouth.

*Kettle-calyxed Milk-Vetch.* Fl. Ju. Clt. 1806. Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  ft.

199 *A. PHYSALOIDES* (D. C. prod. 2. p. 300.) plant stemless, rather hairy; leaflets 5-7, ovate, obtuse, smoothish; scapes longer than the leaves; flowers rather remote, disposed in spikes; calyxes hairy, globose, bladdery.  $\frac{1}{2}$  II. Native of the Levant. Flowers yellowish. The leaves are like those of *A. calycinum*, and the flowers are like those of *A. halicacabus*.

*Winter-cherry-like-calyxed Milk-Vetch.* Pl.  $\frac{1}{2}$  foot.

200 *A. ANTHYLLOIDES* (Lam. dict. 1. p. 320. D. C. astr. no. 124. t. 42. but not of Pall.) plant almost stemless, clothed with hoary villi; leaflets 27-35, ovate; peduncles twice the length of the leaves; flowers distant on the spikes; calyxes hairy, bladdery; legumes hardly half-bilocular, 2-seeded.  $\frac{1}{2}$  H. Native of Armenia. Phaca incana, Vahl. symb. 1. p. 57. Flowers yellow. This plant is very like *A. coluteoides*, but differs in the petioles being unarmed.

*Anthyllis-like Milk-Vetch.* Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

201 *A. NUBIGENUS* (D. Don, prod. fl. nep. 245.) plant stemless; leaves with many pairs of oval, mucronulate, densely pilose leaflets; flowers solitary, almost sessile; calyxes inflated, saccate at the base; legumes nearly terete, straight, very villous.  $\frac{1}{2}$  F. Native of Nipaul, in Gosaingsthan. Root long, woody. Flowers large, yellow, with the vexillum pilose on the back.

*Cloud-born Milk-Vetch.* Fl. May. Pl.  $\frac{1}{4}$  foot.

202 *A. VULNERARIÆ* (D. C. prod. 2. p. 300.) plant almost stemless, twisted, low, hairy; leaflets 7-11-13, obovate, the terminal one sessile; peduncles hardly longer than the leaves; flowers few, capitate; calyxes hairy, reticulated, becoming at length bladdery; corolla clothed with adpressed silky villi.  $\frac{1}{2}$  H. Native of Asia Minor. Phaca halicacaba, Willd. spec. 3. p. 1254. Flowers yellowish.

*Wound-wort-like Milk-Vetch.* Pl.  $\frac{1}{2}$  foot.

203 *A. LUPULINUS* (Pall. itin. ed. gall. append. no. 877. astr. p. 17. t. 15.) plant stemless and canescent from adpressed villi, which is fixed by the centre; leaflets 9, elliptic-oblong; scapes hardly longer than the leaves; spikes dense, ovate; calyx hairy, at length bladdery; corollas glabrous; legumes half-bilocular, 2-seeded.  $\frac{1}{2}$  H. Native of Siberia, in sandy islands in the rivers Selenga and Ouda, and at Lake Baikal. Flowers cream-coloured.

*Hop Milk-Vetch.* Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

204 *A. LAGUROIDES* (Pall. itin. ed. gall. 8vo. append. no. 376. t. 91. f. 2.) plant stemless, and clothed with adpressed villi; leaflets 5-7, elliptic-oblong; scapes about equal in length to the leaves; spikes ovate, dense; calyxes hispid, at length bladdery; legumes bilocular, 2-seeded.  $\frac{1}{2}$  II. Native of Siberia, in plains about the river Selenga. *A. lagurus*, Pall. astr. p. 18. t. 16. but not of Willd. *A. laguroides*, D. C. Willd. This species is very like *A. lupulinus*, but differs in the flowers being purple.

*Hare's-tail-like Milk-Vetch.* Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

205 *A. INFLATUS* (D. C. astr. no. 13.) plant caulescent, nearly erect, glabrous; stipulas lanceolate, adnate to the petiole? leaflets 9, linear-lanceolate; spikes globose; peduncles longer than the leaves; calyxes inflated, tomentose; legumes ovate.  $\frac{1}{2}$  H. Native of Siberia, in the Kirghiscan steppe. *A. anthylloides*, Pall. astr. no. 19. t. 13. *A. anthylloides*, Pall. astr. no. 19. t. 13. but not of Lam. *A. fragiformis*, Willd. spec. 3. p. 1261. Flowers cream-coloured.

*Inflated-calyxed Milk-Vetch.* Pl.  $\frac{1}{2}$  foot.

206 *A. FOLLICULARIS* (Pall. astr. p. 19. t. 14.) plant stemless, canescent from adpressed hairs, which are fixed by their centre; leaflets 13-21, lanceolate; scapes straight, longer than the leaves; spikes cylindrical; calyxes clothed with blackish adpressed down, at length becoming bladdery.  $\frac{1}{2}$  II. Native of the Kirghiscan steppe, at the Uba, and near Salair. *A. stricta*, Sievers ex Fisch. in litt. *Oxytropis follicularis*, Pers. ench. but the carina is obtuse.

*Follicular-fruited Milk-Vetch.* Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

207 *A. MOLLIS* (Bieb. fl. taur. suppl. p. 495.) plant almost stemless and rather villous; leaflets 25-29, elliptic, obtuse, young ones hairy; scapes shorter than the leaves; flowers spicate; calyxes hairy, at length becoming bladdery, the teeth subulate; legumes very hairy, covered by the calyx.  $\frac{1}{2}$  H. Native of Iberia, on hills about Tiflis. *A. eriocarpus*, Bieb. fl. taur. 2. p. 196. but not of D. C. Flowers yellowish.

*Soft Milk-Vetch.* Pl.  $\frac{1}{2}$  foot.

208 *A. HELMI* (Fisch. in litt. D. C. prod. 2. p. 301.) plant almost stemless, canescent from adpressed bristles; leaflets 13-17, elliptic, rather mucronulate; scapes length of leaves; flowers 6-8, disposed in a kind of capitate spike; calyxes membranous, at length pubescent; legumes hairy, longer than the

calyx. 2. H. Native of the Ural mountains, at the metal mines of Woskres-Senskoï. Flowers yellow. Perhaps this plant belongs to a different section.

*Helm's Milk-Vetch.* Pl.  $\frac{1}{2}$  foot.

\* \* *Corollas white. Calyxes hardly bladdery. Perhaps this will constitute a proper section.*

209 *A. GALACTITES* (Pall. astr. p. 85. t. 65.) plant stemless, rather canescent from adpressed bristles; leaflets 11-15, oblong; flowers radical, aggregate, almost sessile; legumes minute, 2-seeded, inclosed in the calyx, which is pubescent, membranous, and rather inflated. 2. II. Native of Siberia, beyond the Baikal, and of Dahuria, in naked gravelly places. Corolla white, but becoming of a pale yellow colour on drying, and almost as long as the leaves.

*Milky-Vetch.* Pl.  $\frac{1}{4}$  foot.

210 *A. AMMODYTES* (Pall. itin. ed. gall. append. no. 372. t. 83. f. 2. astr. p. 7. t. 5.) plant prostrate, clothed with hoary down; stipulas ovate, obtuse; leaves with 2-5 pairs of ovate-leaflets; flowers axillary, rather radiant, twin, on short peduncles; calyxes cylindrical, hairy. 2. F. Native of Eastern Siberia, on sandy hills. D. C. astr. no. 91. Legume ovoid, mucronate, half-bilocular. Flowers white. Plant small. Petioles permanent and unarmed, as in division *Chronopodi*.

*Sand-viper Milk-Vetch.* Fl. May, July. Clt. 1820. Sh. pr.

§ 16. *Caprini* (from *caprinus*, of a goat; in reference to the leaves of *A. caprinus*, the ciliæ of which have been compared to a goat's beard). D. C. prod. 2. p. 301. *Stipulas adhering to the petioles at the base. Petioles unarmed. Flowers yellow. Calyxes not bladdery.*

211 *A. OVA'TUS* (D. C. astr. no. 107.) plant somewhat caulescent, procumbent, villous; leaflets 20-23, ovate; peduncles longer than the leaves; spikes of flowers ovate-oblong; bracteas and calyxes villous; legumes glabrous. 2. II. Native of Armenia. Flowers cream-coloured according to the dried specimens, ex. Tourn. cor. 28. Perhaps belonging to a different section.

*Ovate-spiked Milk-Vetch.* Pl. procumbent.

212 *A. DASYANTHUS* (Pall. astr. p. 79. t. 65. itin. ed. gall. append. no. 375. t. 85.) plant caulescent, erect, clothed with soft hairs; leaflets 21-23, elliptic, obtuse, rather mucronate; peduncles hardly shorter than the leaves; spikes of flowers ovate-roundish; calyxes villous, 5-cleft; legumes ovate-lanceolate, hairy. 2. H. Native of Siberia and Caucasus, the Ukraine, and Hungary, in sandy and calcareous fields. *A. eriocéphalus*, Waldst. et Kit. pl. rar. hung. 1. t. 46. Flowers yellow, with the vexillum pubescent.

*Thick-flowered Milk-Vetch.* Pl. 1 foot.

213 *A. MULTIVOLVIS* (D. C. prod. 2. p. 301.) plant short, caulescent and pubescent; leaflets 41-61, elliptic, obtuse at both ends; racemes pedunculate, rather loose, elongated, hardly shorter than the leaves; calyxes cylindrical, 5-toothed; corollas glabrous; legumes mucronate, velvety, twice the length of the calyx. 2. F. Native of the Levant, between Bagdad and Kermancha. Flowers 8-10, distant, yellow.

*Many-paired-leaved Milk-Vetch.* Pl.  $\frac{1}{2}$  foot.

214 *A. CAPRINUS* (Lin. spec. 1071.) plant almost stemless, erect, pubescent; leaflets 23-29, ovate-oblong, ciliated; peduncles one-half shorter than the leaves; flowers racemose, spreading; segments of the calyx subulate; corollas glabrous; legumes ovate, inflated, stipitate, sparingly pilose. 2. H. Native of Barbary and the Levant. D. C. astr. no. 109.—*Moris. oxon. 2. p. 24. f. 3.* Flowers yellow.

*Var. β, glaber* (D. C. prod. 2. p. 302.) leaflets as well as ovaries nearly smooth. 2. H. Native of Mauritania. Perhaps a proper species.

*Goat's Milk-Vetch.* Fl. June, July. Clt. 1683. Pl.  $\frac{1}{2}$  ft.

215 *A. LONGIFLORUS* (Pall. astr. p. 73. exclusive of the synonyme of Buxb. and Lin.) plant almost stemless, rather hairy; leaflets 11-13, obovate, retuse, or emarginate; racemes loose, shorter than the leaves; teeth of calyx lanceolate-subulate; corolla very long, glabrous; legumes ovate, turgid, mucronate, smooth, when young filled with pulp. 2. H. Native of the desert of Tartary and of the Volga, as well as at Lake Inderskoï. Flowers yellow. The plant from the Volga differs from the rest in the legumes being almost sessile.

*Var. α, breviscapus* (D. C. prod. 2. p. 303.) peduncles much shorter than the leaves; bracteas hardly exceeding the pedicels. Pall. astr. t. 60.—*Gmel. sib. 4. t. 27.*

*Var. β, procærior* (D. C. prod. 2. p. 302.) peduncles exceeding the leaves; bracteas thrice the length of the pedicels. Pall. astr. t. 60. β.

*Long-flowered Milk-Vetch.* Fl. June, July. Clt. 1806. Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

216 *A. UTRIGER* (Pall. astr. p. 75.) plant stemless, rather hairy; leaflets 25-35; racemes loose, much shorter than the leaves; teeth of calyx lanceolate-subulate; corollas glabrous; legumes stipitate, ovate, mucronate, hard, turgid, clothed with woolly pubescence, adult ones glabrous and 1-celled. 2. H. Native of Russia, on rocks. Flowers yellow.

*Var. α, ovatus* (Pall. astr. t. 61.) leaflets ovate; legumes large. 2. H. Native of Tauria, Tartary, and Iberia.

*Var. β, Uralensis* (Pall. astr. t. 62. f. 2. β) leaflets oblong-linear. 2. II. Native of the Ural mountains, at the river Don.

*Bladder-bearing Milk-Vetch.* Fl. Ju. Jul. Clt. 1818. Pl.  $\frac{1}{4}$  ft.

217 *A. LIGNOSUS* (D. C. astr. no. 114. t. 39.) plant somewhat caulescent, woody, grey; leaflets 49-51, oblong-linear; peduncles few-flowered, much shorter than the leaves; teeth of calyx lanceolate, subulate; corollas glabrous; legumes sessile, compressed, villous. 2. ? 2. ? II. Native of Siberia, in sandy fields impregnated with salt, at the river Irtysh. Flowers yellow.

*Woody-stemmed Milk-Vetch.* Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

218 *A. PUBIFLORUS* (D. C. astr. no. 111.) plant almost stemless, hairy; leaflets 21-27, ovate, acute; flowers almost sessile, aggregate; teeth of calyx linear-subulate; wings of corolla pubescent; ovary sessile, woolly. 2. H. Native of Siberia. Flowers yellow.

*Downy-flowered Milk-Vetch.* Pl.  $\frac{1}{2}$  foot.

219 *A. FABACEUS* (Bieb. suppl. p. 496.) plant stemless; leaflets 35-45, oblong or ovate, pilose; scapes few-flowered, much shorter than the leaves; teeth of calyx lanceolate; corollas glabrous; legumes compressed, sessile, ovate, mucronate, and quite smooth, even when young. 2. II. Native of Iberia, on hills, and of other provinces in the east. *A. tumidus*, Bieb. fl. taur. 2. p. 198. but not of Willd. Flowers yellow, drooping. Allied to *A. longiflorus* and *A. utriger*.

*Bean-like Milk-Vetch.* Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

220 *A. LANTIGERUS* (Desf. atl. 2. p. 181. t. 202.) plant stemless and clothed with soft hairs; leaflets 17-31, elliptic or oblong; flowers almost sessile, aggregate; teeth of calyx lanceolate; corollas glabrous; legumes compressed, ovate, mucronate, sessile, when young very hairy, but when in an adult state sparingly pilose. 2. H. Native of Mauritania, Egypt, Phrygia, and Iberia, in barren sandy places and on hills. Flowers yellow, sometimes pedunculate.

*Var. β, subglabratus* (D. C. prod. 2. p. 302.) leaflets almost glabrous; calyxes and petioles hairy at the base. 2. II. Native of the Levant.—*Buxb. spec. 3. p. 38. f. 2.* and hence the *A. tragacanthoides* of Willd. spec. 3. p. 1323. Flowers radical.

*Wool-bearing Milk-Vetch.* Fl. May, Jul. Clt. 1791. Pl.  $\frac{1}{4}$  ft.

221 *A. EXCAPUS* (Lin. mant. 275.) plant stemless, clothed with soft hairs; leaflets 21-27, ovate; flowers almost sessile,

aggregate; teeth of calyx long and subulate; corolla glabrous; legumes ovate, acuminate-mucronate, hairy, sessile, and rather compressed.  $\mathcal{U}$ . H. Native of Vallais, Thuringia, Austria, Hungary, and the Ukraine. Jacq. icon. rar. t. 561. Pall. astr. 64. *Astragaloides syphilitica*, Mönch. Flowers yellow. The plant is used to cure syphilis in Hungary.

*Scapeless Milk-Vetch*. Fl. May, July. Clt. 1787. Pl.  $\frac{1}{4}$  ft.

222 *A. SCHANGINIA'NUS* (Pall. astr. p. 67. t. 73.) plant somewhat caulescent and loosely lanuginose; leaflets 25-31, ovate-oblong, peduncles very short, somewhat racemose; teeth of calyx long, subulate; corollas glabrous; legumes triquetrous, acuminate, pubescent, callous.  $\mathcal{U}$ . H. Native of Siberia, at the Catunja and in the desert of the Don. Leaves about a foot long. Flowers yellow.

*Schang's Milk-Vetch*. Pl. 1 foot.

223 *A. DECLINAT'US* (Willd. spec. 3. p. 1294.) stems short, procumbent; leaflets 29-31, oblong, obtuse, and pilose; racemes few-flowered, crowded, pedunculate, one half shorter than the leaves; legumes oblong, acute, pilose.  $\mathcal{U}$ . H. Native of Armenia. *A. orientalis acutis fere flore luteo*. Tourn. cor. 29. ex Willd. Very like *A. exscapus*. Flowers yellow.

*Declinate-stemmed Milk-Vetch*. Pl. procumbent.

224 *A. NUMMULARIUS* (Lam. dict. 1. p. 317. exclusive of the synonyms) stemless, hairy; leaflets 21-23, ovate, mucronate, or emarginate; flowers almost sessile, aggregate; teeth of calyx lanceolate-subulate; corolla glabrous; legumes compressed, ovate, mucronate, hairy.  $\mathcal{U}$ . H. Native of Candia, Syria, and Eastern Caucasus. D. C. astr. 117. t. 11. f. 2. Flowers yellow. In the same plant the leaflets are emarginate and acute.

*Money-wort Milk-Vetch*. Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

225 *A. DIFFUSUS* (Willd. spec. 3. p. 1321.) plant almost stemless, beset with cinereous hairs; leaflets 19-23, elliptic-lanceolate; flowers almost sessile, aggregate; bractees and calycine teeth setaceous, longer than the tube, and very pilose; legumes ovate, rather triquetrous, acuminate, hairy.  $\mathcal{U}$ . H. Native of Tauria, in fields adjacent to the Caucasus, and in the Caspian and Tartarian deserts. Bieb. fl. taur. 2. p. 202. *A. dolichophyllus*, Pall. astr. p. 84. t. 68. Flowers pale cream-coloured. This plant is allied to *A. testiculatus*.

*Diffuse Milk-Vetch*. Fl. May, Jul. Clt. 1820. Pl.  $\frac{1}{4}$  foot.

226 *A. HUMILIS* (Bieb. fl. taur. 2. p. 203. suppl. 498.) plant almost stemless, depressed, clothed with cinereous villi; leaflets obovate; flowers almost sessile, aggregate; calycine teeth much shorter than the tube; legumes ovate, acuminate, hairy.  $\odot$ . H. Native of Iberia. Corolla yellowish. Allied to *A. testiculatus*.

*Humble Milk-Vetch*. Pl. depressed.

227 *A. RUBRUS* (D. C. astr. no. 115.) plant almost stemless, beset with cinereous villi; leaflets 19-21, linear-oblong; flowers almost sessile, aggregate; calycine teeth about equal in length to the tube; legumes compressed, acuminate, villous, half-bilocular.  $\mathcal{U}$ . H. Native of Tartary. Flowers very pale cream-coloured. Perhaps sufficiently distinct from the following species.

*Doubtful Milk-Vetch*. Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

228 *A. BUCHTORME'NSIS* (Pall. astr. p. 76. t. 62. f. A.) plant stemless, clothed with hoary pubescence; leaflets 39-43, oblong; peduncles few-flowered, very short, declinate when in flower; calyx 5-toothed; legumes oblong-cylindrical, acuminate, callous, half-bilocular.  $\mathcal{U}$ . H. Native of Siberia at the rivers Uba, Catunja, and Buchtorm. Flowers yellow. Legume, according to Fischer  $\frac{1}{2}$  an inch long and hairy.

*Buchtorm Milk-Vetch*. Fl. May, Jul. Clt. 1818. Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  ft.

229 *A. BRACHYSTACHYS* (D. C. prod. 2. p. 303.) plant hairy-pubescent, with very short stems; leaflets 15-23, exactly and broadly ovate; peduncles shorter than the leaves; flowers dis-

posed in short spikes; calyx cylindrical, with lanceolate-subulate teeth; corollas glabrous; ovary sparingly-villous.  $\mathcal{U}$ .? h.? F. Native of the Levant, between Aleppo and Mossul. Flowers yellow. Legumes unknown.

*Short-spiked Milk-Vetch*. Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

230 *A. GLOBOSUS* (Vahl. symb. 1. p. 60.) plant stemless, clothed with hoary-silvery down; leaflets 12-16 pairs, elliptic-oblong, callous at the apex; scapes twice the length of the leaves; spikes of flowers dense, ovate-globose; bractees linear, about equal in length to the calyx.  $\mathcal{U}$ . F. Native of Armenia. D. C. astr. 120. Flowers yellow.

*Globose-spiked Milk-Vetch*. Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

231 *A. CYLINDRACEUS* (D. C. astr. 119.) plant stemless and clothed with hoary-silky down; leaves with 14 pairs of elliptic-oblong leaflets; peduncles longer than the leaves; spikes cylindrical; bractees setaceous, longer than the calyx.  $\mathcal{U}$ . F. Native of Armenia. Allied to the preceding species. Perhaps both are wrongly placed in the present section. Flowers pale-yellow.

*Cylindrical-spiked Milk-Vetch*. Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

232 *A. LANATUS* (Labill. dec. syr. 1. p. 21. t. 10. but not of Pall.) plant stemless, clothed with hoary villi; leaflets 11-23, ovate; peduncles rather shorter than the leaves; spikes of flowers ovate, dense; legumes ovate-cordate, triquetrous, compressed, acute, villous.  $\mathcal{U}$ . F. Native of Mount Lebanon. *A. Libanotis*, Willd. spec. 3. p. 1308. *A. hirsutissimus*, D. C. astr. no. 46. t. 19. Flowers yellow. Perhaps this plant belongs to another section.

*Woolly Milk-Vetch*. Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

§ 17. *Incani* (from *incanus*, hoary; aspect of plants). D. C. prod. 2. p. 304. *Stipulas adnate to the petioles, which are unarmed. Calyxes as well as legumes not bladderly. Flowers usually purple, rarely of a dirty yellow colour. Vexillum much elongated. Leaves hoary from adpressed down. Legumes perfectly bilocular.*

233 *A. MONSPESSULANUS* (Lin. spec. 1072.) plant almost stemless, clothed with hoary pubescence or almost glabrous; leaflets 21-41, ovate or lanceolate, outer ones rather the smallest; scapes exceeding the leaves; teeth of calyx long, and subulate; legumes terete, subulate, a little arched, adult ones glabrous.  $\mathcal{U}$ . H. Native of the south of Europe and Mauritania, in fields. Cam. epit. 929. with a figure. Curt. bot. mag. 219. Flowers either purple, pale, or white. Stems almost wanting when growing in a dry situation, but in rich earth or in a moist place they are elongated. Leaves hoary when the plant grows in dry exposed situations, but in a moist situation they are almost glabrous.

*Var.  $\beta$ , polygala* (D. C. prod. 2. p. 304.) spikes of flowers shorter; legumes almost glabrous, even when young; leaflets ovate-roundish, almost glabrous.  $\mathcal{U}$ . H. Native of the south of Caucasus. *A. polygala*, Pall. astr. p. 110. t. 83.

*Montpelier Milk-Vetch*. Fl. June, Aug. Clt. 1710. Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot, or prostrate.

234 *A. SANGUINOLENTUS* (Bieb. casp. 190. fl. taur. 2. p. 200.) plant stemless; leaflets elliptic, obtuse, hoary beneath; scapes declinate, longer than the leaves; legumes oblong, compressed, rather arched, glabrous, spotted with blood-colour.  $\mathcal{U}$ . H. Native of Eastern Caucasus, on dry exposed hills. *A. incanus* var. Pall. astr. 84. f. 2. *A. clavatus  $\beta$ , brevibracteatus*, D. C. astr. no. 127. Flowers yellowish green. Perhaps this species is referrible to section *Caprini*.

*Bloody-spotted-legged Milk-Vetch*. Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

235 *A. INCANUS* (Lin. spec. 1072.) plant stemless, hoary; leaflets 13-17, ovate; scapes hardly exceeding the leaves; spikes capitate; calycine teeth subulate, short; legumes nearly cylindrical, hoary from short down, incurved at the apex, and ending in a subulate mucrone, hardly 3 times the length of the calyx;

cells 5-6-seeded. *U. H.* Native of the south of France, in dry fields and among stones. Magn. bot. monsp. p. 32. with a figure. *A. incanus*, Pall. astr. t. 84. Flowers purplish.

*Var. β, Barrelieri* (Dufour, ann. gen. sc. 7. p. 297.) legumes hoary, at length very hard, oblong, not ovate, a little incurved, subulate; cells usually 5-seeded. *U. H.* Native of Spain, in the province of Valentia, on arid hills at St. Philip.

*Hoary Milk-Vetch.* Fl. June, July. Clt. 1795. Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  ft.

236 *A. INCURVUS* (Desf. atl. 2. p. 182. t. 203.) plant stemless, hoary; leaflets 17-27, elliptic; scapes longer than the leaves; spikes of flowers capitate; teeth of calyx subulate; legumes oblong, cylindrical, tapering to the base, incurved at the apex, glabrous, hardly 3-times the length of the calyx; cells 3-5-seeded. *U. H.* Native of Algiers, in sandy places. D. C. astr. 128. Flowers pale-purple.

*Incurved-podded Milk-Vetch.* Pl.  $\frac{1}{2}$  foot.

237 *A. CLAVATUS* (D. C. astr. no. 127. t. 44.) plant almost stemless, hoary; leaflets 11-21, roundish-ovate; scapes longer than the leaves; flowers disposed in spikes, spreading; legumes erect, glabrous, somewhat clavate, incurved at the top; cells 4-5-seeded. *U. H.* Native of Armenia. Flowers greenish yellow in a dried state. Perhaps the same as *A. cinereus* of Willd. spec. 3. p. 1315.

*Clavate-legged Milk-Vetch.* Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

238 *A. NUMMULARIODES* (Desf. emend. D. C. astr. no. 131.) plant stemless and hoary; leaflets 17-23, obovate; scapes longer than the leaves; flowers few, disposed in short spikes; calyxes beset with black villi, 5-toothed; legumes elliptic, ventricose, silky, hardly longer than the calyx; cells 3-seeded. *U. H.* Native of sandy places near Sbiba, in Tunis. *A. nummularius*, Desf. atl. 2. p. 182. t. 204. exclusive of the synonymes. *A. rotundifolius*, Willd. spec. 3. p. 1317. Flowers rose-coloured.

*Money-wort-like Milk-Vetch.* Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

239 *A. MACRORRHIZUS* (Cav. icon. 2. p. 28. t. 133.) plant stemless, hoary; leaflets 15-21, ovate, mucronulate; scapes exceeding the leaves; spikes ovate, many-flowered; flowers distinct, pedicellate; calyxes clothed with black villi, 5-toothed; legumes erect, obovate, pubescent, a little longer than the calyx, ending in a hooked acumen; cells 3-4-seeded. *U. H.* Native of Spain, in fields about Madrid. Flowers red. *A. montanus*, Brot. ex Steud.

*Long-rooted Milk-Vetch.* Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

240 *A. BRACHYCARPUS* (Bieb. fl. taur. 2. p. 201. cent. 2. p. 58.) plant stemless, pubescent; leaflets 15-27, oblong-elliptic; scapes longer than the leaves; spikes many-flowered, at length elongated; calyxes clothed with black and white hairs mixed; legumes erect, obovate, length of calyx, when young clothed with adpressed pubescence; cells 2-3-seeded. *U. H.* Native of Caucasus. Sims, bot. mag. 2335.—Buxb. cent. 3. t. 38. f. 1. ? Flowers of a dirty purple colour.

*Sharp-fruited Milk-Vetch.* Fl. Ju. July. Clt. 1820. Pl.  $\frac{1}{2}$  ft.

241 *A. GLAREOSUS* (Dougl. mss.) stems short, procumbent; plant clothed with hoary silky villi; stipulas free, permanent; leaflets numerous, obovate; peduncles or scapes bearing from 3-10 flowers at the apex; bractees lanceolate, subulate, twice the length of the pedicels. *U. H.* Native of North America, from the confluence of Lewis and Clarke's river with the Columbia to the Rocky mountains. Flowers large, purple. Habit of a species of *Oxytropis*. This species belongs more properly to section *Onobrychoidei* than to the present section.

*Gravel Milk-Vetch.* Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

242 *A. PURSHII* (Dougl. mss.) plant tufted, woody at the base, densely clothed with hoary-silky villi; stipulas distinct, permanent; leaflets numerous, elliptic; bractees subulate, twice the length of the pedicels; peduncles or scapes shorter than the leaves, bearing a few flowers at the apex. *U. H.* Native of

North-west America, on the low hills of the Spokane River. Flowers yellow. Habit of a species of *Oxytropis*. This plant belongs more properly to section *Ciceroides*.

*Pursh's Milk-Vetch.* Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

243 *A. MOLLISSIMUS* (Torrey, in ann. lyc. 2. p. 173.) plant almost stemless, erect, clothed in every part with silky down; stipulas free; leaves with 11-14 pairs of ovate-oblong mucronulate leaflets; peduncles longer than the leaves; flowers spicate, erect; legumes oblong, arched, glabrous. *U. H.* Native of North America, on the Platte. Flowers probably cream-coloured.

*Very-soft Milk-Vetch.* Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

244 *A. PENDULUS* (D. C. astr. no. 129.) plant stemless, hoary; leaflets 17-21, roundish; scapes longer than the leaves; flowers spreading, but at length pendulous, disposed in spikes. *U. F.* Native of the Levant. *A. orientalis* folio subrotundo, flore purpureo magno, Tourn. cor. 28.

*Pendulous-flowered Milk-Vetch.* Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

245 *A. ELONGATUS* (Willd. spec. 3. p. 1314.) plant stemless, hoary; leaflets 9-11, elliptic; scapes longer than the leaves; spikes of flowers elongated; flowers erect, but at length spreading; legumes pendulous, ovate, pubescent, mucronate by the style; cells 2-3-seeded. *U. H.* Native of Galatia. *A. Pistacia*, Rost. ined. Flowers purplish. Legumes the size and form of those of the *Pistachia-nut*. Very like *A. brachycarpus*, but differs in the fruit being pendulous.

*Elongated-spiked Milk-Vetch.* Pl.  $\frac{1}{2}$  foot.

246 *A. ANGULOSUS* (D. C. astr. no. 122. t. 45.) plant stemless, hoary; leaflets 9-13, elliptic, mucronulate; scapes longer than the leaves; spikes of flowers at length elongated; legumes ovate, somewhat trigonal, rather pendulous, pubescent, mucronate by the style, about 3-times the length of the calyx; cells 3-4-seeded. *U. H.* Native of the Levant. Flowers unknown.

*Angular-podded Milk-Vetch.* Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

§ 18. *Radiciſſori* (from *radix*, a root, and *flos*, a flower; in reference to the flowers and scapes rising from the roots, and not from the stems). D. C. prod. 2. p. 305. *Stipulas adhering to the petioles, which are unarmed. Calyxes not bladderly, nor ruptured above after flowering. Flowers purplish or white, with the vexillum not much elongated. Leaves not hoary. Legumes usually bladderly.*

247 *A. PHYSODES* (Lin. spec. 1073.) plant almost stemless and glabrous, but beset with a few hairs, which are fixed by their centre; leaflets 21-31; peduncles scape-like, about equal in length to the leaves or rather longer; legumes inflated, membranous, nearly globose, glabrous. *U. H.* Native of Siberia, in places impregnated with salt. D. C. astr. 127. Pall. astr. 71. but not of Pall. itin. Flowers purplish. Vexillum oblong. Root creeping.

*Var. α, Wolgensis* (Pall. astr. t. 58. D. C. astr. t. 48.) leaflets linear, acute; scape declinate, length of leaves. *U. H.* Native of Sandy Islands, at the mouth of the Volga.

*Var. β, Tauricus* (Pall. astr. t. 58. B. f. 1.) leaflets oblong; scapes exceeding the leaves; stems more conspicuous. *U. H.* Native of Tauria.

*Var. γ, Altaicus* (Pall. astr. t. 58. B. f. 2.) leaflets elliptic; scapes length of leaves. *U. H.* Native of Altai.

*Inflated-podded Milk-Vetch.* Fl. Ju. Jul. Clt. 1759. Pl.  $\frac{1}{2}$  ft.

248 *A. PALLASII* (Fisch. in litt. D. C. prod. 2. p. 305.) plant almost stemless, tufted, branched, clothed with hairy pubescence; leaflets 11-13, oblong-linear; scapes length of leaves; legumes inflated, membranous, almost globose, villous. *U. H.* Native of the Caspian desert, at Lake Inderskoi. *A. physodes affinis*, Pall. astr. p. 73. t. 59. *A. physodes* var.  $\delta$ , D. C. astr. no. 127. Pers. ench. 2. p. 344. Flowers purplish.

*Pallas's Milk-Vetch.* Fl. June, July. Clt. 1818. Pl.  $\frac{1}{2}$  foot.

249 *A. TESTICULATUS* (Pall. astr. p. 82. t. 67.) plant stemless, clothed with cinereous villi; leaflets lanceolate or oblong; flowers radical, almost sessile, aggregate; legumes inflated, ovate, tomentose.  $\mathcal{U}$ . H. Native in deserts and in sands at the Caspian sea, and of Tauria. Flowers flesh-coloured, but in a dried state they appear milk-coloured or yellowish. Calyxes cylindrical. Bieb. fl. taur. 2. p. 202. *A. cinereus radiceflorus*, D. C. astr. t. 40.

*Testiculate-podded Milk-Vetch.* Fl. June, July. Clt. 1818. Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

250 *A. RUPIFRAGUS* (Pall. astr. p. 86. t. 70.) plant stemless, clothed with cinereous villi; leaflets oblong, obtuse; scapes shorter than the leaves, or about equal in length to them; legumes oblong, acute, 2-celled.  $\mathcal{U}$ . H. Native of the south of Tauria, on rocks. Flowers purplish. Calyxes rather turgid.

*Var. a, exscapus* (Pall. astr. t. 70.) scapes very short or hardly any; leaflets oblong-linear.

*Var. b, caulescens* (Pall. astr. t. 70. B.) scapes length of leaves; leaflets oblong, fewer; calyxes rather bladderly.  $\mathcal{U}$ . H. Native of the Ural mountains. Perhaps a proper species.

*Broken-rock Milk-Vetch.* Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

251 *A. REDUNCUS* (Pall. astr. p. 109. t. 82.) plant almost stemless, hairy, and rather canescent; leaflets 25-35, elliptic-oblong, glabrous above; scapes a little higher than the leaves; flowers disposed in elongated spikes; legumes erect, hairy, incurved, cylindrical, hooked downwards, channelled above, 5-times the length of the calyx.  $\mathcal{U}$ . H. Native of Tauria, in sandy places at the Volga, and about Sarepta. *A. cinereus longipes*, D. C. astr. 41. Flowers purple or white.

*Var. b, brevipes* (D. C. astr. t. 41.) scapes shorter than the leaves; leaflets elliptic-ovate, fewer.  $\mathcal{U}$ . H. Growing along with the species.

*Hooked-podded Milk-Vetch.* Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

252 *A. HIRSUTUS* (Vahl. symb. 1. p. 59. D. C. astr. no. 125. t. 43.) plant stemless, clothed with hoary villi; leaflets 7-9, elliptic; scapes rather longer than the leaves; flowers capitate; calyx villous, 5-cleft, at length cleft above; legumes nearly globose, apiculated, hairy, 2-celled.  $\mathcal{U}$ . H. Native of Armenia on hills. Colour of flowers unknown.

*Hairy Milk-Vetch.* Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

253 *A. ERIOCARPUS* (D. C. astr. no. 135. t. 47. but not of Bieb.) plant stemless, villously-hairy; leaflets 21-27, elliptic, obtuse; scapes exceeding the leaves; spikes of flowers ovate; calyx villous, 5-toothed; ovary very hairy.  $\mathcal{U}$ . H. Native country unknown. Flowers purple.

*Woolly-fruited Milk-Vetch.* Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

254 *A. PYGMÆUS* (Pall. astr. 66. t. 54.) plant almost stemless, branched, prostrate; leaflets 7-9, lanceolate, small, pubescent; peduncles 1-flowered, very short; legumes oblong, inflated, pubescent.  $\mathcal{U}$ .?  $\mathcal{H}$ .? II. Native of Eastern Siberia, in the Arctic region. Flowers unknown. Perhaps only a variety of *A. pumilio*.

*Pygmy Milk-Vetch.* Pl. prostrate.

255 *A. PUMILIO* (Pall. astr. p. 67. t. 55.) plant almost stemless, with many little shoots rising from the neck; leaflets 9, lanceolate-linear, hoary, and rather pilose beneath; flowers twin, almost sessile.  $\mathcal{U}$ . H. Native of the Curil islands. Flowers large, pale violet. Calyx 5-cleft, clothed with white or brown hairs. Legumes unknown.

*Dwarf Milk-Vetch.* Pl.  $\frac{1}{4}$  foot.

256 *A. GEMINIFLORUS* (Humb. et Bonpl. pl. equin. 1. p. 126. t. 37.) plant almost stemless, branched, prostrate; leaflets 19-21, approximate, complicate, oblong, silky, small; flowers twin, almost sessile; legumes ovate, acuminate, silky, 2-seeded.  $\mathcal{U}$ . F. Native of South America, in the kingdom of Quito, in high cold places; frequent on mount Antisana. Flowers violaceous.

*Twin-flowered Milk-Vetch.* Pl.  $\frac{1}{2}$  foot, prostrate.

257 *A. UNIFLORUS* (D. C. astr. no. 141. t. 50.) plant almost stemless, branched, prostrate, glabrous; leaflets 13-17, linear, obtuse; stipulas joined; flowers almost sessile, solitary.  $\mathcal{H}$ .?  $\mathcal{U}$ . G. Native of Peru, at Huasa-Huasi. Flowers purplish.

*One-flowered Milk-Vetch.* Pl. prostrate.

† *Species not sufficiently known.*

258 *A. UNCATUS* (Lin. spec. 1072.) plant stemless and scapeless; leaves with 8-9 pairs of obcordate leaflets, each terminating in a bristle; legumes subulate, hooked, longer than the leaves.  $\odot$ . F. Native about Aleppo. *Oxytropis uncatus*, Pers. ench. 2. p. 33.? Said to be allied to *A. triméstris*. Flowers almost white.

*Hooked-podded Milk-Vetch.* Pl.  $\frac{1}{4}$  foot.

259 *A. ARCTICUS* (Willd. enum. suppl. 51.) plant stemless; leaflets ovate-lanceolate, pilose, silky beneath; scapes ascending, longer than the leaves; legumes lanceolate, a little inflated.  $\mathcal{U}$ . H. Native country unknown. Corolla shewy violet.

*Arctic Milk-Vetch.* Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

260 *A. ? OBCORDATUS* (Ell. sketch. 2. p. 227.) plant glabrous, decumbent; leaves with 7-9 pairs of small obcordate leaflets; peduncles elongated; lobes of calyx subulate.  $\mathcal{U}$ . H. Native of the south of Georgia, near St. Mary. Flowers white. Legumes unknown.

*Obcordate-leafletted Milk-Vetch.* Pl. prostrate.

261 *A. PSEUDO-CICER* (Opiz, in flora, 1821. p. 758.) plant caulescent, prostrate; leaflets glabrous, lanceolate, acute; stipulas lanceolate; racemes pedunculate, shorter than the leaves.—Native of Bohemia. *Melilotus dentata*, Waldst. et Kit. hung. ex Opiz.

*False-chick-pea Milk-Vetch.* Pl. prostrate.

262 *A. RADICANS* (Horn. hort. hafn. 2. p. 708.) stolons rooting; leaflets ovate-lanceolate; scapes nearly erect, length of leaves; flowers in ovate heads; legumes oblong, flat, glabrous.  $\mathcal{U}$ . H. Native country unknown.

*Rooting Milk-Vetch.* Pl. creeping.

263 *A. SYRIACUS* (Lin. spec. 1069.) plant pubescent, caulescent and procumbent; leaflets few pairs, linear-lanceolate; heads of flowers pedunculate, longer than the leaves; flowers reflexed; legumes ovate-oblong, tomentose, ending in a long beak.  $\mathcal{U}$ . H. Native of Syria. The plant in the Linnaean herbarium under this name certainly belongs to section *Onobrychoidei*.

*Syrian Milk-Vetch.* Pl. procumbent.

264 *A. PASTELLIANUS* (Pollin, pl. veron. 1816.) plant caulescent, diffuse, and silky; leaves with 6 pairs of linear bluntish leaflets; spikes capitate, on long peduncles; legumes ovate, silky, exceeding the calyx.  $\mathcal{U}$ . H. Native of fields about Verona, among stones on mount Pastello.

*Pastello Milk-Vetch.* Pl. diffuse.

265 *A. LUNATUS* (Pall. astr. p. 44.) plant caulescent, glabrous; leaves with usually 15 pairs of linear-lanceolate leaflets; peduncles very long, sulcated, 10-flowered; legumes triquetrous, rather lunate, erect, glabrous.  $\mathcal{U}$ . H. Native of Persia. Buxb. cent. 3. t. 36. f. 2.? *Oxytropis lunata*, Pers. ench. p. 333 According to Fischer this is a true species of *Astragalus*, intermediate between *A. falcatus* and *A. hamosus*.

*Lunate-podded Milk-Vetch.* Pl. 1 foot.

*Cult.* All the species of this genus are worthy of cultivation in every collection. The shrubby kinds, or those belonging to section *Tragacanthæ*, grow well in any light dry soil, and are increased by cuttings or seeds. The herbaceous perennial kinds thrive well in any kind of earth, though they prefer a dry light soil, and they are easily increased by dividing the plants or by seeds; the last mode is preferable, as the greater part of the species are very liable to die if even transplanted or divided at the root. The dwarfer kinds are well adapted for ornamenting rock-work, or to be grown in pots as alpine in a mixture of loam,

peat, and sand. Those marked frame require the protection of a frame or greenhouse in winter. The seeds of the annual species only require to be sown in the open border early in spring. Those species belonging to divisions *Alopecuroidei*, *Tragacanthæ*, *Incarni*, *Dissitiflori*, and *Onobrychoidei* are the most worthy of cultivation.

**CXXXII. GÜLDENSTÆDTIA** (in honour of A. Güldenstaedt, a Russian naturalist). Fisch. in litt. but not of Neck. D. C. prod. 2. p. 307.

**LIN. SYST.** *Diadélphia*, *Decándria*. Calyx bibracteate at the base, campanulate, 5-cleft, upper segments broadest. Petals 5, disposed in a papilionaceous corolla, with the vexillum entire, about the length of the wings. Keel minute. Stamens diadelphous. Legume somewhat cylindrical, 1-celled, many-seeded, filled with medulla, which vanishes at maturity, with the valves always separating in a spiral manner. Seeds reniform, small, scrobiculate. Stemless herbs, with impari-pinnate or simple leaves, that is, having the terminal leaflet only remaining, which is jointed at the top of the petiole. Scapes ascending. Flowers umbellate, red, or violaceous. Perhaps *Astrágalus Sínicus* of Lin. belongs to this genus.

1 *G. MONOPHYLLA* (Fisch. in litt. D. C. prod. 2. p. 307.) leaves simple, kidney-shaped, clothed with silky-pubescence; umbels 2-5-flowered.  $\mathcal{U}$ . H. Native of the Altaian mountains. Leaves glaucous, sometimes trifoliate. Flower purplish.

*One-leaved* Güldenstædtia. Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

2 *G. PAUCIFLORA* (Fisch. mss. D. C. prod. 2. p. 307.) leaves impari-pinnate, silky; umbels 2-3-flowered.  $\mathcal{U}$ . H. Native of the Altaian mountains, in humid meadows. *Astrágalus pauciflorus*, Pall. astr. no. 88. t. 66. B. Willd. spec. 3. p. 1319. *Astrag. biflorus*, Pall. itin. 3. p. 205.—Gmel. sib. 4. p. 54. no. 70. t. 26. f. 1. Flowers purple.

*Var.  $\beta$ , subglabrata* (D. C. prod. 2. p. 307.) leaves almost glabrous at length.  $\mathcal{U}$ . H. Native of Dahuria. *Astrágalus brevicarinatus*, D. C. astr. p. 128. t. 49. Flowers flesh-coloured. Legumes villous.

*Few-flowered* Güldenstædtia. Fl. June, July. Clt. 1827. Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

3 *G. LATIFOLIA* (Fisch. in litt.) plant hoary: leaflets 1-7, ovate, terminal one largest; legumes terete, subulate, a little incurved, clothed with adpressed pubescence.  $\mathcal{U}$ . H. Native of Persia and Armenia. *Astrágalus latifolius*, Lam. dict. 1. p. 319. D. C. astr. no. 133. t. 46. Flowers purple.

*Broad-leaved* Güldenstædtia. Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

*Cult.* See *Oxytropis* for culture and propagation, p. 253.

**CXXXIII. BISERRULA** (from *bis*, twice, and *serrula*, a little saw; in allusion to the legumes, which are toothed on both sides, giving them the appearance of a little saw). Lin. gen. no. 893. Lam. ill. t. 622. D. C. astr. no. vi. prod. 2. p. 307.

**LIN. SYST.** *Diadélphia*, *Decándria*. Calyx 5-cleft. Keel obtuse. Stamens diadelphous. Legume flat, 2-celled, having the valves carinately compressed, and sinuately-toothed on the back.—A diffuse pubescent herb, with impari-pinnate leaves, having many pairs of orbiculate leaflets. Peduncles shorter than the leaves. Spikes ovate. Flowers small, blue, or purple.

1 *B. PELÉCINUS* (Lin. spec. 1073. Gisek. icon. fasc. 1. t. 17.)  $\odot$ . H. Native of the south of Europe, and the north of Africa, in waste places and cornfields. Lam. ill. f. 22. *Pelécinus vulgaris*, Tourn. inst. 417. t. 234.

*Corn-weed* Biserrula. Fl. July, Aug. Clt. 1640. Pl.  $\frac{1}{2}$  to 1 ft.

*Cult.* The seeds of this plant only require to be sown in the open border in spring.

### Tribe III.

**HEDYSA'REÆ** (plants agreeing with *Hedysarum* in some important characters). D. C. legum. mem. vii. prod. 2. p. 307. Embryo with the radicle bent back upon the edge of the cotyledons (f. 21. c. f.). Corolla papilionaceous (f. 42. b.). Stamens rarely free, but usually monadelphous (f. 43. c.) or diadelphous, 9 joined together, and one free (f. 44. d.), or 5 in each bundle. Legumes dividing transversely into 1-seeded cells or joints (f. 41. e.). Cotyledons flat, changing into leaves at the time of germination. This tribe is very natural, and easily distinguished from the rest by the legumes being divided transversely into joints, unless in the following genera, *Onobrychis*, *Eleiötis*, and *Lespedeza*, which have only 1-celled, 1-seeded legumes, and in a few others, which have the legumes divided into transverse cells from membranous or spongy dissepiments, but not separating into joints.

**SUBTRIBE I. CORONILLEÆ** (plants agreeing with *Coronilla* in some characters). D. C. prod. 2. p. 308. Flowers disposed in umbels (f. 41. b. f. 42. b.). Legumes terete (f. 41. c.) or compressed. Stamens diadelphous, 9 joined and 1 free.

**CXXXIV. SCORPIURUS** (from *σκορπιος*, *scorpius*, a scorpion, and *οὐρα*, *oura*, a tail; in reference to the twisted form of the legumes). Lin. gen. 876. Gært. fruct. 2. t. 155. D. C. prod. 2. p. 308.—*Scorpioides*, Tourn. inst. 226.—*Scorpius*, Lois. fl. gall. Mœnch.

**LIN. SYST.** *Diadélphia*, *Decándria*. Calyx 5-cleft, with equal acute lobes. Corolla with a 2-edged keel. Stamens diadelphous, the 5 longest dilated a little under the anthers. Ovary sulcated. Style filiform, acute. Legume revolute, rather spiral, constantly of 3-6 1-seeded joints, which are furrowed lengthwise, with the nerves usually prickly or muricated. Embryo replicate. Cotyledons linear.—Annual herbs, with membranous linear-lanceolate stipulas, simple entire leaves, which taper into the petiole, axillary 1-4-flowered peduncles, which are longer than the leaves, and yellow, rarely purple flowers.

1 *S. LÆVIGATA* (Smith, fl. græc. t. 718. ex prod. 2. p. 81.) legumes glabrous, with ribs unarmed.  $\odot$ . H. Native of the islands in the Archipelago of Europe. *S. hupleuri-folio siliquis lævibus*, Tourn. inst. 402. Flowers yellow. Perhaps only a variety of *S. muricata*.

*Smooth-podded* Caterpillar. Fl. June, July. Clt. 1818. Pl. prostrate.

2 *S. MURICATA* (Lin. spec. 1050.) legumes glabrous, with the inner ribs unarmed, and the outer ones muricated with minute bluntish tubercles.  $\odot$ . H. Native of the region of the Mediterranean, in fields.—Moris. oxon. sect. 2. t. 11. f. 4. *S. echinata*  $\alpha$ , Lam. dict. 726. Peduncles 2-flowered. Flowers yellow.

*Muricated-podded* Caterpillar. Fl. June, July. Clt. 1640. Pl. trailing.

3 *S. SULCATA* (Lin. spec. 1050.) legumes glabrous; inner ribs smooth, 4 outer ones bearing stiff distant prickles, which are hooked at their apex.  $\odot$ . H. Native of the region of the Mediterranean, in fields. Gært. fruct. 2. t. 155. Desf. atl. 2. t. 4. *S. echinata*  $\beta$ , Lam. dict. 1. p. 726. Peduncles usually 3-flowered. Flowers yellow.

*Furrowed-podded* Caterpillar. Fl. June, July. Clt. 1596. Pl. prostrate.

4 *S. SUBVILLOSA* (Lin. spec. 1050.) legumes glabrous, the inner ribs naked, but 6 or 8 of the outer ones bear stiff, crowded prickles, which are a little hooked at the apex.  $\odot$ . H. Native along with the preceding species. *S. echinata*  $\gamma$ , Lam. dict. 1. p. 726.—Moris. hist. sect. 2. t. 11. f. 2. Legumes thicker, and more revolute than those of *S. sulcata*. Flowers yellow. Plant rather villous. Peduncles usually 4-flowered.

• N n

*Sub-villous Caterpillar.* Fl. Ju. July. Clt. 1731. Pl. proc.

5 *S. ACUTIFOLIA* (Viv. fl. lyb. p. 43. t. 19. f. 4.) legumes clothed with short hairs, having the inner ribs naked, and 6 or 8 of the outer ones bearing crowded, stiff, very short prickles. ☉. H. Native of Cyreniaca, in sandy places, and of Corsica, about Bonifacio. Flowers yellow.

*Acute-leaved Caterpillar.* Fl. Ju. July. Clt. 1825. Pl. proc.

6 *S. VERMICULATA* (Lin. spec. 1050.) legumes glabrous, with the inner ribs almost obsolete, but the 10 outer ones bear crowded stipitate tubercles, which are obtusely dilated at the apex. ☉. H. Native of the region of the Mediterranean, in corn-fields. Moris. hist. sect. 2. t. 11. f. 3. Gärtn. fruct. 2. p. 155. Flowers yellow, but with the vexillum streaked with red, solitary on the peduncles. Legumes thick.

*Vermicular-podded Caterpillar.* Fl. June, July. Clt. 1621. Pl. prostrate.

7 *S. PURPUREA* (Desf. atl. 2. p. 174.) stem and leaves hairy; peduncles 1-flowered; legumes covered all over with very short tubercles. ☉. H. Native of Algiers. Flowers purple. Plant with the habit of the preceding species.

*Purple-flowered Caterpillar.* Fl. June, July. Pl. trailing.

*Cult.* These plants are preserved in gardens more for the oddness of the shape of their pods than for their beauty, and being all hardly annuals the seeds of them only require to be sown in the open border in spring, where they are intended to remain, and thinned afterwards if they rise too thick.

CXXXV. CORONILLA (from *corona*, a crown; in reference to the disposition of the flowers in heads or umbels at the tops of the peduncles). Neck. elem. no. 1319. Lam. ill. t. 630. D. C. prod. 2. p. 309.—Coronilla species of Lin. and others.

LIN. SYST. *Diadéphia*, *Decandria*. Calyx campanulate, short, 5-toothed (f. 41. a.), the 2 superior teeth approximate, and joined together higher up than the rest. Claws of petals usually longer than the calyx. Carina acute. Stamens diadelphous. Legume nearly terete, slender, at length separating into oblong 1-seeded joints (f. 41. c.). Seeds ovate or cylindrical (f. 41. f.).—Shrubs or herbs, with impari-pinnate leaves, and axillary peduncles, bearing at their tops umbels of pedicellate flowers.

SECT. I. *E'MERUS* (from *ημερος*, *emerus*, pure, agreeable; the shrub is very pretty). Tourn. inst. t. 418. Desv. journ. bot. 3. p. 121. t. 4. f. 9. D. C. prod. 2. p. 309. Legume nearly terete, separating into joints slowly and obscurely, but decidedly. Claws of petals 3 times the length of the calyx. Flowers yellow.

1 *C. E'MERUS* (Lin. spec. 1046.) shrubby, glabrous; stipulas small; leaflets 5-7, obovate; peduncles 3-5-flowered. ♀. H. Native of middle and south Europe, and of Tauria, in hedges, and among bushes. Sims, bot. mag. 445. *E'merus major*, Mill. fig. t. 132. f. 1. and minor, f. 2. *C. pauciflora*, Lam. fl. fr. Flowers yellow.

*Agreeable Coronilla or Scorpion-Senna.* Fl. April, June. Clt. 1596. Shrub 3 to 4 feet.

SECT. II. *CORONILLA* (see genus for derivation). Tourn. inst. t. 419. Desv. journ. bot. 3. p. 119. t. 4. f. 3. Legume rather compressed, evidently separating into joints (f. 41. e.). Claws of petals hardly longer than the calyx.

\* *Flowers yellow.*

2 *C. JU'NCEA* (Lin. spec. 1047.) shrubby, glabrous; stipulas small; leaflets 3-7, linear-lanceolate, obtuse, rather fleshy, lower ones remote from the stem; umbels 5-7-flowered. ♀. H. Native of the south of France. Ker. bot. reg. 820. Lodd. bot. cab. 235.—Barrel. icon. t. 133.—J. Bauh. hist. 1. p. 2. t. 383. f. 2. Branches rush-like, terete, almost naked, slender. Flowers bright yellow.

*Rushy-branched Coronilla.* Fl. June, July. Clt. 1656. Shrub 2 to 3 feet.

3 *C. STIPULARIS* (Lam. dict. 2. p. 120.) shrubby, glabrous; stipulas roundish, large, deciduous; leaflets 7-9, obovate, mucronulate, glaucous, lower ones remote from the stem; umbels 6-8-flowered. ♀. F. Native of the south of Italy, in Goat's Island, in Sicily near Palermo, and probably of Spain. *C. orbicularis*, Moench. *C. Valentina*, Lin. spec. 1047. exclusive of the synonyme of Clusius, and therefore the name. Curt. bot. mag. 185. *C. Hispanica*, Mill. dict. no. 4. ? Flowers deep yellow, very fragrant at night.

*Large-stipuled Coronilla.* Fl. Mar. Nov. Clt. 1596. Sh. 3 ft.

4 *C. PENTAPHYLLA* (Desf. atl. 2. p. 171.) shrubby, glabrous; stipulas ovate, mucronate, deciduous; leaflets 5-7, cuneiform, mucronate, usually emarginate; umbels 10-20-flowered. ♀. F. Native of Algiers on hills. Mill. fig. t. 289. f. 2. ?

*Five-leafletted Coronilla.* Fl. June, July. Clt. 1700. Shrub 2 to 4 feet.

5 *C. ARGE'NTEA* (Lin. spec. 1048.) shrubby; leaflets 11, silky, terminal one largest. ♀. F. Native of Candia. Mill. fig. t. 289. f. 1. ? ex Ait. hort. kew. 4. p. 332. This is a very doubtful plant. Flowers beautiful yellow, sweet-scented.

*Silvery Coronilla.* Fl. May, June. Clt. 1664. Sh. 2 feet.

6 *C. GLAU'CA* (Lin. spec. 1047.) shrubby, glabrous; stipulas small, lanceolate; leaflets 5-7, obovate, very obtuse, glaucous, lower ones remote from the stem; umbels 7-8-flowered. ♀. F. Native of France about Narbonne, and of Sicily, and probably of Spain. Curt. bot. mag. t. 13. Mill. fig. 289. f. 1. Flowers beautiful yellow, fragrant in the day time, but scentless at night.

*Glaucous Coronilla.* Fl. May, Sept. Clt. 1722. Sh. 2 to 4 ft.

7 *C. MINIMA* (Lin. spec. 1048.) suffruticose, procumbent, glabrous; stipulas concrete, small, opposite the leaves, bidentate at the apex, the upper ones largest, membranous, and deciduous; leaflets 7-13, ovate-roundish, obtuse or retuse, lower ones remote from the stem; umbels 7-8-flowered; legume 4-winged, toothed. ♀. H. Native of the southern parts of Europe, on the lower mountains in sandy places. Jacq. fl. austr. t. 271. D. C. fl. fr. 4. p. 608. Sims, bot. mag. 2178.—J. Bauh. hist. 2. p. 351. f. 2. Flowers yellow, sweet-scented. Plant erect or prostrate, evergreen. (f. 41.)

*Least Coronilla.* Fl. June, July. Clt. 1658. Pl. prostrate or  $\frac{1}{2}$  foot.

8 *C. VAGINA'LIS* (Lam. dict. 2. p. 121.) plant suffruticose, prostrate; stipulas concrete, large; leaflets roundish; legumes 4-winged, toothed. ♀. H. Native of the southern parts of Europe, on the lower mountains. Flower yellow. This species is usually confused with *C. minima*.

*Sheathing-stipuled Coronilla.* Pl. prostrate.

9 *C. CORONA'TA* (Lin. spec. 1048.) plant suffruticose, erect, or ascending, glabrous; stipulas concrete, small, opposite the leaves, bidentate at the apex; leaflets 5-11, obovate, rather mucronate, glaucous, lower ones approximating the stem; umbels many-flowered; legumes compressed, tetragonal, erect. ♀. H. Native of the southern parts of Europe, in arid places. Jacq. austr. 1. t. 95. D. C. fl. franc. 4. p. 608. but not of Bieb. nor Sims. *C. Clusii*, Dufour, ann. ec. phys. 7. p. 307. *C. Valentina*, Lam. fl. fr. 2. p. 663. but not of Lam.—Clus. hist. 1. p. 98. f. 2. (fig. 41.)

FIG. 41.

*Crown-flowered Coronilla.* Fl. July, Aug. Clt. 1776. Pl. 1 to 2 feet.

10 *C. MONTANA* (Scop. carn. ed. 2. p. 912. t. 44.) plant herbaceous, erect, glabrous; stipulas concrete, opposite the leaves, oblong, emarginate, deciduous; leaflets 7, ovate, mucronate, rather glaucous, lower ones approximating the stem; umbels 15-20-flowered.  $\mathcal{U}$ . H. Native of Germany, Carniola, and Switzerland, on the mountains. *C. coronata*, Bieb. fl. taur. 1434. Sims, bot. mag. 907.—Riv. tetr. t. 207. (f. 41.)

*Mountain Coronilla.* Fl. Ju. July. Clt. 1776. Pl. 1 to 1½ ft.

11 *C. IBERICA* (Bieb. fl. taur. 2. p. 173.) plant herbaceous, prostrate, glabrous; stipulas distinct, membranous, orbicular, denticulated; leaflets 9-11, obcordate, ciliated; umbels 7-8-flowered; legumes tetragonal, incurved.  $\mathcal{U}$ . H. Native of Iberia and Cappadocia. Willd. spec. 3. p. 1152. Sweet, fl. gard. 25. Lodd. bot. cab. 789. *C. orientalis*, Mill. Flowers large, yellow. Root creeping.

*Iberian Coronilla.* Fl. July, Aug. Clt. 1822. Pl. ascending.

12 *C. SQUAMATA* (Cav. icon. t. 155.) plant herbaceous, erect; stipulas lanceolate-ovate, membranous, somewhat ciliated; leaflets 9-11, obovate, pubescent, lower ones remote from the stem; umbels 7-8-flowered; legumes scurfy from scales.  $\mathcal{U}$ . H. Native of Spain, near the town of Lamota del Cuervo. Flowers yellow.

*Scaly-podded Coronilla.* Fl. June, July. Clt. 1820. Pl. ½ foot.

13 *C. PARVIFLORA* (Willd. spec. 3. p. 1155.) plant herbaceous, much branched, rather scabrous from reflexed stiff hairs; leaflets 9, cuneate, emarginate, glabrous; stipulas ovate, very minute; umbels 5-flowered; peduncles longer than the leaves; legumes terete, arched.  $\mathcal{U}$ . H. Native of Candia and Tauria, on exposed hills. *C. Crética herbacea*, &c. Tourn. cor. 44. *C. Valentina*, Pall. ined. Bieb. fl. taur. 2. p. 173. Very like *C. Crética*, but differs in the flowers being yellow.

*Small-flowered Coronilla.* Pl. ¼ foot.

\* \* Flowers purple, pink, or white.

14 *C. VIMINALIS* (Salisb. par. t. 13. Ait. hort. kew. ed. 2. vol. 4. p. 331.) suffruticose; stipulas ovate, membranous, soon falling off; leaflets 13-21, obovate, retuse, mucronate, glaucous, lower ones approximating the stem; umbels 6-10-flowered.  $\mathcal{U}$ . H. Native of Mogodor. Branches hardly angular. Flowers large, pale, having the vexillum lined with red lengthwise, changing from pale to deeper purple.

*Twiggy Coronilla.* Fl. May, Nov. Clt. 1798. Sh. 2 to 4 ft.

15 *C. CRÉTICA* (Lin. spec. 1048.) plant herbaceous, ascending, glabrous; stipulas small, acute; leaflets 11-13, cuneate, retuse, the lower ones remote from the stem; umbels 3-6-flowered.  $\odot$ . H. Native of Candia, Tauria, and Italy, on hills. Flowers white, having the vexillum streaked with red, and the keel dark purple. Jacq. hort. vind. t. 25. *C. parviflora*, Mænench. *Astrolobium Créticum*, Desv.

*Cretan Coronilla.* Fl. June, July. Clt. 1731. Pl. ascending.

16 *C. VARIA* (Lin. spec. 1048.) plant herbaceous, diffuse, flexuous, glabrous; stipulas distinct, lanceolate; leaflets 9-13, oblong, elliptic, mucronate, lower ones approximating the stem; umbels 16-20-flowered; legumes angular, very long, straight.  $\mathcal{U}$ . H. Native of Europe and Tauria, in fields and meadows. Curt. bot. mag. 258. Mill. fig. t. 106.—Clus. hist. 2. p. 237. f. 2. *Astragalus glaucoïdes*, Gmel. itin. 1. t. 21. ex Bieb. Flowers pink, rarely white, at length drooping. Root creeping. This plant was formerly proposed to be cultivated as a proper food for cattle; and it was found that it grew very readily, and might be very beneficial to the farmer. In a good soil the stems will grow even 5 feet long, and be tender their whole length, so that a small spot of ground will supply a considerable quantity of food.

der, especially in dry seasons. Horses and cows seem to eat it greedily. However, Mr. Curtis remarks that its bitterness will be an objection to its being cultivated for cattle.

*Various-flowered Coronilla.* Fl. June, Nov. Clt. 1640. Pl. diffuse.

17 *C. GLOBOSA* (Lam. dict. 2. p. 122.) herbaceous, glabrous; stipulas small, acute; leaflets oblong-elliptic, 11-13, obtuse, lower ones distant from the stem; umbels globose, 20-30-flowered; legumes pendulous.  $\mathcal{U}$ . H. Native of Candia in fields. *C. Crética herbacea flore magno candido*, Tourn. cor. 44. Flowers pink or white. Perhaps only a variety of *C. varia*.

*Globose-flowered Coronilla.* Fl. July, Nov. Clt. 1800. Pl. diffuse.

† *Doubtful species.*

18 *C. ? SCA'NDENS* (Lin. spec. 1048.) stem scandent, flaccid; leaflets 5, ovate; peduncles axillary, twin, 1-flowered, prickly; legumes terete, articulated, glabrous.—Native of South America. —Plum. ed. Burm. t. 107. f. 3. Perhaps a species of *Poirétia*. Flowers large, pale yellow.

*Climbing Coronilla.* Pl. cl.

19 *C. MULTIFLORA* (D. C. prod. 2. p. 310.) plant suffruticose, glabrous; stipulas small, lanceolate; leaflets 7-9, oblong-cuneate, obtuse, lower ones approximating the stem; umbels 15-20-flowered.  $\mathcal{U}$ . F. Native of Spain. Branches terete, spreading, flexuous. Flowers pale, perhaps yellow, perhaps white.

*Many-flowered Coronilla.* Shrub 1 to 2 feet.

20 *C. HIRSUTA* (D. C. prod. 2. p. 310.) stem herbaceous, erect, clothed with white hairs, as well as the peduncles and leaves; leaves with 6-8 pairs of oval obcordate leaflets; stipulas leafy, roundish-cordate; peduncles longer than the leaves; umbels globose, 8-12-flowered; calyx beset with black hairs.  $\mathcal{U}$ . G. Native of the Cape of Good Hope. *Coronilla argentea*, Burm. cap. 22. Thunb. fl. cap. 592.? Legume unknown.

*Hairy Coronilla.* Pl. 1 foot.

*Cult.* All the species of *Coronilla*, both shrubby and herbaceous, are worthy of cultivation in every collection, for the beauty of their flowers, as well as for the neatness of their herbage. The hardy shrubby kind, *C. Emericus*, is very proper for the front of shrubberies. It thrives in any kind of soil, and flowers the greater part of the year. Ripened cuttings of it root freely if planted in autumn in the open ground. The frame and greenhouse shrubby kinds are beautiful plants of easy culture; they grow best in a mixture of loam and peat, and cuttings of them strike readily in sand under a hand-glass; they may be turned out into the open border in spring, where they will make shewy bushes and flower all the summer, and if the winters are not very severe they will live with very little protection. The hardy perennial herbaceous kinds are most handsome when cultivated in pots, and placed among other alpine plants. *C. varia globosa* and *Iberica* are very hardy, but become troublesome if planted in the open ground, as their roots run so much as to injure every other plant near them, and they are afterwards difficult to eradicate. *C. coronata minima* and *montana* are well adapted for rock-work, but do not long exist in such a situation, as they are apt to be killed in severe winters. The annual species, *C. Crética*, requires the treatment of other hardy annuals.

CXXXVI. ASTROLOBIMUM (from *αστρον*, *astron*, a star, and *λοβος*, *lobos*, a pod; in reference to the disposition of the pods like the rays of a star). Desv. journ. bot. 3. p. 121. t. 4. f. 10. D. C. prod. 2. p. 311.—*Ornithopus* species of Lin. and others.

*Lin. syst.* *Diadelphia*, *Decandria*. Calyx bractless, tubular, nearly equally 5-toothed. Keel of corolla small, compressed. Stamens diadelphous. Legume nearly terete, constantly com-

posed of numerous 1-seeded, indehiscent, cylindrical joints, which are truncate at both ends.—Smooth European herbs, with impari-pinnate leaves. Stipulas wanting or very small, when present they are joined in one, opposite the leaves, and therefore bidentate at the apex. Flowers yellow, capitate, destitute of the bractea to the head of the flowers.

1 *A. EBRACTEATUM* (D. C. prod. 2. p. 311.) peduncles about equal in length to the leaves, bractless at the apex; leaves all pinnate; leaflets elliptic-oblong, many-pairs, equal in size and shape, lower ones distant from the stem; legumes terete, arched. *⊙. H.* Native of Portugal, Spain, south of France, and Italy, in gravelly places. *Ornithopus levigatus*, Smith in Rees' cycl. no. 3. *Ornith. exstipulatus*, Thore, chl. land. 311. *O. ebracteatus*, Brot. fl. lus. 2. p. 159. *Scorpiurus pinnatus*, Mill. dict. no. 5. ? *O. nudiflorus*, Lag. varied. esp. 2. p. 40. *O. durus*, D. C. fl. fr. no. 4039. but not of Cav. *O. pygmaeus*, Viv.—*Dalech. hist.* 1. p. 487. f. 1. Flowers small, yellow.

*Bractless Star-Vetch.* Fl. June, July. Clt. 1700. Pl. pros.

2 *A. DUTRUM* (D. C. prod. 2. p. 311.) peduncles a little longer than the leaves, almost bractless at the apex; stipulas concrete, sheathing; lower leaves simple, the rest pinnate, with few pairs of obcordate leaflets, the lower ones approximating the stem; legumes arched, rather tetragonal. *⊙. H.* Native of Spain, about Valentia and Madrid in bushy places, and of Portugal in vineyards. *Ornithopus durus*, Cav. icon. 1. p. 31. t. 41. *O. heterophyllus*, Brot. phyt. t. 67. fl. lus. 2. p. 160. Flowers yellow.

*Hard-podded Star-Vetch.* Fl. Ju. July. Clt. 1816. Pl.  $\frac{1}{2}$  to  $\frac{1}{4}$  foot.

3 *A. REPANDUM* (D. C. prod. 2. p. 311.) peduncles a little shorter than the leaves, bractless at the apex; stipulas concrete, sheathing; lower leaves simple, ovate, and emarginate, upper ones pinnate; leaflets oblong, lower ones roundish, approximating the stem; legumes rather nodose, a little incurved. *⊙. H.* Native of Barbary in fields towards Lacalle. *Ornithopus repandus*, Lam. ill. t. 631. f. 4. Poir. dict. 4. p. 620. *O. lotoides*, Viv. Flowers yellow.

*Repand-podded Star-Vetch.* Fl. June, July. Clt. 1805. Pl. prostrate.

4 *A. SCORPIOIDES* (D. C. prod. 2. p. 311.) peduncles longer than the leaves, bractless; stipulas concrete, sheathing; leaves trifoliate; lower leaflets small, roundish, approximating the stem, terminal one large, oval; legume a little incurved, rather nodose. *⊙. H.* Native of the south of Europe, in corn-fields. *Ornithopus scorpioides*, Lin. spec. 1049. Cav. icon. t. 37. *Ornithopus trifoliatus*, Lam. fl. fr. 2. p. 659. *Ornithopodium scorpioides*, All. *Ornithopodium triphyllum*, Mærch. Flowers yellow.

*Scorpion-like-podded Star-Vetch.* Fl. June, July. Clt. 1506. Pl.  $\frac{1}{2}$  foot.

*Cult.* The seeds of these plants only require to be sown in the open border in spring.

CXXXVII. ORNITHOPUS (from *ορνις ορνιθος*, *ornis ornithos*, a bird, and *πους, pous*, a foot; the legumes are like the claws of a bird, and are disposed somewhat in the same manner). Desv. journ. bot. 3. p. 121. t. 5. f. 14. D. C. prod. 2. p. 311.—*Ornithopus* species Lin. and others. Lam. ill. t. 631.—*Ornithopodium*, Tourn. inst. t. 224. Mærch. meth.

LIN. SYST. *Diadelphia, Decandria*. Calyx tubular, almost equally 5-toothed, bracteate. Keel of corolla small, compressed. Stamens diadelphous. Legume compressed, with many 1-seeded indehiscent joints, which are truncate at both ends, but having parallel margins.—European, villous, annual herbs, with impari-pinnate leaves, small stipulas which are aduate to the petioles, axillary peduncles, bearing a few-flowered umbel at the

top of each. Flowers small, white or rose-coloured. All the species have a pinnate bractea under each head of flowers.

1 *O. COMPRESSUS* (Lin. spec. 1049.) peduncles shorter than the leaves; leaves villous, upper ones having the lower pair of leaflets approximating the stem; legumes compressed, pubescent, wrinkled, incurved at the apex; the joints oval. *⊙. H.* Native of the south of Europe and the north of Africa, in sandy places. Berg. phyt. t. 191. *Ornithopodium compressum*, All. ped. no. 1245. Flowers small, yellow.

*Compressed-podded Bird's-foot.* Fl. June, July. Clt. 1731. Pl. prostrate.

2 *O. PERPUSILLUS* (Lin. spec. 1049.) peduncles longer than the leaves; leaves rather villous, upper ones having the lower pair of leaflets approximating the stem; legumes rather compressed, glabrous, curved upwards, the joints elliptic, moderately compressed. *⊙. H.* Native of every part of Europe and the North of Africa, on heaths and gravelly pastures; plentiful in Britain. Smith, engl. bot. 369. Oed. fl. dan. 307. Curt. lond. 6. t. 53. Flowers small, usually 2-3 or 5 in a head, having the vexillum and wings white, and beautifully veined with crimson, and the keel green.

*Var. β, nodosus* (Mill. dict. no. 2.) root bearing ovoid tubercles; legumes pubescent. *⊙. H.* Native of Europe, in several parts of Britain and of France, very common about Paris. The tubercles, which are said to be on the roots of this variety, are to be found on the roots of almost all leguminous plants, which arise from morbid excrecences.

Common or *Very small Bird's-foot.* Fl. May, July. Britain. Pl. prostrate.

3 *O. SATIVUS* (Brot. fl. lus. 2. p. 160.) peduncles longer than the leaves; leaflets pubescent; oval in the lower leaves, and lanceolate in the superior ones, the lower pairs approximating the stem; legumes hardly arched, with roundish compressed knots. *⊙. H.* Native of Portugal and other parts of the south of Europe, in rather wet sandy places and meadows. *O. roseus*, Dufour. in litt. *O. perpusillus β*, intermedium, Roth. fl. germ. 2. p. 215. *Ornithopodium majus*, C. Baul. pin. 350. Ger. emac. 1241. f. 3.—Moris. hist. sect. 2. t. 10. f. 13. Flowers white and red, mixed.

*Cultivated Bird's-foot.* Fl. May, July. Clt. 1818. Pl. pr.

*Cult.* The seeds of these plants only require to be sown in the open ground, in spring. None of the species are worth cultivating, except in botanical gardens.

CXXXVIII. HIPPOCREPIS (from *ἵππος*, *hippos*, a horse, and *κρητις*, *krepis*, a shoe; in reference to the shape of the recesses of the pods, which are curved in such a manner as to give them a likeness to a horse's shoe). Lin. gen. 885. Lam. ill. t. 630. D. C. prod. 2. p. 312. *Ferrum-equinum*, Tourn. inst. t. 225.

LIN. SYST. *Diadelphia, Decandria*. Calyx 5-cleft (f. 42. a.) with the lobes equal and acute. Carina of corolla 2-edged (f. 42. b.). Stamens diadelphous. Style filiform, acute. Legume having numerous, 1-seeded joints, curved (f. 42. c.), hence the upper side of the legume appears as if it were cut, from having numerous rounded recesses. Seeds cylindrical or compressed, oblong, curved, fixed to the middle part of the joint, and therefore the umbilicus is in the middle of the curve.—Herbs or subshrubs, with impari-pinnate leaves and yellow flowers, which are sometimes solitary and axillary, sometimes sessile, but usually disposed in umbels on the tops of the axillary peduncles.

§ 1. *Roots perennial. Legumes sinuated, with the joints curved, forming a broad open recess between each pair.*

1 *H. BALEARICA* (Jacq. misc. 2. p. 305. icon. rar. 1. p. 149.) shrubby, erect; peduncles longer than the leaves, bearing an

umbel of flowers at the apex; legumes glabrous, a little arched. *h. F.* Native of the Island of Minorca. Lam. ill. 620. f. 2. Curt. bot. mag. t. 427. Leaves and calyxes either glabrous or pilose.

*Minorca* Horse-shoe-Vetch. Fl. May, Ju. Clt. 1776. Sh. 1 to 2 ft.

2 *H. comosa* (Lin. spec. 1050.) stem herbaceous, prostrate; peduncles longer than the leaves, bearing an umbel of flowers at the apex; legumes arched, sinuated on both margins, rough from minute prominent tubercles. *u. H.* Native of Europe, in Germany, Italy, France, Austria, Britain, in calcareous soils; plentiful in Kent, Cambridgeshire, and Berkshire, and in most chalk countries, as well as of the north of Africa. Smith, engl. bot. t. 31. Jacq. austr. 5. t. 431. Riv. tetr. 97. *H. perennis*, Lam. fl. fr. 2. p. 657. Leaflets 7-11, obovate, obtuse, very minutely mucronate. Legumes with their joints neither dilated nor bordered. (fig. 42.)

*Tufted* Horse-shoe-Vetch. Fl. April, Aug. Brit. Pl. pr. 3 *H. HELVETICA* (G. Don, in Loud. hort. brit. p. 308.) stems herbaceous, procumbent; peduncles longer than the leaves, bearing an umbel of flowers at the apex; legumes compressed, curved, smooth; leaflets 9-11, obovate, obtuse, mucronate. *u. H.* Native of Switzerland. *H. comosa*, Schleich. Legume broad, arched. An elegant plant, much larger in every part than the last species.

*Swiss* Horse-shoe-Vetch. Fl. May, Aug. Clt. 1819. Pl. pr.

4 *H. GLAUCA* (Ten. fl. neap. 2. p. 165. t. 69.) stems herbaceous, ascending; leaves glaucous; peduncles longer than the leaves, bearing an umbel of flowers at the apex; legumes arched, rather scabrous, constantly of 5 joints. *u. H.* Native of Naples, on the rocks of Magella. Calyx pubescent. Allied to *H. comosa*.

*Glaucous* Horse-shoe-Vetch. Fl. May, Jul. Clt. 1819. Pl. asc.

## § 2. Roots annual. Legumes with roundish recesses.

5 *H. SCABRA* (D. C. prod. 2. p. 312.) peduncles twice the length of the leaves, bearing an umbel of flowers at the apex; legumes arched, scabrous at the seeds, the rest clothed with a kind of lepidotod pubescence. *o. H.* Native of Spain, in the kingdom of Murcia, near the city. Style long, compressed, permanent at the top of the legumes.

*Scabrous-podded* Horse-shoe-Vetch. Pl. prostrate.

6 *H. BICONTORTA* (Lois. not. in ann. soc. Lin. par. vol. 4. 1827.) stem branched, spreading; leaflets linear; peduncles length of leaves, usually bearing 3 flowers at the apex; legumes scabrous, twisted into a double circle. *o. H.* Native of Montpellier.

*Twice-twisted-podded* Horse-shoe-Vetch. Pl. spreading.

7 *H. MULTISILIQUOSA* (Lin. spec. 1050.) peduncles a little shorter than the leaves, 2-4-flowered; legumes quite smooth, circularly incurved. *o. H.* Native of Spain, Italy, south of France, and Barbary, in exposed stony or sandy places. Mill. fig. 278. f. 2. *Ferrum equinum polyceratum*, Col. cephr. p. 300. with a figure. *F. multiflorum*, Moench. meth. 119. Plant smooth.

*Many-podded* Horse-shoe-Vetch. Fl. Ju. Aug. Clt. 1683. Pl. pr.

8 *H. MONOCARPA* (Bieb. fl. taur. suppl. p. 480.) flowers axillary, almost sessile, solitary; legumes quite glabrous. *o. H.* Native of Eastern Caucasus, on hills about Schamachi. *H. unisiliquosa*, Bieb. fl. taur. 2. p. 174. exclusive of the synonyms.

FIG. 42.

*One-fruited* Horse-shoe-Vetch. Fl. June, Aug. Clt. 1824. Pl. prostrate.

9 *H. UNISILIQUOSA* (Lin. spec. 1050.) flowers axillary, sessile, solitary; legumes a little incurved, hairy in the middle part of the joints. *o. H.* Native of the south of Europe, Barbary, and the Levant, in exposed stony places. Lam. ill. t. 630. f. 3. Mill. fig. 278. f. 1. *Ferrum equinum vulgare*, Col. cephr. p. 300. with a figure. *F. uniflorum*, Moench. meth. 119.

*One-podded* Horse-shoe-Vetch. Fl. June, July. Clt. 1570. Pl. prostrate.

10 *H. CILIATA* (D. C. prod. 2. p. 313.) peduncles rather shorter than the leaves; legumes arched, hispid at the seeds, and ciliated on one side. *o. H.* Native of Spain and Italy.

*Var. a*; peduncles 4-6-flowered. *o. H.* Native of Spain, near Aranjuez. *H. ciliata*, Willd. berl. mag. nat. ges. 1808. p. 173.

*Var. b*; peduncles 3-flowered. *o. H.* Native of Spain, in the provinces of Granada and Murcia. *H. annua*, Lag. nov. spec. 23. p. 299.

*Var. g*; peduncles 2-flowered. *o. H.* Native of Italy, about Naples, as well as of Sicily and Tauria. *H. dicarpa*, Bieb. suppl. 480.

*Ciliated-podded* Horse-shoe-Vetch. Fl. June, July. Clt. 1818. Pl. prostrate.

11 *H. BIFLORA* (Spreng. pug. 2. p. 73.) peduncles very short, 2-flowered; legumes minutely ciliated on both margins. *o. H.* Native country unknown. Flowers twin, axillary, almost sessile, but the peduncles becomes elongated after flowering. Cilix of legume very short.

*Two-flowered* Horse-shoe-Vetch. Fl. June, July. Clt. 1816. Pl. prostrate.

*Cult.* All the species of this genus are worthy of cultivation in every garden, on account of their neatness and beauty. The *H. Balearica* is the only species which requires protection in a greenhouse in winter. It thrives in a mixture of loam and peat, and cuttings of it strike root readily under a hand-glass. The perennial herbaceous kinds are well fitted for ornamenting rock-work or banks: they are propagated by dividing at the root or by seeds. The annual species are also well fitted for rock-work, where their seeds should be sown early in spring.

CXXXIX. SECURIGERA (from *securis*, a hatchet, and *gero*, to bear; in reference to the form of the pods). D. C. fl. fr. 4. p. 609. prod. 2. p. 313. Securidaca, Tourn. inst. t. 224. Lam. ill. t. 629. but not Lin.—Bonavaria, Scop. Neck. clem. no. 1320. Desv. journ. vol. 3. p. 60. t. 4. f. 7.—Securilla, Pers. ench. 2. p. 314.

LIN. SYST. *Diadelphia, Decandria*. Calyx short, bilabiate, lower lip 3-parted, upper one bidentate. Claws of petals rather longer than the calyx. Keel acute. Stamens diadelphous. Legume compressed, flat, with rather prominent sutures, the seeds separated by spongy substance, not articulated, linear, ending in a long beak at the apex. Seeds 8-10, compressed. Herb, with the habit of *Coronilla*.

1 *S. CORONILLA* (D. C. l. c.). *o. H.* Native of the south of Europe, from Spain to Tauria. *Coronilla securidaca*, Lin. spec. 1048. *Securidaca lutea*, Mill. dict. no. 1. fig. 232. *Securidaca legitima*, Gärtn. fruct. 2. t. 153. Flowers yellow, 3 or 4 in an umbel.

*Coronilla-like* Hatchet-Vetch. Fl. July, Aug. Cl. 1562. Pl. prostrate.

*Cult.* The seeds of this plant only require to be sown in the open ground in any kind of soil.

SUBTRIBE II. ECHEDISA'ÆÆ (plants agreeing with *Hedysarum* in important characters). D. C. prod. 2. p. 313. Flowers

disposed in racemes (f. 43. g. f. 44. c.). Legumes compressed (f. 43. i. f. 44. g.).

**CXL. DIPHACA** (from *dis*, twice, and *φακη*, *phake*, a lentil or pea; in reference to the pods being composed of 2 1-seeded joints). Lour. coch. p. 454. D. C. prod. 2. p. 313.

**LIN. SYST.** *Diadelphia*, *Decándria*. Calyx 5-cleft, permanent, propped by 2 lanceolate bracteas, the lowest lobe longest. Corolla papilionaceous. Keel of 2 distinct petals. Stamens joined into 2 5-anthered bundles. Carpels 2, 1-styled. Legume compressed, straight, articulated; joints striated, 1-seeded. This genus is allied to *Dalbergia* and *Æschinómene*, in the stamens being equally diadelphous, but the fruit is articulated as in *Hedysarum*, and the plant is therefore placed in the same tribe.

1 D. COCHINCHINENSIS (Lour. l. c.). 2. G. Native of Cochinchina, China, and the Moluccas, where it is cultivated in gardens. *Dalbergia diphaca*, Pers. ench. 2. p. 276.—Rumph. amb. 3. p. 200. t. 128. according to Loureiro. Leaves imparipinnate. Peduncles 2, axillary, 1-flowered. Flowers white.

*Cochin-china* Diphaca. Shrub 8 feet.

*Cult.* To be treated as other greenhouse plants.

**CXLI. PICTETIA** (in honour of Charles Pictet, a celebrated French physician, author of *Traite des Assolemens*, 1 vol. 8vo. Geneva, 1788.). D. C. in ann. sc. nat. 4. jan. 1825. p. 93. legum. mem. vii. prod. 2. p. 314.

**LIN. SYST.** *Diadelphia*, *Decándria*. Calyx furnished at the base with 2 caducous bracteoles, campanulate, 5-cleft, 2 superior lobes obtuse and shorter than the others, 3 inferior ones acuminate and somewhat spinose. Vexillum of corolla roundish, complicated. Keel obtuse, a little shorter than the wings. Stamens diadelphous. Style filiform, glabrous. Legume stipitate, compressed, few-seeded, sometimes continuous, having the seeds separated by a kind of spongy substance, sometimes articulated, the joints 1-seeded, but some of them are abortive, never striated nor warted. Seeds compressed, flat, ovate, rather truncate at the base. Cotyledons flat, green. Radicle lying above the commissure formed by the cotyledons.—Quite glabrous American shrubs, having the cauline stipulas usually spinose-cent, rarely unarmed. Leaves impari-pinnate, the leaflets exstipellate, having the middle nerve of each drawn out in a spine-like mucrone. Flowers axillary, disposed in loose racemes or solitary, yellow, the pedicels jointed at the apex, and bibracteolate; bracteoles caducous.

1 P. SQUAMATA (D. C. l. c. t. 47. f. 3.) leaves with 7-10 pairs of orbicular leaflets, each leaflet ending in a long spine-like mucrone, having the lateral veins hardly evident; stipulas spinose, erect; scales at the base of the branchlets, imbricated, and rather spinose; racemes loose, 3-7-flowered. 2. S. Native of the island of St. Thomas, by the sea-side. *Robinia squamata*, Vahl. symb. 3. p. 88. t. 69. *Robinia squamosa*, Poir. dict. 6. p. 224. *Caragana spinosa*, Rich. herb. Pedicels distant, elongated, nearly opposite. Flowers yellow. Legumes unknown.

*Scaly-branched* Pictetia. Fl. June, Jul. Clt. 1824. Sh. 6 ft.

2 P. ARISTATA (D. C. legum. mem. vii. t. 47. f. 5.) leaves with 7-10 pairs of obovate-orbicular, usually alternate leaflets, each leaflet ending in a long straight spine-like mucrone, having the lateral nerves prominent; stipulas spinose, spreading; racemes loose, 3-7-flowered. 2. S. Native of St. Domingo, Santa Cruz, and Krabben Island. *Æschinómene aristata*, Jacq. hort. schœnbr. t. 237. *Poirétia aristata*, Desv. journ. bot. 3. p. 122. Flowers yellow. Legume of 3-4 joints. Very like the preceding species.

*Arched-leafletted* Pictetia. Fl. June, July. Clt. 1816. Sh. 5 to 10 feet.

3 P. OBCORDATA (D. C. l. c. t. 47. f. 1. prod. 2. p. 314.)

leaves with 10-12 pairs of nearly opposite obcordate leaflets, each leaflet ending in a short, recurved, spine-like mucrone; stipulas ovate-lanceolate, unarmed. 2. S. Native of St. Domingo. Racemes few-flowered. Legumes oblong, compressed, and perhaps 1-celled and 1-seeded from abortion, each standing on a longish stipe. Flowers unknown, but most probably yellow.

*Obcordate-leafletted* Pictetia. Shrub 3 to 6 feet.

4 P. JUSSIEI (D. C. l. c.) leaves with 3-4 pairs of alternate or opposite, oblong leaflets, each leaflet ending in a straight spine-like mucrone, the odd one longest; stipulas spinose, erect, small. 2. S. Native country unknown. *Robinia aculeata*, Juss. herb. where a specimen of it is preserved without either flower or fruit.

*Jussieu's* Pictetia. Shrub 3 to 6 feet.

5 P. DESVAUXII (D. C. l. c. t. 47. f. 4.) leaves with 1-2 pairs of approximate oblong leaflets, which taper to both ends, and terminate in a straight spine-like mucrone; stipulas spinose, straight; pedicels axillary, 1-flowered; legume linear-oblong, obtuse, continuous. 2. S. Native of St. Domingo. *Robinia spinifolia*, Desv. journ. bot. 1814. 1. p. 78. Flowers small, yellow. Legume an inch long and about 3 lines broad, 5-6-seeded.

*Desvaux's* Pictetia. Shrub 3 to 6 feet.

6 P. TERNATA (D. C. l. c. t. 47. f. 2.) leaflets 3, approximate, cuneate-oblong, terminating in a short, straight, spine-like mucrone; stipulas spinose, straight; pedicels axillary, 1-flowered; legume torulose, linear-oblong, acute. 2. S. Native of St. Domingo. *Æschinómene ternata*, Spreng. syst. in herb. Balb. Flowers yellow.

*Ternate-leaved* Pictetia. Shrub 3 to 4 feet.

*Cult.* A mixture of loam, peat, and sand will suit the species of this genus, and young cuttings will root in sand under a hand-glass, in heat.

**CXLII. ORMOCARPUM** (from *ορμος*, *ormos*, a necklace, and *καρπος*, *carpos*, a fruit; in allusion to the shape of the pods, which are jointed, and may be likened to a necklace). Beauv. fl. d'ow. 1. p. 95. Desv. journ. bot. 3. p. 122. t. 5. f. 16. D. C. prod. 2. p. 314.

**LIN. SYST.** *Diadelphia*, *Decándria*. Calyx furnished with 2 permanent bracteoles at the base, 5-cleft, somewhat bilabiate, with all the lobes acute. Corolla papilionaceous, with a broad entire vexillum, and an obtuse 2-edged keel. Stamens diadelphous. Legume stipitate, many-jointed, with the joints attenuated at both ends, usually striated and warted lengthwise, 1-seeded, distinctly separating.—Smooth shrubs, with simple leaves, having the petiole jointed at the apex, or impari-pinnate, or abruptly-pinnate leaves. Racemes short, axillary.

\* *Leaves simple, with the petiole jointed at the apex.*

1 O. VERRUCOSUM (Beauv. l. c. t. 58.) leaves simple, ovate-lanceolate, acuminate; joints of legume striated and warted. 2. S. Native of western Africa, in the kingdom of Waree. *Mullera verrucosa*, Pers. ench. 2. p. 311. Leaves 3 inches long, but hardly an inch and a half broad. Flowers red.

*Warted-podded* Ormocarpum. Shrub 3 to 6 feet.

2 O. ? SULCATUM (Beauv. l. c. in a note) leaves simple, small; joints of legume furrowed, but not warted. 2. S. Native of St. Domingo. Perhaps *Pictetia Desvauxii*. Flowers red.

*Furrowed-podded* Ormocarpum. Shrub 3 to 4 feet.

\* \* *Leaves impari-pinnate.*

3 O. SENNOIDES (D. C. prod. 2, p. 315.) leaves impari-pinnate, with 6-7 pairs of obovate, retuse mucronulate leaflets; joints of legume striated and beset with prickly tubercles. 2. S.

Native of the East Indies. *Hedysarum sennoïdes*, Willd. spec. 3. p. 1207. *O. cassioides*, Desv. l. c. Flowers red?

*Senna-like Ormocarpum*. Fl. July, Aug. Clt. 1816. Sh. 3 to 6 feet.

4 *O. coronilloïdes*; shrubby, erect, branched; leaves impari-pinnate; leaflets oblong, emarginate, glaucous; flowers lateral, pedunculate; legumes with 6-7 furrowed, glabrous joints, which taper at both ends. *h. S.* Native of the island of St. Thomas, in Guinea, on a little island in Man-of-War Bay.

*Coronilla-like Ormocarpum*. Shrub 6 feet.

\*\*\* *Leaves abruptly pinnate.*

5 *O. elegans*; shrubby, smooth except the young leaves, which are silky; leaves abruptly pinnate, with 8-10 pairs of ovate-lanceolate, mucronate leaflets; racemes axillary, not so long as the leaves; calyx smooth, slightly 5-lobed; vexillum large. *h. S.* Native of Mexico. Legumes stipitate, 3-jointed; joints tapering to both ends. Calyx permanent. Flowers purple.

*Elegant Ormocarpum*. Shrub 3 to 6 feet.

6 *O. coccinea*; shrub rather villous, with 10-16 pairs of obovate-lanceolate, obtuse, mucronate leaflets; racemes shorter than the leaves; calyx campanulate, almost truncate. *h. S.* Native of Mexico. Flowers apparently scarlet.

*Scarlet-flowered Ormocarpum*. Shrub 3 to 4 feet.

*Cult.* See *Pictëtia*, p. 278. for culture and propagation.

CXLIII. AMICIA (in honour of Joseph Baptiot Amici, a celebrated French physician). H. B. et Kunth, nov. gen. amer. 6. p. 511. t. 600. D. C. prod. 2. p. 315.—*Zygomeris*, Moc. et Sesse, fl. mex. icon. ined.

LIN. SYST. *Monadelphina, Decándria*. Calyx campanulate, 5-cleft, 2 upper lobes roundish, large, 2 lateral ones minute, the lowest one oblong, keeled, and concave. Corolla with an orbicular vexillum, and with the wings applied to the keel. Stamens 10, monadelphous, with the tube or sheath cleft in front. Legume linear, compressed, many-jointed, with the joints truncate at both ends.—Climbing shrubs. Branches and petioles pubescent. Leaves abruptly pinnate, with 2 pairs of leaflets, full of pellucid dots. Peduncles axillary, 5-6-flowered. Bractæas 2, orbicular, opposite, at the origin of the pedicels. Flowers yellow. This genus is nearly allied to *Poirëtia*, but is easily distinguished by the form of the calyx.

1 *A. glandulosa* (H. B. et Kunth, l. c.) leaflets obovate, somewhat emarginate; vexillum obcordate; legume with 5 joints. *h. S.* Native of New Granada, near Loxa.

*Glandular Amicia*. Shrub cl.

2 *A. zygomeris* (D. C. prod. 2. p. 315.) leaflets cuneate-obcordate, mucronate; vexillum broadly obovate, mucronate; legumes having 2 joints. *h. S.* Native of Mexico. *Zygomeris flava*, Moc. et Sesse, fl. mex. icon. ined. According to the figure there are 2 of the stamens longer than the rest.

*Two-jointed-podded Amicia*. Clt. 1826. Shrub cl.

*Cult.* See *Pictëtia*, p. 278. for culture and propagation.

CXLIV. POIRETIA (in honour of J. L. M. Poirët, a French botanist and traveller in Barbary, editor of the supplement to Lamarck's Dictionnaire de Botanique, 4 vols. 4to.). Vent. choix. t. 42. but not of Gmel. nor Smith, nor Cav. D. C. prod. 2. p. 315.—*Turpinia*, Pers. ench. 2. p. 314. but not of Bonpl. nor Rafin.

LIN. SYST. *Monadelphina, Decándria*. Calyx campanulate, bilabiate, upper lip somewhat bidentate, lower one tridentate. Corolla with a semi-orbicular, emarginate vexillum, thrown back from the keel, with reflexed sides; wings spreading. Stamens 8-10, monadelphous, with the tube or sheath cleft in front. Stigma capitate. Legume with 3-4, compressed, 1-seeded,

straight, truncate joints, separating at maturity.—Climbing shrubs, having the habit of *Glycine*, with abruptly pinnate leaves, bearing 2 pairs of leaflets. Stipulas distinct from the petiole. Racemes short, axillary. Flowers covered with glandular dots.

1 *P. scandens* (Vent. l. c.) stems climbing, glabrous; leaves with 2 pairs of obovate retuse leaflets, full of pellucid dots; racemes few-flowered, shorter than the petioles. *h. S.* Native of St. Domingo, and near Caraccas, among bushes. H. B. et Kunth, nov. gen. amer. 6. p. 510. *Glycine*, Lam. ill. t. 609. f. 2. *Turpinia punctata*, Pers. l. c. *P. punctata*, Desv. journ. bot. 3. p. 122. t. 5. f. 17. *Glycine punctata*, Willd. spec. 3. p. 1066.

*Climbing Poirëtia*. Clt. 1823. Shrub cl.

2 *P. psoraleoides* (D. C. prod. 2. p. 315.) stem erect, angular; leaves with 4 obovate leaflets, full of pellucid dots; flowers almost terminal, glomerate. *h. S.* Native of Monte Video, at the bottom of mountains. *Psoralea tetraphylla*, Poir. suppl. 4. p. 589. The leaves are sometimes composed of 3 or 5 leaflets from some cause or other.

*Psoralea-like Poirëtia*. Shrub 2 to 3 feet.

*Cult.* See *Pictëtia*, p. 278. for culture and propagation.

CXLV. PLANARIUM (from *planarius*, plain; in reference to the broad flat legumes). Desv. obs. legum. in Schlecht. Linnaea. 2. p. 511.

LIN. SYST. *Diadelphina, Decándria*. Calyx campanulate. Stamens diadelphous. Legume on a short stipe, compressed, 8-jointed, having a prominent longitudinal nerve in the middle of the valves.—A climbing shrub, with impari-pinnate leaves.

1 *P. latisiliquum* (Desv. l. c.). *h. S.* Native of Peru. *Poirëtia latisiliquosa*, Desv. journ. bot. and D. C. prod. 2. p. 316. *Hedysarum latisiliquosum*, Juss. herb. Poir. dict. 6. p. 432. Stems pubescent. Leaves with 5 oval, acute leaflets. Racemes axillary, few-flowered, longer than the petioles.

*Broad-podded Planarium*. Shrub cl.

*Cult.* See *Pictëtia*, p. 278. for culture and propagation.

CXLVI. MYRIADENUS (from *μυριος*, *myrios*, innumerable, and *αδην*, *aden*, a gland; in reference to the leaves being beset with numerous glands). Desv. journ. bot. 3. p. 121. t. 4. f. 11. D. C. prod. 2. p. 316. but not of Cass.

LIN. SYST. *Diadelphina, Decándria*? Calyx tubular, 5-toothed, and appearing as if hidden within 2 opposite bractæas. Corolla and stamens unknown. Legume constantly composed of numerous, terete, somewhat obconical, 1-seeded, indehiscent joints.—An erect smooth herb, having 4 dotted, obovate, emarginate leaflets at the top of each petiole, with very short, axillary, solitary, 1-flowered pedicels, and yellow flowers. This genus is not sufficiently known, but it appears to be nearest allied to *Poirëtia*, in the leaves being of 4 glandular leaflets.

1 *M. tetraphyllus* (D. C. prod. 2. p. 316.). *h. S.* Native of Jamaica.—Sloan. jam. 1. p. 186. t. 116. f. 3. *Ornithopus tetraphyllus*, Lin. amœn. 5. p. 402. Lunan. hort. jam. 1. p. 94. Leaflets cuneate, obtuse, or emarginate, glabrous, dotted beneath, all rising from the apex of the petiole.

*Four-leafletted Myriadenus*. Fl. Ju. Jul. Clt. 1818. Pl. 1 ft.

*Cult.* The seeds of this plant require to be sown in pots and placed on a hot-bed in spring, and when the plants are strong enough they may be removed to the stove or greenhouse, or they may remain in the frame, where they will ripen seeds.

CXLVII. ZORNIA (in honour of John Zorn, once an apothecary at Kempten in Bavaria, author of Icones plantarum medicinalium, 8vo. Nuremberg, 1779 and 1784). Gmel. syst. 1076. Michx. fl. bor. amer. 2. p. 76. Desv. journ. bot. 3. p. 124. t. 5. f. 25. D. C. prod. 2. p. 316.—*Anonyma*, Walt. car. 181.

**LIN. SYST.** *Monadelphica*, *Decandria*. Calyx campanulate, bilabiate, upper lip emarginate, lower one 3-cleft. Corolla inserted in the bottom of the tube of the calyx. Vexillum having revolute sides. Keel bifidly lunulate. Stamens monadelphous. Anthers alternately gibbose and ovate. Legume compressed, 3-5-jointed; joints nearly orbicular, usually hispid.—Glabrous herbs, full of pellucid dots. Stipulas sagittate, lower ones lanceolate, upper ones the largest, and forming girding bracteas. Leaflets 2 or 4, rising from the top of the petiole. Flowers yellow, surrounded by the large stipulas.

\* *Leaves having 2 leaflets rising from the top of each petiole.*

1 *Z. ANGUSTIFOLIA* (Smith, in Rees' cycl. no. 1.) stems diffuse; leaflets oblong-lanceolate; bracteas ovate-sagittate, 5-nerved, ciliated, shorter than the legumes, full of glandular dots; prickles of legume covered with retrograde stiff hairs. ☉. S. Native of the Mauritius and the East Indies, in sandy places.—Rheed. mal. 9. t. 82. *Z. diphylloides*, Pers. 2. p. 318. *Hedysarum diphylloides*, var. *a*, Lin. syst. 560. exclusive of the synonyme of Sloane. In some specimens of this plant the legumes are prickly their whole length, in others only at their apex.

*Narrow-leafletted Zornia*. Fl. July, Aug. Clt. 1733. Pl.  $\frac{1}{2}$  to 1 foot.

2 *Z. GLOCHIDATA* (Reichb. in Sieb. pl. exsicc. seneg. no. 40.) stems erect, branched; leaflets linear; bracteas ovate-sagittate, 5-nerved, dotless, and ciliated with long hairs, a little shorter than the legumes; legume with 3-4 joints, beset with glochidate prickles, which are covered with retrograde stiff hairs. ☉. S. Native of Senegal.

*Glochidate-podded Zornia*. Fl. July, Aug. Clt. 1823. Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

3 *Z. BIARTICULATA*; stem branched; leaflets lanceolate, acute; spikes few-flowered; stipulas ovate, membranous, acute, 4-5-nerved, ciliated; legumes 2-jointed, echinate; prickles hooked at apex. ☉. S. Native of the Gold Coast, in sandy places.

*Two-jointed-podded Zornia*. Pl.  $\frac{1}{2}$  foot.

4 *Z. GRACILIS* (D. C. prod. 2. p. 316.) stems erect; leaflets oblong-lanceolate; bracteas linear-sagittate, acuminate at both ends, 5-nerved, a little ciliated, full of glandular dots; prickles of legume beset with stiff retrograde bristles. ☉. S. Native of Guiana.

*Slender Zornia*. Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

5 *Z. RETICULATA* (Smith, in Rees' cycl. no. 2.) stems erect; leaflets lanceolate, glabrous, lower ones elliptic; bracteas ovate, acute, ciliated, glandless, 5-nerved, reticulated, length of legumes; legumes pubescent, as well as furnished with a few downy prickles. ☉. S. Native of Jamaica, Cayenne, Porto Rico, and Santa Cruz. *Hedysarum diphylloides*  $\beta$ , Lin. Swartz. and Willd. *Z. diphylloides*  $\beta$ , ciliatum, Pers.

*Var.  $\beta$ , puberula* (D. C. prod. 2. p. 316.) branches pubescent at the apex; bracteas ovate-lanceolate, acuminate, longer than the legumes. ☉. S. Native of Cayenne. Perhaps a proper species. Perhaps only a variety of *Z. pubescens*.

*Reticulated-bracteate Zornia*. Fl. Jul. Aug. Clt. 1800. Pl. 1 ft.

6 *Z. THYMIFOLIA* (H. B. et Kunth, nov. gen. amer. 6. p. 514.) stems diffuse, and are as well as the petioles pubescent; leaflets oblong, glabrous above, but puberulous beneath, having the margins dotted as well as the calyxes; bracteas ovate, 5-nerved, puberulous and glandular beneath; legumes rather pilose, the joints reticulated with veins.  $\frac{1}{2}$ ?  $\frac{1}{4}$ ? S. Native of Mexico, near Santa Rosa.

*Var.  $\beta$ , clandestina*; plant larger and more branched; leaves dotless; bracteas a little dotted, glabrous, ciliated. ☉. S. Native of Mexico, near Jalapa. *Z. thymifolia*, Schlecht. et Cham. in Linnæa. 5. p. 582. Perhaps a proper species.

*Thyme-leaved Zornia*. Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

7 *Z. LAEVIS* (Schlecht. et Cham. in Linnæa. 5. p. 582.) plant smooth; bracteas somewhat 7-nerved, sparingly dotted, ciliated; legumes smooth, but rather puberulous between the joints; leaflets variable, ovate, or ovate-lanceolate, acute. ☉. S. Native of Mexico, near Jalapa.

*Smooth Zornia*. Pl.  $\frac{1}{2}$  foot.

8 *Z. PUBESCENS* (H. B. et Kunth, nov. gen. amer. 6. p. 515.) stem erect, dichotomously branched, glabrous; branches and petioles clothed with villous pubescence; leaflets oblong-lanceolate, pubescent on both surfaces, and are glandless as well as the calyxes; bracteas ovate, acute, ciliated, dotted; legumes hispid and muricated, having 5-6 joints. ☉. S. Native of South America, on the banks of the river Magdalena, near Honda.

*Pubescent Zornia*. Pl. 1 to 2 feet.

9 *Z. LATIFOLIA* (D. C. prod. 2. p. 317.) plant ascending, clothed in every part with villi; bracteas ovate, acute, many-nerved. ☉. H. Native of Brazil. Leaflets ovate, 12-18 lines long and 8-9 broad, longer than the petioles. Flowers large. Legume unknown.

*Broad-leafletted Zornia*. Pl.  $\frac{1}{2}$  to  $\frac{3}{4}$  foot.

10 *Z. MARANHAMENSIS*; stems erect, branched, pubescent at the apex; leaflets lanceolate, acute; stipulas subulate; bracteas lanceolate, 3-nerved, acute, villous; legume with 3-4 hispid joints. ☉. S. Native of Maranham.

*Maranham Zornia*. Pl.  $\frac{1}{2}$  foot.

11 *Z. ZEYLONENSIS* (Pers. ench. 2. p. 318.) leaflets ovate; bracteas ovate, ciliated; legumes prickly; stem erect. ☉. S. Native of Ceylon.—Burm. zeyl. t. 50. f. 1. Pluk. alm. t. 102. f. 1. *Hedysarum conjugatum*, Willd. spec. 3. p. 1178. *H. diphylloides*, var. *Lin.* *Z. conjugata*, Smith, in Rees' cycl. no. 3.

*Ceylon Zornia*. Fl. July, Aug. Clt. 1825. Pl.  $\frac{1}{2}$  foot.

12 *Z. DICTYOCARPA* (D. C. prod. 2. p. 317.) leaflets lanceolate; bracteas ovate-sagittate, acuminate, shorter than the legumes, a little ciliated and rather glandular, hardly 5-nerved; joints of legume unarmed, glabrous, reticulated. ☉. H. Native of New Holland. Sieb. pl. exsicc. nov. holl. no. 610.

*Net-fruited Zornia*. Fl. July, Aug. Clt. 1820. Pl.  $\frac{1}{2}$  foot.

\* \* *Leaves bearing 4 leaflets at the apex of each petiole.*

13 *Z. TETRAPHYLLA* (Michx. fl. bor. amer. 2. p. 76. t. 41.) leaflets 4, digitate, oblong, acuminate; bracteas glabrous, length of legumes, 5-nerved; prickles of legume rather scabrous.  $\frac{1}{4}$ . F. Native of Carolina, in sandy fields. *Anonymos bracteata*, Walt. car. 181. *Z. bracteata*, Gmel. syst. 1096. *Hedysarum tetraphyllum*, Lam. diet. 2. p. 405. but not of Thunb.

*Four-leafletted Zornia*. Fl. June, July. Clt. 1824. Pl. 1 ft.

14 *Z. CAPEENSIS* (Pers. ench. 2. p. 317.) leaflets 3-4, oblong, rather acute, dotted beneath; bracteas semisagittate at the base, but ovate at the top; legumes 4-jointed, reticulately scabrous. ☉. G. Native of the Cape of Good Hope, in the interior of the country. *Hedysarum tetraphyllum*, Thunb. nov. act. ups. 6. p. 41. t. 3. fl. cap. 595. *Z. heterophylla*, Smith, in Rees' cycl. no. 5.

*Cape Zornia*. Fl. July, Aug. Clt. 1824. Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

*Cult.* See *Myriadenus*, p. 279, for culture and propagation.

**CXLVIII. STYLOSANTHES** (from *στυλος*, *stylos*, a style, *anthos*, *anthos*, a flower; in allusion to the flower having a long style). Swartz, prod. 108. act. holm. 1789. p. 296. fl. ind. occ. 1280. t. 25. Lam. ill. t. 627. D. C. prod. 2. p. 317.

**LIN. SYST.** *Monadelphica*, *Decandria*. Tube of calyx very long and slender, with a 5-parted limb; the lobes unequal. Corolla inserted in the throat of the tube of the calyx. Keel minute, bifid at the apex. Stamens monadelphous, having the tube or sheath cleft in front. Ovary sessile. Style filiform,

very long and straight, crowned by a capitate, hispid stigma. Legume having 2 1-seeded joints, the upper joint acuminate and hooked at the apex from the permanent base of the style.—Small herbs or subshrubs, with branching stems, trifoliate leaves, having the middle leaflet almost sessile. Stipulas adnate to the petioles. Spikes of flowers terminal, dense, imbricated by the stipulas and bracteas. Flowers small, yellow.

1 *S. PROCUMBENS* (Swartz, in act. holm. l. c. t. 11. f. 1. fl. ind. occ. 3. p. 1282.) stem suffruticose, procumbent, clothed with adpressed pubescence at the apex; leaflets oblong, acute, glabrous, lined; spikes many-flowered.  $\frac{1}{2}$ . S. Native of Jamaica, St. Domingo, Porto Rico, and Guadaloupe, in waste grassy fields.—Sloan. hist. 1. t. 119. f. 2. *Hedysarum hamatum*  $\alpha$ , Lin. spec. 1056. *Ononis cerifolia*, Reichb. in Sieb. pl. exsic. seneg. no. 37.

*Procumbent Stylosanthes*. Fl. June, Aug. Clt. 1821. Sh. pr.

2 *S. ERECTA* (Beauv. fl. d'ow. 2. p. 28. t. 77.) stem erect, glabrous; leaflets ovate-oblong, glabrous, as well as the stipulas; spikes many-flowered, elongated.  $\odot$ . S. Native of tropical Africa, on the western coast.

*Erect Stylosanthes*. Fl. July, Aug. Clt. 1825. Shrub 1 ft.

3 *S. VISCOSA* (Swartz, in act. holm. l. c. t. 9. f. 2. fl. ind. occ. 3. p. 1285.) shrubby, erect; branches clothed with clammy hairs; leaflets elliptic, mucronate, ciliate, serrulated, hairy; spikes few-flowered.  $\frac{1}{2}$ . S. Native of the south of Jamaica and Mexico, in sandy mountainous places.—Sloan. hist. 1. t. 119. f. 1. *Hedysarum hamatum*  $\beta$ , Lin. spec. 1056.

*Clammy Stylosanthes*. Fl. July, Aug. Clt. 1818. Sh. 1 ft.

4 *S. MUCRONATA* (Willd. spec. 3. p. 1166.) stem suffruticose; branches pubescently hairy; leaflets oblong-ovate, pubescent beneath, ciliate serrulated; spikes few-flowered; bracteas ciliated.  $\frac{1}{2}$ . S. Native of Ceylon and Tranquebar, in sandy places.—Burm. zeyl. t. 106. f. 2. *Hedysarum hamatum*, Burm. ind. 167. *Arachis fruticosa*, Retz. obs. 5. p. 26., but the stems are said to be erect, but in the specimens which have been examined they appear to be diffuse, but according to the description of Burmann, they are procumbent.

*Mucronate Stylosanthes*. Fl. July, Aug. Clt. 1817. Pl. diff.

5 *S. RIGIDA* (Spreng. syst. 3. p. 310.) stem shrubby; branches straight; leaflets almost sessile, oblong, mucronate, coriaceous, shining above, rather tomentose and reticulately wrinkled beneath; spikes short, few-flowered; bracteas ovate, minute.  $\frac{1}{2}$ . S. Native of Brazil.

*Stiff Stylosanthes*. Shrub 1 to 2 feet.

6 *S. HUMILIS* (H. B. et Kunth, nov. gen. amer. 6. p. 506. t. 594.) stems tufted and somewhat dichotomously branched, and marked with a hairy line; leaflets oblong, and are as well as the calyxes ciliated; stipulas hispid, falcate, subulate at the apex; flowers axillary, sessile; legumes ending in a hooked awn, reticulated, hispid.  $\frac{1}{2}$ . S. Native of South America, on the Orinoca, near Carichana, in very warm places.

*Humble Stylosanthes*. Shrub procumbent.

7 *S. GLUTINOSA* (H. B. et Kunth, l. c.) plant procumbent and clothed with clammy hairs; leaflets spatulate or obovate-oblong; flowers axillary, solitary, sessile; stipulas ovate-lanceolate, 4-nerved.  $\frac{1}{2}$ . S. Native of Mexico, near Acapulco, in sandy places. Flowers red.

*Glutinous Stylosanthes*. Pl. procumbent.

8 *S. TENUIFOLIA*; stem erect, branched; leaflets linear, acute, stiff; flowers numerous, disposed in terminal spikes.  $\odot$ . S. Native of Maranhão.

*Fine-leaved Stylosanthes*. Pl. 1 foot.

9 *S. ELATIOR* (Swartz, in act. holm. l. c. t. 11. f. 2.) stem herbaceous, erect, with one side pubescent only; leaflets lanceolate, glabrous; spikes few-flowered; bracteas lanceolate, ciliated.  $\frac{1}{2}$ . F. Native of North America, from Pennsylvania

to Carolina, and of Guadaloupe.—Pluk. alm. t. 447. f. 7. *Trifolium biflorum*, Lin. spec. 1088. *Arachis aprica*, Walt. carol. 182. S. hispida, Michx. but not of Rich.

*Taller Stylosanthes*. Fl. July, Aug. Clt. 1816. Pl. 1 to 2 ft.

10 *S. GRACILIS* (H. B. et Kunth, l. c. p. 596.) stem erect, marked with a pubescent line, rather hispid at the apex; leaflets linear, puberulous; young stipulas and bracteas hispid; flowers disposed in terminal glomerate heads, which are involucreted with bracteas; legumes glabrous, ending in a hooked mucrone, and having a few glandular tubercles at the apex.  $\odot$ . H. Native of Mount Turimiriqui, in the province of New Andalusia.

*Slender Stylosanthes*. Pl. 3 to 4 feet.

11 *S. HISPIDA* (Rich. in act. soc. h. n. par. 1792. p. 112.) stems herbaceous, glabrous, diffuse; leaflets lanceolate, mucronate, hispid; stipulas and bracteas ciliated, hispid; spikes many-flowered.  $\frac{1}{2}$ . S. Native of Cayenne.

*Hispid Stylosanthes*. Pl. diffuse.

12 *S. GUINEENSIS*; plant suffruticose, much branched, ascending; leaflets small, oblong-lanceolate, mucronate; stipulas sheath-formed, mucronate; pedicels short, 1-flowered, axillary.  $\frac{1}{2}$ . S. Native of Cape Coast.

*Guinea Stylosanthes*. Shrub 1 foot.

13 *S. GUIANEENSIS* (Swartz, in act. holm. l. c.) stem herbaceous, erect, hairy; leaflets lanceolate, pubescent, longer than the petioles; stipulas and bracteas hispid; spikes many-flowered.  $\odot$ . S. Native of French Guiana, in meadows, and near Mariquito, in New Granada. H. B. et Kunth, nov. gen. amer. 6. p. 508. *Trifolium Guianense*, Aubl. guian. 2. p. 776. t. 309.

*Guiana Stylosanthes*. Fl. July, Aug. Clt. 1820. Pl. 3 ft.

*Cult.* This genus contains plants of no beauty, and are therefore not worth cultivating, unless in botanical gardens. The annual species should be treated like the species of *Zornia*. The shrubby and perennial herbaceous kinds like other stove plants. They are all most easily increased by seeds.

CXLIX. ADESMIA (from  $\alpha$ , priv. and  $\delta\epsilon\sigma\mu\omicron\varsigma$ , *desmos*, a bond; in reference to the stamens being free). D. C. ann. se. nat. 4. p. 94. jan. 1825. legum. mem. vii. prod. 2. p. 318.

LIN. SYST. *Decandria, Monogynia*. Calyx 5-cleft, with the segments acute and nearly equal. Corolla papilionaceous. Vexillum complicated above the rest of the petals when young. Keel curved and truncate at the apex. Stamens distinct, approximate. Legume compressed, transversely many-jointed, having the upper suture straight and thickish, but the lower suture is sinuately lobed; joints 1-seeded, nearly orbicular, at length separating from each other. Seeds compressed, reniformly orbicular.—South American herbs, with lanceolate stipulas, abruptly pinnate leaves, ending in a bristle, axillary, 1-flowered pedicels, or the flowers are disposed in something like racemes at the tops of the branches, in consequence of the upper leaves being abortive. Dr. Hooker's arrangement of the species of this genus is here adopted.

SECT. I. A'SSUE. Annual herbs, having the lower flowers axillary, solitary, and pedicellate, but the upper ones form a panicle at the tops of the branches, in consequence of the upper leaves being abortive. Flowers yellow. The plants contained in this section have the habit of *Smithia*.

1 *A. MURICATA* (D. C. in ann. se. nat. 4. p. 94. jan. 1825.) stem decumbent, scabrous from glands; leaves with 5-7 pairs of obovate, emarginate leaflets, having scabrous margins; pedicels axillary, and also disposed in terminal racemes; legumes with 6-8 muricated joints.  $\odot$ . H. Native of Patagonia. *Hedysarum muricatum*, Jacq. icon. rar. t. 568. coll. 5. p. 145. *Æschinómene Patagónica*, Hortul. Patagónium *hedysaroides*, Schrank. in munch. denschr. 1808. p. 91. *Hedysarum pimpinellæfolium*, Poir. dict. 6. p. 447.

• O o

*Muricated-podded Adesmia.* Fl. June, July. Clt. 1793. Pl. decumbent.

2 *A. SMITHIÆ* (D. C. l. c.) stems decumbent, pubescent; leaves with 5 pairs of cuneate, emarginate, pubescent leaflets; pedicels axillary, 1-flowered, shorter than the leaves; joints of legume 4-8, pilose. ☉. S. Native of South America. Like *A. muricata*, but the down on the stems is soft, not glandular, and clammy, and the pedicels are all axillary. Habit of *Smithia*.

*Smith's Adesmia.* Pl. decumbent.

3 *A. HISPIDULA* (D. C. l. c. t. 48.) stems diffuse, puberulous, and with the petioles and peduncles scabrous from a few retrograde spines; leaves with 4-6 pairs of oblong, obtuse leaflets, which are a little toothed at the apex and pilose on the margins; pedicels axillary, 1-flowered; joints of legume 4-8, furnished in the centre with feathery bristles. ☉. S. Native of Peru. *Æschinómene hispidula*, Lag. nov. gen. et spec. p. 22. no. 297. *Hedýsarum pëndulum*, var.  $\beta$ , Poir. dict. 6. p. 449. ex Desv. *Hedýsarum uniflorum*, Donb. herb.

*Hispid Adesmia.* Pl. diffuse.

4 *A. TENÉLLA* (Hook. in Beech. voy. p. 19.) plant pubescently-hairy, glandless; stems procumbent, simple; leaves with 3-4 pairs of obovate, obtuse, or retuse leaflets, and sometimes furnished with a terminal one; pedicels axillary, 1-flowered, lower ones equal in length to the leaves; calycine segments ovate-lanceolate; legume with 2-3 muricated joints, equal in length to the calyx. ☉. H. Native of Chili, on hills near Valparaiso.

*Tender Adesmia.* Pl. procumbent.

5 *A. ANGUSTIFOLIA* (Hook. in Beech. voy. p. 19.) plant pubescently hairy, glandless; stems procumbent; leaves with 4-5 pairs of remote, linear, bluntish leaflets; pedicels 1-flowered, lower ones shorter than the leaves; calycine segments lanceolate; legume 5-6-jointed, beset with a few plumose stiff bristles, twice the length of the calyx. ☉. H. Native about Valparaiso.

*Narrow-leafletted Adesmia.* Pl. procumbent.

SECT. II. PERÉNNES. Perennial herbs, with very long, terminal leafless racemes, and panicles. Flowers yellow. Plants with the habit of *Onobrychis*.

6 *A. DENTÁTA* (D. C. in ann. sc. nat. 4. p. 91. jan. 1825. legum. mem. t. 49.) stem erect, beset with glandular pubescence; leaves with 4-5 pairs of obovate, truncate leaflets, which are deeply serrated at the apex, when young rather villous; joints of legume 4-8, muricated. ♀. S. Native of South America. *Æschinómene dentata*, Lag. nov. gen. et spec. p. 22. no. 296.

*Toothed-leafletted Adesmia.* Pl. 1 to 2 feet.

7 *A. BÍCOLOR* (D. C. l. c.) stems prostrate; leaves with 9-12 pairs of lanceolate, acute, entire, pubescent leaflets; stipulas conforming to the leaves; racemes very long, opposite the leaves; joints of legume 6-8, rounded in front, and clothed with very short pubescence. ♀. S. Native of Monte Video, on rocks by the sea-side and in the sand. *Hedýsarum bicolorum*, Poir. dict. 6. p. 448. Pedicels 6-8 lines long. Flowers rather large, red on the outside but yellow on the inside.

*Two-coloured-flowered Adesmia.* Pl. prostrate.

8 *A. PÉNDULA* (D. C. l. c.) stems diffuse, hardly pubescent; leaves with 7-9 pairs of oval-oblong, entire, pubescent leaflets; racemes elongated; lower flowers distant; legumes pendulous, with 7-8 rather hispid joints. ♀. S. Native of Monte Video and Buenos Ayres. *Hedýsarum pëndulum*, Poir. dict. 6. p. 449. var.  $\alpha$ . Flowers yellow, but reddish on the outside.

*Pendulous-podded Adesmia.* Fl. June, July. Clt. 1825. Pl. diffuse.

9 *A. PUNCTÁTA* (D. C. l. c.) stems procumbent, beset with glandular pili; leaves with 9-12 pairs of linear, obtuse, entire,

rather mucronate, pubescent, ciliated leaflets; racemes spicate, crowded with flowers; joints of legume 4-8, oblong, hairy, and dotted with black. ♀. S. Native of Monte Video and Buenos Ayres. *Hedýsarum punctatum*, Poir. dict. 6. p. 447. Calycine segments linear-subulate. Flowers apparently purplish on the outside.

*Dotted-podded Adesmia.* Pl. procumbent.

10 *A. PAPPÒSA* (D. C. l. c. with a figure) stem ascending, leafy and villous at the base; leaves with 8-10 pairs of obovate, retuse, mucronate, entire, rather pilose leaflets, when young pubescent beneath; racemes terminal, compound, very long, glabrous, pedunculate, many-flowered; calyx glandless; base of vexillum with a tuft of hairs; legume with 2 joints, beset with soft plumose bristles. ♀. G. Native of Chili. *Æschinómene papposa*, Lag. nov. gen. et spec. p. 23. no. 298. *Hedýsarum papposum*, Lher. ined. Flowers small, with a reflexed vexillum. Stamens probably only 5. Habit almost of *Oxytropis deflexa*.

*Downy-bristled Adesmia.* Fl. Ju. Jul. Clt. 1823. Pl. asc.

11 *A. LONGISÉTA* (D. C. l. c.) plant decumbent, villous; leaves with 6-7 pairs of obovate, mucronulate leaflets, which are villous on both surfaces; racemes almost terminal; flowers distant, on long pedicels; calyces glandular; legumes 2-jointed, beset with long, plumose stiff bristles. ♀. S. Native of South America. Herb almost with the habit of *Anthyllis montana*, the flowers of *Ononis*, the legumes of *Onobrychis*, and the stamens of *Sophora*.

*Long-bristled-podded Adesmia.* Pl. decumbent.

12 *A. CONFÉRTA* (Hook. in Beech. voy. p. 20.) plant ascending, pubescent; leaves with 6 pairs of obovate-oblong, retuse, mucronate leaflets; racemes terminal, compound, beset with black glands, many-flowered; fructiferous pedicels deflexed; calycine segments ovate; legume 3-4-jointed, muricated, and glandular. ♀. G. Native of Chili.

*Crowded-flowered Adesmia.* Pl. ascending.

13 *A. FRUTICULÒSA*; stem decumbent, pilose, as well as the petioles; leaves with numerous pairs of small, lanceolate, mucronate leaflets; peduncles few-flowered, shorter than the leaves; legumes 3-4-jointed, hairy, and muricated. ♀. S. Native of Mexico. *Æschinómene fruticulosa*, N. E. herb. Lamb.

*Fruticulose Adesmia.* Pl. decumbent.

14 *A. MIMOSOIDES*; plant procumbent; branches and petioles villously pubescent; leaves with numerous, linear, alternate, sessile, obtuse, mucronate leaflets, which are oblique at the base; pedicels short, 1-flowered. ♀. S. Native of Mexico. *Æschinómene mimosoides*, N. E. in herb. Lamb.

*Mimosa-like Adesmia.* Pl. procumbent.

SECT. III. SPINÒSÆ. Stems shrubby, spinose. There are numerous unpublished species belonging to this section in Dr. Gillies's herbarium.

15 *A. MICROPHYLLA* (Hook. in Beech. voy. p. 19. t. 9. Lodd. bot. cab. 1691.) stem shrubby, much branched; branches striated, pubescent, divaricate, spinose; leaves with 6 pairs of small, orbicular leaflets, on short petioles, pubescent; racemes of flowers somewhat capitate, terminal, simple, spinescent; bractæas orbicular; legumes 3-jointed, covered with long plumose bristles, which are stiff and naked at the base. ♀. G. Native of Valparaiso. Plant dichotomous, resembling furze. Stamens and petals free.

*Small-leaved Adesmia.* Fl. summer. Clt. 1826. Sh. 1 to 2 ft.

16 *A. GLUTINÒSA* (Hook. in Beech. voy. p. 19.) stem shrubby, branched; branches spreading, beset with glandular, glutinous hairs, spinose; leaves with about 3 pairs of elliptic, hairy leaflets; racemes elongated, terminal, simple, spinescent, and are as well as the linear bractæas clothed with white hairs; legumes

3-jointed, very long, clothed with plumose bristles.  $\mathfrak{h}$ . G. Native of Chili, about Coquimbo.

*Glutinous Adesmia*. Shrub 1 to 2 feet.

SECT. IV. FRUTICOSÆ. Plants shrubby, unarmed.

17 *A. BALSAMIFERA* (Hook. in Beech. voy. p. 20.) plants densely beset with resinous glands; stem much branched; leaves with usually 10 pairs of cuneate-oblong leaflets, usually ending in an odd one; legume 6-jointed, silky when young.  $\mathfrak{h}$ . G. Native of Chili, where it is called *Jarilla*. *Mimosa balsàmica*, Feuill. chil. 1: p. 134. The plant, besides being of great beauty, yields a balsam of a highly agreeable odour, which is perceptible at a great distance, and is found to be of great efficacy in healing wounds.

*Balsam-bearing Adesmia*. Shrub.

18 *A. FLORIBUNDA*; plant erect, shrubby; branches pubescent; leaves with numerous pairs of lanceolate-oblong, mucronate, villous leaflets, which are obtuse at both ends and villous beneath as well as the petioles; peduncles axillary, few-flowered, aggregate, short, forming a paniced raceme at the tops of the branches, in consequence of the upper leaves being abortive.  $\mathfrak{h}$ . G. Native of Mexico. *Æschynomene*, spec. nov. N. E. in herb. Lamb. An elegant shrub.

*Bundle-flowered Adesmia*. Shrub 2 to 4 feet.

*Cult.* The annual species should be treated in the same manner as that recommended for *Myriadenus*, see p. 279. The shrubby and perennial kinds will grow well in a mixture of loam, peat, and sand, and they may be propagated either by young cuttings, planted in sand, with a hand-glass placed over them; those of the stove species in heat, or by seeds, the latter mode is to be preferred.

CL. ÆSCHYNOMENE (from *αἰσχυνω*, *aischuno*, to be ashamed; in reference to the leaves of some of the species falling on the slightest touch, like those of the sensitive plant). Lin. gen. 888. Lam. ill. 629. Beauv. fl. d'ow. 1. p. 88. R. Brown, in hort. kew. ed. 2. vol. 4. p. 336. Desv. journ. bot. 3. p. 124. t. 6. f. 26. D. C. prod. 2. p. 320, but not of Jaum.

LIN. SYST. *Diadelphia*, *Decandria*. Calyx 5-cleft, bilabiate, upper lip bifid, lower one trifid or tridentate. Corolla papilionaceous. Stamens 10, joined into 2 equal bundles or sets. Legume compressed, transversely articulated, straight, and exserted. Seeds compressed, solitary in the joints.—Tropical herbs and shrubs, with impari-pinnate leaves, having many pairs of leaflets, semisagittate stipulas, axillary racemes of yellow flowers, each furnished with 2 opposite bracteas just under the calyx.

1 *Æ. ASPERA* (Lin. spec. 1060.) stem herbaceous, erect, terete; leaves with 30-40 pairs of linear leaflets, which are smooth as well as the legumes; racemes compound; peduncles, bracteas, calyxes, and corollas hispid.  $\mathfrak{h}$ . S. Native of the East Indies and Cochin-china. *Æ. lagenària*, Lour. cochin. p. 446. *Æ. paludosa*, Roxb. *Æ. lagenarium*, Roxb. hort. beng. p. 57. Breyn. cent. 51. t. 52. Stipulas ending in a long acumen each. The centres of the joints of the legume are scabrous from tubercles.

The substance known by the name of rice-paper is the produce of *Æ. aspera*; when held between the eye and the light its beautiful cellular tissue is discoverable. Dr. Livingstone first brought from China to Europe a quantity of this substance, which he presented about 26 years ago to Miss Jane Jack, who was celebrated for the beauty and accuracy of her artificial flowers. Formed of rice-paper they obtained additional celebrity, fetched very high prices, and were eagerly sought for by persons of the greatest rank and most acknowledged taste. For a bouquet which Miss Jack presented to the late Princess

Charlotte of Wales, she received the regal present of 70*l*. When Dr. Livingstone first procured the rice-paper from the Chinese, the pieces did not exceed 4 inches square; they were dyed of various shades and colours, and cost about 6*d*. each square. Since that time the price has been much reduced, and the size of the pieces increased, so as to be upwards of a foot long and 5 inches across. The tinted pieces are employed by the Chinese for their artificial flowers, and the plain white for making drawings upon. Now this material is so much esteemed in Europe, that it is in request with people of all nations who visit Canton. The same substance is also known in our possessions in the East Indies, where it grows abundantly in the marshy plains of Bengal, and on the borders of the jeels, or extensive lakes in every province between Calcutta and Hurdwar. The plant is perennial and of low growth, and seldom exceeds a diameter of 2½ inches in the stem. It is brought to the Calcutta bazaars in great quantities in a green state, and the thickest stems are cut into laminæ, from which the natives form artificial flowers and various fancy ornaments to decorate their shrines at Hindoo festivals. The Indians make hats of rice-paper, by cementing together as many leaves as will produce the requisite thickness; in this way any kind of shape may be formed, and when covered with silk or cloth the hats are strong and inconceivably light. It is an article of great use to fishermen; it forms floats of the best description to their nets. The slender stems of the plant are bundled into fascines, about 3 feet long, and with one of these under his arm, does every fisherman go out to his daily occupation. With his net on his shoulders he proceeds to work without a boat, and stretches it into the deepest and most extensive lakes, supported by his buoyant faggot.

The cutting the material into laminæ is performed vertically round the stem. The most perfect stems are selected for this purpose, but few are found sufficiently free from knots to produce a cutting of more than 9 or 10 inches in length. The Bengalee name of the plant is *Shola*, commonly pronounced *Sola*, *Kath-shola*, and *Phool-shola*.

*Rough Æschynomene*. Fl. June, Jul. Clt. 1759. Sh. 6 to 8 ft.

2 *Æ. SENSITIVA* (Swartz, fl. ind. occ. 3. p. 1276.) stem shrubby, smooth, terete; leaves with 16-20 pairs of linear leaflets; legumes and racemes glabrous; peduncles branched, few-flowered; joints of legume 6-10, nearly quadrangular, smooth in the middle, but rather pilose at the upper suture.  $\mathfrak{h}$ . S. Native of Jamaica, Martinico, and Brazil, in sandy places, and on the banks of rivulets. Leaves falling on being touched. Flowers white.

*Sensitive Æschynomene*. Fl. June, July. Clt. 1733. Sh. 3 to 6 feet.

3 *Æ. MACROPODA* (D. C. prod. 2. p. 320.) stem herbaceous, terete, scabrous at the apex as well as the branches, peduncles, and petioles; leaves with 10-12 pairs of linear leaflets; peduncles few-flowered; joints of legume 5-7, smooth, the stipe 3 times the length of the lower joint.  $\odot$ . S. Native of Senegal. Stamens monadelphous at the base, but easily separated into 2 bundles, even in a dried state. Stipulas small.

*Var. β, Belisii* (D. C. prod. 2. p. 320.) leaves with 10 pairs of glabrous leaflets; peduncles branched, few-flowered, clothed with glandular pubescence; joints of legume 4-6, scabrous in the middle.  $\mathfrak{h}$ . S. Native of Prince's Island, on the western coast of Africa. *Æ. sensitiva*, Beauv. fl. d'ow. 1. p. 89. t. 53.

*Long-footed-podded Æschynomene*. Shrub 2 to 3 feet.

4 *Æ. SULCATA* (H. B. et Kunth, nov. gen. amer. 6. p. 530.) arborescent; branches striated from furrows, rather flexuous, glabrous, when young hispid as well as the peduncles; leaves with 17-21 pairs of linear, mucronate leaflets, which are glabrous as well as the calyxes; bracteas ciliated; joints of legume 7-9,

glabrous.  $\mathfrak{h}$ . S. Native of New Andalusia, near Bordones, in shady woods.

*Furrowed-stemmed Æschynomene.* Shrub 10 to 12 feet.

5 *Æ. HISPIDULA* (H. B. et Kunth, nov. gen. amer. 6. p. 530.) arborescent; branches striated and rather flexuous; rachis, peduncles, and legumes hispid from tubercles; peduncles few-flowered; leaves with 15-20 pairs of oblong-linear, somewhat mucronulate leaflets, which are glabrous as well as the calyxes; stipulas and bracteas ciliated.  $\mathfrak{h}$ . S. Native of South America, on the banks of the river Magdalena, near Badilla.

*Hispid-legged Æschynomene.* Shrub 6 to 10 feet.

6 *Æ. INDICA* (Lin. spec. 1061.) stem herbaceous, erect, terete, glabrous as well as the leaves; leaves with 15-20 pairs of linear leaflets; peduncles few-flowered; legumes glabrous, dotted; joints 10-12, straight on one side and rounded on the other.  $\odot$ . S. Native of the East Indies and Guinea. *Hedysarum*, Neli Tali. Roxb. hort. beng. 57.—Rheed. mal. 9. t. 18. Flowers yellow.

*Indian Æschynomene.* Fl. June, Jul. Clt. 1799. Pl. 2 to 3 ft.

7 *Æ. GLABERRIMA* (Poir. suppl. 4. p. 76.) stem erect, terete, glabrous as well as the leaves; leaves with 30-35 pairs of linear leaflets; peduncles few-flowered; legumes glabrous, dotted, having 10-12 joints, which are straight on one side and rounded on the other.  $\odot$ . II. Native of Carolina, where it is perhaps spontaneous.

*Quite-smooth Æschynomene.* Pl. 2 to 3 feet.

8 *Æ. AMERICANA* (Lin. spec. 1061.) stem erect, terete, hispid; leaves with 10-20 pairs of linear, mucronate, rather ciliated leaflets; racemes simple, few-flowered; legumes glabrous, dotless, having 4-8 joints, which are straight on one side and rounded on the other.  $\odot$ . S. Native of the West Indies. Lam. ill. t. 629. f. 2.—Sloan. jam. 1. t. 118. f. 3. There is a variety of this plant having a dwarfier, almost glabrous stem. Flowers brownish-yellow.

*American Æschynomene.* Fl. Jul. Aug. Clt. 1732. Pl. 3 ft.

9 *Æ. GUAYAQUILENSIS*; shrubby; plant hispid; leaves with numerous pairs of linear, obtuse, mucronate, smooth leaflets, which are serrated at the apex; peduncles few-flowered, shorter than the leaves; bracteas ovate, cordate, cuspidate, ciliate serrated; joints of legume 6-8, smooth, straight on one side and rounded on the other; stipulas semisagittate.  $\mathfrak{h}$ . S. Native of Guayaquil. *Æschynomene* species, Guayaquil, Ruiz et Pav. in herb. Lamb. along with the two following.

*Guayaquil Æschynomene.* Shrub 2 to 3 feet.

10 *Æ. FLURIARTICULATA*; plant herbaceous, smooth, erect; leaflets linear, obtuse, glabrous; peduncles few-flowered; joints of legume 14-18, smooth; bracteas large, serrated.  $\odot$ . S. Native of Guayaquil. Stipulas large, semisagittate.

*Many-jointed-legged Æschynomene.* Pl. 2 to 3 feet.

11 *Æ. SCABRA*; plant herbaceous, hispid; leaves with numerous pairs of linear leaflets, which are obtuse at both ends; peduncles few-flowered; bracteas serrated; joints of legume mucronated in the centre.  $\odot$ . S. Native of Guayaquil.

*Scabrous Æschynomene.* Pl. 2 to 3 feet.

12 *Æ. PATULA* (Poir. suppl. 4. p. 78.) stem suffruticose; branches spreading, hispid at the apex; leaves with 10-15 pairs of glabrous, linear, obtuse, hardly mucronulate leaflets; racemes simple, few-flowered; joints of legume 4-5, semi-orbicular, puberulous.  $\mathfrak{h}$ . S. Native of the Mauritius. Perhaps a variety of *Æ. Americana*.

*Spreading Æschynomene.* Fl. July, Aug. Clt. 1826. Shrub trailing.

13 *Æ. PUBULA* (Lin. spec. 1061.) stem herbaceous, smooth, rather diffuse; leaflets linear, obtuse, mucronulate, 10-15 pairs; racemes few-flowered; legumes glabrous, having a few joints which are straight on one side and rounded on the other, and

scabrous in the centre.  $\odot$ . S. Native of the East Indies.—Rheed. mal. 9. t. 21.

*Dwarf Æschynomene.* Fl. July, Aug. Clt. 1818. Pl.  $\frac{1}{2}$  ft.

14 *Æ. PLEURONEURIA* (D. C. prod. 2. p. 321.) stem terete, almost erect, clothed with adpressed pubescence, as well as the petioles and nerves; leaves with 20 pairs of semi-lanceolate leaflets, having almost a lateral nerve; stipulas lanceolate, striated, not produced at the base; racemes few-flowered, almost terminal; legumes pubescent, with a few distinct joints, which are straight on one side and rounded on the other.  $\odot$ . ? S. Native of St. Domingo. *Smithia Domingensis*, Balb. herb. In some specimens of this plant the stamens are monadelphous, but in others they are diadelphous.

*Side-nerved-leafletted Æschynomene.* Pl. 2 to 3 feet.

15 *Æ. DIFFUSA* (Willd. spec. 3. p. 1164.) stem herbaceous, smooth, diffuse; leaflets linear, obtuse; peduncles hispid, 1-flowered; joints of legume straight on one side and rounded on the other, and scabrous in the centre.  $\odot$ . S. Native of Tranquebar. Stem branched much at the base.

*Diffuse Æschynomene.* Pl. 1 to 2 feet.

16 *Æ. SUBVISCOSA* (D. C. prod. 2. p. 321.) stem herbaceous, erect, scabrous from small tubercles and pili, which are tipped with glands; leaflets linear, obtuse, glabrous; peduncles usually 2-flowered, and are as well as the legumes beset with glandular hairs.  $\odot$ . S. Native of the East Indies. *Æ. viscidula*, Roxb. hort. beng. in Willd. enum. 776. but not of Mich. *Æ. Roxbúrgii*, Spreng. syst. 3. p. 322. Flowers having the vexillum streaked and spotted with red, the wings of a dirty-yellow colour, and the keel violaceous at the apex.

*Rather-clammy Æschynomene.* Fl. July, Aug. Clt. 1816. Pl. 1 to 2 feet.

17 *Æ. GLANDULOSA* (Poir. suppl. 4. p. 76.) stem shrubby, beset with glandular hairs; leaflets linear, mucronate; peduncles few-flowered; joints of legume 4-5, semiarticulated, furnished with small prickles in the centre.  $\mathfrak{h}$ . S. Native of Porto Rico. Very like *Æ. Americana*.

*Glandular Æschynomene.* Shrub 1 to 2 feet.

18 *Æ. VILLOSA* (Poir. suppl. 4. p. 76.) stem suffruticose, terete, villous; leaflets linear, obtuse, nearly glabrous; racemes axillary, divaricate; legumes clothed with glandular pili.  $\mathfrak{h}$ . S. Native of Porto Rico. Corolla small, white. Perhaps not sufficiently distinct from *Æ. glandulosa*.

*Villous Æschynomene.* Shrub 1 to 2 feet.

19 *Æ. HISPIDA* (Willd. spec. 3. p. 1163.) stem herbaceous, erect, hispid; leaves with 20-25 pairs of linear obtuse leaflets; racemes simple, 3-5-flowered; legumes distinctly stipitate, 6-9-jointed, hispid.  $\odot$ . II. Native of North America, from Philadelphia to Carolina. *Hedysarum Virginicum*, Lin. ex Pursh. Flowers yellow, veined with red. Nutt. gen. amer. 2. p. 111. The hairs on the legume are scattered, and tubercularly glandular at the base.

*Hispid Æschynomene.* Fl. Aug. Clt. 1803. Pl. 2 to 3 ft.

20 *Æ. LATIFOLIA* (Spreng. syst. 2. p. 322.) leaflets oblong, mucronate, glabrous; racemes many-flowered, bracteate, and are as well as the legumes hispid.  $\odot$ . S. Native of Monte Video.

*Broad-leaved Æschynomene.* Pl. 1 to 2 feet.

21 *Æ. PUBERULA* (D. C. prod. 2. p. 321.) stem, leaves, and peduncles beset with scabrous down; leaves with 10 pairs of elliptic-linear, obtuse, mucronate leaflets; racemes short, branched, crowded, many-flowered; stipulas linear-subulate, striated; legumes with few joints.  $\mathfrak{h}$ . S. Native of South America. Branches terete, and probably suffruticose. Calyxes and bracteoles small.

*Puberulous Æschynomene.* Shrub 1 to 2 feet.

22 *Æ. HYSTRIX* (Poir. suppl. 4. p. 77.) stem terete, and is as well as the petioles and peduncles rough from long, yellow bris-

ties; leaves with 10 pairs of oval-linear, obtuse, mucronate leaflets; peduncles compound, many-flowered, shorter than the leaves; pedicels recurved; legumes glabrous, having few joints.  $\frac{1}{2}$ .? S. Native of Cayenne. *Æ. cassioides*, Desv.

*Porcupine Æschynomene*. Shrub 1 to 2 feet.

23 *Æ. PAUCIJUGA* (D. C. prod. 2. p. 321.) stem terete, beset with bristly, rather glandular hairs, as well as the petioles, peduncles, and bracteas; leaves with 4-5 pairs of obovate, obtuse, rather mucronate leaflets, which are hardly pubescent; racemes many-flowered, compound; stipulas and bracteas ovate, acute, striated; legumes smoothish.  $\frac{1}{2}$ .? S. Native of Cayenne.

*Var. β, subscabra* (D. C. l. c.) legume scabrous from short stiff down. Native of South America.

*Few-paired-leafletted Æschynomene*. Shrub 2 to 3 feet.

24 *Æ. MICRANTHIA* (D. C. prod. 2. p. 321.) stems herbaceous, procumbent, pubescent; leaves with 2-4 pairs of small obovate-roundish, rather mucronate leaflets, which are scarcely pubescent; pedicels axillary, 1-2-flowered, length of leaves; joints of legume glabrous, compressed, nearly orbicular.  $\frac{1}{2}$ . S. Native of Madagascar. *Hedysarum micranthos*, Poir. dict. 6. p. 446. Leaves impari-pinnate.

*Small-flowered Æschynomene*. Pl. prostrate.

25 *Æ. VISCIDULA* (Michx. fl. bor. amer. 2. p. 75. but not of Willd.) plant clothed with clammy pubescence; stems herbaceous, slender, prostrate; leaves with 3-4 pairs of obovate leaflets; peduncles 1-2-flowered; legumes pubescent, with 2 oval-roundish joints.  $\odot$ . H. Native of Florida and Cumberland Island, in sandy places. Nutt. gen. amer. 2. p. 111. *Æ. prostrata*, Poir. suppl. 4. p. 76. This plant has very much the habit of a species of *Smithia*.

*Viscid Æschynomene*. Fl. July, Aug. Clt. 1816. Pl. pros.

26 *Æ. FALCATA* (D. C. prod. 2. p. 322.) stem much branched, villous; leaves with 2-3 pairs of obovate, cuneated, villous leaflets; peduncles usually 2-flowered, elongated; legumes falcate, with roundish pubescent joints.—Native of Brazil, at Rio Janeiro. *Hedysarum falcatum*, Poir. dict. 6. p. 448.

*Falcate-podded Æschynomene*. Pl. 1 foot.

27 *Æ. BRASILIANA* (D. C. prod. 2. p. 322.) stems diffuse, clothed with glandular pili; leaves with 5-6 pairs of ovate-elliptic, pubescent, rather ciliated leaflets; racemes divaricate, loose; joints of legume rather inflated, hispid, and clammy.—Native of Brazil, at Rio Janeiro. *Hedysarum Brasilianum*, Poir. dict. 6. p. 418.

*Brazilian Æschynomene*. Pl. diffuse.

28 *Æ. MICROPHYLLA* (Desv. in herb. mus. paris. D. C. prod. 2. p. 322.) stem terete, clothed with stiff villi; leaves with 20-30 pairs of pubescent, oblong, obtuse, much crowded, small leaflets; racemes much longer than the leaves; legumes glabrous, having 1-2 semi-ovate joints.—Native of Brazil. Bracteas 3, permanent at the origin of the pedicels, and 3 times shorter than them. Bracteoles 2, adpressed under the bilabiate calyx.

*Small-leaved Æschynomene*. Pl. 1 foot.

29 *Æ. ELEGANS* (Schlecht. et Cham. in Linnæa. 5. p. 583.) plant herbaceous; stems diffuse, weak, terete, beset with spreading pili at the apex; leaves with 5-8 pairs of elliptic, obtuse, mucronate leaflets, which are clothed with adpressed pili; stipulas lanceolate, ciliate-serrated; racemes 5-7-flowered, much longer than the leaves; legume on a long stipe, which is one-half the length of the legume, puberulous, and usually with 6 joints.  $\odot$ . S. Native of Mexico, on hills near Jalapa, and at Hacienda de la Laguna. *Æ. mimosoides*, Sesse et Moc. mss. Stems rather flexuous.

*Elegant Æschynomene*. Pl. 3 feet.

30 *Æ. FASCICULARIS* (Schlecht. et Cham. in Linnæa. 5. p. 584.) shrubby, erect, clothed with somewhat strigose, adpressed,

cinereous down; branches angular; leaves with 20 or more pairs of linear, acute, mucronate leaflets, which are almost glabrous above; racemes short, axillary; flowers in fascicles, on short pedicels; legume on a short stipe, 4-jointed.  $\frac{1}{2}$ . S. Native of Mexico, between La Laguna verde and Actopan. Leaves small. Legumes large. Stipe of legume hardly exerted from the calyx. Stipulas lanceolate, acuminate, nerved. Flowers yellow.

*Fascicular-flowered Æschynomene*. Shrub 2 to 3 feet.

† *Little known or doubtful species.*

31 *Æ. DIVISA* (Nees et Mart. in nov. act. bonn. 12. p. 31.) stem shrubby, smooth; petioles strigose; leaves with 12-15 pairs of linear acute leaflets; peduncles 2-3-flowered, shorter than the leaves; joints of legume semi-orbicular, hispid; vexillum of 2 petals.  $\frac{1}{2}$ . S. Native of Brazil. The vexillum is said to be obcordate, and constantly composed of 2 petals, which is a circumstance not to be found in any other papilionaceous flower, but perhaps the vexillum is only profoundly bipartite, or perhaps the flower is resupinate, and the 2-petalled keel has been taken for the vexillum.

*Divided Æschynomene*. Shrub 2 to 3 feet.

32 *Æ. HONESTA* (Nees et Mart. l. c. p. 32.) branches hispid at the apex; leaves with 10-11 pairs of linear, obtuse, glabrous leaflets; legumes disposed in something like a corymb, when young clothed with hispid pubescence, but glabrous in the adult state; vexillum broad, entire.  $\frac{1}{2}$ . S. Native of Brazil. Said to be nearly allied to *Æ. sensitiva*. Flowers yellow.

*Honest Æschynomene*. Shrub 2 to 4 feet.

33 *Æ. SCORPARIA* (H. B. et Kunth, nov. gen. amer. 6. p. 532) plant diffuse; branches elongated, twiggy, straight, angular, and are, as well as the calyxes, clothed with silky-silvery down; leaves with 10-14 pairs of oblong, mucronate, half-cordate leaflets, which are clothed with adpressed down on both surfaces; peduncles axillary, twin, few-flowered; legumes puberulous, usually 3-jointed.  $\frac{1}{2}$ . S. Native of Peru, near Guancabamba. Flowers yellow.

*Broom Æschynomene*. Shrub diffuse.

34 *Æ. MOLLICULA* (H. B. et Kunth, l. c.) suffruticose; branches elongated, clothed with yellowish-silky down; leaves with 18-20 pairs of oblong-linear, mucronate, semi-cordate leaflets, which are pubescent on both surfaces, as well as the rachis and calyx; peduncles axillary, short, few-flowered; legumes falcate, 1-6-jointed, pubescent.  $\frac{1}{2}$ . S. Native of South America, in the province of Jaen de Bracamoros. Flowers yellow.

*Soft Æschynomene*. Shrub 2 to 3 feet.

35 *Æ. PILOSA* (Poir. dict. 4. p. 450.) stem herbaceous, pilose, compressedly tetragonal at the apex; leaflets oval, retuse, mucronate, glabrous; racemes hairy, many-flowered; joints of legumes scabrous in the centre.  $\odot$ . S. Native of the East Indies. Nerves of leaves blackish.

*Pilose Æschynomene*. Pl. 1 to 2 feet.

36 *Æ. PUBESCENS* (Poir. dict. 4. p. 451.) stem herbaceous, glabrous; branches spreading; leaflets elliptic, retuse, mucronate, pubescent; racemes terminal, glabrous, many-flowered; calyx 5-cleft; joints of legume rather scabrous.  $\odot$ .? S. Native of the East Indies.

*Pubescent Æschynomene*. Pl. 1 to 2 feet.

37 *Æ. BREVIIFOLIA* (Poir. dict. 4. p. 451.) plant glabrous, and dwarf; stems filiform; leaves with 2 pairs of roundish, mucronate, glaucous leaflets; peduncles 1-2-flowered; calyx 5-toothed; legumes on long stipes; having 3-4 rather remote joints.—Native of Madagascar. Flowers small, yellow.

*Short-leaved Æschynomene*. Pl.  $\frac{1}{2}$  foot.

38 *Æ. HIRSUTA* (D. C. prod. 2. p. 322.) stem scabrous and

hairy; racemes 3-flowered; bracteas ciliate serrated; legumes hairy. ☉. S. Native of New Spain. Æ. *hirta*, Lag. nov. gen. et spec. 22. but not of Lam.

\* *Hirsute Æschynomene*. Pl. 1 foot.

39 Æ. *HIRTA* (Lam. ill. 629. f. 1. Poir. dict. 4. p. 450.) plant hispid in every part; stem herbaceous; branches terete; leaves with 7-9 pairs of oval-linear mucronulate leaflets; racemes terminal, many-flowered; calyx 5-parted, having the lobes nearly equal, and subulate at the apex; legumes hairy, with the joints tumid and tubercled in the centre. ☉. S. Native of the East Indies.

*Hairy Æschynomene*. Pl. 1 to 2 feet.

40 Æ. *ARBOREA* (Lin. spec. 1060.) stem arboreous, smooth; joints of legume semi-cordate, glabrous. ♀. S. Native of the East Indies. Flowers large, copper-coloured. Perhaps a species of *Desmodium*. Perhaps *D. Mauritium*.

*Arboreous Æschynomene*. Shrub 6 to 7 feet.

41 Æ. ? *HETEROPHYLLA* (Lour. coch. p. 446.) shrubby; branches tomentose; lower leaves ternate, with ovate leaflets, superior ones impari-pinnate, with roundish leaflets; peduncles many-flowered; calyx 4-toothed; stamens monadelphous; legumes pilose, with cordate joints. ♀. G. Native of the north of Cochin-china. Flowers small, white. This plant ought certainly to be removed from the present genus.

*Variable-leaved Æschynomene*. Shrub 7 to 8 feet.

42 Æ. ? *CREPITANS* (Jacq. fragm. 37. t. 42. f. 2.) stem arboreous; leaves glabrous, young ones decompound; legumes stipitate, glabrous, linear, the seeds intercepted by cellular substance; the sutures prominent, but retaining the joints. ♀. S. Native of Caraccas. Perhaps a species of *Mimosa*.

*Rattling Æschynomene*. Tree.

*Cult.* The species of this genus require more than an ordinary degree of heat to preserve them through the winter, so that they are seldom kept alive through the winter in this country, and consequently never grow to a flowering state. Rich loam suits them best, and cuttings may be rooted in sand under a hand-glass in heat; however, they are not worth growing except in botanical gardens.

CLI. SMITHIA (in honour of the late Sir James Edward Smith, M.D. F.R.S. and P.L.S. founder of the Linnæan society, and possessor of the Linnæan herbarium; author of English Botany, English Flora, Flora Britannica, and the botanical part of Rees' cyclopædia; died in 1829, in the 69th year of his age). Ait. hort. kew. ed. 1. vol. 3. p. 496. ed. 2. vol. 4. p. 336. Lam. ill. 627. Desv. journ. bot. 3. p. 121. t. 4. f. 12. D. C. prod. 2. p. 323.

Lin. syst. *Diadelphia*, *Decándria*. Calyx bipartite. Corolla papilionaceous. Stamens divided into 2 equal bundles. Legume transversely articulated, plicate, inclosed in the calyx. This genus is nearly allied to *Æschynomene*, but is distinguished from it in the legume being inclosed with incumbent joints. The calyx, stamens, and habit are that of *Æschynomene*, but the pods are that of *Lourea*.

1 S. *SENSITIVA* (Ait. l. c. t. 13. Sal. par. lond. t. 92.) lips of calyx entire; racemes pedunculate, 3-5-flowered. ☉. S. Native of the East Indies. *Petagnana sensitiva*, Gmel. syst. p. 1119. *Coronilla Surattensis*, Garc. in herb. Burm. confused with *Galèga senticòsa*, Burm. fl. ind. 172. Leaves with many pairs of small leaflets. Plant trailing. Flowers yellow.

*Sensitive Smithia*. Fl. July, Sept. Clt. 1785. Pl. procumbent.

2 S. *CONFERTA* (Smith, in Rees' cycl. 33. no. 2.) lips of calyx toothed at the apex; racemes sessile, shorter than the leaves. ☉. ? S. Native of New Holland, within the tropic. *Smithia capitata*, Desv. l. c. Flowers yellow.

*Crowded-flowered Smithia*. Fl. July. Clt. 1820. Pl. proc.

3 S. *GEMINIFLORA* (Roth. nov. spec. 352.) lips of calyx entire; racemes pedunculate, 2-flowered. ☉. S. Native of the East Indies. Flowers probably purple. Calyxes or bracteas ending in a setose mucrone. On the pagina of the leaf the supine bristles or hairs are more copious than in *S. sensitiva*.

*Twin-flowered Smithia*. Fl. July. Clt. 1810. Pl. proc.

† *A doubtful species.*

4 S. *SPICATA* (Spreng. neue entd. 2. p. 160.) spikes of flowers on very short peduncles, secund, distich, very hairy; leaves impari-pinnate; stem shrubby; stamens monadelphous. ♀. S. Native of Senegambia. In every particular this plant differs from *Smithia*, but its legitimate genus is unknown.

*Spike-flowered Smithia*. Shrub.

*Cult.* See *Lourea* for culture and propagation.

CLII. LOUREA (the meaning of this name is unknown to us, but it is apparently the name of some person). Neck. elem. no. 1318. Desv. journ. bot. 3. p. 122. t. 5. f. 18. D. C. prod. 2. p. 323. but not of Jaum.

Lin. syst. *Diadelphia*, *Decándria*. Calyx campanulate, permanent, 5-cleft (f. 43. a.), with equal spreading lobes, when in fruit inflated and conniving at the apex. Corolla papilionaceous, with an obcordate vexillum (f. 43. d.), and an obtuse keel (f. 43. b.). Stamens diadelphous (f. 43. c.). Legume with 4-6 flat 1-seeded joints (f. 43. i.), bent backward into plaits (f. 43. i.), which nestle within the calyx.—Erect Indian plants, with setaceous stipulas, simple or trifoliate leaves, and long terminal racemes of purple or white flowers.

1 L. *VESPERTILIONIS* (Desv. l. c.) lateral leaflets wanting or very small, terminal one large, transversely and falcately oblong, 10-times the breadth of the length. ☉. S. Native of Cochin-china. *Hedysarum vespertilionis*, Lin. fil. suppl. 331. Jacq. icon. rar. 3. t. 566. *Christia lunata*, Moench. suppl. 39. Corolla white, spreading. Leaves crescent-shaped, 4 lines long, and 2 inches broad, variegated with yellow, red, and green (f. 43.).

*But-wing-leaved Lourea*. Fl. July, Sept. Clt. 1780. Pl. 2 to 4 feet.

2 L. *OBCORDATA* (Desv. l. c.) leaves rather pubescent; lateral leaflets small, ovate-obcordate, rarely wanting, terminal one shorter than broad. ☉. S. Native of Java and Timor. *Hedysarum obcordatum*, Poir. dict. 6. p. 425.

*Obcordate-leafletted Lourea*. Pl. 2 to 4 feet.

3 L. *RENIFORMIS* (D. C. prod. 2. p. 324.) leaves simple, transversely-reniform, others trifoliate, with the lateral leaflets smaller and oval; racemes opposite the leaves, and longer than them. ☉. S. Native in the suburbs of Canton. *Hedysarum reniforme*, Lour. coch. p. 447. exclusive of the synonymes. *Hedys. Lourèirii*, Spreng. syst. append. p. 292. Flowers violaceous. Very like the first species.

*Reniform-leaved Lourea*. Fl. Jul. Aug. Clt. 1818. Pl. proc.

*Cult.* The species of *Lourea* have a rather singular appearance from their kidney-shaped painted leaves. Being annuals their seeds should be sown in pots, filled with a mixture of peat and sand, with a little loam, and placed in a hot-bed, and when the plants have grown 2 inches high, they should be planted into separate small pots, and afterwards shifted into larger ones as they grow.

FIG. 43.

CLIII. URARIA (a name not explained by its author). Desv. journ. bot. 3. p. 122. t. 5. f. 19.—Doodia, Roxb. hort. beng. p. 99. but not of R. Br.—Hedysarum species of Lin. and others.

LIN. SYST. *Diadelphia, Decandria*. Calyx profoundly 5-cleft, with setaceous segments. Corolla papilionaceous. Stamens diadelphous. Legume with a few ovate 1-seeded joints, bent back into plaits, nestling within the calyx.—Herbs, rarely shrubs, with impari-pinnate, ternate, or simple leaves, stipellate leaflets, lanceolate membranous acuminate stipulas, which are striated lengthwise, the upper ones answering the purpose of bracteas to the flowers, but soon falling off. Pedicels 1-flowered, rising in pairs from the axils of the bracteas, forming long, dense, simple, many-flowered racemes.

\* *Leaves impari-pinnate, with 2-4 pairs of leaflets.*

1 U. PICTA (Desv. l. c.) stem shrubby, erect, velvety; leaves with 2-4 pairs of long lanceolate leaflets, which are smoothish above, and blotched with white, but pubescent and reticulately-nerved beneath; racemes very long and spicate; bracteas ciliated; segments of the calyx setaceous, and very hairy.  $\frac{1}{2}$ . S. Native of Guinea, among grass all along the coast, and of the East Indies. Hedysarum pictum, Jacq. icon. rar. 3. t. 567. coll. 2. p. 262. Flowers purple.

*Painted-leaved Uraria*. Fl. July, Aug. Clt. 1788. Shrub 2 to 3 feet.

2 U. COMOSA (D. C. prod. 2. p. 324.) stem shrubby; branches and petioles villous; leaves with 3 pairs of linear-lanceolate glabrous leaflets; racemes elongated, cylindrical; bracteas villous; segments of the calyx setaceous, and very hairy.  $\frac{1}{2}$ . S. Native of the East Indies. Hedysarum comosum, Vahl. symb. 2. p. 84.

*Tufted Uraria*. Fl. July, Aug. Clt. 1818. Shrub 2 feet.

3 U. CRINITA (Desv. l. c.) stem shrubby, erect; leaves with 2-3 pairs of oblong leaflets; racemes elongated; pedicels hispid, recurved; the 3 largest segments of calyx pilose and reflexed; legumes smooth.  $\frac{1}{2}$ . S. Native of the East Indies. Hedysarum crinitum, Lin. mant. 102. Burm. ind. p. 169. t. 56.

*Hairy-calyxed Uraria*. Fl. July, Aug. Clt. 1780. Shrub 3 to 4 feet.

\* \* *Leaves trifoliate, the terminal leaflets stalked.*

4 U. LAGOPOIDES (D. C. prod. 2. p. 324.) stem shrubby, rather velvety; leaflets ovate, mucronate, almost naked; racemes oblong, about the length of the common petiole; segments of calyx setaceous, and very hairy.  $\frac{1}{2}$ . S. Native of the East Indies and China. Hedysarum lagopodioides, Lin. spec. 1057. Lespedeza lagopoides, Pers. ench. 2. p. 308.—Burm. ind. p. 163. t. 53. f. 2. Flowers purple.

*Hare's-foot-like Uraria*. Fl. June, July. Clt. 1790. Sh. 2 ft.

5 U. LAGOPUS (D. C. in ann. sc. nat. 4. p. 100.) stem shrubby, very hairy at the apex; leaflets ovate, obtuse, mucronate, clothed with soft velvety pubescence beneath; racemes cylindrical, twice the length of the petiole; segments of the calyx setaceous, and very hairy; bracteas hairy on the back.  $\frac{1}{2}$ . G. Native of Nipaul. Flowers purple.

*Hare's-foot Uraria*. Fl. June, July. Clt. 1824. Sh. 2 to 4 ft.

6 U. ARBOREUM; arboreous; leaflets oval, retuse, and are, as well as the branches, very hairy; stipulas cordate, stem-clasping, cuspidate; racemes elongated, bractless, densely clothed with stiff hairs; calycine segments lanceolate, feathery; legumes 3-seeded, plaited within the calyx.  $\frac{1}{2}$ . G. Native of Nipaul. Hedysarum arboreum, Hamilt. in D. Don, prod. fl. nep. 243. Erythrina arborescens, Roxb. hort. beng. p. 52.?

*Tree Uraria*. Tree 12 feet.

7 U. LAGOCÉPHALA (D. C. prod. 2. p. 324.) stem herbaceous; leaflets roundish, pilose beneath; panicle terminal, contracted,

bracteate; peduncles and calyxes very pilose; calycine segments long and linear; legumes deflexed, glabrous, 3-jointed.  $\frac{1}{2}$ . S. Native of Brazil. Hedysarum lagocéphalum, Link. enum. 2. p. 248. Flowers yellow.

*Hare's-headed Uraria*. Fl. July. Clt. 1824. Pl. 1 to 2 feet.

\* \* \* *Leaves simple.*

8 U. CERCIFOLIA (Desv. l. c. f. 19.) leaflet solitary at the top of the petiole, furnished with 2 stipels, roundish, and rather velvety beneath; racemes oblong, dense, terminal.  $\frac{1}{2}$ . S. Native of the East Indies. Hedysarum cercifolium, Steud. nom. 392.

*Judas-tree-leaved Uraria*. Shrub 2 to 3 feet.

9 U. CORDIFOLIA (Wall. pl. rar. asiat. p. 33. t. 37.) leaves simple, broadly ovate, cordate, villous on the under surface as well as the branches; racemes terminal, panicle, elongated, hairy; legume 2-3-jointed, villous, inclosed in the calyx; bracteas ovate, acuminate, clothed with silky pili.  $\frac{1}{2}$ . S. Native of the Burman Empire, near Prome and Meaong, on the banks of the Irawaddi. Flowers small, of a whitish-rose colour.

*Heart-leaved Uraria*. Shrub 2 to 3 feet.

*Cult.* A mixture of loam, peat, and sand will answer the species, and young cuttings will root in sand under a hand-glass in heat, but the species are more easily propagated by seeds.

CLIV. NICOLSONIA (in honour of M. Nicolson, author of Essai Sur L'Histoire Naturelle de Saint Domingue, 1 vol. 8vo. Paris, 1776). D. C. legum. mem. vii. prod. 2. p. 325.—Perrottetia, D. C. ann. sci. nat. jan. 1825. p. 95. but not of Kunth.

LIN. SYST. *Diadelphia, Decandria*. Calyx 5-parted, with lanceolate, subulate, bearded segments. Corolla papilionaceous, shorter than the calyx. Stamens diadelphous. Legume straight, exerted, constantly composed of numerous, compressed, semi-orbicular, 1-seeded joints, which open at the convex suture.—American herbs, with pinnately trifoliate leaves, the leaflets oval or oblong, and stipellate. Stipulas distinct from the petioles, rather scarious. Bracteas like the stipulas, but broader. Pedicels twin in the axils of the bracteas. Racemes terminal, crowded, almost constituting a panicle. Flowers small, bluish-purple. This genus differs from *Uraria* in the legume being straight and exerted, and from *Desmodium* in the calyx being 5-parted and bearded.

1 N. BARBATA (D. C. l. c.) leaflets elliptic-oblong; calyx closed after flowering; legumes glabrous.  $\frac{1}{2}$ ?  $\frac{1}{2}$ ? S. Native of Jamaica and St. Domingo, in arid sandy places. Hedysarum barbatum, Lin. spec. 1055. Swartz, obs. 287. Flowers bluish-purple.

*Bearded-calyxed Nicolsonia*. Fl. June, July. Clt. 1818. Pl. procumbent.

2 N. CAYENNE'NSIS (D. C. leg. t. 51.) leaflets elliptic-obovate; calyx spreading after flowering; legumes smoothish.  $\frac{1}{2}$ . S. Native of Cayenne. Flowers bluish-purple. Racemes looser, and the pedicels are longer than the first species, but very similar.

*Var.  $\beta$ , laxiuscula* (D. C. prod. 2. p. 325.) leaflets elliptic-obovate, and a little more villous beneath than the species; legumes rather scarious; stamens monadelphous.  $\frac{1}{2}$ . S. Native of Cayenne. Perhaps a proper species.

*Cayenne Nicolsonia*. Pl. procumbent.

3 N. VENUSTULA (D. C. prod. 2. p. 325.) stems suffruticose, erect, and are, as well as the petioles, clothed with adpressed pubescence; leaflets oblong-elliptic, clothed with silky, glaucous pubescence beneath; racemes terminal, short, sessile; calyx pilosely bearded; legumes with 1-3 semi-orbicular hairy joints.  $\frac{1}{2}$ . S. Native of Cumaua, on the declivity of mount Turimi-quiri. Hedysarum venustum, H. B. et Kunth, l. c.

*Pretty Nicolsonia*. Shrub 2 feet.

4 *N. villōsa* (Schlecht. et Cham. in Linnæa. 5. p. 584.) plant herbaceous; stems erect, clothed with rusty spreading hairs; leaflets elliptic, silky and glaucous beneath, but almost glabrous above; legumes puberulous, 3-jointed. 2. G. Native of Mexico. Axillary branches bearing the flowers at the apex, hardly longer than the leaves. Flowers disposed in dense racemes.

*Villous Nicolsonia.* Pl. 3 feet.

*Cult.* For culture and propagation see *Uraria*, p. 287.

CLV. *DESMODIUM* (from *δεσμος*, *desmos*, a band; in reference to the stamens being connected). D. C. legum. mem. vi. prod. 2. p. 325.—*Desmodium* and *Hedysarum*, Desv. journ. bot. 3. p. 122. t. 5. f. 15 and 22. H. B. et Kunth, nov. gen. amer. 6. p. 516 and 527.—*Hedysarum* species of Lin. and others.

LIN. SYST. *Diadélphia*, *Decándria*. Calyx bibracteolate at the base, obscurely bilabiate to the middle, upper lip bifid, lower one 3-parted (f. 44. a.). Corolla papilionaceous, with a roundish vexillum (f. 44. b.) and an obtuse keel (f. 44. c.), which is shorter than the wings. Stamens diadelphous (f. 44. d.), with the filaments almost permanent (f. 44. f.). Legume of many 1-seeded, compressed, membranous or coriaceous, hardly deliscent joints (f. 44. g.), which separate at maturity.—Herbs or small shrubs, for the most part natives within the tropics, with pinnately-trifoliate leaves, sometimes the lateral leaflets absent altogether, or very small, then the leaves in such cases are called simple. Stipels 2 at the base of the terminal leaflet, and one at the base of each lateral leaflet. Racemes of flowers terminal, usually loose. Pedicels filiform, 1-flowered, rising singly, but usually by threes from the axils of the bracteas. Flowers purple, blue, or white, smaller than those of *Hedysarum*. The plants belonging to this genus are not well defined.

SECT. I. *EUDESMODIUM* (from *eu*, good or well, and *Desmodium*; this section contains the genuine species of the genus). D. C. legum. vi. prod. 2. p. 325. Joints of legume coriaceous, indeliscent, rather elliptic and somewhat truncate at both extremities. Leaves pinnately-trifoliate. Peduncles axillary, shorter than the petioles. Flowers disposed in corymbose umbels.

1 *D. UMBELLATUM* (D. C. prod. 2. p. 325.) stem shrubby, branched, terete, smooth; branches pubescent; leaflets ovate, obtuse, glabrous above, but canescent beneath from short down; peduncles axillary, shorter than the petioles, bearing umbels of flowers at their apexes; legumes clothed with adpressed villi. 2. S. Native of Malacca, Ceylon, Java, and Madagascar. *Hedysarum umbellatum*, Lin. spec. 1053. Burm. ind. 166. Jacq. hort. schœnbr. 297.—Rumph. amb. 4. t. 52. Flowers white.

*Var. β. hirsutum* (D. C. prod. 2. p. 326.) branches and petioles hairy; leaflets ovate, rather glabrous above, but hairy beneath; racemes shorter than the petioles, umbelliferous; legumes hairy. 2. S. Native of the East Indies.

*Umbellate-flowered Desmodium.* Clt. 1801. Sh. 3 to 6 feet.

2 *D. AUSTRALIS* (D. C. prod. 2. p. 326.) stem shrubby, branched, terete, glabrous; branchlets pubescent; leaflets elliptic, acute, glabrous above, but canescent beneath from short down; peduncles axillary, shorter than the leaves, somewhat umbelliferous; legumes smooth. 2. S. Native of New Caledonia, and the island of Tanna. *Hedysarum umbellatum*, Forst. prod. no. 274. but not of Lin. *Hedysarum australe*, Willd. spec. 3. p. 1183. Very like the preceding species.

*Southern Desmodium.* Shrub 2 to 4 feet.

3 *D. LUTESCENS* (Desv. l. c.) stem terete, pubescent; leaflets obovate-roundish, pubescent; racemes terminal, and are as well as the legumes clothed with velvety villi. 2. G. Native of China. *Hed. lutescens*, Poir. dict. 6. p. 417. *Zornia lutescens*, Steud. nom. 900. Flowers yellowish.

*Yellowish Desmodium.* Shrub 2 to 3 feet.

SECT. II. *PLEUROLIDIUM* (from *πλευρον*, *pleuron*, a side, and *λοβος*, *lobos*, a lobe; in reference to the joints of the legumes being rather convex on one side). D. C. legum. vi. prod. 2. p. 326. Joints of legume membranous, nearly square, the lower side rather convex, and at length deliscent. Leaves furnished with one leaflet, or pinnately-trifoliate, the lateral leaflets very small. Perhaps a proper genus.

\* *Pterópoda* (from *πτερον*, *pteron*, a wing, and *πους ποδος*, *pous podos*, a foot; in reference to the footstalks of the leaves being winged). D. C. prod. 2. p. 326. Leaves having only one leaflet. Petioles winged; wing drawn out into a tooth on both sides at the apex.

4 *D. AURICULATUM* (D. C. legum. mem. vi.) stems erect, glabrous, triquetrous; leaves ovate, acute, glabrous, 4 times longer than the winged petioles; legumes quite glabrous, and rather coriaceous. 2. G. Native of the island of Timor. *Pteroloma auriculatum*, Desv. in herb. mus. par. Joints of legume 4 or 5, easily separating at maturity.

*Auricled-leaved Desmodium.* Fl. July, Aug. Clt. 1819. Shrub 3 to 6 feet.

5 *D. TRIQUETRUM* (D. C. prod. 2. p. 326.) stems erect, smoothish, triquetrous; leaves ovate-lanceolate, rather cordate, acuminate, 3 times longer than the winged petiole; legumes nearly sessile, hairy. 2. S. Native of the East Indies. *Hedysarum triquetrum*, Lin. spec. 1052. Burm. ind. t. 52. f. 2. zeyl. t. 81. Flowers purple.

*Triquetrous-stemmed Desmodium.* Fl. July, Aug. Clt. 1802. Shrub 3 to 6 feet.

6 *D. PSEUDOTRIQUETRUM* (D. C. in ann. sc. nat. 1. p. 100. legum. mem. vi.) stems ascending, rather hairy, triquetrous; leaflets ovate-lanceolate, rather cordate, acuminate, twice the length of the winged petioles; legumes glabrous, but ciliated on both sutures with adpressed villi. 2. G. Native of Nipaul. Flowers purple.

*False-triquetrous-stemmed Desmodium.* Fl. July, Aug. Clt. 1820. Shrub 3 to 6 feet.

7 *D. ALATUM* (D. C. legum. mem. vi.) stems erect, somewhat tetragonal, glabrous; leaflets lanceolate, acuminate, 8 times longer than the petioles; legumes glabrous, membranous. 2. S. Native of the East Indies, at Cawnpore. *Hedysarum alatum*, Roxb. hort. beng. 56. Joints of legume 5-6, sometimes irregularly triangular. Flowers purple.

*Winged-petioled Desmodium.* Fl. July, Aug. Clt. 1817. Shrub 3 to 6 feet.

\*\* *Gyrántia* (from *gyro*, to whirl). D. C. prod. 2. p. 326. Leaves pinnately-trifoliate; petiole wingless.

8 *D. GYRANS* (D. C. prod. 2. p. 326.) plant glaucous; leaflets 3, elliptic-oblong, terminal one very large, but the lateral ones are very small; racemes numerous, disposed in a panicle; legumes pubescent. 2. S. Native of Bengal. *Hedysarum gyrans*, Lin. fil. suppl. 332. Jacq. icon. rar. 3. t. 562. Flowers violaceous. The singular motion with which the lateral leaflets of this plant are endued is thus described in Linnæus's supplement. "This is a wonderful plant on account of its singular motion, which is not occasioned by any touch, or irritation, or movement in the air, as in *Mimosa Opuntia*

FIG. 44.

and *Dionæa*; nor is it so evanescent as in *Amórpha*. No sooner had the plants raised from seed acquired their ternate leaves than they began to be in motion in every direction; this movement did not cease during the whole course of their vegetation, nor were they observant of any time, order, or direction; one leaflet frequently revolved, whilst the other on the same petiole was quiescent; sometimes a few leaflets only were in motion, then almost all of them would be in movement at once; the whole plant was very seldom agitated, and that only during the first year. It continued to move in the stove during the second year of its growth, and was not at rest even in winter." In our climate the lateral leaflets move up and down, either steadily or by jerks, particularly if the house in which it is growing be shut up very warm. This motion is most evident when the sun's rays are on the plant, it therefore appears to us that it is the action of the sun's rays upon it which occasions the motion of the leaflets. For further particulars see Brouss. mem. acad. scienc. paris, 1784. p. 616. Silvestr. bull. philom. 1. p. 67. t. 5. (f. 44.)

*Var. β*; lateral leaflets almost wanting. ♂. S. Native of Nipaul. Wallich. Hedys. gyraus, Roxb. hort. beng. p. 57.

*Moving Plant or Whirling Desmodium.* Fl. July, Aug. Clt. 1775. Pl. 1 to 3 feet.

9 *D. GYROIDES* (D. C. legum. vi. prod. 2. p. 326.) leaflets 3, elliptic, the terminal one large, and the lateral ones small; racemes numerous, disposed in a panicle; legumes hairy. ♀. S. Native of the East Indies, in Silhet. Hedysarum gyroides, Roxb. hort. beng. 57. The legume is very like that of *D. triquetrum*, but hairy. The plant is hoary in every part.

*Gyran-like Desmodium.* Clt. 1817. Pl. 3 to 5 feet.

10 *D. TIMORIENSE* (D. C. leg. mem. vi. prod. 2. p. 327.) leaflets 3, rhomboid, canescent from villi beneath, and with a few scattered hairs above; lateral ones one-half smaller than the terminal one; racemes numerous, disposed in a panicle; legumes short, pubescent. ♂. S. Native of the island of Timor.

*Timor Desmodium.* Pl. 2 to 4 feet.

SECT. III. CHALA'RIUM (probably from χαλαω, *chalaō*, to loose; from containing a loose heterogeneous mass of plants). D. C. prod. 2. p. 327. Joints of legume membranous, indehiscent, oval or orbicular, rarely oblong, convex on both sides, or with the superior side straightish, tapering to both ends.—Leaves simple or pinnately-trifoliate. Racemes loose, elongated, with 3 pedicels rising from each bractea.

§ 1. *Leaves simple, that is, only having one leaflet.*

11 *D. GANGETICUM* (D. C. prod. 2. p. 327.) stem erect; leaflets ovate, acute, clothed with adpressed silky pubescence beneath; stipulas 4 times shorter than the petiole; legumes puberulous, having 5-6 semi-orbicular joints. ♀. S. Native of the East Indies. Burm. zeyl. t. 49. Hedys. Gangéticum, Lin. spec. 1052. *Æschynomene Gangética*, Poir. Hedys. ochroleucum, Mæench. Flowers dirty purple?

*Var. β, Neaia* (D. C. prod. 2. p. 327.) leaflets ovate-lanceolate, acuminate, silky beneath; stipulas exceeding half the length of the petioles. ♀. S. Native of the Philippine islands. Perhaps a distinct species.

*Ganges Desmodium.* Fl. July, Aug. Clt. 1762. Pl. 2 to 3 ft.

12 *D. MACULATUM* (D. C. prod. 2. p. 327.) stem erect, herbaceous; leaves ovate, obtuse or rather acute, spotted with white above, and clothed with adpressed pubescence beneath; legumes rather puberulous, having 5-6 semi-orbicular joints. ♂. S. Native of the East Indies. Hedys. maculatum, Lin. spec. 1051. *Æschynomene maculata*, Poir.—Dill. hort. elth. 1. t. 141. f. 168. Flowers pale violet, or red and yellow. (Mill.)

*Spotted-leaved Desmodium.* Fl. July, Aug. Clt. 1732. Pl. 1 foot.

13 *D. RENIFORME* (D. C. prod. 2. p. 327.) stem erect; leaves

roundish-reniform, very blunt; joints of legume semi-orbicular. ♂. S. Native of the East Indies. Hedys. reniforme, Lin. spec. 1051. Burm. ind. t. 52. f. 1. Lower flowers solitary in the axils of the leaves. Flowers purple. Habit of *Elciotis monophylla*, but the legume is very distinct.

*Reniform-leaved Desmodium.* Fl. Jul. Aug. Clt. 1820. Pl. 1 ft.

14 *D. RUBRUM* (D. C. prod. 2. p. 327.) stem suffrutescent; branches nearly erect; leaves ovate, ciliated; racemes terminal, spicate; legumes arched, scabrous. ♀. G. Native of Cochinchina. Ornithopus ruber, Lour. coch. p. 452. Branches red. Flowers pale.

*Red-branched Desmodium.* Shrub 2 feet.

15 *D. TERMINALE* (D. C. prod. 2. p. 327.) stem tall, shrubby at the base; leaves large, rather tomentose; panicle loose; outer joint of legume sterile and dilated. ♀. S. Native of Guiana. Hedys. terminale, Rich. act. soc. hist. nat. par. p. 105. Flowers purple.

*Terminal Desmodium.* Shrub 2 feet.

16 *D. PERROTETII* (D. C. legum. mem. vi. prod. 2. p. 327.) stem terete, erect, scabrous from short curved hairs; leaves ovate, rather acute, puberulous beneath, but villous when young, nearly glabrous above; panicle terminal; joints of legume ovate, equal, velvety. ♀. S. Native of Guiana. The leaves appear to be spotted with white in the dried specimens.

*Perrotet's Desmodium.* Shrub 1 to 2 feet.

17 *D. ORMOCARPOIDES* (D. C. prod. 2. p. 327.) stem suffrutescent, erect, glabrous; leaves ovate, acuminate, glabrous; racemes nodding; legumes hairy from short down, with elliptic, elongated, compressed joints. ♀. S. Native of Java. Hedys. ormocarpoides, Desv. in herb. Desf. Hedys. adhaerens, Poir. suppl. 5. p. 15. but not of Vahl. Perhaps this plant is referrible to the first section.

*Ormocarpum-like Desmodium.* Shrub 2 to 3 feet.

18 *D. SAGITTATUM* (D. C. prod. 2. p. 327.) leaves oblong or linear-lanceolate, cordately-sagittate, on very short petioles; flowers solitary, axillary, on long pedicels.—Native of the East Indies. Hedys. sagittatum, Poir. dict. 6. p. 403. The legume is unknown. Flowers red. Stem triquetrous, glabrous.

*Sagittate-leaved Desmodium.* Fl. July, Aug. Clt. 1807. Pl. 1 to 2 feet.

19 *D. LINEARIFOLIUM* (D. C. legum. mem. vi. prod. 2. p. 327.) stem herbaceous, terete, glabrous at the base; leaves linear, mucronate, glabrous, on short petioles; racemes terminal, puberulous; legumes puberulous, with 4-6 compressed, roundish-elliptic joints.—Native country unknown.

*Linear-leaved Desmodium.* Pl. 1 to 2 feet.

20 *D. DENUDATUM* (D. C. legum. mem. vi. prod. 2. p. 328.) stems terete, suffruticose, glabrous; branches twiggy, puberulous, bearing leaves only at the base; leaves oblong-lanceolate, acutish; stipulas and stipels setaceous; racemes elongated, naked; pedicels usually twin. ♀. S. Native of St. Domingo, in dry pastures. Flowers purple.

*Naked-branched Desmodium.* Shrub 1 to 2 feet.

21 *D. ANGUSTIFOLIUM* (D. C. prod. 2. p. 328.) shrubby; branches twiggy; leaves linear-lanceolate, mucronate, puberulous beneath, and with the margins scabrous; racemes solitary; bractea ciliated, with stiff hairs; joints of legume 1-6, roundish, hairy, with rather hispid margins. ♀. S. Native of Mexico. Hedysarum angustifolium, H. B. et Kunth, nov. gen. amer. 6. p. 517. Flowers minute, purple.

*Narrow-leafletted Desmodium.* Fl. June, Aug. Clt. 1824. Shrub 2 feet.

22 *D. VELUTINUM* (D. C. prod. 2. p. 328.) stem shrubby, terete, pubescent; leaves ovate, clothed with velvety tomentum on both surfaces, mucronate; racemes terminal and axillary; calyx 5-parted, villous; legumes clothed with villous tomentum, having oblong compressed joints. ♀. S. Native of South Ame-

rica. Hedys. velutinum, Willd. spec. 3. p. 1174. Flowers small, violet. Perhaps a species of *Uraria*.

*Velvety* *Desmodium*. Shrub 2 to 3 feet.

23 *D. LATIFOLIUM* (D. C. prod. 2. p. 328.) stems shrubby, terete, when young clothed with rufous velvety down, but at length becoming smooth; leaves broad, ovate, rather cordate, mucronulate, and repand, clothed with velvety villi on both surfaces; stipulas cordate at the base, cuspidate; racemes terminal and axillary; legume hairy, with 3-5 semi-orbicular joints.  $\frac{1}{2}$ . S. Native of the East Indies and China. Hedys. latifolium, Roxb. hort. beng. p. 57. Ker. bot. reg. 356. Horn. hort. hafn. suppl. 152. Roth. nov. spec. 355. Pluk. alm. 432. f. 3. ? Flowers purple.

*Broad-leaftletted* *Desmodium*. Fl. Aug. Clt. 1818. Sh. 3 ft.

24 *D. LASIOCARPUM* (D. C. prod. 2. p. 328.) villous in every part; stem shrubby, terete, when young clothed with rufous velvety down, but glabrous in the adult state; leaves broad, ovate-lanceolate, mucronulate, rather repand, clothed with velvety villi on both surfaces; stipulas subulate, hairy; racemes long, spike-formed, terminal, and axillary, forming a panicle; legumes hispid, with 3-4 semi-orbicular joints.  $\frac{1}{2}$ . S. Native of Africa, in the kingdoms of Warea and Benin, and plentiful in the island of St. Thomas in the gulf of Guinea. Hedys. lasiocarpum, Beauv. fl. d'ow. 1. p. 32. t. 18. Poir. suppl. 5. p. 15. Hedys. deltoideum, Poir. suppl. 5. p. 15. Flowers small, red.

*Woolly-fruited* *Desmodium*. Fl. June, Aug. Clt. 1823. Shrub 3 to 6 feet.

25 *D. ELATUM* (H. B. et Kunth, nov. gen. amer. 6. p. 527.) stem erect, shrubby, and is, as well as the petioles, clothed with stiff hairs; leaves ovate, obtuse, pilose on both surfaces, very soft beneath, and glaucescent; racemes paniced; legumes hairy.  $\frac{1}{2}$ . S. Native of New Andalusia, near Caripe. Flowers purple. Allied to *D. aspera*.

*Tall* *Desmodium*. Shrub 3 to 6 feet.

§ 2. *Trifoliata* (the plants contained in this division have trifoliate leaves). Leaves pinnately trifoliate, the terminal leaflet the largest.—This section contains a great number of species which are very nearly allied to each other, but which are very difficult to extricate, or to place into any kind of order, and therefore they are here arranged geographically.

\* *Boreali-Americana* (the species contained in this division are all natives of North America). Hedysari species foliis ternatis, Michx. fl. bor. amer. 2. p. 72. Pursh. fl. amer. sept. 2. p. 482. Nutt. gen. amer. 2. p. 108.

26 *D. CANADENSE* (D. C. prod. 2. p. 328.) stem erect, rather pilose and striated; leaflets oblong-lanceolate, smoothish; stipulas filiform; racemes terminal; joints of legume 4-5, oval, bluntly triangular, hispid from short hairs.  $\frac{1}{2}$ . H. Native of North America, in sandy fields and woods; plentiful throughout Canada. Hedys. Canadense, Lin. spec. 1054. Hedys. scabrum, Moench.—Corn. can. 45. with a figure.—Moris. oxon. sect. 2. t. 11. f. 9. Flowers reddish purple, in simple or paniced, lateral or terminal racemes. Bracteas lanceolate.

*Canadian* *Desmodium*. Fl. Jul. Aug. Clt. 1640. Pl. 4 to 6 ft.

27 *D. CANESCENS* (D. C. prod. 2. p. 328.) stem erect, angular, ciliated, hispid; leaflets ovate-roundish, canescent from adpressed hairs beneath; stipulas ovate; racemes paniced; bracteas cordate; joints of legume ovate-triangular, hispid.  $\frac{1}{2}$ . H. Native of Virginia and Carolina. Hedys. canescens, Lin. spec. 1054. but not of Mill. Hedys. scaberrimum, Ell. sketch. 2. p. 217. ?—Pluk. alm. t. 308. f. 5. Flowers pale purple, middle-sized.

*Var.  $\beta$ , paleaceum* (D. C. l. c.) racemes almost simple.  $\frac{1}{2}$ . H. Native of Virginia. Hedys. paleaceum, Poir. dict. 6. p. 418.

*Canescent* *Desmodium*. Fl. July, Aug. Clt. 1733. Pl. 3 to 4 ft.

28 *D. MARYLANDICUM* (D. C. prod. 2. p. 328.) stem erect, pilose, branched; leaflets oblong, villous beneath; stipulas subulate; racemes paniced; joints of legume 3, rhomboid, reticulated, and rather pilose.  $\frac{1}{2}$ . H. Native of North America, from New York to Carolina. We have seen this plant growing in great plenty in dry sandy woods near New York and in Long Island. Hedys. Marylandicum, Lin. spec. 1055.—Dill. hort. elth. t. 174. f. 171. Flowers pale purple, fading to blue, the vexillum having a green spot at the base.

*Maryland* *Desmodium*. Fl. July, Oct. Clt. 1725. Pl. 2 feet.

29 *D. OBTUSUM* (D. C. prod. 2. p. 329.) stem erect, pubescent; leaflets ovate, obtuse, somewhat cordate at the base; stipulas lanceolate-subulate; panicle terminal; joints of legume semi-orbicular, reticulated, and hispid.  $\frac{1}{2}$ . H. Native from Pennsylvania to Virginia, in woods and fields, and in dried up marshes. Hedys. obtusum, Muhl. in Willd. Hedys. coriaceum, Poir. dict. 6. p. 418. ? Flowers violaceous.

*Obtuse-leaftletted* *Desmodium*. Fl. July, Aug. Clt. 1805. Pl. 2 feet.

30 *D. CILIARE* (D. C. prod. 2. p. 329.) stem erect, rather pilose, slender; leaves approximate, on very short petioles; leaflets small, oval, obtuse; stipulas subulate; racemes axillary, and terminal, paniced; joints of legume oval, hispid.  $\frac{1}{2}$ . H. Native about New York and Philadelphia. Hedys. ciliare, Nutt. gen. amer. 2. p. 109. Flowers small, violaceous.

*Ciliated* *Desmodium*. Fl. July, Aug. Clt. 1823. Pl. 1 to 2 ft.

31 *D. VIRIDIFLORUM* (D. C. prod. 2. p. 329.) stem erect, branched, pubescent; leaflets ovate-oblong, scabrous beneath; stipulas lanceolate, cuspidate; racemes paniced, bracteate; joints of legume oval, rough.  $\frac{1}{2}$ . H. Native from New Jersey to Carolina, and of Upper Louisiana, in woods and in waste fields. Hedys. viridiflorum, Lin. spec. 1055. but not of Burm.—Pluk. alm. t. 308. f. 5. Flowers reddish purple, but at length becoming greenish.

*Greenish-flowered* *Desmodium*. Fl. July, Sept. Clt. 1787. Pl. 3 feet.

32 *D. LÆVIGATUM* (D. C. prod. 2. p. 329.) stem simple, erect, glabrous, and rather glaucous; leaves quite glabrous, on long petioles; leaflets ovate, acute; stipulas subulate; panicle terminal; flowers twin, on long pedicels; bracteas ovate, acute, shorter than the flower-buds; lower segment of calyx elongated.  $\frac{1}{2}$ . H. Native of the State of New York, in woods. Hedys. lævigatum, Nutt. gen. amer. 2. p. 109. Flowers purple. Legume unknown. Allied to the following species.

*Smooth* *Desmodium*. Pl. 2 to 3 feet.

33 *D. BRACTEOSUM* (D. C. prod. 2. p. 329.) stem erect, glabrous; leaflets oblong-oval, acuminate, glabrous; stipulas subulate; racemes terminal, few-flowered; bracteas ovate, acuminate, striated, glabrous; joints of legume nearly oval.  $\frac{1}{2}$ . H. Native of Pennsylvania and the western parts of Virginia. Hedys. bracteosum, Michx. fl. bor. amer. 2. p. 73. Pursh, fl. amer. sept. 2. p. 482. Flowers largish, purple.

*Var.  $\beta$ , cuspidatum* (D. C. l. c.) leaves with scabrous margins; stipulas ovate-lanceolate; joints of legume ovate, reticulated, glabrous, but with pubescent margins.  $\frac{1}{2}$ . H. Native of shady woods. Hedys. cuspidatum, Willd. spec. 3. p. 1198. Pursh, l. c. Said by Nuttall to be hardly a variety of *D. bracteosum*.

*Large-bracted* *Desmodium*. Fl. July, Aug. Clt. 1806. Pl. 1 to 2 feet.

34 *D. GLABELLUM* (D. C. prod. 2. p. 329.) stem erect, glabrous; leaflets ovate, obtuse, rather glaucous beneath; stipulas small, subulate; panicle terminal; joints of legume triangularly-rhomboid.  $\frac{1}{2}$ . H. Native from Virginia to Carolina, in woods and fields. Hedys. glabellum, Michx. fl. bor. amer. 2. p. 73. Flowers small, purple. Perhaps the same as *D. paniculatum*.

according to Ell. sketch. 2. p. 211. but the leaflets are said to be not half the size, and blunter.

*Glabrous* *Desmodium*. Fl. July, Sept. Pl. 1 to 2 feet.

35 *D. PANICULATUM* (D. C. prod. 2. p. 329.) stem erect, glabrous; leaflets oblong-lanceolate or elliptic, glabrous; stipulas subulate; panicle terminal; joints of legume 4, rhomboid, pubescent.  $\mathcal{U}$ . H. Native from New York to Carolina, in dry woods. Hedys. paniculatum, Lin. spec. 1056.—Pluk. alm. t. 432. f. 6. Flowers small, pale purple.

*Panicle-flowered* *Desmodium*. Fl. July. Clt. 1781. Pl. 2 ft.

36 *D. STRICTUM* (D. C. prod. 2. p. 329.) stem straight, erect, glabrous, simple; leaflets linear-elliptic, glabrous, reticulately veined, glaucous beneath; stipulas subulate; panicle terminal, pedunculate, few-flowered; joints of incurved legume somewhat lunately triangular, hispid.  $\mathcal{U}$ . H. Native of woods, in New Jersey. Hedys. hirtum, Pursh, fl. amer. sept. 2. p. 483. Nutt. gen. amer. 2. p. 109. Flowers purple.

*Straight* *Desmodium*. Pl. 1 to 2 feet.

37 *D. ACUMINATUM* (D. C. prod. 2. p. 329.) stem erect, simple, pubescent, leafy at the apex; leaves on long footstalks; leaflets ample, ovate, long-acuminate, rather pilose on both surfaces, the terminal one roundish-ovate; panicle terminal, on a long peduncle; pedicels rather pilose; joints of stipitate legume 3, bluntly triangular, pubescent.  $\mathcal{U}$ . H. Native from New England to Carolina, and Upper Canada at Lake Huron. Hedys. acuminatum, Michx. fl. bor. amer. 2. p. 72. Pursh, l. c. Hedys. glutinosum, Willd. spec. 3. p. 198. Pursh, l. c. ex Nutt. l. c. Flowers purple.

*Acuminate-leafletted* *Desmodium*. Fl. July, Aug. Clt. 1805. Pl. 1 to 2 feet.

38 *D. NUDIFLORUM* (D. C. prod. 2. p. 330.) stem erect, simple, smoothish; leaflets broad-oval, acuminate; scape panicle, glabrous, radical, higher than the leaf-bearing stems; joints of legume roundish-triangular, smoothish.  $\mathcal{U}$ . H. Native from New England to Carolina, and in Canada about Quebec, in woods and in waste fields. Hedys. nudiflorum, Lin. spec. 1056. Ell. sketch. 2. p. 209. Flowers purple.

*Naked-flowered* *Desmodium*. Fl. Jul. Aug. Clt. 1823. Pl. 1 ft.

39 *D. PAUCIFLORUM* (D. C. prod. 2. p. 330.) stem decumbent, very humble and filiform; leaves on very long petioles; leaflets broad-ovate, acuminate, ciliated with pubescence; stipulas obsolete; racemes terminal, pedunculate, few-flowered, hardly exceeding the leaves.  $\mathcal{U}$ . H. Native of the woods of Ohio, Kentucky, and Tennessee. Hedys. pauciflorum, Nutt. gen. amer. 2. p. 109. Flowers small, white.

*Few-flowered* *Desmodium*. Fl. July, Aug. Clt. 1818. Pl. decumbent.

40 *D. RIGIDUM* (D. C. prod. 2. p. 330.) stem erect, much branched, tomentose; leaflets oblong-ovate, obtuse, reticulated, pubescent; panicle branched; bracteas ovate-lanceolate, acuminate.  $\mathcal{U}$ .? H. Native of Carolina. Hedys. rigidum, Ell. sketch. 2. p. 215. Flowers purple.

*Stiff* *Desmodium*. Pl. 1 to 2 feet.

41 *D. RHOMBIFOLIUM* (D. C. prod. 2. p. 330.) plant pubescent; leaflets rhomboid, obtuse, thickish, reticulately wrinkled; panicle compound; bracteas small; joints of legume 1-3, almost orbicular, veiny and pubescent.  $\mathcal{U}$ .? F. Native of Carolina, near Beaufort. Hedys. rhombifolium, Ell. sketch. 2. p. 215. Flowers purple.

*Rhomb-leafletted* *Desmodium*. Pl.

42 *D. LINEATUM* (D. C. prod. 2. p. 330.) stem creeping, green, and lined; leaves almost sessile; leaflets nearly orbicular, smoothish; racemes elongated, few-flowered; joints of legume lenticular.  $\mathcal{U}$ . H. Native of Carolina. Hedys. lineatum, Michx. fl. bor. amer. 2. p. 72. but not of Lin. Flowers purple.

*Lineated-stemmed* *Desmodium*. Pl. creeping.

43 *D. ROTUNDIFOLIUM* (D. C. prod. 2. p. 330.) stem prostrate, hairy; leaflets orbicular, pilose on both surfaces; stipulas roundish-cordate, reflexed; racemes axillary, and forming a terminal few-flowered panicle; bracteas cordate; joints of legume rather rhomboid, reticulated, and scabrous.  $\mathcal{U}$ . H. Native from Pennsylvania to Carolina, in dry rocky places. Hedys. rotundifolium, Michx. l. c. Pursh, l. c. but not of Vahl. Hedys. canescens, Willd. ex Ell. Flowers purple.

*Round-leafletted* *Desmodium*. Fl. July, Aug. Clt. 1733. Pl. prostrate.

† *North American species not sufficiently known.*

44 *D. PEDUNCULATUM* (D. C. prod. 2. p. 338.) stem herbaceous, erect; leaflets ovate at the base, and acuminate at the apex, smooth, middle one longer than the petiole; racemes axillary, erect, very long.  $\mathcal{U}$ . F. Native of South Carolina. Hedys. pedunculatum, Mill. dict. no. 17. Flowers pale yellow.

*Peduncled* *Desmodium*. Pl. 1 foot.

45 *D. GRANDIFLORUM* (D. C. prod. 2. p. 338.) leaflets oval, veiny, smooth on both surfaces; racemes axillary, erect; flowers large; legumes pendulous, many-jointed.—Native of Carolina. Hedys. grandiflorum, Walt. car. 185. but not of Pall.

*Great-flowered* *Desmodium*. Pl. 2 feet.

46 *D. REPENS* (D. C. prod. 2. p. 338.) stems procumbent; leaflets obcordate; racemes lateral.  $\mathcal{U}$ . H. Native of Virginia. Hedys. repens, Lin. spec. 1056.—Dill. hort. elth. 172. t. 142. f. 9. ex Lin. but Dillenius's plant is a native of the East Indies.

*Creeping* *Desmodium*. Pl. creeping.

\* \* *Mexican species.*

47 *D. ALAMANI* (D. C. prod. 2. p. 330.) stem erect, angular, smoothish, branched; leaflets ovate, acute, hardly pubescent; stipulas lanceolate, acuminate, spreadingly reflexed; racemes terminal; pedicels twin; bracteas lanceolate, acuminate, deciduous; lower segment of the calyx elongated.  $\mathcal{U}$ . G. Native of Mexico. Hedys. geminiflorum, and perhaps Hedys. mucronatum, Moc. et Sesse, fl. mex. icon. ined. Hedys. Alamani, Spreng. syst. append. p. 291. Flowers purple. Young legume 4-5-jointed, rather hoary.

*Alaman's* *Desmodium*. Pl. 1 to 3 feet.

48 *D. STIPULACEUM* (D. C. prod. 2. p. 330.) stem erect, branched, pilose; leaflets ovate, rather obtuse; stipulas horizontal, obliquely ovate-lanceolate, acuminate, ciliated; stipels large; racemes terminal, somewhat panicle.  $\mathcal{U}$ . G. Native of Mexico, on the mountains. Hedys. stipulaceum, Moc. et Sesse, fl. mex. icon. ined. Flowers purple.

*Large-stipuled* *Desmodium*. Fl. July, Aug. Clt. 1824. Pl. 1 to 2 feet.

49 *D. INFRACTUM* (D. C. prod. 2. p. 330.) stem nearly erect, rather angular, bent at the leaves; leaflets ovate, acute, puberulous as well as the petioles and peduncles; stipulas ovate, acute; racemes axillary, simple; joints of legume 2, semi-orbicular, glabrous.  $\mathcal{U}$ . G. Native of Mexico, on the mountains. Hedys. biarticulatum, Moc. et Sesse, fl. mex. icon. ined. but not of Lin. Hedys. infractum, Spreng. syst. append. 290. Flowers violaceous.

*Bent-stemmed* *Desmodium*. Pl. 1 to 2 feet.

50 *D. APARINES* (D. C. prod. 2. p. 330.) stem erect, rough from crowded hairs, which are hooked at the apex; leaflets oblong, rather pilose, painted with white above and pale beneath; racemes terminal.  $\mathcal{U}$ . G. Native of Mexico. Hedys. Aparines, Link. enum. 2. p. 247. Hedys. ramosum, H. W. no. 13789. ex Schlecht. et Cham. in Linnæa. 5. p. 586. Leaflets sometimes roundish. Flowers purple.

*Clearer* *Desmodium*. Fl. June, Jul. Clt. 1823. Pl. 1 to 2 ft.

51 *D. CINE'REUM* (D. C. prod. 2. p. 330.) branches clothed

with white tomentum; leaflets elliptic, rather mucronate, having parallel veins, clothed with hoary silky tomentum on both surfaces; racemes elongated; joints of legume 1-5, deltoid, semi-orbicular, clothed with soft canescent pubescence. *h. S.* Native between Acapulco and the city of Mexico, near Mascala and Chilpacingo, Hedys. cinereum, H. B. et Kunth, nov. gen. amer. 6. p. 526. Flowers purple.

*Cinereous Desmodium.* Fl. Jul. Aug. Clt. 1820. Sh. 1 to 2 ft.

52 *D. SEROTINUM* (D. C. prod. 2. p. 338.) stem herbaceous; leaflets elliptic, obtuse, pubescent beneath as well as the petioles; racemes terminal, simple. *U. G.* Native of Mexico, near Jalapa. Hedys. serotinum, Willd. enum. p. 777.

*Late-flowering Desmodium.* Pl. 1 foot.

53 *D. Plicatum* (Schlecht. et Cham. in Linnæa. 5. p. 585.) stem erect, terete, clothed with retrograde canescent tomentum upwards, but below with dense canescent pubescence; leaves on short petioles; leaflets oblong-elliptic, rather retuse and mucronate at the apex, pubescent above and tomentose beneath; stipulas and stipels ending in a long acumen each; spikes paniced; flowers in fascicles; bractæas very narrow and very acute, exceeding the calyx; legumes tomentose, with a few, usually 3-4, complicated joints. *h. G.* Native of Mexico, in fields, between Misantla and Colipa. The whole plant is of a yellowish-cinereous colour. Corolla violaceous. Habit of *Hedys. cajanifolium*, H. B. et Kunth. Hedys. multiflorum, H. W. no. 13797. et Schlecht. et Cham. l. c.

*Plicate-podded Desmodium.* Shrub 2 feet.

\*\*\* South American and West Indian species. *Hedysarum*, Swartz, fl. ind. occid. 3. p. 1263. H. B. et Kunth, nov. gen. amer. 6. p. 517.

54 *D. UNCINATUM* (D. C. prod. 2. p. 331.) stem shrubby, climbing, rough from hairs, which are hooked at the apex; leaflets ovate, villous, painted with white above; racemes terminal. *h. S.* Native of the Caraccas. Hedys. uncinatum, Jacq. hort. schœnb. 3. t. 298. Flowers violaceous.

*Hooked-haired Desmodium.* Shrub cl.

55 *D. CÆRULEO-VIOLEACEUM* (D. C. prod. 2. p. 331.) stems shrubby, terete, diffuse, and are as well as the leaves clothed with villous pubescence; leaflets elliptic; stipulas lanceolate-subulate, ciliated; racemes terminal, capitate; legumes scabrous, pilose. *h. S.* Native of Guiana. Hedys. cæruleo-violaceum, Meyer. esseq. 246. Calyx 5-parted, with lanceolate-subulate lobes. Corolla bluish violet.

*Bluish-violet-flowered Desmodium.* Shrub 1 to 2 feet.

56 *D. MOLLICULUM* (D. C. prod. 2. p. 331.) stems diffuse, clothed with soft pili as well as the petioles and peduncles; leaflets pilose on both surfaces, terminal one rhomboid-orbicular, lateral ones roundish-elliptic, mucronate; racemes loose-flowered, young legumes with 2 hispid joints. *h. S.* Native of South America. Hedys. molliculum, H. B. et Kunth, nov. gen. amer. 6. p. 512. *Heteroloma lanatum*, Desv. ined. Flowers purple. Allied to *D. lanatum* and *D. rotundifolium*.

*Softish Desmodium.* Shrub diffuse.

57 *D. ARENARIUM* (H. B. et Kunth, nov. gen. amer. 6. p. 527.) stems herbaceous, procumbent; stipulas ovate, acuminately-subulate; leaflets oblong-elliptic, clothed with adpressed pubescence on both surfaces, glaucescent beneath; racemes almost terminal or opposite the leaves, solitary; joints of legume few, hairy. *U. S.* Native on the banks of the Orinoco, near Atures, in sandy places. Flowers violaceous.

*Sand Desmodium.* Pl. procumbent.

58 *D. ? MULTICAULE* (D. C. prod. 2. p. 331.) stems diffuse, slender, suffrutescent at the base, clothed with hoary-velvety down as well as the leaves; leaflets elliptic; stipulas broad, cordate, acuminate; racemes opposite the leaves and about the

same length; pedicels twin; bractæas tern, acuminate. *h. S.* Native of Peru. Root thick, woody. Flowers small. Young legume slender and many-jointed, villous. Perhaps this plant does not belong to the present genus.

*Many-stemmed Desmodium.* Shrub diffuse.

59 *D. ERYTHRINÆFOLIUM* (D. C. prod. 2. p. 331.) stems twiggy, glabrous, angular; leaflets broad-ovate, acuminate, glabrous, pale beneath; stipulas subulate; racemes terminal, somewhat paniced; joints of legume very smooth and dolabriliform, acute at both ends. *h. S.* Native of South America. Hedys. erythrinæfolium, Juss. in Poir. dict. 6. p. 408.

*Erythrina-leaved Desmodium.* Shrub.

60 *D. CARIPENSE*; plant erect; branches, petioles, and peduncles rather hairy; leaflets ovate-oblong, mucronate, ciliated, hairy above but glabrous beneath; racemes elongated; joints of legume 3-5, rhomboid, hairy. *h. S.* Native of Cumana, near Caripe. Hedys. Caripense, H. B. et Kunth, nov. gen. amer. 6. p. 523. *D. Cumanense*, D. C. prod. 2. p. 331. Flowers purple.

*Caripe Desmodium.* Shrub 2 to 3 feet.

61 *D. CAJANIFOLIUM* (D. C. prod. 2. p. 331.) branches densely hairy; leaflets oblong, obtuse, full of parallel veins, glabrous and shining above, but covered with soft silky pubescence and glaucescent beneath; racemes paniced; joints of legume 2-6, semi-orbicular, and puberulous. *h. S.* Native on the banks of the river Magdalena, near Honda, and of the island of Trinidad. Hedys. cajanifolium, H. B. et Kunth, nov. gen. amer. 6. p. 525. t. 598. Flowers bluish.

*Pigeon-pea-leaved Desmodium.* Fl. July, Aug. Clt. 1820. Shrub 2 to 3 feet.

62 *D. WADE* (D. C. prod. 2. p. 331.) stem shrubby; lower leaves simple, the rest trifoliate; leaflets ovate-lanceolate, ciliated; racemes very long, opposite the leaves; pedicels tern; legumes membranous, scabrous, 3-jointed. *h. S.* Native of Brazil, particularly in Para. Hedys. Wade, Vand. in Roem. script. 63. Flowers small, white. *Wade* is the vernacular name of the plant.

*Wade Desmodium.* Shrub 1 to 2 feet.

63 *D. RACEMIFERUM* (D. C. prod. 2. p. 331.) stem terete, slender, hispid; leaflets oval, obtuse, glabrous above, villous beneath, and somewhat marcescent; stipulas and bractæas oblong, acuminate, villous; racemes terminal; pedicels twin at each bractea, which is caducous. *h. S.* Native of Cayenne. Hedys. racemodum, Aubl. guian. 2. p. 774. ? but not of Thunb. Flowers purple.

*Raceme-bearing Desmodium.* Shrub 1 to 2 feet.

64 *D. ANCISTROCARPUM* (D. C. prod. 2. p. 331.) stem frutescent, pilosely-pubescent; leaves glaucous beneath; leaflets of the lower leaves orbicular, of the upper ones elliptic; racemes opposite the leaves, elongated; joints of legume numerous, semi-orbicular, hispid from stiff hairs, which are hooked at their apices. *h. S.* Native of Brazil. Hedys. ancistrocarpum, Ledeb. ind. hort. dorp. suppl. 1823. Flowers small, purple.

*Ancistrum-fruited Desmodium.* Shrub 1 to 2 feet.

65 *D. INCANUM* (D. C. prod. 2. p. 332.) stem suffrutescent, erect, terete, pubescent; leaflets ovate-oblong, hoary beneath; stipulas oblong, acuminate, glabrous; racemes terminal; pedicels solitary; legumes deflexed, puberulous, having semi-orbicular joints. *h. S.* Native of Jamaica and St. Domingo, among bushes and grass. Hedys. incanum, Swartz, fl. ind. occid. 1265. but not of Thunb. Hedys. canescens, Mill. but not of Lin. Hedys. incanum, Lun. hort. jam. *Æschynomene incana*, Meyer.—Plum. ed Burm. t. 149. f. 1. Flowers pale red.

*Hoary Desmodium.* Fl. Jul. Aug. Clt. 1818. Sh. 2 to 3 ft.

66 *D. SUPINUM* (D. C. prod. 2. p. 332.) stems frutescent, decinate, pubescent above; leaflets ovate, clothed with hoary villi beneath; stipulas lanceolate, acuminate, puberulous; racemes

terminal; pedicels solitary; legumes nearly erect, pubescent, with semi-ovate joints.  $\frac{1}{2}$ . S. Native of Jamaica, Guadaloupe, Santa Cruz, among grass, and of the Spanish Main, about Bordonos and Cumana. Hedys. supinum, Swartz, fl. ind. occid. 1264. H. B. et Kunth, nov. gen. amer. 6. p. 524. but not of Vill. nor Pall. *Æschynomene spicata*, Poir. 4. p. 452. ex herb. mus. par. D. Cumanense, Willd. herb.—Sloane, hist. jam. 1. t. 118. f. 2. Flowers small, bluish purple. Perhaps the plant of Kunth is distinct from that of Swartz.

*Supine Desmodium*. Fl. July, Aug. Clt. 1816. Sh. trail.

67 D. TORTUOSUM (D. C. prod. 2. p. 332.) stem erect, herbaceous, terete, pubescent, suffrutescent at the base; leaflets elliptic, smoothish; stipulas much acuminate; racemes axillary, elongated, loose; legumes erectish, pubescent, with roundish twisted joints.  $\frac{1}{2}$ . S. Native among bushes on the mountains of Jamaica, Porto Rico, and on the banks of the river Magdalena, near Honda. Hedys. tortuosum, Swartz, fl. ind. occid. 1271. H. B. et Kunth, nov. gen. amer. 6. p. 521.—Sloan. jam. 1. t. 116. f. 9. Flowers pale blue.

*Var.  $\beta$ , hirtellum* (D. C. prod. 2. p. 332.) stem beset with short hooked hairs; leaves rather villous on both surfaces.  $\frac{1}{2}$ . S. Native of Guadaloupe. Perhaps a proper species.

*Twisted Desmodium*. Fl. Jul. Aug. Clt. 1781. Sh. 2 to 3 ft.

68 D. MÔLLE (D. C. prod. 2. p. 333.) stem erect, terete, glabrous; leaflets ovate, attenuated, clothed with soft villi beneath; racemes terminal; pedicels tern; young legumes twisted, puberulous, with rhomboid joints, the ultimate one largest and somewhat orbicular, at length all glabrous.  $\frac{1}{2}$ . S. Native of the islands of Santa Cruz, St. Thomas, and St. Domingo. Hedys. môle, Vahl. symb. 2. p. 83. Flowers purple.

*Soft Desmodium*. Shrub 1 to 2 feet.

69 D. ADSCENDENS (D. C. prod. 2. p. 332.) stem suffrutescent, ascending, terete, pilose; leaflets roundish, pubescent beneath; stipulas lanceolate, falcate; racemes erect, axillary, simple; pedicels solitary; legumes declinate, pubescent.  $\frac{1}{2}$ . S. Native of the West Indies. Hedys. adscendens, Swartz, fl. ind. occid. 1263. but not of Sieb. Flowers small, red. Perhaps many species are confused under this name.

*Var.  $\beta$ , Orinocense* (H. B. et Kunth, nov. gen. amer. 6. p. 520. t. 597.) legumes with 1-3 joints.

*Ascending Desmodium*. Fl. Ju. Aug. Clt. 1818. Sh. 1 to 2 ft.

70 D. CÆRULEUM; stem terete; branches declinate, ascending, pilose; leaflets roundish, pubescent beneath, mucronate, somewhat emarginate; stipulas rather falcate; racemes simple, erect, axillary, many-flowered.  $\frac{1}{2}$ . S. Native of Brazil. D. adscendens var.  $\beta$ , cœruleum, Lindl. bot. reg. 815. D. C. prod. 2. p. 332. Flowers large, blue. Stamens monadelphous according to the figure.

*Blue-flowered Desmodium*. Fl. June, Aug. Clt. 1818. Sh. 1 to 2 feet.

71 D. LIMENSE (Hook, bot. misc. 2. p. 215.) stem erect, furrowed, hairy; leaves on long stalks; leaflets smoothish above, and covered with adpressed hairs beneath; racemes long, terminal, and axillary; bractæas ovate, acuminate, silky; legumes flexuous, with 5-8 oval, hairy, scabrous joints.  $\frac{1}{2}$ . S. Native of Peru, near Lima.

*Lima Desmodium*. Shrub 1 to 2 feet.

72 D. TRIGONUM (D. C. prod. 2. p. 332.) stem herbaceous, scandent, triquetrous, hairy; leaflets ovate, acute, hairy; racemes terminal, very long; legumes twisted, hispid, and inflexed.  $\frac{1}{2}$ . S. Native of Jamaica, in shady bushy places. Hedys. trigonum, Swartz, fl. ind. occ. 1267. Hedys. triphyllum, P. Browne, jam. 301. f. 7. Hedys. intortum, Mill. dict. Hedys. adhærens, Vahl. symb. 2. p. 82. Flowers large, pale red or bluish.

*Trigonal-stemmed Desmodium*. Fl. July, Aug. Clt. 1733. Pl. climbing.

73 D. OBLONGIFOLIUM (D. C. prod. 2. p. 332.) stems herbaceous, diffuse, terete, and are as well as the petioles clothed with rough villi; stipulas scarious, ovate, acuminate; leaflets ovate-oblong, acuminate, villously pubescent; peduncles almost radical, elongated, loosely racemose at the apex; lower pedicels twin.  $\frac{1}{2}$ . S. Native of Jamaica, on the higher mountains. Hedys. oblongifolium, Bert. ined. Flowers purplish-violet. Ovary puberulous, 2-3-jointed.

*Oblong-leaved Desmodium*. Pl. diffuse.

74 D. SPIRALE (D. C. prod. 2. p. 332.) stem herbaceous, climbing, rooting at the base, angular, glabrous; leaflets ovate, glabrous; stipulas subulate; racemes terminal, elongated; pedicels twin or tern; legumes pubescent, spirally twisted.  $\frac{1}{2}$ . S. Native of the south of Jamaica, in shady, arid, bushy places. Hedys. spirale, Swartz, fl. ind. occid. p. 1273. H. procumbens, Mill. dict. Flowers small, greenish yellow. Leaflets marked with a shining spot above, sometimes obtuse and sometimes acuminate, according to Swartz.

*Var.  $\beta$ , stoloniferum* (D. C. prod. 2. p. 333.) leaflets acuminate; stipulas ovate, acute, striated.  $\frac{1}{2}$ .?  $\frac{1}{2}$ .? S. Native of Porto Rico. Hedys. stoloniferum, Poir. dict. 6. p. 421. Perhaps a proper species. Plant creeping and rooting.

*Spiral-podded Desmodium*. Fl. July, Aug. Clt. 1700. Pl. cl.

75 D. TENUELLUM (D. C. prod. 2. p. 333.) stems herbaceous, diffuse, slender, smoothish; leaflets ovate, acute, glabrous, the terminal one twice the size of the rest; stipulas spreading, subulate; racemes terminal; pedicels twin, spreading.  $\frac{1}{2}$ . S. Native of St. Domingo. Hedys. tenellum, Spreng. in herb. Balb. Flowers small, purple.

*Very small Desmodium*. Pl. diffuse.

76 D. TENELLUM (D. C. prod. 2. p. 333.) branches ascending, glabrous; floral leaves simple, the rest trifoliate; leaflets clothed with adpressed pubescence on both surfaces, glaucescent beneath, terminal one ovate-oblong, lateral ones elliptic, acute; racemes loose, rather flexuous; legumes with 2-5 joints, spirally twisted, glabrous, the joints rhomboid.  $\odot$ . S. Native of shady humid places near Caracas. Hedys. tenellum, H. B. et Kunth, nov. gen. amer. 6. p. 522. Nearly allied to *D. tortuosum* and *D. spirale*. Flowers purple.

*Slender Desmodium*. Fl. July, Aug. Clt. 1818. Pl. 1 ft.

77 D. AXILLARE (D. C. prod. 2. p. 333.) stem herbaceous, creeping, and rooting at the joints, rather pubescent; leaflets rhomboid-roundish, pubescent beneath, and reticulately veined; racemes axillary, much longer than the leaves; pedicels 1-3-together; legumes declinate, pubescent, with 2-4 semi-ovate joints.  $\frac{1}{2}$ . S. Native of Jamaica, St. Domingo, and Guadaloupe. Hedys. axillare, Swartz, fl. ind. occ. 1274. Flowers small, of a purplish blood-colour.

*Axillary-flowered Desmodium*. Pl. creeping.

78 D. RÉPTANS (D. C. prod. 2. p. 333.) stems creeping; leaflets obovate-roundish, lateral ones unequal-sided, rounded at both ends, glabrous above, but clothed with canescent pubescence beneath; racemes ascending, on very long peduncles; joints of legume 2, semi-orbicular, hispid.  $\frac{1}{2}$ . S. Native of St. Domingo and of New Granada, in very hot places, on the banks of the river Magdalena, near Nares. Hedys. réptans, Poir. dict. 6. p. 422. H. B. et Kunth, nov. gen. amer. 6. p. 518. Flowers flesh-coloured.

*Creeping Desmodium*. Shrub creeping.

79 D. SCORPIURUS (Desv. l. c.) stems herbaceous, procumbent, rather pilose; stipulas ovate-falcate, apiculated; leaflets obovate-oblong, obtuse, pubescent beneath; racemes opposite the leaves, elongated; joints of legume 4-5, ovate.  $\frac{1}{2}$ . S. Native of Jamaica and St. Domingo. Hedys. scorpiurus, Swartz, fl. ind. occid. p. 1268. Flowers purple.

*Scorpion-tail-like-racemed Desmodium*. Pl. procumbent.

80 D. ASPERUM (Desv. l. c.) stems tetragonal, hispid, fistular;

a little striated, with a circumcised or irregularly ruptured limb. *h. S.* Native of Guadaloupe, and of Cuba about the Havannah. *Melastoma semicrenata*, Rich. in Bonpl. mel. t. 31. *Melastoma acuminata*, Desr. in Lam. dict. 4. p. 54. *Melast. elongata*, Vahl. ecl. 3. p. 16. ex Ser. Petals 5, white. Stamens 10. Ovarium 3-celled.

*Half-crenated-leaved Conostegia.* Tree 20 to 30 feet.

10 *C. TUNICA'TA* (Ser. mss. in D. C. l. c.) glabrous; branches terete; leaves oval-lanceolate, acuminate at both ends, quite entire, triple-nerved, besides the marginal nervules; thyse paniced, terminal, short; flower-bud ovate, irregularly ruptured. *h. S.* Native of Peru, on the Andes. *Melastoma tunicata*, Bonpl. mel. t. 60. Petals 5, white, oval. Anthers not auricled at the base. Berry 5-celled.

*Tunicated Conostegia.* Sh. 4 to 6 feet.

11 *C. PARVIFLORA* (D. C. l. c.) glabrous; branchlets terete; leaves oval, attenuately acuminate, repandly crenated, quintuple nerved; thyse paniced, terminal, with its branches spreading; calyx circumcised. *h. S.* Native of St. Domingo. *Melastoma montanum*, Spreng. syst. 2. p. 296. This species differs from *C. montana* in the leaves being oval, not oblong, crenated, not denticulated, quintuple-nerved, not 3-nerved.

*Small-leaved Conostegia.* Shrub 6 ft.

12 *C. MONTANA* (D. Don, l. c.) smoothish; branchlets tetragonal, clothed with mealy cinereous down; leaves oblong, somewhat denticulated, 3-nerved, besides the marginal nervules, paler beneath; thyse paniced, terminal, having its branches spreading; flower-bud obtuse, cut round in the middle. *h. S.* Native of the high mountains in the south of Jamaica. *Melastoma montana*, Swartz, fl. ind. occ. p. 766. Flowers small. Limb of calyx truncate after opening, ~~unequal~~ with an unequal edge. Petals oblong-obovate, white. Stamens 10-16; stigma rather capitate.

*Mountain Conostegia.* Shrub 6 to 8 feet.

13 *C. MEXICANA* (Ser. mss. ex D. C. l. c.) quite glabrous; branchlets terete; leaves oval-lanceolate, tapering to both ends, denticulated, quintuple-nerved; thyse terminal, paniced, loose; flower-bud ovate-oblong, obtuse, irregularly ruptured. *h. S.* Native in the temperate parts of Mexico. *Melastoma Mexicana*, Bonpl. mel. t. 55. Petals 5, white, oval. Stamens 10; stigma obtuse. Berry 5-celled.

*Mexican Conostegia.* Shrub 6 feet.

14 *C. XALAPE'NSIS* (D. Don, l. c.) branchlets terete, and are, as well as the petioles, panicles, and under side of leaves, clothed with rusty down; leaves lanceolate, acute at both ends, quintuple-nerved, toothed; thyse terminal, paniced, ovate; flower-bud ovate, obtuse at both ends, regularly cut round about in the middle. *h. S.* Native of Mexico, near Xalapa. *Melastoma Xalapensis*, Bonpl. mel. t. 54. Petals 5, oval, white. Stamens 10; stigma obtuse.

*Xalapa Conostegia.* Shrub 5 feet.

15 *C. LUTE'SCENS* (Ser. mss. ex D. C. l. c.) branches quite glabrous, obscurely tetragonal above; leaves ovate-lanceolate, attenuated, glabrous, a little toothed on the outer margin, petiolate, 3-5-nerved; racemes terminal, compound; flowers decandrous; peduncles 3-flowered, the middle flower of the three sessile; calyx ovate, acute, at length truncate; style brownish purple, longer than the corolla and stamens. *h. S.* Native of the Island of Montserrat. *Melastoma lutescens*, Vahl. ecl. fasc. 3. p. 17. but not of Humb. et Bonpl.

*Yellowish Conostegia.* Shrub 2 to 3 feet.

16 *C. GLA'BRA* (D. Don, l. c.) branches nearly terete; leaves oblong, acuminate, somewhat 3-nerved, quite entire, glabrous; panicle terminal; calyx circumcised. *h. S.* Native of the Society Islands. *Melastoma glabra*, Forst. prod. no. 194. Willd. spec. 2. p. 584. The whole shrub quite glabrous, the

branches purplish, the leaves almost one-nerved, from the marginal nerves being confluent. Cymes corymbose, terminal, trichotomous. Flower-bud obovate, obtuse.

*Glabrous Conostegia.* Shrub 4 to 6 ft.

† *Species not described.*

17 *C. HOLOSERICEA* (D. Don, mem. soc. wern. 4. p. 316.) *h. S.* Native of Peru. *Melastoma holosericea*, Pav. in herb. Lamb. but not of Lin.

*Whole-silky Conostegia.* Shrub.

18 *C. CUCULLATA* (D. Don, l. c.) *h. S.* Native of Peru. *Melastoma cucullata*, Pav. in herb. Lamb.

*Cucullate Conostegia.* Shrub.

19 *C. SUPERBA* (D. Don, l. c.) *h. S.* Native of South America. *Melastoma superba*, Bonpl. ined.

*Superb Conostegia.* Shrub.

*Cult.* For culture and propagation see *Melastoma*, p. 764.

LXVIII. DIPLOGENEA (from διπλοος, *diploos*, and γενεα, *genca*, generation). Lindl. in Brande's quart. journ. Oct. 1828. p. 121.

LIN. SYST. *Octándria, Monogýnia*. Calyx with a calyptriform conical deciduous limb. Petals 4, lanceolate, inserted in the fleshy disk which covers the ovary; anthers ovate, bicalcarate at the base, opening by one pore at the apex. Ovary adnate to the calyx, 4-celled, many seeded, crowned by the large fleshy disk. Style falcate, clavate. Stigma simple.—A smooth parasitical shrub, almost with the habit of *Viscum*. Branches fleshy, dichotomous, compressed in the young state. Leaves oblong, retuse, fleshy, 3-ribbed, veinless, filled with oily receptacles between the parenchyma. Flowers small, white, disposed in short axillary racemes. Tube of calyx replete with oily receptacles.

1 *C. VISCOIDES* (Lindl. l. c.) *h. S.* Native of Madagascar at St. Mary's.

*Misseltoe-like Diplogenea.* Shrub.

*Cult.* This plant being parasitical, it should be treated in the same manner as tropical orchideous plants. Cuttings will strike root under a hand-glass.

LXIX. DIPLOCHITA (from διπλοος, *diploos*, double, and χιτων, *chiton*, an outer covering; in reference to the calyx, which is involved by 2 bracteas while in a young state). D. C. prod. 3. p. 176.—Chitonia, D. Don, in mem. wern. soc. 4. p. 317. but not of Mocino.—Fothergilla, Aubl. guian. 1. p. 441. but not of Lin.

LIN. SYST. *Deca-Dodecándria, Monogýnia*. Calyx adhering to the ovary at the base, when young involved by 2 bracteas, cylindrical, with the throat usually ciliated after flowering; limb bluntly 5-6-toothed, permanent, drawn out beyond the ovary. Petals 5-6, usually oblong. Anthers biauriculate at the base, opening by one pore at the apex. Ovary ovate-oblong, crowned by a callous glabrous disk. Style filiform; stigma peltate or capitate. Capsule dry, indehiscent, 5-celled. Seeds ovate.—Tall South American showy trees or large shrubs, usually clothed with rusty velvety down on the branches, and under side of the leaves. Leaves petiolate, ovate, usually acuminate, obtuse or cordate at the base, smoothish above, with the margins quite entire or crenated. Thyse terminal, with opposite branches. Flowers white or rose-coloured, but in one of the species yellow. Bracteas 2, oval, large, involving the calyx when young, but at length falling off altogether.

\* *Leaves quite entire.*

1 *D. FOTHERGILLA* (D. C. prod. 3. p. 176.) branches compressed when young, but at length becoming terete, and are, as well as the petioles, rachis, and nerves of leaves on the under side, clothed with rufous down; leaves petiolate, oval, acumi-

nated, quite entire, 5-nerved, hardly clothed with velvety white down between the nerves; thyrses panicled, many-flowered; bracteas velvety; calyx quite glabrous in the adult state; stigma dilated, rather peltate. *h. S.* Native of Guadeloupe and Trinidad, Guiana and Brazil. *Melastoma Fothergilla*, Rich. in Bonpl. mel. t. 32. *Melastoma compressa*, Vahl. ecl. 3. p. 23. dec. amer. 2. t. 17. *Fothergilla mirabilis*, Aubl. guian. 1. p. 441. t. 174. Flowers white.

*Fothergill's Diplochita*. Clt. 1815. Tree 10 to 20 feet.

2 *D. FLORIDA* (D. C. l. c.) branches terete, and are, as well as the petioles, rachis, and nerves of leaves on the under side, clothed with almost imperceptible rufous down; leaves petiolate, elliptic-oblong, cuneate at the base, acuminate at the apex, 5-nerved, quite entire, glabrous above, but covered with almost imperceptible white down beneath; thyrses terminal, many-flowered; bracteas coloured under the flower, rather velvety; calyxes quite glabrous, with a truncate, bluntly somewhat 5-toothed border. *h. S.* Native of French Guiana. A shewy tree, called by the natives of Guiana *Bois Yaman*. Trunk tall, usually furrowed. Bracteas rose-coloured, as in *Cornus florida*. Petals, stamens, and style unknown. Berry 3-5-celled. Seeds angular. Perhaps sufficiently distinct from *D. Fothergilla*, and the synonyme of Aublet is perhaps referrible to this plant.

*Florid Diplochita*. Tree 20 to 30 feet.

3 *D. BRACTEATA* (D. C. l. c.) branches rather compressed when young, and are, as well as the panicles, petioles, and under side of leaves, clothed with whitish brown, adpressed, flocky, stellate down; leaves petiolate, oval, acuminate, obtuse at the base, with the margins quite entire, glabrous on the upper surface; panicles terminal, and there are also racemose peduncles rising from the axils of the upper leaves; calyx tubular, not striated; petals glabrous. *h. S.* Native of Brazil, near Coari, in marshy fields. *Melastoma bracteatum*, Mart. et Schrank, mss. Like *D. Fothergilla*, but differs in the margins of the leaves being quite entire, in the calyxes being tomentose, and in the stigmas not being dilated.

*Bracteate-flowered Diplochita*. Shrub 10 to 20 feet.

4 *D. MUCRONATA* (D. C. prod. 3. p. 177.) branchlets somewhat compressed, at length terete, and are, as well as the petioles, panicles, and under side of leaves, densely clothed with rufous stellate down; leaves petiolate, broadly oval, abruptly acuminate, almost entire, quite glabrous above, 5-nerved; thyrses somewhat panicled, rising from the top of the branches in an umbellate manner; bracteas and calyxes tomentose; petals 5-6, oblong; stigma dot-formed. *h. S.* Native of French Guiana. *Melastoma mucronata*, Desr. in Lam. dict. 4. p. 47. Rich. in Bonpl. mel. t. 18. Calyx furnished with a ring of hairs under the insertion of the stamens. Ovary toothed at the apex. Berry 4-celled, black. Anthers bluntly auricled at the base. Flowers white.

*Mucronate Diplochita*. Shrub 6 to 10 feet.

5 *D. SWARTZIANA* (D. C. l. c.) branchlets rather terete, and are, as well as the petioles, peduncles, and under side of leaves, clothed with short hoary rufescent stellate down; leaves oblong-oval, abruptly acuminate, 5-7-nerved, quite entire; thyrses straight; bracteas deciduous; calyxes tomentose, bluntly toothed, not ciliated inside. *h. S.* Native of Jamaica. *Melastoma Tamonea*, Swartz, fl. ind. occ. p. 783. *Melastoma Swartziana*, Rich. in Bonpl. mel. t. 33. *Melast. dodecandra*, Desr. in Lam. dict. Petals 5-6, oblong, red. Stigma hardly dilated. This species comes very near to *D. acuminata*, but differs in the want of the ring of hairs under the stamens, and in the ovary not being toothed at the apex.

*Swartz's Diplochita*. Clt. 1815. Shrub 10 to 15 feet.

6 *D. CAUDATA* (D. C. l. c.) leaves broadly elliptic, quite entire, 5-nerved, terminated in a long tail-like point each; flowers

glomerate in panicles. *h. S.* Native of Peru. *Chitonia caudata*, D. Don, in mem. wern. soc. 4. p. 317. but distinct from *Melastoma caudata*, Bonpl.

*Tailed-leaved Diplochita*. Shrub 6 to 10 ft.

7 *D. AUREA* (D. C. l. c.) leaves ovate-lanceolate, acuminate, triple-nerved, quite entire, acute at the base, glabrous on both surfaces; panicle pyramidal, smooth. *h. S.* Native of Peru. *Chitonia aurea*, D. Don, l. c. Flowers golden yellow.

*Golden-flowered Diplochita*. Shrub 6 to 10 ft.

8 *D. BUBALINA* (D. C. l. c.) leaves ovate-lanceolate, toothed, acuminate, 5-nerved, clothed with fulvous tomentum beneath, as well as on the branchlets; panicle many-flowered; calyx clothed with hoary tomentum. *h. S.* Native of Peru. *Melastoma bubalina*, Pav. in herb. Lamb. *Chitonia bubalina*, D. Don, l. c. Leaves often a foot long, and 4 inches broad. Flowers small.

*Buffalo Diplochita*. Shrub 6 to 10 ft.

9 *D. MACROPHYLLA* (D. C. l. c.) leaves cordate-oval, acuminate, crenulate, clothed with fulvous tomentum beneath, as well as on the branches; panicle pyramidal; calyx furrowed. *h. S.* Native of Mexico. *Melastoma macrophylla*, Pav. in herb. Lamb. *Chitonia microphylla*, D. Don, l. c. Leaves a hand or a foot long, and 4-5 inches broad.

*Long-leaved Diplochita*. Shrub 10 feet.

\* \* *Leaves crenated.*

10 *D. LEUCOPHYLLA* (D. C. l. c.) branchlets bluntly tetragonal, and are, as well as the petioles, peduncles, and under side of leaves, clothed with adpressed rufous powdery down; leaves petiolate, obtuse at the base and rather cordate, oval, acuminate, crenately toothed, 5-nerved, glabrous and glaucous above; panicle terminal; calyxes urceolate, and are, as well as the bracteas, densely clothed with white stellate down; petals clothed with white velvety down on the outside. *h. S.* Native of Cayenne.

*White-headed Diplochita*. Tree 10 to 20 feet.

11 *D. SERRULATA* (D. C. l. c.) branchlets compressed, and are, as well as the panicles, petioles, and under side of leaves, densely clothed with short velvety stellate down; leaves petiolate, rather cordate at the base, ovate, acuminate, toothed, 7-nerved, glabrous above; panicle terminal, elongated; branchlets opposite, distant, many-flowered; bracteas and calyxes densely clothed with velvety down; petals 5-6, velvety on the outside; filaments pilose; stigma hardly dilated at the apex. *h. S.* Native of Brazil, in woods. *Melast. lasiopetalum*, Mart. et Schrank, mss. Leaves nearly a foot long, obtuse at the base, and tapering gradually to an acumen at the apex. Calyx white, striated lengthwise. Down on the branches and petioles brown.

*Var. β, latifolia* (D. C. l. c.) leaves broader, cordate at the base, abruptly acuminate. *h. S.* Native of St. Domingo and Cayenne. *Melastoma serrulata*, Rich. herb. *Melast. Balbisianum*, Ser. mss. *Melast. patens*, Spreng. in herb. Balb. but not of Swartz.

*Serrulated-leaved Diplochita*. Shrub 6 to 10 feet.

*Cult.* All the species are fine broad leaved trees and shrubs. Their culture and propagation are the same as for the species of *Melastoma*. p. 764.

LXX. PHYLLOPUS (from *φυλλον*, *phyllon*, a leaf, and *πους*, *pous*, a foot; the pedicels or footstalks bear two leafy bracteas each). D. C. prod. 3. p. 177.

LXX. SYST. *Decandria, Monogynia*. Tube of calyx adnate to the ovary, turbinate campanulate; limb campanulate, with 5 very short teeth; the teeth ciliated with bristles. Petals 5, unguiculate, broadly ovate, somewhat cordate, terminating each in a bristle. Stamens 10, equal. Anthers with long beaks at the apex, and opening by a pore. Ovary adnate to the

calyx. Style cylindrical, rather velvety at the base. Stigma a pruinose dot. Fruit probably baccate, 5-celled. Seeds unknown.—Brazilian shrubs, having the younger branchlets and petioles clothed with rufous adpressed bristles, but at length becoming smooth. Leaves oblong, elongated, acuminate, 3-nerved, quite entire, with a few scattered bristles above, but covered with pale rufous stellate down beneath. Pedicels axillary, 1-flowered, a little longer than the petioles, bearing 2 linear foliaceous bracteas above the middle. Calyx very hispid. Petals purple.

1 P. MARTIUSII (D. C. prod. 3. p. 178.) *h. S.* Native of Brazil at Coari, and at Cupati in the province of Rio Negro, in fields. *Melastoma phyllopus*, Schrank et Mart. mss. Leaves 5-6 inches long, and 1 broad.

*Martius's Phyllopus.* Shrub.

*Cult.* For culture and propagation see *Melastoma*, p. 764.

LXXI. HENRIETTEA (*Caca-Henriette* is the name given to the tree by the natives of Cayenne). D. C. prod. 3. p. 178.

LIN. SYST. *Decandria, Monogynia*. Calyx campanulate, 5-lobed; lobes broad, obtuse. Petals 5, velvety, ovate. Stamens 10; anthers thick, bifid at the base, and ending in a beak at the apex opening by one pore. Style cylindrical, hairy, crowned by an obtuse capitate stigma. Berry juicy, 5-celled. Seeds unknown.—Shrubs, native of Guiana, with nearly terete branches, clothed with adpressed strigose down. Leaves on short petioles, oval, acuminate by a mucrone, triple-nerved, green above, and clothed with velvety down beneath. Peduncles 1-flowered, rising, 3-4 together, from the axils of the fallen leaves. Calyx clothed with rufous villi.

1 H. SUCCOSA (D. C. prod. 3. p. 178.) Leaves bluntly tetragonal, but at length becoming terete, and are as well as the petioles rough from adpressed strigose down; leaves on short petioles, quintuple-nerved, oval, acuminate by a mucrone, quite entire, green above, hairy on the nerves, but the rest of leaf scabrous from stiff bristles, and clothed with roughish rusty down beneath; pedicels 3-4 together, 1-flowered, in the axils of the fallen leaves, rusty; calyx rusty, villous, bluntly 5-lobed. *h. S.* Native of Cayenne, in woods, where it is called by the inhabitants *Caca-Henriette*. *Melastoma succosa*, Aubl. guian. 1. p. 418. t. 162. Calyx obovate-globose. Petals large, ovate, velvety. Anthers large, obtuse and biariculate at the base, but tapering into a 1-pored beak at the apex. Style thick, hardly capitate at the apex. Berry violaceous, but with the pulp red.

*Juicy-berried Henriettea.* Shrub 10 to 12 feet.

† *Doubtful species.*

2 H. ? PATRISIANA (D. C. l. c.) branches nearly terete, and are as well as the petioles and nerves of leaves scabrous from adpressed, reddish strigæ; leaves petiolate, oval, obtuse at the base, acute at the apex, ciliated with bristles, triple-nerved, besides the 2 marginal nervules, glabrous on both surfaces, except on the nerves; pedicels crowded in the axils of the old or fallen leaves, very short, 1-flowered, and are as well as the calyxes clothed with adpressed, rufous down; limb of calyx bluntly 5-lobed; petals lanceolate. *h. S.* Native of Cayenne. Leaves 3 inches long. Flowers small, almost sessile. Adult branches glabrous. Style filiform. Stamens not seen. Berry glabrous, globose. Limb of calyx permanent, incurved.

*Patris's Henriettea.* Shrub 6 to 10 ft.

3 H. ? RAMIFLORA (D. C. l. c.) branches bluntly tetragonal, hispid, but at length becoming glabrous; leaves on short petioles, ovate-lanceolate, acuminate at both ends, entire, 3-nerved, besides the 2 marginal nervules, smooth above, but clothed with roughish rather rusty tomentum beneath; pedicels scattered on the branches beneath the leaves, rather crowded,

1-flowered; calyx urceolate, bluntly 5-toothed; petals ovate. *h. S.* Native of Jamaica, in marshes. *Melastoma ramiflora*, Swartz, fl. ind. occ. p. 775. Flowers flesh-coloured. Anthers sagittate, acuminate. Stigma blunt. Leaves of a golden yellow hue above.

*Branch-flowered Henriettea.* Shrub 6 to 10 feet.

*Cult.* For culture and propagation see *Melastoma*, p. 764.

LXXII. MARUMIA (in honour of the celebrated vegetable physiologist, Martin Van Marum, author of *Dissertationes qua disquiritur quo usque motus fluidorum animalium et plantarum consentiunt*, 4to. Groningen, 1773, and other works). Blum. in bot. zeit. 1831. no. 29. p. 503.

LIN. SYST. *Octandria, Monogynia*. Tube of calyx oblong-ovate, adhering at the base to the ovary, beset with stiff hairs; limb 4-cleft, drawn out beyond the ovary, with the segments oblong-linear and permanent. Petals 4, unequal-sided. Stamens 8, alternate ones shorter; anthers linear, arched, beaked at the apex, and opening by 1 pore, those of the longer stamens constricted at the base, and furnished with a fascicle of bristles; and those of the shorter ones furnished with fewer bristles at the base. Ovary conical in the free part and rather villous. Style filiform, thickest at the base. Stigma a clammy dot. Berry ovate, inclosed in the calyx, 4-celled, many-seeded. Seeds linear-cuneiform, angular.—Sarmentose shrubs. Leaves opposite, petiolate, oblong, somewhat 5-nerved, quite entire, discoloured, glabrous above, but clothed with stellate or lepidotted down beneath as well as on the branches and peduncles. Inflorescence axillary, cymose, or subcorymbose, few or many-flowered. Flowers large, rose-coloured, bibracteate.

1 M. MUSCOSA (Blum. in bot. zeit. 1831. no. 29. p. 504.) leaves somewhat cordate, ovate-oblong, acuminate, clothed with rusty scurfy tomentum beneath; peduncles many-flowered; calyx densely clothed with tomentum, intermixed with soft simple bristles. *h. S.* Native of Java, in mountain woods, where it is called by the natives *Harendong-bulu*. *Melastoma muscosum*, Blum. bijdr. p. 1070. *Melast. ferruginea*, Reinw. ined. Flowers large, rose-coloured.

*Mossy Marumia.* Shrub sarmentose.

2 M. STELLULATA (Blum. l. c. p. 505.) leaves oblong-ovate, rather cordate at the base or roundish, tomentose beneath; peduncles 1-5-flowered; calyx beset with spine-like bristles, which are stellately multifid at the apex. *h. S.* Native of Sumatra and Saloma. *Melastoma stellulatum*, Jack, in Lin. trans. 14. p. 6. Flowers large, rose-coloured.

*Stellate-spined Marumia.* Sh. sarmentose.

3 M. NEMOROSA (Blum. l. c.) leaves somewhat lanceolate, cordate, clothed with rusty, leprous down beneath; peduncles 1-3-flowered; calyx covered with simple bristles. *h. S.* Native of Sumatra and Pulo-Nias. *Melastoma nemorosa*, Jack, in Lin. trans. 14. p. 149. Flowers large, pale red.

*Grove Marumia.* Shrub sarmentose.

4 M. ZEYLANICA (Blum. l. c.) leaves ovate-oblong, rather cordate, bluntly acuminate, scurfy beneath; peduncles usually 3-flowered; calyx clothed with simple bristles. *h. S.* Native of Ceylon.

*Ceylon Marumia.* Shrub sarmentose.

*Cult.* For culture and propagation see *Melastoma*, p. 764. All the species bear showy flowers, and are therefore worth cultivating.

LXXIII. CREOCHITON (from *κρεα*, *crear*, flesh, and *χιτων*, *chiton*, an outer coat; in reference to the outer coat, that is, the bracteas, being fleshy and inclosing the flower-bud, in its young state). Blum. in bot. zeit. 1831. no. 29. p. 506.

LIN. SYST. *Octandria, Monogynia*. Tube of calyx globose, adhering to the ovary; limb short, continuous with the tube,

obsoletely and repandly 4-toothed, permanent. Petals 4, ovate-roundish, oblique. Stamens 8, equal. Anthers oblong, thick, arched, each furnished with a very short connective in front at the base, and terminating in a short, uniporose beak at the apex. Ovarium glabrous. Style thick, quadrangular; stigma small, blunt. Berry dry, globose, crowned by the tube of the calyx, 4-celled. Seeds innumerable, cuneate-oblong, with a linear hylum.—Climbing shrubs, with terete branchlets. Leaves opposite, petiolate, ovate or elliptic-oblong, quite entire, somewhat 5-nerved, quite glabrous above, but rather scurfy beneath. Peduncles axillary and terminal, dilated at the apex, and umbellately many-flowered. Each flower inclosed within two fleshy bracteas before expansion. Flowers large, and rose-coloured.

1 C. PUDIBUNDA (Blum. in bot. zeit. 1831. no. 29. p. 506.) leaves ovate, bluntish, or obtuse at both ends, clothed beneath with scurfy dots; umbels simple, rarely branched, many-flowered. *h. S.* Native of Java, in woods near Kapangdang, at the foot of Mount Salak, where it is called by the natives *Tjalant-jung*. *Melastoma pudibundum*, Blum. bijdr. p. 1071. Flowers large, red.

*Blush Creochiton.* Shrub cl.

2 C. BIRRACTEATA (Blum. l. c. p. 507.) leaves ovate, rather cordate, bluntish, densely clothed with fulvous leprosis tomentum on the nerves beneath, as well as on the branchlets and peduncles; umbels simple, few-flowered. *h. S.* Native along with the preceding species, and where it is called by the natives *Harendong-aroy*. *Melastoma bibracteatum*, Blum. bijdr. p. 1071. Flowers large, red.

*Bibracteate Creochiton.* Shrub cl.

*Cult.* See *Melastoma* for culture and propagation, p. 764. Elegant climbing plants, bearing large showy flowers.

LXXIV. PHYLLAGATHIS (from *φυλλον*, *phyllon*, a leaf, and *αγαθῆ*, *agathis*, a round heap; the flowers are disposed in heaps or heads, surrounded by leaves or bracteas). Blum. in bot. zeit. 1831. no. 29. p. 507.

LIN. SYST. *Octándria*, *Monogýnia*. Tube of calyx oblong, glabrous, adhering to the ovarium at the base; limb drawn out beyond the ovarium, 4-cleft. Petals 4. Stamens 8, equal. Anthers arched, inappendiculate at the base, beaked at the apex, the beak opening by 1 pore? Style long. Berry 4-celled.—Shrub. Leaves opposite, large, roundish, 7-nerved, beset with rusty dots beneath, standing on very long ciliated petioles. Flowers purplish, densely crowded in axillary pedunculate heads, each head involucreted, or surrounded by 5-6 broad cordate-nerved bracteas.

1 P. ROTUNDIFOLIA (Blum. l. c.). *h. S.* Native of Sumatra. *Melastoma rotundifolium*, Jack. in Lin. trans. 14. p. 11.

*Round-leaved Phyllagathis.* Shrub 1 to 2 feet.

*Cult.* For culture and propagation see *Melastoma*, p. 764.

LXXV. LOREYA (dedicated to — Lorey, author of a Flora of Burgundy). D. C. prod. 3. p. 178.

LIN. SYST. *Decándria*, *Monogýnia*. Tube of calyx campanulate, adhering to the ovarium at the very base, and truncate at the apex. Petals 5, ovate, obtuse, rather cordate at the base. Stamens 10; anthers thick, ovate, obtuse, rather gibbous at the base. Ovarium glabrous at the apex. Style filiform; stigma capitate, almost pentagonal. Berry 5-celled. Seeds unknown.—A glabrous, Guiana shrub. Leaves petiolate, oval, triple-nerved, besides the 2 marginal nervules, quite entire. Cymes lateral, many-flowered.

1 L. ARBORESCENS (D. C. l. c.) glabrous; branchlets bluntly quadrangular, at length terete; leaves petiolate, oval-orbicular, obtuse, or mucronate, entire, 5-nerved, 2 of the nerves rising from the middle a little above the base; lateral racemes 7-8-

flowered, cymose; limb of calyx rather truncate; petals 5, rather cordate at the base. *h. S.* Native of French Guiana, in woods, where it is called *Mele* by the inhabitants. *Melastoma arborescens*, Aubl. guian. 1. p. 420. t. 163. Berry yellow, eatable, very like a medlar.

*Arborescent Loreya.* Tree 30 feet.

*Cult.* For culture and propagation see *Melastoma*, p. 764.

LXXVI. MICONIA (in honour of D. Micon, a Spanish botanist). Ruiz et Pav. fl. per. syst. 1. p. 104. prod. p. 60. D. Don, in mem. wern. soc. 4. p. 315. D. C. prod. 3. p. 179.

LIN. SYST. *Decándria*, *Monogýnia*. Tube of calyx adhering to the ovarium; limb short, permanent, 5-toothed; teeth obtuse, furnished with a broad membrane on the inside, usually adpressed and connivent above the ovarium after flowering. Petals 5, obovate, obtuse. Stamens 10; anthers oblong-linear, bluntly and shortly auriculated at the base. Ovarium rather umbilicate at the apex, quite glabrous. Style filiform; stigma obtuse. Capsule baccate, 5-celled. Seeds 3-sided, smooth, with a black linear hylum.—American, branched, smooth, or rather hairy or tomentose shrubs, not as in *Clidemia* hispid. Leaves variable. Flowers in terminal panicles. This genus is perhaps divisible into many genera. Numbers of the species are not well known.

SECT. I. LEIOSPIÆRA (from *λεῖος*, *leios*, smooth, and *σφαῖρα*, *sphaîra*, a sphere; in reference to the globular smooth fruit) D. C. prod. 3. p. 179. Tube of calyx and fruit globose and quite smooth. Flowers crowded, or in 1 series, disposed in a thyse on the ends of the branches.

1 M. RACEMOSA (D. C. prod. 3. p. 179.) branchlets bluntly tetragonal, but at length becoming terete, glabrous, but ciliated at the knots; leaves petiolate, oval, attenuated at the base, acutish at the apex, serrulated, and ciliated with bristles, 3-nerved, besides the marginal nervules, nearly glabrous on both surfaces; thyse panicled, terminal; having the flowers disposed along its branches in 1 row. *h. S.* Native of Guiana, Porto Rico, and Trinidad, in marshy places of woods. *Melastoma racemosa*, Aubl. guian. t. 156. Rich. in Bonpl. mel. t. 27. *Melast. decussata*, Vahl. eel. 1. p. 49. Flowers red.

*Racemose-flowered Miconia.* Shrub 3 to 6 feet.

2 M. BARBIGERA (D. C. l. c.) branches bluntly tetragonal, at length becoming terete, glabrous, ciliated at the knots; petioles elongated, bristly at the apex; leaves lanceolate, acuminate, ciliated with bristles, 3-nerved, besides the marginal nervules, glabrous on both surfaces in the adult state; thyse panicled, terminal, having the flowers disposed in 1 series along its branches. *h. S.* Native of French Guiana. Inflorescence as in *M. racemosa*. Leaves nearly as in *M. ciliata*, but the petioles are about 3-times longer. Flowers white.

*Bearded-petioled Miconia.* Shrub 3 to 6 feet.

3 M. PURPURAESCENS (D. C. l. c.) branches bluntly tetragonal, pilose; leaves petiolate, oblong-lanceolate, acute, serrulately ciliated, pilose; thyse panicled, terminal; having the flowers disposed in 1 series along its branches. *h. S.* Native of Guiana, on the banks of rivulets. *Melastoma purpurascens*, Aubl. guian. t. 154. but not of Swartz. *Melast. purpurea*, Willd. spec. 2. p. 590. but not of Pav. Berry purple. Petals white.

*Purplish Miconia.* Fl. July. Clt. 1817. Sh. 3 to 6 feet.

4 M. SETINODIS (D. C. l. c.) branches terete, glabrous, ciliated with bristles at the knots; leaves petiolate, ovate-oblong, acuminate, ciliately serrated, 3-nerved, besides the 2 marginal nervules, glabrous except the axils of the nerves, which are bearded; thyse terminal, panicled; calyx rather campanulate, bluntly 6-8-toothed. *h. S.* Native of South America, in shady places on Mount Quindiu. *Melastoma setinodis*, Bonpl.

mel. t. 2. Flowers white. Petals 6-8, oval. Anthers blunt, opening by 1 pore at the apex, which is common to the 2 cells.

*Bristle-knotted Miconia.* Shrub 6 feet.

5 *M. CILIATA* (D. C. l. c.) branchlets nearly terete, glabrous; leaves petiolate, oblong-lanceolate, acuminate, serrated, ciliated with bristles, glabrous on both surfaces, 3-nerved, besides the marginal nervules; thyrses terminal, somewhat spicate; flowers crowded in whorls, the whorls distant.  $\frac{1}{2}$ . S. Native of French Guiana, in woods. *Melastoma ciliata*, Rich. in act. soc. hist. nat. par. 1791. p. 109. and in Bonpl. mel. t. 26. *M. purpurascens*, Vahl. ex Rich. Flowers purple.

*Ciliated-leaved Miconia.* Shrub 3 to 6 feet.

6 *M. PILEATA* (D. C. prod. 3. p. 180.) branches tetragonal, and are as well as the petioles and leaves more or less hispid, and ciliated from long stiff bristles; thyrses somewhat spicate, terminal; flowers almost sessile, disposed in crowded whorls; whorls distant.  $\frac{1}{2}$ . S. Native of Brazil, in woods. *Melastoma ciliatum* and *pileatum*, Schrank et Mart. mss. A very variable species, sometimes nearly glabrous, and sometimes very hispid. Flowers always glabrous. Seeds ovoid. Nearly allied to *M. congestiflora*. Bractees in both ciliated, with bristles at the apex.

*Cap Miconia.* Shrub 6 feet.

7 *M. WYDLERIANA* (D. C. in herb. Wydl. no. 225. mem. mel. p. 77.) branches bluntly tetragonal, but at length becoming terete, glabrous, but when young as well as the panicles somewhat tubercularly scabrous from rufous hairs; leaves almost sessile, oval, acuminate, obtuse at the base, and somewhat cordate, quite glabrous above, but dotted from tubercular rufous down beneath; thyrses panicle, terminal; flowers almost sessile, in crowded whorls.  $\frac{1}{2}$ . S. Native of Porto Rico, in the woods. Fruit globose, black.

*Wydl. Miconia.* Shrub 1 to 2 feet.

8 *M. CONGESTIFLORA* (D. C. l. c.) branchlets tetragonal, and are as well as the panicles and petioles quite glabrous; leaves petiolate, oblong, 5-nerved, glabrous on both surfaces, ciliated with long, stiff hairs; thyrses spicate, terminal; flowers crowded, in distant, many-flowered, opposite bundles.  $\frac{1}{2}$ . S. Native of Brazil, in the province of Minas Geraes. *Melast. sessiliflorum*, Mart. herb. but not of Vahl. Calyx hemispherical, with 5 broad, small, permanent lobes. Petals obovate, emarginate. Anthers oblong, opening by 1 pore. Style filiform. Ovary many-celled. Seeds angular.

*Crowded-flowered Miconia.* Shrub 6 feet.

9 *M. BRACHYPODA* (D. C. l. c.) branches bluntly quadrangular, glabrous, villous, and bristly at the knots; petioles short, villous at the apex; leaves oval, attenuated at the base, acute, serrately ciliated, 3-nerved, besides the lateral nervules, pilose on the nerves on both surfaces, and beset with scattered dots of stellate down above; thyrses terminal, spicate, rather continuous.  $\frac{1}{2}$ . S. Native of St. Domingo. *Melastoma crœcum*, from Hispaniola, Spreng. syst. 2. p. 302. exclusive of the synonyms, and the country Peru. Leaves yellowish on the under surface.

*Short-petioled Miconia.* Shrub 6 feet.

10 *M. RUFESCENS* (D. C. l. c.) branchlets bluntly tetragonal, densely clothed with pili; leaves almost sessile, cordate at the base, ovate, crenulated, scabrous, rather tomentose, 5-nerved; thyrses spicate, terminal, densely clothed with pili; flowers crowded in something like whorls; the whorls distant.  $\frac{1}{2}$ . S. Native of Guiana, in fields. *Melastoma rufescens*, Aubl. guian. t. 157. Perhaps belonging to a different section.

*Rufescent Miconia.* Shrub 6 to 9 feet.

SECT. II. *ERIOSPHAERA* (from *ερion*, erion, wool, and *σφαῖρα*, *sphaira*, a sphere; in reference to the flower-bud being globose,

as well as being clothed with tomentum). D. C. prod. 3. p. 180. *Hypoxanthus*, Rich. herb. Flower-bud globose, tomentose. Tube of calyx nearly globose; limb very short. Berry globose. Leaves discoloured, glabrous above and tomentose beneath. Panicle terminal, hoary, with opposite branches, and having the flowers sessile and disposed in a second manner along the branches, rarely crowded at the tops of the branches, or along a nearly simple rachis.

11 *M. FULVA* (D. C. l. c.) branches tetragonal, and are as well as the petioles, panicles, and under side of leaves clothed with whitish, rufescent, adpressed, rather stellate, lepidotted down; leaves opposite, or 3-4 in a whorl, elongated, hardly petiolate, attenuated at the base, and terminating in a long slender acumen at the apex, 3-nerved, glabrous above, with the margins bluntly and repandly crenated; panicle terminal, with its branches opposite or in whorls; rachis tetragonal.  $\frac{1}{2}$ . S. Native of Cayenne. *Melastoma chrysophylla*, Rich. in act. soc. hist. nat. par. 1792. p. 109. but not of Desr. *Melastoma fulva*, Rich. in Bonpl. mel. t. 11. Flower-bud small and globose. Leaves 7-8 inches long and an inch broad. Flowers white.

*Var.  $\beta$ , tinctoria* (Mart. herb. ex D. C. l. c.) branchlets somewhat 2-edged, and are as well as the petioles and under side of leaves clothed with whitish, rufescent, rather stellate, lepidotted, adpressed down; leaves opposite or 3 in a whorl, on short petioles, oblong, tapering to the base, and acuminate at the apex, rather repand, glabrous above in the adult state, 3-nerved, besides the 2 marginal nervules.  $\frac{1}{2}$ . S. Native of Brazil. Flowers and fruit unknown. Allied to *var.  $\alpha$* , but differs in the leaves being much less crenated, and in the branchlets being 2-edged, not tetragonal.

*Fulvous Miconia.* Shrub 4 to 6 feet.

12 *M. LEPIDOTA* (D. C. l. c.) branchlets rather compressed, but at length becoming terete, and are as well as the petioles, panicles, and under side of leaves clothed with rather stellate, small, somewhat rufescent, lepidotted down; leaves petiolate, oval, acuminate, quite entire, 3-nerved, quite glabrous above; panicle many-flowered, terminal, rather loose.  $\frac{1}{2}$ . S. Native of Brazil, at Para and the Rio Negro, in woods. *Melastoma lepidotum*, Schrank et Mart. mss. Leaves not truly lepidotted, but discoloured from almost imperceptible down. Fruit hardly the size of a large mustard-seed. Teeth of calyx obtuse, very short. Seeds angular. Flowers not seen.

*Lepidotted Miconia.* Shrub 2 to 3 feet.

13 *M. ARGYROPHYLLA* (D. C. prod. 3. p. 181.) branches acutely tetragonal, and are as well as the petioles, panicles, and leaves clothed with white stellate down beneath; leaves petiolate, oval, acuminate, quite entire, glabrous above, 3-nerved, besides the marginal nervules; panicle terminal, raceme-formed; fruit globose, somewhat 10-ribbed.  $\frac{1}{2}$ . S. Native of Brazil, at the river Amazon. *Melastoma argyrophylla*, Schrank et Mart. mss. Teeth of calyx 5, short, acute. Seeds 3-sided, smooth. Flowers unknown.

*Silver-leaved Miconia.* Shrub 1 to 2 feet.

14 *M. FALLAX* (D. C. l. c.) branches tetragonal, and are as well as the panicles and under side of leaves clothed with white stellate tomentum; leaves hardly petiolate, oblong, acuminate, coriaceous, quite entire, somewhat 5-nerved, obtuse and somewhat cordate at the base, glabrous and shining above; panicle terminal, elongated, having the flowers sessile and crowded on its branches.  $\frac{1}{2}$ . S. Native of Brazil, in the province of Bahia, in woods at the river Peruagua. Habit almost of *M. holosericea*, but differs in the petioles being shorter, and in the leaves being destitute of dots on the upper surface.

*Fallacious Miconia.* Shrub 6 to 8 feet.

15 *M. STENOSTACHYA* (D. C. l. c.) branches tetragonal, and are as well as the petioles and under side of leaves clothed with

white stellate down; leaves petiolate, oval, acuminate, obtuse at the base, glabrous above, quite entire, 7-nerved, and margined with a slender nerve; panicle terminal, rather spike-formed; having the flowers sessile along its branches. *h. S.* Native of the interior of Brazil. *Melastoma stenostachyum*, Schrank et Mart. mss. This species comes very near *M. holosericea* in the flower-bud, but differs in the nerves of the leaves being 7, not 5, nor glandular on the upper surface.

*Slender-spiked Miconia.* Shrub 2 to 3 feet.

16 *M. FERRUGINATA* (D. C. l. c.) shrubby; branchlets thick, angular, and are as well as the panicles, petioles, and under side of leaves, densely clothed with stellate rather rufescent down; leaves petiolate, oblong, bluntish at both ends, coriaceous, quite entire, 5-nerved, glabrous on the upper surface; panicle terminal, elongated; flowers crowded on the short branches of the panicle; bracteas linear. *h. S.* Native of Brazil, in the provinces of Minas Geraes and Pernambuco. *Melastoma ferrugineum*, Schrank et Mart. mss. Leaves when young clothed with stellate velvety down. Calyx rather truncate, with an obscurely 10-ribbed tube. Petals small, white. Fruit almost globose. Petioles rather angular.

*Var. β, latifolia* (D. C. l. c.) leaves oval-oblong, acutish. *h. S.* Native of Brazil, in the province of Minas Geraes. *Melastoma Plukenetii*, Schrank et Mart. mss.

*Rusty Miconia.* Shrub 6 feet.

17 *M. HERPÉTICA* (D. C. l. c.) branches terete, and are as well as the petioles, panicles, and under side of leaves, as well as on the upper side of young leaves, densely clothed with stellate, rather rufescent, soft down; leaves petiolate, ovate, acuminate, entire, 5-nerved, or almost quintuple-nerved; panicle terminal, spike-formed: having the flowers crowded on its short branches. *h. S.* Native of Brazil, in mountain fields in the provinces of St. Paul and Minas Geraes. *Melast. herpeticum*, Schrank et Mart. mss. Nearly allied to *M. detergibilis*, but certainly distinct. Style longer than the stamens, not shorter as in *M. holosericea*.

*Herpetic Miconia.* Shrub 2 to 3 feet.

18 *M. DETERGIBILIS* (D. C. l. c.) branches terete, and are as well as the panicles, under side of leaves, and upper side of the young leaves, densely clothed with soft, short, velvety tomentum; leaves petiolate, ovate-oblong, somewhat acuminate, entire, obtuse at the base, 5-nerved, at length glabrous above and minutely dotted; panicle terminal: having the flowers sessile, and crowded along its branchlets, and axillary. *h. S.* Native of Brazil, in the province of St. Paul, in elevated fields and woods. *Melastoma detergibile*, Schrank et Mart. mss. Berry violaceous. Perhaps only a variety of *M. holosericea*, but the flowers are crowded on the shorter as well as on the younger branches, not regularly disposed, as in that plant.

*Cleansing Miconia.* Shrub 4 to 6 feet.

19 *M. HOLOSERICEA* (D. C. l. c.) branches terete, and are as well as the petioles, panicles, calyxes and under side of leaves, as well as the upper side when young, densely clothed with soft, velvety tomentum; leaves petiolate, oval-oblong, acute, obtuse and rather cordate at the base, 5-nerved, glabrous above but covered with very minute white dots; panicle terminal: having the flowers sessile and disposed in a secund manner along its branches. *h. S.* Native of the West Indies, Guiana, and Brazil. *Melastoma holosericea*, Lin. spec. 566, but not of Swartz. Bonpl. mel. p. 52. tt. 23, 24. *Melast. albicans*, Swartz, fl. ind. occ. 2. p. 786. ex Smith. Flower-buds and fruit globose. Petals white. Anthers oblong, having their connectives thickish and biauriculate at the base. Branches and leaves usually naked through the summer. Berry 3-4-celled, violaceous. Seeds cuneate, 3-sided.

*Var. α, obtusiuscula* (D. C. l. c. p. 182.) leaves ovate-oblong.

*Var. β, acuminata* (D. C. l. c.) leaves elliptic-oblong, short-acuminate.

*Var. γ, oblongata* (D. C. l. c.) leaves oblong, long-acuminate, somewhat crenulately repand. *Melastoma*, Schrank et Mart. mss. In Brazil, in the province of Goyaz.

*Whole-silky Miconia.* Shrub 3 to 6 feet.

20 *M. ARGENTEA* (D. C. prod. 3. p. 182.) branches angular, hoary; leaves petiolate, ovate, short-acuminate, somewhat denticulated, 5-nerved, quite glabrous above, but white from tomentum beneath; panicles terminal, spreading; flowers very numerous, on short pedicels; calyx acutely 5-toothed. *h. S.* Native of the West Indies, on the Mosquito shore. *Melastoma argentea*, Swartz, fl. ind. occ. 779. but not of Desr.—Sloane, jam. t. 196. f. 1. ex Swartz. Flowers white, decandrous. Berry subglobose.

*Silvery Miconia.* Shrub 6 feet.

21 *M. SERIALIS* (D. C. l. c.) branches terete, and are as well as the peduncles, outside of calyxes, under side of leaves, petioles and nerves on the upper side clothed with soft, white, velvety tomentum; leaves approximate, on short petioles, oblong, acuminate at both ends, triple-nerved, quite glabrous, and shining above; thyse terminal, large, with its branches bifid, and bearing 1 flower in the bifurcation, the rest of the flowers sessile, and disposed in 1 series along the branches. *h. S.* Native of Brazil. A showy species. Lobes of calyx very blunt, glabrous inside.

*Row-flowered Miconia.* Shrub 6 to 8 feet.

22 *M. PIPERICARPA* (D. C. l. c.) branchlets from compressed to terete, and are as well as the petioles, panicles, and under side of leaves clothed with small, white, velvety, stellate down; leaves petiolate, oblong, acuminate, quite entire, triple-nerved, glabrous above; racemes simple, terminal; bracteas setaceous, under the pedicels. *h. S.* Native of Brazil, in woods. *Gallesia pipericarpa*, Mart. herb. Fruit globose, hardly so large as a grain of pepper, a little ribbed. Limb of calyx wanting. Seeds 2-3, smooth, large, obtuse at one end and angular at the other, with a black hylum.

*Pepper-fruited Miconia.* Shrub 2 to 3 feet.

23 *M. MELLINA* (D. C. l. c.) branches nearly terete, and are as well as the rachis and petioles densely clothed with rufous, scaly, branched down; leaves petiolate, oblong, acuminate, attenuated at the base, 3-5-nerved, serrated on the upper part, densely clothed with stellate tomentum beneath, but at length glabrous above; panicles terminal: having the flowers crowded on the branches; lobes of calyx 5, short. *h. S.* Native of Brazil, in the provinces of Minas Geraes and St. Paul, in humid parts of woods. *Melastoma mellinum*, Schrank et Mart. mss. Petioles 3 lines long. Leaves 3 inches long, and an inch broad. Nearly allied to *M. herpética*.

*Honey Miconia.* Shrub 6 to 8 feet.

24 *M. BRACTEOLATA* (D. C. l. c.) branches somewhat tetragonal, and are, as well as the petioles, panicles, and young leaves on both surfaces, but in the adult ones only on the under, clothed with rufous stellate down; leaves petiolate, oblong, acuminate, quite entire, 3-nerved, glabrous on the upper surface in the adult state; thyse spicate, crowded; bracteas linear, much exceeding the flower-bud. *h. S.* Native of South America, between Loxa and Caamarca. Calyx bluntly 5-toothed. Petals 5, white. Capsule glabrous, 3-celled. *Melastoma bracteolata*, Bonpl. mel. t. 62.

*Bracteolate Miconia.* Shrub 4 to 6 feet.

25 *M. LEUCOCARPA* (D. C. l. c.) branches bluntly tetragonal, and are, as well as the panicles and under side of leaves, clothed with very short granular stellate down; leaves almost sessile, broadly ovate, obtuse, coriaceous, quite entire, 5-nerved, glabrous above; panicle terminal, having the flowers sessile, and

crowded along its branchlets. *h. S.* Native of Brazil, in the elevated plains of Champadada Paranan. *Melastoma leucocarpum*, Mart. et Schrank, mss. Branches twisted. Berry white, globose. Seeds 3-sided, nearly globose.

*White-fruited Miconia.* Shrub 6 to 8 feet.

26 *M. ELA'TA* (D. C. l. c.) branches angularly furrowed, clothed with rusty tomentum; leaves petiolate, oblong, acute, serrulately denticulated, 5-nerved, glabrous above, and of an obscure green, but clothed with rusty tomentum beneath; flowers decandrous, panicle crowded, sessile, small, white; calyx rather campanulate, minutely toothed; stigma thickened, depressed; berry minute. *h. S.* Native of Jamaica, on the higher mountains, and others of the West India islands. *Melastoma elata*, Swartz, fl. ind. occ. 2. p. 781. Leaves from half a foot to a foot long.

*Tall Miconia.* Tree 30 to 40 ft.

27 *M. FERRUGINEA* (D. C. l. c.) branches terete; branchlets tetragonal, clothed with rusty tomentum; leaves ovate, acute, obsoletely crenated, and somewhat ciliated, 3-nerved, glabrous above, but clothed with rusty tomentum beneath, as well as the petioles; panicles terminal; flowers small, pedicellate. *h. S.* Native of St. Domingo. *Melastoma ferruginea*, Desr. in Lam. dict. 4. p. 42. Leaves 3 inches long, and 15 lines broad. Corolla rather rose-coloured. Perhaps a variety of the preceding species.

*Ferruginous Miconia.* Shrub 8 to 10 ft.

28 *M. RUBIGINOSA* (D. C. prod. 3. p. 183.) branchlets terete, and arc, as well as the petioles and under side of leaves, densely clothed with rufous down; leaves on short petioles, ovate-lanceolate, somewhat cordate at the base, acuminate at the apex, 5-nerved, or nearly triple-nerved, smooth and shining above; thyse terminal, panicle; calyx globose, with 5 short acutish teeth. *h. S.* Native of South America, on Mount Quindiu. *Melastoma rubiginosa*, Bonpl. mel. t. 47. Berry blue, 3-celled. Petals 5, white. Anthers linear, opening by a pore.

*Rusty Miconia.* Shrub 12 feet.

29 *M. CÆLA'TA* (D. C. l. c.) branchlets terete, woolly; leaves lanceolate, 3-nerved, and as if they were blistered on the upper surface and glabrous, clothed with rusty wool beneath; flowers crowded, almost sessile; calyx globose, with 5 short teeth, quite glabrous; stamens length of corolla; thyse straight, longer than the stamens, crowned by a thickish stigma; berry globose, 4-celled. *h. S.* Native of South America, on the cold mountains of Saragura near Loxa. *M. calata*, Bonpl. mel. t. 6. Flowers white.

*Engraved-leaved Miconia.* Shrub 10 feet.

30 *M. BIGLONERA'TA* (D. C. l. c.) branches terete, and arc, as well as the petioles, rachis, and nerves of leaves, clothed with small rufous velvety stellate down; leaves lanceolate, acute, 3-nerved, besides the marginal nervules, quite entire, reticulated beneath, and covered with rufous velvety down; thyse terminal; flowers almost sessile, crowded in whorls; two of the whorls distant. *h. S.* Native of South America, on Mount Duida, at the source of the Orinoco. *Melastoma biglomerata*, Bonpl. mel. t. 15. Calyx obovate, velvety, with 5 very blunt teeth. Petals 5, white, small. Berry crowned, 4-celled.

*Biglomerate-flowered Miconia.* Shrub 6 to 8 feet.

31 *M. APOSTACHYA* (D. C. l. c.) branches terete; leaves lanceolate, quite entire, 3-nerved, glabrous above, clothed with very fine rufous tomentum beneath; spike terminal, very simple; flowers sessile, decandrous; petals obovate; genitals equal in length to the corolla; anthers rather falcate; berry globose, 3-celled, crowned by the calyx. *h. S.* Native of South America, near the river Orinoco about Atures and Maypures. Leaves like these of *Nerium Oleander*. *Melastoma apostachya*, Bonpl. mel. t. 1. Flowers white.

*Simple-spiked Miconia.* Shrub 4 feet.

SECT. III. *EUMICONIA* (from *eu*, well or good, and *Miconia*; this section contains what are supposed to be the genuine species of the genus). D. C. prod. 3. p. 183. Tube of calyx obovate or turbinate, not globose as in the last section. Flowers not disposed in rows along the branches of the panicle.

\* *Leaves sessile, 5-7-nerved.*

32 *M. IMPETIOLARIS* (D. Don, in wern. soc. mem. 4. p. 315.) branches nearly terete, and arc, as well as the panicles and under side of leaves, clothed with rufous stellate down; leaves sessile, half stem-clasping, ovate, rather cordate at the base, acuminate at the apex, quite entire, 5-nerved, glabrous above; thyse panicle, terminal; flowers sessile; calyx globose, with 5 very short teeth. *h. S.* Native of the West Indies, Guadeloupe, St. Domingo, Jamaica, &c. *Melastoma impetiolaris*, Swartz, fl. ind. occ. p. 788. Rich. in Bonpl. mel. t. 29. *Melast. macrophylla*, Desr. in Lam. dict. 4. p. 44. Berry blue, globose, 3-4-celled. Petals 5, white, orbicular. Anthers bauriculate at the base of the connectives.

*Impetiolar-leaved Miconia.* Clt. 1822. Shrub 4 to 6 ft.

33 *M. IMPETIGINOSA* (D. C. l. c.) branches terete, and arc, as well as the rachis, densely clothed with bristles, intermixed with stellate down; leaves sessile, broadly ovate, acuminate, somewhat crenulated, 5-nerved, scabrous from stellate down on both surfaces, netted, the veins elevated beneath, and impressed above; spikes terminal; flowers sessile, bracteate, crowded in distant opposite fascicles. *h. S.* Native of Brazil, at the Rio Negro. *Melastoma impetiginosum*, Mart. herb. Calyx very villous, with short lobes. Petals small, oval. Anthers long, opening by one pore, each with a slender bauriculate connective. Style filiform. Inflorescence that of *Leandra*.

*Scabby Miconia.* Shrub 4 to 6 feet.

\*\* *Leaves cuneated at the base, almost sessile, triple-nerved.*

34 *M. TOMENTOSA* (D. Don, l. c.) branches terete, and arc, as well as the panicles, calyxes, and under surface of leaves, densely clothed with rufous stellate down; leaves sessile, oval, cuneated at the base, acuminate at the apex, quite entire, glabrous on the upper surface except the nerves, 3-nerved a great way above the base, besides the submarginal nervule; panicle terminal, nearly cylindrical; calyx ovate-urceolate, with 5 erect short permanent ovate lobes. *h. S.* Native of Guiana and Brazil, in woods. *Melastoma tomentosa*, Rich. in act. soc. hist. nat. par. p. 109. Bonpl. mel. t. 16. *Melast. megalophyllum*, Mart. herb. Flowers white.

*Tomentose Miconia.* Tree 14 to 15 ft.

35 *M. BRUNNEA* (D. C. prod. 3. p. 184.) branches bluntly somewhat tetragonal, and arc, as well as the panicles and under surface of leaves, densely clothed with rather bristly short rufous down; leaves almost sessile, ovate, rather cuneated at the base, acutish at the apex, glabrous on the upper surface in the adult state, 3-nerved above the base, besides the submarginal nervule; panicle terminal, with its branches spreading; calyx somewhat urceolate: with its lobes short, obtuse, and cohering. *h. S.* Native of Brazil, in the province of St. Paul, in woods. *Melastoma brunneum*, Mart. herb. Flowers sessile, crowded along the branches. Anthers linear, opening by one pore, tapering to the base. Style filiform. The foliage is like that of *M. tomentosa*.

*Brown Miconia.* Shrub 6 to 10 ft.

36 *M. ALA'TA* (D. C. prod. 3. p. 184.) branches tetragonal, having the angles winged, and arc, as well as the panicles, under side of leaves, and nerves on the upper surface, clothed with short stellate rather scabrous down; leaves sessile, cuneated at

the base, oval, acute, puberulous above from short scattered simple down, triple-nerved; nerves rising from about the fifth part of the length; panicle terminal, much branched; branches opposite. *h. S.* Native of Guiana; and of Brazil, as in Maranhão, provinces of St. Paul and Rio Janeiro. *Melastoma alata*, Aubl. guian. 1. p. 410. t. 158. *Clidemia alata*, G. Don, in Loud. hort. brit. p. 174. Leaves large. Lobes of calyx short, blunt. Style long, filiform. Fruit hardly baccate. Flowers white.

*Var. β, Amazónica* (Schrank, mss.) leaves broadly ovate, abruptly cuneate at the base. *h. S.* Native of Brazil, on the banks of the Amazon.

*Winged-stemmed Miconia.* Shrub 3 to 4 ft.

37 *M. CINCHONAFOLIA* (D. C. l. c.) branches terete, and are, as well as the petioles, nerves of leaves, peduncles, and calyxes, densely clothed with rufous stellate tomentose down; leaves petiolate, oval, quite entire, triple-nerved, glabrous above except on the nerves, but velvety beneath; raceme terminal, simple, spicate; tube of calyx oblong, a little longer than the 5 oblong lobes. *h. S.* Native of Brazil, in dense woods in wet places at the river Tapura. *Melastoma cinchonafolium*, Mart. herb. *M. leucandrum*, Schrank, mss. Leaves 8-10 inches long, and 2-3 broad. Anthers oblong, with hardly evident connectives. Peduncles usually bearing 3 approximate sessile flowers each. Style filiform, longer than the stamens. Petals linear, white. Seeds small, trigonal, with a linear hylum.

*Cinchona-leaved Miconia.* Shrub 6 to 10 feet.

38 *M. SPONDYLANTHA* (D. C. l. c.) branches terete, and are, as well as the petioles, covered with adpressed villi; leaves on short petioles, broad-lanceolate, cuneate at the base, acuminate, villous beneath, but only on the nerves on the upper surface, the rest being beset with scattered pili, quite entire, quintuple-nerved, with the nerves distant; thyse racemose, terminal, nearly simple; peduncles short, very hairy, 3-flowered; tube of calyx globose, bluntly 10-ribbed. *h. S.* Native of Brazil, on the edges of woods, at Ega and Coari; and of French Guiana. *Melastoma spondylanthum*, Mart. herb. Leaves 9-10 inches long. Flowers unknown. Fruit the size of a coriander seed. Seeds numerous, small, trigonal, with a linear hylum.

*Club-flowered Miconia.* Shrub 6 to 10 feet.

39 *M. DISCOLOR* (D. C. l. c.) branchlets compressed, at length terete, when young, as well as on the under side of leaves, beset with silvery scale-like dots; leaves oval-oblong, cuneate, sessile, quintuple-nerved, quite entire, glabrous above; thyse terminal, lepidotted when in a young state, but glabrous in the adult state, as well as the calyxes; fruit ovate, a little striated. *h. S.* Native of Brazil, near Rio Janeiro. This species appears to be intermediate between the second and third sections of the genus, agreeing in the silvery down with *M. argyrophylla*, and in the form of the leaves with *M. tomentosa*.

*Two-coloured-leaved Miconia.* Shrub 4 to 6 ft.

40 *M. PUNCTATA* (D. Don, in soc. wern. mem. 4. p. 315.) branches tetragonal, and are, as well as the peduncles, petioles, and under side of leaves, clothed with small rufous purplish down; leaves on short petioles, oblong-lanceolate, acuminate at both ends, quite entire, triple-nerved, glabrous above, but rusty and dotted beneath; thyse terminal, paniced; calyx globose, usually 5-toothed. *h. S.* Native of the West Indies, in mountain woods. *Melastoma punctata*, Desr. in Lam. dict. 4. p. 50. Rich. in Bonpl. mel. t. 40. Berry 3-celled, few-seeded. Petals 5, white, rather orbicular.

*Dotted Miconia.* Shrub 4 to 8 ft.

\*\*\* *Leaves on short petioles, disposed in whorls.*

41 *M. LONGIFOLIA* (D. C. l. c.) branchlets 8-ribbed, but at

length becoming terete, and when young, as well as the petioles and peduncles, covered with rather scabrous stellate down; leaves on short petioles, oblong, attenuated at both ends, almost triple-nerved, glabrous above, but covered with small dot-like down beneath; panicle terminal, branching, immediately above the ultimate whorl of leaves; its branches angular, also disposed in whorls; calyx rather scabrous from stellate down, with 5 very short teeth. *h. S.* Native of Cayenne, on the banks of rivulets; and of Brazil, in woods at the river St. Francisco. *Melastoma longifolia*, Aubl. guian. 1. p. 432. t. 170. Flowers white.

*Long-leaved Miconia.* Clt. 1817. Shrub 4 to 6 ft.

42 *M. LAMBERTIANA* (D. C. prod. 3. p. 185.) branchlets 8-ribbed, and are, as well as the petioles and peduncles, rather scabrous from scattered stellate down, but at length becoming terete and glabrous; leaves on short petioles, oblong, attenuated at both ends, quite entire, 3-nerved, glabrous above, beset with dots of stellate down beneath; panicle terminal, pedunculate, much branched, with its axis tetragonal, and its branchlets angular and in whorls; calyx scabrous from stellate down, with 5 short hardly evident teeth. *h. S.* Native of the Island of St. Vincent. Anthers linear, bicuriculate at the base, and opening by one pore at the apex. Style filiform. Fruit unknown. This species differs from *M. longifolia* in there being an interval between the ultimate whorls of leaves, and the branches of the panicle, and in the flowers being smaller.

*Lambert's Miconia.* Shrub 4 to 6 ft.

\*\*\* *Leaves petiolate, opposite, 3-5-nerved.*

43 *M. CALVESCENS* (D. C. l. c.) branches nearly terete, and are, as well as the petioles, panicles, and calyxes, white from short crowded stellate down, which at length falls off; leaves petiolate, oval, abruptly and shortly acuminate, crenate, obtuse at the base, triple-nerved, besides the marginal nervules, having the nerves rising near the base; when young velvety, but glabrous in the adult state except the nerves; panicle terminal, dense, many-flowered, having the flowers crowded on its branchlets. *h. S.* Native of Brazil, in the province of Rio Negro. *Melastoma calvescens*, Schrank et Mart. mss. Allied to *M. auriculata*.

*Naked Miconia.* Shrub 4 to 6 ft.

44 *M. ERIOBONTA* (D. C. l. c.) branchlets bluntly tetragonal, and are, as well as the petioles and panicles, clothed with short rather rufescent hoary tomentose down; leaves petiolate, ovate, obtuse at the base, short-acuminate at the apex, quite entire, 3-nerved, besides the two marginal nervules, quite glabrous above, rather purplish on the nerves beneath; thyse terminal, rather racemose, with its branchlets bearing 5 or 6 flowers at the apex; fruit globose, 5-furrowed, pubescent; teeth of calyx 5, short, woolly, conniving above the ovary. *h. S.* Native of Cayenne. Fruit the size of a small pea, probably dry. Seeds angular, with a linear hylum.

*Var. β, oblongifolia* (D. C. l. c.) leaves oblong. *h. S.* Native of Cayenne.

*Hairy-toothed-calyxed Miconia.* Shrub 4 to 6 ft.

45 *M. AURICULATA* (D. C. l. c.) branches terete, and are, as well as the panicles, clothed with rufous stellate down, intermixed with bristles; leaves on short petioles, cuneate at the base, curled, oval-oblong, acuminate, ciliate serrated, scabrous on both surfaces from down, which is for the most part simple, quintuple-nerved, besides the submarginal nervules, having the upper nerves rising a little above the base; panicles terminal, having the flowers crowded on the tops of its branches. *h. S.* Native of Brazil, in the province of St. Paul. *Melastoma auriculatum*, Mart. herb. Calyx hairy, with 5 short blunt lobes. Petals obovate. Anthers linear, bluntly auricled at the base, opening by one pore at the apex. Style filiform, exserted,

rather dilated at the apex, almost funnel-shaped. Leaves 4 inches long, and  $1\frac{1}{2}$  or 2 broad.

*Var. β, thecæformis* (D. C. l. c.) leaves paler beneath; branches less hairy. *h. S.* Native of Brazil, in the province of Bahia. *Melástoma thecæforme*, Schrank et Mart. mss. Leaves a little smaller than those of the species, but similar in form, the branches and panicles less hispid, but more tomentose, without being intermixed by bristles.

*Auricled-anthered Miconia.* Shrub 4 to 6 ft.

46 *M. SEPIARIA* (D. C. l. c.) branches from compressed to terete, and arc, as well as the panicles, whitish from small down, but at length becoming glabrous; leaves hardly petiolate, oval, tapering much to both ends, quintuple-nerved, almost quite entire, glabrous on both surfaces, but with the base of the nerves rather velvety; panicle terminal, oppositely branched; bractæas small; calyx covered with scattered stellate down, with 5 very short teeth. *h. S.* Native of Brazil, in hedges. *Melástoma sepiarium*, Mart. herb. Anthers biauriculate at the base, opening by a pore at the apex.

*Hedge Miconia.* Shrub 4 to 6 ft.

47 *M. COLLINA* (D. C. l. c.) quite glabrous; branchlets rather furrowed, but at length becoming terete; leaves oval, attenuated at the base, acuminate at the apex, triple-nerved, besides the two marginal nervules, with repand margins; panicle terminal, oppositely branched; bractæas small; teeth of calyx 5, obtuse, hardly evident. *h. S.* Native about Porto Rico, in woods on the hills. Petals obovate, small, apparently yellow, spotted with red in the dried state. Anthers linear, opening by one pore, biauriculate at the base. Stigma hardly dilated. *Melástoma acuminata*, Balb. herb. *Melast. parviflora*, Vahl. herb.

*Hill Miconia.* Shrub 4 to 6 ft.

48 *M. MARTISIANA* (D. C. prod. 3. p. 186.) glabrous; branches from tetragonal to terete; leaves petiolate, ovate-lanceolate, acute, coriaceous, quite entire, 3-nerved, besides the marginal nervules, shining above; panicle terminal: with its branchlets opposite and bearing many flowers at their tops, and knotted at their origin; calycine teeth 5, obtuse, very short. *h. S.* Native of Brazil. *Melástoma Martianum*, Schrank, mss. Petals obovate, reflexed. Anthers linear, biauriculate at the base, and opening by one pore at the apex. Style filiform. Stigma hardly dilated. Fruit unknown.

*Martius's Miconia.* Shrub 4 to 6 ft.

49 *M. MAXIMILIANA* (D. C. l. c.) branches from compressed to terete, and arc, as well as the petioles and peduncles, covered with short stellate down, intermixed with a few bristles, but at length becoming glabrous; leaves on short petioles, oval-acuminate, serrulately ciliated, quintuple-nerved, rather bristly on both surfaces, and pale beneath; panicle terminal. *h. S.* Native of Brazil. *Melástoma Maximilianum*, Mart. herb. Calyx beset with scattered stellate down, with 5 broad very short teeth. Petals obovate, yellow when dry. Stigma dilated, rather pilose. Anthers linear, biauriculate at the base, and opening by one pore at the apex.

*Prince Maximilian's Miconia.* Shrub 4 to 6 ft.

50 *M. LOXENSIS* (D. C. l. c.) branches nearly terete, and arc, as well as the petioles, peduncles, and nerves of leaves on the under surface, clothed with thick flocky curled down; leaves petiolate, oval, hardly obtuse at the base, short-acuminate at the apex, setaceously denticulated, 3-nerved, smoothish beneath except on the nerves; thyse panicked, terminal, crowded; calyx almost globose, bluntly and shortly 5-toothed. *h. S.* Native of Peru, in temperate places about Loxa. *Melástoma Loxensis*, Bonpl. mel. t. 43. Berry blue, 3-celled. Style nearly clavate. Petals 5, roundish, white.

*Loxa Miconia.* Shrub 5 ft.

51 *M. UROPHYLLA* (D. C. l. c.) branches terete, and arc, as

well as the petioles, clothed with powdery tomentum; leaves petiolate, oblong, quite entire, triple-nerved, clothed with velvety tomentum beneath, but glabrous above, each terminating in a long narrow taper-point; panicle terminal, many-flowered; tube of calyx globose, 10-ribbed; the limb deciduous; fruit dry, 3-celled, few-seeded. *h. S.* Native of Brazil, in the provinces of Minas Geraes and St. Paul. *Rhéxia caudata*, Schrank et Mart. mss. Flowers unknown. Pericarp very thin, and perhaps adnate to the calyx. Seeds about 15, shining, triangular, with a long linear black hylum.

*Tail-leaved Miconia.* Shrub 1 to 2 ft.

52 *M. PAUCIDENS* (D. C. l. c.) branchlets terete, and arc, as well as the petioles, nerves of leaves on the under side, peduncles, and calyxes, rather velvety, or dotted from scattered small stellate down; leaves oblong, attenuated at the base, acuminate at the apex, with a very few teeth on the margin, smoothish, 3-nerved; thyse panicked, terminal; fruit globose, bluntly 10-ribbed. *h. S.* Native of Para, in Brazil. *Melástoma paucidens*, Schrank et Mart. herb. The serratures are few, and acute at the apex of the leaves.

*Few-toothed-leaved Miconia.* Shrub 4 to 6 ft.

53 *M. CAUDIGERA* (D. C. l. c.) branchlets rather compressed, and arc, as well as the petioles, panicles, and under side of leaves, velvety from very minute stellate down; leaves petiolate, oval, 3-nerved, quite entire, glabrous above, each terminating in a long narrow taper-point; panicles terminal, short, having the flowers crowded on its branchlets. *h. S.* Native of Brazil, in shady places in the province of Bahia, near Sincora. *Melástoma caudatum*, Schrank et Mart. mss. Petals oval-oblong, white. Nearly allied to *M. caudatum*, but differs in the leaves being nearly twice the breadth, and in being smooth above.

*Tail-bearing-leaved Miconia.* Shrub 4 to 6 ft.

54 *M. GUAYAQUILENSIS* (D. Don, in mem. soc. wern. 4. p. 315.) branchlets from tetragonal to terete, and arc, as well as the petioles and calyxes, clothed with purplish rather powdery down; leaves on short petioles, oval, bluntly somewhat cordate at the base, acute at the apex, 5-nerved, a little toothed, glabrous; thyse terminal, panicked; flowers tern, rather aggregate, nearly sessile; calyx bluntly 5-toothed. *h. S.* Native about Guayaquil. *Melástoma Guayaquilensis*, Bonpl. mel. t. 49. Petals 5, oval, white. Anthers bluntly biauriculate at the base. Leaves half a foot long. Berry 3-celled, crowned by the limb of the calyx.

*Guayaquil Miconia.* Shrub 8 to 10 ft.

55 *M. ATTENUATA* (D. C. l. c.) branchlets bluntly tetragonal, and arc, as well as the peduncles and petioles, smoothish; leaves on short petioles, oval-oblong, attenuated at both ends, triple-nerved, besides the 2 fine marginal nervules, quite entire, glabrous on both surfaces; thyse panicked, terminal, with its branchlets spreading; calyx rather velvety; limb with 5 very short teeth. *h. S.* Native of Cayenne. *M. parviflora*, Aubl. guian. t. 171. ? but the flowers are one-half smaller in the figure than in the specimen. Flowers white.

*Var. β, subquintuplinervia* (D. C. l. c.) leaves almost quintuple-nerved; the nerves are more distinct, especially the 2 marginal ones. *h. S.* Native of Berbice. Berry small, globose, bluntly costate; calyx almost truncate, hardly 5-toothed.

*Attenuated-leaved Miconia.* Shrub 4 to 6 feet.

56 *M. CAUDATA* (D. C. prod. 3. p. 187.) branches tetragonal, and arc, as well as the panicles, hardly velvety, even when examined through a lens; leaves petiolate, ovate, long-acuminate, quite entire, 5-nerved; the outer nerves almost marginal, glabrous above, but clothed with adpressed rusty velvety down beneath; panicle terminal, divaricately and oppositely branched; bractæoles small, deciduous. *h. S.* Native of New Granada, between Mariquita and St. Anna. *Melástoma caudata*, Bonpl.

mel. t. 7. Calyx bluntly 5-lobed. Anthers long, falcate. Style hairy at the base; stigma hardly tumid. Flowers rose-coloured. Different from *Chitonia caudata*, D. Don.

*Tailed-leaved Miconia.* Shrub 6 to 12 ft.

57 *M. STAMINEA* (D. C. l. c.) branches compressedly tetragonal, and are, as well as the panicles and young leaves, velvety from short stellate down, but at length becoming glabrous from the down falling off; leaves petiolate, obtuse at the base, oval, acutish, quite entire, 5-nerved, besides the submarginal nervules; branches of the panicle, which is terminal, opposite, 7-9-flowered; bracteas oblong-linear, shorter than the calyx; petals oblong, glabrous; stigma dot-formed. *h. S.* Native of Brazil, in the province of Rio Janeiro, in woods on the mountains. *Melastoma staminea*, Desr. in Lam. dict. 4. p. 53. *Melastoma glabrescens*, Schrank et Mart. mss. Calyx tubular, velvety, with a 5-toothed limb; teeth ovate, acutish. Anthers biauriculate at the base.

*Var. β, oblongata* (D. C. l. c.) leaves oval-oblong. *h. S.* Native of Brazil, in the province of Bahia.

*Long-stamened Miconia.* Shrub 4 to 6 ft.

58 *M. AFFINIS* (D. C. l. c.) branches bluntly tetragonal, and are, as well as the petioles and panicles, rather canescent from almost imperceptible stellate down; leaves oval, obtuse at the base, short-acuminate at the apex, 5-nerved, quite entire, or hardly repand, glabrous above, but beset with scurf on the nerves beneath, and with dot-like down between the nerves; thyse panicled, terminal, with spreading branches; limb of calyx very short, 5-toothed. *h. S.* Native of Cayenne. This species is difficult to distinguish from *M. staminea*, but differs from it, besides the characters given, in the flowers being one-half smaller, in the limb of the calyx being drawn out less, in the petals being oblong and obtuse, and in the fruit being without ribs, and tapering a little to the apex.

*Ailed Miconia.* Shrub 4 to 6 feet.

59 *M. SUBCILATA* (D. C. l. c.) branches bluntly tetragonal, and are, as well as the panicles and leaves, glabrous, or when young covered with rather flocky deciduous down; leaves on long petioles, oval, acuminate, obtuse at the base, 5-nerved, with the margins furnished with a few distant crenulae and ciliae; panicle oblong, terminal; bracteas oblong, small, shorter than the calyx; calyx somewhat obconical, shortly 5-toothed; petals oblong, rather velvety; stigma dot-formed. *h. S.* Native of Brazil, in woods along the banks of the Rio Negro. *Melastoma laevigatum* et *M. procerum*, Mart. et Schrank, mss. but not of Willd. Anthers linear. There is a circle of hairs round the peduncles at the base.

*Subciliated Miconia.* Tr. 12 to 20 ft.

60 *M. CORONATA* (D. C. l. c.) branches acutely tetragonal, and are, as well as the panicles, petioles, and under side of leaves, clothed with powdery down; leaves petiolate, broad-oval, quintuple or septuple-nerved, quite entire, terminating each in a short acumen; panicle terminal, pyramidal; bracteoles small, deciduous; tube of calyx globose, crowned by a 5-toothed limb. *h. S.* Native of South America, on Mount Quindiu. *Melastoma coronata*, Bonpl. mel. t. 56. Petals 5, white, oblong. Stigma rather peltate. Berry size of a small pea.

*Crowned Miconia.* Tree 10 to 20 ft.

61 *M. PENDULIFOLIA* (D. C. l. c.) branchlets terete, and are, as well as the petioles, panicles, and under side of leaves, rather velvety from powdery down; leaves petiolate, ovate-lanceolate, acute, 3-nerved, somewhat denticulated, pendulous, glabrous above; panicle terminal, somewhat racemose; bracteoles small, subulate; calyx with 5 very short teeth. *h. S.* Native of Guadaloupe, in woods. *Melastoma pendulifolia*, Bonpl. mel. t. 35. Petals 5, white, obovate. Anthers linear. Stigma hardly thicker than the style. Ovarium 3-celled.

*Pendulous-leaved Miconia.* Shrub 4 to 8 ft.

62 *M. HAVANE'NSIS* D. C. prod. 3. p. 188.) glabrous; branchlets terete; leaves petiolate, oblong, acuminate, 3-nerved, quite entire, pendulous; panicle terminal, racemose; bracteoles wanting or very small, and deciduous; limb of calyx shortly and bluntly 5-toothed; petals 5, oblong. *h. S.* Native of Cuba, about the Havannah. Very like *M. pendulifolia*, but differs in the margins of the leaves being quite entire, in the petals being oblong, and in the smoothness of the whole plant. Flowers white. Anthers linear. Stigma hardly dilated.

*Havannah Miconia.* Shrub 4 to 6 ft.

63 *M. PYRAMIDALIS* (D. C. l. c.) branchlets compressed, and are, as well as the petioles, panicles, and under side of leaves, but especially on the nerves, clothed with flocky scurfy down; leaves oblong-lanceolate, acuminate, 3-nerved, besides the 2 marginal nervules, somewhat denticulated; thyse panicled, terminal; fruit bluntly ribbed, crowned by the calyx, which is somewhat repand and bluntly 5-toothed. *h. S.* Native of the West India Islands, Guadaloupe, Trinidad, Cuba, &c. *Melastoma pyramidalis*, Desr. in Lam. dict. 4. p. 53. Flowers white. Perhaps the same as *Melastoma acinodendron*, Lin. spec. 558. —Pluk. alm. t. 159. f. 1.

*Var. β, ciliolata* (D. C. l. c.) leaves ciliated at the base, toothed at the apex. *h. S.* Native of Porto Rico, Guadaloupe, and Trinidad. *Melastoma Portoricense*, Spreng. neue. entd. 3. p. 51.

*Var. γ? sphaerocarpa* (D. C. l. c.) leaves toothed, without ciliae; fruit globose, crowned by the 5 lobes of the calyx, without any tube. *h. S.* Native on the banks of the Orinoco. *Melastoma pyramidalis*, Bonpl. mel. t. 21. *Chitonia pyramidalis*, G. Don, in *hort. brit.* p. 174. Perhaps a proper species.

*Pyramidal Miconia.* Clt. 1817. Shrub 4 to 8 ft.

64 *M. NICOTIANÆFOLIA* (D. C. l. c.) branchlets from compressed to terete, and are, as well as the petioles, panicles, and calyxes, clothed with powdery pruinose small down; leaves petiolate, oval, acuminate, denticulated, 5-nerved, glabrous in the adult state; thyse panicled, terminal; limb of calyx bluntly 5-toothed, broader than the tube. *h. S.* Native of St. Domingo. *Melastoma nicotianæfolia*, Desr. in Lam. dict. 4. p. 53. ex herb. mus. par. Bracteoles 2, small, acute, under each flower. Petals 5, oval, obtuse. Anthers linear, curved, obtuse, opening by a pore at the apex, and bluntly biauriculate at the base. Style filiform. Leaves 6 inches long, with the nerves yellow above. Perhaps the *Melastoma acinodendron* of Lin.

*Tobacco-leaved Miconia.* Shrub.

65 *M. FLORIBUNDA* (D. C. l. c.) branches bluntly tetragonal, and are, as well as the petioles, nerves of leaves on the under surface, and calyxes, rather velvety from rusty powdery down; leaves petiolate, oval, acutish at both ends, quite entire, septuple-nerved, glabrous above; panicle terminal, much branched, loose; bracteoles wanting or deciduous; calyx with 5 short teeth. *h. S.* Native of Peru, on the mountains in temperate parts. *Melastoma floribunda*, Bonpl. mel. t. 53. Petals rose-coloured, oval, truncate at the base. Filaments beset with glandular hairs at the apex. Anthers thick. Stigma broadly peltate. Berry 5-celled. From the anthers and the form of the stigma, this plant does not well accord with the other species of this genus.

*Bundle-flowered Miconia.* Tree 20 to 30 ft.

66 *M. LAEVIGATA* (D. C. l. c.) branchlets terete, and are, as well as the petioles and peduncles, rather velvety from short stellate down, but at length becoming glabrous; leaves petiolate, oval, obtuse at the base, acuminate at the apex, ciliate serrated, 5-nerved, glabrous on both surfaces; cyme panicled, trichotomous at the base, terminal; branches of cyme

bid; flowers sessile, secund along the branches, and with a solitary one in each fork; calyx nearly globose, bluntly 10-ribbed, with 5 short obtuse bent in lobes. *h. S.* Native of the West Indies. *Melastoma lævigata*, Desr. in Lam. dict. 4. p. 52. Flower-bud small, nearly globose, velvety. Capsule globose, 5-celled, umbilicate from the calyx, and adhering to it. Seeds ovate, shining, with a basilar black hylum. *Ker. bot. reg. t. 363.* Flowers whitish.

*Smooth Miconia.* Clt. 1815. Shrub 6 to 8 ft.

67 *M. TRICHOTOMA* (Desr. in Lam. dict. 4. p. 53.) branchlets nearly terete, and arc, as well as the petioles and panicles while young, rather velvety from short down, but at length becoming glabrous; leaves petiolate, broadly oval, short-acuminate, 3-5-nerved, glabrous on both surfaces in the adult state; panicle corymbose, trichotomous, many-flowered, much branched; fruit globose, bluntly 10-ribbed. *h. S.* Native of Martinique. *Melastoma trichotoma*, Desr. in Lam. dict. 4. p. 53. Seeds ovate, angular, with a black hylum. A congener of *M. lævigata*. Compare it with *Melastoma nigricans*, Vahl. ecl. 3. p. 26. ex Ser.

*Trichotomous-panicled Miconia.* Shrub 4 to 6 ft.

68 *M. PRÆSINA* (D. C. l. c.) glabrous; branchlets somewhat tetragonal; leaves petiolate, broad-lanceolate, quite entire, triple-nerved, glabrous on both surfaces; thyrses panicled, terminal, with spreading filiform branches; teeth of calyx 5, erect, short, permanent. *h. S.* Native of Jamaica and Hispaniola, in woods. *Melastoma præcina*, Swartz, fl. ind. occ. p. 777. exclusive of the synonyme of Aubl. This plant differs from the figure given by Aublet, now *M. microcarpa*, in the leaves being triple-nerved, not 5-nerved, quite entire, not somewhat denticulated, in being glabrous on both surfaces, not velvety on the under surface, and in the teeth of the calyx being permanent, not deciduous, &c.

*Leek-green Miconia.* Clt. 1817. Shrub 4 to 6 ft.

69 *M. MICROCARPA* (D. C. prod. 3. p. 189.) branchlets bluntly tetragonal, but at length becoming terete, and are, as well as the panicles, petioles, and nerves of leaves on the under surface, velvety from almost imperceptible stellate down; leaves petiolate, ovate-lanceolate, acuminate, somewhat attenuated at the base, 5-nerved, repandly denticulated, glabrous above, but beset with scattered dot-like down between the nerves on the under surface; thyrses panicled, terminal, much branched, loose; fruit globose, bluntly 10-ribbed; limb of calyx deciduous, very short, toothed, truncate. *h. S.* Native of Brazil, in woods in the provinces of Para and Rio Negro; and probably of Guiana, if *M. lævigata*, Aubl. guian. 1. p. 412. t. 59. is referrible to this species, which is most likely the case. Flowers white.

*Small-fruited Miconia.* Shrub 4 to 6 ft.

70 *M. AMBIGUA* (D. C. l. c.) branchlets terete, glabrous? leaves petiolate, oblong-oval, acuminate, acute at the base, 5-nerved, somewhat denticulately serrated, membranous, powdery on the nerves beneath; thyrses terminal, panicled, loose-flowered, powdery; limb of calyx 5-toothed, permanent. *h. S.* Native of South America, in Cumana, at Caripe. *Melastoma ambigua*, Bonpl. mel. t. 25. Petals 5, white, roundish. Berry globose, 3-celled. The teeth of the calyx are connivent above the ovary after flowering.

*Ambiguous Miconia.* Shrub 6 ft.

71 *M. CEANOETHINA* (D. C. l. c.) branchlets from compressed to terete, and are, as well as the petioles, panicles, and nerves of leaves, and both surfaces of leaves while young, clothed with small flocky velvety stellate down; leaves petiolate, ovate-lanceolate, acuminate, obtuse at the base, almost quite entire, glabrous above in the adult state, 3-nerved, besides the 2 marginal nervules; thyrses panicled, terminal; berries globose, usually 10-ribbed, crowned by 5 obtuse conniving teeth. *h. S.*

Native of Guadaloupe, Trinidad, Cuba, &c. Nearly allied to *M. ambigua*. Flowers white.

*Ceanothus-like Miconia.* Shrub 4 to 6 ft.

72 *M. MINUTIFLORA* (D. C. l. c.) quite glabrous; branches nearly terete; leaves petiolate, lanceolate, quite entire, 5-nerved, membranous; thyrses terminal, panicled, loose; calyx short, campanulate, hardly 5 crenate. *h. S.* Native of Cumana, near the monument called Guacharo. *Melastoma minutiflora*, Bonpl. mel. t. 22. Calyx nearly entire. Flowers minute, white; petals roundish. Ovary nearly free, 3-celled. According to Bonpland's figure the nerves are rufescent beneath, and probably from down.

*Minute-flowered Miconia.* Shrub 6 ft.

73 *M. CORIACEA* (D. C. l. c.) branches tetragonal, and are, as well as the petioles and nerves of leaves, beset with simple hairs, which are rather glandular at the apex, intermixed with rough minute fascicles of down; leaves petiolate, oval, callously serrated, coriaceous, terminating in a stiff point, wrinkled, smoothish, with revolute margins; thyrses terminal, panicled, with crowded flowers, having its branches and rachis tetragonal; calyx turbinate, with obtuse permanent lobes, which are furnished with one bristle each on the outside. *h. S.* Native of Guadaloupe, on the top of the Sulphur Mountain. *Melastoma coriacea*, Swartz, fl. ind. occ. p. 790. *Melast. cymbifolia*, Rich. in Bonpl. mel. t. 26. Flowers yellowish. Stigma obtuse. Berry cinereous, 3-celled. Leaves concave beneath and convex above.

*Coriaceous-leaved Miconia.* Shrub 3 to 6 ft.

74 *M. SIEBERI* (D. C. l. c.) quite glabrous; branches tetragonal; leaves petiolate, oval, with stiff points, coriaceous, callously serrated, 5-nerved, flattish; thyrses terminal, panicled, crowded with flowers, having its rachis and branches tetragonal; bractees oblong, membranous, under the branches of the panicle. *h. S.* Native of the island of Trinidad. Sieb. fl. trin. no. 260. Habit of *M. coriacea*, but is distinguished from that plant in the smoothness.

*Sieber's Miconia.* Shrub 4 to 6 feet.

75 *M. LUTESCENS* (D. C. l. c.) branchlets bluntly tetragonal, and are as well as the petioles, nerves of leaves on the under surface, and rachis yellowish; leaves petiolate, oblong, acute at the base, and acuminate at the apex, glabrous above, but clothed with white, deciduous, woolly down beneath when young, 3-nerved, toothed; thyrses terminal, panicled, many-flowered; calyx globose, with 5 very short, acute teeth. *h. S.* Native of Peru, near Loxa, on Mount Saraguro. *Melastoma lutescens*, Bonpl. mel. t. 17. Petals roundish-obovate, white. Anthers opening by 1 pore. Stigma obtuse. Berry globose, 3-celled, crowned.

*Yellowish Miconia.* Shrub 4 to 6 feet.

76 *M. THOMASIANA* (D. C. l. c.) glabrous; branchlets terete; leaves petiolate, oval, bluntish, triple-nerved, with quite entire, rather revolute edges, coriaceous; cymes terminal, trifid at the base, with its branches somewhat racemose; tube of calyx turbinate, covered with scurfy stellate down, with 5 broad obtuse lobes; fruit globose, hispid from a few bristles. *h. S.* Native of the Island of St. Thomas. *Melastoma coriacea*, Juss. in herb. mus. par. Stamens 10; anthers without auricles. Petals 5, oval. Seeds trigonal, cuneated, shining, with a linear concave hylum. Flowers yellowish.

*St. Thomas Miconia.* Shrub 2 to 3 feet.

77 *M. ASTROLASIA* (D. C. prod. 3. p. 190.) branches terete, and are as well as the panicles, under side of leaves, and petioles densely clothed with rufous stellate down; leaves on short petioles, ovate, obtuse at the base, and acute at the apex, quite entire, 5-nerved, beset with dots of stellate down above, but at length becoming smoothish; panicle terminal, much branched. *h. S.* Native of St. Domingo. *Melastoma astrolasion*, Spreng.

neue. entd. 3. p. 63. and syst. 2. p. 296. Flowers small. Branches of panicle disposed in whorls.

*Starry Miconia.* Shrub 4 to 6 feet.

78 *M. LANCEOLATA* (D. C. l. c.) branches somewhat tetragonal, and are as well as the petioles, under side of leaves, and panicles velvety from short, rufous, stellate down; leaves petiolate, oblong-lanceolate, denticulated, 3-nerved; panicles terminal; flowers sessile, on the tops of the branches of the panicle. *h. S.* Native of St. Domingo. *Melastoma lanceolata*, Desr. in Lam. dict. 4. p. 43. Flowers small.

*Lanceolate-leaved Miconia.* Shrub 4 to 6 feet.

79 *M. MACROSTACHYA* (D. C. l. c.) branches nearly terete, and are as well as the petioles, tetragonal rachis, and under side of leaves velvety from rufescent, short, soft down; leaves petiolate, oblong-linear, attenuated at the base, bluntish, but mucronate at the apex, 3-nerved, quite entire, quite glabrous above; thyrses spicate, terminal, very long; flowers crowded, in whorls; tube of calyx obovate, scurfy, with 5 short obtuse lobes. *h. S.* Native of Brazil

*Long-spiked Miconia.* Shrub 4 to 6 feet.

80 *M. PULVERULENTA* (Ruiz et Pav. syst. 1. p. 104.) branches bluntly tetragonal, and are as well as the petioles, panicles, calyxes, and under side of leaves white from soft, scurfy, stellate down; leaves oval, obtuse at the base, 5-nerved, somewhat acuminate at the apex, and rather serrulated, glabrous above in the adult state; thyrses terminal, puffed; flowers with 5-8 petals; tube of calyx turbinate. *h. S.* Native of Peru, in woods. *Pomerculla tomentosa*, Domb. herb. Ovarium glabrous at the base. Calyx drawn out beyond the ovary. Petals 5, obtuse, obovate. Stamens short.

*Powdery Miconia.* Shrub 4 to 6 feet.

81 *M. TRIPLÉNÉRVIS* (Ruiz et Pav. l. c. p. 105.) leaves oblong, triple-nerved, acuminate, quite entire. *h. S.* Native of Peru, on mountains towards Cuchero, and in the tract of Guayabal.

*Triple-nerved-leaved Miconia.* Tree 20 feet.

82 *M. LANUGINOSA* (Ruiz et Pav. l. c.) leaves oblong, 5-nerved, quite entire, bluntly acuminate. *h. S.* Native of Peru, at Cuchero, in groves near Cassape and Cassapillo.

*Woolly Miconia.* Tree 18 feet.

83 *M. EMARGINATA* (Ruiz et Pav. l. c. p. 106.) leaves cordate, emarginate, 5-nerved. *h. S.* Native of Peru, in groves at Chinchao. Ruiz et Pav. fl. per. ined. 4. t. 394.

*Emarginate-leaved Miconia.* Shrub 10 to 18 feet.

*Cult.* For culture and propagation see *Melastoma*. Many of the species are worth cultivating for the sake of their fine foliage, but none of them for their flowers, which are always insignificant.

**LXXVII. OXYMERIS** (from *ὄξυς*, *oxys*, sharp, and *μερίς*, *meris*, a part; in reference to the pointed petals and calycine teeth). D. C. prod. 3. p. 190.

*Lin. syst.* *Decándria, Monogýnia.* Calyx quite glabrous, with an obovate, turbinate tube: and 5 very short, callous teeth. Flower-bud conical. Petals lanceolate, acuminate. Stamens 10, equal; anthers oval-oblong, obtuse, opening by 1 pore at the apex, but tapering to the base: each furnished with a short filiform connective, which is rather bigibbous at the base. Style filiform, crowned by a dot-formed stigma. Ovarium quite glabrous. Capsule baccate, 3-4-celled. Seeds unknown.—Quite glabrous, Brazilian shrubs. Leaves petiolate, oblong, quite entire, 3-nerved. Panicle terminal. Bracteas subulate. Flowers whitish or yellowish.

1 *O. QUINQUE-DENTATA* (D. C. prod. 3. p. 190.) quite glabrous, branched, between terete and compressed, sulcately subtetragonal at the tops; leaves petiolate, oval-oblong, attenuated at both ends, 3-nerved, quite entire; panicle terminal,

beset with small, rather resinous dots; bracteas small, linear; calyx obovate, with 5 short teeth; petals lanceolate, ending in a callous acumen. *h. S.* Native of Brazil, in the province of Minas Geraes. *Melastoma oxypetalum*, Schrank et Mart. mss. Habit of a species of *Gentiana*, and of a yellowish hue when dried.

*Five-toothed-leaved Oxymerys.* Shrub.

2 *O. QUINQUE-NODIS* (D. C. l. c.) quite glabrous; branches bluntly tetragonal or compressed; leaves petiolate, long-lanceolate, acuminate at both ends, quite entire, 3-nerved; panicle terminal; bracteas linear-subulate; tube of calyx globose, with 5 grain-formed callous lobes. *h. S.* Native of Brazil, in woods in the province of Minas Geraes, at Mount Serra da Carassa. *Melastoma quinquenode*, Schrank et Mart. mss. Flowers small, white, numerous. Nodes or grain-formed lobes of calyx yellowish.

*Five-knotted-calyxed Oxymerys.* Shrub.

*Cult.* For culture and propagation see *Melastoma*, p. 764.

**LXXVIII. CREMANIUM** (*κρεμανο*, *kremao*, to suspend; because most of the plants contained in this genus climb on trees). D. Don, in mem. soc. wern. 4. p. 310. D. C. prod. 3. p. 191.

*Lin. syst.* *Decándria, Monogýnia.* Tube of calyx campanulate or obovate, adhering to the ovary; limb permanent, 1-5-toothed. Petals 4-5, obovate. Stamens 10, equal. Anthers short, rather cucate at the base, without auricles; opening by 2 pores at the apex. Style filiform; stigma orbicularly peltate. Capsule baccate, 3-5-celled. Seeds angular or ovate, with a linear hylum.—American, branched shrubs. Leaves petiolate, rather coriaceous, quite entire, or somewhat serrated. Panicle terminal. Bracteas small, at the base of the branchlets. Flowers for the most part white, small, and bractless.—Some of the species of this genus will perhaps, on future investigation, prove to belong to *Miconia*.

\* *Flowers octandrous.*

1 *C. ROTUNDIFOLIUM* (D. Don, mem. soc. wern. 4. p. 311.) stem creeping; branches tomentose; leaves cordate, orbicular, quite entire, green, hispid on both surfaces; flowers usually 4 together, on short pedicels. *h. S.* Native of Peru. Flowers large, white.

*Round-leaved Cremanium.* Shrub creeping.

2 *C. NITIDUM* (D. Don, l. c.) stem rooting; branches glabrous, spreading; leaves ovate, acute, glabrous, shining, with rather winged, toothed margins; racemes glabrous, nodding; filaments beset with glandular hairs. *h. S.* Native of Peru. Flowers white.

*Shining Cremanium.* Shrub creeping.

3 *C. THYRSOIDÉUM* (D. Don, l. c.) stem rooting; branches tomentose; leaves lanceolate, acute, 3-nerved, quite entire, glabrous, shining, pilose on the nerves beneath; flowers drooping, crowded into a compound thyrses. *h. S.* Native of Peru. Flowers white, not half the size of those of *C. nitidum*.

*Thyrsoid-flowered Cremanium.* Shrub creeping.

4 *C. LATIFOLIUM* (D. Don, l. c.) branchlets pilose; leaves ovate, cordate, acute, serrulated, naked, and shining above, but pilose beneath; panicle terminal, many-flowered. *h. S.* Native of Peru. Flowers small, white.

*Broad-leaved Cremanium.* Shrub.

5 *C. VACCINOIDES* (D. Don, l. c. p. 312.) glabrous; branchlets tetragonal, slender; leaves oval, obtuse, quite entire, hardly 3-nerved, the lateral nerves being so slender as hardly to be discernible; racemes solitary, 1-flowered, lower ones axillary; limb of calyx repand, 4-toothed, obtuse. *h. S.* Native of Peru, on the Andes above Caxamarca. *Melastoma vaccinoides*, Bonpl. mel. t. 8. Leaves pale beneath. Petals white, spotted with

yellow. Filaments short, flat. Anthers opening by 2 pores. Berry 3-celled.

*Whortle-berry-like Cremanium.* Shrub 3 to 6 feet.

6 *C. RUBENS* (D. C. prod. 3. p. 191.) quite glabrous; branchlets tetragonal, furrowed; leaves petiolate, ovate-lanceolate, acuminate, denticulate, 3-nerved; panicle terminal, somewhat racemose; branchlets tetragonal, opposite; flowers dioecious, octandrous, and decandrous, crowded. *h. S.* Native of the south of Jamaica, on the hills. *Melastoma rubens*, Swartz, fl. ind. occ. p. 797. Branches blood-red. Berry small, blue. The parts of flowers are quaternary or quinary, but most frequently quaternary. Petals roundish, small, white.

*Reddish-stemmed Cremanium.* Shrub 3 to 6 feet.

7 *C. ELÆODENDRUM* (D. C. l. c.) quite glabrous; branchlets from compressed to terete; leaves petiolate, oblong, elongated, tapering to both ends, triple-nerved, and as if they were appendiculate beneath at the origin of the lateral nerves; panicle terminal, much branched; lobes of calyx 4, obtuse, short. *h. S.* Native of Brazil. Flowers small; petals oval. Anthers narrowed at the base, and opening by 2 wide pores at the apex. Stigma peltate.

*Olive-tree Cremanium.* Shrub 2 to 3 feet.

8 *C. GLANDULOSUM* (D. C. l. c.) branches bluntly tetragonal, clothed with whitish tomentum while young; leaves ovate, 3-nerved, entire, strigose above, and beset with glandular rough hairs beneath; racemes terminal; flowers crowded, almost sessile, octandrous, minute. *h. S.* Native of Jamaica, on the mountains. *Melastoma glandulosa*, Swartz, fl. ind. occ. p. 799.

*Glandular Cremanium.* Shrub 3 to 6 ft.

\* \* *Flowers decandrous*

9 *C. MEDIUM* (D. Don, in mem. wern. soc. 4. p. 313.) stem erect; branchlets pilose; leaves elliptic, acute, serrulate, naked, and shining above, but pilose beneath; thyse compound; flowers drooping. *h. S.* Native of Peru. Flowers small, white.

*Intermediate Cremanium.* Shrub.

10 *C. CALOPHYLLUM* (D. Don, l. c.) stem erect; leaves cuculate-oblong, coriaceous, glabrous, quite entire, marginate, shining above, but feather-nerved, and finely reticulate beneath; panicle terminal, much branched. *h. S.* Native of Peru. *Melastoma obovata*, Pav. in herb. Lam. Leaves like those of a myrtle. Flowers very small, white. Style twice the length of the stamens.

*Beautiful-leaved Cremanium.* Shrub.

11 *C. LAURINUM* (D. Don, l. c.) stem erect; branchlets pilose; leaves lanceolate, obtuse, quite entire, 3-nerved, glabrous above and pilose beneath; panicle racemose; flowers drooping. *h. S.* Native of Peru. Flowers small, white.

*Laurel-like Cremanium.* Tree.

12 *C. CÆRULEUM* (D. Don, l. c.) stem climbing? branchlets very pilose; leaves lanceolate, acuminate, quite entire, 3-nerved, rough above, but very pilose beneath; panicle brachiate, hispid. *h. S.* Native of Peru. *Melastoma cærulea*, Pav. in herb. Lamb. Flowers small, white. Berry small, globose, blue.

*Blue-berried Cremanium.* Shrub cl.

13 *C. CÆLÉSTE* (D. Don, l. c.) stem erect; branchlets powdery; leaves ovate-lanceolate, acuminate, crenulate, 3-nerved, powdery on the under surface; panicle brachiate; flowers glomerate. *h. S.* Native of Peru. *Melastoma cælestis*, Pav. in herb. Lamb. Flowers small, white. Style twice the length of the stamens.

*Sky-blue-berried Cremanium.* Shrub.

14 *C. SERRULATUM* (D. Don, l. c.) stem erect; leaves elliptic-oblong, acute, serrulate, 3-nerved, glabrous; panicle brachiate; flowers glomerate; style about half the length of the

stamens. *h. S.* Native of Peru. *Melastoma serrulatum*, Pav. in herb. Lamb. Flowers small, milk-coloured.

*Serrulate-leaved Cremanium.* Shrub.

15 *C. HISPIDISSIMUM* (D. C. prod. 3. p. 192.) branchlets terete, and are as well as the petioles, peduncles, and calyxes hispid from long, stiff, spreading bristles; leaves petiolate, ovate, short-acuminate, 5-nerved, ciliate, pilose on both surfaces; thyse panicled, terminal; having its branches spreading. *h. S.* Native of Peru. A very showy species. Lobes of calyx feathered by bristles. Petals 5, oval, obtuse, yellow in a dried state. Filaments and style beset with glandular bristles. Anthers arched, obtuse, opening by 2 confluent pores, and ending in 2 short bristles at the base.

*Very-hispid Cremanium.* Shrub 2 to 3 feet.

16 *C. PAPILLOSUM* (D. C. l. c.) branchlets terete, and are as well as the petioles and rachis velvety from rather flocky, short, stellate, crowded down; leaves ovate, bluntish, 7-nerved, ciliate crenulate, beset with bristles above, which are swollen at the base, but reticulate and covered with hairs beneath; panicle terminal, many-flowered; calyx velvety, hardly 5-toothed; stigma peltate; anthers 2-celled? *h. S.* Native of Peru. *Melastoma papillosum*, Desr. in Lam. dict. 4. p. 48.

*Papillose Cremanium.* Shrub 4 to 5 ft.

17 *C. RECLINATUM* (D. C. l. c.) quite glabrous and bushy; branchlets reclinate at the apex; leaves petiolate, oval, 3-5-nerved, quite entire; thyse terminal, few-flowered; calyx campanulate, hardly 5-toothed. *h. S.* Native of Peru, on Mount Saraguro, in temperate places. *Melastoma reclinatum*, Bonpl. mel. t. 48. Petals small, white, obovate. Anthers wedge-shaped, furnished with a simple, membranous appendage behind, and opening by 2 pores at the apex. Stigma capitate, depressed. Berry 3-celled.

*Reclinate-branched Cremanium.* Shrub 3 to 5 feet.

18 *C. QUADRANGULARE* (D. C. l. c.) branches smoothish, tetragonal; leaves petiolate, ovate-lanceolate, acuminate, entire, 3-nerved, stiff, glabrous above and rusty beneath; thyse panicled, terminal, straight, with its branches opposite and angular; calyx ovate, cinereous from stellate down, with its lobes ovate, obtuse, and membranous; stigma capitate. *h. S.* Native of Jamaica, on the mountains. *Melastoma quadrangulare*, Swartz, fl. ind. occ. p. 770. The branches, and probably the peduncles, are clothed with minute velvety down when young. Leaves yellowish above; nerves thick, the lateral ones almost marginal. Anthers opening by 2 pores, according to Swartz.

*Quadrangular-branched Cremanium.* Shrub 3 to 6 feet.

19 *C. GRANULOSUM* (D. C. l. c.) branches bluntly tetragonal, and are as well as the petioles, panicles, and under side of leaves densely clothed with rusty, powdery, velvety, flocky down; leaves petiolate, oblong-oval, with somewhat revolute margins, hardly toothed, 3-5-nerved, glabrous above; panicle terminal: having its branchlets opposite, with the flowers crowded at their tops. *h. S.* Native of New Granada, in shady woods near Ybaguë. *Melastoma granulatum*, Bonpl. mel. t. 12. Limb of calyx 5-toothed, drawn out beyond the ovary; having the teeth spurred on the outside. Petals oval, white. Anthers bearing 2 short auricles at the base, but bluntish and opening by 2 pores at the apex. Stigma capitate. Ovary a little toothed at the apex. Allied to *C. quadrangulare*.

*Granular Cremanium.* Shrub 10 to 15 feet.

20 *C. ASPERGILLARE* (D. C. prod. 3. p. 193.) branchlets terete, and are as well as the petioles, panicles, and under side of leaves clothed with rufous stellate tomentum; leaves on short petioles, oblong-oval, serrulate, 3-nerved, glabrous above; panicle short, thyrsoid; having its branches opposite, and bearing the flowers in tufts at their tops. *h. S.* Native of Quito,

between Delay and Cuenca. *Melastoma aspergillaris*, Bonpl. mel. t. 19. Calyx bluntly 5-toothed. Petals roundish, white. Anthers oval, opening by 2 pores? at the apex. Stigma thickish. Berry 3-celled.

*Roughish Cremanium*. Shrub 3 to 6 feet.

21 *C. LEDIFOLIUM* (D. C. l. c.) branchlets terete, and are as well as the petioles, peduncles, and under side of leaves densely clothed with stellate down; leaves hardly petiolate, oblong, with revolute edges, and hence nearly linear, obtuse, coriaceous, 1-nerved, glabrous on the upper surface, except on the nerve; thyse spike-formed, axillary, and terminal, few-flowered; calyx campanulate, rather velvety, bluntly 5-toothed.  $\frac{1}{2}$  S. Native of Chimborazo. Petals small, obovate. Anthers 2-celled. Stigma hardly dilated.

*Ledum-leaved Cremanium*. Shrub 2 to 3 feet.

22 *C. GLABERRIMUM* (D. C. l. c.) quite glabrous; branches nearly terete; leaves oval or obovate, triple-nerved, quite entire, beset with glandular dots above, each terminating in a very short acumen; panicle terminal; bractees small, linear; calyx globose, with 5 short, acute teeth.  $\frac{1}{2}$  S. Native of Brazil, in woods between Lorena and St. Paul. *Melastoma dimorphum*, Schrank et Mart. mss. Habit of *C. milleflorum*. Dots on leaves, elongated, yellow, small, and scattered. Flowers small, white. Anthers oblong, obtuse, opening by 2 pores at the apex, each furnished with a slender connective. Style dilated and rather tube-formed at the apex.

*Very smooth Cremanium*. Shrub 6 to 8 feet.

23 *C. MINUTIFLORUM* (D. C. l. c.) glabrous, except in the young parts, which are furnished with scattered dots of white flocky down; branches obscurely tetragonal; leaves elliptic-oblong, acuminate, rather serrulated, 3-nerved, besides the marginal nervules; panicle terminal.  $\frac{1}{2}$  S. Native of Brazil, in woods at Capoeira. *Melastoma minutiflorum*, Schrank et Mart. mss. but not of Bonpl. The leaves are yellowish when in a dry state. Anthers oval, obtuse, opening by 2 pores. Style short, dilated at the apex. Flowers small; petals oval. Habit of the following species.

*Minute-flowered Cremanium*. Shrub 4 to 6 feet.

24 *C. MILLEFLORUM* (D. C. l. c.) quite glabrous; leaves petiolate, obovate, short-acuminate, 3-nerved, quite entire at the base, but serrulated in the upper part; panicle terminal, much branched.  $\frac{1}{2}$  S. Native of Brazil, in the province of St. Paul, in marshes. *Melastoma milleflorum*, Schrank et Mart. mss. Branches tetragonal. Leaves  $1\frac{1}{2}$  inch long. Herb yellowish when dried. Flowers hardly the size of those of a *Galium*, white or red. Calyx with a hemispherical tube, and 5 small teeth. Petals obovate, obtuse. Genitals exerted a little; articulation of connective hardly evident. Anthers 10, clavate, truncate, beakless, opening by 2 pores.

*Thousand-flowered Cremanium*. Shrub 2 to 3 feet.

25 *C. OLIGOTRICHUM* (D. C. l. c.) branches bluntly somewhat tetragonal; leaves oval, acute, 3-nerved, besides the marginal nervules, glabrous on both surfaces in the adult state, and very bluntly crenated, ciliated from bristles, which rise from the notches; petioles bearing a few bristles at the apex; panicle terminal, many-flowered.  $\frac{1}{2}$  S. Native of Mexico. The leaves, when young, are covered with scattered, stellate down on the under surface. Petals retuse, nearly emarginate. Calyx dotted, when examined by a lens, with the teeth very short.

*Few-haired Cremanium*. Shrub 4 to 6 feet.

26 *C. TINCTORIUM* (D. C. l. c.) quite glabrous; branches nearly terete, furnished with crowded bristles at the knots; leaves petiolate, oval-oblong, rather acuminate, serrulated, 3-nerved, coriaceous, shining; thyse panicle, terminal, crowded; petals 6, orbicular.  $\frac{1}{2}$  S. Native of Peru. The leaves are yellowish, and the whole shrub is used for dyeing yellow by the

Peruvians. Calyx bluntly 6-toothed. Stamens rather shorter than the petals. Anthers short, cuneate, very blunt, opening by 2 wide pores at the apex. Stigma peltate. Berry or capsule hardly baccate. Seeds ovate, angular, with a linear hilum.

*Dyer's Cremanium*. Shrub 4 to 6 feet.

27 *C. CRUCEUM* (D. C. prod. 3. p. 194.) branches terete, glabrous; leaves petiolate, ovate, a little serrated at the apex, 5-nerved, glabrous, 3 of the nerves are larger than the other two, and bearded at their origin; petioles rather pilose; panicles terminal, trichotomous; calyx turbinate, 5-toothed.  $\frac{1}{2}$  S. Native of Peru. *Melastoma crucea*, Desr. in Lam. dict. 4. p. 55. Spreng. syst. 2. p. 302. exclusive of the variety from Hispaniola.

*Copper-coloured Cremanium*. Shrub.

28 *C. THEEZANS* (D. C. l. c.) quite glabrous; branchlets terete; leaves petiolate, lanceolate-oval, a little toothed, 5-nerved; thyse terminal, having its branchlets crowded with flowers; calyx campanulate, hardly crose.  $\frac{1}{2}$  S. Native of temperate places about Popayan. *Melastoma Theezans*, Bonpl. mel. t. 9. Flowers white, scented in the evening. Petals 5, oval. Anthers opening by 2 pores, and minutely appendiculated at the base. At Popayan the leaves of this plant are infused and drank in place of tea by the inhabitants.

*Tea Cremanium*. Tree 12 to 20 ft.

29 *C. LATECRENATUM* (D. C. l. c.) smoothish; branches nearly terete; leaves petiolate, broad-lanceolate, acuminate, broadly and bluntly crenated, 5-nerved, beset with stellate powdery down on the nerves beneath; panicle terminal, clothed with powdery tomentum; calyx with a globose tube and a 5-toothed deciduous lob.  $\frac{1}{2}$  S. Native of Brazil, in the province of Bahia, in bogs on hills. Very like *Melastoma pyramidale*, Bonpl. t. 21. but the crenæ of the leaves are broad and beardless, not acute and ciliated. *Melastoma pyramidale*, Mart. et Schrank, mss.

*Broad-crenated-leaved Cremanium*. Shrub 3 to 6 feet.

30 *C. INÆQUALIS* (D. C. l. c.) branchlets from compressed to terete, and are as well as the panicles velvety from short, deciduous, stellate down when young, but at length becoming glabrous; leaves petiolate, oblong, acuminate, sharply and unequally serrated, but entire at the base and apex, 3-nerved; panicle terminal, much branched; branches opposite.  $\frac{1}{2}$  S. Native of Brazil, in dark woods in the province of St. Paul. *Melastoma biserratum*, Schrank et Mart. mss. Fruit globose, furrowed, a little larger than a mustard seed. Style short, crowned by an orbicular peltate stigma. Seeds angular.

*Unequal-leaved Cremanium*. Shrub.

31 *C. PUSILLIFLORUM* (D. C. l. c.) branchlets at first rather compressed, but at length terete, and are as well as the petioles and under side of leaves rather scabrous from distant, deciduous tufts of small, stellate down, the rest glabrous; leaves petiolate, oblong, acuminate, membranous, nearly quite entire, 3-nerved, besides the marginal nervules, glabrous; panicle terminal, divaricate, much branched; lobes of calyx 5, short, acute, deciduous.  $\frac{1}{2}$  S. Native of Brazil, in woods. *Melastoma pusilliflorum*, Mart. et Schrank, mss. Flowers small, white. Anthers oblong, obtuse, each with a slender connective. Style filiform. Fruit globose. Seeds smooth, angular.

*Small-flowered Cremanium*. Shrub 2 to 3 feet.

32 *C. ? PANICULATUM* (D. C. l. c.) branchlets compressed, at length terete, and are as well as the petioles and nerves of leaves, when young, rather scabrous from small, distant, stellate tufts of down; the rest glabrous; leaves petiolate, oblong, acuminate, nearly quite entire, almost glabrous, 3-nerved, besides the marginal nervules; panicle terminal, loose, oblong; calyx beset with rather scabrous down: the lobes 5, acute, narrowed, erect, permanent.  $\frac{1}{2}$  S. Native of Brazil, near Villa Rica. Me-

*lástoma paniculatum*, Schrank et Mart. mss. Very like *C. pusilliflorum*. Petals seen but not the genitals.

*Panicle-flowered Cremanium*. Shrub 2 to 3 feet.

33 *C. LIGUSTROIDES* (D. C. l. c.) smoothish, or the parts while young are beset with small, stellate tufts of down; branchlets compressed, but at length becoming terete; leaves on short petioles, rather coriaceous, ovate, hardly acuminate, quite entire, or rather repand at the apex, 3-nerved, besides the marginal nervules; panicle terminal, much branched; lobes of calyx 5, very short, blunt, and deciduous; berry globose. *h. S.* Native of Brazil, in the province of Bahia, among bushes. *Melástoma densifrons*, nitens, ligustrinum, and repandulum, Schrank et Mart. Limb of calyx very short. Petals obovate. Anthers obtuse, opening widely at the top, with the opening separated by a dissepiment into 2 divisions. Stigma capitately peltate. Seeds few, angular.

*Privet-like Cremanium*. Shrub 4 to 6 feet.

34 *C. CINNAMOMIFOLIUM* (D. C. l. c.) quite glabrous; branches bluntly tetragonal, but at length terete; leaves petiolate, oval, or somewhat ovate, acuminate, 3-nerved, quite entire; thyse contracted, terminal, with its branches angular and opposite; teeth of calyx 5, very short, or almost wanting. *h. S.* Native of Brazil. *Melástoma cinnamomifolium*, Mart. herb. but not of Jacq. This species is very nearly related to *C. rubens*, but differs in the flowers being 5-cleft, not 4-cleft, and in the leaves being less attenuated at the base. Stamens seen but not the style.

*Cinnamon-leaved Cremanium*. Shrub.

*Cult.* For culture and propagation see *Melástoma*, p. 764.

LXXIX. BLAKEA (dedicated to M<sup>r</sup>. Blake, of Antigua, by Dr. Patrick Browne, a great promoter of useful knowledge). Lin. gen. no. 810. Juss. gen. 328. D. Don, in mem. wern. soc. 4. p. 323. D. C. prod. 3. p. 195.—*Topòbea*, Aubl. guian. 1. p. 476.—*Valdèria*, Ruiz et Pav. prod. p. 67. t. 11. syst. 1. p. 121.—*Bellùcia*, Neck. elem. 2. no. 833. *Drepanándrum*, Neck. elem. no. 793.?

LIN. SYST. *Dodecándria*, *Monogýnia*. Calyx campanulate, girded by 4-6 broad scales, which are either disposed in a cruciate manner or in 3 series; limb permanent, membranous, 6-lobed or 6-toothed. Petals 6. Stamens 12. Anthers large, concatenated into a ring, obtuse at the apex, and opening by a twin pore, each furnished with a short spur-like process at the base. Capsule baccate, crowned by the calyx, 6-celled. Seeds ovate, angular.—Trees or shrubs. Leaves petiolate, 3-5-nerved, coriaceous, glabrous above and shining, but usually densely clothed with rusty tomentum beneath. Peduncles axillary, terete, 1-flowered, naked, opposite, or solitary, shorter than the leaves, usually clothed with brown tomentum. Flowers large, showy, red.

§ 1. *Calyx 6-lobed, girded at the base by 4, rarely by 6 scales.*

1 *B. TRINE'RVIA* (Lin. spec. 635.) leaves oval-oblong, 3-nerved, glabrous, and shining on both surfaces in the adult state, and when young serrulated; petioles and branchlets clothed with rusty tomentum; peduncles solitary, longer than the petioles; scales longer than the calyx. *h. S.* Native of Jamaica; very common on the Port Royal mountains, along with various species of *Meriania*. Sims, bot. mag. t. 451.—P. Browne, jam. p. 323. t. 35. Roots issuing from the branches and stems. Flowers large, of a rose colour.

*Three-nerved-leaved Blakea*. Fl. June, July. Clt. 1789. Shrub 4 to 8 feet.

2 *B. MEXICANA* (D. Don, in mem. wern. soc. 4. p. 325.) leaves elliptic, acute, 5-nerved, denticulated, pilose beneath;

peduncles usually 3 together; scales longer than the calyx. *h. S.* Native of Mexico. Flowers large, rose-coloured.

*Mexican Blakea*. Shrub 4 to 6 feet.

3 *B. ROSEA* (D. Don, l. c.) leaves oval-lanceolate, acuminate; glabrous; peduncles twin; scales longer than the calyx; petals mucronate. *h. S.* Native of Peru. *Valdèria rosea*, Ruiz et Pav. fl. per. ined. t. 408. Flowers rose-coloured.

*Rose-coloured-flowered Blakea*. Shrub or tree.

4 *B. OVALIS* (D. Don, l. c.) leaves oval, acuminate, naked on both surfaces, shining, 3-nerved; peduncles twin; scales longer than the calyx; petals obtuse. *h. S.* Native of Peru. *Valdèria ovalis*, Ruiz et Pav. syst. 121. fl. per. ined. t. 406. Flowers red.

*Oval-leaved Blakea*. Tree 10 to 20 feet.

5 *B. REPENS* (D. Don, l. c.) leaves lanceolate, acuminate, 3-nerved, pilose beneath; peduncles twin; scales shorter than the calyx; petals mucronulate. *h. S.* Native of Peru. *Valdèria repens*, Ruiz et Pav. syst. p. 121. fl. per. ined. t. 405. Roots issuing from the branches. Flowers red.

*Creeping Blakea*. Shrub.

6 *B. LATIFOLIA* (D. Don, l. c.) leaves large, oval, 3-nerved, acuminate, glabrous; peduncles solitary; scales longer than the calyx. *h. S.* Native of Peru. *Valdèria latifolia*, Ruiz et Pav. fl. per. ined. t. 407. Flowers red.

*Broad-leaved Blakea*. Shrub or tree.

§ 2. *Calyx 6-toothed, girded by 4 scales.*

7 *B. QUINQUE'NVIS* (Aubl. guian. 1. p. 525. t. 210.) leaves elliptic, acuminate, naked, and shining on both surfaces, 5-nerved, the 2 outer nerves near the margin of the leaf, and the other 2 rising above the base of the leaf; peduncles twin, shorter than the petioles; scales longer than the calyx; anthers 16-18; filaments much dilated at the apex; stigma peltate. *h. S.* Native of Guiana and Trinidad, as well as of Brazil, in woods. *B. triplénervia*, Lin. fil. suppl. *Apatitia blakeoides*, Desv. in Hamilt. prod. no. 42. Flowers large, flesh-coloured, with white disks. Petals 8-9, unguiculate. Berry large, round, yellow, eatable.

*Five-nerved-leaved Blakea*. Clt. 1820. Sh. 10 to 16 ft.

8 *B. MULTIFLORA* (D. Don, l. c. p. 326.) leaves oval-oblong, short-acuminate, 5-nerved, pilose beneath; peduncles usually 3 together; scales 3-times shorter than the calyx. *h. S.* Native of Peru. Flowers red.

*Many-flowered Blakea*. Shrub.

9 *B. ROTUNDIFOLIA* (D. Don, l. c.) leaves large, roundish, 5-nerved, densely clothed with rusty tomentum beneath, as well as on the branches; peduncles solitary; scales longer than the calyx. *h. S.* Native of Peru. Leaves 4-7 inches long and 4-6 broad. Flowers red.

*Round-leaved Blakea*. Shrub.

10 *B. MACROPHY'LLA* (D. Don, l. c.) leaves large, oval, 5-nerved, naked on both surfaces; peduncles solitary; scales longer than the calyx. *h. S.* Native of Mexico. Leaves a foot long and 7 inches broad. Flowers red.

*Long-leaved Blakea*. Shrub or tree.

11 *B. PARASITICA* (Don, l. c. p. 327.) leaves roundish, cordate, 5-nerved, mucronate, glabrous and shining above; peduncles short, usually 3 together; scales about equal in length to the calyx. *h. S.* Native of Guiana and Maranham. *Topòbea parasitica*, Aubl. guian. 1. p. 476. t. 189. Shrub climbing and rooting on trees. Flowers red.

*Parasitic Blakea*. Shrub cl.

12 *B. LÆVIGATA* (D. Don, l. c.) leaves oval, quite entire, 3-nerved, and arc as well as the branches glabrous; peduncles solitary, shorter than the petioles; scales connate at the base,

shorter than the calyx. *h. S.* Native of Mexico. *B. trinervis*, Pav. in herb. Lamb. Flowers red.

*Smooth Blakea.* Shrub.

† *Species hardly known.*

13 *B. ? PULVERULENTA* (Vahl. symb. 3. p. 61.) calyx without scales; leaves elliptic, glabrous, triple-nerved; racemes terminal. *h. S.* Native of South America. See E. Meyer, in act. bonn. 12. p. 797.

*Powdery Blakea.* Shrub.

14 *B. ? CACATIN* (D. Don, l. c.) branches bluntly quadrangular; leaves ovate, acuminate, 3-nerved; petioles very long, thick both at the base and apex; flowers and fruit unknown. *h. S.* Native of Guiana, on the banks of rivers. *Melastoma Cacatin*, Aubl. guian. 1. p. 437, t. 172. *Cacatin* is a name given to the plant by the Indians of Guiana.

*Cacatin Blakea.* Shrub 8 to 10 ft.

*Cult.* The species of this genus are all worth cultivating for the sake of the fine broad foliage, and large showy rose-coloured flowers. They thrive well in peat earth, or a mixture of loam and peat, and require to be liberally supplied with water, particularly in spring and summer. Cuttings should be taken from shoots that are quite ripe, otherwise they are apt to rot; and if planted in a pot of sand, and plunged in a moist heat under a hand-glass, they strike root freely.

SUBORDER II. CHARIANTHEÆ (plants agreeing with *Charianthus* in the anthers opening longitudinally by 2 chinks). Ser. mss. ex D. C. prod. 3. p. 196. Anthers 2-celled (f. 113. c.), opening longitudinally by a double chink (f. 113. c.). Fruit fleshy. Seeds cuneate, angular.

LXXX. KIBESSIA (*Kibessia* is the name given to this plant by the Javanese). D. C. prod. 3. p. 196. Blume, in bot. zeit. 1831. no. 30. p. 524.

LIN. SYST. *Octândria, Monogynia*. Tube of calyx nearly hemispherical, muricated from branched bristles, adnate to the ovary; limb undivided, calyptriform, cut round about at the base, and falling off in one piece. Petals 4, obovate. Stamens 8, equal. Anthers ovate, opening by a longitudinal double chink, fleshy on the back and without any appendage. Style filiform, tapering to the apex; stigma simple. Fruit nearly globose, depressed at the apex, and hence umbilicate, indehiscent, 4-celled. Seeds cuneate, angular.—A large, glabrous shrub, with terete branchlets, but rather tetragonal towards the apex. Leaves opposite, on short petioles, oval-oblong, tapering to both ends, 3-nerved, quite entire. Peduncles axillary and terminal, solitary, or in few-flowered fascicles; pedicels bibracteate in the middle. Flowers large, blue.

1 *K. AZUREA* (D. C. prod. 3. p. 196. Blum. l. c.). *h. S.* Native of Java, in woods on the mountains. *Melastoma azureum*, Blum. bijdr. p. 1079.

*Blue-flowered Kibessia.* Shrub 10 feet.

*Cult.* This shrub is worth cultivating for its showy, large, blue flowers and fine foliage. Its culture and propagation are the same as that recommended for *Blakea*.

LXXXI. CHARIANTHUS (from *χαρις*, *charis*, beautiful, and *ἄνθος*, *anthos*, a flower; flowers very showy). D. Don, in wern. soc. mem. 4. p. 327. D. C. prod. 3. p. 191.—*Chenanthëra*, Rich. herb.

LIN. SYST. *Octândria, Monogynia*. Tube of calyx ovate, rather urceolate (f. 113. a.); limb spreading, bluntly 4-lobed, permanent. Petals 4, erect, oval. Stamens 8, nearly equal; filaments linear (f. 113. b.); anthers continuous with the filaments (f. 113. c.), oblongly club-shaped, naked at the base, opening longitudinally by a double chink (f. 113. c.). Ovary adnate to the calyx (f. 113. c.). Style filiform, exserted. Cap-

sule baccate, globose, umbilicate, 4-celled, opening a little at the apex by the valves. Placentas lunate. Seeds ovate, with a large lateral hylum. Albumen none. Embryo straight, with thick cotyledons, and a long, inferior radicle.—Erect, West Indian shrubs, with petiolate, 5-nerved leaves, and purple flowers, which are disposed in trichotomous, corymbose cymes.

1 *C. COCCINEUS* (D. Don, l. c.)

FIG. 113.

all parts of shrub rather pubescent when young, but at length becoming quite glabrous; branches nearly terete; leaves oval, acuminate, quite entire, 5-nerved, beset with flocky down beneath or small dots. *h. S.* Native of Guadaloupe and Cayenne, on the higher mountains, in sphagnum places. *Melastoma coccinea*, Rich. in act. soc. hist. nat. par. 109. and in Bonpl. mel. t. 11. *Melast. alpina*, Swartz, fl. ind. occ. 2. p. 800.

The dots on the lower surface of leaves are the cicatrices, occasioned by the falling off of the tufts of stellate down. Calyx dotted from flocky down when young, but quite glabrous in the adult state. Flowers scarlet.

*Scarlet-flowered Charianthus.* Shrub 4 to 6 feet.

2 *C. GLABRUM* (D. C. prod. 3. p. 196.) shrubby, quite glabrous in every part; branchlets bluntly tetragonal; leaves oval, acuminate, entire, 5-nerved, dotless. *h. S.* Native of Martinique, Trinidad, and Guadaloupe. *Melastoma corymbosa*, Vahl. ecl. 3. p. 25. *Melast. Berterianum*, Spreng. in herb. Balb. *Chenanthëra mucronata*, Rich. herb. *Charianthus Berterianus*, Ser. mss. Perhaps only a smooth variety of the preceding species, but the leaves are longer. Flowers purplish red.

*Quite-glabrous Charianthus.* Shrub 4 to 6 feet.

3 *C. TRINIDIENSIS* (D. Don, l. c.) leaves ovate, coriaceous, obtuse, short-acuminate, 5-nerved, quite entire, glabrous on both surfaces, as well as on the branches. *h. S.* Native of the West India Islands. Flowers blood-coloured. Lateral nerves of leaves almost obsolete.

*Laurestinus-leaved Charianthus.* Shrub 4 to 6 feet.

4 *C. PURPUREUS* (D. Don, l. c.) branches and petioles hispid from bristles; leaves oval, short-acuminate, cordate at the base, quite entire, 5-nerved, pilose beneath and on the margins. *h. S.* Native of the Island of Montserrat. *Melastoma coccinea*, Vahl. ecl. 1. p. 48. icon. amer. t. 16. but not of Rich. Flowers purplish red.

*Purple-flowered Charianthus.* Shrub 4 to 6 feet.

5 *C. CILIATUS* (D. C. prod. 3. p. 197.) branches hispid from bristles; leaves ovate, coriaceous, short-acuminate, glabrous on both surfaces, 5-nerved, serrated, with the serrature callous and ciliate toothed. *h. S.* Native of Trinidad. Sieb. pl. trin. no. 279. *Tetrazygos ciliatus*, Rich. herb. *Melastoma Dodoniana*, Hamilt. prod. p. 37. Flowers purple.

*Ciliated-leaved Charianthus.* Shrub 3 to 6 feet.

*Cult.* All the species of *Charianthus* are worth cultivating for their showy cymes or corymbs of purple or scarlet flowers. Their culture and propagation are the same as recommended for *Blakea*, see p. 801.

LXXXII. CHENOUPLEURA (from *χαίρω*, *chaino*, to open, and *πλευρα*, *pleura*, a side). Rich. herb. ex D. C. prod. 3. p. 197.

LIN. SYST. *Dicândria, Monogynia*. Calyx adnate to the  
5 K

ovarium; limb bluntly 5-toothed. Petals 5, roundish. Stamens 10, hardly longer than the petals. Anthers opening longitudinally by 2 chinks: having their connectives bauriculate at the base. Style clavate, crowned by an orbicular, somewhat umbilicate stigma. Berry? 3-4-celled. Seeds unknown.—Glabrous shrubs, with the habit of the section *Leosphæria* of *Miconia*. Leaves petiolate, oblong-lanceolate, obtuse at the base, acuminate at the apex, denticulated from hair-formed, distant serratures, 3-nerved or almost triple-nerved. Thyse terminal, elongated, having its branchlets opposite and almost racemose. Flowers from white to flesh-coloured. Bracteoles and segments of calyx ciliated.

1 *C. STENOBOTRYS* (D. C. prod. 3. p. 197.). *h. S.* Native of Hispaniola, on the mountains, and probably of Jamaica. *Melastoma stenobotrys*, Rich. in Bonpl. mel. t. 30. exclusive of the synonym of Swartz.

*Narrow-racemed ChænoBLEURA.* Sh. 4 to 6 feet.

*Cult.* For culture and propagation see *Melastoma*, p. 764.

LXXXIII. EWYCKIA (dedicated by Dr. Blume to Van Ewyck, a patron of natural history). Blum. in bot. zeit. 1831. no. 30. p. 524.

*LIN. SYST.* *Octandria, Monogynia.* Tube of calyx hemispherical, adhering to the ovarium; limb continuous with the tube, obsoletely 4-toothed. Petals 4, ovate, acute. Stamens 8, equal. Anthers oblong, obtuse at both ends, opening by a double chink, furnished behind at the base with a fleshy connective. Style filiform; stigma acute. Berry globose, crowned by the limb of the calyx, 4-celled. Seeds cuneated, angular.—A smooth shrub or small tree. Branches terete, but thickened at the knots. Leaves opposite, on short petioles, elliptic, acuminate at both ends, quite entire, 3-nerved. Racemes axillary, few-flowered; pedicels bibracteate in the middle. Flowers small, blue.

1 *E. CYANEA* (Blume, l. c. p. 524.). *h. S.* Native of Amboyna. *Melastoma azureum*. Zippel, ined.

*Blue-flowered Ewyckia.* Shrub.

*Cult.* For culture and propagation, see *Blakea*, p. 801.

LXXXIV. ASTRONIA (from *αστρον*, *astron*, a star; flowers and fruit). Blume, bijdr. p. 1080. bot. zeit. 1831. no. 30. p. 256.

*LIN. SYST.* *Deca-Dodecandria, Monogynia.* Tube of calyx hemispherical, adnate to the ovarium; limb 5-6-toothed. Petals 5-6, obovate, obtuse. Stamens 10-12, equal. Anthers linear-oblong, opening by a double chink, inappendiculate, adnate to the thick, triangularly-compressed connectives. Style filiform; stigma peltate. Capsule dry, 2-4-celled, crowned by the limb of the calyx, opening irregularly lengthwise. Seeds straight, paleaceous, enwrapped in fine aril.—Glabrous trees. Branches tetragonal, beset with small, brownish scales or dots at the tops as well as on the petioles, peduncles, and calyxes. Leaves opposite, on longish petioles, oblong, acuminate, quite entire, 3-nerved or triple-nerved, discoloured. Inflorescence paniced, terminal, and axillary. Flowers small, purplish, unisexual from abortion.

1 *A. SPECTABILIS* (Blum. l. c.) leaves 3-nerved, oblong, acuminate, obtuse at the base, thickly beset with rust-coloured scales or dots beneath. *h. S.* Native of Java, in woods on the higher mountains, where it is called *Kihariendung*.

*Showy Astronia.* Tree.

2 *A. PAPETARIA* (Blum. in bot. zeit. l. c.) leaves 3-nerved, oblong, acuminate, attenuated at the base, thickly beset with rufous dots beneath. *h. S.* Native of Amboyna. *A. spectabilis*, Zippel ined. *Pharmaceum papetarium*, Rumph. amb. 4. p. 134. t. 69. *Oebat papeba* is the Malay name of the tree.

*Papetaria Astronia.* Shrub.

3 *A. MACROPHYLLA* (Blum. l. c.) leaves triple-nerved, beset with fugaceous scattered down beneath. *h. S.* Native of Java and the Moluccas.

*Var. β, discolor*; leaves 3-nerved or obscurely triple-nerved. Java.

*Var. γ, cōncolor* (Blum. in bot. zeit. l. c.) leaves nearly of the same colour on both surfaces, beset with very small dots beneath and on the branchlets. *h. S.* *A. cōncolor*, Zippel, ined.

*Long-leaved Astronia.* Tree.

*Cult.* For culture and propagation see *Blakea*, p. 801.

† The structure of the following *Melastomeaceous* plants is not known, and therefore they are ranged here according to the names they have first received.

§ 1. Plants referred by authors to *Rhexia*, from the fruit being capsular.

\* Flowers decandrous.

1 *R. FULVA* (Spreng. syst. 2. p. 308.) shrubby; branches dichotomous, pubescent; leaves oblong, minute, almost nerveless, beset with hispid bristles; flowers decandrous, terminal, solitary; calycine lobes subulate. *h. S.* Native of Brazil.

*Fulvous Rhexia.* Shrub.

2 *R. FASCICULATA* (Spreng. neue. entd. 3. p. 62. et syst. 2. p. 308.) racemes rather dichotomous, terminal; leaves linear-oblong, in fascicles, quite glabrous, nerveless, with 1 tooth on each side; corolla blood-coloured; calyx 10-striped, strigose. *h. S.* Native of Brazil. Perhaps a species of *Cambessedesia*.

*Fascicled-leaved Rhexia.* Pl.

\* \* Flowers octandrous.

3 *R. HELVOLA* (Spreng. syst. 2. p. 309.) suffruticose; leaves crowded, sessile, oval, quite entire, nerved, beset with pale red, stiff hairs or bristles on both surfaces; peduncles axillary, cymose; flowers octandrous; calyxes very hispid. *h. S.* Native of Brazil.

*Pale-red-haired Rhexia.* Shrub.

4 *R. TRICHOTOMA* (Roth. diss. pl. var. 9. t. 5.) shrubby; branches tetragonal; angles hairy; leaves sessile, lanceolate, hairy; flowers sessile, axillary, and terminal. *h. S.* Native of Surinam. Vahl. symb. p. 48.

*Trichotomous Rhexia.* Shrub.

5 *R. STRIGOSA* (Willd. herb. ex Spreng. syst. 2. p. 309.) suffruticose; leaves ovate, 3-nerved, strigose; peduncles axillary, corymbose; flowers octandrous; calyxes hairy. *h. S.* Native of Cayenne.

*Strigose Rhexia.* Shrub.

§ 2 Plants referred by authors to *Melastoma*, from their fruit being fleshy.

\* Flowers octandrous.

1 *M. MELANOPHYLLUM* (Spreng. neue. entd. 2. p. 171.) branches knotted, nearly terete, glabrous; leaves ovate, acuminate, quite glabrous on both surfaces, 3-nerved, quite entire, shining above; panicles lateral; flowers octandrous; calyx with 4 minute teeth, covered with stellate scales. *h. S.* Native of Brazil.

*Black-leaved Melastoma.* Shrub.

2 *M. SESSILE* (Spreng. syst. 2. p. 303.) branches twiggy; leaves half stem-clasping, roundish-cordate, acute, quite entire, obsoletely triple-nerved, beset with glandular villi on both surfaces; flowers almost sessile, axillary, octandrous. *h. S.* Native of Brazil. Perhaps a species of *Sagraea*.

*Sessile-flowered Melastoma.* Shrub.

3 *M. VIRGATUM* (Swartz, prod. p. 72. fl. ind. occ. 2. p. 816.

branches twiggy, tetragonal, glabrous; leaves ovate-lanceolate, acuminate, 3-nerved, entire; flowers white, octandrous; calyx 4-toothed, the teeth subulate; petals oblong, longer than the calyx; filaments jointed under the anthers; stigma acute. *h. S.* Native of Jamaica, in woods on the mountains.

*Twiggy Melastoma.* Shrub.

4 *M. MATUBA* (Spreng. *neuc. entd.* 3. p. 61.) leaves ovate-oblong, 3-nerved, acuminate, glabrous, quite entire; panicle terminal, with trichotomous, erect branches; calyx terete, truncate. *h. S.* Native of Guadeloupe and Antigua.

*Matuba Melastoma.* Shrub.

5 *M. MICRANTHUM* (Swartz, *prod.* p. 71. *fl. ind. occ.* 2. p. 803.) branches twiggy, terete, glabrous; leaves oblong, acuminate at both ends, glabrous, 3-nerved, denticulate, petiolate; racemes axillary, reclinate towards the tops of the branches; flowers white, octandrous; calyx 4-toothed; petals 4, acuminate, with a blood-coloured spot at the base of each; berry 8-sided, 4-celled, white and pellucid at maturity. *h. S.* Native of Jamaica, on the mountains. Perhaps a species of *Ossaia*.

*Small-flowered Melastoma.* Shrub.

6 *M. TRIFLORUM* (Vahl. *eccl. fasc.* 1. p. 46.) branches, petioles, and calyxes strigose; leaves elliptic-lanceolate, quite entire, 3-nerved; flowers axillary, octandrous, somewhat pedunculate; tern; calyx turbinate, obscurely 4-toothed; petals ovate, exceeding the stamens. *h. S.* Native of the West Indies.

*Three-flowered Melastoma.* Shrub.

7 *M. TRIPLINEURIA* (Link. et Otto. *icon. pl. rar. hort. berol.* t. 24.) stems branched; leaves oval, bluntish, somewhat feather-nerved towards the apex, tapering into the petiole at the base; hairs adpressed; panicles terminal; calyx with 4 acuminate lobes. *h. S.* Native of Mexico, at Xalapa. Flowers white. Leaves, petals, and sepals ciliated.

*Triple-nerved-leaved Melastoma.* Fl. June, Aug. Clt. 1827. Shrub 2 to 4 feet.

8 *M. ECOSTATUM* (Ait. *hort. kew. ed.* 3. p. 46.) leaves ovate-lanceolate, acuminate, denticulate, without ribs, triple-nerved, pilose above, but smoothish beneath; corymbs terminal, trichotomous; branchlets, peduncles, and calyxes clothed with powdery tomentum; flowers octandrous. *h. S.* Native of Jamaica.

*Ribless Melastoma.* Shrub 1 to 2 feet.

9 *M. SALICINUM* (Ser. *ms.* in D. C. *prod.* 3. p. 199.) branches terete, and are as well as the petioles, nerves of leaves, peduncles, and calyxes clothed with long, rufous, rather adpressed bristles; leaves oblong-lanceolate, acuminate at both ends, 3-nerved, with the margins revolute; thyse terminal; lobes of calyx 4, narrow, acuminate. *h. S.* Native of Brazil. Perhaps a proper genus, belonging to Tribe *Miconiæ*. It is not a *Clidemia*, from the ovary being glabrous at the apex: nor a *Miconia*, from the calyx being 4-cleft.

*Willow Melastoma.* Shrub 3 to 6 feet.

10 *M. PICTUM* (Rudolph, in Schrad. *neues. journ.* vol. 2. pt. 2. p. 293.) branches nearly terete, smooth; branchlets hoary; leaves ovate, acuminate, obsoletely denticulate, 5-nerved, covered with strigæ above, and reticulately tomentose beneath; panicles terminal, divaricate; flowers octandrous; calyx 4-toothed; petals oblong, purple, with undulated margins; anthers acuminate. *h. S.* Native of Jamaica, on the mountains.

*Painted Melastoma.* Shrub 3 to 6 feet.

11 *M. CRINITUM* (Vahl. *eccl. fasc.* 3. p. 28.) branches terete, glabrous below, leafless at the apex, hispid from white pili; leaves oval-oblong, denticulate, hispid on both surfaces; flowers octandrous; tube of calyx short, tetragonal; angles acutish, gibbous at the base; calycine segments 4, awned beneath the apex; genitals length of corolla. *h. S.* Native of Martinico, on the mountains. Perhaps a species of *Clidemia*.

*Hairy Melastoma.* Shrub.

\* \* *Flowers decandrous.*

*A. Species natives of the West Indies.*

12 *M. EXPANSUM* (Vahl. *eclog. fasc.* 3. p. 21.) branches terete, glabrous below; leaves oblong-ovate, attenuated, setaceously denticulate, glabrous, 5-nerved; racemes compound, powdery; flowers decandrous; pedicels dichotomous; calyx campanulate, obscurely striated, 5-toothed; petals 5, linear-oblong, obtuse; stamens longer than the corolla. *h. S.* Native of the Island of Montserrat. Perhaps a species of *Miconia*, allied to *M. pyramidale*.

*Expanded Melastoma.* Shrub.

13 *M. CAPITATUM* (Vahl. *eclog. amer. fasc.* 1. p. 45.) branches tetragonal, compressed towards the apex; leaves broad-lanceolate, quite entire, obtuse at the base, acuminate at the apex, 5-nerved, pilose, petiolate; heads of flowers terminal, involucreted; bractæas membranous, lanceolate, pilose on the back, about the length of the calyx; calyx glabrous, tubular, pilose at the base; having lanceolate, ciliated segments; petals oblong, longer than the calyx; filaments with 2 appendages each; ovary elongated, beset with setaceous pili at the apex. *h. S.* Native of the West Indies. Perhaps a species of *Chetogastera*.

*Capitate-flowered Melastoma.* Shrub.

14 *M. NERVOSUM* (Smith in Rees' *cycl.* vol. 23.) stem terete, bristly; leaves elliptic-oblong, acute, crenate at the base and apex, 5-nerved, villous; flowers in glomerated spikes. *h. S.* Native of Jamaica. Allied to *Miconia alata* according to Smith.

*Nerved-leaved Melastoma.* Shrub.

15 *M. SPLENDENS* (Swartz, *prod.* p. 70. *fl. ind. occ.* p. 789.) branches nearly terete, glabrous; branchlets rusty; leaves oblong, acuminate, glabrous on both surfaces, 5-nerved, entire, shining above; flowers in umbellate panicles, small, almost sessile; calyx 5-toothed; petals 5, ovate, white; stigma capitate, depressed; berry blue, minute. *h. S.* Native of Jamaica, in woods on the mountains. Plum. ed. Burm. t. 140. ex Swartz. Perhaps a species of *Miconia*.

*Splendent Melastoma.* Shrub.

16 *M. FAVOSUM* (Desr. in Lam. *dict.* 4. p. 47.) branchlets clothed with rufous rather scurfy tomentum; leaves ovate, rather cordate, denticulate, 5-nerved, large, lacunose beneath, and with many angled tubercles above; flowers corymbose, terminal; calyx rounded at the base, 10-angled, bluntly 5-toothed; petals red, longer than the calyx. *h. S.* Native of St. Domingo. Perhaps a species of *Clidemia*.

*Pitted-leaved Melastoma.* Shrub.

17 *M. PILULIFERUM* (Vahl. *eclog. fasc.* 3. p. 15.) branches obscurely tetragonal, glabrous, spreading; branchlets compressed, clothed with rufous powdery down; leaves lanceolate-elliptic, quite entire, glabrous, petiolate; flowers spicate, decandrous; spikes bipartite, in a somewhat compound raceme; bractæas setaceous; calyx 5-toothed, striated; stamens longer than the corolla; berries globose, twice the size of a mustard seed. *h. S.* Native of Martinico. Perhaps a species of *Miconia*.

*Pill-bearing Melastoma.* Shrub.

18 *M. TRINEURVUM* (Swartz, *fl. ind. occ.* p. 774.) quite glabrous; branches somewhat tetragonal; leaves petiolate, oblong, attenuated at both ends, 3-nerved, without any marginal nervules; thyse terminal, loose, panicle; racemules bipartite; flowers crowded, sessile, decandrous. *h. S.* Native of Jamaica, on the mountains. Calyx, petals, fruit, and genitals undescribed.

*Three-nerved-leaved Melastoma.* Shrub.

19 *M. VIRESCENS* (Vahl. *eclog. fasc.* 3. p. 18.) branches

terete, greenish, glabrous, rather compressed above, and beset with rather powdery villi; leaves obovate-lanceolate, denticulated, glabrous, smooth, 3-5-nerved; spikes terminal, racemose, bipartite; flowers secund, decandrous; calyx somewhat campanulate, 5-toothed, powdery; anthers linear, curved, furnished at the base on one side with a short brown auricle; style length of stamens, but longer than the corolla; berry globose, about the size of a mustard seed. *h. S.* Native of the Island of Trinidad.

*Greenish Melastoma.* Shrub small.

20 *M. RIGIDUM* (Swartz, prod. p. 69. fl. ind. occ. 2. p. 768.) shrub with very straight tetragonal branches, clothed with rusty scurfy down towards the apex; leaves ovate, cordate, denticulated, petiolate, 3-nerved, stiff, rather membranous, glabrous, brittle; racemes terminal, many-flowered, beset with rusty hairs; flowers decandrous; calyx ovate, hairy, 5-toothed; teeth short, obtuse, stiff; petals ovate, white; stamens longer than the corolla; filaments keeled on the back; style short, thick, striated; stigma obtuse; berries roundish, clothed with rusty farina. *h. S.* Native of Jamaica, on the highest mountains.

*Stiff Melastoma.* Shrub.

21 *M. CHRISTOPHORI'NUM* (Hamilt. prod. fl. ind. occ. p. 37.) stems bushy, glabrous, erect; leaves obovate, acute, quite entire, green above and white beneath, triple-nerved; flowers decandrous, panicled, terminal; peduncles rather trichotomous. *h. S.* Native of the Island of St. Christopher. Flowers small, red.

*St. Christopher Melastoma.* Shrub.

22 *M. SESSILIFLORUM* (Lin. spec. 558.) leaves oblong-spatulate, sessile, entire, 3-nerved, tomentose beneath; fascicles of flowers scattered. *h. S.* Native of Jamaica.—Pluk. phyt. t. 249. f. 2.

*Sessile-flowered Melastoma.* Shrub small.

23 *M. BRACHIA'TUM* (Vahl, eclog. fasc. 3. p. 24.) branches smooth, terete; branchlets compressed, clothed with rusty powdery down; leaves elliptic, attenuated, denticulated, glabrous, 5-nerved; nerves powdery beneath; spikes bipartite, racemose, secund; calyx about the size of a black pepper, sulcated, globose when the fruit is ripe; petals small, obovate; flowers decandrous. *h. S.* Native of Montserrat.

*Armed Melastoma.* Shrub 4 to 6 feet.

24 *M. STRIA'TUM* (Vahl, eclog. fasc. 3. p. 14.) branches glabrous, powdery and compressed towards the top; leaves ovate-oblong, attenuated, glabrous, toothed, 3-5-nerved; racemes terminal, compound; pedicels 3-flowered; calyx glabrous, truncate or 3-lobed; lobes rounded; petals 5, wedge-shaped; stamens length of the petals. *h. S.* Native of Montserrat.

*Striated Melastoma.* Shrub 4 to 6 feet.

#### B. Species natives of Guiana.

25 *M. PLEUROCA'RPUM* (E. Meyer, in act. bonn. 12. p. 795.) branches terete, a little striated; leaves oblong, acuminate, serrulated, ciliated, truncate at the base, 5-nerved, rather pilose; panicle terminal; flowers glomerate, decandrous; calyx glabrous, 10-ribbed, 5-toothed; anthers with long beaks, bicallous at the base; berry 3-celled, crowned by an entire margin. *h. S.* Native of Surinam. Petals obovate, concave.

*Ribbed-fruited Melastoma.* Shrub.

26 *M. FRA'GILE* (Lin. fil. suppl. 236.) leaves ovate, serrated, rather petiolate, 5-nerved, smooth, ciliated, very brittle; lower peduncles trifid; pedicels usually 2-flowered; flowers decandrous, rather secund; berry pea-formed, glabrous. *h. S.* Native of Brazil, Mexico, and Surinam.

*Brittle-leaved Melastoma.* Shrub.

27 *M. BRU'NNEUM* (Vahl, eclog. fasc. 3. p. 19.) shrub with terete branches, and tetragonal branchlets; leaves oval, ciliated,

scabrous above, but hoary beneath, petiolate, 3-5-nerved; flowers decandrous, aggregate beneath the leaves, rather pedunculate and strigose; calyx oblong, with rufescent stripes, and with 5 ovate obtuse segments; petals roundish, length of the segments of the calyx; stamens length of corolla; style clavate, crowned by an obtuse stigma. *h. S.* Native of Guiana.

*Brown-calyxed Melastoma.* Shrub.

28 *M. GROSSULARIOIDES* (Lin. spec. 558.) leaves roundish-ovate, acuminate, denticulated, 3-nerved, glabrous on both surfaces; flowers decandrous. *h. S.* Native of Surinam.—Pluk. alm. 40. t. 249. f. 4.

*Gooseberry-like Melastoma.* Shrub.

29 *M. ICOSA'NDRUM* (Swartz, herb. ex Wikst. fl. guad. in acad. sc. stockh. 1827.) leaves ovate or lanceolate, acuminate, crenulated, 3-nerved, glabrous; branches of panicle 3-parted; flowers icosandrous. *h. S.* Native of Guadaloupe.

*Icosandrous Melastoma.* Shrub.

30 *M. PUNCTULA'TUM* (Swartz, herb. ex Wikst. l. c.) leaves opposite, ovate, acuminate, quite entire, 5-nerved, glabrous, full of elevated dots beneath; cymes terminal, contracted, few-flowered; calyx glabrous, 5-crenated. *h. S.* Native of Guadaloupe.

*Dotted-leaved Melastoma.* Shrub.

31 *M. FARINULE'NTUM* (Swartz, herb. ex Wikst. l. c.) leaves scattered, ovate, attenuated, quite entire, 3-nerved, beset with adpressed dots beneath, rather mealy; raceme straight, trifidly 3-parted; flowers pedicellate, decandrous. *h. S.* Native of Guadaloupe.

*Mealy Melastoma.* Shrub.

#### C. Species natives of Brazil.

32 *M. RA'DULUM* (Hoffmanns. verz. 1826. p. 159.) stem terete, somewhat articulated, bluntly 4-winged; leaves petiolate, ovate, acuminate, 3-nerved, somewhat denticulated, rough above, and beset with decumbent hairs beneath; flowers cymose; calyx ovate, somewhat pentagonal, beset with somewhat imbricate tubercles and adpressed hairs. *h. S.* Native of Brazil. Perhaps a species of *Lasiandra* or *Macaírea*.

*Rasp-leaved Melastoma.* Shrub.

33 *M. BRASIL'ENSE* (Spreng. syst. 2. p. 297.) leaves lanceolate, acuminate, quite entire, hoary beneath, as well as the branches and calyxes from stellate down; branches of panicle divaricate. *h. S.* Native of Brazil.

*Brazilian Melastoma.* Shrub.

34 *M. SERRULA'TUM* (Spreng. syst. 2. p. 300. but not of Pav.) leaves oblong, acute, serrulately ciliated, clothed with fulvous hairs on both surfaces, and on the branches; panicle terminal, trichotomous, with divaricate branches. *h. S.* Native of Brazil.

*Serrulated-leaved Melastoma.* Shrub.

35 *M. HETERONEI'RUM* (Schränk et Mart. mss.) shrubby, glabrous, rufescent, with terete branches; leaves oval-oblong, tapering much into the petiole, acuminate at the apex, triple-nerved or almost quintuple-nerved; flowers almost sessile, crowded, axillary; fruit globose; calycine lobes 5-6, deciduous. *h. S.* Native of Brazil, in the woods of Tapura. The nerves on the lower leaves are nearly marginal, and those on the upper leaves are as in *Miconia spondylántha*, rising far above the base, and somewhat alternate. Petals and stamens unknown. Perhaps a proper genus.

*Variable-nerved Melastoma.* Shrub.

#### D. Species natives of New Grenada.

36 *M. SQUAMULOSUM* (Smith in Rees' cycl. vol. 23.) leaves elliptic, obtuse, 3-nerved, entire, smooth above, but covered with scale-like hairs beneath; flowers panicled, terminal, dense;

calyx turbinate, 10-ribbed, bluntly 5-toothed, scaly; petals roundish, yellow; berry furrowed, villous. *h. S.* Native of New Granada. Perhaps a species of *Davya*.

*Scaly Melastoma.* Shrub.

37 *M. LIGUSTRINUM* (Smith in Rees' cycl. vol. 23.) stem and branches glabrous; leaves oval, obtuse, entire, 3-nerved, glabrous, petiolate, shining above, yellowish beneath; flowers terminal, panicle, dense; calyx hemispherical, glabrous, striated, broadly and bluntly toothed; petals obtuse, small, white or reddish; anthers obtuse; style obtuse; stigma hollow; berry small, yellow. *h. S.* Native of New Granada. Allied to *M. squamulosa* ex Smith.

*Privet-like Melastoma.* Shrub.

38 *M. GRÖSSUM* (Lin. fil. suppl. 236.) branches stiffish, terete, hispid; leaves quite entire, 5-nerved, rather cordate, covered with scabrous tomentum; flowers large, terminal; calyx strigose; petals rather pilose on the outside. *h. S.* Native of New Granada.

*Large Melastoma.* Shrub.

39 *M. IBAGUENSE* (Humb. et Bonpl. mel. 1. p. 105. t. 45.) stems weak, flexuous; leaves lanceolate, awnless, ciliated, 3-nerved, clothed with scurfy down and rufescent hairs beneath, as well as on the branchlets; raceme terminal, loose, few-flowered; flowers decandrous; calyx rather globose, with 5 little teeth; berry small, globose, 3-celled. *h. S.* Native of New Granada, on Mount Quindiu, near Ibaguë. Genitals unknown. Perhaps a species of *Clidemia* or *Tschudya*.

*Ibaguë Melastoma.* Shrub 10 feet.

40 *M. GLOBIFLORUM* (Cham. et Schlecht. in Linnæa. 5. p. 564.) clothed with hairy tomentum; branches terete; leaves petiolate, 5-nerved, ovate-elliptic, acuminate, hairy above, but yellowish beneath; racemes terminal; its branches bearing bundles of flowers at their tops; calyx urceolate, 5-toothed; petals 5, emarginate; stamens 10; anthers opening by one pore, without appendages; ovary glabrous; style thickish; stigma dotted; berry 5-celled, many-seeded, crowned by the teeth of the calyx; seeds yellowish, 3-sided, with a blackish hylum. *h. S.* Native of Mexico, in woods about Jalapa. Tomentum on the stem, tops of branches, and under side of the leaves stellate, and on the upper side simple. Berry hairy.

*Globe-flowered Melastoma.* Shrub 4 to 6 feet?

41 *M. SCORPIOIDES* (Cham. et Schlecht. in Linnæa. 5. p. 564.) leaves on short petioles, membranous, obovate, acuminate, glabrous above, but clothed with scurfy down beneath, 5-nerved or triple-nerved; racemes terminal, elongated, constantly composed of twisted cymes; flowers almost sessile, secund, small, decandrous; anthers opening by one pore, shortly auricled at the base; stigma peltately funnel-shaped. *h. S.* Native of Mexico, at Cuesta Grande de Chiconquiaco. Down on the branches and lower surface of leaves rather scurfy, intermixed with a few fine stellate down.

*Scorpion-like Melastoma.* Shrub.

42 *M. CORNOIDES* (Cham. et Schlecht. Linnæa. 5. p. 563.) glabrous; branches terete; leaves petiolate, oval-lanceolate, acuminate, 5-nerved, puberulous, ciliated, membranous; cymes axillary, or nearly terminal, trichotomous, loose, and few-flowered, having the branches filiform, bibracteolate; berries globose, 5-ribbed; ribs running down from the teeth of the calyx. *h. S.* Native of Mexico, near Jalapa in woods. Habit of *Clidemia agræstis*. Seeds small, yellowish, with a black nearly linear hylum. Stamens 10; anthers not appendiculated, opening by one pore at the apex. Perhaps a species of *Clidemia*.

*Dogwood-like Melastoma.* Shrub 2 to 3 ft.?

43 *M. FURFURACEUM* (Vahl, eclog. fasc. 3. p. 13.) leaves oblong, glabrous, smooth, quite entire, petiolate, 3-nerved, acuminate; branches and peduncles clothed with scurfy tomentum;

racemes simple; pedicels 3-flowered; flowers almost sessile, decandrous; calyx 5-toothed; teeth minute; petals 5, oblong; style length of the stamens. *h. S.* Native of South America.

*Scurfy Melastoma.* Shrub.

\*\*\* *The number of stamens and parts of the flower are unknown in the following species.*

44 *M. MYRICOIDES* (Desr. in Lam. dict. 4. p. 51.) smoothish; branches tetragonal, knotted at the joints; leaves ovate, smoothish, somewhat acuminate, denticulated, 3-5-nerved, small, almost sessile, rather villous beneath; flowers trichotomously panicle; fruit globose, glabrous, granular. *h. S.* Native of the Antilles.

*Myrica-like Melastoma.* Shrub.

45 *M. THYRSOIDÆUM* (Vahl, eclog. fasc. 3. p. 13.) glabrous; leaves oblong-ovate, attenuated at both ends, glandularly denticulated, 3-nerved; racemes terminal, decomposed; peduncles tetragonally compressed; flowers small; bracteas linear; calyx globose, truncate. *h. S.* Native of Montserrat.

*Thyrse-like-flowered Melastoma.* Shrub.

46 *M. CUPREUM* (Smith in Rees' cycl. vol. 23.) leaves oval-elliptic, acute, entire, on short petioles, 3-nerved, smoothish above, but clothed with rufous tomentum beneath, as well as the petioles and peduncles; flowers dichotomously panicle, very numerous, and very minute; calyxes glabrous. *h. S.* Native about the Caraccas?

*Copper-coloured Melastoma.* Shrub.

47 *M. ADSCENDENS* (Swartz, fl. ind. occ. 2. p. 772.) shrub sarmentose, twining, rooting; branches tetragonal, pubescent; leaves ovate, acute, glabrous, 3-nerved, denticulated; raceme ovate, terminal; racemes bearing the flowers on one side; calyx tubular, with its limb membranous and 4-5-sided, and with 4-5 truncate teeth; petals oblong, obtuse; stamens 8-10; anthers opening by 2 pores at the apex, and sheathed at the base; fruit oblong, 5-celled. *h. S.* Native of Jamaica, in mountain woods. *M. scandens*, Swartz, prod. p. 69. but not of Aubl. Perhaps a proper genus allied to *Meriania*.

*Ascending Melastoma.* Shrub cl.

48 *M. NODOSUM* (Desr. in Lam. dict. 4. p. 55.) blackish; branches somewhat tetragonal, knotted; leaves elliptic, serrulately ciliated, 5-nerved, coriaceous; flowers in trichotomous corymbs, bracteate; peduncles hispid; calyx campanulate, angular at the base, crenated, length of the corolla. *h. S.* Native of the Antilles.

*Knotted Melastoma.* Shrub.

49 *M. PARADOXUM* (Mart. herb. ex D. C. prod. 3. p. 202.) shrubby, quite glabrous; branches much compressed between the knots; leaves petiolate, coriaceous, oval, somewhat cordate at the base, 5-nerved, with the margins nerve-formed, pale beneath; panicle terminal; fruit globose. *h. S.* Native of Brazil, on Mount Arara-coara. Seeds 3-sided, smooth. Habit of *Tococa*, but the bladders on the petioles are wanting. The calyx is 4-sided.

*Paradoxical Melastoma.* Shrub.

§ 3. *Alternifoliæ.* *The leaves being alternate in the following species, it is therefore evident that it should be excluded from the order altogether.*

1 *RHEXIA JUSSIEOIDES* (Lin. fil. suppl. 215.) pubescent; leaves lanceolate, alternate? ribbed, with the margins scabrous from very minute serratures; flowers solitary, axillary, octandrous; calycine segments 4, lanceolate, acute; petals ovate, exceeding the calyx, yellow; genitals inclinate, shorter than the corolla; filaments short; stigma warted; capsule somewhat

tetragonal, 4-celled.  $\frac{1}{2}$ . S. Native of Surinam. This plant most probably belongs to some genus of *Onagrariæ*.

*Jussiaea*-like *Rhexia*. Shrub.

† *An additional species of Arthrostemma.*

3 *ARTHROSTEMMA NITIDA* (Graham in ed. phil. journ. dec. 1831. Hook. bot. mag. 3142.) stems shrubby, erect, and are, as well as the branches, tetragonally winged, beset with coloured hairs; leaves ovate, acute, serrulated, glabrous on both surfaces, shining above, but glandularly hispid on the nerves beneath; peduncles axillary towards the tops of the branches, 3-flowered, longer than the petioles; petals obovate, retuse; anthers dissimilar, with their connectives short and biauriculate.  $\frac{1}{2}$ . S. Native of Buenos Ayres. Flowers lilac.

*Shining Arthrostemma.* Fl. Ju. Jul. Clt. 1829. Sh. 2 to 3 ft.

ORDER XCIX. ALANGIÆ (see genus for derivation). D. C. prod. 3. p. 103. Tube of calyx egg-shaped, rather constricted at the apex; limb campanulate, 5-10-toothed. Petals 5-10, linear, spreadingly reflexed. Stamens much exerted, double or quadruple the number of the petals; filaments free, filiform, very villous at the base. Anthers adnate, linear, 2-celled, bursting inwards by a longitudinal double chink, often barren. Disk fleshy at the base of the limb of the calyx. Drupe oval, somewhat crowned, fleshy, a little ribbed, and somewhat tomentose, containing a valveless 1-celled nut, the bone or stone having a hole at its apex. Seed one (or 3, ex Rheede), inverted, ovate, with fleshy friable albumen. Embryo straight, with a long ascending radicle, and flat foliaceous ovate-cordate cotyledons.—Shewy Indian trees, with the branches often spinescent. Leaves alternate, exstipulate, ovate-lanceolate, acuminate, feather-nerved, quite entire, dotless, similar to those of *Grænia*. Flowers few, sessile, in axillary fascicles. Fruit eatable.

This order is only composed of one genus, whose place in the natural system is very doubtful. It differs from *Myrtaceæ* in the greater number of petals, in the adnate anthers, in the one-celled fruit, and in the albuminous pendulous seeds. It agrees with *Combretaceæ* in the tube of the calyx being constricted at the apex, in the one-celled fruit, and the pendulous seed; but differs in the greater number of petals, in the adnate anthers, in the albuminous seeds, and in the flat cotyledons. In the form of the anthers, and in the one-celled fruit, it differs from *Melastomaceæ* and *Onagrariæ*. It agrees in some degree with *Haloragaceæ* in the fabric of the seed, but differs from it in habit, in the one-celled fruit, and single style. The properties are said by the Malays to be purgative and hydrogogue, and their roots aromatic.

1. *ALANGIUM* (*Alangi* is the Malabar name of the first species). Lam. dict. 1. p. 174. Vahl. symb. 1. p. 61. Corr. ann. mus. 10. p. 161. D. C. prod. 3. p. 203.—*Angolam*, Adans. fam. 2. p. 85.—*Angolamia*, Scop.

LIN. SYST. *Icosandria, Monogynia*. Being no other genus the character is the same as that of the order.

1 *A. DECAPE'TALUM* (Lam. dict. 1. p. 174.) flowers of 10 petals; branches glabrous, spinescent; leaves oblong-lanceolate.  $\frac{1}{2}$ . S. Native of Malabar, on rocky mountains, where it is called *Alangi* or *Angolam* by the natives. Rheed. mal. 4. t. 17. *Grænia salvifolia*, Lin. fil. suppl. 409. ex Vahl, symb. 1.

p. 61. Berry or drupe rather tomentose, 2-3-seeded. Stamens 23, ex Vahl. The petals are either 10 or 12, and the stamens are double that number. Flowers white, with a grateful scent, solitary or 2-3-together in the axils of the leaves. The pulp of the fruit has a grateful sweet taste.

*Ten-petalled Alangium.* Clt. 1779. Tree 30 ft.

2 *A. HEXAPE'TALUM* (Lam. l. c.) flowers of 6-7 petals; branches glabrous, hardly spinescent; leaves ovate-lanceolate, acuminate.  $\frac{1}{2}$ . S. Native of Malabar, among rocks, where it is called by the natives *Kara-Angolam* and *Namidou*. Stamens 10-12, but 26 according to Rheed. mal. 4. t. 26. but in the specimen examined by De Candolle, the petals were 7, and the stamens 28, therefore the stamens are thrice the number of the petals. Leaves velvety beneath, and on the petioles. Berry or drupe with a purple tomentose coriaceous rind, and red juicy clammy pulp, which has a rather acid taste; the nut one-seeded.

*Six-petalled Alangium.* Clt. 1823. Tree 30 ft.

3 *A. TOMENTOSUM* (Lam. dict. l. c.) flowers unknown; branches unarmed, velvety when young, as well as the petioles and nerves of leaves; leaves oblong, bluntly acuminate, reticulated with little veins beneath.  $\frac{1}{2}$ . S. Native of the East Indies. Berry or drupe pubescent, with a woody coriaceous livid-purple rind.

*Tomentose Alangium.* Tree 20 ft.

*Cult.* The species of *Alangium* thrive well in a mixture of loam and peat, or any light rich soil; and cuttings root readily if planted in a pot of sand, with a hand-glass placed over them, in heat.

ORDER C. PHILADELPHEÆ (plants agreeing with *Philadelphus* in important characters). D. Don, in edinb. phil. journ. 1826. April. p. 133. D. C. prod. 3. p. 205.—*Myrtaceæ*, gen. Juss.

Tube of calyx turbinate, adhering to the ovary; limb 4-10-parted. Petals (f. 114. d.) alternating with the lobes of the calyx, and therefore equal to them in number, convolutely imbricate in æstivation. Stamens 20-40, inserted into the throat of the calyx in 1 or 2 series. Styles sometimes nearly distinct and at others more or less joined together in one; stigmas many. Capsule half adhering to the calyx, 4 (f. 114. b.)-10-celled, many-seeded. Seeds scobiform, subulate, smooth, heaped together at the angles of the cells on the angular placenta, covered by loose, membranous aril. Albumen fleshy. Embryo inverted, almost the length of the albumen (f. 114. c.), with oval, obtuse, flattish cotyledons, and a nearly terete radicle, which is longer than the cotyledons.—This order consists of hardy ornamental shrubs. Leaves opposite, dotless, nerved, toothed, or nearly entire, exstipulate. Peduncles opposite, axillary, or terminal, trichotomously cymose, or somewhat paniced. Flowers white, in most cases fragrant. *Philadelphææ* is more closely allied to *Sarifrægeæ* than to *Myrtaceæ*; from the former, however, it differs widely in habit, but in the fructification differing chiefly in the numerous cells of the fruit, and in the indefinite stamens. From *Myrtaceæ* it differs in the arillate albuminous seeds, in the styles being more or less distinct, and in the toothed, dotless leaves. De Candolle points out an approach to *Hydrægeæ*, and that it is a link connecting it with *Viburnum*, agreeing almost equally with *Philadelphææ* and *Viburnææ* in habit and fructification.

*Synopsis of the genera.*

1 PHILADELPHUS. Limb of calyx 4-5-parted. Petals 4 (f. 114. d.) -5. Stamens 20-40. Styles 4-5, joined or distinct. Capsule 4 (f. 114. b.), -5-celled.

2 DECUMARIA. Limb of calyx 7-10-toothed. Petals 7-10. Stamens thrice the number of the petals. Style 1, crowned by 7-10 stigmas. Capsule 7-10-celled.

3 DEUTZIA. Limb of calyx 5-6-cleft. Petals 5-6. Stamens 10-12; filaments fricuspitate. Styles 3-4. Capsule 3-4-celled.

I. PHILADELPHUS (the *φιλᾶδελφος* of Aristotle is a tree not now known; it is said to be from Ptolemy Philadelphus, King of Egypt). Lin. gen. no. 614. Gært. fruct. 1. p. 173. t. 35. D. C. prod. 3. p. 205. Syringa, Tourn. inst. t. 389. but not of Lin.

LIN. SYST. *Icosándria, Tetra-Pentagýnia*. Tube of calyx obovate-turbinate; limb 4-5-parted. Petals 4 (f. 114. d.) -5. Stamens 20-40, free, shorter than the petals. Styles 4-5, sometimes connected, and sometimes more or less distinct. Stigmas 4-5, oblong or linear, usually distinct, rarely joined. Capsule 4 (f. 114. b.) -5-celled, many-seeded. Seeds scabiform, inclosed in a membranous arillus (f. 114. c.), which is fringed at one end (f. 114. d.).—Shrubs, with pedicellate, white, usually sweet-scented flowers, disposed in corymbose cymes, or somewhat paniced, rarely axillary and bracteate.

§ 1. Stems stiff, straight. Flowers in racemes.

1 P. CORONARIUS (Lin. spec. 671.) leaves ovate, acuminate, serrately denticulated, triple-nerved, smoothish, but hairy at the veins beneath; flowers racemose; lobes of calyx acuminate; styles almost distinct from the base, not exceeding the stamens. h. H. Native of the south of Europe. Curt. bot. mag. 391. The leaves have the taste of cucumbers. The flowers are white, and have a strong scent, which, at a distance, resembles that of orange flowers, but near it is too powerful for most persons. The primary flowers are 5-cleft, but the rest are 4-cleft.

Var. *a*, *vulgâris* (D. C. prod. 3. p. 205.) shrub strong; leaves oval-oblong, large, rather distant. h. H. Schkuhr. handb. t. 121. Lam. ill. t. 420.

Var. *β*, *nânus* (Mill. dict. no. 2.) shrub 1-2 feet high; leaves and branchlets crowded; flower-bearing branches incurved. h. H. Native country unknown. This variety is sometimes to be found in gardens with double flowers.

Var. *γ*, *flöre-plenus*; flowers double.

Var. *δ*, *variegâtus*; leaves edged with white or yellow.

Garland or Common Syringa or Mock-orange. Fl. May, June. Clt. 1596. Shrub 2 to 10 feet.

2 P. ZEYHERI (Schr. diss. with a figure, ex D. C. prod. 3. p. 205.) leaves ovate, acuminate, serrately denticulated, rounded at the base, triple-nerved, hairy at the veins beneath; flowers somewhat racemose; lobes of calyx long-acuminate; style profoundly 4-cleft. h. H. Native of North America. This species is of more humble habit than *P. coronarius*, and differs chiefly from it in the leaves being rounded at the base, and in the flowers being fewer, larger, and scentless.

*Zeyher's Syringa* or Mock-orange. Fl. May, June. Clt.? Shrub 3 to 4 feet.

3 P. FLORIBUNDUS (Schr. diss. with a figure, ex D. C. l. c.) leaves ovate-oval, long-acuminate, serrate-toothed, triple-nerved, clothed with hairy pubescence beneath; flowers somewhat racemose; lobes of calyx ending in a long acumen each; style 4-cleft at the apex. h. H. Native of North America. Flowers white, 5-7, showy, sweet-scented.

*Bundle-flowered Syringa* or Mock-orange. Fl. May, June. Clt.? Shrub 4 to 8 feet.

4 P. VERRUCOSUS (Schr. diss. with a figure, ex D. C. l. c.) leaves elliptic-ovate, acuminate, denticulated, clothed with hairy pubescence beneath; flowers racemose; lobes of calyx acuminate; style 4-cleft at the apex. h. H. Native of North America. *Philadelphus grandiflorus*, Lindl. bot. reg. 570. Pursh, fl. sept. amer. but not of Willd. The leaves on the ribs and primary veins beneath, as well as the peduncles, pedicels, and calyxes, are beset with hair-bearing warts. Flowers large, white, scentless.

*Warted Syringa* or Mock-orange. Fl. May, June. Clt.? Shrub 4 to 6 feet.

5 P. LATIFOLIUS (Schr. diss. ex D. C. prod. 3. p. 506.) leaves broad-ovate, acuminate, toothed, somewhat quintuple-nerved, clothed with hairy pubescence beneath; flowers racemose; lobes of calyx acuminate; style 4-cleft at the very apex. h. H. Native of North America. *P. latifolius*, Hortul. *P. pubescens*, Cels. hort. Lois. herb. amat. t. 208. This species is known by its white bark, and by the leaves being broad ovate, beset with hairs, which are naked at the base, not with warts, as well as the young branches.

*Broad-leaved Syringa* or Mock-orange. Fl. May, June. Clt.? Shrub 4 to 6 feet.

6 P. TOMENTOSUS (Wall. cat. 3653.) leaves ovate, acuminate, denticulated, tomentose beneath; raceme terminal; pedicels opposite; lobes of calyx ovate, acute. h. H. Native of Nipaul and Kamaon. *P. Nipaulensis*, Loud. hort. brit. p. 196.

*Tomentose Syringa* or Mock-orange. Clt. 1822. Shrub 3 to 6 feet.

§ 2. Stems more slender, twiggy, loose. Flowers solitary or 3 together.

7 P. GRANDIFLORUS (Willd. enum. 1. p. 511.) leaves ovate, long-acuminate, denticulated, triple-nerved, hairy at the vein beneath, and with fascicles of pili in the axils of the veins; flowers solitary, or by threes; lobes of calyx long-acuminate; styles joined in one, longer than the stamens, crowned by 4 linear stigmas. h. H. Native of North America. Guimp. abb. holz. t. 44. Schr. diss. with a figure. *P. inodorus*, Hortul. Branches covered with a castaneous blood-coloured epidermis. Flowers large, scentless.

*Great-flowered Syringa* or Mock-orange. Fl. June, July. Clt. 1811. Shrub 6 to 8 feet.

8 P. SPECIOSUS (Schr. diss. with a figure, ex D. C. l. c.) leaves ovate, rarely oval-ovate, long-acuminate, sharply serrate-toothed, clothed with hairy pubescence beneath; flowers solitary, or by threes; lobes of calyx with very long acumens; style deeply 4-cleft, exceeding the stamens. h. H. Native of North America. *P. grandiflorus* of German gardeners. *P. grandiflorus β*, *lâxus* of other gardeners. Tube of calyx nearly terete. Capsule 8-valved, ex Schr., but more likely 4-valved, with the valves becoming 2-parted at maturity. Flowers large, white, scentless?

*Showy Syringa* or Mock-orange. Fl. June. Clt.? Shrub 10 to 14 feet.

9 P. LÂXUS (Schr. diss. with a figure, ex D. C. l. c.) leaves oval-ovate, long-acuminate, toothed, clothed with hairy pu-

FIG. 114.

bescence beneath; flowers solitary and by threes; lobes of calyx ending each in a very long acumen; style 4-cleft; stigmas about equal in length to the stamens. *h. H.* Native of North America. *P. lãxus* and *P. hũmilis*, Hortul. Humbler than the preceding plant.

*Loose Syringa* or Mock-orange. Fl. Ju. Clt. ? Sh. 4 to 6 ft.

10 *P. hirsutus* (Nutt. gen. amer. 1. p. 301.) leaves oblong-ovate, acute, toothed, 5-nerved, hairy on both surfaces, white beneath; flowers solitary and by threes; styles joined to the apex; stigmas undivided. *h. H.* Native of North America, in Tennessee, at French River; frequent among rocks. Flowers white, scentless?

*Var. β, grãcilis* (Schrad. l. c.) branches more slender; leaves 3-nerved. *h. H.* Native of North America. *P. grãcilis*, Hortul. Lodd. cat. ex Loud. hort. brit. p. 196.

*Hairy Syringa* or Mock Orange. Shrub 2 to 3 ft.

11 *P. Lewisii* (Pursh, fl. amer. sept. 1. p. 329.) leaves ovate, acute, almost entire, with ciliated margins; style length of the stamens, trifid at the apex. *h. H.* Native of North America, at Clark's river, in watery places. Flowers smaller than those of the following species.

*Lewis's Syringa* or Mock-orange. Fl. June. Clt. ? Shrub 6 to 8 ft.

12 *P. inodorus* (Lin. spec. p. 671.) leaves broad-ovate, acuminate, quite entire, triple-nerved, or nearly feather-nerved; flowers solitary, and by threes; style cleft at the apex into 4 oblong stigmas. *h. S.* Native of South Carolina, very rare, on the banks of rivers.—Pursh, fl. amer. sept. 1. p. 329. Sims, bot. mag. t. 1478. *Syringa inodora*, Moench.—Catesb. car. 2. t. 84. Flowers white, scentless, large.

*Scentless Syringa* or Mock-orange. Fl. June. Clt. 1738. Shrub 4 to 6 ft.

*Cult.* All the species of *Philadelphus* or *Syringa* are very desirable plants for shrubberies, the flowers being showy, and of many of the species sweet-scented. They grow in any common soil; and are readily increased by laying down the branches.

II. DECUMARIA (from *δεκυμα*, *decuma*, a tenth; in reference to the tenfold structure of some of the flowers). Lin. gen. no. 597. Lam. ill. t. 403. D. C. prod. 3. p. 206.—Forsythia, Walt. but not of Vahl.

LIN. SYST. *Icosãndria, Monogýnia*. Tube of calyx campanulate; limb 7-10-toothed. Petals oblong, equal in number to the teeth of the calyx, and alternating with them. Stamens thrice the number of the petals, disposed in one series, 2 in front of each petal, and one between each. Style one, very thick, expanded at the apex into a disk, bearing 7-10 radiating stigmas. Capsule ovoid, comate with the calyx to above the middle, which is 7-10-nerved, and toothless, crowned by the style and stigmas, valveless, 7-10-celled, opening irregularly near the prominent nerves of the calyx. Seeds numerous, oblong, inclosed in a membranous aril, fixed obliquely by their centre.—Sarmentose shrubs. Leaves opposite, glabrous, entire or toothed at the apex, dotless. Flowers white, sweet-scented, disposed in terminal corymbs, sometimes they are to be found dioecious in gardens. Leaf-buds beset with short rufous pili.

1 *D. BARBARA* (Lin. spec. 1668.) leaves ovate-oblong, acute at both ends. *h. H.* Native of Lower Carolina, in shady places. *D. radicans*, Moench. meth. p. 17. *D. Forsythia*, Michx. fl. bor. amer. 1. p. 282. Flowers like those of the lime tree, very sweet-scented.

*Var. β, sarmentosa* (Bosc, act. soc. hist. nat. par. 1. p. 76. t. 13.) lower leaves roundish, upper ones ovate-lanceolate. *h. H.* Native of Virginia and Carolina, in humid shady places. *Forsythia scãndens*, Walt. car. p. 154. *D. prostrata*, Lodd. cat. ex Loud. hort. brit. 188.

*Barbarous* or Climbing *Decumaria*. Fl. July, Aug. Clt. 1785. Shrub sarmentose or cl.

*Cult.* *Decumaria* is a very proper shrub for training against a wall or on trellis work, to form bowers, for which it is well adapted from its sweet-scented flowers. It thrives well in any common soil, and is easily increased by laying down the branches or by cuttings.

III. DEUTZIA (in honour of John Deutz, a Dutch naturalist). Thunb. nov. gen. 19. jap. p. 10. Juss. gen. 431.

LIN. SYST. *Decãndria, Trigýnia*. Tube of calyx campanulate, tomentose; limb 5-6-cleft. Petals 5-6, oblong. Stamens 10; filaments tricuspidate. Styles 3-4, longer than the corolla; stigmas simple, club-shaped. Capsule globular, truncate, perforated, somewhat 3-cornered, scabrous, awned from the permanent bases of the styles, 3-4-valved, 3-4-celled, small, opening at the base. Seeds several in each cell.—Much branched shrubs, with the branches purplish and villous. Leaves opposite, petiolate, ovate, acuminate, serrated, wrinkled, and veined, scabrous from stellate fascicles of down. Flowers in compound panicles. Peduncles and pedicels tomentose and scabrous.

1 *D. SCABRA* (Lin. syst. p. 425. Thunb. jap. 185. t. 24.) leaves ovate, acuminate, serrated, scabrous from stellate down; flowers in compound panicles; peduncles and pedicels scabrous; calycine lobes short and bluntish. *h. H.* Native of Japan, where the leaves are used by joiners in smoothing and polishing.

*Scabrous Deutzia*. Fl. May, June. Shrub 4 to 6 ft.

2 *D. STAMINEA* (R. Br. mss. ex Wall. pl. rar. asiat. 2. p. 82. t. 191.) young branches clothed with stellate tomentum, old ones glabrous; leaves quite entire, scabrous, lanceolate, acuminate, cuspidately serrated, white from tomentum beneath; cymes trichotomous; peduncles 3-flowered; pedicels and calyxes beset with stellate tomentum outside. *h. H.* Native of Nipaul, on the high mountains near the Great Valley. *Philadelphus* or *Leptospermum stamineum*, Wall. Flowers white, sweet-scented. Styles 4-5, length of the stamens; teeth of filaments shorter than the anthers; teeth of calyx lanceolate, acute.

*Long-stamened Deutzia*. Shrub 3 to 4 ft.

3 *D. CORYMBOSA* (R. Br. in Wall. cat. 3652.) glabrous; leaves ovate, acuminate, cuspidately serrated; panicles corymbose, trichotomous; panicle and outside of calyx dotted; teeth of calyx short and rounded; teeth of filaments shorter than the anthers. *h. H.* Native of Kamaon. *Philadelphus corymbosus*, Wall. Flowers white.

*Corymbose-flowered Deutzia*. Shrub 3 to 4 ft.

4 *D. BRUNONIANA* (Wall. cat. 3650.) leaves ovate, acuminate, cuspidately serrated, clothed with hoary tomentum beneath, as well as the peduncles and calyxes; peduncles axillary; lobes of calyx subulate; petals narrow; cusps of filaments longer than the anthers. *h. H.* Native of Kamaon. *Leptospermum scabrum*, Wall. Flowers white. Fruit small.

*Brown's Deutzia*. Shrub 4 to 5 ft.

*Cult.* Any common soil will suit these shrubs, and they may easily be increased by laying down the branches or by cuttings.

ORDER CI. MYRTACEÆ (plants agreeing with *Myrtus* in important characters). R. Brown, gen. rem. p. 14. D. C. dict. class vii. and not. 1826. prod. 3. p. 207.—*Myrti*, Juss. gen. p. 323.—*Myrtac*, Juss. dict. sc. nat. 34. p. 79.—*Myrtineæ*, D. C. theor.—*Myrtoidea*, Vent. tabl. Batsch. p. 13.—*Myrteacæ*, Nees, nov. act. bonn. 11. p. 113.—*Hesperideæ*, Lin. ord. nat. 19. but not of Vent.

Calyx superior, 4-5-cleft (f. 115. a. f. 117. b.), rarely 6-cleft, sometimes falling off like the cap, in consequence of the cohesion

at the apex; tube adnate to the ovarium (f. 115. a. f. 123. a.). Petals equal in number to the lobes of the calyx, inserted in the calyx, rarely wanting; but when present with a quincuncial æstivation (f. 122. b.). Stamens inserted along with the petals (f. 115. e. f. 123. b.), and are either twice their number or indefinite (f. 119. c. f. 123. b.), usually disposed in many series; filaments distinct (f. 123. b.), or connected into several parcels (f. 117. e. e.), curved inwards before flowering; anthers ovate, 2-celled, small, bursting lengthwise (f. 120. c.). Ovary inferior, 2-4-5 or 6-celled; style simple (f. 119. c.). Stigma simple. Fruit either dry (f. 119. d.) or fleshy (f. 121. e.), dehiscent or indehiscent. Seeds usually indefinite, variable in form. Embryo exalbuminous, straight or curved, with its cotyledons and radicle distinguishable, or conferruminated into a solid mass.—Trees or shrubs. Leaves usually opposite (rarely alternate, as in *Barringtonia*), entire, full of transparent dots, feather-nerved, the nerves usually running into each other towards the margin, and forming a vein running parallel with the margin. Inflorescence variable, sometimes on 1-flowered axillary pedicels, sometimes on axillary 3-flowered trichotomous cymose peduncles, or the peduncles are furnished with many opposite flowers, and terminated by one flower; sometimes the flowers are sessile and spicate; always with 2 opposite bractes under each flower. Flowers white, red, occasionally yellow, but never blue.

*Myrtaceæ* is one of the most natural among the tribes of plants, and the most easily recognised. Its opposite exstipulate clothed entire leaves, with a marginal vein, are a certain indication of it, with the exception of a few plants, which probably do not belong to the order, although at present placed in it. It is closely allied to *Rosaceæ*, *Lythraceæ*, *Onagraceæ*, *Combretaceæ*, and *Melastomaceæ*, but cannot well be confounded with them or any other tribe. It is distinguished from *Lythraceæ* in the calyx being adnate to the ovarium, from *Combretaceæ* in the many-celled ovary, in the erect or horizontal seeds, not pendulous, and in the cotyledons not being convolute; from *Melastomaceæ* in the filaments not being bent abruptly, nor received in vacuities below the recesses of the calyx, as in that order, and in the form of the stamens; from *Onagraceæ* in the stamens being usually indefinite. The order offers a curious instance of the facility with which the calyx and corolla can take upon themselves the same functions of transformation. In *Eucalyptus*, as is well known, the sepals are consolidated into a cup-like lid, called the operculum. In *Eudæsmia*, a nearly related genus, the calyx remains in its normal state, while the petals are consolidated into the operculum. The pellucid dottings of the leaves, and other parts, indicate the presence of a fragrant aromatic or pungent volatile oil, which gives the principal quality to the products of the order. To this are to be attributed the grateful perfume of the *Guava* fruit, the powerful scent of the flower-buds of *Caryophyllus aromaticus*, called in England cloves, and the balsamic odour of the eastern fruits called the *Jamsorade* and the *Rose-apple*. The fruit of various *Eugenias* are found by travellers in the forests of Brazil to bear very agreeable fruit. A fruit of Brazil, called *Japocabieras*, brought from the forests to the towns of St. Paul and Tejuco, belongs to this order; it is said to be delicious. (St. Hil. pl.

usual. p. 29.) The young flower-buds of *Calyptanthus aromatica* have the flavour and quality of cloves, for which they might be advantageously substituted, according to M. Auguste St. Hilaire, pl. usual. no. 14. The volatile oil of cajeputi, or cajeput oil, is distilled from the leaves of *Melaleuca leucodendron* and *M. cajeputi*, and is well known as a powerful sudorific; and is a useful external application in chronic rheumatism. (Ainslie, 1. p. 260.) It is considered carminative, cephalic, and emmenagogue, and is no doubt a highly diffusible stimulant, antispasmodic and diaphoretic, and on that account is used in the cure of cholera. It has also the power of dissolving caoutchouc. (Ibid.) The root of *Stravadium racemosum* has a slightly bitter, but not unpleasant taste. It is considered by the Hindoo doctors valuable on account of its aperient, deobstruent, and cooling properties; the bark is supposed to possess properties similar to *Cinchona*. (Ibid. 2. p. 65.) A kind of gum is yielded by *Eucalyptus resinifera*, which is occasionally sold in the medicine bazaars of India. (Ibid. 1. p. 185.) Other species of *Eucalyptus* yield a large quantity of tannin, which has been even extracted from the trees of New Holland, and sent to the English market. The leaves of *Glaphyria nitida*, called by the Malays the *tree of long life*, probably from the other trees of the forest having ceased to exist, afford at Bencoolen a substitute for tea, and it is known by the natives by the name of *tea plant*. (Lin. trans. 14. p. 129.)

#### synopsis of the genera.

##### TRIBE I.

CHAMÆLAUCIÆ. Lobes of calyx 5 (f. 115. b.). Petals 5. Stamens disposed in one series, fertile and sterile mixed (f. 115. c. c.). Fruit dry, 1-celled. Ovula numerous, erect from the base, fixed to the centre or to the somewhat exserted central placenta.—Heath-like shrubs, all natives of New Holland. Leaves opposite, dotted. Flowers small, on short pedicels. Bractes 2 under each flower, free or joined.

1 CALYTHRIX. Calyx drawn out into a cylindrical tube (f. 115. a.); lobes ending in a long bristle each (f. 115. g.). Stamens 10-30, free. Fruit dry, indehiscent, 1-celled.

2 DARWINIA. Tube of calyx drawn out into a membranous deciduous limb, with its throat dilated. Lobes roundish, cordate. Stamens 10-15, free. Ovary 1-celled, 1-ovulate.

3 VERTICORDIA. Flowers before expansion girded by 2 free or concrete bractes; lobes of calyx palmately parted into 5-7-lobules. Stamens 20, of which 10 are sterile and ligulate. Stigma feathered. Fruit 1-seeded, 1-celled when mature.

4 CHAMÆLAUCIUM. Flowers girded by 2 concrete bractes, which terminate each in a dorsal mucrone; lobes of calyx undivided, petaloid. Stamens 20, 10 of which are sterile and ligulate. Stigma capitate. Ovary 1-celled, 5-6-ovulate.

5 GENETYLLIS. Flowers girded by 2 distinct bractes; lobes of calyx short, obtuse, entire. Stamens 20, many of which are sterile, all filiform. Stigma bearded. Ovary 1-celled, 5-6-ovulate.

6 PILEANTHUS. Flowers inclosed in a 1-leaved calyptriform involucre before expansion; limb of calyx 10-parted; lobes rounded. Stamens 20, all fertile, some simple, others bifurcate. Ovary 1-celled, 5-7-ovulate. Stigma obtuse.

## TRIBE II.

**LEPTOSPERMEÆ.** Calyx 4-6-lobed (f. 116. b. f. 117. b.). Petals 4 (f. 116. b.) -6. Stamens free (f. 119. c.) or polyadelphous (f. 117. e.). Fruit dry, many-celled. Seeds exarillate and exalbuminous.—Shrubs or trees, natives of New Holland. Leaves opposite or alternate, usually full of pellucid dots. Inflorescence variable; sometimes cymose and centrifugal, with pedicellate flowers (f. 118.); sometimes spicate and centripetal, with sessile flowers (f. 116. f. 117.).

**SUBTRIBE I. MELALEUCÆ.** Stamens polyadelphous (f. 116. c. f. 117. e.).

7 **ASTARTEA.** Limb of calyx 5-parted; lobes orbicular. Bundles of stamens alternating with the petals. Stigma capitate. Capsule 3-celled, 3-valved, many-seeded, half adhering to the calyx. Flowers pedicellate.

8 **TRISTANIA.** Calyx 5-cleft. Bundles of stamens opposite the petals. Capsule 3-celled, many-seeded. Flowers pedicellate.

9 **BEAUFORTIA.** Limb of calyx 5-parted; lobes acute. Bundles of stamens opposite the petals. Capsule adhering to the tube of the calyx, 3-celled; cells 1-seeded. Flowers sessile.

10 **CALOTHAMNUS.** Calyx 4-5-toothed (f. 116. b.). Bundles of stamens opposite the petals (f. 116. c.). Capsule covered by the calyx, 3-celled, many-seeded. Flowers sessile.

11 **MELALEUCA.** Limb of calyx 5-parted (f. 117. b.). Bundles of stamens elongated, opposite the petals (f. 117. c.). Capsule covered by the calyx (f. 117. a.), and adnate to the base of the branches, 3-celled, many-seeded. Flowers sessile.

12 **LAMARCHEA.** Limb of calyx 5-parted. Petals campanulately conniving. Stamens monadelphous at the base, but dividing into 5 polyandrous parts at the apex. Capsule covered by the chartaceous calyx, 3-celled, opening by 3 valves at the apex, globose, woody, many-seeded. Flowers axillary, solitary, sessile.

13 **EUDERMIA.** Limb of calyx 4-toothed. Petals joined into a deciduous operculum. Bundles of stamens 4, alternating with the teeth of the calyx. Capsule 4-celled, 4-valved. Flowers pedunculate.

**SUBTRIBE II. EULEPTOSPERMEÆ.** Stamens free. (f. 119. c.)

14 **EUCALYPTUS.** Limb of calyx lid-formed, falling off in one piece (f. 118. b.). Petals none. Stamens numerous. Capsule 4-celled (f. 118. c.), or from abortion only 3-celled, many-seeded.

15 **ANGOPHORA.** Limb of calyx 5-toothed. Stamens numerous. Capsule covered by the calyx, 3-celled, 3-valved; cells 1 or few-seeded. Flowers corymbose.

16 **CALLISTEMON.** Limb of calyx 5-parted; lobes obtuse. Stamens numerous (f. 119. c.). Capsule 3-celled (f. 119. b.), many-seeded, incrusting by the calyx. Flowers sessile.

17 **METROSIDEROS.** Limb of calyx 5-6-cleft (f. 120. a.). Stamens 20-30, very long. Capsule 2-3-celled; cells many-seeded. Flowers pedicellate.

18 **LEPTOSPERMUM.** Limb of calyx 5-cleft; lobes triangular. Stamens 20-30, shorter than the petals. Capsule 4-5-celled. Flowers solitary, pedicellate.

19 **BILLÓTIA.** Limb of calyx 5-cleft; lobes triangular. Stamens 20-30, shorter than the petals. Berry 3-celled. Flowers sessile, in globose heads.

20 **FABRICIA.** Limb of calyx 5-cleft; lobes valvate. Stamens numerous. Capsule many-celled, adnate to the calyx; cells opening at the apex. Seeds winged. Flowers on short pedicels.

21 **BÆCKEA.** Limb of calyx 4-cleft. Stamens 5-10, shorter than the petals. Capsule 2-5-celled, many-seeded, inclosed in the calyx. Flowers pedicellate.

## TRIBE III.

**MYRTEÆ.** Calyx 4-5-parted (f. 121. b. f. 122. d. a.). Petals 4-5. Stamens free (f. 123. b.). Fruit fleshy, baccate, many-celled (f. 121. c.).—Trees or shrubs. Leaves opposite, full of pellucid dots, or opaque, quite entire. Peduncles axillary, sometimes 1-flowered, sometimes in trichotomous cymes, and sometimes branched and approximating into a terminal panicle.

22 **SONNERATIA.** Calyx adhering to the ovary at the base, 4-6-cleft. Stamens numerous. Berry adnate to the calyx at the base, the rest girded by it, 10-15-celled. Seeds curved, imbedded in fleshy pulp. Flowers large, terminal, solitary. Leaves dotless.

23 **NEOLITIS.** Calyx 4-5-toothed. Stamens numerous. Ovary 4-10-celled. Berry crowned by the calyx, few or many-seeded. Flowers pedicellate. Leaves dotless.

24 **CAMPOMANESIA.** Limb of calyx 5-parted; lobes ovate. Stamens numerous. Berry many-seeded, globose, pulpy, 7-10-celled. Seeds rather reniform. Peduncles 1 or many-flowered. Leaves dotted.

25 **PSIDIUM.** Tube of calyx rather contracted at the apex, limb at first undivided, but at length cleft into 1-5 parts (f. 121. b.). Stamens numerous. Ovary 5-20-celled. Berry many-seeded (f. 121. c.), crowned by the lobes of the calyx. Seeds imbedded in pulp. Leaves dotless.

26 **JOSSINIA.** Limb 4-parted even to the base; lobes open in aestivation. Stamens numerous. Fruit fleshy, crowned by the calycine lobes, many-seeded. Peduncles 1-flowered.

27 **MYRTUS.** Limb of calyx 5-parted, rarely 4-parted. Stamens numerous. Berry 2-3-celled, crowned by the limb of the calyx. Seeds incurved, many in each cell, rarely solitary. Pedicels 1-flowered. Leaves dotted.

28 **MYRCIA.** Limb of calyx 5-parted (f. 122. a. d.). Stamens numerous. Ovary 2-3-celled; cells many-ovulate. Berry when mature usually 1-2-celled, and 1-3-seeded. Seeds nearly globose. Peduncles axillary and terminal, many-flowered. Leaves dotted.

29 **CALYPTRANTHES.** Limb of calyx falling off in one piece. Petals wanting, or 2-3 very small. Stamens numerous. Ovary 2-3-celled; cells 2-seeded. Berry 1-celled, 1-4-seeded. Peduncles axillary, many-flowered.

30 **SYZYGIUM.** Limb of calyx almost entire, or repandly lobed. Petals 4-5, concrete, falling off in the shape of a calyptra. Stamens numerous. Ovary 2-celled; cells few-ovulate. Berry 1-celled, 1 or few-seeded. Seeds globose. Peduncles axillary and terminal, in cymose corymbs.

31 **CARYOPHYLLUS.** Limb of calyx 4-parted (f. 123. d.)

Petals 4, cohering at the apex, as in *Syzygium*. Stamens free (f. 123. b.), disposed in 4 bundles, inserted near the teeth of the calyx. Ovarium 2-celled (f. 123. a.); cells many-ovulate. Berry 1-2-celled, 1-2-seeded from abortion. Cymes terminal, or in the forks of the branches. Leaves dotted.

32 ACME'NA. Limb of calyx truncate, when young involute. Petals 5, small, distant. Stamens numerous. Berry 1-seeded. Cymes 3-flowered, disposed in a terminal panicle thyrs.

33 EUGENIA. Limb of calyx 4-parted even to the ovary. Stamens numerous. Ovarium 2-3-celled; cells many-ovulate. Berry nearly globose, crowned by the calyx; when mature 1, rarely 2-celled, 1-2-seeded. Seeds large, roundish.

34 JAMBOSA. Tube of calyx drawn out beyond the ovary (f. 124. a.); limb 4-parted. Stamens very numerous (f. 124. c.). Ovarium many-celled and many-ovulate. Fruit 1-2-seeded, umbilicate at the apex. Seeds angular. Leaves dotted. Cymes lateral and terminal.

#### TRIBE IV.

BAIRINGTONIÆ. Calyx 4-6-toothed. Petals 4-6. Stamens numerous, disposed in many series; filaments monadelphous a short way at the base. Fruit baccate or dry, many-celled. Cotyledons large, fleshy.—Trees, with dotless, alternate, or nearly opposite leaves, or crowded in whorls, quite entire or serrated. Flowers in racemes or panicles.

35 BARRINGTONIA. Limb of calyx 2-3-parted. Petals 4. Stamens numerous, long. Ovarium 4-celled; cells 2-ovulate. Berry large, crowned by the limb of the calyx, 1-celled at maturity, and 1-seeded. Trees, with dotless leaves.

36 STRAVIDIUM. Limb of calyx 4-parted. Ovarium semi-bilocular; cells 2-ovulate. The rest as in *Barringtonia*.

37 GUSTAVIA. Limb of calyx entire, or 4-6-8-lobed (f. 126. b.). Petals 4-6-8. Stamens numerous. Ovarium 4-6-celled; cells many-ovulate. Capsule 3-6-celled; cells few-seeded.—Trees, with dotless leaves.

† Genera belonging to *Myrtaceæ*, and probably for the most part to tribe *Myrtææ*, from the fruit being baccate; but from the seeds being unknown it is doubtful what place they should occupy in the order.

38 CATINGA. Limb of calyx 4-toothed. Petals? Stamens numerous. Berry crowned by the limb of the calyx, 1-celled, 1-seeded. Leaves dotted.

39 PETALOTOMA. Limb of calyx 8-cleft; the segments acute. Petals 6-8, unguiculate, with the limbs cut. Stamens 16, inserted in the fleshy crenated disk. Stigma 4-5-cleft. Berry round, crowned by the limb of the calyx, 1-seeded.

40 FETIDIA. Limb of calyx 4-parted; lobes valvate in æstivation. Petals wanting. Stamens numerous, in many series, free. Stigma 4-cleft. Berry dry, indehiscent, bluntly tetragonal, 4-celled; cells 1-2-seeded. Leaves alternate, dotless.

41 COUPOURI. Limb of calyx 5-lobed. Petals, stamens, and style unknown. Berry ovate, 1-celled, 1-seeded, crowned by the calyx. Seed large. Leaves alternate.

42 CAREYA. Limb of calyx 4-parted. Petals 4 (f. 127. b.).

Stamens numerous (f. 127. g.), free, outer ones sterile. Stigma capitate (f. 127. c.), obscurely 4-toothed. Berry globose (f. 127. d.), crowned by the lobes of the calyx; when young 4-celled (f. 127. e.), pulpy, and many-seeded. Seeds compressed. Leaves alternate, dotless.

43 GLAPHYRIA. Limb of calyx 5-lobed. Petals 5. Berry 5-celled, many-seeded. Seeds fixed by 2 series in each of the cells. Leaves alternate, minute, stipulate.

44 CROSSOSTYLIS. Calyx 4-angled, adnate to the ovary at the base, permanent, 4-cleft beyond the middle. Petals 4, unguiculate. Stamens about 20; filaments connate into a ring at the base, intermixed with sterile threads. Stigma 4-lobed; lobes trifid at the apex. Berry striated, 1-celled, many-seeded.

45 GRIS. Tube of calyx adhering to the ovary; limb 4-cleft. Petals 4. Stamens numerous, inserted in a square disk; filaments joined in 5 series, inner ones very short. Style none. Stigma cruciate. Drupe 8-furrowed, crowned by the calyx, containing an oblong nut. Leaves very long. Flowers large.

#### Tribe I.

CHAMÆLAUCIÆ (plants agreeing with the genus *Chamelaucium* in important characters). D. C. diet. class. vol. 11. and not. 1826. prod. 3. p. 208. Lobes of calyx 5 (f. 115. g.). Petals 5 (f. 115. b.). Stamens disposed in one series, free (f. 115. c.), or somewhat polyadelphous, with some sterile ones mixed among the fertile. Fruit dry, 1-celled. Ovula numerous, erect from the base, fixed to the centre, or to the somewhat exerted central placenta.—Heath-like shrubs, all natives of New Holland. Leaves opposite, full of dots. Flowers small, on short pedicels. Bracteoles 2 under each flower; they are either free or joined together at the base, sometimes in the form of an operculum.

I. CALYTHRIX (from *καλὺξ*, *calyx*, a calyx, and *θηρίξ*, *thrix*, a hair; in reference to the lobes of the calyx, which end in a long hair each). Labill. nov. holl. 2. p. 8. t. 146. R. Br. in bot. reg. no. 409. D. C. prod. 3. p. 208.

LIN. SYST. *Deca-Icosandria*, *Monogynia*: Tube of calyx adhering to the ovary at the base, but drawn out at the apex into a long slender cylindrical tube; limb 5-parted (f. 115. g.), permanent, lobes ovate at the base, but each ending in a bristle at the apex (f. 115. g.), which is longer than the corolla. Petals 5 (f. 115. b.), deciduous. Stamens 10-30, free (f. 115. c.); anthers roundish. Style filiform, length of the stamens. Fruit dry, indehiscent, 1-celled; when young biovulate, but when mature 1-seeded. Australian heath-like shrubs. Leaves scattered, crowded, terete, and rather angular, usually on very short petioles, which are furnished with 2 small stiff filiform stipulas. Flowers axillary, solitary, almost sessile, propped by 2 membranous keeled bracteas, which are connate at the base. Petals purple or white, but yellowish when dried.

1 C. GLABRA (R. Br. l. c.) icosandrous; leaves petiolate, stipulate, glabrous in the adult state, as well as the bracteas. h. G. Native of New Holland, near Port Jackson. Lodd. bot. cab. t. 586. Leaves when fresh terete, but when dry triangular. Petals pale reddish.

*Glabrous Calythrix*. Fl. Ap. Ju. Clt. 1818. Sh. 2 to 3 ft.

2 C. PUBESCENS (Sweet, ex Loud. hort. brit. p. 199.) icosandrous; leaves petiolate, stipulate, pubescent in the adult state, as well as the bracteas. h. G. Native of New Holland. Leaves terete.

*Pubescent Calythrix*. Shrub 2 to 3 ft.

3 *C. TETRA'PTERA* (Labill. l. c.) icosandrous; leaves petiolate, stipulate, glabrous in the adult state, as well as the bracteas; branchlets villous. *h. G.* Native of New Holland, in Van Lewin's Land. Petals yellowish according to the dried specimen. (f. 115.)

*Four-winged Calythrix.* Shrub 2 to 3 ft.

4 *C. SCA'BRA* (D. C. prod. 3. p. 208.) icosandrous; leaves petiolate, with 2 very short stipulas, scabrous in the adult state, as well as the bracteas; branchlets villous. *h. G.* Native of New Holland, on the eastern coast. *C. glabra*, Sieb. fl. nov. holl. exsic. no. 285. but not of R. Br.

*Scabrous Calythrix.* Shrub 2 to 3 ft.

5 *C. ERICOIDES* (Cunning. in Fields' new south wales, p. 350.) icosandrous; leaves scattered, petiolate, stipulaceous, glabrous; stipulas deciduous; bracteas one-half shorter than the tube of the calyx. *h. G.* Native of New Holland, in pine ridges, at Bathurst.

*Heath-like Calythrix.* Clt. 1824. Shrub 4 to 6 ft.

*Cult.* The species grow well in a mixture of loam, peat, and sand; and young cuttings strike root readily in sand under a hand-glass. All the species are singular.

II. *DARWINIA* (in honour of the celebrated Dr. Darwin, author of the botanic garden, a Poem). Rudge, in Lin. trans. 11. p. 299. t. 22. D. Don, in edinb. phil. journ. July, 1829.

*LIN. SYST.* *Deca-Icosándria, Monogýnia.* Tube of calyx adhering to the ovarium from the middle downwards, the other half membranous and deciduous, with the throat dilated; limb 5-cleft; lobes roundish-cordate, concave, full of pellucid dots, imbricate in æstivation. Petals wanting. Stamens indefinite, from 10-15, inserted in the limb of the calyx, usually approximating by threes; filaments very short, flat, glabrous; anthers inserted by their bases. Ovarium 1-celled, 1-ovulate; ovulum erect. Style tapering to the top, and bearded at the apex; stigma a pruinose dot.—Seed pentagonal, scrobiculate on the outside.—Australian decumbent leafy shrubs. Leaves scattered, narrow, full of pellucid dots, articulated to the branches. Flowers in terminal fascicles, red or white, interspersed with chaffy leaves or bracteas.

1 *D. FASCICULARIS* (Rudge, in Lin. trans. 11. p. 299. t. 22.) leaves acerose; receptacle chaffy; style thrice the length of the flower. *h. G.* Native of New Holland. Calyx red.

*Fascicled-flowered Darwinia.* Fl. May, July. Clt. 1820. Shrub decumbent.

2 *D. TAXIFOLIA* (Cunning. in Fields' new south wales, p. 352.) leaves acinaciform; style shorter than the flower. *h. G.* Native of New Holland. Calyx white.

*Yew-leaved Darwinia.* Fl. May, July. Clt. 1824. Shrub decumbent.

*Cult.* The species of *Darwinia* are singular plants; their culture and propagation are the same as that recommended for *Calythrix*.

III. *VERTICORDIA* (meaning unknown to us). D. C. dict. class. vol. ii. and not. 1826. prod. 3. p. 208.—*Chamelaucium* species of Desf. in ann. mus. 5. p. 29. and p. 271.

*LIN. SYST.* *Icosándria, Monogýnia.* Flower girded by 2 free or concrete involucrem-formed bracteas before evolution.

Lobes of calyx 5, each palmately parted into 5-7 lobules. Petals 5. Stamens 20, of which 10 are sterile and ligulate, the other 10 fertile and equal among themselves. Style filiform, exserted. Stigma bearded. Ovarium 1-celled, inclosing 5-6 ovula, which are erect and fixed to the centre. Fruit 1-seeded. Seed globose.—Australian shrubs, with the habit of *Pileanthus*. Leaves opposite, linear, somewhat triquetrous. Flowers on longish pedicels, rising from the axils of the upper leaves, disposed in a terminal corymb.

1 *V. FONTAINE'SII* (D. C. prod. 3. p. 209.) calycine lobes linear, ciliated; bracteas concrete on one side, and separating lengthwise on the other; leaves acutish. *h. G.* Native of New Holland, at King George's Sound. *Chamelaucium plumdsum*, Desf. in mem. mus. 5. p. 42. t. 4.

*Desfontaine's Verticordia.* Shrub 1 to 2 ft.

2 *V. BROWNII* (D. C. l. c.) calycine lobes linear-subulate, bearded, and ending each in an awn; bracteoles distinct; leaves obtuse, adpressed. *h. G.* Native of New Holland. *Chamelaucium Brownii*, Desf. in mem. mus. 5. p. 272. t. 19.

*Brown's Verticordia.* Shrub 1 to 2 ft.

*Cult.* For culture and propagation see *Calythrix*.

IV. *CHAMÆLAUCIUM* (we suppose this name to be from *χαμαιλευκη*, an humble poplar; but the application is unknown to us). D. C. prod. 3. p. 209.—*Chamelaucium*, Desf. in mem. mus. 5. p. 39.

*LIN. SYST.* *Icosándria, Monogýnia.* Flower girded by 2 concave bracteas before evolution, each terminating in a dorsal mucrone, afterwards separating transversely. Lobes of calyx 5, undivided, petaloid. Petals 5. Stamens 20, of which 10 are sterile and ligulate, and the other 10 fertile and alternately shorter. Style inclosed; stigma capitate. Ovarium 1-celled, inclosing 5-9 erect ovula, which are inserted in the central placenta.—Australian shrub, with the habit of *Pileanthus*. Leaves opposite, crowded, linear, triquetrous. Flowers axillary, white, on short pedicels.

1 *C. CILIATUM* (Desf. l. c. p. 40. t. 3. f. B.) *h. G.* Native of New Holland, at King George's Sound. Tube of calyx striated, glabrous, with the lobes roundish and ciliated.

*Ciliated-calyxed Chamelaucium.* Shrub 1 to 2 ft.

*Cult.* For culture and propagation see *Calythrix*. A singular shrub.

V. *GENETYLLIS* (meaning unknown to us). D. C. dict. class. vol. 2. and not. 1826. prod. 3. p. 209.

*LIN. SYST.* *Icosándria, Monogýnia.* Bracteoles 2, distinct, girding the flower; limb of calyx 5-cleft; lobes very short, obtuse, entire. Petals 5, ovate, acutish, permanent, rather scarious. Stamens 20, short; of these many are sterile and filiform, not strap-formed. Style filiform, exserted; stigma bearded. Ovarium 1-celled, bearing 5-6 seeds at the base.—Australian shrubs, with the habit of *Pileanthus*. Leaves crowded, linear-triquetrous, full of glandular dots, but the upper or floral ones are linear, flat, and rather membranous. Flowers bibracteolate, capitate, white, sessile in the axils of the bracteas. The calyx is like that of *Chamelaucium*; the style is like that of *Verticordia*, but differs from both in the sterile stamens not being ligula-formed, but filiform.

1 *G. DIOSMOIDES* (D. C. diss. with a figure). *h. G.* Native of New Holland, on the eastern coast. D. C. coll. 3. with a figure.

*Diosma-like Genetyllis.* Shrub 1 foot.

*Cult.* For culture and propagation see *Calythrix*, p. 812.

VI. *PILÆANTHUS* (from *πλεος*, *pilos*, a cap, and *ανθος*, *anthos*, a flower; in reference to the flower, which is inclosed within a 1-leaved involucrem before expansion). Labill. nov.

FIG. 115.

holl. 2. p. 11. t. 149. Juss. ann. mus. 19. p. 432. D. C. prod. 3. p. 209.

**LIN. SYST.** *Icosandria, Monogynia*. Flowers inclosed in a 1-leaved involucre before evolution, which is closed on all sides, but at length is circumcised at the base, and falls off in one piece, leaving a campanulate base. Limb of calyx 10-parted; lobes roundish. Petals 5. Stamens 20, all fertile; filaments free, some simple and others bifurcate at the apex; the anthers are therefore of 2 approximate or of 2 separated cells. Ovary 1-celled, 5-6-ovulate; the ovules erect, and fixed to the base of the fruit. Stigma obtuse. Mature fruit unknown.—An Australian shrub, with the leaves and branches opposite. Flowers axillary, nearly terminal, white, on short pedicels.

1 *P. LIMACIS* (Labill. l. c.). *h. G.* Native of New Holland, in Van Lewin's Land. Desf. ann. mus. 5. t. 3. f. A. Leaves terete, and rather clavate, crowded at the tops of the branches. Lobes of calyx white.

*Limax-like Pileanthus.* Shrub 2 to 3 feet.

*Cult.* For culture and propagation see *Calythrix*, p. 812.

#### Tribe II.

**LEPTOSPERMEÆ** (plants agreeing with *Leptospermum* in important characters). D. C. dict. class. vol. ii. and not. 1826. prod. 3. p. 209. Lobes of calyx 4-5 (f. 116. b. f. 117. b.). Petals 4-5. Stamens free (f. 119. c.) or polyadelphous (f. 117. c.). Fruit dry, many-celled. Seeds exarillate and exalbuminous.—Shrubs and trees, all natives of New Holland, with the exception of a few from the neighbouring regions. Leaves opposite or alternate, usually full of pellucid dots. Inflorescence variable: sometimes cymose and centrifugal, with pedicellate flowers (f. 118.); sometimes spicate and centripetal, with sessile flowers (f. 116. f. 117.), which are as if they were somewhat immersed in hollows in the branches; but are sometimes produced in leafy spikes at the tops of the branches.

**SUBTRIBE I. MELALEUCÆ** (plants agreeing with *Melaleuca* in the stamens being polyadelphous). D. C. prod. 3. p. 210. Stamens polyadelphous (f. 116. c. f. 117. c.).

**VII. ASTARTEA** (a mythological name; Astarte, in Syriac, Venus). D. C. dict. class. vol. 2. and not. 1826. p. 210.

**LIN. SYST.** *Polyadelphia, Polyandria*. Tube of calyx hemispherical; limb 5-parted; lobes semi-orbicular. Petals 5. Bundles of stamens alternating with the petals, and shorter than them. Style short; stigma capitate. Capsule half adhering to the calyx, 3-celled, 3-valved, many-seeded.—An Australian shrub, with opposite, linear, fleshy leaves, which, when young, are disposed in axillary fascicles; and pedicellate, solitary, axillary flowers. Habit of *Baccharis*, but differs from it in the stamens being polyadelphous, and from *Melaleuca* in the bundles of the stamens being alternate with the petals, not opposite to them, and in the flowers being pedicellate, not adnate to the branches.

1 *A. FASCICULARIS* (D. C. prod. 3. p. 210.). *h. G.* Native of Van Diemen's Land. *Melaleuca fascicularis*, Labill. nov. holl. 2. p. 29. t. 170.

*Fascicled-leaved Astartea.* Shrub 6 to 9 feet.

*Cult.* For culture and propagation, see *Calythrix*, p. 812.

**VIII. TRISTANIA** (τρίτε, *tris*, three, and *stau*, *stao*, to stand; disposition of flowers and leaves). R. Br. in Ait. hort. kew. ed. 2. vol. 4. p. 417. but not of Poir. D. C. prod. 3. p. 210.

**LIN. SYST.** *Polyadelphia, Polyandria*. Calyx 5-cleft, permanent; tube turbinate. Petals 5. Bundles of stamens 5, opposite the petals, and hardly longer than them. Anthers incumbent. Capsule 3-celled, many-seeded, half exserted, or

inclosed. Seeds wingless.—Australian shrubs, with lanceolate leaves and pedunculate sub-corymbs of flowers.

1 *T. NERIIFOLIA* (R. Br. l. c.) leaves opposite, lanceolate, glaucescent beneath; bundles of stamens triandrous or pentandrous. *h. G.* Native of New South Wales. Bonpl. nav. t. 3. Rehb. gart. mag. 1. t. 17. *Melaleuca neriifolia*, Sims, bot. mag. t. 1058. *Melaleuca salicifolia*, Andr. bot. rep. 485. In each branch of the corymb there are 3 pedicellate flowers, one of which is quadrifid, and the other 2 quinquefid. Petals and stamens yellow.

*Oleander-leaved Tristania.* Fl. June, Sept. Clt. 1804. Tr. 10 to 30 feet.

2 *T. LAURINA* (R. Br. l. c.) leaves alternate, cuneate-lanceolate; branchlets and calyxes pubescent; capsules half superior. *h. G.* Native of New South Wales. Sieb. nov. holl. exsic. no. 220. *Melaleuca laurina*, Smith, in Lin. trans. 3. p. 275. Teeth of calyx shorter than the capsule. Habit almost of *Daphne Lauræola*. Flowers yellow.

*Laurel-like Tristania.* Shrub 5 to 10 feet.

3 *T. PERSICIFOLIA* (Cunningh. in Fields' new south wales, p. 250.) leaves opposite, lanceolate, attenuated, acute, smooth, glaucous beneath, with undulately crenated or quite entire margins; calycine segments ovate, acute. *h. G.* Native of New Holland, in ravines in spring wood. Allied to *T. neriifolia*.

*Peach-leaved Tristania.* Shrub 12 to 16 feet.

4 *T. CONFERTA* (R. Br. l. c.) leaves alternate, lanceolate-elliptic, acute, those at the tops of the branches crowded; segments of calyx acute, foliaceous. *h. G.* Native of New South Wales. Leaves almost of *Pittosporum*.

*Crowded-leaved Tristania.* Fl. Jul. Sep. Clt. 1805. Sh. 4 to 6 ft.

5 *T. SUAVEOL.* (Smith, in Rees' cycl. vol. 26. no. 2.) leaves alternate, elliptic; calyx somewhat hemispherical, with a repand margin. *h. G.* Native of New Holland, at Endeavour River. *Melaleuca suaveolens*, Gertn. fruct. 1. p. 173. t. 35. Smith, in Rees' cycl. 23. no. 4. Flowers yellow. Calyx villous.

*Sweet-scented Tristania.* Tree.

6 *T. ALBENS* (Link. et Out. in hort. berol. ex D. C. prod. 3. p. 210.) leaves elliptic, ciliated, rather hairy on the nerves on both surfaces. *h. G.* Native of New Holland?

*Whitish Tristania.* Tree.

7 *T. DEPRESSA* (Lodd. cat. ex Link. enum. 2. p. 273.). *h. G.* Native of New Holland. This species is not described.

*Dpressed Tristania.* Clt. 1820. Shrub.

*Cult.* *Tristania* is a genus of fine-leaved trees or shrubs. The species grow well in an equal mixture of peat, loam, and sand; and cuttings, not too ripe, strike root readily if planted in a pot of sand, and placed under a hand or bell-glass.

**IX. BEAUFORTIA** (so named in compliment to Mary Duchess of Beaufort, a botanical patroness). R. Br. in Ait. hort. kew. ed. 2. vol. 4. p. 418. D. C. prod. 3. p. 411.

**LIN. SYST.** *Polyadelphia, Polyandria*. Tube of calyx turbinate; limb 5-parted; lobes acute. Petals 5. Bundles of stamens 5, opposite the petals. Anthers inserted by the base, bifid at the apex; lobes deciduous. Style filiform. Capsule corticate, incrustated to the tube of the calyx, 3-celled; cells 1-seeded.—Elegant Australian shrubs, with sessile, opposite, or scattered leaves, and scarlet flowers.

1 *B. DECUSSATA* (R. Br. l. c.) leaves opposite, decussate, ovate, or oval, many-nerved; bundles of stamens on very long claws; filaments radiating. *h. G.* Native of New Holland, on the south-west coast. Ker. bot. reg. t. 18. Sims, bot. mag. 1733. Colla, hort. ripul. p. 20. t. 22. Flowers scarlet. Styles usually flexuous.

*Decussate-leaved Beaufortia.* Fl. May, July. Clt. 1800. Shrub 3 to 10 feet.

2 *B. SPARSA* (R. Br. l. c.) leaves scattered, oval, many-nerved. *h. G.* Native along with the preceding species. Flowers red.

*Scattered-leaved Beaufortia.* Shrub 8 to 10 feet.

3 *B. CAKINATA* (Cunningh. mss. ex Loud. hort. brit. p. 319.) leaves opposite, decussate, many-nerved, keeled on the back, ovate or oval, glaucous. *h. G.* Native of New Holland. Flowers scarlet.

*Keeled-leaved Beaufortia.* Shrub 2 to 4 feet.

*N.B.* There are two other species, which were detected by Mr. Brown; but they still remain unpublished.

*Cult.* This is a splendid genus of plants, and therefore the species are desirable objects in every collection of greenhouse plants; they are also very suitable for conservatories, being free growers and abundant flowerers. Their culture and propagation is the same as that recommended for the species of *Tristania*, p. 813.

**X. CALOTHAMNUS** (from *καλος*, *kalos*, beautiful, and *θαμνος*, *thamnos*, a shrub; in reference to the elegance of the shrubs, from their scarlet flowers and terete leaves). Labill. nov. holl. 2. p. 25. R. Br. in Ait. hort. kew. 4. p. 417.—*Baudinia*, Leschen. ined.

**LIN. SYST.** *Polyadélphia Polyándria*. Calyx permanent, 4-5-toothed (f. 116. *b.*), with a hemispherical tube. Petals 4-5 (f. 116. *b.*). Bundles of stamens equal in number to the petals (f. 116. *c. a.*), and opposite them. Anthers inserted by the base. Style filiform. Capsule corticate from the calyx, 3-celled, many-seeded.—Elegant Australian shrubs, with scattered, crowded, terete leaves, and axillary, solitary, scarlet flowers, which are sessile, and the fruit is therefore adnate to the branches.

\* *Flowers quadrifid.*

1 *C. SANGUINEA* (Labill. l. c. t. 154.) 2 of the bundles of stamens bearing 12-16 anthers, and joined together on one side; the other two free, sterile, monandrous; adult leaves, as well as fruit glabrous. *h. G.* Native of New Holland, in Van Lewin's Land. Flowers scarlet.

*Bloody-flowered Calothamnus.* Shrub 2 to 6 feet.

2 *C. QUADRIFIDA* (R. Br. in Ait. hort. kew. 4. p. 418.) bundles of stamens 4, distinct, equal, bearing 12-15 anthers each; adult leaves as well as flowers glabrous. *h. G.* Native of New Holland, on the south-west coast. Rehb. gart. mag. 1. t. 9. upper figure. Sims, bot. mag. 1506. Anthers inserted by the base. Flowers scarlet, somewhat secund.

*Quadrifid Calothamnus.* Fl. July, Sept. Clt. 1803. Shrub 2 to 4 feet.

\*\* *Flowers quinquefid.*

3 *C. VILLOSA* (R. Br. l. c.) bundles of stamens equal, distinct, polyandrous; adult leaves as well as fruit villous. *h. G.* Native of New Holland, on the south-west coast. Lindl. bot. reg. t. 1099. Rehb. gard. mag. 1. t. 9. lower figure. Colla, hort. ripul. app. 2. p. 328. t. 15. Flowers scarlet. (f. 116.)

*Villous Calothamnus.* Fl. Jul. Sept. Clt. 1823. Sh. 2 to 4 ft.

4 *C. GRACILIS* (R. Br. l. c.) bundles of stamens equal, triandrous; leaves very long, and are as well as the exerted fruit, glabrous; stem branched. *h.*

FIG. 116.

*G.* Native of New Holland, on the south-west coast. Leaves stiff, acute, terete. Flowers scarlet.

*Slender Calothamnus.* Fl. July, Sept. Clt. 1803. Shrub 3 to 6 feet.

5 *C. CLAVATUS* (Cunningh. mss. ex Loud. hort. brit. p. 319.) bundles of stamens equal, polyandrous; adult leaves as well as fruit downy. *h. G.* Native of New Holland. Leaves terete, clavate at the apex. Flowers scarlet.

*Clavate Calothamnus.* Fl. Jul. Sept. Clt. 1824. Sh. 2 to 6 ft.

*Cult.* The species of *Calothamnus* deserve a place in every collection of greenhouse plants, for the splendour of their blossoms. Their culture and propagation is the same as that recommended for *Tristania*, see p. 813. The glass placed over the cuttings requires to be taken off and wiped occasionally, to prevent damp.

**XI. MELALEUCA** (from *μελας*, *melas*, black, and *λευκος*, *leucos*, white; the trunk is black, and the branches are white). Lin. mant. 14. Smith, in Lin. trans. 3. p. 273. R. Br. in Ait. hort. kew. 4. p. 410. D. C. prod. 3. p. 211.—*Caju-pùti*, Adans. fam. f. 2. p. 84.

**LIN. SYST.** *Polyadélphia, Polyándria*. Tube of calyx somewhat hemispherical (f. 117. *a.*); limb 5-parted (f. 117. *b.*). Petals 5. Bundles of stamens 5 (f. 117. *c. g.*), elongated, opposite the petals. Style filiform (f. 117. *c.*); stigma obtuse. Anthers incumbent. Capsules connate, inclosed in the thickened tube of the calyx, and adnate to the branches by the base, 3-celled, many-seeded. Seeds angular.—Trees and shrubs, for the most part natives of New Holland, and a very few of the East Indies. Leaves alternate, or opposite, equal at the base. Flowers always sessile, or somewhat adnate to the branches, spicate or capitate, white, yellow, or purple.

\* *Leaves alternate.*

1 *M. LEUCODENDRON* (Lin. mant. 105.) leaves alternate, long, lanceolate, acuminate, falcate, 3-5-nerved; flower-bearing branches pendulous; flowers in spikes, rather distant, and are as well as the rachis quite glabrous. *h. S.* Native of the East India Islands, where it is called *Caju-puti* by the natives.—A tree with a black trunk, white branches, and white flowers. Rumph. amb. 2. p. 72. t. 16. *Mýrtus leucodéndron*, Lin. fil. suppl. *Melaleuca leucodéndron latifolia*, Lin. fil. suppl. p. 342. *M. leucodéndron*, Hayne, arz. gew. 10. t. 9. From the leaves of this tree is distilled the volatile, green, aromatic oil called *Cajeput*, from *Caju-puti*, a white tree, which is the Malay name, whence also Linnaeus gave to it the name of *Leucodéndron*. The oil has the taste of peppermint, but stronger and colder, and a smell of turpentine, but it seldom comes to Europe unadulterated. It is a powerful sudorific, and an useful external application in chronic rheumatism. Ainslie, 1. p. 260. It is considered carminative, cephalic, and emmenagogue, and is, no doubt, a highly diffusible stimulant, antispasmodic, and diaphoretic, and is much used in the cure of cholera morbus, from its antispasmodic powers. It has also the power of dissolving caoutchouc. A decoction of the leaves is much used in China as a tonic. The bark is very serviceable in caulking boats, covering houses, &c.

*White-tree or Cajeput-tree.* Clt. 1796. Tr. 15 to 20 ft.

2 *M. MINOR* (Smith, in Rees' cycl. vol. 23. no. 2.) leaves alternate, elliptic-lanceolate, acutish, rather falcate, 3-5-nerved; flowers rather distant, in spikes; rachis and calyxes villous. *h. S.* Native of Amboyna, and other East India islands, where it is called in the Malay language *Caju-puti* and *Cajukilee*. Rumph. amb. 2. p. 74. t. 17. f. 1. and probably f. 2. *M. Cajupùti*, Roxb. hort. beng. p. 59. *M. saligna*, Gmel. syst. 793. is referrible to this species, according to the synonyms given to it. *M. Cajapùti* of gardeners is totally distinct from this

species. The trunk is black, and the branches and flowers white, as in the last species. Cajeput oil is also distilled from the leaves of this tree; probably in greater quantity than from the last. *Smaller Cajeput-tree.* Clt. 1800. Tree 10 feet.

3 *M. VIRIDIFLORA* (Gærtn. fruct. 1. p. 173. t. 35.) leaves alternate, elliptic-lanceolate, equal-sided, 5-nerved, acute at both ends; flowers approximate, in spikes; calyxes, rachis, and branchlets pubescent; claws of the bundles of stamens shorter than the segments of the calyx, or obsolete. *h. G.* Native of New South Wales, and of New Caledonia. Smith, et R. Br. l. c. no. 2. *M. leucodendron angustifolia*, Lin. fil. suppl. p. 342. *M. angustifolia*, Gærtn. *Metrosideros quinquenervia*, Cav. icon. 4. t. 333. *Metrosideros coriacea*, Poir. suppl. 3. p. 685. but not of Salisb. *Metrosideros albida*, Sieb. pl. exsicc. nov. holl. no. 319. Flowers pale greenish yellow.

*Greenish-flowered Melaleuca.* Clt. 1777. Tr. 10 to 20 ft.

4 *M. PALUDOSA* (R. Br. in Ait. hort. kew. 4. p. 410.) leaves alternate, linear-lanceolate, elongated, equal-sided, straight, 3-nerved; lateral nerves approximating the margin, which is scabrous; rachis of the spike, which is cylindrical, as well as the tube of the calyx, clothed with silky down; claws of the bundles of stamens very short. *h. G.* Native of New Holland, on the south-west coast. Flowers red.

*Marsh Melaleuca.* Fl. July, Sept. Clt. 1803. Sh. 4 to 6 ft.

5 *M. GLOBIFERA* (R. Br. l. c.) leaves alternate, oblong, 5-nerved, equal-sided, tapering to the base; heads spherical; capsules connate. *h. G.* Native of New Holland, on the south coast. Flowers greenish yellow?

*Globe-bearing Melaleuca.* Fl. July, Sept. Clt. 1803. Sh. 4 to 10 feet.

6 *M. DIOSMIFOLIA* (Andr. bot. rep. t. 476. and R. Br. l. c.) leaves alternate, oval, or lanceolate, obsolete 1-nerved, petiolate, flat, crowded, and are as well as the branchlets quite glabrous; spikes oblong, glabrous; bundles of stamens pentandrous. *h. G.* Native of New Holland, on the south-west coast. *M. chlorantha*, Bonpl. nav. p. 22. t. 8. *M. foliosa*, Dum. Cours. bot. cult. 5. p. 373. Flowers greenish yellow.

*Diosma-leaved Melaleuca.* Fl. June, July. Clt. 1794. Sh. 3 to 10 feet.

7 *M. STYPHELOIDES* (Smith, in Lin. trans. 3. p. 275.) leaves alternate, ovate, acuminate, ending in a pungent mucrone, many-nerved, sessile, glabrous; spikes pubescent; segments of calyx acute, nerved. *h. G.* Native of New South Wales. R. Br. in Ait. hort. kew. 4. p. 411. *M. obliqua*, Hort. ex Steud. Flowers white, surrounding the lower part of the branches. This plant has altogether the habit of *Styphelia*, from its stiff harsh leaves. *M. epaeridea*, Hort.

*Styphelia-like Melaleuca.* Fl. May, July. Clt. 1793. Sh. 4 to 10 feet.

8 *M. GENISTIFOLIA* (Smith, exot. bot. 1. t. 55.) leaves alternate, linear-lanceolate, flat, 3-nerved, dotted, and are as well as the branches glabrous; bundles of stamens polyandrous, with their claws about equal in length to the petals. *h. G.* Native of New South Wales, and where it is called by the English *White tea-tree*. Flowers with reddish petals and yellow stamens. (f. 117.)

*Broom-leaved Melaleuca.* Fl. June, July. Clt. 1793. Shrub 6 to 20 feet.

9 *M. LANCEOLATA* (Otto. hort. berol. 36.) leaves scattered, lan-

ceolate, acute, almost nerveless, 3-veined, almost dotless, recurved at the apex, and are as well as the branchlets glabrous; spikes loose, naked; bundles of stamens polyandrous, with their claws about equal in length to the petals. *h. G.* Native of New Holland. Flowers yellowish. Very like *M. genistifolia*.

*Lanceolate-leaved Melaleuca.* Fl. June, Aug. Clt. 1816. Shrub 3 to 4 feet.

10 *M. STRIATA* (Labill. nov. holl. 2. p. 26. t. 165.) leaves alternate, lanceolate-linear, acute, obsolete striated, stiff, almost sessile; spikes oval or oblong; tube of calyx woolly; bundles of stamens usually decandrous, with their claws twice the length of the petals. *h. G.* Native of New Holland, on the south coast. R. Br. l. c. Fruit crowded, nearly globose. Margin of calyx repand. Flowers white.

*Striated-leaved Melaleuca.* Fl. June, July. Clt. 1803. Sh. 6 to 9 feet.

11 *M. PENTAGONA* (Labill. nov. holl. 2. p. 27. t. 166.) leaves alternate, linear-lanceolate, acuminate, thickish, rather 3-nerved; spikes ovate-globose; tube of calyx glabrous, globose, pentagonal; bundles of stamens pentandrous. *h. G.* Native of New Holland, in Van Lewin's Land. Fruit crowded, in a globose head. Stamens joined together to the middle in bundles. Flowers white?

*Pentagonal-fruited Melaleuca.* Shrub 4 to 6 feet.

12 *M. ACEROSA*; leaves alternate, acerose, villous, full of pellucid dots; bundles of stamens polyandrous, with their claws very long. *h. G.* Native of New Holland. *Billötia acerosa*, Coll. hort. rip. 1. p. 21. t. 23. Flowers purple.

*Acerose-leaved Melaleuca.* Fl. June, July. Clt.? Shrub 3 to 6 feet.

13 *M. THYMOIDES* (Labill. l. c. t. 167.) leaves alternate, lanceolate, or oblong, 5-nerved, petiolate, and are as well as the branchlets quite glabrous; heads of flowers globose or oval; segments of the calyx acute, 3-nerved; bundles of stamens usually decandrous, with their claws shorter than the petals. *h. G.* Native of New Holland, in Van Lewin's Land, and on the south-west coast. R. Br. in hort. kew. 4. p. 412. Flowers purplish. Perhaps the same as *M. lucidula* of Hort.

*Thyme-like Melaleuca.* Fl. June, July. Clt. 1803. Shrub 4 to 6 feet.

14 *M. SQUAMEA* (Labill. l. c. p. 28. t. 158.) leaves lanceolate-ovate, acuminate, 3-nerved, when young villous as well as the branchlets; heads of flowers globose, pubescent; bundles of stamens bearing 5-9 anthers each, with very short claws. *h. G.* Native of Van Diemen's Land. R. Br. in hort. kew. 4. p. 412. Ker. bot. reg. t. 477. Flowers lilac, much crowded. Fruit corticate by the scaly spongy calyx. Leaves becoming black on drying.

*Scaly-calyced Melaleuca.* Fl. June, July. Clt. 1805. Tr.

15 *M. XODOSA* (Smith, exot. bot. 1. p. 67. t. 35.) leaves alternate, linear-subulate, mucronate, stiff, 1-nerved, flat, and rather spreading; heads globose; segments of the calyx membranous, glabrous; bundles of stamens bearing 3-6-8 anthers, with the claws very short. *h. G.* Native of New Holland, on the eastern coast, at Port Jackson. Vent. malm. t. 112. R. Br. in Ait. hort. kew. 4. p. 413. *Metrosideros*, Gærtn. fruct. 1. p. 172. t. 34. Cav. icon. 4. p. 19. t. 334. *Metrosideros pungens*, Reich. in Sieb. pl. exsicc. no. 316. Flowers pale yellowish. Fruit disposed in a small globose head.

*Knotted Melaleuca.* Fl. Jun. Jul. Clt. 1790. Sh. 3 to 6 ft.

16 *M. TENUIFOLIA* (D. C. prod. 3. p. 213.) leaves alternate, subulate, nearly terete, mucronate, stiff, strictly erect, villous when young, but glabrous in the adult state, as well as the branches; heads of fruit globose, dense; calyxes rather velvety, with deciduous truncate lobes. *h. G.* Native of New Holland, on the east coast. Flowers unknown. Allied to *M. no-*

FIG. 117.

*dōsa*, but differs in the leaves being 3 times longer, about 15-16 inches long.

*Fine-leaved Melaleuca.* Shrub 3 to 6 ft.

17 *M. ERICAFOLIA* (Smith, exot. bot. t. 34.) leaves alternate, linear-subulate, nerveless, awnless, spreading or somewhat recurved; spikes of flowers oval, glabrous; bundles of stamens octandrous or decandrous, with their claws hardly exceeding the petals. *h. G.* Native of New South Wales. *M. nodōsa*, Link, enum. 2. p. 273. Sieb. pl. exsic. nov. holl. no. 318. and nq. 549. Flowers pale yellow.

*Heath-leaved Melaleuca.* Fl. July, Sept. Clt. 1788. Shrub 4 to 6 ft.

18 *M. ARMILLA'RI* (Smith, in Lin. trans. 3. p. 277.) leaves alternate, linear-subulate, mucronate, recurved at the apex; spikes cylindrical, quite glabrous; bundles of stamens polyandrous, with their claws exceeding the petals. *h. G.* Native of New South Wales. *M. ericafolia*, Andr. bot. rep. t. 175. Vent. malm. t. 76. Wendl. coll. 1. t. 29. but not of Smith. *Metrosideros armillaris*, Gært. fruit. 1. p. 171. t. 43. Cav. icon. 4. t. 335. Flowers white.

*Bracelet Melaleuca.* Fl. June, July. Clt. 1788. Shrub 6 to 8 ft.

19 *M. UNCINATA* (R. Br. in Ait. hort. kew. 4. p. 414.) leaves alternate, angular, filiform, mucronate, erect, uncinately recurved at the apex; branchlets twiggy; heads of flowers ovate, with the rachis woolly; bundles of stamens pentandrous and hexandrous, with their claws exceeding the petals. *h. G.* Native of New Holland, on the south coast. Flowers yellowish.

*Hooked-leaved Melaleuca.* Fl. Feb. Sep. Clt. 1803. Shrub 4 to 6 ft.

20 *M. SCA'BRA* (R. Br. l. c.) leaves alternate, nearly terete, mucronulate, scabrous, crowded; heads of flowers globose; bundles of stamens bearing 4-6 anthers, with their claws about equal in length to the petals. *h. G.* Native of New Holland, on the southern coast. Sweet, fl. austr. t. 10. Flowers purplish. Perhaps the same as *M. muricata*, Hort.

*Scabrous Melaleuca.* Fl. Feb. Sep. Clt. 1803. Sh. 2 to 3 ft.

21 *M. JUNIPEROIDES* (D. C. prod. 3. p. 213.) leaves alternate, terete, stiff, mucronate, glabrous in the adult state; heads of flowers globose, with the rachis villous; bundles of stamens bearing 4-6 anthers, with their claws about equal in length to the petals. *h. G.* Native of New Holland. *Metrosideros juniperoides*, Rehb. in Sieb. pl. exsic. nov. holl. no. 317. Flowers yellowish, in small heads. Branchlets and young leaves rather villous.

*Juniper-like Melaleuca.* Shrub 2 to 4 ft.

22 *M. ERUBESCE* (Otto, hort. berol. p. 37.) leaves alternate, linear-subulate, flat above, and mucronulate at the apex; spikes cylindrical, and arc, as well as the branchlets, quite glabrous; bundles of stamens polyandrous, with their claws exceeding the petals. *h. G.* Native of New Holland. Rehb. gart. mag. 1. t. 82. *M. diosmifolia*, Dum. Cours. bot. cult. 5. p. 373. Leaves nearly like those of *M. ericafolia*. Flowers less crowded. Petals pale yellowish. Stamens rose-coloured.

*Reddish-stamened Melaleuca.* Fl. June, July. Clt. Shrub 3 to 6 ft.

23 *M. PULCHELLA* (R. Br. in Ait. hort. kew. 4. p. 414.) leaves scattered or nearly opposite, oval or oblong, obtuse, obsoletely 3-nerved; flowers usually solitary, and are, as well as the branches glabrous; bundles of stamens polyandrous, petaloid on the outside, bearing the stamens from the base to the apex on the margins inside, exceeding the petals. *h. G.* Native of New Holland, on the south coast. Lodd. bot. cab. t. 200. Rehb. gart. mag. 1. t. 8. f. 2. *M. densa*, Colla, hort. ripul. append. 1. p. 815. t. 4. but not of R. Br. *M. serpyllifolia*, Dum. Cours. bot. cult. 5. p. 374. Flowers reddish.

*Neat Melaleuca.* Fl. Ju. Sept. Clt. 1803. Sh. 2 to 3 ft.

• • • *Leaves opposite.*

24 *M. THYMIFOLIA* (Smith, exot. bot. 1. t. 36.) leaves opposite, lanceolate, nerveless; spikes few-flowered; bundles of stamens polyandrous, with the claws branched on the inside even to the middle. *h. G.* Native of New South Wales. R. Br. l. c. Rehb. gart. mag. 1. t. 8. f. 1. Sims, bot. mag. 1869. *M. gnidifolia*, Vent. malm. t. 7. *M. coronata*, Andr. rep. t. 278. *M. parvifolia*, Otto, hort. berol. t. 37. *M. discolor*, Sieb. pl. exsic. nov. holl. no. 329. *Metrosideros calycina*, Cav. icon. t. 336. f. 2. Bundles of stamens lilac or purple, and somewhat petaloid.

*Thyme-leaved Melaleuca.* Fl. June, Sep. Clt. 1792. Shrub 2 to 3 ft.

25 *M. DECUSSATA* (R. Br. l. c. p. 415.) leaves opposite, decussate, oval-lanceolate, 3-nerved; spikes oval, quite glabrous; bundles of stamens polyandrous, with the claws very short. *h. G.* Native of New Holland, on the south-west coast. Sims, bot. mag. t. 2268. Colla, hort. rip. 86. t. 15. *M. pumila*, Otto, in litt. and *M. parviflora*, Otto, hort. berol. p. 37. Rehb. gart. mag. 1. t. 31. Flowers crowded, lilac.

*Decussate-leaved Melaleuca.* Fl. July, Sep. Clt. 1803. Sh. 3 to 6 ft.

26 *M. CUTICULARIS* (Labill. nov. holl. 2. p. 30. t. 171.) leaves opposite, crowded, oblong-linear, obtuse, veinless; flowers solitary, axillary, glabrous; bundles of stamens dodecandrous, having their claws the length of the petals. *h. G.* Native of New Holland, in Van Lewin's Land. The cuticle of the trunk and branches of the tree are separable. Perhaps the same as the *M. fimbriata* of gardens, but differs in the leaves being spreading and narrower.

*Cuticular Melaleuca.* Tree 10 to 20 ft.

27 *M. FULGENS* (R. Br. l. c.) leaves opposite, lanceolate-linear, acute, 1-nerved; spikes of flowers oval, quite glabrous; bundles of stamens polyandrous, palmately many-cleft, having their claws the length of the petals. *h. G.* Native of New Holland. Ker. bot. mag. 103. Flowers larger than those of any other species of the genus. Bundles of stamens scarlet, more than an inch long. Fruit glabrous, nearly globose. Lobes of calyx roundish, blunt.

*Fulgent Melaleuca.* Fl. July, Sept. Clt. 1803. Sh. 6 to 20 ft.

28 *M. LINEARIFOLIA* (Smith, exot. bot. t. 56.) leaves opposite, lanceolate-linear, acute, 3-nerved at the base, dotted; spikes of flowers oblong, glabrous, as well as the branchlets; bundles of stamens polyandrous, pinnate-parted, exceeding the petals. *h. G.* Native of New South Wales. R. Br. l. c. *Metrosideros hyssopifolia*, Cav. icon. 4. t. 336. f. 1. Fruit globose. Calycine lobes small, acutish, deciduous. Flowers cream-coloured.

*Toad-flax-leaved Melaleuca.* Fl. Ju. Aug. Clt. 1793. Tr. 20 to 30 ft.

29 *M. ABIETINA* (Smith in Rees' cyc. vol. 23. no. 15.) leaves opposite, elliptic-oblong, concave, obtuse, 3-nerved; flowers few, glabrous at the tops of the branches; bundles of stamens polyandrous, having elongated claws, but not exceeding the petals, multifid at the apex. *h. G.* Native of New Holland, at King George's Sound. This species is remarkable in having terminal flowers.

*Fir-like Melaleuca.* Tree 20 to 30 ft.

30 *M. HYPERICIFOLIA* (Smith in Lin. trans. 3. p. 249.) leaves opposite, decussate, elliptic-oblong, 3-nerved, the lateral nerves are obsolete, approximating the margin, which is recurved; spikes cylindrical, quite glabrous; bundles of stamens polyandrous, unguiculate, elongated; filaments radiating. *h. G.* Native of New South Wales. Andr. bot. rep. t. 200. Wendl. coll.

1. t. 18. R. Br. l. c. 4. p. 415. Vent. cels. t. 10. *Metrosideros hypericifolia*, Salisb. prod. p. 351. Flowers of a splendid scarlet-colour.

*St. John's-wort-leaved Melaleuca*. Fl. June, Aug. Clt. 1792. Shrub 10 to 20 ft.

31 *M. ELLIPTICA* (Labill. nov. holl. 2. p. 31. t. 173.) leaves opposite, elliptic, blunt at both ends, 1-nerved in the middle, with the veins pinnate, and confluent at the margins; spikes of flowers cylindrical, pubescent; bundles of stamens polyandrous, with their claws exceeding the petals. *h. G.* Native of New Holland, in Van Diemen's Land. Flowers scarlet, rather smaller than those of the preceding species. Fruit globose, glabrous. Lobes of calyx acutish, permanent.

*Elliptic-leaved Melaleuca*. Shrub 4 to 6 ft.

32 *M. SQUARROSA* (Smith in Lin. trans. 6. p. 300.) leaves opposite, ovate, acute, 5-7-nerved, on short petioles, glabrous; branchlets villous; spikes cylindrical; bractæas foliaceous; lobes of calyx blunt and nerveless; bundles of stamens dodecandrous, with their claws very short. *h. G.* Native of New Holland and Van Diemen's Land. Labill. nov. holl. 2. t. 169. Smith, bot. pag. t. 1935. *M. myrtifolia*, Vent. malm. t. 47. *M. caputiti*, Hort. Flowers yellowish.

*Square-rose Melaleuca*. Fl. Ju. Aug. Clt. 1794. Tr. 20 to 40 ft.

33 *M. GIBBOSA* (Labill. nov. holl. 2. p. 30. t. 172.) leaves opposite, decussate, crowded, ovate, obtuse, 3-nerved; spikes few-flowered, and are, as well as the branches and calyxes, glabrous; bundles of stamens polyandrous, with their claws the length of the petals; fruit appearing as if they were sunk in the branches at the base. *h. G.* Native of Van Diemen's Land and of New Holland on the south coast. *M. imbricata*, Hort. There is a variety of this species with 3 leaves in a whorl.

*Gibbous Melaleuca*. Clt. 1820. Shrub 6 to 12 ft.

34 *M. SPRENGELIOIDES* (D. C. prod. 3. p. 215.) leaves opposite, decussate, sessile, crowded, roundish, mucronate, 5-nerved; heads of flowers nearly globose, crowded, glabrous; bundles of stamens bearing 7-10 anthers, with their claws the length of the petals; fruit nearly globose, with a truncate, somewhat inflexed limb. *h. G.* Native of New Holland. Allied to *M. gibbosa*, but very distinct.

*Sprengelia-like Melaleuca*. Shrub 6 to 8 ft.

35 *M. CALYCINA* (R. Br. in Ait. hort. kew. 4. p. 416.) leaves opposite, ovate-lanceolate, 3-5-nerved, nearly sessile; glomerules few-flowered; segments of the calyx acute, nerveless; bundles of stamens polyandrous, with their claws shorter than the petals. *h. G.* Native of New Holland, on the southern coast. Flowers purple.

*Large-calyxed Melaleuca*. Fl. June, Aug. Clt. 1803. Shrub 3 to 6 feet.

\*\*\* *Leaves in whorls.*

36 *M. DENSA* (R. Br. l. c.) leaves scattered, 3 in a whorl or opposite, obovate, 3-nerved; spikes oblong or oval. *h. G.* Native of New Holland, on the south-west coast. Flowers reddish.

*Dense-leaved Melaleuca*. Fl. June, Aug. Clt. 1803. Shrub 2 to 6 ft.

37 *M. INCA'NA* (R. Br. in bot. reg. t. 410.) leaves 3 in a whorl, linear-lanceolate, clothed with hoary down on both surfaces, as well as the branches; spikes oval or oblong. *h. G.* Native of New Holland. *M. tomentosa*, Colla, hort. rip. 87. t. 37. *M. lanata*, Nois. *M. canescens*, Link et Otto, hort. berol. p. 87. abbild. t. 81. *M. lanigera*, Wendl. Bundles of stamens bearing each 5-7 anthers, with their claws shorter than the petals. Flowers pale yellow.

*Hoary Melaleuca*. Fl. Ju. Aug. Clt. 1817. Shrub 3 to 8 ft.

† *Species not sufficiently known.*

38 *M. MICROPHYLLA* (Smith in Rees' cycl. vol. 23. no. 9.)

VOL. II.

leaves alternate, imbricate, cylindrical, obtuse, somewhat spatulate; spikes oval on the upper part of the branches; calyxes glabrous. *h. G.* Native of New Holland, at King George's Sound. From the flowers being pedicellate, and the bundles of stamens not exceeding the petals, it is therefore perhaps a species of *Tristania* or *Astártea*.

*Small-leaved Melaleuca*. Shrub.

39 *M. TETRAGONA* (Lodd. ex Otto, hort. berol. p. 37.) leaves opposite, decussate, ovate-elliptic, 3-nerved. *h. G.* Native of New Holland. Allied to *M. decussata*, but the leaves are broader, much less dotted, more remote, and more spreading. Flowers unknown.

*Tetragonal Melaleuca*. Clt. 1820. Shrub 4 to 6 ft.

†† *Species only known by name. Many of them may prove identical with some of those described above.*

1 *M. divaricata*, Donn. 2 *M. hispida*, Wendl. 3 *M. perforata*, Ræusch. 4 *M. stricta*, Smith. 5 *M. trinervia*, Smith. 6 *M. pendulina*, Lodd.

*Cult.* The greater part of the species of *Melaleuca* are desirable green-house or conservatory plants, their foliage being neat, and in some the blossoms are splendid. Their culture and propagation are the same as recommended for *Tristania*, see p. 813.

XII. LAMARCHEA (dedicated to A. M. Lamarche, a captain in the French navy, formerly lieutenant of the ship *Uranie*, under captain Freycenet in his voyage round the world; and a particular friend of Gaudichaud's). Gaud. in Freyc. voy. part. bot. p. 483. t. 110.

*LAN. SYST.* *Icosándria*, *Monogýnia*. Calyx hemispherical, with a 5-parted regular deciduous limb. Petals 5, inserted in the limb of the calyx, obovate-spatulate, ciliate fringed at the apex, campanulately conniving, exceeding the limb of the calyx. Stamens numerous, inserted with the petals, monadelphous, exceeding the corolla. Stamiferous tube a little arched, divided into 5 polyandrous parts even to the middle. Ovarium globose, free. Style crowned by a subcapitate stigma. Capsule globose, chartaceous, 3-celled, dividing into 3 valves at the dissepiments; placentas 3, fixed to the axis of the capsule. Seeds numerous, cuneate or lanceolate, arched triangular, erectly ascending.—An unarmed tree, with scattered, linear-lanceolate, quite entire, 3-nerved, coriaceous leaves. Flowers axillary, solitary, sessile, brownish purple, lateral after the leaves have fallen.

1 *L. HAKEÆFOLIA* (Gaud. l. c. t. 484. t. 110.) *h. G.* Native of the Sandwich Islands?

*Hakea-leaved Lamarchea*. Tree.

*Cult.* For culture and propagation see *Tristania*, p. 813.

XIII. EUDESMIA (from *eu*, *eu*, well, and *desmè*, a bundle; in reference to the stamens being connected into 4 bundles). R. Br. in gen. rem. p. 67. t. 3. D. C. prod. 3. p. 216.

*LAN. SYST.* *Polyadélphia*, *Polyándria*. Tube of calyx turbinate; limb 4-cleft. Petals closely joined into 4-striped deciduous hemispherical operculum. Stamens indefinite, joined into 4 polyandrous bundles, which alternate with the teeth of the calyx, and therefore opposite the petals. Capsule 4-celled, 4-valved, opening at the apex.—A New Holland shrub, with tetragonal branches. Leaves nearly opposite, broad-lanceolate, coriaceous, glaucous. Peduncles axillary, bearing umbels of white flowers.

1 *E. TETRAGONA* (R. Br. l. c.) *h. G.* Native of New Holland, at Lucky Bay. Sweet, fl. austr. t. 21. Lindl. bot. reg. with a figure.

*Tetragonal-branched Eudesmia*. Fl. July. Clt. 1824. Tree 10 to 20 feet.

*Cult.* For culture and propagation see *Tristania*, p. 813.

5 M

SUBTRIBE II. *EULEPTOSPERMEÆ* (from *eu*, well, and *leptospermum*; this subtribe contains plants agreeing with *Leptospermum* in the free stamens). D.C. prod. 3. p. 216. Stamens free.

XIV. *EUCALYPTUS* (from *eu*, *eu*, well, and *καλυπτω*, *kalypto*, to cover, as with a lid; in reference to the limb of the calyx covering the flower before expansion, and afterwards falling off in one piece, in the shape of a lid or cover (f. 118. b.). Lher. sert. angl. 18. D.C. prod. 3. p. 216.

LIN. SYST. *Icosandria, Monogynia*. Tube of calyx permanent, obovate or globose (f. 118. a.), cup-shaped; limb in the form of a lid, entire, cut round regularly at the base, and falling off in one piece (f. 118. b.). Petals wanting. Stamens numerous (f. 118. d.), free. Capsule 4-celled (f. 118. c.), or only 3-celled from abortion, opening at the apex, many-seeded.—Tall trees, natives of New Holland. Leaves quite entire, coriaceous, usually alternate, rarely opposite, very variable even in the same tree, quite glabrous except in a very few of the species. Peduncles axillary, bearing an umbel of from 3-15 flowers. Flowers white. The operculum of the calyx in some, according to Mr. Brown, (gen. rem. p. 68.) is double, the outer in the form of a calyx, and the inner the form of a corolla. There are about 100 species in New Holland (R. Br. gen. rem. p. 15.), of which hardly a half are rightly known. In Van Dieman's Land a manufactory has been established for the preparation of extract of tannin from the bark of various species of *Eucalyptus*. A considerable quantity of the substance has been recently imported into England, and it has been said by tanners to be twice as powerful in its operation as oak-bark.

§ 1. *Alternifoliæ* (from *alternus*, alternate, and *folium*, a leaf). *Leaves alternate*.

\* *Operculum conical, longer than the cupula*.

1 *E. CORNU'TA* (Labill. voy. 1. p. 403. t. 20. nov. holl. 2. t. 221.) operculum cone-formed, 5 times longer than the cupula; base of style permanent; flowers capitate at the tops of the terete peduncles; leaves linear-lanceolate. h. G. Native of New Holland, in Van Lewin's Land.

*Horned Eucalyptus*. Clt. 1803. Tree 30 ft.

2 *E. TERETICORNIS* (Smith in Lin. trans. 3. p. 284. nov. holl. 41.) lid conical, terete, quite smooth and membranous, broader, and 3 times longer than the cupula; umbels lateral; leaves lanceolate, oblique at the base. h. G. Native of New Holland.

*Terete-horned Eucalyptus*. Clt. 1804. Tree.

3 *E. RESINIFERA* (Smith in Whit. voy. p. 331. t. 25. ex exot. bot. 2. p. 49. t. 84.) lid conical, terete, coriaceous, twice the length of the cupula; peduncles of umbel somewhat compressed, a little longer than the petioles; leaves ovate-lanceolate, long-acuminate, attenuated at the base, marginate by a nerve. h. G. Native of New Holland. Andr. bot. rep. t. 400. Hayn. arzn. gew. 10. t. 5. *Metrosideros gummifera*, Gærtn. fruct. 1. p. 173. t. 34. f. 1. Leaves full of minute dots. A resin something like kino has been produced from this species, and for all medical purposes full as efficacious.

*Resin-bearing Eucalyptus* or *Red Gum-tree*. Fl. Apr. July. Clt. 1788. Tree.

4 *E. LONGIFOLIA* (Link, enum. 2. p. 29. Link et Otto, abbild. t. 45.) lid of calyx conical; leaves lanceolate, unequal at the base, long-acuminate, having the acumen incurved, full of pellucid dots, and margined by a nerve; peduncles longer than the petioles. h. G. Native of New Holland. Lindl. bot. reg. 941. *E. glaucophylla*, Hoffm. berz. 1826. p. 114. ? Branches red. Leaves usually deflexed. Allied to *E. resinifera*, but differs in the peduncles being longer.

*Long-leaved Eucalyptus*. Fl. June. Tree.

\* \* *Operculum conical, equal in length to the cupula*.

5 *E. ROBUSTA* (Smith in Lin. trans. 3. p. 283. spec. nov. holl.

p. 39. t. 13.) operculum conical, constricted in the middle, length of the cup, and broader than it; peduncles lateral and terminal, 2-edged; pedicels short, compressed; leaves ovate. h. G. Native of New Holland.

*Var. β, rostrata* (Cav. icon. 4. t. 342.) leaves ovate-lanceolate, acuminate, coriaceous, girded by a marginal parallel nerve. h. G. Native of New Holland. *E. robusta*, Sieb. pl. exsic. nov. holl. no. 480.

*Robust Eucalyptus*. Fl. Aug. Sep. Clt. 1794. Tr. 100 ft. 6 *E. MARGINATA* (Smith in Lin. trans. 6. p. 302.) lid of calyx conical, length of cup; umbels lateral; leaves ovate, with thickened margins. h. G. Native of New Holland. Margin of leaves cartilaginous and reddish. Operculum not constricted as in *E. robusta*, to which it is very nearly allied.

*Marginate-leaved Eucalyptus*. Fl. April, June. Clt. 1794. Tree.

7 *E. INCRASSATA* (Labill. nov. holl. 2. p. 12. t. 150.) lid of calyx conical, somewhat constricted nearly the length of the cupula; peduncles axillary, 2-edged, as well as the pedicels, which are short; leaves oblong-lanceolate, thickish, rather acuminate, girded by a thin nerve, which is parallel with the margin. h. G. Native of New Holland, in Van Lewin's Land. Marginal nerve of leaf visible beneath. Lower surface of leaves pale.

*Thickened Eucalyptus*. Clt. 1818. Shrub 6 ft.

8 *E. PERSICIFOLIA* (Lodd. bot. cab. t. 501.) lid of calyx conical, a little shorter than the cupula; peduncles axillary, 2-edged, length of the petiole; pedicels short, compressed; leaves oblong, attenuated at the base, acuminate at the apex, marked with a nearly parallel, very thin nerve on the margin. h. G. Native of New Holland. Lodd. bot. cab. 501. Umbels 8-10-flowered. Leaves 3 inches long and 6 lines broad.

*Var. β*; leaves a little broader; peduncles shorter. *Eucalyptus*, Sieb. pl. exsic. nov. holl. no. 593.

*Var. γ*; leaves a little longer; peduncles exceeding the petioles a little. *E. incrassata*, Sieb. pl. exsic. nov. holl. no. 477. *E. multiflora*, Poir. suppl. 2. p. 594.

*Peach-leaved Eucalyptus*. Fl. July. Clt. 1817. Tree.

9 *E. PUNCTATA*; lid of calyx conical, longer than the cupula; peduncles axillary at the tops of the branches, shorter than the petioles, and are, as well as the pedicels, 2-edged; leaves oblong, attenuated at the base, acuminate at the apex, dotted beneath, and girded by a nerve, which is parallel to the margin. h. G. Native of New Holland. Sieb. pl. exsic. nov. holl. no. 623. Leaves more distinctly margined than the preceding. Operculum not constricted in any way. Umbels 4-8-flowered. Dots on the under surface of the leaves blackish. Leaves 3 inches long, and 7-8 lines broad.

*Dotted-leaved Eucalyptus*. Tree.

10 *E. ACERVULA* (Sieb. pl. exsic. nov. holl. p. 469.) lid of calyx conical, length of the cupula; peduncles lateral, shorter than the petioles, and are, as well as the pedicels, 2-edged; leaves ovate-lanceolate, oblique at the base, and very much cut on one side, acuminate at the apex. h. G. Native of New Holland. Leaves 4-5 inches long, and about an inch broad. Umbels 5-10-flowered. Alabastrum or flower-bud 3 lines long.

*Little-horned Eucalyptus*. Tree.

11 *E. VIRGATA* (Sieb. l. c. no. 467.) lid of calyx conical, length of the cupula; peduncles axillary and lateral, hardly longer than the petioles, and are 2-edged, as well as the pedicels; leaves oblong-linear, acuminate at both ends, thickish, coriaceous, and nearly veinless. h. G. Native of New Holland. Leaves 4-6 inches long, and about 6-9 lines broad.

*Twiggy Eucalyptus*. Tree.

12 *E. MICRANTHA* (D. C. prod. 3. p. 217.) operculum conical, length of the cup; peduncles angular, length of the petioles,

axillary and nearly terminal; umbels 15-20-flowered; leaves oblong, coriaceous, attenuated at the base, long-acuminated, with the nerves confluent in front of the margins. *h. G.* Native of New Holland. Sieb. pl. exsic. no. 497. Leaves shining on both surfaces, 6-7 inches long, and 1 broad, having the veins feathered. Alabastrum ovoid, smaller than that of any other species.

*Small-flowered Eucalyptus.* Tree.

13 *E. STELLULATA* (Sieb. l. c. no. 487.) lid conical, length of the cupula; peduncles lateral, very short, nearly terete; umbels 15-20-flowered; leaves oblong, tapering to both ends, 3-5-nerved at the base. *h. G.* Native of New Holland. Petioles and peduncles 3 lines long. Leaves 3 inches long, and half an inch broad, rather coriaceous, and a little shining. Flower-bud oblong, tapering to both ends, 2 lines long.

*Starry Eucalyptus.* Tree.

14 *E. OBLONGA* (D. C. prod. 3. p. 217.) lid of calyx conical, length of the cupula; peduncles lateral and axillary, compressed, length of the petioles; umbels 8-12-flowered; leaves oblong, unequal at the base and attenuated, mucronate at the apex, coriaceous, veinless. *h. G.* Native of New Holland. Sieb. pl. exsic. no. 583. Flower-bud oblong, attenuated at both ends, nearly sessile on the tops of the peduncles, and a little shorter than them. Leaves 3-4 inches long, and 9 lines broad.

*Oblong-leaved Eucalyptus.* Tree.

15 *E. VIMINALIS* (Labill. nov. holl. 2. p. 12. t. 151.) operculum conical, hardly acute, length of the cupula; peduncles axillary and lateral, compressed, shorter than the petioles; flowers sessile, 3 on the top of each peduncle; leaves linear-lanceolate. *h. G.* Native of Van Dieman's Land. Capsule hemispherical. Leaves 3 inches long, and 4-5 lines broad. Intermediate between the first and second division of the genus.

*Twiggy Eucalyptus.* Clt. 1810. Tree.

16 *E. CAPITELLATA* (Smith in White, voy. p. 226. icon. nov. holl. t. 42.) lid of calyx conical, bluntish, length of the cup, which is angular, and somewhat 2-edged; peduncles lateral; flowers capitate; leaves ovate-lanceolate, stiff, oblique. *h. G.* Native of New Holland. *E. triántha*, Link, enum. 2. p. 20. and perhaps of Spreng. syst. 2. p. 501.

*Headed-flowered Eucalyptus.* Clt. 1804. Tree.

17 *E. SALIGNA* (Smith in Lin. trans. 3. p. 285.) operculum acute, and is, as well as the cup angularly 2-edged; peduncles lateral, short; flowers capitate; leaves linear-lanceolate. *h. G.* Native of New Holland. Flowers small. Calyx biangular. Fruit turbinate. *E. angustifolia*, Link, enum. 2. p. 30. ex Spreng.

*Willowy-leaved Eucalyptus.* Clt. 1804. Tree.

\*\*\* Operculum nearly conical or hemispherical, shorter than the cupula.

FIG. 118.

18 *E. OVA'TA* (Labill. l. c. p. 13. t. 153.) lid of calyx hemispherical, mucronulate, shorter than the cup; peduncles axillary, and somewhat terminal, nearly terete, shorter than the petioles; flowers 3-5-together, capitate; leaves ovate, mucronate, a little crenated. *h. G.* Native of New Holland, in Van Lewin's Land. Leaves coriaceous, some entire, and others irregularly crenated. *E. mucronata*, Link, enum. 2. p. 30. *E. androsemi-folia*, Hoffm. verz. 1826. Pe-

tiolos half an inch long. Limb of leaves 3-4 inches long, and 1-2 broad.

*Ovate-leaved Eucalyptus.* Clt. 1820. Shrub 6 to 8 ft.

19 *E. SCABRA* (Dum. Cours. bot. cult. 7. p. 280.) operculum rather conical, a little shorter than the cup; peduncles axillary, angularly compressed, equal in length to the petioles, or longer; flowers capitate; leaves lanceolate, unequal at the base, those on the sterile branches curled, on the fertile flat; when young usually velvety, as well as the branches. *h. G.* Native of New Holland. *E. eugenioides*, Sieb. pl. nov. holl. exsic. no. 479. *E. penicellata*, Hort. Branches and leaves bearing crowded fascicles of short hairs, which at length fall off, and the leaves become glabrous; sometimes glabrous even in the young state. Petioles 4 lines long. Leaves unequal at the base, oval or oblong-lanceolate, acuminate. The peduncles, in Sieber's specimens, are 4-5-flowered, and about equal in length to the petioles, but in the plant cultivated by Noisette, they are 15-20-flowered, and twice the length of the petioles.

*Scabrous Eucalyptus.* Clt. 1810. Tree.

20 *E. PILULARIS* (Smith in Lin. trans. 3. p. 284.) lid of calyx conical, rather hemispherical at the base, a little shorter than the cup; peduncles lateral, very short, rather angular; flowers 6-7 in a head; leaves linear-lanceolate, acuminate; veins confluent at the tops, forming a nerve, which is parallel with the margin. *h. G.* Native of New Holland. Sieb. pl. exsic. nov. holl. no. 474. Sieber's plant is most probably the same as Smith's, but that of Sprengel is perhaps different, from the flowers being corymbose. Flower-bud about the size of a grain of millet. Peduncles 2-3 lines long, nearly one-half shorter than the petioles. Leaves 3 inches long, and 5 lines broad.

*Pill-bearing Eucalyptus.* Clt. 1804. Tree.

21 *E. RADIATA* (Sieb. pl. exsic. nov. holl. no. 425.) lid of calyx hemispherical, mucronate, shorter than the cupula; peduncles axillary and lateral, rather angular, and rather shorter than the petioles; flowers 15-20-together in an umbel, on short pedicels; leaves linear-lanceolate, veins very fine, confluent at the apex, and forming a nerve, which is parallel with the margin. *h. G.* Native of New Holland. Fruit globose, 3 lines in diameter. Petioles 4 lines long. Leaves 4 inches long, and 6-7 lines broad.

*Ray-nerved Eucalyptus.* Tree.

22 *E. STRICTA* (Sieb. l. c. no. 472.) operculum hemispherical, mucronate, shorter than the cupula; peduncles lateral, nearly terete, a little longer than the petioles; flowers 5-6 in a head; leaves stiff, linear-lanceolate, coriaceous, acuminate. *h. G.* Native of New Holland. Fruit globose, 3 lines in diameter. Petioles a line and a half long. Peduncles 3 lines long. Leaves 3 inches long, and 4 lines broad, rather shining, having the middle nerve hardly prominent, and the rest veinless.

*Straight Eucalyptus.* Tree.

23 *E. HÆMASTOMA* (Smith in Lin. trans. 3. p. 285.) operculum hemispherical, mucronate, shorter than the cupula; peduncles axillary, and nearly terminal, rather angular, longer than the petioles, some bearing one umbel at the apex, and others bearing many umbels disposed in a racemose manner; flowers pedicellate, 5-10 in each umbel; leaves linear-lanceolate, acuminate. *h. G.* Native of New Holland. *E. racemosa*, Cav. icon. 4. p. 24. no. 377. White, trav. p. 226. with a figure. Leaves rather unequal at the base, 3 inches long, and 6 lines broad.

*Bloody-mouthed Eucalyptus.* Clt. 1803. Tree.

24 *E. LIGUSTRINA* (D. C. prod. 3. p. 219.) operculum hemispherical, mucronate, shorter than the cup; peduncles axillary, compressed, length of the petioles; flowers 6-8 in a head; leaves linear-lanceolate, very unequal at the base and attenuated, acuminate at the apex. *h. G.* Native of New Holland. Sieb. pl. exsic. nov. holl. no. 617. Leaves 2 inches long, and 4-5

lines broad. Petioles and peduncles 3-4 lines long. Perhaps the same as *E. salicifolia*, Cav. icon. 4. p. 376.

*Privet-like Eucalyptus*. Tree.

25 *E. AMYGDA'LINEA* (Labill. nov. holl. 2. p. 14. t. 154.) lid hemispherical, nearly mutic, shorter than the cup; peduncles axillary and lateral, nearly terete, length of the petioles; umbels 6-8-flowered, nearly capitate; leaves linear-lanceolate, attenuated at the base, and acuminate mucronate at the apex. *h. G.* Native of Van Dieman's Land. *Metrosideros salicifolia*, Gært. fr. 1. p. 171. t. 24. f. 3. a. but not b. *E. globularis*, Hort. Leaves 3 inches long, and 3 lines broad, some unequal at the base, and some equal. Petioles and peduncles 3 lines long. Fruit globose, size of a grain of pepper.

*Almond-like Eucalyptus*. Clt. 1820. Tree.

26 *E. AMBIGUA* (D. C. prod. 3. p. 219.) lid hemispherical, mucronate, shorter than the cupula; peduncles axillary, compressed, length of the petioles; umbels capitate, 8-9-flowered; leaves lanceolate, rather coriaceous, unequally attenuated at the base, and acuminate mucronate at the apex. *h. G.* Native of New Holland. Allied to *E. ligustrina* and *E. amygdalina*, but the fruit is nearly globose, and twice the size. Petioles and peduncles 2-3 lines long. Leaves 2-3 inches long, and 6-12 lines broad, stiffish; lateral veins hardly evident.

*Ambiguous Eucalyptus*. Tree.

27 *E. LINDLEYANA* (D. C. prod. 3. p. 219.) operculum hemispherical, nearly mutic; peduncles nearly terete; flowers 3-5 in an umbel; leaves linear-lanceolate, some petiolate and cuneate at the base, others sessile and obtuse at the base. *h. G.* Native of New Holland. *E. longifolia*, Lindl. bot. reg. t. 947.

*Lindley's Eucalyptus*. Fl. June. Tree.

28 *E. BOTRYOIDES* (Smith in Lin. trans. 3. p. 286.) lid of calyx hemispherical, rather mucronate, shorter than the cupula; peduncles lateral, compressed, 4-6-flowered, capitate; leaves lanceolate, oblique. *h. G.* Native of New Holland. *E. platypodos*, Cav. icon. 4. p. 23. t. 341. Fruit turbinate, ex Smith, but cylindrical according to Cav.

*Botrys-like Eucalyptus*. Fl. Apr. July. Clt. 1803. Tree.

29 *E. PIPERITA* (Smith, l. c.) operculum hemispherical, mucronate, shorter than the cup; peduncles axillary and lateral, compressed, shorter than the petioles; umbels 3-5-flowered; branchlets angular; leaves lanceolate, coriaceous, acuminate, 1-nerved, and somewhat many-nerved at the base. *h. G.* Native of New Holland. White, trav. p. 226. with a figure. Rehb. Gart. mag. t. 42. Petioles 8 lines long. Peduncles 4 lines long. Leaves 4-6 inches long, and an inch broad, shining on both surfaces.

*Var. β, pauciflora* (Sieb. pl. exsic. no. 470.) leaves longer; umbels fewer-flowered. *h. G.* Native of New Holland.

*Peppery Eucalyptus*. Clt. 1788. Tree.

30 *E. PALLENS* (D. C. prod. 3. p. 219.) lid of calyx hemispherical, nearly awnless, shorter than the cupula; peduncles axillary, compressed, length of the petioles; umbels 5-7-flowered; branches angular; leaves lanceolate, acuminate, rather coriaceous, feather-nerved; veins confluent in front of the margins. *h. G.* Native of New Holland. Sieb. pl. exsic. no. 606. Petioles 5 lines long. Leaves 5 inches long, hardly oblique at the base, and nearly an inch and a half broad, white on both surfaces.

*Pale-leaved Eucalyptus*. Tree.

31 *E. OBLIQUA* (Lher. sert. angl. p. 18.) lid of calyx hemispherical, mucronate, shorter than the cupula; peduncles axillary and lateral, and arc, as well as the branches, nearly terete, length of the petioles; umbels 9-12-flowered; leaves broad, lanceolate, acuminate, very unequal at the base, feather-nerved.

*h. G.* Native of New Holland. Lam. ill. t. 422. Salisb. par. lond. 15. Smith, nov. holl. 13. Leaves 6-7 inches long, and 2 inches broad. Petioles and peduncles an inch long.

*Oblique-leaved Eucalyptus*. Fl. July, Aug. Clt. 1774. Tr. 100 ft.

32 *E. CORYMBOSA* (Smith in Lin. trans. 3. p. 287. nov. holl. p. 43.) operculum hemispherical, mucronate, shorter than the cup; peduncles angular, disposed in a terminal corymb; leaves lanceolate, equally attenuated at the base, coriaceous. *h. G.* Native of New Holland. Cav. icon. t. 340. Fruit turbinate. Petioles half an inch long. Leaves 4 inches long, and one broad. Veins feathered, hardly evident. The *E. corymbosa* of the gardens is probably distinct from this, but the flowers have not been seen.

*Corymbse-flowered Eucalyptus*. Clt. 1788. Tree.

33 *E. PANICULATA* (Smith, l. c.) operculum hemispherical, mucronate, shorter than the cup, which is angular; peduncles angular, lower ones axillary, the rest disposed in a terminal panicle; leaves lanceolate, equally attenuated at the base, coriaceous. *h. G.* Native of New Holland. Fruit turbinate, angular. Leaves 3 inches long, and 5-6 lines broad. Petioles 5 lines long.

*Panicle-flowered Eucalyptus*. Clt. 1804. Tree.

34 *E. GNEORIFOLIA* (D. C. prod. 3. p. 220.) lid of calyx hemispherical, nearly mutic, shorter than the cupula, which is turbinate; peduncles nearly terete, axillary, length of the petioles; flowers 5-7 in a head; leaves linear-lanceolate or oblong-lanceolate, unequally attenuated at the base, coriaceous. *h. G.* Native of New Holland, on the eastern coast. Alabastrum with the lid or operculum about 4 lines long, obtuse. Flowers sessile on the tops of the peduncles. Petioles 4 lines long. Leaves 2 inches long, and 6 lines broad. The middle nerve is only prominent or even evident.

*Widow-wale-leaved Eucalyptus*. Tree.

35 *E. OBTUSIFOLIA* (D. C. prod. 3. p. 220.) operculum hemispherical, very blunt, shorter than the cup, which is obovate; peduncles rather angular, axillary, length of the petioles; flowers 4-5 in each head; leaves lanceolate, mucronate, unequally attenuated at the base, coriaceous. *h. G.* Native of New Holland, on the eastern coast. Very like the preceding species, but differs in the flowers being larger, in the cup of the calyx being obovate, in the operculum being blunter, and in the leaves being broader. The mucrones of the leaves are deciduous as in the preceding species.

*Blunt-leaved Eucalyptus*. Tree.

\*\*\*\* *Operculum hemispherical, much broader than the cupula.*

36 *E. GOMPHOCÉPHALA* (D. C. prod. 3. p. 220.) operculum hemispherical, obtuse, rather striated, much broader than the cup, and a little longer; peduncles 2-edged, length of the petioles, nearly terminal; flowers 3-4 in each head or umbel; leaves lanceolate, acuminate, coriaceous. *h. G.* Native of New Holland. Petals wanting. Stamens very numerous. Fruit angularly compressed, rather turbinate, 4-celled. Petioles an inch long, terete. Leaves glaucous, veinless, 5 inches long, and one broad.

*Club-flowered Eucalyptus*. Tree.

\*\*\*\*\* *Mature operculum depressed in the centre, where it is umbonate, shorter than the cupula.*

37 *E. GLÓGULUS* (Labill. voy. 1. p. 153. t. 13. nov. holl. 2. p. 121.) operculum conical, when young length of the cup, which is tetragonal, but in the adult state it is depressed, and mucronate in the centre; peduncles axillary, short, 1-flowered; leaves alternate, lanceolate, nearly falcate. *h. G.* Native of Van

Dieman's Land and New Holland. Petioles an inch long. Leaves 7-8 inches long, and one broad. Fruit an inch in diameter, flat on the top. *E. globulâris*, Hort. is probably distinct from this in the leaves.

*Globuled Eucalyptus*. Clt. 1810. Tree 150 ft.

§ 2. *Oppositifoliæ* (from *oppositus*, opposite, and *folium*, a leaf). *A series of the leaves are opposite and sessile, and others petiolate and alternate.*

38 *E. DIVERSIFOLIA* (Bonpl. nov. 1. p. 35. t. 13.) operculum conical, length of the cup, which is turbinate; peduncles axillary, terete; flowers 5-7 in each tuft; lower leaves opposite, sessile, ovate, obtuse; upper ones alternate, petiolate, lanceolate, acuminate by a mucrone. *h. G.* Native of New Holland, in Kanguru Island. *E. connata*, Dum. Cours. bot. cult. 7. p. 280. ? *E. piperita*, hort. berol. Fruit hemispherical, 5 lines in diameter, flat at the top. Pericarp cross-formed at the apex. Leaves 2-3 inches long, lower ones an inch and a half broad, but the upper ones are only half an inch broad. Branches terete, but when very young compressed. *E. heterophylla*, Sweet?

*Diverse-leaved Eucalyptus*. Tree.

39 *E. PULVIGERA* (Cunningh. in Field's new south wales, p. 350.) leaves opposite, sessile, rather connate at the base, nearly orbicular, retuse, cuspidate at the apex, with thickened undulated margins; umbels axillary, pedunculate, 3-flowered; pedicels very short, terete. *h. G.* Native of New Holland, near Cox's River. Operculum hemispherical, acute.

*Powder-bearing Eucalyptus*. Clt. 1824. Tree.

40 *E. CORDATA* (Labill. nov. holl. 2. p. 13. t. 152.) operculum with the margin repressed, and the middle umbonate, shorter than the cup, which is obovate; peduncles axillary and terminal, short, and rather angular; flowers 3-4 in each head, leaves for the most part opposite, sessile, cordate, usually crenated; branchlets terete. *h. G.* Native of New Holland, at Cape Van Dieman. Lodd. bot. cab. t. 328. Fruit nearly globose, 4-5 lines in diameter. Branches and young leaves glaucous. Leaves usually obtuse, 2 inches long and an inch and a half broad.

*Cordate-leaved Eucalyptus*. Fl. June. Clt. 1816. Tr. 60 ft.

41 *E. PULVERULENTA* (Sims, bot. mag. t. 208.) operculum hemispherical; peduncles short, axillary; flowers 3 in each head; leaves opposite, ovate-orbicular, rather mucronate, cordate, covered with glaucous powder, quite entire; branches terete. *h. G.* Native of New Holland. *E. cordata*, Hort. berol. Perhaps distinct from the preceding species. Perhaps the operculum is truly hemispherical.

*Powdery Eucalyptus*. Clt. 1816. Tree.

† *Doubtful species, in consequence of the flowers being unknown. Many of which are probably identical with some of those described above, especially among those with alternate leaves.*

\* *Leaves opposite.*

42 *E. GLAUCA* (D. C. prod. 3. p. 221.) operculum unknown; leaves glaucous and powdery; lower ones opposite, sessile, stem-clasping, cordate, ovate, mucronate; middle ones on short petioles, and about opposite; upper ones alternate, petiolate, lanceolate, and acuminate; branches 4-winged or quadrangular. *h. G.* Native of New Holland. *E. perfoliata*, Hort. *E. pulverulenta*, Link, enum. 2. p. 31. Leaves very variable on the same plant, both with regard to size and shape.

*Glaucous Eucalyptus*. Clt. 1820. Tree.

43 *E. PURPURAESCENS* (Link, enum. 2. p. 31.) leaves opposite, stem-clasping, lanceolate, long-acuminate, glaucous beneath.

*h. G.* Native of New Holland. Branches and nerves of leaves purplish. Leaves 4 inches long and 10 lines broad. Perhaps the two following varieties are the same, only differing in the shape of the leaves from the age of the plants.

*Var. β, petiolulata* (D. C. l. c.) leaves on short petioles, linear-lanceolate, acuminate.

*Var. γ, petiolaris* (D. C. l. c.) leaves on long petioles, broad-lanceolate. *E. oppositifolia*, Desf. hort. par. 1804. p. 422. Branchlets terete, and are as well as the petioles and nerves of leaves brownish purple. Leaves 3-4 inches long and an inch broad, unequally attenuated at the base, girded by a nerve at the margin.

*Purplish-nerved Eucalyptus*. Clt. 1823. Tree.

44 *E. TUBERCULATA* (Parn. h. engl. ex Otto. hort. berol.) leaves opposite, sessile, stem-clasping, oblong-linear, acute, membranous, glabrous; branches filiform, tubercular. *h. G.* Native of New Holland. *E. verrucosa*, Hort. ex Loud. hort. brit. p. 198.

*Tubercled-branched Eucalyptus*. Clt. 1822. Tree.

45 *E. CUNNINGHAMI*; leaves linear-lanceolate, rather falcate, acute, with thickened margins; umbels many-flowered, and are as well as the leaves crowded. *h. G.* Native of New Holland, forming bushes upon the more elevated of the mountains. *E. microphylla*, Cunningham. in Field's new south wales, p. 350.

*Cunningham's Eucalyptus*. Clt. 1824. Shrub.

46 *E. RIGIDA* (Hoffmans. verz. 1826. p. 114.) leaves stiff and hard, lower ones sessile, opposite, ovate, rather cordate, obtuse, upper ones petiolate, scattered, lanceolate, acute, and somewhat apiculate; stem and branches terete. *h. G.* Native of New Holland. Flowers and fruit unknown. Perhaps the same as *E. diversifolia*.

*Stiff-leaved Eucalyptus*. Tree.

47 *E. HYPERICIFOLIA* (Dum. Cours. bot. cult. 7. p. 279.) leaves opposite, lanceolate-oblong, acute, glaucescent beneath; branches filiform. *h. G.* Native of New Holland. Petioles half an inch long. Leaves 6 inches long and an inch and a half broad. Lateral nerves of leaves parallel, connected in front of the margin. *E. hypericifolia* of Link. enum. 2. p. 30. has alternate, nearly linear leaves, which are acuminate at both ends, coriaceous, standing on short petioles, dotted when examined by a lens, but perhaps only the same plant.

*St. John's-wort-leaved Eucalyptus*. Clt. 1823. Tree.

\* \* *Leaves alternate.*

48 *E. MICROPHYLLA* (Willd. enum. p. 515.) leaves alternate, ovate-oblong, cuspidate, glaucescent beneath. *h. G.* Native of New Holland. Petioles 4 lines long. Leaves an inch and a half long, falcate at the apex, small, crowded on the branchlets. Link, enum. 2. p. 30.

*Small-leaved Eucalyptus*. Clt. ? Tree.

49 *E. STENOPHYLLA* (Link, enum. 2. p. 30.) leaves alternate, linear, attenuated at the base, bluntish, veiny, dotted, with the lateral nerves connected before the margin. *h. G.* Native of New Holland. Petioles 4 lines long. Leaves 3 inches long, and 4 lines broad.

*Narrow-leaved Eucalyptus*. Clt. 1823. Tree.

50 *E. MYRTIFOLIA* (Link, enum. 2. p. 30.) leaves alternate, on long petioles, ovate, acute, reticulated, dotted; lateral nerves connected before the margins. *h. G.* Native of New Holland. Petioles 3-4 lines long. Leaves 20-21 lines long, and nearly an inch broad.

*Myrtle-leaved Eucalyptus*. Clt. 1823. Tree.

51 *E. ELONGATA* (Link, l. c.) leaves alternate, lanceolate, reticulately veined, coriaceous, ending in a filiform acumen each. *h. G.* Native of New Holland. Petioles 8 lines long. Leaves 4-5 inches long, and 10-12 lines broad. Perhaps the same as *E. cornuta*, or perhaps *E. pterisifolia*.

*Elongated Eucalyptus.* Clt. 1823. Tree.

52 *E. ME'DIA* (Link, l. c.) leaves alternate, lanceolate, long-acuminate, obovate, and oblique at the base, with the nerves parallel beneath.  $\frac{1}{2}$  G. Native of New Holland. Petioles half an inch long. Leaves 6-7 inches long, and from 1-2 inches broad.

*Intermediate Eucalyptus.* Clt. 1823. Tree.

53 *E. RETICULATA* (Link, l. c.) leaves alternate, lanceolate, acuminate, somewhat ovate at the base, oblique, reticulately veined beneath.  $\frac{1}{2}$  G. Native of New Holland. Leaves 6-7 inches long and 2 or more broad.

*Reticulated-leaved Eucalyptus.* Clt. 1823. Tree.

54 *E. UMBELLATA* (Dum. Cours. bot. cult. 7. p. 279.) leaves alternate, ovate, rather crenated, mucronate, stiffish.  $\frac{1}{2}$  G. Native of New Holland. Branches terete, brown. Leaves 4-5 inches long and 2-5 inches broad. Nearly allied to *E. ovata*.

*Umbellate-flowered Eucalyptus.* Tree.

† The following names occur in the gardens, but they are all perhaps synonymous with those described above.

1 *E. orbicularis*, Lodd. 2 *E. pulchella*, Lodd. 3 *E. albicaulis*, Hort. 4 *E. cotinifolia*, Lodd. 5 *E. undulata*, Hort. 6 *E. alata*, Hort.

Cult. For culture and propagation see *Tristania*, p. 813.

**XV. ANGO'PHORA** (from  $\alpha\gamma\gamma\omicron\varsigma$ , *angos*, a vessel, and  $\phi\omicron\rho\epsilon\omega$ , *phoreo*, to bear; form of fruit). Cav. icon. 4. p. 21. D. C. prod. 3. p. 222.

**LIN. SYST.** *Icosándria, Monogýnia*. Tube of calyx turbinate, marked with 5 prominent ribs; limb of 5 permanent teeth. Petals 5. Stamens indefinite, free; anthers ovate. Style filiform. Capsule covered by the corticate  $\frac{1}{2}$  x, obovate, truncate, 3-celled, 3-valved. Seeds solitary, or few in the cells.—Australian shrubs, with opposite leaves, rarely with the rameal ones ternate. Flowers white.

1 *A. CORDIFOLIA* (Cav. l. c. t. 338.) leaves sessile, ovate, cordate at the base, and are glabrous as well as the branches; peduncles and branchlets clothed with bristles or stiff hairs.  $\frac{1}{2}$  G. Native of New Holland, near Port Jackson. *Metrosidëros hispida*, Smith, in Lin. trans. 3. p. 267. Sieb. pl. exsic. no. 471. Sims. bot. mag. t. 1960. *Metrosidëros hirsuta*, Andr. bot. rep. t. 281. *Metros. anómala*, Vent. malm. t. 2. *Met. cordifolia* and *M. hispida*, Pers. ench. 2. p. 25. *Eucalyptus hirsuta*, Link, enum. hort. berol. 2. p. 31. Flowers rather large, yellowish or whitish.

*Heart-leaved Angophora.* Fl. May, Aug. Clt. 1789. Sh. 7 to 10 feet.

2 *A. INTERMEDIA* (D. C. prod. 3. p. 222.) leaves on short petioles, elliptic-oblong, and are as well as the branches glabrous; peduncles hispid from bristles.  $\frac{1}{2}$  G. Native of New Holland. Flowers one half smaller than those of the preceding species.

*Intermediate Angophora.* Shrub 4 to 6 feet.

3 *A. LANCEOLATA* (Cav. l. c. t. 339.) leaves petiolate, lanceolate, acuminate, glabrous, as well as the branches and peduncles.  $\frac{1}{2}$  G. Native of New Holland, near Port Jackson. *Metrosidëros splendens*, Gært. fr. 1. p. 171. t. 34. f. 7. *Melaleuca costata*, Rousch. *Metrosidëros costata* and *lanceolata*, Pers. ench. 2. p. 25. Like the two preceding species, this varies with opposite and alternate leaves.

*Lanceolate-leaved Angophora.* Fl. May, Aug. Clt. 1816. Shrub 4 to 6 feet.

Cult. See *Metrosidëros* for culture and propagation.

**XVI. CALLISTEMON** ( $\kappa\alpha\lambda\lambda\iota\sigma\tau\omicron\varsigma$ , *kallistos*, beautiful, and  $\sigma\tau\eta\mu\omega\nu$ , *stemon*, a stamen; in most of the species the stamens

are of a beautiful scarlet colour). R. Br. in bot. reg. no. 393. D. C. prod. 3. p. 222.—*Metrosidëros* species of authors.

**LIN. SYST.** *Icosándria, Monogýnia*. Tube of calyx half spherical; limb 5-parted, with the lobes obtuse. Petals 5 (f. 119. b). Stamens numerous (f. 119. e.); filaments free. Style filiform. Stigma capitate (f. 119. c). Capsule 3-celled (f. 119. f.), many-seeded, inclosed, and connate with the thickened tube of the calyx, which is adnate to the branches.—New Holland shrubs, having the inflorescence rising from the old branches in crowded spikes, as in the species of *Melaleuca*; but with the stamens free, as in *Metrosidëros*. Leaves elongated, stiff, alternate, usually lanceolate.

• *Filaments of stamens yellowish.*

1 *C. PINIFOLIUM* (D. C. prod. 3. p. 223.) leaves linear-filiform, acerose, stiff, mucronate, channelled, scabrous; calyxes glabrous.  $\frac{1}{2}$  G. Native of New Holland. *Metrosidëros pinifolia*, Wendl. coll. 1. p. 53. t. 16. Willd. enum. 513. *Metro. viridiflora*, Cels. Nois. but not of Sims. Petals greenish, oval. Stamens of a dirty yellowish green colour, thrice the length of the petals.

*Pine-leaved Callistemon.* Fl. June, Jul. Clt. ? Sh. 4 to 6 ft.

2 *C. VIRIDIFLORUM* (D. C. l. c.) leaves linear-lanceolate, stiff, pungent, beset with scabrous dots, rather villous when young as well as the branches; calyx glabrous.  $\frac{1}{2}$  G. Native of New Holland, on the east coast. *Metrosidëros viridiflora*, Sims, bot. mag. 2602. Petals and stamens greenish yellow. Filaments deflexed, 4-times the length of the corolla, ex Sims. Fruit globose; limb of calyx deciduous.

*Green-flowered Callistemon.* Fl. June, Aug. Clt. 1818. Shrub 4 to 6 feet.

3 *C. SALIGNUM* (D. C. l. c.) leaves lanceolate, acuminate at both ends, mucronate, glabrous in the adult state, with the middle nerve feather-veined, and the lateral nervules approximating the margins; calyxes glabrous.  $\frac{1}{2}$  G. Native of New Holland. *Metrosidëros saligna*, Smith, in Lin. trans. 3. p. 272. Vent. hort. cels. t. 70. Bonpl. nav. t. 4. Sieb. pl. exsic. no. 320. Flowers pale yellow. Stamens hardly 3-times the length of the petals, which are roundish.

*Willowy Callistemon.* Fl. May, July. Clt. 1788. Shrub 4 to 6 feet.

4 *C. LOPHANTHUM* (Sweet, fl. aust. t. 29.) leaves lanceolate, attenuated at both ends, mucronate, 1-nerved, and feather-veined, glabrous in the adult state, but villous when young as well as the branches; flowers distinct, spicate, nearly terminal; calyx pilose; petals rather pubescent, ciliated; ovary densely clothed with down; capsule distinct.  $\frac{1}{2}$  G. Native of New Holland. *Metrosidëros lophantha*, Vent. hort. cels. t. 69. *Metro. saligna*, Sims, bot. mag. 1821. Flowers straw-coloured.

*Crest-flowered Callistemon.*

Fl. June, Aug. Clt. 1806. Shrub 4 to 6 ft.

5 *C. LEPTOSTACHYUM* (Sweet, fl. aust. no. 29.) leaves lanceolate, acute, mucronate, attenuated at both ends, full of dots, 1-nerved, and feather-veined, glabrous in the adult state, when young clothed with silky tomentum as well as the branches; spikes long, slender; calyx pilose; petals pubescent, ciliated; ovaries smoothish; capsules crowded.  $\frac{1}{2}$  G. Native of New Holland. Flowers greenish yellow.

FIG. 119.

# MYRTACEÆ. XVI. CALLISTEMON. XVII. METROSIDÆROS.

*Slender-spiked Callistemon.* Fl. June, Aug. Clt. 1820. Shrub 4 to 6 feet.

6 *C. PALLIDUM* (D. C. prod. 3. p. 223.) leaves obovate-oblong, glaucous, mucronate, glabrous in the adult state, with the lateral nerves hardly evident; calyces glabrous. *h. G.* Native of New Holland. *Metrosidæros pallida*, Bonpl. nav. p. 101. t. 41. *Metro. australis*, R. Br. mss. Very like the preceding species, and hardly distinct. Flowers pale yellowish green.

*Pale-flowered Callistemon.* Shrub 4 to 6 feet.

7 *C. SIEBERI* (D. C. l. c.) leaves linear, almost nerveless, and with the midrib hardly prominent, clothed with silky villi when young, but glabrous in the adult state; the lateral nerves wanting; calyces pubescent. *h. G.* Native of New Holland. *Myrtaceæ*, Sieb. pl. exsicc. no. 637. Stamens a little longer than the petals.

*Sieber's Callistemon.* Shrub 4 to 6 feet.

• • *Filaments of stamens scarlet.*

8 *C. RIGIDUM* (R. Br. in bot. reg. t. 393.) leaves linear or lanceolate, flat, stiff, very acute, mucronate, smooth; calyces pubescent. *h. G.* Native of New Holland. *Metrosidæros linearis*, Willd. enum. p. 513. but not of Willd. spec. *Metros. viminalis*, Hort. berol. Perhaps the same as *Metrox viminalis*, Gærtn. fruct. 1. p. 171. t. 34. Lam. ill. t. 221. f. 6. Smith, in Lin. trans. 3. p. 273. Flowers crimson.

*Stiff Callistemon.* Fl. May, June. Clt. 1800. Sh. 4 to 8 ft.

9 *C. LINEARE* (D. C. prod. 3. p. 223.) leaves linear, stiff, acute, keeled beneath, channelled above, villous while young; calyces clothed with velvety pubescence. *h. G.* Native of New Holland. *Metrosidæros linearis*, Smith, in Lin. trans. 2. p. 273. Willd. spec. 2. p. 953. *Melaleuca linearis*, Wendl. et Schrad. sert. hann. t. 11. *Metrosidæros calyculatus*, Sieb. pl. nov. holl. exsicc. no. 545. *Callistemon pungens*, Hort. Style longer than the stamens. Lobes of calyx almost orbicular, falling off after flowering. Fruit globose.

*Linear-leaved Callistemon.* Fl. June, July. Clt. 1788. Sh. 4 to 6 feet.

10 *C. RUGULOSUM* (D. C. l. c.) leaves linear-lanceolate, stiff, mucronate, flat, tubercled on the disk, and scabrous on the margins, 3-nerved; lateral nerves approximating the margin of the leaf; fruit glabrous. *h. G.* Native of New Holland. *Metrosidæros rugulosa*, Willd. enum. suppl. p. 31. without a description. *Metrosidæros scabra*, Coll. hort. ripul. p. 71. *Metro. glandulosa*, Desf. hort. par. *M. macro-punctatum*, Dum. Cours. bot. cult. 7. p. 277. *Callistemon scabrum*, Lodd. bot. cab. 1283. Stamens scarlet.

*Roughish-leaved Callistemon.* Fl. Mar. June. Clt. 1821. Sh. 4 to 6 feet.

11 *C. LINEARIFOLIUM* (D. C.) leaves linear-lanceolate, stiff, mucronate, flat, having the middle nerve finely feather-nerved; the lateral nerves confused with the entire margin of the leaves; tube of calyx villous. *h. G.* Native of New Holland. *Metrosidæros linearifolia*, Link. enum. 2. p. 26. Stamens scarlet.

*Linear-leaved Callistemon.* Fl. Mar. June. Clt. 1820. Sh. 5 to 8 feet.

12 *C. LANCEOLATUM* (D. C. l. c.) leaves lanceolate, mucronate, attenuated at both ends; having the midrib rather prominent and feather-nerved; the lateral nerves approximating the margins of the leaves; calyces pubescent. *h. G.* Native of New Holland. *Metrosidæros lanceolata*, Smith, in Lin. trans. 3. p. 272. Pers. ench. 2. p. 24. no. 15. but not no. 11. *Metro. citrina*, Curt. bot. mag. 260. Stamens scarlet.

*Lanceolate-leaved Callistemon.* Fl. June, Nov. Clt. 1788. Shrub 5 to 10 feet.

13 *C. MARGINATUM* (D. C. prod. 3. p. 224.) leaves lanceolate, stiff, flat, acute at both ends, 3-nerved; the middle nerve

rather prominent; and the lateral ones very flat; calyces glabrous. *h. G.* Native of New Holland. *Metrosidæros marginata*, Gærtn. fruct. 1. p. 171. t. 34. f. 6. Smith, in Lin. trans. 3. p. 273. Flowers crimson.

*Marginate-leaved Callistemon.* Fl. June. Shrub 6 to 8 feet.

14 *C. SPECIOSUM* (D. C. l. c.) leaves lanceolate, flat, having the middle nerve rather prominent, and the lateral nerves approximating the margin; calyces villous; capsule 4-celled, tomentose at the apex. *h. G.* Native of New South Wales. *Metrosidæros speciosa*, Sims, bot. mag. t. 1761. Leaves when young rather silky from adpressed caducous villi, and reddish. Stamens scarlet.

*Var. β, glaucum* (D. C. l. c.) leaves glaucescent. *h. G.* *Metrosidæros glauca*, Bonpl. nav. 1. p. 86. t. 34. Perhaps the same as *Metrosidæros semperflorens*, Lodd. bot. cab. t. 523. *Callistemon formosum*, Hort.

*Showy Callistemon.* Fl. Mar. Ju. Clt. 1823. Sh. 5 to 10 ft.

† *A species not sufficiently known.*

15 *C. HYBRIDUM* (D. C. l. c.) leaves linear, stiff, marginate by a nerve, acuminate mucronate, almost pungent, glabrous. *h. G.* Native country unknown. *Metrosidæros hybrida*, Otto. hort. berol.

*Hybrid Callistemon.* Shrub 4 to 6 feet.

*Cult.* All the species of *Callistemon* are worth cultivating in every collection of greenhouse plants for the neatness of their foliage, and the beauty of their blossoms, but especially those belonging to the last division of the genus, for the splendour of their flowers, which are either scarlet or crimson; and are therefore well adapted for a conservatory. The soil best suited for them is a mixture of loam, peat, and sand. Ripened cuttings of them strike root in sand, under a hand-glass. They may be also raised from seeds, which are frequently produced in this country on large plants. Plants raised from cuttings, taken from flowering plants, come into flower when small, but those raised from seeds do not flower till they become large.

**XVII. METROSIDÆROS** (from *μυρρα*, *metra*, the heart of a tree, and *σιδηρος*, iron; the wood and pith of the trees are very hard). R. Br. gen. rem. p. 15. D. C. prod. 3. p. 224.—*Metrosidæros* species, Gærtn. Smith and Ait.—Nani, Adans. fam. 2. p. 88.

**LIN. SYST.** *Icosándria*, *Monogýnia*. Tube of calyx not angular, adhering to the ovary; limb 6-cleft (f. 120. a.). Stamens 20-30, free, very long, and exserted. Style filiform; stigma simple. Capsule 2, but usually 3-celled; cells many-seeded. Seeds wingless.—Trees or shrubs. Leaves opposite or alternate. Flowers pedicellate, not adnate to the branches, as in the genus *Melaleuca* and *Callistemon*. The genera *Angophora* and *Callistemon* have been separated from *Metrosidæros* as it formerly stood; these genera are very natural, but the present genus requires to be still further divided into other genera, for as it now stands it is a heterogeneous mass of plants; but from the fruit of the greater part of the species being unknown, this is altogether impracticable at present.

• *Leaves opposite.*

1 *M. VERA* (Rumph. amb. 3. p. 16. t. 7. Lindl. coll. t. 18.) leaves opposite, on short petioles, ovate-lanceolate, acuminate, quite glabrous; cymes axillary, pedunculate, many-flowered. *h. S.* Native of Amboyna and Java, among rocks. Nani Valent. rest. ind. 220. t. 53. ex Rumph. *Eugenia Amboynensis*, Hort. Flowers yellow. Stamens 30. Ovary 2-celled. This species differs from all the others in habit, and is probably the only true species of *Metrosidæros*. The Chinese make rudders and anchors of the wood; and among the Japanese it is very scarce and valuable. The bark is used as a remedy for fluor albus and

diarrhoea, being mixed with pinang and a small quantity of cloves and nutmegs.

*True Iron-wood.* Fl. Mar. Ju. Clt. 1819. Tr. 10 to 20 ft.

2 *M. DIFFUSA* (Smith, in Lin. trans. 3. p. 268.) leaves opposite, ovate, veiny, glabrous on both surfaces; panicles axillary or terminal; pedicels opposite. *h. G.* Native of New Zealand and the Island of Otaheite. *Melaleuca diffusa*, Forst. prod. no. 213. *Melaleuca lucida*, Lin. fil. suppl. t. 342. Flowers yellow. Leaves 3-nerved beneath at the base. Fruit unknown.

*Diffuse Iron-wood.* Tree.

3 *M. VILLOSA* (Smith, l. c.) leaves opposite, ovate, veiny, pubescent beneath; thyrses axillary or terminal, opposite, villous; flowers sessile, crowded. *h. G.* Native of the Sandwich Islands. Flowers reddish. *Melaleuca villosa*, Lin. fil. suppl. p. 342. *Melaleuca æstuosa*, Forst. profl. no. 215. *Mel. spectabilis*, Gært. fr. 1. p. 172. t. 34. f. 9.?—*Leptospermum collinum*, Forst. gen. 36. no. 2. appears to differ from this, according to the description, in the leaves being glabrous on both surfaces, in the petioles being velvety, and in the calyx being truncate from the limb being deciduous; it is therefore perhaps a different species.

*Villous Iron-wood.* Tree.

4 *M. FLORIDA* (Smith, l. c.) leaves opposite, obovate-oblong, glabrous, veiny; thyrses terminal; calyx turbinate, nakedish. *h. G.* Native of New Zealand. *Melaleuca florida*, Forst. prod. 114. *Leptospermum scandens*, Forst. gen. 36. no. 1. but not of Gært. Calyx elongated, as in the above, silky from almost imperceptible adpressed down. Flowers yellowish. Stamens twice the length of the petals. Style length of stamens. Ovary 3-celled.

*Flowering Iron-wood.* Tree.

5 *M. GLOMULIFERA* (Smith, in Lin. trans. 3. p. 268.) leaves opposite, ovate, reticulately veined, pubescent beneath; heads lateral, pedunculate, and are as well as the bractes tomentose. *h. G.* Native of New Holland. Branches opposite. Petioles short. Flowers greenish yellow. Heads of flowers bibracteate. Fruit unknown.

*Head-bearing Iron-wood.* Fl. May, June. Clt. 1805. Tr. 15 to 20 feet.

6 *M. ANGUSTIFOLIA* (Smith, l. c.) leaves opposite, linear-lanceolate, naked; peduncles axillary, umbellate; bractes lanceolate, glabrous. *h. G.* Native of the Cape of Good Hope. *Myrtus angustifolia*, Lin. mant. 74. Houtt. pfl. syst. 3. t. 25. f. 2. *Leptospermum salicifolium*, Lam. dict. 3. p. 467. ex herb. Juss. Branches tetragonal. Leaves resembling those of *Phillyrea*. Stamens long. Fruit capsular, 3-celled. Flowers yellowish.

*Narrow-leaved Iron-wood.* Clt. 1787. Tr. 20 ft.

7 *M. UMBELLATA* (Cav. icon. 4. p. 20. t. 337.) leaves opposite, elliptic-lanceolate, glabrous; peduncles umbellate, short, rising from the axils of the upper leaves, rather downy; umbels few-flowered; petals oblong. *h. G.* Native of New Holland. *Melaleuca umbellata*, Reusch. Leaves nearly of *Phillyrea angustifolia*, but differ in being dotted beneath, and revolute at the margins. Lobes of calyx 5, acute, and are as well as the tube glabrous at length. Stamens distinct, much exserted, scarlet. Capsule 3-celled.

*Umbellate-flowered Iron-wood.* Shrub 8 to 10 feet.

8 *M. OPERCULATA* (Labill. sert. cal. p. 61. t. 60.) leaves opposite, linear-lanceolate, glabrous, but when young rather villous; corymbs nearly terminal; petals orbicular, somewhat adhering to each other at the apex, and separating in the manner of an operculum. *h. G.* Native of New Caledonia. Petals opening almost as in *Vitis*. Stamens about 70, 5-times the length of the petals. Capsule 3-celled.

*Operculate-petalled Iron-wood.* Shrub 9 feet.

9 *M. OBOVATA* (Hook, in Beech. bot. p. 63. t. 12.) leaves

opposite, obovate, coriaceous, very blunt, veiny, glabrous, tapering into the petiole, which is short, with the margins rather revolute; corymbs axillary and terminal; calyx glabrous, full of elevated dots. *h. G.* Native of Gambier Island.

*Obovate-leaved Iron-wood.* Tree.

10 *M. POLYMORPHA* (Gaud. in Freyc. voy. part. bot. p. 482. t. 108. and 109.) leaves opposite, of various forms, coriaceous, glabrous on both surfaces, but covered with a little silky tomentum beneath; peduncles 3 or many-flowered, terminal and axillary, corymbose; calyxes and branchlets glabrous, or clothed with silky tomentum. *h. G.* Native of the Sandwich Islands, at the elevation of 900 to 1800 feet.

*Var. α*; leaves roundish-elliptic, cordate.

*Var. β*; leaves ovate or ovate-elliptic, rounded at the base.

*Var. γ*; leaves oblong, acute at the base.

*Var. δ*; leaves lanceolate.

*Polymorphous Iron-wood.* Tree.

\* \* *Leaves alternate.*

11 *M. CILIATA* (Smith, l. c. Labill. sert. cal. p. 60. t. 59.) leaves scattered or nearly opposite, elliptic, obtuse, coriaceous, ciliated at the base when young, as well as the branchlets; flowers in dense corymbs. *h. G.* Native of New Caledonia. *Melaleuca ciliata*, Forst. prod. p. 217. *Leptospermum ciliatum*, Forst. gen. 36. no. 3. Leaves like those of *Celastrus buxifolius*. Flowers purple. Lobes of calyx 5, acute, permanent. Capsule 3-celled.

*Ciliated-leaved Iron-wood.* Shrub 6 feet.

12 *M. CAPITATA* (Smith, l. c.) leaves scattered, obovate, mucronate; heads of flowers dense, terminal; calyxes and branchlets pilose. *h. G.* Native of New Holland. *Melaleuca eriocéphala*, Sieb. pl. exsicc. nov. holl. no. 322. *Callistemon* or *Callistemma capitatum*, Rchb. hort. bot. 1. t. 84. Leaves 2-4 lines long, rather villous when young, but in the adult state the margins are scabrous from glands. Heads of flowers globose. Flowers lilac. Stamens a little longer than the petals. Stigma rather capitate.

*Capitate-flowered Iron-wood.* Clt. 1824. Sh. 5 to 6 ft.

13 *M. ERICIFOLIA* (Smith, in Rees' cycl. vol. 23. no. 16.) leaves alternate, imbricate, linear, acute, pilose, channelled above, convex beneath; heads of flowers terminal. *h. G.* Native of New Holland, at King George's Sound. Said to be allied to the preceding species.

*Heath-leaved Iron-wood.* Shrub.

14 *M. CORIFOLIA* (Vent. malm. t. 46.) leaves alternate, linear, recurved at the apex; flowers axillary; calyxes smoothish, with the lobes lanceolate; stigma capitate. *h. G.* Native of New Holland, on the eastern coast. *Leptospermum ambiguum*, Smith, exot. bot. t. 59. Flowers white. Leaves crowded on the branches. Stamens a little longer than the petals. From the stigma being capitate (f. 120. b.) in this as well as in *M. capitata* and *M. ericifolia*, these plants will form a distinct genus, which might be called *Gynocéphala*.

*Coris-leaved Iron-wood.* Shrub 4 to 6 feet.

15 *M. JUNIPERINUS*; leaves subulately-filiform, mucronate, stiff, glabrous, tubercled; peduncles woolly; spikes capitate. *h. G.* Native of New Holland. *Metrosideros juniperinus*, Rchb. ex Spreng. syst. app. p. 194.

*Juniper-like Metrosideros.* Shrub 4 to 6 feet.

FIG. 120.

16 *M. PU'NGENS* (Sieb. ex Spreng. syst. add. p. 194.) leaves linear, mucronate, spreading, nerved, glabrous; peduncles woolly; spikes capitate.  $\frac{1}{2}$  G. Native of New Holland.

Pungent *Metrosideros*. Shrub.

† Species not sufficiently known.

\* Leaves and flowers unknown.

17 *M. ? SAUCIFOLIA* (Gærtn. fruct. 1. p. 171. f. 3.). Two species of *Eucalyptus* are confused under this name.

Willow-leaved Iron-wood. Tree.

18 *M. ? EXCELSA* (Gærtn. fruct. 1. p. 172. t. 34. f. 8.). This is perhaps a species of *Leptospermum*.

Tall Iron-wood. Tree.

19 *M. ? SPECTABILIS* (Gærtn. l. c. f. 9.). Probably a species of *Leptospermum*.

Showy Iron-wood. Shrub.

20 *M. ? SCANDENS* (Gærtn. l. c. f. 10.). Probably a species of *Leptospermum*.

Climbing Iron-wood. Shrub.

21 *M. ? ALBIFLORA* (Gærtn. l. c. f. 11.). Probably a species of *Leptospermum*.

White-flowered *Metrosideros*. Shrub.

22 *M. MYRTIFOLIA* (Gærtn. l. c. f. 12.). Probably a species of *Leptospermum*.

Myrtle-leaved Iron-wood. Shrub.

\*\* Flowers and fruit unknown.

23 *M. ? AROMATICA* (Salisb. prod. p. 351.) leaves alternate, broad-ovate, acuminate, thin, glaucous beneath.  $\frac{1}{2}$  G. Native about Port Jackson.

Aromatic Iron-wood. Shrub.

24 *M. ? PROCERA* (Salisb. l. c.) leaves alternate, ovate-lanceolate, green beneath, coriaceous, with divaricating nerves.  $\frac{1}{2}$  G. Native at Port Jackson.

Tall Iron-wood. Tree.

25 *M. ? PROPINQUA* (Salisb. l. c.) leaves alternate, ovate-lanceolate, glaucous beneath, coriaceous, with divaricating nerves.  $\frac{1}{2}$  G. Native at Port Jackson.

Allied Iron-wood. Shrub.

26 *M. ? APOCYNIFOLIA* (Salisb. l. c.) leaves nearly opposite, elliptic, marginate, coriaceous, with parallel nerves.  $\frac{1}{2}$  G. Native at Port Jackson.

Apocynum-leaved Iron-wood. Shrub.

27 *M. ? CORIACEA* (Salisb. l. c.) leaves alternate, ovate-lanceolate, glabrous on both surfaces, very coriaceous.  $\frac{1}{2}$  G. Native at Port Jackson.

Coriaceous-leaved Iron-wood. Shrub.

28 *M. ? DECORA* (Salisb. l. c.) leaves alternate, dense, on very short petioles, lanceolate, mucronulate, coriaceous, glabrous on both surfaces in the adult state.  $\frac{1}{2}$  G. Native at Port Jackson.

Neat Iron-wood. Shrub.

29 *M. ? SCARIOSA* (Horn. hort. hafn. suppl. p. 139.) leaves scattered, lanceolate, with scarious margins; branchlets pubescent.  $\frac{1}{2}$  G. Native country unknown.

Scarious-leaved Iron-wood. Shrub.

\*\*\* Species entirely undescribed.

30 *M. connata*, Desf. hort. par. 31 *M. plinifolia*, Desf. l. c. 32 *M. nana*, Gmel. Hort. Carls.

N.B. *Metrosideros macrophylla* of Lam. ill. t. 421. f. 1. Poir. suppl. 3. p. 686 is the same as *Sarcocœna multiflora*, see vol. 1. p. 562. or a nearly allied species.

Cult. For culture and propagation see *Callistemon*, p. 823.

XVIII. LEPTOSPERMUM (from λεπτός, *leptos*, slender, and σπέρμα, *sperma*, a seed; in reference to the seeds being

small and narrow). Forst. gen. p. 36. Gærtn. fruct. 1. p. 174. t. 35. Smith, in Lin. trans. 3. p. 260. Cav. icon. 4. p. 16. *Leptospermum*, sect. 2. *Euleptospermum*, D. C. prod. 3. p. 227.

LIN. SYST. *Icosandria, Monogynia*. Tube of calyx rather turbinate; limb 5-cleft, with the lobes triangular and valvate. Petals 5. Stamens 20-30, free, shorter than the petals. Style filiform; stigma capitate. Capsule 4-5-celled. Seeds oblong, small.—New Holland shrubs, with alternate, quite entire, dotted, small leaves. Flowers pedicellate, solitary, scattered, white.

1 *L. EMARGINATUM* (Wendl. fil. ex Spreng. syst. 2. p. 491.) leaves linear-oblong, emarginate, obscurely 5-nerved; calycine teeth membranous, coloured.  $\frac{1}{2}$  G. Native of New Holland. *Melaleuca nervosa*, Hort. ex Link, enum. 2. p. 25.

Emarginate-leaved *Leptospermum*. Fl. Ju. Jul. Clt. 1818. Shrub 4 to 6 feet.

2 *L. OBOVATUM* (Sweet, fl. aust. t. 36.) leaves obovate, emarginate, obscurely 3-5-nerved, glabrous; branches angular, a little winged; calyxes glabrous; with the teeth coloured.  $\frac{1}{2}$  G. Native of New Holland. Flowers white.

Obovate-leaved *Leptospermum*. Fl. July, Aug. Clt. ? Sh. 3 to 6 feet.

3 *L. SERICEUM* (Labill. nov. holl. 2. p. 9. t. 147.) leaves obovate, mucronate, 3-5-nerved, silky on both surfaces as well as the calyxes; lobes of calyx permanent.  $\frac{1}{2}$  G. Native of Van Dieman's Land. Flowers white.

Silky *Leptospermum*. Fl. Ju. Jul. Clt. 1818. Sh. 4 to 6 ft.

4 *L. TUBERCULATUM* (Poir. suppl. 3. p. 338.) leaves ovate or oblong-lanceolate, dotted beneath and finely 3-nerved, glabrous in the adult state, but clothed with silky pubescence when young, as well as the branchlets; calyxes silky, but when in fruit glabrous.  $\frac{1}{2}$  G. Native of New Holland, about Port Jackson. *L. stellatum*, Cav. icon. 4. p. 16. t. 320. ? The margin of the calyx is said to be entire by Cavanilles, in his diagnosis, but from his description, as well as from the figure, it is acutely 5-cleft. The petals are yellow, according to Cav., but according to the specimen white.

Var.  $\beta$ , *subenerve* (D. C. prod. 3. p. 227.) leaves 1-nerved, or almost nerveless.

Tubercular *Leptospermum*. Fl. June, Jul. Clt. 1816. Sh. 4 to 6 feet.

5 *L. GRANDIFLORUM* (Smith, in Lin. trans. 6. p. 299.) leaves lanceolate, narrowed at both ends, mucronate; calyxes villous, with coloured teeth; bracteas gemmaceous, permanent.  $\frac{1}{2}$  G. Native of New Holland. Sims, bot. mag. t. 1810. Lodd. bot. cab. t. 701. Flowers large, white, about the size of those of *Fabricia larigata*. Leaves pubescent when young, but glabrous in the adult state.

Great-flowered *Leptospermum*. Fl. June, July. Clt. 1803. Shrub 4 to 6 feet.

6 *L. LANIGERUM* (Ait. hort. kew. ed. 2. vol. 3. p. 182. but not of Willd.) leaves oblong or oval, mucronate, pubescent on both surfaces or only beneath, obsolete 3-nerved; branchlets villous; calyxes very villous, from spreading pili.  $\frac{1}{2}$  G. Native of Van Dieman's Land and New Holland. Lodd. bot. cab. t. 1192. *Philadelphus laniger*, Ait. hort. kew. ed. 1. vol. 2. p. 156. Flowers white.

Var.  $\beta$ , *pubescens* (D. C. prod. 3. p. 227.) leaves smaller, and rather oblique.  $\frac{1}{2}$  G. Gathered with the species. *Philadelphus laniger*  $\beta$ , piliger. Ait. hort. kew. ed. 1. vol. 2. p. 156. *L. pubescens*, Willd. spec. 2. p. 650. Not differing from the species, unless in the leaves being rather smaller. Both have their leaves sometimes nearly glabrous in the gardens; but always to be known by the hairy calyx.

Wool-bearing *Leptospermum*. Fl. Ju. Jul. Clt. 1774. Sh. 3 to 6 feet.

7 *L. TRINE'VE* (White, journ. 229. with a figure) leaves ovate-lanceolate, 3-nerved; calyx clothed with adpressed silky villi; calycine teeth foliaceous, permanent. *h. G.* Native of New Holland. *Leptospermum lanigerum*, var. Smith, in Lin. trans. 3. p. 263. Willd. spec. 2. p. 949. Flowers white.

*Three-nerved-leaved Leptospermum.* Shrub 4 to 6 ft.

8 *L. SCOPARIUM* (Smith, in Lin. trans. 3. p. 262.) leaves ovate, mucronate, obsolete 3-nerved; calyxes glabrous; calycine teeth membranous, coloured. *h. G.* Native of New Zealand and New Holland, on the sea-shore. Andr. bot. rep. 622. *Philadelphus scoparius*, Ait. hort. kew. ed. 1. vol. 2. p. 156. *Melaleuca scoparia*, Wendl. sert. hann. p. 25. t. 15. Flowers white. The leaves of this species were used by Captain Cook's ships' crews as tea, whence they named it the tea-plant. They have a very agreeable bitter flavour, with a pleasant smell when fresh, but lose something of both when dry. A strong infusion of them proved emetic to some, in the same manner as green tea. They were also used with spruce leaves in equal quantity to correct their astringency, in brewing beer from them, and they rendered the beer exceedingly palatable.

*Var. a, linifolium* (D. C. prod. 3. p. 227.) leaves lanceolate. *h. G.* Native of New Zealand. *L. scoparium*, Forst. gen. 36. trav. 1. t. 22. *Melaleuca scoparia diosmatifolia*, Wendl. l. c. f. 1. *L. squarrosum*, Gaertn. fruct. 1. p. 174.

*Var. β, myrtifolium* (D. C. l. c.) leaves ovate-elliptic. *h. G.* Native of New Holland. Wendl. l. c. f. 2. *Philadelphus floribundus*, Roem. et Ust. mag. 7. t. 2.

*Var. γ, rubricaulis* (D. C. prod. 3. p. 227.) leaves flattish, hardly 3-nerved. *h. G.* *R. rubricaulis*, Link. enum. 2. p. 25. *Broom Leptospermum* or New Zealand Tea. Fl. June, July. Clt. 1772. Shrub 4 to 6 feet.

9 *L. FLAVESCENS* (Smith, l. c. Ait. hort. kew. ed. 2. vol. 3. p. 181.) leaves linear-lanceolate, obtuse, 1-nerved, dotted; calyxes glabrous; calycine teeth membranous, at length deciduous. *h. G.* Native of New Holland. *L. thea*, Willd. *L. flavescens*, Willd. spec. 2. p. 949. Hook. bot. mag. 2695. *Melaleuca thea*, Wendl. sert. hann. 1. p. 24. t. 14. *L. polygalæfolium*, Salisb. prod. p. 3. Flowers white, but yellowish in a dried state. Wendlend says the leaves are 3-nerved, and in the *Hortus Kewensis* they are said to be nerveless, but in the specimens examined they are 1-nerved, as in the figure of Wendlend.

*Yellowish Leptospermum.* Fl. May, July. Clt. 1788. Sh. 4 to 6 feet.

10 *L. GNIDIÆFOLIUM* (D. C. prod. 3. p. 228.) leaves linear-lanceolate, acutish, 3-nerved, dotless; calyxes covered with silky villi; calycine teeth smoothish, and coloured a little. *h. G.* Native of New Holland. *L. pendulum*, Sieb. Flowers white.

*Gnidia-leaved Leptospermum.* Shrub 4 to 6 feet.

11 *L. POROPHYLLUM* (Cav. icon. 4. p. 17. t. 330. f. 2.) leaves oblanceolate, acutish, 1-nerved, densely dotted, glabrous; calyxes silky, with the teeth acute. *h. G.* Native of New Holland. In the figure of this plant, given by Cavanilles, the teeth of the calyx are deciduous, and the pubescence of the calyx is not taken any notice of, but it is probably the same. Flowers white.

*Porous-leaved Leptospermum.* Fl. June, July. Clt. 1800. Shrub 3 to 6 feet.

12 *L. PARVIFOLIUM* (Smith, in Lin. trans. 3. p. 263.) leaves oblong-obovate, nerveless, dotted, glabrous; calyxes villous, with the teeth membranous and coloured. *h. G.* Native of New Holland. *L. eriocalyx*, Sieb. pl. exsic. nov. holl. no. 313. Branches villous when young, but at length becoming glabrous. Leaves 2 lines long. Flowers white.

*Small-leaved Leptospermum.* Fl. June, July. Clt. 1789. Shrub 4 to 6 feet.

13 *L. MYRTIFOLIUM* (Sieb. pl. exsic. nov. holl. no. 314.) leaves

obovate-oblong, 3-nerved, dotted, rather pubescent while young; calyxes clothed with silky villi; with the lobes membranous, coloured, and pubescent. *h. G.* Native of New Holland. Flowers solitary, sessile, yellowish when in a dry state.

*Myrtle-leaved Leptospermum.* Shrub 3 to 6 feet.

14 *L. ATTENUATUM* (Smith, in Lin. trans. 3. p. 262.) leaves linear-lanceolate, acute, 3-nerved; calyx clothed with silky villi; with the teeth membranous, coloured, and nearly glabrous. *h. G.* Native of New Holland. Flowers for the most part 2 on a short silky peduncle. Perhaps *L. glomeratum*, Wendl. in flor. 1819. p. 678. and *L. resiniferum*, Bertol. amœn. p. 28. differs from the present plant. Flowers white.

*Attenuated-leaved Leptospermum.* Fl. May, Jul. Clt. 1795. Shrub 3 to 6 feet.

15 *L. MULTIFLORUM* (Cav. icon. 4. p. 17. t. 331. f. 1.) leaves linear, attenuated, acuminate, 1-nerved, dotless; calyxes glabrous, with the lobes deciduous. *h. G.* Native of New Holland. Flowers white.

*Many-flowered Leptospermum.* Shrub 6 to 8 feet.

16 *L. THYMFOLIUM* (Cunningh. in Field's new south wales, p. 319.) rather villous; leaves oval, obtuse, flattish; flowers axillary, solitary, or twin; segments of the calyx deciduous. *h. G.* Native of New Holland, growing in swampy forest land on the Macquarie River.

*Thyme-leaved Leptospermum.* Clt. 1824. Shrub.

17 *L. MULTICAULE* (Cunningh. l. c.) silky; leaves oval, or ovate-lanceolate; teeth of calyx coloured. *h. G.* Native of New Holland, in barren bushy hills, near Bathurst.

*Many-stemmed Leptospermum.* Clt. ? Shrub.

18 *L. OBLIQUUM* (Coll. hort. ripul. append. 2. p. 351.) leaves oblique, sessile, linear-lanceolate, attenuated at the base, and mucronate at the apex, dotted, pale beneath; stem reddish, branched. *h. G.* Native of New Holland. Nearly allied to *L. multiflorum*. Flowers white.

*Oblique-leaved Leptospermum.* Fl. June, July. Clt. 1800. Shrub 4 to 6 feet.

19 *L. JUNIPERINUM* (Smith, in Lin. trans. 3. p. 263.) leaves linear-lanceolate, pungent, 1-nerved, silky while young as well as the branchlets; calyx glabrous, with membranous, coloured teeth. *h. G.* Native of New Holland. Vent. malm. t. 89. *L. recurvifolium*, Salisb. prod. p. 350. *Melaleuca tenuifolia*, Wendl. obs. p. 50. ex Willd. Flowers white.

*Juniper-like Leptospermum.* Fl. June, July. Clt. 1790. Shrub 4 to 5 feet.

20 *L. BACCATUM* (Smith, l. c.) leaves linear-lanceolate, pungent, 1-nerved, but 3-nerved at the very base; branches hairy; calyxes glabrous: with coloured, pubescent teeth; capsule baccate. *h. G.* Native of New Holland. *L. juniperifolium*, Cav. icon. 4. p. 18. t. 331. f. 2. Flowers white.

*Berry-fruited Leptospermum.* Fl. July. Clt. 1790. Shrub 4 to 5 feet.

21 *L. ARACHNOIDEUM* (Smith, l. c.) leaves subulate, pungent; branchlets hairy; tube and teeth of calyx villous; capsule 5-celled. *h. G.* Native of New Holland. *L. arachnoïdes*, Gaertn. fruct. 1. p. 174. t. 35. f. 3. Lam. dict. 3. p. 466. *Melaleuca arachnoïdea*, Ræusch. Flowers white.

*Cobwebbed Leptospermum.* Fl. May, Jul. Clt. 1795. Sh. 2 to 3 feet.

22 *L. TRILOCULARE* (Vent. malm. t. 84.) leaves linear, pungent, dotted, ciliated; calyx clothed with silky villi, both on tube and teeth; capsule 3-5-celled; stamens 15. *h. G.* Native of New Holland. Lodd. bot. cab. t. 791. Bractees gemmaceous, permanent, glabrous. Leaves usually twisted obliquely, 1-nerved, hardly 3-nerved at the base. Flowers white.

*Three-celled-fruited Leptospermum.* Fl. June, July. Clt. 1800. Shrub 2 to 3 feet.

23 *L. DUBIUM* (Spreng. syst. 2. p. 492.) leaves linear, very narrow, bluntish; teeth of calyx glabrous, green. *h. G.* Native of New Holland. The rest unknown.

*Doubtful Leptospermum.* Shrub.

24 *L. PENDULUM* (Sieb. pl. exsicc. nov. holl. no. 312.) leaves linear, acute, when young silky, but glabrous in the adult state, dotted, 1-nerved; calyx clothed with silky villi, both on the tube and lobes. *h. G.* Native of New Holland. Branches twiggy, flexile, glabrous.

*Pendulous Leptospermum.* Fl. Jun. Jul. Clt. ? Sh. 2 to 4 ft.

25 *L. SQUARROSUM* (Sieb. pl. exsicc. nov. holl. ex Spreng. syst. addend. p. 194.) leaves lanceolate, acute, squarrose, stiff, glabrous, but when young silky beneath; calyx sessile, glabrous, coloured, obtuse. *h. G.* Native of New Holland.

*Squarrose Leptospermum.* Shrub 4 to 6 ft.

26 *L. ERICOCALYX* (Sieb. pl. exsicc. nov. holl. ex Spreng. syst. add.) leaves small, spatulate, quite glabrous, dotted; calyxes nearly sessile, clothed with silky wool. *h. G.* Native of New Holland.

*Hairy-calyced Leptospermum.* Shrub 4 to 6 ft.

† *Species not sufficiently known.*

27 *L. ? UMBELLATUM* (Gærtn. fruct. 1. p. 174. t. 35. f. 3.) flowers umbellate; capsule girdled by a circular margin in the middle. *h. G.* Native of New Holland. Perhaps this plant does not belong to the present genus, but it is not sufficiently known.

*Umbellate-flowered Leptospermum.* Shrub.

28 *L. ? IMBRICATUM* (Smith, in Lin. trans. 6. p. 300.) leaves obovate, imbricate, nerveless; branches and calyxes glabrous; calycine teeth membranous, coloured, keeled. *h. G.* Native of New Holland. Perhaps a species of *Bæckea*. Flowers white.

*Imbricate-leaved Leptospermum.* Fl. June, Jul. Clt. 1823. Shrub 4 to 5 feet.

29 *L. AMBOINENSE* (D. C. prod. 3. p. 229.) leaves linear-lanceolate; flowers pedicellate, solitary; calycine lobes deciduous. *h. S.* Native of Amboyna. *Myrtus Amboinensis*, Rumph. amb. 2. t. 18. Perhaps a species of *Bæckea*, but the leaves are said to be scattered, and the stamens 23 in number.

*Amboyna Leptospermum.* Shrub.

\* *Cult.* For culture and propagation, see *Callistemon*, p. 823. All the species are pretty shrubs when in flower.

XIX. *BILLOTIA* (dedicated to Madame Tecaphila Billot, of Turin, a famous botanical artist). R. Br. but not of Colla. hort. rip. t. 23. *Leptospermum*, sect. 1. *Acônis*, D. C. prod. 3. p. 226.

LIN. SYST. *Icosándria*, *Monogýnia*. Tube of calyx rather turbinate; limb 5-cleft; lobes valvate. Petals 5. Stamens 10-30, free, shorter than the petals. Style filiform; stigma capitate. Capsule 3-celled.—New Holland shrubs, with alternate, entire, dotted, small leaves. Flowers white, sessile, densely crowded into globose heads.

1 *B. MARGINATA*; flowers capitate; leaves obovate-oblong, edged with white, ciliated, 3-nerved; lateral nerves obsolete at the apex, distant from the margin. *h. G.* Native of New Holland, in Van Lewin's Land, at the Straits of d'Entrecasteaux. *Leptospermum marginatum*, Labill. nov. holl. 2. p. 10. t. 148. Stamens 10, but the habit of the shrub is like that of the other species.

*Var. β, glabrata* (D. C. prod. 3. p. 226.) leaves nearly glabrous. *h. G.* *Fabricia angustifolia*, Otto. in litt.

*Marginate-leaved Billotia.* Fl. June, July. Clt. 1820. Sh. 4 to 6 feet.

2 *B. FLEXUOSA*; flowers capitate; leaves linear-lanceolate;

acuminated at both ends, glabrous, approximating the margin when in flower. *h. G.* Native of New Holland, at Geography Bay and in Kangaroo Island. *Leptospermum flexuosum*, Spreng. nov. prov. 25. no. 51. Link, enum. holl. 2. p. 26. Coll. hort. ripul. append. 1. p. 111. t. 9. *Myrtus dæros flexuosa*, Willd. enum. p. 514. Flowers white.

*Flexuous-branched Billotia.* Fl. May, July. Clt. 1823. Sh. 4 to 6 feet.

3 *B. LINEARIFOLIA*; flowers capitate; leaves linear-lanceolate, acute at both ends, nearly nerveless, glabrous in the adult state, but when young villous as well as the branches. *h. G.* Native of New Holland, on the eastern coast, in Deere's Island. *Leptospermum linearifolium*, D. C. prod. 3. p. 226. Flowers white.

*Linear-leaved Billotia.* Shrub 3 to 6 feet.

*Cult.* For culture and propagation see *Fabricia*.

XX. *FABRICIA* (in honour of J. C. Fabricius, the celebrated Danish entomologist). Gærtn. fruct. 1. p. 175. t. 35. Smith, in Lin. trans. 3. p. 265. D. C. prod. 3. p. 229.

LIN. SYST. *Icosándria*, *Monogýnia*. Calyx semi-superior, 5-cleft; with a campanulate tube and valvate lobes. Petals 5, sessile. Stamens indefinite, free. Stigma capitate. Capsule many-celled, girdled by the adnate, permanent calyx; cells opening at the apex. Seeds few, winged.—Australian shrubs, with alternate, glaucescent, obovate, dotted leaves; and axillary, solitary, white flowers, on short pedicels.

1 *F. MYRTIFOLIA* (Gærtn. l. c.) cells of capsule 2-3-seeded; calycine teeth nearly orbicular; leaves silky when young. *h. G.* Native of New South Wales. Sims, bot. mag. t. 1304. Sieb. pl. exsicc. nov. holl. no. 309. *F. sericea*, Nois.

*Myrtle-leaved Fabricia.* Fl. May, June. Clt. 1788. Shrub 6 to 10 feet.

2 *F. LÆVIGATA* (Gærtn. l. c.) cells of capsule 5-8-seeded; calycine teeth triangular; leaves glabrous when young. *h. G.* Native of New Holland, about Port Jackson.

*Smooth Fabricia.* Fl. May, Jul. Clt. 1788. Sh. 3 to 6 ft.

3 *F. STRIATA* (Lodd. bot. cab. t. 1219.) the figure and description of this plant are so insufficient, as not to admit of us giving a description of it; and the plant is now lost in the gardens. *h. G.* Native of New Holland.

*Straight Fabricia.* Fl. April, Jun. Clt. 1827. Sh. 2 to 4 ft.

*Cult.* The species of *Fabricia* are well fitted for a conservatory, as they do not flower until they have attained a considerable size. A mixture of loam and peat is the best soil for them. Cuttings taken from young wood root readily, if planted in a pot of sand, with a bell-glass placed over them.

XXI. *BÆCKEA* (in honour of Abraham Bæck, a Swedish physician, and much esteemed friend of Linnæus, who received the *B. frutescens* from him). Lin. gen. 491. R. Br. gen. rem. 16. D. C. prod. 3. p. 229.—*Bæckea* and *Jungia*, Gærtn. fruct. 1. p. 157. and 175.—*Imbricaria* and *Bæckea*, Smith, in Lin. trans. 3. p. 258.—Möllia, Gmel.

LIN. SYST. *Penta-Decándria*, *Monogýnia*. Tube of calyx turbinate; limb 5-cleft, permanent. Petals 5. Stamens 5-10, shorter than the petals. Style filiform; stigma capitate. Capsule 2-5-celled, many-seeded, inclosed in the calyx.—Shrubs, with opposite, glabrous, dotted leaves. Flowers pedicellate, small, white. In *B. virgata* the filaments are glandular at the tops and probably in the others.

1 *B. FRUTESCENS* (Lin. spec. p. 514.) leaves linear, awnless; pedicels axillary, 1-flowered; calycine teeth membranous, coloured. *h. G.* Native of China. Osbeck, trav. p. 251. t. 1.

Smith, in Lin. trans. 3. p. 260. *B. Chinensis*, Ga.

p. 157. t. 31. Capsule 3-celled.

*Shrubby Bæckeia*. Fl. Sept. Dec. Clt. 1806. Sh. 2 to 3 ft.  
2 *B. PARVULA* (D. C. prod. 3. p. 229.) leaves elliptic-oblong, obtuse, rather mucronate; peduncles axillary, umbelliferous. *h. G.* Native of New Caledonia. *Leptospermum parvulum*, Labill. sert. caled. p. 62. t. 61. Capsule 3-celled. Stamens 10.  
*Small Bæckeia*. Shrub 1 foot.

3 *B. VIRGATA* (Andr. bot. rep. t. 598.) leaves linear-lanceolate; peduncles axillary, umbelliferous. *h. G.* Native of New Caledonia. Sims, bot. mag. 2127. Lodd. bot. cab. t. 341. Colla, hort. ripul. t. 6. *Leptospermum virgatum*, Forst. gen. p. 36. Smith, in Lin. trans. 3. p. 265. *Melaleuca virgata*, Lin. fil. suppl. t. 343. Stamens 5-10.

*Twiggy Bæckeia*. Fl. Aug. Oct. Clt. 1866. Sh. 2 to 3 ft.  
4 *B. PINIFOLIA* (D. C. l. c.) leaves long, linear, acuminate, nerveless; peduncles axillary, 3-flowered, longer than the leaves. *h. G.* Native of New Caledonia. *Leptospermum pinifolium*, Labill. sert. caled. p. 63. t. 62. Stamens 10. Capsule 3-celled.

*Pine-leaved Bæckeia*. Shrub 1 to 2 feet.  
5 *B. LINIFOLIA* (Rudge, in Lin. trans. 8. p. 297. t. 12.) leaves linear, long, mucronate; pedicels short, axillary, 1-flowered. *h. G.* Native of New Holland, about Port Jackson. *B. trichophylla*, Sieb. pl. exsic. nov. holl. no. 280. Leaves 6-8 lines long, distant.

*Flax-leaved Bæckeia*. Fl. July, Aug. Clt. 1818. Shrub 2 to 3 feet.

6 *B. DIFFUSA* (Sieb. pl. exsic. nov. holl. no. 276.) leaves linear, ciliate crenulated, nerveless, acutish; pedicels axillary, 1-flowered, about the length of the leaves, with 2 bracteoles under the flower. *h. G.* Native of New Holland. The 2 bracteoles are just under the flower-bud at first, but at last in the middle of the peduncle, in consequence of its elongation. Segments of calyx obtuse, and ciliate crenulated.

*Var. β, striata* (D. C. prod. 3. p. 230.) leaves striated lengthwise. *h. G.* Native of New Holland. Perhaps a proper species. Habit stiffer.

*Diffuse Bæckeia*. Shrub 1 to 2 ft.  
7 *B. DENSIFOLIA* (Smith in Lin. trans. 3. p. 260.) leaves linear-subulate, acerose, crowded on the branches, quadrifariouly imbricated, each terminated by a short, somewhat deflexed deciduous mucrone. *h. G.* Native of New Holland. *Bæckeia fasciculata*, Sieb. pl. exsic. nov. holl. no. 260. Leaves 2-3 lines long. Calyx not ciliated.

*Dense-leaved Bæckeia*. Fl. Aug. Oct. Shrub 1 to 2 ft.  
8 *B. GRAECILIS* (Cunningh. in Field's new south wales, p. 349.) leaves linear, obtuse, imbricated in 4 rows; stem branched, erectish; flowers capitate, terminal, and lateral. *h. G.* Native of New Holland, in arid rocky situations. A slender shrubby plant.

*Slender Bæckeia*. Clt. 1826. Shrub 1 to 2 ft.  
9 *B. RAMOSISSIMA* (Cunningh. in Field's new south wales, p. 249.) much branched, diffuse; leaves lanceolate-linear, acutish, spreading, with scabrous margins; teeth of calyx coloured, ciliated; flowers solitary, axillary, pedunculate, bibracteate. *h. G.* Native of New Holland, on the Blue Mountains.

*Much-branched Bæckeia*. Clt. 1824. Shrub 1 to 2 ft.  
10 *B. PULCHELLA* (D. C. prod. 3. p. 230.) leaves linear, acute, crowded in the axils and on the branchlets; pedicels axillary, 1-flowered, bractless, length of the leaves. *h. G.* Native of New Holland, on the eastern coast. Leaves crowded, spreading. Flowers innumerable.

*Neat Bæckeia*. Shrub 1 to 2 ft.  
11 *B. DIOSMIFOLIA* (Rudge in Lin. trans. 8. p. 298. t. 13.) leaves oblong, rather cuneate, keeled, acute, crowded, imbricate, and are, as well as the calyxes, ciliated; flowers axillary,

1 to 2 ft.

12 *B. CAMPHORATA* (R. & S. pl. exsic. nov. holl. no. 282.) leaves loosely imbricated, late, flat, dotted, finely marginate, on short pedicels; flowers axillary, twin or solitary, pedicellate; stamens 10. Native of New Holland.

*Camphor-scented Bæckeia*. Fl. July, Aug. Clt. 1818. Shrub 2 to 3 ft.

13 *B. MICROPHYLLA* (Rudge ex Sieb. pl. exsic. nov. holl. no. 282.) leaves triquetrous, short, obtuse, glabrous, imbricated; flowers axillary, solitary, sessile; tube of calyx 5-furrowed; calycine segments ciliated and membranous. *h. G.* Native of New Holland, on the eastern coast. *Imbricaria ciliata*, Smith in Lin. trans. 3. p. 176. and therefore *Escallonia ciliata*, Roem. et Schultes. *Stereoxylum ciliatum*, Poir. *Jungia tenella*, Gaertn. Stamens 5.

*Small-leaved Bæckeia*. Shrub 1 to 2 ft.  
14 *B. BREVIFOLIA* (D. C. prod. 3. p. 230.) leaves triquetrous, very short, obtuse, glabrous, imbricated in 4 rows; flowers axillary, solitary, on very short pedicels; tube of calyx turbinate; calycine lobes glabrous, acute. *h. G.* Native of New Holland. *Leptospermum brevifolium*, Rudge in Lin. trans. 8. p. 299. t. 14. *Bæckeia cafnosula*, Sieb. pl. exsic. nov. holl. no. 278.

*Short-leaved Bæckeia*. Shrub 1 to 2 ft.  
15 *B. MICRANTHA* (D. C. prod. 3. p. 230.) leaves obovate, triquetrous, glabrous, imbricated in 4 rows; flowers axillary, solitary, sessile. *h. G.* Native of New Holland. A much branched shrub.

*Small-flowered Bæckeia*. Shrub 1 to 2 ft.  
16 *B. CRENULATA* (D. C. l. c.) leaves obovate-cuneiform, crenulated upwards; flowers axillary, solitary, sessile; calycine lobes roundish, denticulated. *h. G.* Native of New Holland? *Imbricaria crenulata*, Smith in Lin. trans. 3. p. 259. *Jungia imbricata*, Gaertn. fruct. 1. p. 175. t. 35. *Mollia imbricata*, Gmel. syst. p. 420. *Stereoxylum crenulatum*, Poir. *Escallonia crenulata*, Roem. et Schultes. Stamens 5.

*Crenulated-leaved Bæckeia*. Shrub 1 to 2 ft.  
17 *B. OBOVATA* (D. C. l. c.) leaves obovate, entire, glabrous, spreading; pedicels axillary, rather longer than the leaves, bearing 2-3 sessile flowers in an umbel at the top. *h. G.* Native of New Holland, at King George's Sound.

*Obovate-leaved Bæckeia*. Shrub 1 to 2 ft.  
18 *B. DIOSMOIDES* (Sieb. pl. exsic. nov. holl. no. 277.) leaves ovate, acute, erect, rather concave, and somewhat imbricated; flowers axillary, solitary, sessile; lobes of calyx ovate, membranous, somewhat denticulated at the apex. *h. G.* Native of New Holland.

*Diosma-like Bæckeia*. Shrub 1 to 2 ft.  
19 *B. SAXICOLA* (Cunningh. mss.) *h. G.* Native of New Holland. This species is not described.

*Rock Bæckeia*. Shrub 1 to 2 ft.  
*Cult.* All the species of *Bæckeia* are delicate little shrubs. Their culture and propagation are the same as that recommended for *Fabricia*, see p. 827.

### Tribe III.

*MYRTEAE* (plants agreeing with *Myrtus* in important characters). D. C. dict. class. vol. xi. and note, 1826. prod. 3. p. 230. Calyx 4-5-cleft. Petals 4-5. Stamens free. Fruit fleshy, many-celled.—Trees and shrubs, for the most part natives within the tropics, and a very few of New Holland.

FIG. 121.

leaves oval or oblong-lanceolate,  
pinnate beneath; peduncles 3-8,  
flowered; fruit globose.  
West Indies,  
America,

above, but clothed with white tomentum beneath; peduncles 1-flowered; fruit globose, nearly naked. *h. S.* Native of Brazil, in fields at Ypanema, in the province of St. Paul. Like *P. incanescens*, but the down is more woolly. Leaves 3 inches long. Stem 1-3 feet high. Root thick. • Fruit about the size of a walnut. Perhaps the same as *P. grandiflorum*, Ruiz et Pav. fl. per. ined. 4. t. 421. f. a.

*Great-leaved Guava.* Shrub 1 to 3 ft.

16 *P. RUBRUM* (Mart. herb. ex D. C. l. c.) branchlets tetragonal, densely clothed with rufous hairs, as well as the peduncles, bracteas, and calyxes; leaves elliptic or elliptic-oblong, on short petioles, villous on both surfaces when young, but in the adult on the upper surface, and clothed with rufescent hairs in the axils of the lower branchlets, but not on the upper. Fruit ovate-roundish, crowned by long, and 8 lines long, style about equal in length to the ovary, and obtuse. *h. S.* The fruit being unknown, the genus is therefore doubtful.

*D'Urville's Nelitris.* Tree.

4 *N. HUMILIS*; dwarf; leaves elliptic-lanceolate, both ends, glabrous; panicles terminal; calyxine segments angular, acute; petals nearly orbicular. *h. G.* Native of Holland. Stamens connected into a ring at the base, stamens exerted. Stigma tapering. (*v. s. in herb. Lamb.*)

*Dwarf Nelitris.* Shrub 2 ft.

5 *N. ? PSIDIOIDES*; leaves elliptic, tapering to both ends, acuminate at the apex; peduncles racemose, axillary; pedicels of posite, and are, as well as the calyx, downy; branches angular calyxine segments equal in breadth, shorter than the petals. *h. G.* Native of New Holland. Stigma capitate. (*v. s. in herb. Lamb.*)

*Guava-like Nelitris.* Shrub 6 ft.

*Cult.* For culture and propagation see *Psidium*, p. 833.

XXIV. *CAMPOMANESIA* (dedicated to Rodriguez C. de Campomanes, a Spanish naturalist). Ruiz et Pav. fl. per. prod. p. 72. t. 13. syst. p. 128. Lindl. coll. no. 16. in a note. H. B. et Kunth, nov. gen. amer. 6. p. 150. D. C. prod. 3. p. 232.

*LIN. SYST. Icosándria, Monogýnia.* Tube of calyx globose; limb 5-parted; lobes ovate. Petals 5. Stamens numerous, free, inserted in a narrow ring at the base of the limb of the calyx. Style filiform; stigma peltately capitate. Berry many-seeded, pulpy, globose, crowned by the calyx, 10-12-seeded (Ruiz et Pav.), 7-10-celled; cells containing about 9 seeds. Seeds 10-12, imbedded in pulp, disposed in one circular series, inserted in a large fleshy placenta, ex Kunth, somewhat reniform, ex Ruiz et Pav.; testa granular and resiniferous.—American trees. Leaves opposite, petiolate, conduplicate, entire, full of pellucid dots. Peduncles one or many-flowered, rising from the axils of the fallen leaves. Berry crowned by the calyx.

1 *C. LINEATIFOLIA* (Ruiz et Pav. syst. 128. fl. per. ined. 4. t. 422.) leaves oval, acute; pedicels axillary, aggregate, bi-bracteolate. *h. S.* Native of the Andes of Peru, in very hot places. It is also cultivated in the gardens of Peru, under the name of *Palillo*, for the sake of its fruit, which are eaten by the inhabitants, and has much the taste of the Guava. The fruit is yellow and sweet-scented.

*Lined-leaved Campomanesia.* Tree.

2 *C. CORNIFOLIA* (H. B. et Kunth, nov. gen. amer. 6. p. 150. t. 147.) leaves nearly elliptic, acute, clothed with fine pubescence beneath; lower peduncles aggregate or branched. *h. S.* Native of New Granada, near Ibagué, where it is called *Guyavo de Anselmo*, and where the fruit is eaten by the inhabitants. Perhaps the same as the preceding species.

*Calyx campanulate; lobes acute, valvate; alternating with the lobes of the corolla; filaments free; anthers roundish. Style capitate. Base of berry adnate to the permanent calyx at the apex, and appearing semi-superior, nearly globose, many-celled; rind membranous; cells 10-15, separated by thin dissepiments. Seeds numerous, nestling in fleshy pulp, curved, exalbuminous. Embryo curved, with a long radicle, and foliaceous, short, convolute, unequal cotyledons.—Small trees, with tetragonal branches. Leaves opposite, entire, oval, thickish, 1-nerved, nearly veinless, without any dots. Flowers terminal, nearly solitary, large.*

1 *S. ACIDA* (Lin. fil. suppl. p. 252.) branchlets tetragonal; leaves oval-oblong; calyx 6-cleft; petals 6; berry globose. *h. G.* Native of New Guinea and the Moluccas in swamps. Lam. ill. t. 420. dict. 1. p. 429. Pagapate, Sonn. voy. p. 16. tt. 10, 11. *Aublétia caseolaris*, Gaertn. fruct. 1. p. 379. t. 78. *Rhizophora caseolaris*, Lin. spec. p. 635. *Mángium caseolare rubrum*, Rumph. amb. 3. t. 74. *Blatti*, Rheed. mal. 3. t. 40. *Bagatapat*, Ray, hist. 3. luz. p. 83. Petals red. Pulp of fruit acid.

*Acid-fruited Sonneratia.* Tree 40 ft.

2 *S. ALBA* (Smith in Rees' cycl. vol. 33. no. 2.) branchlets terete; leaves oval-roundish; flowers 6-8-cleft, apetalous; berry obconical at the base, and depressed at the apex. *h. S.* Native of the Moluccas. *Mángium caseolare album*, Rumph. amb. 3. t. 73.

*White Sonneratia.* Tree 50 ft.

3 *S. APETALA* (Buchan in Sym. emb. ava. 3. p. 313. t. 25. ex Smith in Rees' cycl. vol. 33. no. 3.) branches terete, pendulous; leaves ovate-lanceolate; flowers 4-cleft, apetalous. *h. S.* Native of Ava near Rangoon, on the wet inundated banks of the coast. Roth, nov. spec. p. 233.

*Apetalous Sonneratia.* Tree.

*Cult.* For culture and propagation see *Psidium*, p. 833.

XXIII. *NELITRIS* (from *νη*, *ne*, priv. and *ελυτρον*, *elytron*, a seed-vessel; in reference to the berry, which is without any partitions). Gaertn. fruct. 1. p. 134. t. 27. Lindl. coll. no. 16. in a note. D. C. prod. 3. p. 231.—Decaspermum, Forst. gen. no. 37.—*Psidium* species, Lin. fil.

*LIN. SYST. Icosándria, Monogýnia.* Tube of calyx obovate; limb 4-5-toothed. Petals 4-5. Stamens numerous, free, inserted in a narrow ring at the base of the limb of the calyx. Style filiform; stigma capitate. Ovary 4-10-celled; ovula fixed to the axis. Berry crowned by the calyx, few or many-seeded. Seeds covered by a bony testa. Embryo straightish, with a thick radicle, which is much longer than the cotyledons, which are ovate-lanceolate and minute.—Australian shrubs, with opposite, ovate or oblong, shining, dotless, 1-nerved, entire leaves; pedunculate flowers, and small fruit.

1 *N. JAMBOSELLA* (Gaertn. l. c.) leaves ovate, acute; peduncles axillary, 1-flowered, nearly the length of the leaves; ova-

*Dog-wood-leaved Campomanesia.* Tree.

3 *C. ? TOMENTOSA* (H. B. et Kunth, l. c.) leaves elliptic-oblong, acutish, coriaceous, clothed with rufescent tomentum beneath. *h. S.* Native of New Granada, near Ibagué. Flowers and fruit unknown.

*Tomentose Campomanesia.* Tree.

*Cult.* For culture and propagation see *Psidium*, p. 833.

XXV. *PSIDIUM* (from *ψιδιον*, *psidion*, the Greek name of the pomegranate. It is derived from *ψω*, *psio*, to make small, in reference to the number of seeds). Lin. gen. no. 615. Lam. ill. 416. Lindl. coll. no. 16.—*Guaiáva*, Tourn. inst. t. 443. Gærtn. fruct. 1. p. 185. t. 38.—*Psidium* and *Buchardia*, Neck.

LIN. SYST. *Icosándria*, *Monoýnia*. Tube of calyx ellipsoid (f. 121. a.) or obovate, usually contracted at the apex; limb ovate, undivided, but afterwards 1-5-cleft (f. 121. d.). Petals 5 (f. 121. b.). Stamens numerous, free, inserted in a broad circle almost through the whole undivided part of the limb. Style filiform (f. 121. c.); stigma capitate. Ovary 5-20-celled (f. 121. e.) (ex Mart. in litt.); cells bipartite; from the septiform placenta being cleft at the margin, many of the cells become abortive at maturity. Ovula numerous, horizontal (f. 121. c.), fixed to the margin of the placenta. Berry many-seeded, corticate by the tube of the calyx, and crowned by its lobes. Seeds nestling in the pulp in the mature fruit, with a bony testa. Embryo form of a horse-shoe, with a hard crustaceous testa; radicle longer than the cotyledons, which are very small; cover of embryo separable at the radicle.—Trees or shrubs, natives of America within the tropics. Leaves opposite, feather-nerved, dotless. Peduncles axillary, 1-3-flowered, bibracteate. Flowers white. Fruit edible; cells usually not distinguishable at maturity. *Guava* is a corruption of the American name *Guayaba*.

\* *Branchlets tetragonal.*

1 *P. PUMILUM* (Vahl. symb. 2. p. 56.) branchlets tetragonal; leaves lanceolate, acute, glabrous above, tomentose and lined beneath; pedicels 1-flowered, shorter than the leaves; fruit globose. *h. S.* Native of the Moluccas, Ceylon, and Java. Blume, bijdr. fl. ned. ind. p. 1093.—Rumph. amb. 1. t. 49. *P. angustifolium*, Lam. dict. 3. p. 16. Branches and under side of leaves white, ex Lam. *P. cujavillus*, Burm. fl. ind. p. 114. but the peduncles are said to be 2-flowered, and the leaves ovate.

*Var. β*, *Guadalupense* (D. C. prod. 3. p. 233.) leaves linear-lanceolate, velvety from rufous down beneath, as well as on the branchlets. *h. S.* Native of Guadeloupe. Perhaps the same as the Indian plant.

*Dwarf Guava.* Shrub 2 to 3 ft.

2 *P. AROMATICUM* (Aubl. guian. 1. p. 485. t. 191.) branchlets tetragonal; leaves oblong, acuminate, glabrous; peduncles 1-flowered; fruit globose, 4-celled. *h. S.* Native of the woods of Guiana and Cayenne. *Buchardia*, Neck. gen. no. 728. Berry yellow, hardly the size of a cherry. The bruised leaves have the smell of balm.

*Var. β*, *grandiflorum* (Aubl. guian. t. 190.) leaves ovate. *h. S.* Native along with the first, which it is very like, but smaller.

*Aromatic Guava.* Fl. July. Clt. 1779. Shrub 5 to 8 ft.

3 *P. ACUTANGULUM* (D. C. prod. 3. p. 233.) branchlets acutely tetragonal, almost 4-winged, glabrous; leaves ovate or elliptic-oblong, short, petiolate, rather attenuated at both ends, glabrous, full of pellucid and somewhat tubercular dots; pedicels solitary, 1-flowered; calycine lobes ovate, reflexed, longer than the tube, which is obovate before expansion. *h. S.* Native of Brazil, near Ega. Pedicels nearly an inch long. Leaves about 3 inches long.

*Var. β*, *acidum* (Mart. herb.) leaves more obtuse at the base,

hardly with any pellucid dots. *h. S.* Native of Brazil, at Nogueira, in the province of Rio Negro. Fruit globose, glabrous, pale yellow, size of a Borsdorff apple. Lobes of calyx ovate, obtuse, erect, and usually connate, crowning the fruit; pulp acid, citron-coloured. Seeds orbicular, compressed, pale brown.

*Acute-angled-branched Guava.* Shrub.

4 *P. STRIATULLUM* (D. C. prod. 3. p. 233.) branchlets tetragonal, glabrous; leaves oblong, gradually acuminate, hardly obtuse at the base, on very short petioles, glabrous, and full of tubercular dots on both surfaces; pedicels solitary, 1-flowered, glabrous; ovary obovate, striated lengthwise. *h. S.* Native of Brazil. Allied to *P. turbiniflorum*. Leaves with pellucid dots when young. Perhaps a species of *Myrtus*.

*Striated-fruited Guava.* Shrub 10 to 12 ft.

5 *P. PUNCTULATUM* (D. C. l. c.) branches somewhat tetragonal; leaves ovate, cuneate at the base, short-acuminate at the apex, glabrous, dotted beneath, and bearded in the axils of the veins; peduncles 1-flowered; ovary broad, globose. *h. S.* Native of Brazil. Petioles half an inch long. Peduncles longer than the petioles. Young leaves villous and dotted. Lobes of calyx broad, very blunt, and spreading. Perhaps a *Myrtus*.

*Dotted Guava.* Shrub 4 to 6 ft.

6 *P. RIVULARE* (Mart. herb. ex D. C. l. c.) branchlets somewhat tetragonal; leaves oval or ovate, short-acuminate, glabrous above, when young white beneath, clothed with rufous down at the nerves, but glabrous in the adult state; pedicels solitary, 1-flowered, opposite, at the base of the branchlets of the same year; fruit spherical. *h. S.* Native of Brazil, between Coari and Ega by rivulet sides. Lobes of calyx oval, obtuse. Fruit 10-celled.

*Rivulet Guava.* Shrub 6 to 10 ft.

7 *P. MARIBENSE* (Mart. herb. D. C. prod. 3. p. 233.) glabrous; upper part of branches tetragonal; leaves on short petioles, elliptic-oblong, cuneate at the base, bluntish at the apex; pedicels 1-flowered, a little longer than the petioles; fruit spherical. *h. S.* Native of Brazil, at Maribi, near the river Tapura. Leaves 2 inches long, and an inch broad. Petioles 2 lines long. Fruit 6 lines in diameter. Lobes of calyx short, at length obliterated or deciduous.

*Maribi Guava.* Shrub 6 to 10 ft.

8 *P. MONTANUM* (Swartz, fl. ind. occ. p. 879.) branches tetragonal; leaves oval-oblong, acuminate, quite glabrous; peduncles many-flowered; fruit roundish. *h. S.* Native of Jamaica, on the mountains. Wood very hard. Fruit small, acid, smelling like the flowers of the bitter-almond; hence it is called *Almandron*. Leaves broadly subrenate according to the author, but almost entire according to the specimens examined. The wood is excellent, of a dark colour and curled grain; it is easily worked, and takes a fine polish.

*Mountain Guava.* Clt. 1779. Tree 60 to 100 ft.

9 *P. PYRIFERUM* (Lin. spec. 672.) branches tetragonal; leaves elliptic, acute, lined with rather prominent nerves, pubescent beneath; pedicels 1-flowered; fruit pear-shaped. *h. S.* Native of the Caribbee Islands and the continent of America, near Cumana, and now cultivated every where within the tropics, for the sake of its fruit. Lindl. bot. reg. 1079. Ruiz et Pav. fl. per. ined. t. 418. Rumph. amb. 1. t. 47. Trew. chr. t. 43. *Guayáva pyrifórmis*, Gærtn. fruct. 1. t. 38. *P. vulgare*, Rich. act. soc. hist. par. p. 110. The common *Guava* is pear-shaped, and of a yellowish colour when ripe. Pulp sweet, aromatic, and pleasant. The fruit of the *guava* is eaten both by the natives and Europeans, either in its crude state or when made into jellies.

*Pear-fluering or Common Guava.* Fl. June, July. Clt. 1656. Tree 10 to 20 ft.

10 *P. POMIFERUM* (Lin. spec. p. 672.) branches tetragonal;

leaves oval or oblong-lanceolate, pubescent beneath; peduncles 3-8, or many-flowered; fruit globose.

h. S. Native of the West Indies, Mexico, and South America, from whence it has migrated to the East Indies, but is said to grow wild in Cochinchina, by Loureiro. Perhaps indigenous to both Asia and America, or probably two species are confused. Rumph. amb. 1. t. 48.—Mer. sur. t. 57. Hern. mex. p. 85. with a figure. Fruit yellow, somewhat astringent, with an agreeable odour. The root and young leaves are astringent, and are esteemed useful in strengthening the stomach.

Peduncles downy, varying from one to many-flowered, whence it has been joined with *P. pyriferum* by Raddi, under the name of *P. Guaiava*. Pulp of fruit red.

Var.  $\beta$ , *sapidissima* (Jacq. hort. schoenbr. 3. p. 62. t. 366.) peduncles 1-flowered.—Native country unknown. Berry dirty yellow, larger than a plum.

*Apple-bearing* or *Common Red Guava*. Fl. June, July. Clt. 1692. Shrub 6 to 15 ft.

11 *P. HIAN'S* (Mart. herb. D. C. prod. 3. p. 254.) branches tetragonal; leaves oval, obtuse at the base, and usually at the apex, puberulous on both surfaces, but hairy on the nerves beneath; peduncles solitary, 1, rarely 2-flowered, axillary, erect, lateral ones usually deflexed; flower-bud globose, gaping at the apex. h. S. Native of Brazil, at Vaudo, Parana, in Tabuleira, and Catingas. Branches, peduncles, and calyxes velvety from short rufous down. Ovary obovate. Limb of calyx cup-shaped; lobes 5, roundish, at length reflexed.

*Gaping Guava*. Shrub 6 to 10 ft.

12 *P. TURBINIFLORUM* (Mart. in litt. ex D. C. 3. p. 234.) branches tetragonal, hairy; leaves ovate-oblong, gradually acuminate, obtuse at the base, on very short petioles, beset with tubercular dots on both surfaces, and hairy on the nerves beneath; pedicels 1-flowered, solitary, villous; calyx gaping, at length lobed; ovary oblong, turbinate. h. S. Native of Brazil. Pedicels 9-10 lines long. Ovary and calyx becoming glabrous at length. Branches opposite, at length terete.

*Top-flowered Guava*. Shrub 10 to 20 ft.

13 *P. CINEREUM* (Mart. herb. ex D. C. l. c.) branches tetragonal; leaves oblong, mucronate, on very short petioles, glabrous above, but clothed with adpressed canescent villi beneath; peduncles 1-3-flowered; fruit ovate, crowned by the lobes of the calyx, which are roundish-ovate and short. h. S. Native of Brazil, in the province of St. Paul. Perhaps a narrow-leaved variety of *P. incanescens*.

*Grey Guava*. Shrub 4 to 6 ft.

14 *P. INCANESCENS* (Mart. herb. ex D. C. l. c.) branches tetragonal; leaves obovate, on short petioles, cuneate at the base, obtuse, and mucronate at the apex, glabrous above, but clothed with adpressed canescent villi beneath; peduncles 3-flowered; young fruit ovate, crowned by the lobes of the calyx, which are ovate and short. h. S. Native of Brazil, in fields near Taubate, in the province of St. Paul. A very distinct species. Branchlets rather downy. Leaves  $2\frac{1}{2}$  inches long, and  $1\frac{1}{2}$  broad. Fruit nearly like that of *Eugenia*, 4-5-seeded.

*Hoary Guava*. Shrub 4 to 6 ft.

15 *P. GRANDIFOLIUM* (Mart. herb. ex D. C. l. c.) branches tetragonal, thick, clothed with white tomentum; leaves obovate, mucronate, on short petioles, cuneate at the base, glabrous

FIG. 121.

above, but clothed with white tomentum beneath; peduncles 1-flowered; fruit globose, nearly naked. h. S. Native of Brazil, in fields at Ypanema, in the province of St. Paul. Like *P. incanescens*, but the down is more woolly. Leaves 3 inches long. Stem 1-3 feet high. Root thick. • Fruit about the size of a walnut. Perhaps the same as *P. grandiflorum*, Ruiz et Pav. fl. per. ined. 4. t. 421. f. a.

*Great-leaved Guava*. Shrub 1 to 3 ft.

16 *P. RU'FUM* (Mart. herb. ex D. C. l. c.) branchlets tetragonal, densely clothed with rufous hairs, as well as the peduncles, bracteas, and calyxes; leaves elliptic or elliptic-oblong, on short petioles, villous on both surfaces when young, but in the adult state glabrous on the upper surface, and clothed with rufescent villi beneath; pedicels in the axils of the lower branchlets, but somewhat racemose; young fruit ovate-roundish, crowned by the lobes of the calyx, which are short and obtuse. h. S. Native of Brazil, in mountain fields in the province of Minas Geraes. Branchlets hairy, but the branches are terete and smooth. Leaves 4 inches long, and  $1\frac{1}{2}$  or 2 inches broad. Bracteoles linear.

*Rufous Guava*. Shrub 4 to 6 ft.

17 *P. PUBESCENS* (Mart. herb. ex D. C. l. c.) branches rather tetragonal; pedicels, bracteas, and calyxes hairy; leaves nearly sessile, oblong, acute, when young downy on both surfaces, hoary beneath; pedicels 1-flowered; bracteoles linear-subulate; lobes of calyx acute. h. S. Native of Brazil, in the province of Pernambuco, near the river Termo. Flowers large. Ovary broadly obovate, not constricted at the apex. Habit nearly of *Cratægeus viciocarpa*.

*Pubescent Guava*. Shrub 3 to 4 ft.

\* *Branchlets terete.*

18 *P. GUINE'NSE* (Swartz, fl. ind. occ. 2. p. 881.) branches terete, pubescently villous; leaves petiolate, ovate, glabrous above, clothed with rusty tomentum beneath, as well as the petioles; peduncles 1-3-flowered; fruit roundish. h. S. Cultivated in the West Indies, but is said to have been introduced from Guinea. Berry fulvous, rather pubescent, red inside, about the size of a nutmeg, of an exquisite taste.

*Guinea Guava*. Shrub 8 to 12 ft.

19 *P. POLYCARPON* (Lamb. in Lin. trans. 11. p. 231. t. 17.) branches terete, hairy; leaves almost sessile, ovate-oblong, acute, pubescent above, wrinkled and scabrous beneath; peduncles 3-flowered; fruit globose. h. S. Native of the Island of Trinidad. Ker. bot. reg. 653. Branches reclinate. Fruit yellow inside, about the size of a plum, of a delicate taste. The middle flower on the peduncle is sessile, and the lateral ones pedicellate, as in the preceding and following species.

*Many-fruited Guava*. Fl. May. Clt. 1810. Shrub 3 to 6 ft.

20 *P. ARACA* (Raddi, mem. 1821. p. 5. t. 1.) branchlets terete, hairy; leaves petiolate, oval or oblong, obtuse, downy or hairy on both surfaces; peduncles axillary, 1-3-flowered; fruit ovoid. h. S. Native of Brazil, in fields about Rio Janeiro. *P. minus*, Mart. herb. Berry about the size of those of a sorbus, greenish-yellow on the outside, but whitish within. Very nearly allied to *P. Guine'ense*, but the leaves are velvety above, not glabrous, and the nerves more elevated.

*Araca Guava*. Shrub 4 to 6 ft.

21 *P. FLUVIATILE* (Rich. ex herb. Thib.) branchlets terete, glabrous; leaves petiolate, oval, quite glabrous; lower ones obtuse at both ends, but the upper ones are acuminate at both ends; pedicels opposite, 1-flowered, almost 10-times the length of the petioles. h. S. Native of Cayenne, along the banks of rivers. *P. Guian'ense*, Pers. ench. 2. p. 27. Peduncles an inch and a half long. Style longer than the stamens. Stigma hardly

capitate. Fruit unknown. Leaves full of pellucid dots. Perhaps a *Myrtus*.

*River-side Guava*. Shrub 6 to 8 feet.

22 *P. DENSICOMUM* (Mart. herb. ex D. C. l. c.) branches terete, rather compressed at the apex, glabrous; leaves petiolate, ovate-lanceolate, gradually acuminate, glabrous; pedicels 1-flowered, 3 or 4-times longer than the petioles; fruit globose. *h. S.* Native of Brazil, on the banks of the Soluniois, and at Lake Ega. Tree glabrous, with a dense head. Allied to *P. fluviatile*, but differs in the pedicels being shorter.

*Dense-headed Guava*. Tree 20 feet.

23 *P. LITTORALE* (Raddi, mem. 1831. p. 6. t. 1. f. 2.) branchlets terete; leaves oval-oblong, thickish or coriaceous, attenuated at the base, bluntly acuminate at the apex, glabrous on both surfaces, shining above; pedicels 1-flowered, longer than the petioles; fruit exactly pear-shaped. *h. S.* Native of Brazil, on the sea-shore, where it is called by the inhabitants *Araca de Praya*. Fruit greenish-yellow, but white inside.

*Shore Guava*. Shrub 6 to 10 feet.

24 *P. RIPA'RIUM* (Mart. herb. ex D. C. l. c.) branches terete; pedicels and calyxes hairy; leaves almost sessile, linear-oblong, obtuse at the apex, rather cordate at the base, pubescent beneath, and nearly glabrous above; pedicels 3-flowered; fruit pear-shaped. *h. S.* Native of Brazil, on the banks of rivers. Nearly allied to *P. turbiniflorum*. Leaves 3 inches long and an inch broad, with somewhat sinuated crenated margins. Lobes of calyx very blunt.

*River-side Psidium*. Tree 20 to 30 feet.

25 *P. GUAVIROBA* (D. C. prod. 3. p. 235.) glabrous; branches terete; leaves oval-lanceolate, acuminate, tapering to the base, petiolate; pedicels 1-flowered, length of petioles; fruit globose; calycine lobes short and blunt. *h. S.* Native of Brazil, in fields at Ypanema, in the province of St. Paul, where it is called by the inhabitants *Guaviroba de Canorro* or *Guavirobo de Campo*. *P. caninum*, Mart. herb. but not of Lour. Leaves 2 inches long, and 9-10 lines broad. Fruit the size of a large pea.

*Guaviroba*. Shrub 6 to 10 feet.

26 *P. ? DECUSATUM* (D. C. l. c.) branchlets terete, rather hairy; leaves oval, obtuse, membranous, opaque; pedicels axillary, 1-flowered, length of leaves; calyx at length bluntly 5-lobed, reflexed; style incurved. *h. S.* Native of Brazil, in fields, in the province of Minas Geraes. *Myrtus decussata*, Mart. herb. Leaves 6 lines long and 3 lines broad. Branches and branchlets opposite, slender. Stamens very numerous. Calyx glabrous.

*Decussate-branched Guava*. Shrub 2 to 3 feet.

27 *P. ? DESERTORUM* (Mart. herb. ex D. C. prod. 3. p. 236.) branchlets terete, and are as well as the petioles and pedicels clothed with short velvety down; leaves ovate, acute, rather cordate at the base, with crenated margins, glabrous on both surfaces, full of pellucid dots; pedicels 1-flowered, slender; fruit ovate; lobes of calyx roundish. *h. S.* Native of Brazil, in the desert of Bahia. A small neat tree, with pale green leaves. Leaves 15-18 lines long, and 7-9 lines broad. Petioles 2-3 lines long. Pedicels 10-12 lines long. Flowers small.

*Desert Guava*. Tree 10 to 15 feet.

28 *P. ? TENUIFOLIUM* (Mart. herb. ex D. C. l. c.) branchlets terete, glabrous as well as the petioles and pedicels; pedicels 1-3 together, axillary, 1-flowered; leaves ovate, obtuse at the base, but acuminate at the apex, glabrous, but beset with crowded, very minute dots; fruit globose; lobes of calyx roundish. *h. S.* Native of Brazil, in the desert of Bahia. Fruit 5-celled; cells biovulate. Pedicels 5-6 lines long, slender, bractless at the apex. Leaves membranous. Very nearly allied to *P. desertorum*.

*Fine-leaved Guava*. Tree 15 to 20 feet.

29 *P. OLIGOSPERMUM* (Mart. herb. ex D. C. l. c.) branches

terete or compressed, slender, glabrous; leaves elliptic, acuminate, glabrous, full of pellucid dots; pedicels 1-flowered, rather compressed, thrice the length of the petioles; flower-bud oblong; acute; fruit obovate, subglobose, turbinate at the base, 1-3-seeded. *h. S.* Native of Brazil, in woods on the banks of rivers in the province of Bahia. Bark greyish. Leaves an inch long and 5-lines broad. Fruit nodding, yellow. Seeds imbedded in bitter, rather diaphanous pulp. *P. oligospermum*, Link, enum. is perhaps different from this.

*Few-seeded Guava*. Shrub 8 to 10 feet.

30 *P. LANUGINOSUM* (Ruiz, et Pav. fl. per. ined. 4. t. 421. f. b.) branches terete; leaves oblong, obtuse, crenated, woolly; peduncles 3-flowered, the middle flower sessile, and the lateral ones pedicellate, bearing 2 bracteas at the base of each; tube of calyx long, 4-cleft, with the lobes acute; stamens exserted. *h. S.* Native of Peru. Petals obovate. Fruit long, terete, 4-celled, crowned by the lobes of the calyx. Seeds reniform. Shrub woolly in every part.

*Woolly Guava*. Shrub 6 to 8 feet.

31 *P. ? MYRSINITES* (D. C. prod. 3. p. 236.) branchlets terete, clothed with rufous hairs; pedicels axillary, solitary, 1-flowered, angular, hairy; bracteoles deciduous; ovarium turbinate, glabrous; lobes of calyx 5, very blunt; leaves oblong, almost sessile, obtuse at the base, acutish at the apex, villous on the margins, and middle nerve above, the rest glabrous. *h. S.* Native of Brazil, in deserts, in the provinces of the mines. *Myrtus myrsinites*, Mart. herb. Pedicels 3-4 lines long. Throat of calyx broad, and staminiferous, as in *Psidium*. Leaves 12-15 lines long, and 3-4 broad. Perhaps a species of *Myrtus*.

*Myrtle-like Psidium*. Tree 12 feet.

32 *P. BROWNIANUM* (Mart. herb. ex D. C. l. c.) branchlets hairy; pedicels solitary, axillary, 1-flowered, with lanceolate-linear bracteoles under the flowers; flower-bud ovate, acute, glabrous, at length splitting unequally into 5 roundish lobes; leaves ovate, almost sessile, bluntly attenuated at the apex, opaque, glabrous on both surfaces as well as the branches. *h. S.* Native of Brazil, in the desert of Bahia. A small, densely branched tree, with greyish bark. Leaves 2 inches long and 1 inch broad, with rather revolute margins. Petals roundish. Stamens usually changing into elliptic petals. Fruit unknown.

*Brown's Guava*. Tree 10 to 12 feet.

33 *P. OBOVATUM* (Mart. herb. ex D. C. l. c.) branchlets terete, velvety from short down; leaves obovate, coriaceous, quite glabrous in the adult state, but when young rather velvety; fruit nearly globose, glabrous. *h. S.* Native of Brazil, in fields, in the province of St. Paul. Very like the Brazilian *P. Cattleyanum*, but differs in the branches being beset with short villi.

*Obovate-leaved Guava*. Shrub 10 to 15 feet.

34 *P. CATTLEIANUM* (Sabine, in hort. trans. 4. p. 315. t. 11.) branchlets terete, glabrous; leaves obovate, coriaceous, quite glabrous; pedicels opposite, 1-flowered, hardly equal in length to the petioles. *h. S.* Native of China and of Brazil, or rather originally brought from China to Brazil. Lindl. coll. t. 16. Ker. bot. reg. 622. *P. coriaceum*, Mart. herb. *P. Chinense*, Lodd. cab. The fruit of this *Guava* is rather large, nearly spherical, of a fine deep claret colour, growing in the axils of the leaves; the skin has much the consistence of that of a fig, but is thinner; the interior is a soft fleshy pulp, purplish red next the skin, but becoming paler towards the middle, and at the centre is quite white; it is juicy, and in consistence is much like a strawberry, to which it bears some resemblance in flavour.

*Cattley's Guava*. Fl. May, Ju. Clt. 1818. Tr. 10 to 20 ft.

35 *P. CODA'TUM* (Sims, bot. mag. t. 1779.) branchlets terete, glabrous; leaves sessile, cordate-roundish, rather stem-clasping,

coriaceous, glabrous on both surfaces; pedicels aggregate or few-flowered, longer than the flowers. *h. S.* Native of Guadeloupe. *P. amplexicaule*, Rich. in herb. Juss. Pers. ench. 2. p. 27.

*Cordate-leaved Guava.* Fl. May, July. Clt. 1811. Shrub 5 to 6 feet.

36 *P. EMARGINATUM* (Ruiz, et Pav. fl. per. ined. 4. t. 418.) peduncles axillary; leaves ovate, obtuse, coriaceous, somewhat cordate at the base, and emarginate at the apex, much shorter than the peduncles; fruit globose, crowned by the lobes of the calyx; calyx 4-cleft; petals 4. *h. S.* Native of Peru. Branches apparently terete.

*Emarginate-leaved Guava.* Shrub 8 to 10 feet.

37 *P. MACROSTEMON* (Ruiz et Pav. fl. per. ined. 4. t. 420. f. a.) branches dichotomously branched; leaves small, crowded, ovate, acute, downy; pedicels rising from the axils of the upper leaves, all 1-flowered, and forming a terminal raceme; stamens very long; stigma somewhat capitate; calyx 4-lobed; petals 4, obovate. *h. S.* Native of Peru. Branches apparently terete.

*Long-stemmed Guava.* Shrub.

38 *P. RUTIDOCARPUM* (Ruiz et Pav. fl. per. ined. 4. t. 420. f. b.) branches terete; leaves oval, acuminate, wrinkled; pedicels axillary, solitary, 1-flowered; fruit oval, rugged, crowned by the lobes of the calyx; petals 5. *h. S.* Native of Peru.

*Rugged-fruited Guava.* Shrub.

† *Species not sufficiently known.*

39 *P. DUBIUM* (H. B. et Kunth, nov. gen. amer. 6. p. 152.) branchlets compressed; leaves on short petioles, lanceolate, terminating each in a long, narrow acumen, membranous, glabrous; peduncles racemose, short, few-flowered. *h. S.* Native of South America, among rocks on the banks of the Orinoco, near Atures. Calyx 4-cleft. Petals 4. Ovary 2-celled; cells 2-seeded. Perhaps a species of *Myrtus* or a *Eugenia*.

*Doubtful Guava.* Shrub 2 to 3 feet.

40 *P. CANINUM* (Lour. coch. p. 310.) leaves on short petioles, ovate, acutish, tomentose on both surfaces; peduncles racemose, many-flowered, axillary, and terminal; fruit ovate. *h. G.* Native of China, about Canton. Loureiro calls this *P. caninum*, because dogs are delighted with it in the same manner as cats with valerian. The leaves are rather serrated. This species comes very near to *P. pumilum*.

*Dog's Guava.* Shrub 2 to 3 feet.

41 *P. NIGRUM* (Lour. l. c.) leaves ovate-lanceolate, glabrous on both surfaces, scattered; peduncles terminal, branched; fruit globose. *h. G.* Native of Cochinchina, in woods. Berry small, black. Leaves serrated.

*Black-fruited Guava.* Tree.

42 *P. RUBRUM* (Lour. l. c.) leaves oblong, obtuse, glabrous, on short petioles; flowers axillary, sessile, crowded, 4-petalled; fruit oblong. *h. G.* Native of Cochinchina, in woods. Berry red, small, with an acrid sweet taste.

*Red-fruited Guava.* Tree.

43 *P. INDICUM* (Raddi, mem. p. 6.) leaves rather fleshy, shining, rounded at the apex; berries roundish, sessile. *h. S.* Native of Brazil, where it is cultivated for its fruit, and has probably been imported from the East Indies.

*Indian Guava.* Tree 10 to 12 feet.

44 *P. LATIFOLIUM* (Link, enum. 2. p. 27.) leaves tapering into the petiole, which is short, and somewhat acuminate. *h. S.* Native of South America. Nothing more is known about this plant.

*Broad-leaved Guava.* Shrub 10 to 12 feet.

45 *P. WILLEMETIANUM* (D. C. prod. 3. p. 337.) *h. S.* Native of the Mauritius, between Port St. Louis and Le Pouce. Willem. herb. maur. p. 28. Perhaps a species of *Jossinia*.

*Willemet's Guava.* Shrub.

*Cult.* The species of *Guava* grow freely in a mixture of loam and peat. Cuttings will strike root if planted in sand, with a hand-glass over them. Some of the species fruit in the stoves of this country; but they are hardly worth the trouble and expense, to grow them for this purpose.

XXVI JOSSINIA (meaning unknown to us). Comm. inss. D. C. prod. 3. p. 337.—*Eugenia* species, Lam. *Myrtus* species, Spreng.

LIN. SYST. *Icosandria, Monogynia*. Tube of calyx turbinate-globose; limb 4-parted, even to the base; lobes distinct in the bud. Petals 4. Stamens numerous, free, inserted in a broad disk, as in *Psidium*. Fruit fleshy, turbinate-globose, crowned by the calycine lobes, many-seeded. Seeds not well known.—Trees and shrubs, natives of the Mauritius, where they are commonly called *Bois de nêfle* by the colonists. Leaves stiff. Peduncles axillary, 1-flowered, bibracteolate, under the flowers. Fruit edible. This genus is not well known; it differs from *Eugenia* in the broad stamiferous disk; in the fruit being many-seeded, and in the seeds being like those of *Myrtus*: it differs from *Psidium* in the lobes of the calyx being 4, not 5, and in the flower-bud; from *Myrtus* and *Mycia* in the parts of the flower being 4, not 8.

1 *J. MESPILOIDES* (D. C. prod. 3. p. 337.) leaves ovate-lanceolate, on long petioles, coriaceous, with revolute margins, glabrous and shining above, but velvety beneath, as well as on the branches and peduncles; pedicels 1-flowered, longer than the petioles. *h. S.* Native of the Island of Bourbon, where it is called *Bois de pêche marron*, *Bois de nêfle à grandes feuilles*. *Eugenia mespiloides*, Lam. dict. 3. p. 205. *Myrtus mespiloides*, Spreng. syst. 2. p. 481. Petioles 8 lines long. Pedicels nearly an inch long. Fruit, according to the specimen in Jussieu's herbarium, ovate, fleshy, crowned by the calyx, velvety-canescens. Flowers large.

*Medlar-like Jossinia.* Tree 50 feet.

2 *J. LUCIDA* (D. C. prod. 3. p. 337.) leaves obovate-orbicular, on short petioles, glabrous, coriaceous, pale beneath; flowers solitary, on short pedicels. *h. S.* Native of the Mauritius, where it is commonly called *Bois de cloux*. *Eugenia lucida*, Lam. dict. 3. p. 205. *Myrtus Commersonii*, Spreng. syst. 2. p. 479. Fruit obovate-globose, glabrous, crowned by the obtuse lobes of the calyx.

*Shining Jossinia.* Tree.

3 *J. ORBICULATA* (D. C. l. c.) leaves roundish, obtuse, coriaceous, glabrous, on short petioles, with reflexed margins; pedicels very short, 1-flowered, 5-6 together in a fascicle, and are as well as the calyxes rather velvety. *h. S.* Native of the Mauritius. *Eugenia orbiculata*, Lam. dict. 3. p. 204. *Myrtus orbiculata*, Spreng. syst. 2. p. 480. There is a variety of this with solitary pedicels. Leaves 2 inches broad and hardly  $2\frac{1}{2}$  inches long. Pedicels 3 lines long.

*Orbicular-leaved Jossinia.* Clt. 1823. Shrub 6 to 8 feet.

4 *J. ELLIPTICA* (D. C. l. c.) leaves elliptic, attenuated at the base, bluntish at the apex, glabrous, rather coriaceous, on short petioles; flowers axillary, 2-4 in a fascicle, almost sessile; calyxes pubescent. *h. S.* Native of the Mauritius. *Eugenia elliptica*, Lam. dict. 3. p. 206. but not of Smith. Flowers small. Lateral nerves of leaves hardly prominent, with the limb opaque, without any pellucid dots.

*Elliptic-leaved Jossinia.* Shrub 2 to 3 feet.

5 *J. TINIFOLIA* (D. C. prod. 3. p. 238.) leaves oval, coriaceous, on short petioles, when young clothed with white velvety down as well as the branchlets, peduncles, and calyxes; pedicels solitary or twin, 3 or 4 times longer than the leaves. *h. S.* Native of the Mauritius, where it is called *Bois de nêfle*.

*Eugenia tinifolia*, Lam. dict. 3. p. 204. Perhaps sufficiently distinct from *J. buxifolia*. Pedicels 3-4 lines long.

*Tinus-leaved Jossinia*. Tree or shrub.

6 *J. BUXIFOLIA* (D. C. l. c.) leaves ovate-oblong, bluntish, coriaceous, glabrous, on very short petioles, with reflexed margins, pale beneath; pedicels solitary, slender, shorter than the leaves, exactly axillary; calyxes clothed with silky velvety down. *h. S.* Native of the Island of Bourbon, on the mountains, where it is called *Bois de nêfle commun*. *Eugenia buxifolia*, Lam. dict. 3. p. 204. *Myrtus Borbónica*, Spreng. syst. 2. p. 481. Pedicels 7-8 lines long. Flowers small. Fruit unknown.

*Box-leaved Jossinia*. Shrub.

7 *J. COTINIFOLIA* (D. C. l. c.) leaves ovate or roundish, obtuse, rather coriaceous, with somewhat revolute margins, on very short petioles, full of pellucid dots, glabrous on both surfaces, pale beneath; pedicels 1-3 together, axillary, or supra-axillary, very slender, a little shorter than the leaves. *h. S.* Native of the Island of Bourbon, on the mountains. *Eugenia cotinifolia*, Jacq. obs. 3. p. 3. t. 53. *Myrtus cotinifolia*, Spreng. syst. 2. p. 481. exclusive of the country. Leaves an inch long. Pedicels 8-10 lines long; in some specimens always solitary.

*Cotinus-leaved Jossinia*. Shrub.

8 *J. CASSINOIDES* (D. C. l. c.) leaves ovate, acutish at both ends, coriaceous, glabrous, full of pellucid dots; pedicels 2-3 together, filiform, shorter than the leaves; lobes of calyx roundish. *h. S.* Native of Madagascar. *Eugenia cassinoides*, Lam. dict. 3. p. 205. *Myrtus cassinoides*, Spreng. syst. 2. p. 481.

*Cassin-like Jossinia*. Tree.

*Cult.* All the species of *Jossinia* are worth cultivating, for the sake of their beautiful foliage, as well as for their flowers, which are rather large and white. Their culture and propagation are the same as that recommended for *Psidium*, p. 833.

XXVII. MYRTUS (from *μυρρον*, *myrron*, perfume; *μυρτος* of the Greeks; *Myrtus* of the Dutch; and almost the same in every European language). Lin. gen. 617. Gært. fruct. 1. p. 184. t. 38. D. C. prod. 3. p. 138.—*Myrtus* species of Kunth. *Myrtus*, Tourn. inst. t. 409.

LIN. SYST. *Icosandra*, *Monogynia*. Tube of calyx subglobose; limb 5-parted, rarely 4-parted. Petals 5, rarely 4. Stamens free. Berry 2-3-celled, nearly globose, crowned by the limb of the calyx. Seeds numerous in each cell even when mature, rarely solitary, bony, reniformly incurved. Embryo curved, with very short semicylindrical cotyledons, which are much shorter than the radicle.—Shrubs. Leaves opposite, full of pellucid dots. Pedicels axillary, 1-flowered.—In the most part of the species the flowers and seeds are unknown, it is therefore doubtful whether many of them belong to the genus. A great many of them probably belong to the genus *Myrcia*.

SECT. I. LEUCOMYRTUS (*λευκος*, white, and *μυρτος*, *myrtos*, a myrtle; in reference to the white flowers of the species). D. C. prod. 3. p. 238. Flowers white. Seeds curved in the manner of a horse-shoe; when mature disposed irregularly in the cells.

\* *Flowers 4-cleft, with few stamens.*

1 *M. NUMMULARIA* (Poir. dict. 4. p. 407. exclusive of the country) pedicels axillary, solitary, 1-flowered, shorter than the leaves, bracteolate under the flowers; leaves roundish, shining, small, glabrous; stem creeping; calyx 4-cleft. *h. G.* Native of the Maclove or Falkland Islands, and at the Straits of Magellan. Gaud. ann. sc. nat. 5. t. 2. f. 5. Lucet-musque, Pernet. voy. 2. p. 58.

*Money-wort-like Myrtle*. Sh. creeping.

2 *M. VACCINOIDES* (H. B. et Kunth. nov. gen. amer. 6. p.

130.) pedicels axillary, solitary, 1-flowered, shorter than the leaves, bracteolate at the apex, leaves small, elliptic-ovate, acute, coriaceous, veinless, glabrous; branchlets hairy; calyx 4-lobed; stamens 8. *h. S.* Native of Peru. Leaves 3-4 lines long. Petals ciliated. Berry subglobose, 2-3-celled. Seeds few, rather reniform. Embryo of *M. communis*. Allied to *M. nummularia*.

*Whittle-berry-like Myrtle*. Sh. 1 ft.

3 *M. MYRSINOIDES* (H. B. et Kunth, nov. gen. amer. 6. p. 132.) pedicels axillary, solitary, 1-flowered, bracteolate at the apex; leaves small, obovate, somewhat emarginate, rather coriaceous, reticulated, shining, and are as well as the branches glabrous; flowers 4-cleft, octandrous. *h. G.* Native of Peru, in cold parts between Ayavaca and Guancabamba. A much-branched shrub. Leaves 4-5 lines long. Fruit unknown. Nearly allied to *M. vaccinoides*.

*Myrsine-like Myrtle*. Sh. 6 ft.

4 *M. MICROPHYLLA* (Humb. et Bonpl. pl. equin. 1. p. 19. t. 4.) pedicels axillary, 1-flowered, shorter than the leaves, bearing 2 bracteoles under the flowers; leaves oval, acute, coriaceous, glabrous above, and clothed with adpressed silky down beneath; calyx 4-cleft, hairy. *h. S.* Native of the cold mountains of Saragura, near Iloxa. Habit of *Phyllica* or *Erica*. Petals white, ciliated. Margins of leaves revolute, 4 lines long. Berry red, globose, 2-3-celled. Ovula 2-4 in each cell. Embryo like that of *E. communis*, according to Kunth.

*Small-leaved Myrtle*. Sh. 3 ft.

\* \* *Flowers 5-cleft, polyandrous.*

5 *M. COMMUNIS* (Lin. spec. p. 673.) pedicels solitary, 1-flowered, about the length of the leaves, bearing 2 linear bracteoles under the flowers; calyx 5-cleft; leaves ovate or lanceolate, acute. *h. F.* Native of the south of Europe, on exposed rocks. Berry roundish, 2-3-celled. Seeds reniform. Embryo arched, with a long radicle, and small, equal cotyledons. Gært. fruct. 1. p. 181. t. 38. Lam. ill. t. 410. Duham. ed. nov. 1. p. 43. Corolla white. The common *myrtle* is well known as an elegant evergreen sweet-scented shrub, but unfortunately just too tender to abide our winters in the open air, without some protection. It was a great favourite among the ancients, and was sacred to Venus. *Myrtle* wreaths adorned the brows of bloodless victors, and were the symbol of authority for magistrates at Athens. Both branches and berries were put into wine, and the latter were used in the cookery of the ancients. The *myrtle* was also one of their medicinal plants. All parts of it are astringent, but it is discarded from modern practice.

*A. melanocarpa* (D. C. prod. 3. p. 239.) fruit blackish. This variety of *myrtle* is frequent in the south of Europe, and in gardens, where there are varieties of it with double flowers and variegated leaves.

*Var. α, Romàna* (Mill. fig. t. 184. f. 1.) leaves ovate; pedicels longer. The common broad-leaved or Roman *myrtle*. It is sometimes called *flowering myrtle*, because it flowers more freely in England than any other variety.

*Var. β, Tarentina* (Mill. dict.) leaves ovate; berries rounder. The box-leaved *myrtle*. Flowers small, and open late in the autumn. Leaves small.

*Var. γ, Italica* (Mill. dict.) leaves ovate-lanceolate, acute; branches more erect. The Italian or upright *myrtle*.

*Var. δ, Ba'tica* (Mill. dict.) leaves lanceolate, acuminate. The orange-leaved *myrtle*.—Blackw. t. 114.

*Var. ε, Lusitànica* (Lin. spec.) leaves lanceolate-ovate, acute. *M. acuta*, Mill. dict.—Clus. hist. 1. p. 66. f. 1. The Portuguese *myrtle*. The nutmeg *myrtle* appears to be only a variety of this.

*Var. β, Belgica* (Mill. dict.) leaves lanceolate, acuminate.

The *broad-leaved Dutch myrtle*. Leaves crowded, dark green. The *double-flowering myrtle* appears to be of this variety.

*Var. θ, mucronata* (Lin. spec.) leaves linear-lanceolate, acuminate. *M. minima*, Mill. *Rosemary* or *thyme-leaved myrtle*.

*B. leucocarpa* (D. C. prod. 3. p. 239.) fruit white. *h. H.* Native of Greece and the Balearic Islands. Smith, prod. fl. græc. p. 36. The fruit of this kind is rather large, edible, with a grateful taste and smell.

The above varieties are constant; but there are others in the gardens which are more variable. It will suffice to give the names of a few of these.

1 *Gold-striped broad-leaved myrtle*.

2 *Broad-leaved Jews' myrtle*. This variety has its leaves frequently in threes, on which account it is said to be in esteem among the Jews in their religious ceremonies.

3 *Gold-striped-leaved orange-myrtle*.

4 *Silver-striped Italian myrtle*.

5 *Striped box-leaved myrtle*.

6 *Silver-striped rosemary-leaved myrtle*.

7 *Silver-striped nutmeg myrtle*.

8 *Cock's-comb or bird's-nest myrtle*.

9 *Spotted-leaved myrtle*.

*Common Myrtle*. Fl. July, Aug. Clt. 1597. Sh. 3 to 10 ft.

6 *M. MYRICOIDES* (H. B. et Kunth, nov. gen. amer. 6. p. 131. t. 539.) peduncles axillary, 1-flowered, hardly shorter than the leaves, pubescent, furnished with 2 bracteoles at the apex; leaves oblong, coriaceous, veinless, glabrous above, puberulous beneath as well as on the branchlets; calyx 5-cleft. *h. S.* Native of Peru. Petals glabrous. Berry nearly globose, 3-4-celled. Seeds numerous, nearly reniform. Embryo as in *M. communis*.

*Myrica-leaved Myrtle*. Sh. 4 to 6 ft.

7 *M. SALUTARIS* (H. B. et Kunth, l. c. p. 132.) pedicels axillary, solitary, 1-flowered, shorter than the leaves, puberulous; leaves ovate-oblong, obtuse, rather membranous, reticulated, glabrous, shining; branchlets rather hairy; calyx quinquefid. *h. S.* Native near Carichana, on the banks of the Orinoco, where it is called *Guayava-Arayan*. Leaves 2 inches long, and an inch broad. Petals ciliated, length of stamens. Berry nearly globose, 2-celled, about the size of a sloe. Seeds bony, solitary, or numerous in the cells. A decoction of the root of this species is considered good against hæmorrhages.

*Salutary Myrtle*. Sh. 4 to 6 ft.

8 *M. CALOPHYLLA* (H. B. et Kunth, l. c. p. 133.) pedicels axillary, 1-flowered, solitary, or twin, shorter than the leaves, bibracteolate at the apex; leaves elliptic-oblong, acute, running into the petiole at the base, coriaceous, veinless, shining, and are as well as the branchlets glabrous; calyx 5-cleft. *h. S.* Native on the banks of the Orinoco, near Maypures. Leaves 2 inches long. Pedicels 10-14 lines long, when bearing the fruit. Flowers as large as those of *M. communis*. Berry nearly globose, 2-celled, about the size of a sloe. Embryo probably like that of *M. communis*.

*Beautiful-leaved Myrtle*. Sh. 6 to 8 ft.

9 *M. U'GNI* (Molin. chil. ed. gall. p. 133.) pedicels axillary, 1-flowered, a little recurved, rather longer than the leaves, bearing each 2 linear bracteoles under the flower; leaves ovate, acute, glabrous; calyx 5-cleft, with the lobes reflexed. *h. G.* Native of Chili, where it is called *U'gni*, and by the Spaniards *Murtilla*. Fenill. obs. 3. p. 44. t. 31. Lam. dict. 4. p. 412. Petals almost like those of *M. communis*. Fruit red, musky, nearly globose, 8-seeded, compressed. The natives of Chili express the juice from the fruit and mix it with water, to which it gives a beautiful red colour. It forms a very refreshing drink, and has something of the odour of rosemary.

*Ugni Myrtle*. Sh. 2 to 3 ft.

10 *M. ? ARA'YAN* (H. B. et Kunth, l. c. p. 133.) pedicels

axillary, solitary, 1-flowered, a little shorter than the leaves, bibracteolate under the flower; leaves ovate-oblong, acute, membranous, reticulated, glabrous, shining; branchlets hairy; calyx 5-cleft. *h. S.* Native of Peru, at Gonzanama, at the elevation of 3000 feet, where it is called, along with some other species, *Arayan*. Leaves 20-22 lines long. Flowers size of those of *M. communis*. Berry globose, red, 2-celled; cells 1-seeded.

*Arayan Myrtle*. Sh. 6 to 8 ft.

11 *M. MULTIFLORA* (Juss. herb. Jaume, in Duham. ed. nov. 1. p. 208.) pedicels solitary, axillary, elongated, and in terminal racemes; flowers 5-cleft; leaves ovate-orbicular, mucronate, opaque, coriaceous, hairy on the petioles, margins, and nerves on both surfaces, as well as the branchlets and peduncles. *h. S.* Native of Chili and Peru. Leaves 8-9 lines long and 6-7 broad, green above, and white beneath. Pedicels 6 inches long, glabrous at the apex, as well as the calyxes, but hairy at the base. Fruit and seeds unknown. Perhaps the same as *M. Luma*, Molin. chil. 173. but *M. Luma* of Spreng. syst. appears to be different. The bark is astringent, and possesses the same qualities as that of *M. ugni*.

*Many-flowered Myrtle*. Shrub.

12 *M. ? GOETHEANA* (Mart. herb. ex D. C. prod. 3. p. 240.) pedicels 1-flowered, 3 times shorter than the leaves, bearing 2 acute bracteoles at the apex: lower ones axillary and solitary; upper ones in umbellate fascicles; leaves oval, acuminate, rather coriaceous, quite glabrous, shining; tube of calyx globose, with 5 oblong-oval lobes. *h. S.* Native of Demerara, and of Brazil at Rio Janeiro. Leaves 4 inches long, 15-16 lines broad, opaque, dotted beneath. Peduncles 9 lines long. Flowers large. Petals 7-9 lines long. Stamiferous disk broad, as in *Psidium*. Ovary globose, 2-3-celled. Stamens very numerous, shorter than the petals. Fruit globose, yellowish, 5-celled. Seeds many, oblong.

*Goethe's Myrtle*. Shrub.

13 *M. ? ELEGANS* (D. C. prod. 3. p. 240.) glabrous; pedicels axillary, 1-flowered, solitary, about equal in length to the leaves; bracteoles small under the flowers; lobes of calyx 4, broad, acute; tube obovate; leaves lanceolate, attenuated at both ends, acute, stiff, opaque; branches tetragonal. *h. S.* Native of Brazil, in the province of Minas Geraes. *Psidium elegans*, Mart. herb. Habit almost of *M. communis* var. *Romana*. In habit it comes near *Eugenia Pia*; but neither the flower-bud nor fruit has been seen, and therefore the genus is very doubtful.

*Elegant Myrtle*. Shrub.

14 *M. ? FASCICULARIS* (D. C. l. c.) pedicels 1-flowered, 4-7-together, axillary, a little shorter than the leaves, bearing 2 linear bracteoles under the flowers; leaves oval-oblong, acute at both ends, full of pellucid dots, clothed with velvety pubescence when young, as well as the calyxes; calyx 5-lobed; lobes very obtuse. *h. S.* Native of Cayenne. Flowers and leaves rising in fascicles from the axils of the old leaves, as in *Pyrus*. Pedicels 6 lines long. Fruit and seeds unknown. Lobe of calyx 5-cleft, not 5-parted.

*Fascicled-flowered Myrtle*. Shrub.

15 *M. ? BRACHYSTEMON* (D. C. l. c.) pedicels 1-flowered, axillary, 3-5-together, 3 times shorter than the leaves, bearing 2 ovate bracteoles under the flowers; leaves ovate, glabrous, bluntly somewhat acuminate; calyx 5-cleft; branchlets rather downy. *h. S.* Native of St. Domingo and Porto Rico, in hedges. *Eugenia Patrisii*, Spreng. in herb. Balb. but not of Vahl. Leaves an inch long, and 6 lines broad. Pedicels 3-5 lines long. Flowers small. Stamens 20, shorter than the petals. Fruit and seeds unknown.

*Short-stamened Myrtle*. Shrub.

roc, *myrtos*, a myrtle, a red myrtle; in reference to the flowers being red). D. C. prod. 3. p. 240. Flowers rose-coloured. Seeds flat, compressed, disposed in two series in each cell. According to Salisbury, this section is sufficient to form a distinct genus.

16 *M. tomentosa* (Ait. hort. kew. 2. p. 159.) peduncles 1-3-flowered, bearing 2 ovate bracteoles under each flower, shorter than the leaves, and are, as well as the branches and calyxes, velvety; leaves ovate, velvety above in the young state, clothed with hoary tomentum beneath, 3-nerved, with the lateral nerves almost marginal; calyx 5-cleft. *h. G.* Native of China, Cochin-China, and among the Nellygerry Mountains in the East Indies, and in the Island of Junkseylon, ex Salisb. Curt. bot. mag. t. 250. Lois. herb. amat. t. 267. *M. canescens*, Lour. coch. p. 311.—Pluk. alm. t. 372. f. 1. Petals rose-coloured, longer than the stamens and style, velvety on the outside. Fruit ovate, 3-celled. Seeds compressed, 2 series in each cell. Embryo as in *M. communis* according to Kunth. There is a smoother variety of this species which goes under the name of *M. affinis* in the gardens.

*Tomentose Myrtle.* Fl. June, July. Clt. 1776. Sh. 2 to 6 ft.

17 *M. ? spectabilis* (Blum. bijdr. p. 1083.) peduncles crowded, axillary, 1-flowered, shorter than the leaves; calyx silky, 4-cleft; leaves ovate-oblong, 3-nerved, bluntly acuminate, acutish at the base, coriaceous, glabrous, greyish silvery beneath. *h. S.* Native of Java, in the province of Bantam. Fruit unknown.

*Shony Myrtle.* Shrub.

† In the following species the seeds, fruit, and number of the parts of the flower being unknown, it is therefore doubtful whether any of them belong to the genus. Many of them on future examination may prove to belong to the genus *Mýrcia*, especially those natives of South America.

\* *Pedicels axillary, 1-flowered.*

18 *M. ? linifolia* (Spreng. syst. 2. p. 479.) pedicels axillary, 1-flowered, usually solitary, shorter than the leaves; leaves petiolate, linear, obtuse, nerveless, glabrous, flat beneath. *h. S.* Native of the West Indies. The rest unknown. Perhaps the same as *Eugenia leptospermoides*.

*Flax-leaved Myrtle.* Shrub.

19 *M. ? tenuifolia* (Smith in Lin. trans. 3. p. 280.) pedicels axillary, solitary, 1-flowered, shorter than the leaves; leaves linear, mucronate, with revolute margins, pubescent beneath; calyxes glabrous; petals pubescent. *h. G.* Native of New Holland. Leaves an inch long, and one line broad. Flowers white, one-half smaller than those of *M. communis*. Fruit and seeds unknown.

*Fine-leaved Myrtle.* Clt. 1824. Shrub 3 to 6 ft.

20 *M. graminica* (Spreng. syst. 2. p. 480.) pedicels 1-flowered, usually solitary, capillary, shorter than the leaves; leaves oblong, attenuated at both ends, obtuse, full of parallel veins, and are, as well as the branches, glabrous. *h. S.* Native of Brazil.

*Written-leaved Myrtle.* Shrub.

21 *M. ? lurida* (Spreng. l. c.) pedicels 1-flowered, usually solitary, stiff, shorter than the leaves, stipulate at the base; leaves sessile, lanceolate, cuspidate, quite glabrous on both surfaces, reticulately veined. *h. S.* Native of Monte Video.

*Lurid Myrtle.* Shrub.

22 *M. ? ovalis* (Spreng. syst. 2. p. 479.) pedicels 1-flowered, usually solitary, exceeding the leaves; leaves oval, veiny, glabrous; branches covered with fuscous villi. *h. S.* Native of Brazil.

*Oval-leaved Myrtle.* Shrub.

23 *M. ? heynei* (Spreng. l. c. p. 248.) pedicels axillary, 1-flowered, usually solitary, length of the petioles, bracteate at the

base, and bibracteolate at the apex; leaves elliptic, obtuse, coriaceous, full of pellucid dots, clothed with rusty tomentum when young, as well as the branchlets and pedicels. *h. S.* Native of the East Indies. *Myrtus latifolia*, Roth, nov. spec. p. 232. but not of Aublet. Leaves 3 inches long, and 2 inches broad. Petioles 2 lines long. Fruit, seeds, and number of the lobes of calyx unknown.

*Var. β, conferta* (D. C. prod. 3. p. 241.) pedicels 3-5-together; flowers a little smaller than those of the species. Roth, l. c.

*Heyne's Myrtle.* Shrub.

24 *M. ? erythroxylodes* (H. B. et Kunth, nov. gen. amer. 6. p. 149.) flowers 3-6-together, axillary, and terminal, 4-5-petalled; leaves elliptic, emarginate, reticulated, coriaceous, glabrous, shining; branchlets rather hairy. *h. S.* Native of South America, near Cumana. Flowers, fruit, and seeds unknown.

*Erythroxylum-like Myrtle.* Shrub.

\* \* *Peduncles axillary, 2-3 or many-flowered.*

25 *M. lucida* (Lin. spec. p. 674.) peduncles usually 3-flowered; flowers 5-petalled, nearly sessile, disposed into a tapering lanceolate spike. *h. S.* Native of Surinam.

*Shining Myrtle.* Shrub or tree.

26 *M. ? selloii* (Spreng. syst. 2. p. 482.) peduncles capillary, 3-flowered, shorter than the leaves; flowers 5-cleft; leaves oblong, attenuated at both ends, bluntish, opaque, pale and veiny beneath. *h. S.* Native of Brazil.

*Sello's Myrtle.* Shrub.

27 *M. vestita* (Spreng. syst. add. p. 193.) leaves lanceolate, acute, veiny, clothed with woolly tomentum, as well as the branchlets; peduncles very short, nearly opposite; flowers 4-cleft. *h. S.* Native of Brazil, at Rio Grande.

*Clothed Myrtle.* Shrub.

28 *M. megapota mica* (Spreng. l. c.) leaves lanceolate-spatulate, obscurely veined, clothed with yellowish silky down beneath; peduncles aggregate, shorter than the leaves; flowers quadrifid. *h. S.* Native of Brazil, at Rio Grande.

*Rio Grande Myrtle.* Shrub.

29 *M. triflora* (Spreng. l. c. but not of Jacq.) peduncles straight, bracteate, 3-flowered, about equal in length to the leaves; flowers crowded, 5-cleft; leaves ovate-lanceolate, acute, glabrous, shining above, and reticulated with veins beneath. *h. S.* Native of Monte Video.

*Three-flowered Myrtle.* Shrub.

30 *M. ruscifolia* (Willd. spec. 2. p. 970.) peduncles axillary, short, crowded, many-flowered, pubescent; leaves roundish-elliptic, quite glabrous, and full of pitted dots above. *h. S.* Native of the East Indies. Leaves almost the size of those of *Ruscus aculeatus*, but a little larger and more blunt; when young ornamented with rufescent pili. Flowers and fruit unknown.

*Butcher's-broom-leaved Myrtle.* Shrub.

\* \* \* *Peduncles many-flowered, corymbose, or in branched panicles.*

31 *M. ? firma* (Spreng. syst. 2. p. 487.) panicles axillary, opposite, trichotomous, tomentose, rather shorter than the leaves; leaves ovate-elliptic, coriaceous, large, rufescent, glabrous, veiny. *h. S.* Native of Brazil. The rest unknown.

*Firm Myrtle.* Shrub.

32 *M. ? excers* (Spreng. neue. entd. 2. p. 170. syst. 2. p. 487.) panicle axillary, erect, about equal in length to the leaves; leaves lanceolate, nearly sessile, coriaceous, shining, full of parallel veins, discoloured beneath; branches 2-edged, quite smooth. *h. S.* Native of Brazil.

*Two-edged-branched Myrtle.* Shrub.

33 *M. dioica* (Lin. spec. 675.) peduncles axillary and terminal, trichotomously paniced, length of the leaves; leaves oblong; flowers dioecious. *h. S.* Native of South America. *M. dioica*, Spreng. syst. 2. p. 486. is probably different from the plant of Lin.

*Dioecious Myrtle.* Shrub.

34 *M. fulva* (Spreng. syst. 2. p. 487.) panicle terminal; flowers crowded; leaves oblong-lanceolate, glabrous, as well as the branches. *h. S.* Native of Japan. Berry 2-3-celled; cells 1-seeded. Branches and buds alternate. Leaves solitary, twin or tern. Said to be allied to *Photinia*, and most probably belongs to the one-styled Rosaceous plants.

*Fulvous Myrtle.* Shrub.

35 *M. umbellata* (H. B. et Kunth, nov. gen. amer. 7. p. 258.) racemes axillary, bipartite; branchlets glabrous; leaves on short petioles, lanceolate-oblong, very much acuminate, acutish at the base, coriaceous, shining, with revolute margins, puberulous on both surfaces. *h. S.* Native in shady places on the banks of the Orinoco, near Maypures. Calyx globose. Ovary 2-celled; cells biovulate. The number of petals and the fabric of the seeds are unknown.

*Shaded Myrtle.* Shrub.

36 *M. maxima* (Molin, chil. p. 173.) peduncles many-flowered; leaves alternate, nearly oval; trunk large. *h. G.* Native of Chili.

*Large Myrtle.* Shrub 6 to 10 ft.

37 *M. laevis* (Thunb. fl. jap. 198.) peduncles terminal, umbellate; calyx 5-toothed; leaves ovate, acuminate, acutely serrated, veiny, attenuated at both ends, coriaceous, shining above, reticulated with veins beneath, and clothed with fulvous villi, as well as the panicles and branches. *h. S.* Native of Brazil. The rest unknown.

*Smooth Myrtle.* Shrub.

38 *M. psidioides* (Desv. in Hamilt. prod. fl. ind. occ. p. 44.) peduncles axillary and terminal, crowded, and are, as well as the calyxes, pubescent; leaves somewhat ovate-lanceolate, acuminate, full of parallel nerves, pubescent beneath. *h. S.* Native of the West Indies. Perhaps a species of *Myrcia*.

*Guava-like Myrtle.* Shrub.

39 *M. umbellata* (Desv. l. c. p. 45.) flowers axillary and terminal, in umbellate fascicles; calyx campanulate, 5-toothed; stem dichotomous, divaricate; branches rather cinereous; leaves ovate, acuminate, glabrous, veiny, nearly sessile. *h. S.* Native of Guiana. Perhaps a species of *Myrcia*.

*Umbellate-flowered Myrtle.* Shrub.

40 *M. cauliflora* (Mart.) trunk and branches exserted, and bearing the flowers; leaves lanceolate, long-acuminate, acute at the base, quite glabrous; flowers crowded; berry globose, of a violaceous purple colour. *h. S.* Native of Brazil.

*Stem-flowering Myrtle.* Shrub.

*N. B. M. Chinensis*, Lour. 8. p. 313. is a species of *Symphloca* according to Desv. in herb. mus. par. not probably distinct from *Symphloca sinica*, Ker. bot. reg. t. 710.

*Cult.* All the species of *myrtle* grow well in a mixture of sandy loam and peat; and cuttings not too ripe strike root readily either in sand or mould.

XXVIII. MYRCIA (a surname of Venus). D. C. dict. class. hist. nat. vol. xi. and diss. (1826.) D. C. prod. 3. p. 242.—Myrtus species of Lin. and others.

*Lin. syst.* *Icosandria*, *Monogynia*. Tube of calyx globose, rarely ovate (f. 122. a.); limb 5-parted. Petals 5 (f. 122. b.). Stamens numerous, free. Ovary 2-3-celled; cells many-ovulate. Berry 1-2-celled, when mature 1-3-seeded. Seeds rather globose, with a smooth testa. Cotyledons foliaceous, corrugately

contortuplicate.—Little trees or shrubs, natives of the West Indies and South America. Leaves opposite, quite entire, full of pellucid dots or opaque, furnished with nerves like those of *Myrtus*. Peduncles axillary and almost terminal, paniced, many-flowered. Flowers white. The species are disposed geographically, in consequence of not being sufficiently known, and therefore there are not more obvious characters as yet known for distributing them into sections.

§ 1. *Sphaerocarpæ* (from *σφαῖρα*, *sphaira*, a sphere, and *καρπος*, *karpos*, a fruit; in reference to the fruit of all the species being spherical). D. C. prod. 3. p. 243. Fruit or tube of calyx spherical.

• *Species natives of the West Indies.*

1 *M. punctata* (D. C. prod. 3. p. 243.) peduncles axillary, opposite, about equal in length to the leaves, 3-flowered; flowers 5-cleft, middle flower on each peduncle sessile, lateral ones pedicellate; bracteoles setaceous; leaves oblong, bluntish, dotted on both surfaces, tender, silky, glabrous in the adult state. *h. S.* Native of the Island of Santa Cruz, not in the East Indies, as it is incautiously written by Persoon. *Myrtus punctata*, Spreng. syst. 2. p. 482. *Eugenia punctata*, Vahl. symb. 3. p. 64. Calyx 5-lobed. Petals 4, ex Vahl. but in all probability this is wrong, as it is impossible that the calyx can be 5-lobed, and the petals only 4 in number.

*Dotted-leaved Myrcia.* Shrub 3 to 6 ft.

2 *M. Balbisiana* (D. C. prod. 3. p. 243.) peduncles axillary, longer than the leaves, cymosely-corymbose, bifid, and are, as well as the compressed branches, full of dots; flowers 5-cleft, sessile in the forks of the corymb, the others pedicellate; bracteoles linear; leaves oval, obtuse, glabrous, full of pellucid dots. *h. S.* Native of Guadaloupe. Peduncles sometimes 2, concrete, teretish, ending in 4 bifid 5-flowered branchlets. Calyx dotted, with a silky tube, and a 5-lobed obtuse glabrous limb. Seeds unknown.

*Balbis's Myrcia.* Shrub 4 to 6 ft.

3 *M. divaricata* (D. C. l. c.) racemes axillary, paniced; pedicels opposite, divaricate; flowers 5-cleft; leaves oval-lanceolate, attenuated at both ends, hardly veined, full of pellucid dots, and are, as well as the branches, glabrous. *h. S.* Native of St. Domingo and Martinique. Plum. ed. Burm. t. 208. f. 1. *Eugenia divaricata*, Lam. dict. 3. p. 203. *Myrtus laurifolia*, Hort. par. *Myrtus divaricata*, Ham. prod. fl. ind. occ. p. 45. Berry ovoid, dark blue, 1-seeded. Allied to *E. virgultosa*, but distinct.

*Divaricate Myrcia.* Shrub 4 to 6 ft.

4 *M. sororia* (D. C. l. c.) peduncles axillary, shorter than the leaves, downy, having the flowers crowded in racemes at their tops; tube of calyx short, villous, with roundish pubescent lobes; leaves ovate-lanceolate, long and bluntly acuminate, full of pellucid dots, and reticulately veined; adult leaves glabrous on both surfaces; petioles and branches terete and downy. *h. S.* Native of the Island of Trinidad. Sieb. fl. trin. no. 111. Very like *M. Hayneana*, but differs in the flowers being more crowded, in the leaves being much more distinct, full of pellucid dots, and the branches are terete not gradually compressed. Fruit unknown.

*Sister Myrcia.* Shrub 5 to 10 ft.

5 *M. deflexa* (D. C. prod. 3. p. 244.) peduncles length of leaves, twin in the upper axils of the leaves, and therefore 4 subumbellate and terminal, paniced, many-flowered; flowers 5-cleft; pedicels twin, and are, as well as the branches, villous; leaves elliptic, acuminate, full of pellucid dots, rather shining above, somewhat coriaceous girded by a marginal nervule. *h. S.* Native of St. Domingo. *Eugenia deflexa*, Poir. suppl. 3.

p. 124. Lobes of calyx roundish, full of pellucid dots. Style and all the parts of the inflorescence velvety. Leaves rather villous when young, adult ones glabrous, except on the nerves on the under surface, 2 inches long, and 9 lines broad, deflexed. Young fruit ovate. Cotyledons corrugated. Panicles twin in the axils of the upper leaves.

*Deflexed Myrcia.* Shrub 2 to 3 ft.

6 *M. ? THOMASIANA* (D. C. l. c.) peduncles axillary and terminal, opposite, racemose, usually 6-flowered; pedicels opposite, 1-flowered, furnished with one bractea at the base of each; flowers 5-cleft; leaves elliptic, acuminate, opaque, shining above, and full of impressed dots on both surfaces, as well as the branches. *h. S.* Native of the Island of St. Thomas, ex herb. Deless. Peduncles, bracteas, and calyxes puberulous when examined by a lens. Stamens length of petals. Fruit and seeds unknown.

*St. Thomas Myrcia.* Shrub 6 to 10 feet.

7 *M. CORIACEA* (D. C. prod. 3. p. 243.) peduncles terminal, paniced, glabrous, longer than the leaves; branchlets distant, opposite, bearing 1-3 flowers at the apex; flowers 5-cleft, nearly naked; leaves obovate or elliptic-roundish, obtuse, coriaceous, opaque, with somewhat revolute margins, shining on both surfaces, full of impressed dots above, and are, as well as the branches, glabrous. *h. S.* Native of the Caribbee Islands. —Plum. ed. Burm. t. 208. f. 2. Pluck. alm. 155. f. 3. *Myrtus coriacea*, Vahl, symb. 2. p. 59. *Myrtus cotinifolia*, Poir. dict. 4. p. 410. *Myrtus acris*  $\beta$ , Swartz, prod. and *Myrtus coriacea*, Swartz, fl. ind. p. 912. ? but the flowers are said to be 4-cleft. Bracteoles hardly any under the flowers. Berry globose, size of black pepper. Seeds 1-2, nearly globose. Cotyledons foliaceous, corrugately complicated.

*Coriaceous-leaved Myrcia.* Clt. 1759. Shrub 4 to 6 ft.

FIG. 122.

8 *M. ACRIS* (D. C. l. c.) peduncles axillary and terminal, trichotomous, corymbose, compressed, longer than the leaves; flowers 5-cleft; leaves elliptic, obtuse, convex, coriaceous, quite glabrous, reticulated above from elevated veins, full of very fine pellucid dots. *h. S.* Native of the West Indies, in mountain woods and pastures. Hook. bot. mag. 3153. *Myrtus acris*, Swartz, fl. ind. occ. 2. p. 909. *Myrtus caryophyllata*, Jacq. *Caryophyllus racemosus*, Mill. dict. *Myrtus acris*, Coll. hort. ripul. p. 49. but not of Sieb.—Pluck. alm. t. 155. f. 3. Berry oblong, according to Swartz. Allied to *Eugenia Pimenta*, but differs in the flowers being always 5-cleft. In Jamaica this tree is commonly called *wild cinnamon* or *wild clove tree*. It is a handsome tree, of a pyramidal form. The timber is very hard, red, and weighty, capable of being polished, and used for mill cogs. The leaves have a very sweet aromatic smell, and on account of their agreeable astringency often used in sauce. The flowers are small and white, with a slightly reddish tinge. The berries are round, and are as large as peas, and have an aromatic smell and taste, which renders them agreeable for culinary purposes. The tree grows in Antigua, Jamaica, and Barbadoes, and fills the woods with the fragrant smell of its leaves, resembling that of cinnamon.

*Sharp-tasted Myrcia*, Wild cinnamon or Wild clove. Fl. May, July. Clt. 1759. Tree 20 to 40 ft.

9 *M. PIMENTOIDES* (D. C. l. c.) peduncles axillary and ter-

minal, trichotomously paniced; flowers 5-cleft, those in the forks sessile, the rest pedicellate; leaves ovate, coriaceous, opaque, shining; branchlets acutely tetragonal, and are, as well as the pedicels, glabrous. *h. S.* Native of the West India Islands, and now cultivated in the East Indies. *Myrtus pimenta latifolia*, Roxb. hort. beng. p. 37. *Myrtus citrifolia*, Poir. dict. 4. p. 410. Div. ab. *Eugenia citrifolia* of the same author. As variable a plant as *Eugenia Pimenta*, the leaves lanceolate and acuminate, ex Poir., but oval and obtuse in the specimens, some collected in Guadeloupe, and others in the botanic garden at Calcutta, but it differs from *Eugenia Pimenta* in the branches being acutely tetragonal. The leaves, berries, and flower-buds have a hot taste, and a fragrant smell, like those of *M. acris*, and are used for culinary purposes.

*Pimento-like Myrcia.* Fl. May. Clt. ? Tree.

10 *M. LEPTOCLADA* (D. C. prod. 3. p. 244.) peduncles axillary and subterminal, loosely paniced, glabrous, length of the leaves; pedicels 1-flowered, short; flowers 5-cleft; leaves elliptic-oblong, acuminate, full of pellucid dots, and are glabrous, as well as the branches. *h. S.* Native of St. Domingo. Very like *M. multiflora*. Leaves 3 inches long, and an inch broad. Flowers small. Lobes of calyx 4, 2 obtuse, and 2 acutish. Berry globose, 1-seeded. Seeds shining. Cotyledons foliaceous, corrugately plicatè.

*Slender-branched Myrcia.* Shrub 5 to 6 ft.

11 *M. SPLENDENS* (D. C. l. c.) peduncles axillary and terminal, paniced, and are as well as the branches villous; buds very villous; leaves ovate-elliptic, acuminate, full of large pellucid dots, glabrous, shining above, areolate with prominent and anastomosing veins; flowers small, 5-cleft. *h. S.* Native of St. Domingo and Guadeloupe, among shrubs on the mountains. *Myrtus splendens*, Swartz, fl. ind. occ. 2. p. 907. *Eugenia periplocifolia*, Jacq. coll. 2. p. 108. t. 4. *Eugenia microcarpos*, Lam. dict. 3. p. 201. *Eugenia laxiflora*, Poir. suppl. 3. p. 123. ? Leaves an inch and a half long. Berry globose, scarlet. Seeds 2, hemispherical. Cotyledons corrugated. There are varieties of this plant with the panicles either longer or shorter than the leaves, and the flowers either 4 or 5-cleft.

*Var.  $\beta$ , Mini* (D. C. l. c.) peduncles shorter than the leaves; flowers 4-cleft. *h. S.* Native of Cayenne. *Eugenia Mini*, Aubl. guian. 1. p. 498. t. 197. Perhaps a variety of *M. multiflora*, but according to the figure it comes nearer to *M. splendens*. Perhaps two species are confused under the name. Perhaps *Eugenia patens* of Poir. suppl. 3. p. 124. is referrible to this plant.

*Splendent Myrcia.* Clt. 1803. Tree 12 to 20 feet.

12 *M. MULTIFLORA* (D. C. l. c.) peduncles axillary and terminal, paniculate, longer than the leaves, and are, as well as the branches, glabrous; leaves oval, bluntly acuminate, membranous, full of pellucid dots, with the veins rather prominent on both surfaces, and confluent near the margin. *h. S.* Native of Cayenne. *Eugenia multiflora*, Rich. in act. soc. hist. nat. par. 1792. p. 110. Lam. dict. 3. p. 302. *Myrtus multiflora*, Spreng. syst. 2. p. 485. but not of Jaume. Allied to *M. splendens*, but differs in the flowers being small, glabrous, and 5-cleft. Fruit globose. Seeds 1-2, large, with a hard testa. Cotyledons foliaceous, corrugated.

*Many-flowered Myrcia.* Shrub.

13 *M. FALLAX* (D. C. l. c.) panicles subterminal; rachis compressed; immature fruit ovate, but when mature globose; leaves glabrous, shining, elliptic, ending in a linear, obtuse, abrupt acuminate, having the lateral veins hardly prominent and confluent at the margins. *h. S.* Native of French Guiana. *Eugenia fallax*, Rich. act. soc. hist. nat. par. 1792. p. 100. Leaves full of pellucid dots. Pedicels pubescent. Lobes of calyx rounded at the base, smoothish, permanent, but the tube is white and downy. Seed 1. Style hooked, according to Leblond.

*Fallacious Myrcia.* Shrub 5 to 6 ft.

14 *M. SYLVATICA* (D. C. l. c.) racemes panicled, axillary and terminal, solitary; flowers 5-cleft, pubescent, 1-3 on the branches, middle one sessile; leaves elliptic-ovate, long-acuminated, somewhat ciliated, full of impressed dots above, downy when young, as well as the branches. *h. S.* Native of Guiana, in woods. *Myrtus sylvatica*, Meyer, esseq. p. 191. Styles said to be 3. Fruit and seeds unknown.

*Wood Myrcia.* Shrub 4 to 6 ft.

15 *M. PLATYCLADA* (D. C. l. c.) peduncles axillary and sub-terminal, panicled, longer than the leaves, and arc, as well as the branches, compressed, and consequently 2-edged; flowers 5-cleft; leaves obovate, obtuse, somewhat coriaceous, opaque, glabrous, rather cuneated at the base. *h. S.* Native of French Guiana. Leaves 2 and  $2\frac{1}{2}$  inches long, and 12-15 lines broad. Petioles 3 lines long. Young branches clothed with adpressed down, as well as the petioles, nerves, and peduncles. Fruit and seeds unknown.

*Broad-branched Myrcia.* Shrub.

16 *M. DIVERGENS* (D. C. prod. 3. p. 245.) panicle terminal, many-flowered, having its branches divaricating; calyx 5-cleft; leaves oval, acuminate, opaque, and arc, as well as the branches, glabrous. *h. S.* Native of Cayenne. Leaves 3 inches long, and an inch and a half broad. Flowers small. Fruit and seeds unknown.

*Diverging Myrcia.* Shrub.

17 *M. GUIANENSIS* (D. C. l. c.) peduncles axillary, 1-3-flowered, slender, shorter than the leaves; flowers 5-cleft, bi-bracteolate at the base; leaves oval, bluntish, on short petioles, glabrous, full of pellucid dots. *h. S.* Native of Guiana, on the Serpent Mountains. *Eugenia Guianensis*, Aubl. guian. 1. p. 506. t. 201. *Myrtus Guianensis*, Ham. prod. fl. ind. occ. no. 45. Berry roundish, red, 1-seeded, about the size of a red currant. Seeds unknown.

*Guiana Myrcia.* Shrub 3 to 4 ft.

18 *M. BRACTEOLARIS* (D. C. l. c.) peduncles axillary, opposite, rather villous, in fascicled racemes; flowers crowded, bracteolate, 5-cleft; leaves ovate-elliptic, long-acuminated, shining above, and arc, as well as the branches, glabrous. *h. S.* Native of Cayenne. *Myrtus bracteolaris*, Poir. dict. 4. p. 411. *Myrtus Stoupyi*, Spreng. syst. 2. p. 484. Cotyledons large, foliaceous, plicately wrinkled, ex Kunth, not. in mem. soc. hist. nat. par. 1824. p. 325.

*Bracteolate-flowered Myrcia.* Shrub 4 to 6 ft.

19 *M. CARNEA* (D. C. l. c.) racemes panicled, axillary and terminal, rather tomentose, twice shorter than the leaves; flowers 1-3 on the tops of the branches of the panicle, middle one sessile; calyx 5-cleft, tomentose; leaves oblong-lanceolate, acuminate. *h. S.* Native of Guiana, near Essequibo. *Myrtus carnea*, Meyer, esseq. p. 191. Said to be allied to *Eugenia virgultosa*. Petals pubescent, and the anthers flesh-coloured. Fruit and seeds unknown. Perhaps the same as *M. Coumeta* according to Sprengel.

*Flesh-coloured-anthered Myrcia.* Shrub 4 to 6 ft.

20 *M. COUMETA* (D. C. l. c.) peduncles axillary and sub-terminal, racemose panicled; branchlets 3-flowered; flowers 5-cleft, all pedicellate; leaves broad, ovate, acuminate, glabrous, on short petioles, full of pellucid dots. *h. S.* Native of Guiana, in woods at the river Sinemari. *Eugenia Coumeta*, Aubl. guian. 1. p. 497. t. 195. *Myrtus Coumeta*, Spreng. syst. append. 2. p. 488. Berry roundish, white, crowned by the teeth of the calyx, which are acute, 1-celled, 1-seeded. Seed thick, roundish. Cotyledons unknown. *Coumeta* is the Guiana name of the shrub.

*Coumeta Myrcia.* Shrub 4 to 6 ft.

21 *M. ? TOMENTOSA* (D. C. l. c.) peduncles axillary, longer than the leaves, racemose panicled; branches, calyxes, and

leaves clothed with villous tomentum; flowers 5-cleft; leaves ovate, nearly sessile, full of pellucid dots. *h. S.* Native of Guiana, on the banks of the river Sinemari. *Eugenia tomentosa*, Aubl. guian. 1. p. 504. t. 200. *Myrtus Aubletii*, Spreng. syst. 2. p. 486. Stamens longer than the petals. Fruit and seeds unknown.

*Tomentose Myrcia.* Shrub 3 to 4 ft.

22 *M. FERRUGINEA* (D. C. l. c.) peduncles terminal, paniculately corymbose, bracteolate, clothed with rusty velvety down; leaves oval-elliptic, acute at the base, and acuminate at the apex, glabrous above, but clothed with rusty velvety down beneath, but they at length become glabrous on both surfaces; calyx 5-cleft. *h. S.* Native of French Guiana. *Eugenia ferruginea*, Poir. suppl. 3. p. 124. *Myrtus ferruginea*, Spreng. exclusive of the Synonymes. Leaves nearly like those of *Eugenia chrysophylla* or *E. chrysophylloides*, but it differs in the inflorescence. Fruit globose, glabrous, 2-3-seeded. Seeds large, angular, roundish. Cotyledons thickish, corrugated.

*Rusty Myrcia.* Shrub 4 to 6 ft.

23 *M. CRASSINERVIA* (D. C. l. c.) peduncles axillary, solitary, or twin, panicled, shorter than the leaves; flowers bluntly 5-lobed; leaves oval, abruptly acuminate, feather-nerved, and girded by a marginal nerve, coriaceous, opaque, shining above, clothed with rufous velvety down beneath, as well as the panicles and branchlets. *h. S.* Native of French Guiana. *M. latifolia*, Forsyth in herb. L'Her. Lateral nerves of leaves thick and prominent beneath. Fruit nearly globose, crowned, at length glabrous, 1-seeded. Seed roundish. Cotyledons foliaceous, corrugately plicate.

*Thick-nerved-leaved Myrcia.* Shrub.

24 *M. BRACTEATA* (D. C. l. c.) peduncles axillary, 3-flowered, bearing opposite, leafy bractes in the middle and at the base of the flowers, shorter than the leaves; leaves ovate-lanceolate, tapering into an elongated acumen, with rather revolute, ciliated margins, having the middle nerve hairy on both surfaces; branches hispid; calyxes villous. *h. S.* Native of Cayenne and Brazil. *Eugenia bracteata*, Rich. act. soc. hist. nat. par. 1792. p. 110. *Myrtus bracteata*, Mart. herb. Leaves 2 inches long, and 9-10 lines broad, shining. Tube of calyx ovate. Style inflexed. Bractes coloured, according to Richard. Flowers 5-cleft, rarely 4-cleft. The fruit is that of *Myrcia*, according to the specimen.

*Bracteate Myrcia.* Shrub.

\* \* *Species natives of Brazil.*

† *Fruit nearly globose, 1-3-celled.*

a. *Leaves on long or short petioles, never cordate at the base.*

25 *M. HAYNEANA* (D. C. prod. 3. p. 246.) peduncles axillary, shorter than the leaves, racemose or subpanicled, hairy; tube of calyx with a short, villous tube, and 5 roundish pubescent lobes; leaves oval-oblong, acuminate, full of pellucid dots, reticulately veined, glabrous in the adult state, except on the nerves beneath as well as the branches, which are rather hairy; buds silky. *h. S.* Native of Brazil, at Mato-Virga. *Myrtus Hayneana*, Mart. herb. Leaves 3 inches long and an inch broad. Petioles 1-2 lines long. There are some black bristles at the axils of the leaves, which are almost stipular. Branchlets compressed. Fruit unknown. The shrub agrees with *M. sororia* on the one hand, and with *M. bracteata* on the other.

*Hayne's Myrcia.* Shrub.

26 *M. MYAPORINA* (D. C. l. c.) peduncles axillary, opposite, racemose, 5-9-flowered, almost bractless, about equal in length to the leaves; fruit globose, crowned by the lobes of the calyx, which are bluntish; leaves oblong, obtuse, or nearly obovate, dotted on both surfaces, nearly nerveless and almost glabrous, even

when young, as well as the branchlets.  $\frac{1}{2}$ . S. Native of Brazil. *Myrtus punctata*, Mart. mss. but not of Spreng. A shrub, about 5 or 6 feet high, with erectly spreading branches. Fruit at first scarlet, but at length dark purple. Leaves 15 lines long. Seeds 2-3, smooth.

*Myaporum-like Myrcia*. Sh. 4 to 6 ft.

27 *M. SALICIFOLIA* (D. C. l. c.) peduncles axillary, few-flowered, racemose, rather shorter than the leaves, glabrous; fruit globose, crowned by the lobes of the calyx, which are 5 and obtuse; leaves lanceolate-linear, attenuated at both ends, full of pellucid dots, glabrous in the adult state, but pubescent when young, as well as the branches.  $\frac{1}{2}$ . S. Native of Brazil, at Rio Tapura. *Myrtus salicifolia*, Mart. herb. Leaves 2 inches long and 4 lines broad. Fruit the size of a pea. Seeds not seen. Flowers unknown.

*Willow-leaved Myrcia*. Sh. 4 to 6 ft.

28 *M. DAPHNOIDES* (D. C. l. c.) peduncles axillary, longer than the leaves, panicle, clothed with rufous hairs; lobes of calyx 5, roundish, ciliated in the young state; leaves oblong, obtuse, cuneate at the base, opaque, stiff, crowded, rather villous on both surfaces when young, but in the adult state glabrous above and puberulous beneath; branchlets clothed with rufous down.  $\frac{1}{2}$ . S. Native of Brazil, near Camabua. Branches short, spreading, very leafy, when young sometimes compressed. Leaves an inch and a half long, but hardly half an inch broad, full of impressed dots on the upper surface when old. Racemes nearly 2 inches long. Fruit unknown.

*Daphne-like Myrcia*. Sh. 6 to 10 ft.

29 *M. NIGRESCENS* (D. C. l. c.) peduncles axillary, nearly terminal, panicle, divaricately branched, longer than the leaves; branches and flowers quite glabrous; leaves oval-oblong, attenuated at the base, obtuse at the apex, opaque, stiff, almost nerveless, except the middle nerve, quite glabrous on both surfaces.  $\frac{1}{2}$ . S. Native of Brazil, at the river Amazon. *Myrtus nigræscens*, Mart. herb. Leaves 2 inches long, and 8-12 lines broad, of an obscure green colour. Petioles 2-3 lines long, wrinkled, having the epidermis separating, as if it were transversely. Branches white. Lobes of calyx 5, roundish, deciduous, rather irregular. Fruit unknown.

*Blackish Myrcia*. Sh. 4 to 8 ft.

30 *M. BANISTERIIFOLIA* (D. C. l. c.) peduncles axillary, opposite, twice trifid, a little shorter than the leaves; leaves elliptic, bluntish, membranous, opaque, glabrous above, but villous beneath from adpressed rufescent down, as well as the branchlets, peduncles, and flowers.  $\frac{1}{2}$ . S. Native of Brazil, in fields near Yta in the province of St. Paul. *Myrtus banisteriifolia*, Mart. herb. Leaves an inch and a half long, and 9 lines broad, of an obscure green. Flowers small, 5-cleft. Fruit unknown.

*Banisteria-leaved Myrcia*. Sh. 4 to 6 ft.

31 *M. PALUSTRIS* (D. C. l. c.) peduncles axillary, panicle, longer than the leaves; flowers crowded at the tops of the branchlets, and are as well as the bracteas downy; leaves oval, cuneate at the base, obtuse, opaque, glabrous above, paler beneath and dotted, puberulous on the nerves.  $\frac{1}{2}$ . S. Native of Brazil, in marshes in the province of St. Paul. *Myrtus palustris*, Mart. herb. Leaves an inch and a half long and an inch broad. Petioles 2 lines long. Panicle 2 inches long, pubescent. Lobes of calyx 5, obtuse. Habit almost of *M. banisteriifolia*.

*Marsh Myrcia*. Sh. 4 to 6 ft.

32 *M. HERPESTALA* (D. C. l. c.) peduncles axillary, nearly terminal, racemosely panicle, and are as well as the calyxes and branches hairy; calyx bluntly 5-lobed; leaves oblong, somewhat acuminate, with a few pellucid dots, clothed with adpressed, silky down in the young state, but glabrous above and rather hairy beneath in the adult state.  $\frac{1}{2}$ . S. Native of

Brazil. *Myrtus pseudo-caryophyllus*, Gomez? ex herb. Mart. Leaves 3 inches long and an inch broad. Petiole 3 lines long. Flower-bud globose. Petals pubescent on the outside. Fruit unknown.

*Hairy-petalled Myrcia*. Sh. 4 to 8 ft.

33 *M. ERIOCALYX* (D. C. prod. 3. p. 247.) peduncles axillary, racemosely panicle, longer than the leaves, and are as well as the panicles clothed with velvety villi; calyx 5-cleft, very villous; leaves elliptic, oblong, with revolute margins, rather coriaceous, opaque, glabrous above, but velvety beneath.  $\frac{1}{2}$ . S. Native of Brazil, in woods in the district of the diamonds. Leaves an inch long and 5-6 lines broad, nerveless above, nerved beneath: with 2 small, nearly abortive ones, produced from the axils of the racemes. Bracteas foliaceous, deciduous.

*Woolly-calyxed Myrcia*. Sh. 4 to 6 ft.

34 *M. PUBESCENS* (D. C. l. c.) peduncles axillary, panicle, rather shorter than the leaves, or longer; bracteas, calyxes, and young leaves clothed with adpressed, somewhat rufescent down; leaves oval, obtuse, full of pellucid dots while young: but opaque and glabrous on the upper surface, and clothed with rufescent down on the under surface in the adult state; lobes of calyx 5, obtuse.  $\frac{1}{2}$ . S. Native of Brazil, in elevated fields, in the province of Minas Geraes. Leaves 30 lines long, and 12 lines broad. Panicle  $1\frac{1}{2}$  to 3 inches long. Fruit unknown.

*Pubescent Myrcia*. Sh. 4 to 6 ft.

35 *M. ? MACROCHLAMYS* (D. C. l. c.) peduncles axillary, and nearly terminal, few-flowered; branchlets and bracteas clothed with velvety tomentum; tube of calyx turbinate, shorter than the lobes, which are oblong; bracteoles 2, inserted at the base of the calyx; leaves oval, obtuse, reticulately veined, when young rather villous, full of pellucid dots, but glabrous, stiff, and opaque in the adult state.  $\frac{1}{2}$ . S. Native of Brazil, in the desert of Bahia. Shrub 10 feet. Leaves pale, 18 lines long and 9 broad. Petioles 2-3 lines long. Peduncles 9-10 lines long. Flower-bud globose. Stamiferous torus broad. Fruit unknown.

*Long-cloaked Myrcia*. Sh. 10 ft.

36 *M. RUFIPES* (D. C. l. c.) panicles axillary, longer than the leaves, and terminal, many-flowered, clothed with velvety, rufous down as well as the branchlets; calyx with a glabrous subglobose tube, and 5 ovate lobes, which are clothed with rufescent down; leaves oval, obtuse, full of pellucid dots when young, clothed with rufous villi on the nerve, but in the adult state glabrous on both surfaces.  $\frac{1}{2}$ . S. Native of Brazil, in the provinces of the mines. *Myrtus rufipes*, Mart. herb. Leaves 2 inches long, and an inch broad. Petioles 2 lines long. Bracteas and bracteoles almost wanting. Bark usually separating from the epidermis, which is rufous.

*Rufous-petioled Myrcia*. Sh. 4 to 6 ft.

37 *M. CAMPESTRIS* (D. C. l. c.) peduncles panicle, many-flowered, axillary, and terminal, longer than the leaves; calyx and branchlets densely clothed with rufous down; bracteoles setaceous; leaves oval-oblong, with rather revolute margins, opaque, glabrous above, puberulous on the nerve beneath.  $\frac{1}{2}$ . S. Native of Brazil, in fields, in the provinces of the mines. *Myrtus campestris*, Mart. herb. Very like *M. rufipes*, but differs in the leaves being narrower and in the bracteas being elongated. The leaves are sometimes disposed 3 in a whorl. Fruit unknown.

*Field Myrcia*. Sh. 4 to 6 ft.

38 *M. SCHIRANKIANA* (D. C. l. c.) peduncles axillary, twice or thrice longer than the leaves, rather pubescent, panicle, and rather corymbose at the apex; calyx with a glabrous tube, and 5 somewhat ciliated lobes; leaves oval, nearly sessile, full of pellucid dots when young, with the margin and nerve villous: but opaque and glabrous in the adult state; branches clothed

with rufous villi. *h. S.* Native of Brazil, in the province of Minas Geraes, in the desert called the Certão. *Myrtus Schrankiana*, Mart. herb. Leaves 10-12 lines long, and 4-5 broad. A shrub 3-4 feet high, with dense branches. Peduncles 2 inches long. Lobes of calyx obtuse. Fruit unknown.

*Schrank's Myrcia.* Sh. 3 to 4 ft.

39 *M. EXSÜCOA* (D. C. l. c.) peduncles axillary and terminal, panicle, longer than the leaves; bracteas and calyxes ciliated while young; leaves elliptic or obovate, obtuse, membranous, full of pellucid dots, glabrous except on the nerves, margins, and petioles, which are rather puberulous; branchlets puberulous. *h. S.* Native of Brazil, in fields. *Myrtus Duárti* and *M. exsüca*, Mart. herb. Leaves pale, an inch and a half long, 8-10 lines broad. Fruit unknown.

*Dry Myrcia.* Sh. 4 to 6 ft.

40 *M. ? LEUCOPHLEA* (D. C. l. c.) leaves oval, acute, with a few pellucid dots, glabrous; peduncles axillary, and nearly terminal, racemously panicle, shorter than the leaves, and are as well as the buds clothed with rufous velvety down; flower-buds obovate, small, glabrous; lobes of calyx 5, very short. *h. S.* Native of Brazil, in the province of Bahia, in woods. *Myrtus leucophle'a*, Mart. herb. Branches white, separating from the epidermis. Leaves 3 inches long, and half an inch broad. Petioles 2-3 lines long. Racemes 15 lines long. Fruit small.

*White-juiced Myrcia.* Sh. 4 to 6 ft.

41 *M. LINKIA'NA* (D. C. prod. 3. p. 248.) peduncles axillary, nearly terminal, panicle, shorter than the leaves, and are as well as the branches clothed with soft velvety villi; calyx with a villous tube, and 5 roundish, smoothish lobes; leaves oblong, acuminate, full of pellucid dots, membranous, narrowed at the base, with the margins revolute, glabrous above, but clothed with soft velvety down beneath. *h. S.* Native of Brazil, in woods in the province of Rio Janeiro, near Retiro. *Myrtus Linkiana*, Mart. herb. Leaves 3-4 inches long and 10-17 lines broad. Flowers small. Bracteas small, deciduous.

*Link's Myrcia.* Sh. 4 to 6 ft.

42 *M. EXIMIA* (D. C. l. c.) panicles axillary, a little shorter than the leaves, many-flowered, densely clothed with velvety short tomentum, as well as the calyxes, branchlets, and young leaves; lobes of calyx 5, obtuse; leaves oval-oblong, acuminate, stiff, opaque, reticulately veined, in the adult glabrous above, and velvety beneath; branchlets somewhat compressed. *h. S.* Native of Brazil, in the province of Minas Geraes, in the desert. Leaves pale, 4 inches long, and 1½ and 2 inches broad, on short velvety petioles. A beautiful tree, about 30 feet high.

*Choice Myrcia.* Tr. 30 ft.

43 *M. CORDIÆFOLIA* (D. C. l. c.) peduncles axillary and nearly terminal, panicle, shorter than the leaves, hairy; calyx clothed with silky villi, with 5 very blunt lobes; leaves ovate, obtuse, opaque, stiff, glabrous above, and a little blistered, velvety beneath; with the nerves reticulated, very prominent, and areolate. *h. S.* Native of Brazil, in the province of St. Paul. *Myrtus cordiæfolia*, Mart. herb. Leaves bluntish at the base, 9 inches long and 4-5 inches broad. Petioles 7 lines long. Flower-bud globose, downy. Bark of the branches rufous. Fruit unknown.

*Var. β, minor*; leaves acutish, one half smaller than those of the species.

*Heart-leaved Myrcia.* Shrub.

44 *M. VESTITA* (D. C. l. c.) panicle terminal, branched, many-flowered; branches, bracteas, and calyxes, densely clothed with tomentum; calycine lobes 5, obtuse; leaves elliptic, acutish, almost sessile, opaque above, and rather villous, but densely clothed with hoary tomentum beneath, opposite or alternate. *h. S.* Native of Brazil, in the provinces of the mines, in elevated fields. *Myrtus vestita*, Mart. herb. Petals oval-orbicular. Leaves 2 inches long and an inch broad. Fruit unknown.

*Var. β, obtusifolia* (D. C. l. c.) leaves broader and blunter; panicle rather rufescent. *h. S.* Native of Brazil.

*Clothed Myrcia.* Sh. 5 to 10 ft.

45 *M. SPECTABILIS* (D. C. l. c.) peduncles axillary and nearly terminal, paniculately corymbose, compressed, a little shorter than the leaves, and are as well as the bracteas and calyxes clothed with somewhat silky velvety down; leaves oval-oblong, acuminate, full of pellucid dots, rather villous from deciduous down on the upper surface, and rather hairy on the nerves and nervules beneath. *h. S.* Native of Brazil, in woods in the province of Rio Janeiro. *Myrtus spectabilis*, Mart. herb. Leaves 7 inches long and 2 inches broad, on very short petioles, with the nerves reticulately veined. Flowers in fascicles, on the ultimate branchlets of the panicle. Petals, when in the bud, as well as the calyx, clothed with silky down on the outside. Fruit unknown.

*Shewy Myrcia.* Sh. 4 to 6 ft.

46 *M. MACROPHYLLA* (D. C. l. c.) peduncles axillary, and nearly terminal, one half shorter than the leaves, panicle; pedicels distant, hardly pubescent; fruit obovate-globose, smoothish, crowned by the calycine lobes, which are roundish and connivent; leaves elliptic-oblong, acute, or shortly acuminate, full of pellucid dots, rather membranous, glabrous above and reticulately veined, rather pubescent on the nerves and veins beneath. *h. S.* Native of Brazil, at Coari. Leaves 9 inches long, and 2½ inches broad, standing on short pubescent petioles. Leaf-buds downy. Branches terete, glabrous.

*Long-leaved Myrcia.* Sh. 4 to 6 feet.

47 *M. MAGNOLIÆFOLIA* (D. C. l. c.) peduncles axillary and nearly terminal, panicle, one half shorter than the leaves, compressed, downy; flowers crowded on the ultimate branches; tube of calyx clothed with white villi, but the calycine lobes are orbicular and smoothish; leaves oval-oblong, acutish, stiff, opaque, shining above, clothed with velvety pubescence on the under surface, as well as the branchlets: with the nerves parallel, and the veins reticulated between them. *h. S.* Native of Brazil, at the Rio Negro. Leaves somewhat downy beneath, 5-6 inches long, 1½ to 2 inches broad, standing on petioles, which are 1-2 lines long. Flower-bud nearly globose. Fruit unknown.

*Var. β*; leaves short-acuminate; fruit globose, glabrous.

*Magnolia-leaved Myrcia.* Sh. 5 to 10 ft.

48 *M. MACROCARPA* (D. C. prod. 3. p. 249.) panicle compound, terminal, glabrous, longer than the leaves; fruit globose, depressed, crowned by the short, obtuse lobes of the calyx; leaves elliptic, acutish, coriaceous, opaque, shining above, and quite glabrous on both surfaces, as well as the branches. *h. S.* Native of Brazil, on Mount Formosa, in the province of Rio Janeiro. Allied to *M. Neesiana*. Branches white. Leaves 4 inches long and 1½ broad. Fruit 6 lines broad, and 4 lines long, glabrous, 2-seeded. Seeds with a smooth testa. Cotyledons corrugated.

*Long-fruited Myrcia.* Shrub.

49 *M. NEESIANA* (D. C. l. c.) peduncles axillary, racemose, few-flowered, pubescent, about half the length of the leaves; fruit ovate-globose, scabrous, crowned by the lobes of the calyx, which are ovate and obtuse; leaves oval-oblong, terminating in a short, blunt acumen each, opaque, glabrous on both surfaces; branchlets hairy. *h. S.* Native of Brazil, in woods at the river Amazon. *Myrtus Neesiana*, Mart. herb. Leaves 4-5 inches long, and 1½ broad, standing on petioles, which are 3 lines long. Calyx pubescent when in flower. Fruit size of a large pea, but obovate. Seeds 1-2.

*Nees's Myrcia.* Tr. 20 to 40 ft.

50 *M. MARAGNANA* (D. C. l. c.) peduncles disposed in a

terminal panicle, and are, as well as the branches and calyxes, glabrous; limb of calyx 5-parted, short, deciduous; fruit globose, 2-3-seeded; leaves oval, bluntly acuminate, attenuated at the base, coriaceous, opaque, quite glabrous, smooth above. *h. S.* Native of Brazil, in the province of Maragnon. *Myrtus Maragnana*, Mart. herb. Leaves 24-28 lines long, and 8-9 lines broad, standing on petioles 1-2 lines long. Panicle hardly longer than the leaves.

*Maragnon Myrcia.* Shrub.

51 *M. SEPIARIA* (D. C. l. c.) panicles axillary and terminal, many-flowered; peduncles compressed, rather pubescent, longer than the leaves; calycine lobes obtuse; leaves oval-oblong, bluntly acuminate, stiff, with a few scattered, pellucid dots, shining above, and glabrous on both surfaces, as well as the branchlets. *h. S.* Native of Brazil, in the province of Bahia. *Myrtus sepiaria*, Mart. herb. Leaves 24-28 lines long, and 8-9 lines broad, standing on petioles 1-2 lines long. Lower peduncles 2 inches long, all near together, so as to form a terminal panicle. Bractees small, obtuse, pubescent as well as the calyxes, when young.

*Hedge Myrcia.* Shrub.

52 *M. LITTORALIS* (D. C. l. c.) panicles axillary and terminal, many-flowered, longer than the leaves, clothed with adpressed pubescence; calycine tube clothed with white down; calycine lobes very short, hardly distinct, obtuse, at length spreading; leaves oval, obtuse, opaque, stiffish, nearly veinless, except the middle nerve, glabrous on both surfaces in the adult state, but rather downy when young, as well as the branchlets. *h. S.* Native of Brazil, in the province of Bahia, among bushes. *Myrtus littoralis*, Mart. herb. Leaves nearly 2 inches long, and an inch broad. Petioles hardly a line long. Branches compressed, but in the adult state terete and white.

*Shore Myrcia.* Shrub.

53 *M. PUBIFLORA* (D. C. l. c.) peduncles axillary and nearly terminal, compressed, longer than the leaves, disposed in a branched panicle at the apex, downy as well as the flowers; leaves elliptic, somewhat oblong, obtuse, coriaceous, opaque, glabrous on both surfaces in the adult state, but when young downy beneath; branches pubescently villous. *h. S.* Native of Brazil, on the mountains in the provinces of the mines, at Serro Frio. Branches naked, in consequence of the epidermis being deciduous. Leaves  $2\frac{1}{2}$  inches long and an inch broad. Bractees fuscous, concave, deciduous. Flower-bud hairy, nearly globose. Calyx 5-cleft in the young state. Fruit unknown.

*Downy-flowered Myrcia.* Shrub.

54 *M. HIRTIFLORA* (D. C. l. c.) peduncles axillary or terminal, opposite, and disposed in a terminal panicle; bractees and calyxes very hairy; calycine lobes short, acute; petals glabrous; leaves elliptic-oblong, bluntly and shortly acuminate at the apex, membranous, full of pellucid dots, glabrous on both surfaces as well as the branches. *h. S.* Native of Brazil, in the province of Bahia, on the high mountain called Serra das Lages. Leaves about 3 inches long and 15-18 lines broad. Petioles 2 lines long. Fruit unknown.

*Hairy-flowered Myrcia.* Shrub.

55 *M. CASSINOIDES* (D. C. l. c.) peduncles axillary and nearly terminal, racemose, clothed with velvety tomentum, longer than the leaves; fruit globose, muricated, pubescent, crowned by the lobes of the calyx, which are rather villous, very obtuse and conniving; leaves elliptic or oblong, obtuse, stiff, opaque, crowded, clothed with velvety villi on both surfaces when young, as well as the branchlets, but glabrous on the upper surface in the adult state. *h. S.* Native of Brazil, in the provinces of the mines. Leaves glabrous, rather rufescent when young, from 1-2 inches long, and 9-10 lines broad. Fruit the size of a pea. Seeds 2-3. Cotyledons corrugated.

*Cassine-like Myrcia.* Tr. 10 to 15 ft.

56 *M. VENULOSA* (D. C. prod. 3. p. 250.) peduncles axillary or terminal, paniced, velvety, longer than the leaves; fruit globose, glabrous, rather muricated; calycine lobes broad, obtuse, short; leaves oblong, bluntish, somewhat cuneate at the base, opaque, reticulately veined on both surfaces, glabrous, and shining above, but clothed with dense, short, velvety tomentum beneath, as well as on the branchlets. *h. S.* Native of Brazil, in the province of St. Paul. *Myrtus venulosa*, Mart. herb. Leaves an inch and a half long and 5-6 lines broad. Peduncles 2 inches long. Fruit the size of a pea, within the bearded limb of the calyx. Seeds 2. Cotyledons corrugated.

*Var. β, Capocirensis* (D. C. l. c.) leaves elliptic-oblong, less reticulated than in the species, and the fruit is less muricated. *h. S.* Native of Brazil, in Capocira. Perhaps a proper species.

*Veiny-leaved Myrcia.* Shrub.

57 *M. ELEODENDRA* (D. C. l. c.) peduncles axillary, and nearly terminal, racemously paniced, pubescent when young, about equal in length to the leaves; calycine lobes 5, very blunt, smoothish; leaves oblong-lanceolate, obtuse, full of pellucid dots, rather stiffish, glabrous on both surfaces; petioles and branches densely clothed with soft rufescent down. *h. S.* Native of Brazil. A tree 15-20 feet high, with loose, spreading branches. Leaves pale, rather glaucous, 2 inches long, and 9-10 lines broad. Flowers distant on the racemes. Lower branches of peduncle 3-flowered, upper ones 1-flowered. Fruit unknown.

*Elæodendron-like Myrcia.* Tr. 15 to 20 ft.

58 *M. TORTA* (D. C. l. c.) peduncles axillary, racemose, 7-9-flowered, length of leaves, nearly bractless; fruit globose, crowned by the lobes of the calyx, which are short and roundish; leaves oblong, obtuse, full of pellucid dots, somewhat attenuated at the base, and glabrous on both surfaces, as well as the branchlets. *h. S.* Native of Brazil, on Serra Branca. *Myrtus torta*, Mart. herb. Leaves 2 inches long, and 9 lines broad, standing on petioles 1-2 lines long. Racemes an inch and a half long. Fruit glabrous, dark purple, shining. A tree 10-12 feet high, with twisted branches. Bark thick, greyish, chinky.

*Twisted Myrcia.* Tr. 10 to 12 ft.

59 *M. SUBALPESTRIS* (D. C. l. c.) peduncles axillary and nearly terminal, racemously paniced, longer than the leaves, glabrous; fruit globose, crowned by the lobes of the calyx, which are short obtuse, and connivent; leaves elliptic-oblong, obtuse at both ends, opaque, stiffish, glabrous above, but velvety from short tomentum beneath. *h. S.* Native of Brazil, in the province of the mines. *Myrtus subalpestris*, Mart. herb. Shrub 3 feet. Branches erect, terete. Fruit black, glabrous. Seeds 2, with a smooth testa. Cotyledons corrugated. Fruit unknown.

*Alp Myrcia.* Shrub 3 feet.

60 *M. MYRTILLIFOLIA* (D. C. l. c.) peduncles axillary, longer than the leaves, paniculately corymbose, few-flowered, and as well as the calyxes glabrous; bracteoles nearly wanting, branchlets rather pubescent; leaves oval, coriaceous, pale, glabrous, full of pellucid dots when young, reticulately veined beneath, smoothish in the adult state, opaque, and therefore dotted. *h. S.* Native of Brazil, in the province of Bahia. *Myrtus myrtillifolia*, Mart. herb. Very like *M. ramulosa*, but differs in the leaves being more coriaceous, pale; in the racemes being more crowded and corymbose, with hardly any bracteoles.

*Myrtle-leaved Myrcia.* Tr. 20 to 30 ft.

61 *M. ? RAMULOSA* (D. C. l. c.) racemes axillary, 3-5-flowered about the length of the leaves; bracteoles setaceous, under the pedicels, and shorter than them; calycine lobes short; leaves oval, full of pellucid dots, membranous, reticulately veined glabrous, but rather villous on the nerve beneath, and on the margins and petioles; branches compressed, clothed with velvety

hairs beneath. *h. S.* Native of Brazil. *Myrtus virgulosa*, Mart. herb. but not of Swartz. Flowers small, glabrous. Fruit unknown. Leaves 5-6 lines long, 4-5 lines broad.

*Vár. β, multiflora* (D. C. l. c.) racemes panicled, 12-20-flowered, longer than the leaves. Perhaps distinct from var. *α*.

*Branched Myrcia.* Sh. 4 to 6 ft.

62 *M. AMAZÓNICA* (D. C. l. c.) peduncles shorter than the leaves, rather hairy, racemously panicled; fruit nearly spherical, glabrous, crowned by the lobes of the calyx, which are short and obtuse; leaves elliptic-oblong, bluntly acuminate, opaque, stiffish, reticulately veined, glabrous on both surfaces; branchlets pubescent. *h. S.* Native of Brazil, on the banks of the river Amazon. *Myrtus Amazonica*, Mart. herb. Leaves nearly 3 inches long and 1 broad; petioles 2 lines long. Fruit 1-seeded, and globose; 2-seeded and somewhat didymous, or 3-seeded and bluntly 3-sided. Seeds with a smooth testa. Cotyledons corrugated. Flowers unknown.

*Amazon Myrcia.* Sh. 4 to 6 ft.

63 *M. FENESTRATA* (D. C. prod. 3. p. 251.) peduncles axillary, rather panicled, one half shorter than the leaves, rather hairy; fruit ovate-globose, smoothish, crowned by the lobes of the calyx, which are small and bluntish; leaves nearly sessile, ovate, obtuse at the base and somewhat cordate, acuminate at the apex, full of pellucid dots; lateral nerves at equal distances, and blistered between the veins: middle nerve hispid beneath; branchlets 2-edged, rather hairy. *h. S.* Native of Brazil, on the banks of rivers, at Ega. *Myrtus fenestrata*, Mart. Leaves 3 inches long and 1½ inch broad. Seeds 2. Cotyledons corrugated. Fruit unknown.

*Windowed Myrcia.* Sh. 4 to 6 ft.

64 *M. PERTUSA* (D. C. l. c.) peduncles axillary, twice shorter than the leaves, panicled, somewhat compressed; calyxes pubescent, obtusely 5-lobed; leaves oblong, long-acuminate, somewhat attenuated at the base, full of pellucid dots, glabrous on both surfaces; branchlets terete, hardly pubescent. *h. S.* Native of Brazil. Allied to *M. fenestrata*, but the branches are not 2-edged, and the leaves are one half narrower, nearly all glabrous, or bearing small pili on the nerves beneath. Flowers nearly of *M. pseudo-mini*. Fruit unknown.

*Pertuse-leaved Myrcia.* Sh. 4 to 6 ft.

65 *M. LEUCODENDRON* (D. C. prod. 3. p. 251.) peduncles axillary, and nearly terminal, panicled, clothed with minute, adpressed pubescence, equal in length to the leaves; calycine lobes glabrous, roundish, rather irregular; leaves oval-oblong, somewhat acuminate, membranous, full of pellucid dots, rather puberulous when young as well as the branchlets, but glabrous in the adult state. *h. S.* Native of Brazil. A tree 30 feet high, with the bark of the branches white. Leaves 2½ inches long, 9-10 lines broad. Petioles 1-2 lines long. Flowers almost of *M. nigræscens*. Fruit unknown.

*White-tree Myrcia.* Tr. 30 ft.

66 *M. SPHÆROCARPA* (D. C. l. c.) peduncles axillary, cymosely panicled, a little longer than the leaves; fruit globose, crowned by the lobes of the calyx, which are short and obtuse; leaves elliptic, cuneate at the base, bluntly acuminate at the apex, full of pellucid dots, quite glabrous on both surfaces, as well as the branches and panicles. *h. S.* Native of Brazil. Habit of *Eugenia Candolleana*, but differs in the peduncles being longer, in the fruit being globose, and in the flowers being 5-cleft. Leaves nearly 2 inches long and 8-9 lines broad; petioles 2 lines long. Fruit one half smaller than a pea.

*Round-fruited Myrcia.* Sh. 4 to 6 ft.

67 *M. OBLONGATA* (D. C. l. c.) peduncles axillary, longer than the leaves, panicled at the apex, smoothish; lobes of calyx small, roundish; fruit globose; leaves oblong, obtuse, coriaceous, with a few pellucid dots, and are as well as the branchlets

quite glabrous; lateral nerves almost wanting. *h. S.* Native of Brazil, in woods, in the province of St. Paul. *Myrtus oblongata*, Mart. herb. Very nearly allied to *M. sphærocarpa*, and *M. elegans*. Flowers unknown. Leaves nearly 2 inches long and 6 lines broad. Floral leaves hardly an inch long. Seeds with a smooth testa. Cotyledons contortuplicate.

*Oblong Myrcia.* Tree.

68 *M. ELEGANS* (D. C. l. c.) panicles axillary and terminal, loose, twice the length of the leaves, and are as well as the flowers glabrous; bractees linear-oblong; bracteoles almost wanting; fruit globose, crowned by the lobes of the calyx, which are short and obtuse; leaves oval, obtuse, opaque, stiff, and are as well as the branches glabrous, beset with impressed dots on the upper surface, when young pilose. *h. S.* Native of Brazil, in the province of Para. *Myrtus elegans*, Mart. herb. Leaves 2 inches long, 10-14 lines broad. Petioles 2 inches long. Flowers small. Fruit size of a pea. Seeds 2. Cotyledons corrugated. Allied to *M. Amazonicum*.

*Elegant Myrcia.* Shrub.

69 *M. CAMARÆANA* (D. C. l. c.) peduncles axillary and nearly terminal, hardly longer than the leaves, panicled, and are as well as the flowers glabrous; fruit spherical, dotted; calycine lobes deciduous after flowering; leaves oval, bluntly and shortly acuminate, full of pellucid dots, hardly veiny, glabrous on both surfaces as well as the branchlets. *h. S.* Native of Brazil, in the province of Bahia, near Enginhoda Ponte. *Myrtus Camaræana*, Mart. herb. Leaves 2 inches long and 1 broad. Fruit about the size of a pea, marked with a circular areola. Seeds 2, with a friable smooth testa. Cotyledons contortuplicate.

*Camara's Myrcia.* Tr. 10 to 15 ft.

70 *M. SPIXIANA* (D. C. l. c.) peduncles axillary, loosely panicled, longer than the leaves; bractees and bracteoles almost wanting; leaves elliptic-obovate, rather cuneate at the base, obtuse at the apex, reticulately veined, with a few pellucid dots, rather membranous, quite glabrous on both surfaces, as well as the branches, panicles, and flowers. *h. S.* Native of Brazil, at the river Amazon. Leaves 2 inches long and an inch broad. Petioles hardly 2 lines long. Panicle 3-4 inches long. Flowers small. Lobes of calyx obtuse. Style exserted. Fruit unknown.

*Spix's Myrcia.* Shrub.

71 *M. COSTATA* (D. C. prod. 3. p. 252.) panicles axillary and terminal, many-flowered, length of the leaves, hardly pubescent; tube of calyx clothed with white pubescence; lobes of calyx bluntish, smoothish; leaves ovate, acuminate, full of pellucid dots, membranous, glabrous on both surfaces, feather-nerved and reticulately veined. *h. S.* Native of Brazil, near Bahia. *Myrtus costata*, Mart. herb. Allied to *M. pseudo-mini*. Leaves 2 inches long and an inch broad. Petioles 2-3 lines long. Flowers small. Bractees oblong, deciduous, acute, under the pedicels. Fruit unknown.

*Ribbed-leaved Myrcia.* Tr. 10 to 12 ft.

72 *M. POLYANTHA* (D. C. l. c.) peduncles panicled, axillary and terminal, crowded, equal in length to the leaves, glabrous, as well as the calyxes and branchlets; leaves ovate, bluntly acuminate, coriaceous, full of pellucid dots, quite glabrous on both surfaces, smooth on the upper surface, and full of impressed dots. *h. S.* Native of Brazil, in the deserts in the province of Bahia. *Myrtus polyantha*, Mart. herb. Leaves 15-18 lines long, and 8-9 broad. Flowers small. Allied to *M. ambigua* and *M. pseudo-mini*, but quite glabrous. Fruit unknown.

*Many-flowered Myrcia.* Shrub.

73 *M. AMBIGUA* (L. C. l. c.) peduncles panicled, axillary and terminal, longer than the leaves, and are, as well as the calyxes and branchlets, pubescent; leaves oval, acuminate, with a few pellucid dots, having the veins hardly prominent, smoothish above, and full of impressed dots, glabrous on both surfaces. *h. S.*

Native of Brazil, in the provinces of the mines. *Eugenia Mini* var.? Mart. herb. Intermediate between *M. pseudo-mini* and *M. multiflora*. Inflorescence of *M. multiflora*, but rather downy. Fruit unknown.

Var.  $\beta$ , *pauciflora* (D. C. l. c.) leaves rather narrower; panicles shorter, few-flowered.  $\frac{1}{2}$  S. Native of Brazil. Perhaps the same as *Eugenia Mini*? Mart. herb.

*Ambiguous Myrcia*. Shrub.

74 *M. PSEUDO-MINI* (D. C. l. c.) peduncles axillary, opposite, panicle, longer than the leaves or shorter; calyx and buds villous; leaves elliptic-oblong, gradually acuminate, shining above, hardly reticulated, full of pellucid dots when examined by a lens; flowers small, 5-cleft.  $\frac{1}{2}$  S. Native of Brazil, at Rio Janeiro. *Eugenia Mini*, Mart. herb. Very like the plant figured by Aublet, but differs in the flowers being 5-cleft. Leaves hardly reticulated above, at length nearly smooth; lower ones small, roundish, shorter than the peduncles; upper ones large, rather longer than the peduncles. Petioles 2 lines long. Fruit ovate-globose, blackish, 2-seeded, crowned by the lobes of the calyx, which are very blunt, and somewhat conniving. Seeds smooth. Cotyledons contortuplicate.

*Pseudo-mini Myrcia*. Shrub.

75 *M. CORYMBOSA* (D. C. l. c.) panicles terminal, oppositely branched, subcorymbose; bracteas and bracteoles almost wanting; leaves oval, bluntly acuminate, opaque, quite glabrous, as well as the branches, panicles, and flowers.  $\frac{1}{2}$  S. Native of Brazil, at Rio Tapura. Leaves 3 inches long, and 15-18 lines broad. Petioles hardly 2 lines long. Flowers small, quinquefid. Fruit unknown.

*Corymbose-flowered Myrcia*. Shrub.

76 *M. LAURIFOLIA* (D. C. l. c.) panicles axillary and nearly terminal, shorter than the leaves or longer, glabrous, as well as the flowers; bracteas linear-oblong; calycine lobes roundish; leaves oval, obtuse, stiff, opaque, nearly veinless except the middle nerve, and are, as well as the branches, glabrous.  $\frac{1}{2}$  S. Native of Brazil, in the province of Para. *M. laurifolia*, Mart. herb. Leaves pale, 2 inches long, nearly one inch broad. Petioles 2 lines long. Flowers small. Fruit unknown.

*Laurel-leaved Myrcia*. Shrub.

77 *M. PALLENS* (D. C. l. c.) peduncles panicle, axillary and nearly terminal, a little longer than the leaves, and are, as well as the calyxes and branchlets, glabrous; leaves exactly oval, obtuse at both ends, glabrous, glaucous, full of pellucid dots, as well as being dotted with brown beneath.  $\frac{1}{2}$  S. Native of Brazil, in the provinces of the Mines. *Myrtus torta*, Mart. herb. Leaves 9-10 lines long, and 5-6 lines broad, finely veined. Bracteoles small, setaceous; lobes of calyx obtuse. Shrub twisted, 10 feet high. Fruit unknown.

*Pale Myrcia*. Shrub 10 ft.

78 *M. DECORTICATA* (D. C. l. c.) peduncles axillary and nearly terminal, rather longer than the leaves, panicle, rather hairy; lobes of calyx orbicular, white, and are, as well as the tube, glabrous; leaves ovate-elliptic, short-acuminate, full of pellucid dots when young, opaque stiffish and glabrous in the adult state; branchlets puberulous, separating from the epidermis.  $\frac{1}{2}$  S. Native of Brazil. *Myrtus decorticata*, Mart. herb. Leaves hardly acute, 3 inches long, and  $1\frac{1}{2}$  inch broad, with somewhat revolute margins. Petioles 1-2 lines long, at length transversely subrimose. Petals 5, orbicular. Seeds 2, according to Martius.

*Decorticated Myrcia*. Tree 10 ft.

79 *M. LASIOPUS* (D. C. prod. 3. p. 253.) peduncles axillary and terminal, crowded into a panicle, many-flowered, longer than the leaves, and are, as well as the bracteas, hairy; calyxes glandular, bluntly 5-lobed; leaves ovate, obtuse at both ends, coriaceous, opaque, glabrous, as well as the branches.  $\frac{1}{2}$  S. Na-

tive in fields in the provinces of the Mines. *Eugenia lasiopus*, Mart. herb. Allied to *M. pubescens* on the one hand, and to *M. decorticata* on the other? Leaves an inch and a half long. Petioles a line long. Flowers small, crowded. Fruit unknown. There are varieties of this species with very blunt, and acutish leaves, which are obtuse at the base, but hardly cordate.

*Hairy-peduncled Myrcia*. Shrub 8 to 10 ft.

80 *M. DURIVSCULA* (Mart. herb. ex D. C. prod. 3. p. 253.) peduncles panicle, axillary and nearly terminal, rather shorter than the leaves, and are, as well as the bracteas, hispid; calyxes glandular, glabrous, bluntly 5-lobed; leaves broad, ovate, obtuse at both ends, coriaceous, opaque, and are, as well as the branches, glabrous.  $\frac{1}{2}$  S. Native of Brazil, in the province of Bahia. Perhaps merely a variety of *M. lasiopus*, but the panicles are shorter and less hairy.

*Hardish Myrcia*. Shrub 8 to 10 ft.

81 *M. PRUNIFOLIA* (D. C. l. c.) peduncles supra-axillary, equal in length to the leaves or longer, panicle, and are, as well as the branchlets, clothed with soft hairs; calyx with a villous globose tube, and ovate ciliated spreadingly reflexed lobes; leaves oval or ovate or obovate, full of pellucid dots, membranous, glabrous on the upper surface in the adult state.  $\frac{1}{2}$  S. Native of Brazil, in the province of Minas Geraes. *Myrtus prunifolia*, Mart. herb. A very variable species, or many are confused under this name.

Var.  $\alpha$ , *angustior* (D. C. l. c.) leaves oval, attenuated at both ends; panicle villous, with its branches compressed and divaricating.

Var.  $\beta$ , *obovata* (D. C. l. c.) leaves broadly obovate; panicle pubescent, sparingly branched, equal in length to the leaves; fruit globose, irregularly hollowed out into empty cells, but this is probably occasioned by insects.

Var.  $\gamma$ , *ovata* (D. C. l. c.) leaves broadly ovate, rather opaque; panicle hardly pubescent, longer than the leaves; fruit didymous, globose. Seeds 2, with a brittle testa. Cotyledons contortuplicate.

*Plum-leaved Myrcia*. Shrub.

82 *M. CURATELLÆFOLIA* (D. C. l. c.) panicle corymbose, nearly terminal; peduncles compressed, clothed with canescent velvety down; fruit globose, velvety, crowned by the calycine lobes, which are short, broad, and spreading; leaves obovate, obtuse, somewhat cuneate at the base, membranous, opaque, smoothish above, and clothed with canescent velvety down beneath.  $\frac{1}{2}$  S. Native of Brazil, in fields at Taubate, in the province of St. Paul. *Myrtus curatellæfolia*, Mart. herb. Fruit divided into many empty cells inside.

*Curatella-leaved Myrcia*. Shrub 4 to 6 ft.

83 *M. PILOSA* (D. C. l. c.) peduncles axillary, twice the length of the leaves, racemose or somewhat panicle, and are, as well as the branches and calyxes, hairy; calyx with a globose tube, and ovate, acute, ciliated, spreadingly reflexed lobes; leaves oblong or somewhat ovate, rather opaque, clothed with villi when in a young state, but glabrous on the upper surface in the adult state, and velvety beneath, but at length smoothish.  $\frac{1}{2}$  S. Native of Brazil. *Myrtus pilosa*, Mart. herb. Fruit globose, crowned by the spreading calyx, divided inwardly into 15-20 compartments, some of them empty, and some of them filled with seeds. Seed with a hard testa. This species is very doubtful; it is probably a *Myrtus* or a *Myrcia*, or a new genus, or the fruit is probably deformed by insects.

*Pilose Myrcia*. Shrub 4 to 6 ft.

84 *M. SERICEA*; erect, much branched; leaves oblong, acuminate, glabrous above, and clothed with white silky down beneath, on short petioles; racemes panicle, axillary; peduncles and branches tomentose.  $\frac{1}{2}$  S. Native of Maranhão, in Brazil.

*Silky Myrcia*. Shrub 6 to 8 ft.

85 *M. LÆVIS*; branched; leaves oblong, acuminate, glabrous on both surfaces; racemes panicle, terminal, and axillary. *h. S.* Native of Maranh, in Brazil.

*Smooth Myrcia.* Shrub 6 to 8 ft.

86 *M. FERRUGINEA*; branched; leaves oblong, acuminate, coriaceous, canescent above, rusty beneath; racemes panicle, axillary, and terminal. *h. S.* Native of Maranh, in Brazil.

*Rusty Myrcia.* Shrub 6 to 8 ft.

87 *M. PUBESCENS*; branched; leaves oblong, acuminate, pubescent above, and silky beneath; racemes panicle, axillary and terminal, pubescent. *h. S.* Native of Maranh, in Brazil.

*Pubescent Myrcia.* Shrub 4 to 6 ft.

88 *M. ANGUSTA*; leaves narrow, ovate-lanceolate, glabrous on both surfaces; racemes panicle, axillary and terminal. *h. S.* Native of Maranh, in Brazil.

*Narrow-leaved Myrcia.* Shrub 4 to 6 ft.

*b. Leaves sessile, cordate at the base.*

89 *M. SUBCORDATA* (D. C. l. c.) peduncles compressed, axillary, nearly terminal, panicle, disposed in a kind of corymb, glabrous, as well as the calyxes; leaves sessile, bluntly cordate, broadly ovate, obtuse, coriaceous, opaque, glabrous on both surfaces in the adult state, but when young covered with deciduous down beneath. *h. S.* Native of Brazil, in the provinces of the Mines. Calycine lobes broad, obtuse, short. Fruit globose, crowned by the circular calyx. Seeds shining, very aromatic. Cotyledons contortuplicate. Leaves 12-15 lines long, and 10-12 lines broad. Flowers unknown.

*Subcordate-leaved Myrcia.* Shrub 3 to 4 ft.

90 *M. VARIABILIS* (D. C. prod. 3. p. 254.) peduncles axillary and nearly terminal, longer than the leaves, panicle, and are, as well as the branches, glabrous and somewhat compressed; leaves sessile, half stem-clasping, cordate, coriaceous, dotless, glabrous, reticulately veined, with the veins elevated on the upper surface. *h. S.* Native of Brazil, in the provinces of the Mines. *Myrtus variabilis*, Mart. herb. Calycine lobes broad, obtuse, glabrous. Allied to *M. dealbata*, and having its leaves and branchlets clouded with white as in that species; and is perhaps merely a variety of it with different formed leaves.

*Var. α, ovatifolia* (Mart. herb.) leaves ovate-lanceolate, bluntly acuminate. *h. S.* Leaves an inch and a half long, and 8-9 lines broad.

*Var. β, intermedia* (Mart. herb.) leaves ovate, bluntish. *h. S.* Leaves an inch long, and 6-7 lines broad.

*Var. γ, nummularia* (D. C. l. c.) leaves nearly orbicular, somewhat emarginate at the apex. *h. S.* Leaves nearly an inch broad, and about the same in length.

*Variable Myrcia.* Shrub.

91 *M. DEALBATA* (D. C. l. c.) peduncles axillary and terminal, panicle, longer than the leaves, and are, as well as the bracteas, glabrous, but sprinkled with white powder; leaves sessile, cordate, half stem-clasping, coriaceous, stiff, reticulately veined, glabrous, pale. *h. S.* Native of Brazil, in the province of Minas Geraes. *Myrtus dealbata*, Mart. herb. Leaves an inch long, and 5 lines broad, dotless. Calycine lobes broad, when young rather ciliated which examined by a lens, but at length glabrous, acutish. Petals roundish, glandular. Inflorescence nearly as in *M. coccinea*. Fruit unknown.

*Whitened Myrcia.* Shrub.

92 *M. RACEMULOSA* (D. C. l. c.) peduncles axillary, racemose, twice the length of the leaves, 3-7 flowered, glabrous; branchlets hairy; leaves sessile, cordate, obtuse, coriaceous, quite glabrous, reticulately veined, dotted, rather opaque. *h. S.* Native of Brazil, in the provinces of the Mines. *Myrtus racemulosa*, Mart. herb. Leaves 3-4 lines long, and 3 lines broad, margined by a nerve. Flowers small, glabrous. Calycine lobes short, broad, blunt, glandular. A very distinct species, with the habit of *Baccharis*. Inflorescence nearly as in *M. ramulosa*. Fruit unknown.

*Racemulose-flowered Myrcia.* Shrub 2 to 3 ft.

93 *M. SCUTULIFERA* (D. C. l. c.) peduncles axillary and nearly terminal, panicle, glabrous, many-flowered, 4 times the length of the leaves; leaves sessile, cordate-ovate, reticulately veined, coriaceous, opaque, glabrous; branchlets rather hairy. *h. S.* Native of Brazil, in fields in the provinces of the Mines. *Myrtus scutulifera*, Mart. herb. Very like *M. racemulosa*, but the flowers are more numerous but similar, the leaves are also similar, but longer, and the branchlets less hairy. It is probably only a variety of *α*.

*Saucer bearing Myrcia.* Shrub.

94 *M. ALBO-TOMENTOSA* (D. C. l. c.) peduncles axillary and terminal, panicle, longer than the leaves, and are, as well as branches and bracteas, hairy; calyxes very hairy; leaves sessile, cordate, ovate, bluntish, coriaceous, opaque, glabrous above, densely clothed with velvety tomentum beneath. *h. S.* Native of Brazil, at the river St. Francisco, in the provinces of the Mines. *Myrtus albo-tomentosa*, Mart. herb. Leaves 8-10 lines long, and 7-9 lines broad, when young villous beneath. Calycine lobes blunt. Fruit unknown.

*White-tomentose Myrcia.* Shrub.

95 *M. LASIANTHA* (D. C. l. c.) peduncles axillary and nearly terminal, collected into a panicle, intermixed with leaves, and are, as well as the branchlets and calyxes, very hairy; leaves sessile, half stem-clasping, cordate, ovate, acutish, coriaceous, opaque, villous beneath, smooth and glabrous above. *h. S.* Native of Brazil, in the provinces of the Mines. *Myrtus lasiantha*, Mart. herb. Leaves 5-6 lines long, and 4-5 broad, crowded, somewhat reticulately veined, and villous on the upper surface. Panicle clothed with soft hairs, many-flowered. Calycine lobes broad, bluntish. Fruit unknown.

*Woolly-flowered Myrcia.* Shrub.

§ 2. *Oocarpæ* (from *οον*, *oon*, an egg, and *καρπος*, *karpōs*, a fruit; in reference to the shape of the fruit). D. C. prod. 3. p. 254. Fruit ovate or oblong.

96 *M. BERBERIS* (D. C. l. c.) peduncles panicle, axillary or terminal, shorter than the leaves; fruit oblong, rather elliptic, crowned by the short obtuse calycine lobes; leaves elliptic, terminated in a long abrupt acumen each, coriaceous, when young full of pellucid dots, but in the adult state opaque, and shining above, quite glabrous on both surfaces, as well as the branchlets and panicles. *h. S.* Native of Brazil, at the river Tapura; and of French Guiana. *Myrtus Berberis*, Mart. herb. Leaves 4 inches long, and hardly an inch and a half broad. Petioles 2-3 lines long. Panicle 2-3 inches long. Bracteoles small, deciduous. Fruit 3 lines long, 1-seeded. Cotyledons corrugated.

*Berberry-like Myrcia.* Shrub.

97 *M. FORMOSIANA* (D. C. prod. 3. p. 255.) peduncles panicle, rather shorter than the leaves, axillary or nearly terminal; fruit ovate, crowned by the lobes of the calyx, which are short and obtuse; leaves elliptic-oblong, gradually acuminate, coriaceous, opaque above, shining a little on both surfaces, and quite glabrous, as well as the panicles and branchlets, which are compressed. *h. S.* Native of Brazil, in the province of St. Paul, in woods on the mountains. Very nearly allied to *M. Berberis*, but differs in the leaves being gradually, not abruptly acuminate, and in the fruit being more ovate. Seed one. Cotyledons corrugated.

*Formosa Myrcia.* Shrub.

98 *M. ROSTRATA* (D. C. l. c.) peduncles axillary, racemose, shorter than the leaves, 5-7-flowered; pedicels distant, opposite; calyx bluntly 5-lobed, clothed with adpressed down; fruit obovate; leaves lanceolate, much acuminate, full of pellucid dots, shining above and glabrous on both surfaces, as well as on the branchlets. *h. S.* Native of Brazil, in the province of St. Paul. *Myrtus rostrata*, Mart. herb. Leaves stiffish, 3 inches long, and 7-8 lines broad. Peduncles an inch long. Fruit 4 lines long, crowned by the calyx. Seeds unknown.

*Beaked Myrcia.* Tree 10 to 12 ft.

99 *M. ERIOPUS* (D. C. l. c.) peduncles panicled, axillary, a little longer than the leaves, and are, as well as the branches, hispid; tube of calyx oblong, hispid; leaves oval-oblong, acuminate, when young full of pellucid dots, clothed with long silky velvety down, opaque in the adult state, and smoothish. *h. S.* Native of Brazil, in the province of Rio Janeiro, in woods. *Myrtus eriopus*, Mart. herb. Leaves  $1\frac{1}{2}$  inch long, and 6 lines broad. Petioles 2 lines long. Calycine lobes short, obtuse.

*Woolly-peduncled Myrcia.* Shrub 8 to 10 ft.\*\*\* *Species natives of Columbia.*

100 *M. UMBELLULIFERA* (D. C. prod. 3. p. 255.) peduncles 3-6-flowered, solitary or twin, or 2-4 seated on a short common peduncle; flowers rather umbellate, with the middle one usually sessile; calyxes 5-cleft; leaves elliptic, obtuse at both ends, somewhat emarginate at the apex, coriaceous, reticulated, glabrous, rather silvery beneath; branchlets finely tomentose. *h. S.* Native of Cumana, in cultivated places. *Myrtus umbellulifera*, H. B. et Kunth, nov. gen. amer. 6. p. 135. Flowers about the size of those of *Cratæga oxyacantha*. Stamens about 140 in number. Ovarium 2-3-celled; cells 4-6-ovulate. Fruit and seeds unknown.

*Umbel-bearing Myrcia.* Shrub.

101 *M. ? CLUSIÆFOLIA* (D. C. l. c.) panicles axillary, depauperated, equal in length to the leaves; calyx 5-cleft; leaves elliptic, rounded at the apex, and sometimes emarginate, running down into the petioles, coriaceous, reticulated and shining, and are, as well as the branches, glabrous. *h. S.* Native of South America. *Myrtus clusiæfolia*, H. B. et Kunth, nov. gen. amer. 6. p. 138. Leaves about 2 inches long, and about 17-21 lines broad. Petioles 3-4 lines long. Fruit globose, about the size of a pea, few-seeded. Seeds unknown. Said to be like *M. Pimenta* and *M. coriacea*.

*Clusia-leaved Myrcia.* Shrub.

102 *M. ? POLYANTHA* (D. C. l. c.) panicles axillary and terminal, branched; branchlets 1-3-flowered, compressed, clothed with fine silky down; leaves oblong, acuminate, acute at the base, obsoletely reticulated, coriaceous, glabrous above and shining, puberulous beneath, as well as on the branchlets. *h. S.* Native of South America, on the banks of the rivers Atabapo and Orinoco. *Myrtus polyantha*, H. B. et Kunth, nov. gen. amer. 6. p. 140. t. 545. Ovarium 2-celled; cells 2-ovulate. Fruit and seeds unknown.

*Many-flowered Myrcia.* Shrub.

103 *M. ? COMPLICATA* (D. C. l. c.) panicles axillary and terminal, branched; branchlets 1-3-flowered, compressed, clothed with fine silky down; leaves oblong, acuminate, rounded at the base, complicated, coriaceous, glabrous, shining, and are, as well as the branches, puberulous. *h. S.* Native of New Granada, at San Felipe. *Myrtus complicata*, H. B. et Kunth, nov. gen. amer. 6. p. 141. Ovarium 2-celled; cells 2-ovulate as in *M. polyantha*. Said to be allied to *M. deflexa* of Poir.

*Complicated-leaved Myrcia.* Shrub 8 to 10 ft.

104 *M. COCCOLOBÆFOLIA* (D. C. l. c.) panicles axillary, depauperated, compressed, glabrous, about equal in length to the leaves; calyx 4-5-cleft; leaves roundish-ovate, obtuse, rounded at the base, coriaceous, reticulated, shining, and are, as well as the branches, glabrous. *h. S.* Native of New Granada, near Ibaguë. *Myrtus coccolobæfolia*, H. B. et Kunth, nov. gen. amer. 6. p. 139. Flowers unknown. Berry nearly globose, glabrous, red, 3-celled, acid; cells few-seeded. Embryo like that of *M. bracteolaris*.

*Coccoloba-leaved Myrcia.* Shrub 5 ft.

105 *M. BILLARDIANA* (D. C. l. c.) peduncles axillary, panicled, glabrous, about equal in length to the leaves; flowers 5-lobed; leaves oblong, acuminate, acute at the base, on very short petioles, membranous, reticulated, glabrous. *h. S.* Native of New Andalusia, on Mount Cocollar. *Myrtus Billardiana*, H. B. et Kunth, nov. gen. amer. 6. p. 139. t. 544. Flowers unknown. Berry nearly globose, 1-2-seeded. Cotyledons foliaceous, corrugated. Radicle long, descending. Calyx 4-lobed from the figure, but from the description 5-lobed.

*La Billardier's Myrcia.* Shrub 10 to 12 ft.

106 *M. ? MOLLIS* (D. C. prod. 3. p. 256.) panicles axillary and terminal, branched, clothed with fuscous tomentum; calyx 5-cleft; leaves oblong, acuminate, rounded at the base, coriaceous, reticulated, glabrous above and shining, but clothed with pubescent tomentum beneath, and on the branches. *h. S.* Native of New Granada, near Pasto. *Myrtus mollis*, H. B. et Kunth, nov. gen. amer. 6. p. 141. Flowers hardly known. Fruit and seeds unknown. Said to be allied to *Eugenia deflexa*.

*Soft Myrcia.* Shrub 8 to 12 ft.

107 *M. ACUMINATA* (D. C. l. c.) panicles axillary, solitary and terminal, tern, branched, exceeding the leaves; calyx 4-5-cleft; leaves ovate-oblong, long-acuminate, obtuse at the base, reticulated, coriaceous, shining, pubescent on the nerve, but when young silky. *h. S.* Native of New Granada, between Mariquita and St. Anna. *Myrtus acuminata*, H. B. et Kunth, nov. gen. amer. 6. p. 141. Ovarium turbinate, 2-celled; cells 2-seeded. Embryo like that of *M. bracteolaris*.

*Acuminate-leaved Myrcia.* Shrub 8 to 10 ft.

108 *M. ? HUMBOLDTIANA* (D. C. l. c.) panicles axillary, solitary, somewhat branched, divaricate, clothed with rusty tomentum, shorter than the leaves; calyxes 5-parted; leaves ovate-oblong, terminating in a narrow acumen, acute at the base, coriaceous, reticulated, shining, puberulous beneath; branches tomentose. *h. S.* Native on the banks of the Orinoco. *Myrtus deflexa*, H. B. et Kunth, nov. gen. amer. 6. p. 142. Leaves 6-7 inches long, and 2 inches broad. Ovarium 2-celled; cells 2-seeded. In the immature seeds the cotyledons are foliaceous, complicated, and perhaps afterwards corrugated.

*Humboldt's Myrcia.* Shrub 8 to 10 ft.

109 *M. XYLOPIOIDES* (D. C. l. c.) peduncles axillary, cymosely panicled, shorter than the leaves; leaves lanceolate, terminating in a narrow acumen each, obtuse at the base, on short petioles, membranous, reticulated, downy beneath, as well as on the branches. *h. S.* Native of New Granada, near the town of Buga, in the province of Popayan. *Myrtus xylopioides*, H. B. et Kunth, nov. gen. amer. 7. p. 257. t. 657. Calyx 5-lobed. Fruit elliptic, 1-seeded. Cotyledons fleshy, corrugated.

*Xylopia-like Myrcia.* Shrub 8 to 10 ft.

110 *M. ? LONGIFOLIA* (D. C. l. c.) glabrous; leaves on very short petioles, large, oblong, acuminate, cuspidate, somewhat cordate, coriaceous, very shining; calyx 5-toothed; drupe pear-shaped, 1-seeded. *h. S.* Native in woods on the banks of the Orinoco. *Myrtus longifolia*, H. B. et Kunth, nov. gen. amer. 7. p. 258. Drupe 2-celled; cells 1-seeded. Structure of the flowers and seeds unknown.

*Long-leaved Myrcia.* Shrub 8 to 10 ft.

\*\*\*\* *Uncertain species.*

111 *M. MELASTOMOIDES* (D. C. l. c.) peduncles axillary, panicled, shorter than the leaves; leaves ovate, acutish, strongly 3-nerved, sessile, very opaque and glabrous. *h. S.* Native of Tobago. Flowers 5-cleft. Margin of calyx permanent, usually 5-toothed. Fruit nearly globose, 1-seeded. Seeds large, shining. Cotyledons foliaceous, corrugated.

*Melastoma-like Myrcia.* Shrub 5 to 10 ft.

112 *M. ? TRIPTYCHA* (D. C. l. c.) peduncles axillary, 3-5-flowered, shorter than the leaves; flowers 5-cleft, middle one sessile, lateral ones pedicellate; bractæas linear at the base of the calyx; leaves ovate-lanceolate, acute, full of pellucid dots; branchlets tetragonal, rather pubescent. *h. S.* Native country unknown. Leaves nearly of *M. communis* var. *Romana*. Lobes of calyx acute. Fruit and seeds unknown.

*Three-flowered Myrcia.* Tree 10 to 15 ft.

113 *M. ? VERNICOSA* (D. C. l. c.) peduncles axillary, 3-5-flowered, a little longer than the leaves; calyx bluntly and repandly 5-toothed; leaves oval, obtuse at both ends, nearly sessile, shining on both surfaces, and as if they were varnished above; branches and peduncles glabrous. *h. S.* Native of South America. Leaves 20 lines long, and 12-14 broad, when young furnished with pellucid dots, but opaque in the adult state. Pedicels opposite, distant. Fruit and seeds unknown.

*Varnished-leaved Myrcia.* Shrub 6 to 12 ft.

*Cult.* All the species of *Myrcia* are very like the common myrtle when in flower; they grow best in a mixture of loam, peat, and sand; and young cuttings will root readily if planted in a pot of sand, with a hand-glass over them.

XXIX. CALYPTRANTHES (from *καλυπτρα*, *calyptra*, a veil, and *ανθος*, *anthos*, a flower; in allusion to the operculum of the flower). Swartz, prod. fl. ind. occ. p. 917. t. 15. St. Hil. pl. usual. bras. t. 14. D. C. prod. 3. p. 256.—*Chytraculia* and *Suzygium*, P. Browne, jam. 239. and 240.—*Chytralia*, Adans. jam. p. 80.—*Calyptranthes*, Juss. dict. 6. p. 274. but not of Pet. Th. nor Blume.

*LIN. SYST.* *Icosandria, Monogynia.* Tube of calyx obovate; limb entire before flowering, but circumcised at the base at the time of flowering, constituting a lateral deciduous operculum. Petals wanting, or 2 or 3 small. Stamens numerous; filaments capillary; anthers small, round, 2-celled. Style one. Stigma simple. Ovary 2-3-celled; cells 2-seeded in the central angle. Berry 1-celled from abortion, 1-4-seeded.—Small trees, natives of the West Indies and Brazil. Leaves feather-veined. Peduncles axillary, many-flowered. Mature seeds not well known, but they are probably similar to those of *Myrcia*.

1 *C. OBSCURA* (D. C. prod. 3. p. 257.) leaves oval, acuminate, stiff, shining above, full of pellucid dots beneath, quite glabrous, as well as the branchlets, on short petioles; flowers 2-5 together, axillary, on short pedicels. *h. S.* Native of Brazil. *Psidium obscurum*, Mart. herb. Calyx with an obovate tube, having the limb irregularly ruptured after flowering. Allied to *C. rigidum*.

*Obscure Calyptranthes.* Shrub.

2 *C. RIGIDA* (Swartz, prod. fl. ind. occ. p. 923.) arborescent; leaves ovate, acute, convex, stiff, glabrous; peduncles axillary, simple, usually 3-flowered, glabrous. *h. S.* Native of Jamaica, on the higher mountains. Flowers small, white, nearly sessile on the tops of the peduncles. Berry minute, roundish, 1-seeded.

*Stiff Calyptranthes.* Tree 12 to 15 ft.

3 *C. CHYTRACULIA* (Swartz, prod. p. 79. fl. ind. occ. p. 921.) arborescent; leaves ovate, attenuated at the apex, stiffish, glabrous; peduncles axillary and terminal, trichotomous, panicled,

and are, as well as the flowers, clothed with rufous velvety down. *h. S.* Native of Jamaica, St. Thomas, and Guadeloupe, on the mountains. *Chytraculia arborea*, P. Browne, jam. 239. t. 37. f. 2. *Myrtus chytraculia*, Lin. amœn. 5. p. 398. Flowers small, glomerate, white. Berry dry, 1-seeded. *Eugenia pallens*, Poir. suppl. 3. p. 122. The specific name is derived from *χυτρα*, a vessel, in reference to the operculum of the flower.

*Chytraculia Calyptranthes.* Fl. March, May. Clt. 1778. Tree.

4 *C. SYZYCIUM* (Swartz, prod. p. 79. fl. ind. occ. p. 919.) arborescent; leaves ovate, obtuse, stiff; peduncles axillary, trichotomous, many-flowered, glabrous. *h. S.* Native of Jamaica, in arid calcareous places by the sea side. *Suzygium fruticosum*, Lin. amœn. 5. p. 398. Flowers on short pedicels. Berry roundish, black, 3-4-seeded. The specific name is derived from *συζυγος*, coupled, in reference to the manner in which the leaves are united in pairs.

*Coupled Calyptranthes.* Fl. May, July. Clt. 1779. Shrub 10 to 12 feet.

5 *C. MARTIUSIANA* (D. C. l. c.) leaves oval, attenuated at the base, bluntish at the apex, rather opaque, having the lateral nerves confluent at their tops, reticulated, glabrous on both surfaces, as well as on the branches; peduncles compressed, trifid at the apex, with the ramifications bearing 3 sessile approximate, bibracteate flowers at the apex. *h. S.* Native of Brazil, in woods on the road to Felisbert. Leaves 4 inches long, and 2 inches broad. Peduncles diverging, 1½ inch long. Lateral pedicels 4 lines long, and the middle one 6 lines long. Bractæoles glabrous, deciduous. Calyx villous. Flower-bud ovate, acute, separating transversely into a conical operculum. Stamens numerous. Fruit unknown.

*Martius's Calyptranthes.* Tree.

6 *C. ? ERIOPODA* (D. C. l. c.) leaves ovate, hardly petiolate, obtuse, coriaceous, opaque, glabrous; peduncles axillary, or nearly terminal, solitary or twin, a little branched, somewhat racemously spicate, shorter than the leaves, hairy from rufous villi; calyx villous; fruit globose, crowned by the neck of the calyx. *h. S.* Native of Brazil. *Myrcia eriopus*, Mart. herb. Fruit like that of *Myrcia*, but the calyx agrees with *Calyptranthes*. Leaves 15-18 lines long, and 10-12 lines broad.

*Woolly-footed Calyptranthes.* Tree.

7 *C. PULCHELLA* (D. C. l. c.) leaves obovate, cuneate at the base, obtuse at the apex, coriaceous, dotted beneath, when young full of pellucid dots, glabrous on both surfaces, and on the branches; peduncles axillary, angular, a little shorter than the leaves, bearing 5-9 flowers. *h. S.* Native of Brazil, in the provinces of the Mines. Flowers 3, approximate on the tops of the peduncles. Flower-bud obovate, furnished with small rufous pili at the base. Leaves 15-16 lines long, and 7-9 lines broad.

*Pretty Calyptranthes.* Tree.

8 *C. DENSA* (D. C. l. c.) leaves oval, acutish at the base, stiff, opaque, and are, as well as the branchlets, glabrous; peduncles axillary and terminal, corymbosely panicled, and are, as well as the branchlets, angular; fruit globose, crowned by the short truncate tube of the calyx. *h. S.* Native of Brazil, in the provinces of the Mines. Leaves nearly like those of *C. Chytraculia*, an inch long, and 6 lines broad. Fruit 2-seeded. Embryo pseudo-monocotyledonous. Flower-bud not seen.

*Dense-flowered Calyptranthes.* Tree.

9 *C. CONCINNA* (D. C. prod. 3. p. 258.) leaves elliptic-oblong, cuneate at the base, bluntish at the apex, full of pellucid dots, white from villi beneath, as well as on the branches, opaque in the adult state, and glabrous on both surfaces; peduncles axillary, opposite, bearing 3-5 flowers at the apex, in a kind of umbel. *h. S.* Native of Brazil. Leaves 2 inches long, 10 lines broad, nearly like those of *Myrcia oblongata*. Peduncles

15 lines long. Flowers larger than any other of the species. Fruit unknown.

*Neat Calyptranthès.* Tree.

10 *C. NIGRICANS* (D. C. l. c.) shrubby; leaves obovate, obtuse, stiff, opaque, and are, as well as the branches, glabrous; peduncles axillary or terminal, equal in length to the leaves, somewhat paniced. *h. S.* Native of Brazil. Leaves hardly petiolate, 2-3 inches long, and 15-18 lines broad. Flowers small. Flower-bud obovate, mucronate, blackish, as well as the whole plant.

*Blackish Calyptranthès.* Tree.

11 *C. ? LORANTHIFOLIA* (D. C. l. c.) leaves elliptic, obtuse, rather coriaceous, opaque, clothed with adpressed pubescence, as well as the branchlets, but glabrous above; peduncles twin, opposite, paniced, rising from the base of the branchlets, and are, as well as the flowers, clothed with adpressed rufous down. *h. S.* Native of Brazil, in fields in the province of St. Paul. Leaves 2 inches long, and 15 lines broad. Petioles 2-3 lines long. Racemes 2 inches long. Flowers tern, and as if they were operculated, from the bracteoles cohering at the apex.

*Loranthus-leaved Calyptranthès.* Tree.

12 *C. CUSPIDATA* (Mart. herb. ex D. C. prod. 3. p. 258.) leaves oval, narrowly acuminate, opaque, rather membranous, glabrous on both surfaces, as well as on the branches; peduncles axillary and terminal, loosely paniced, compressed, and are, as well as the calyxes, velvety from adpressed short rufous down. *h. S.* Native of Brazil, in the province of Rio Negro, in woods. Leaves 6 inches long, and 2 inches broad. Panicle shorter than the leaves, usually much branched from the base. Flower-bud obovate, dotted. Fruit unknown.

*Cuspidate Calyptranthès.* Tree.

13 *C. LUCIDA* (Mart. herb. ex D. C. l. c.) leaves elliptic-oblong, acuminate at both ends, petiolate, full of pellucid dots, glabrous on both surfaces, as well as on the branches, shining above; peduncles axillary, twin, paniced, a little shorter than the leaves, and are, as well as the calyxes, glabrous. *h. S.* Native of Brazil, in the province of Bahia. A tree 20 feet high, with white bark. Branchlets angular. Leaves about 2 inches long, and 9 lines broad.

*Shining Calyptranthès.* Tree 20 ft.

14 *C. AROMATICA* (St. Hil. pl. usul. bras. t. 14.) shrubby; leaves connate, oblong-elliptic, quite glabrous; peduncles axillary or terminal, twin, elongated, paniced. *h. S.* Native of Brazil, in woods about Rio Janeiro. Petals 2-3, small, greenish. The flower-buds are whitish and aromatic, and are used in Brazil as a succedaneum for cloves. An oil might be obtained from them equal to oil of cloves.

*Aromatic Calyptranthès.* Shrub.

15 *C. PANICULATA* (Ruiz et Pav. fl. per. syst. p. 131. prod. p. 74. t. 13.) leaves lanceolate-oblong, bluntly acuminate; racemes paniced, terminal. *h. S.* Native of Peru, in groves. Flowers very fragrant. Operculum conical. Berry 2-4-celled. A species not sufficiently known. Ruiz et Pav. fl. per. 4. t. 424.

*Paniced Calyptranthès.* Shrub 10 to 12 ft.

16 *C. ? LATERIFLORA* (D. C. prod. 3. p. 258.) spikes simple, rising from the old trunk or branches, villous; bractæas ovate, acute, concave, lower ones sessile; flowers sessile in the axils of the bractæas; leaves oblong, acuminate, opaque, quite glabrous on both surfaces. *h. S.* Native of Brazil, in the provinces of the Mines. Spikes 3-4 inches long, pedunculate, 11-15-flowered; flowers opposite, axillary, bibractæate. Flower-bud nearly globose, very villous, at length ruptured at the apex, not 4-5-lobed as in *Myrtus* and *Eugenia*, and not truly calyptrate as in *Calyptranthès*. Perhaps a new genus, but the expanded flowers, as well as the fruit, are unknown.

*Side-flowering Calyptranthès.* Tree 20 to 30 ft.

17 *C. ? BULLATA* (D. C. l. c.) branches minutely pubescent; leaves broad-lanceolate, obtuse, more or less blistered. *h. S.* Native of Honduras. *Myrtus bullata*, Salisb. prod. 354. This species is hardly known.

*Blistered Calyptranthès.* Shrub 12 to 14 ft.

*Cult.* See *Myrcia* for culture and propagation, p. 847.

XXX. SYZYGIIUM (the name is derived from συζυγος, *syzygos*, coupled; in allusion to the manner in which the branches and leaves are united by pairs). Gært. fruct. 1. p. 166. t. 33. but not of Browne. D. C. prod. 3. p. 259.—*Opa*, Lour. fl. coch. 309.—*Calyptranthès* spec. Willd.—*Eugenia* spec. Lam. Roxb.—*Calyptranthus*, Blume, bijdr. p. 1089.

LIN. SYST. *Icosandria*, *Monogynia*. Tube of calyx obovate; limb nearly entire or repandly lobed. Petals 4-5, roundish, joined into a calyptra, and as if they were forming a convex membranous circumcised operculum. Stamens numerous, free. Style one; stigma simple. Ovarium 2-celled; cells few-ovulate. Berry 1-celled, 1 or few-seeded. Seeds globose. Cotyledons large, thick, half hemispherical. Radicle small, inserted beneath the middle of the cotyledons, and concealed by them.—Trees or shrubs, natives of the Old World within the tropics. Leaves opposite, glabrous. Peduncles axillary and terminal, cymosely corymbose. This genus differs from *Calyptranthès* in the operculum being formed from the petals, not from the calyx; from *Caryophyllus* in the tube of the calyx being obovate or turbinate, not cylindrical, and with the lobes hardly distinct; and from *Eugenia* in the cotyledons being less closely conferruminated, and in the petals cohering into a calyptra.

§ 1. *Fruit globose or subglobose.*

1 *S. GUINEENSE* (D. C. prod. 3. p. 259.) leaves oblong-elliptic, acuminate at both ends, shining above and reticulated beneath; cymes trichotomous, corymbose, terminal; calyx 5-toothed. *h. S.* Native of Guinea and Senegal. *Calyptranthès Guineensis*, Willd. spec. 2. p. 974. This species is intermediate between *Jambosa* and *Syzygium*. Fruit unknown.

*Guinea Syzygium.* Tree.

2 *S. LATIFOLIUM* (D. C. l. c.) leaves broadly ovate, obtuse at both ends, somewhat emarginate at the apex, coriaceous, reticulated, on very short petioles; flowers nearly sessile, in lateral fascicles. *h. S.* Native of the Mauritius. *Calyptranthès*, Sieb. fl. maur. 2. no. 98. in this the leaves are 9 inches long and 5 broad.

*Broad-leaved Syzygium.* Tree.

3 *S. OBOVATUM* (D. C. l. c.) leaves obovate or oval, obtuse, coriaceous, on short petioles, feather-nerved, and somewhat reticulated; cymes numerous, on long peduncles, disposed in a terminal panicle; calyxes repand. *h. S.* Native of the Mauritius. *Eugenia obovata*, Poir. suppl. 3. p. 124. *Myrtus obovata*, Spreng. syst. 2. p. 436. *Calyptranthès Pollicina*, Willem. maur. p. 29. *Calyptranthès*, Sieb. fl. maur. no. 99. Leaves 5 inches long, and 3 inches broad. Berry globose, larger than a pea. Seeds 2, hemispherical. Cotyledons fleshy, conferruminated.

*Obovate-leaved Syzygium.* Tree.

4 *S. PANICULATUM* (D. C. l. c.) leaves oval, acuminate, feather-nerved, silky; cymes numerous, rather crowded, disposed in a terminal panicle; calyx repand. *h. S.* Native of the Island of Bourbon, where it is called *Bois à écorce blanche*. *S. paniculatum*, Gært. fruct. 1. p. 166. t. 33. ? *Jambolifera pendula*, Lin. ex Steud. *Eugenia paniculata*, Lam. dict. 3. p. 199. Branches with white bark. Petioles 5 lines long. Leaves 2 inches long, and an inch broad.

*Paniced Syzygium.* Tree.

5 *S. CYMOSUM* (D. C. l. c.) leaves ovate-lanceolate, acuminate, hardly feather-nerved, coriaceous; cymes axillary and

terminal, paniced; calyx rather repand. *h. S.* Native of the Mauritius and Bourbon. *Eugenia rhodomela*, Comm. *Eug. cymosa*, Lam. dict. 3. p. 199. *Myrtus cymosa*, Spreng. *Eug. nigrescens*, Poir. suppl. 3. p. 123. Branches brownish red. Leaves like those of the preceding species, but the flowers are larger.

*Cymose-flowered Syzygium.* Tree.

6 *S. GLOMERATUM* (D. C. prod. 3. p. 259.) leaves ovate, obtuse, coriaceous, on very short petioles, reticulately veined, one-nerved; cymes nearly terminal, crowded with flowers, corymbose; calyx hardly repand. *h. S.* Native of the Mauritius, where it is called *Bois de pomme*. *Eugenia glomerata*, Lam. dict. 3. p. 199. *Myrtus glomerata*, Spreng. no. 65. *Myrtus coriacea*, Sieb. fl. maur. 2. no. 102. and probably the *Myrtus acris*, Sieb. l. c. no. 101. exclusive of the synonyme of Swartz. *Eugenia contracta*, Poir. suppl. 3. p. 125.

*Glomerated Syzygium.* Tree.

7 *S. JAMBOLANUM* (D. C. l. c.) leaves oval or obovate, feather-nerved, coriaceous; cymes paniced, loose, lateral and terminal; calyxes quite entire. *h. S.* Native of the East Indies. *Jambolana*, Rumph. amb. 1. t. 42. *Jambolifera pedunculata*, Houtt. pfl. syst. 1. p. 462. t. 7. f. 1. *Eugenia Jambolana*, Lam. dict. 3. p. 198. *Calyptránthes Jambolana*, Willd. spec. 2. p. 275. and in Ust. neu ann. 2. p. 23. Blum. bijdr. 1091. Petioles 5-6 lines long. Fruit black, esculent. It is commonly called *Jaca-plum*.

*Var. a*; leaves acuminate. *Eugenia Jambolana*, Roxb.

*Var. β*; leaves elliptic, tapering to both ends. *Eugenia Jambolana*, Roxb. and Rumph.

*Var. γ*; leaves obovate, very obtuse. Perhaps *Eugenia obtusifolia*, Roxb. hort. beng. p. 37.

*Jambolan Syzygium.* Clt. 1796. Tree.

8 *S. INOPHYLLA* (D. C. prod. 3. p. 260.) leaves ovate-elliptic, acuminate at both ends, coriaceous, shining, reticulately veined; cymes axillary and terminal, corymbose; pedicels 3-flowered; flowers sessile; calyx quite entire. *h. S.* Native of the East Indies. *Eugenia inophylla*, Roxb. hort. beng. no. 37.

*Feiny-leaved Syzygium.* Tree.

9 *S. CARYOPHYLLIFOLIUM* (D. C. l. c.) leaves ovate-elliptic, acuminate at both ends, coriaceous, feather-nerved; peduncles lateral, in dense cymose panicles; calyx rather repand, with a transparent border. *h. S.* Native of the East Indies.—Pluk. alm. t. 274. f. 2.—Rheed. mal. 5. t. 29. Rumph. amb. 1. t. 41. *Myrtus Cumini*, Lin. spec. 674. *Eugenia caryophyllifolia*, Lam. dict. 3. p. 198. *Eug. corticosa*, Lour. coch. p. 309. *Calyptránthes caryophyllifolia*, Blum. l. c. Petioles almost an inch long. Stamens short.

*Clove-leaved Syzygium.* Clt. 1822. Tree.

10 *S. NERVOSUM* (D. C. l. c.) leaves oval-elliptic, attenuated at the base, acuminate at the apex, rather coriaceous, feather-nerved, lateral nerves rather prominent; peduncles lateral and terminal, cymosely paniced, loose; calyx quite entire. *h. S.* Native of the Moluccas. *Eug. operculata*, Roxb. hort. beng. p. 37.

*Nerveed-leaved Syzygium.* Tree.

11 *S. VENOSUM* (D. C. l. c.) leaves elliptic, cuneated at the base, acuminate at the apex, rather coriaceous; lateral veins nearly regular, forming a marginal vein in front of the margin; panicles axillary and terminal, shorter than the leaves; calyx nearly entire. *h. S.* Native of Nipaul. Petioles 8-9 lines long. Leaves 4 inches long and  $1\frac{1}{2}$  broad.

*Veiny-leaved Syzygium.* Tree.

12 *S. AREOLATUM* (D. C. l. c.) leaves elliptic, cuneated at the base, acuminate at the apex, rather coriaceous, reticulately veined; areolæ regular at the margin, and as if they were constituting a double line; peduncles paniced, axillary and terminal, 3 or 4 times shorter than the leaves; calyx quite entire.

*h. G.* Native of Nipaul. Flower-bud globose, somewhat depressed. Operculum corolline. Cupula truncate.

*Areolate-veined Syzygium.* Tree.

13 *S. FRUTICOSUM* (D. C. l. c.) shrubby; leaves elliptic-ovate, acuminate, rather coriaceous, feather-veined, peduncles lateral, opposite or aggregate, loosely and corymbosely paniced.

*h. S.* Native of Chittagong, in the East Indies. Flowers small. Operculum almost as in the first section, wholly deliscent, but corolline, obtuse, and marcescent. *Eugenia fruticosa*, Roxb. hort. beng. p. 37.

*Shrubby Syzygium.* Shrub 5 to 10 feet.

14 *S. CARYOPHYLLÆUM* (Gaertn. fruct. 1. p. 166. t. 33.?) leaves obovate, bluntish or emarginate, rather coriaceous, dotless; peduncles cymosely corymbose, trichotomous, terminal.

*h. S.* Native of Ceylon. *Myrtus caryophyllata*, Lin. spec. 675. Swartz, obs. 202. *Calyptránthes caryophyllata*, Pers. ench. no. 4. Flowers small. Calyx obovate, repandly toothed. Operculum corolline.

*Clove-like Syzygium.* Tree.

15 *S. ZEYLANICUM* (D. C. l. c.) arboreous; leaves ovate, acuminate, coriaceous, shining above, and full of impressed dots beneath; peduncles nearly terminal, cymosely paniced.

*h. S.* Native of Ceylon. *Myrtus*, Herm. zeyl. 435. with a good figure. *Myrtus Zeylanica*, Lin. spec. p. 675. Andr. bot. 619. Berry (ex Herm.) white and 1-seeded. Flowers small. Calyx with an oblong tube, and an evidently 5-lobed limb. Operculum corolline.

*Ceylon Syzygium.* Fl. June, July. Clt. 1798. Tree.

16 *S. SPICATUM* (D. C. l. c.) leaves ovate, acuminate, coriaceous, shining above, full of impressed dots; peduncles short, umbelliferous, crowded into a spicate ovate raceme; style exserted. *h. S.* Native of the East Indies. *Eugenia spicata*, Lam. dict. 3. p. 201. Calyx turbinate, pruinose glaucous, 5-cleft. Perhaps sufficiently distinct from *S. Zeylanicum*.

*Spicate-flowered Syzygium.* Tree.

17 *S. ODORATUM* (D. C. l. c.) leaves ovate-lanceolate, attenuated at the base, acute at the apex, rather coriaceous, dotless; peduncles terminal, cymosely corymbose; berry globose, crowned by the limb of the calyx, which is very entire. *h. G.* Native of Cochinchina, among bushes, and of China. *Opia odorata*, Lour. coch. p. 309. *S. lucidum*, Gaertn. fruct. 1. p. 167. t. 33.?

*Sweet-scented Syzygium.* Shrub 4 to 6 feet.

18 *S. RACEMOSUM* (D. C. prod. 3. p. 261.) leaves oblong-lanceolate, acuminate, full of parallel veins; peduncles umbellulate, racemose, axillary or terminal; fruit globose. *h. S.* Native of Java, on the mountains. *Calyptránthus racemosa*, Blum. bijdr. p. 1089.

*Racemose-flowered Syzygium.* Tree.

19 *S. LAXIFLORUM* (D. C. l. c.) leaves oblong-lanceolate, acuminate at both ends, full of transverse parallel veins; panicles terminal or axillary, divaricate; pedicels subumbellate. *h. S.* Native of Java, in mountain woods. *Calyptránthus laxiflora*, Blum. bijdr. p. 1090. Perhaps the same as *S. Zeylanicum*.

*Loose-flowered Syzygium.* Tree.

20 *S. CORYMBOSUM* (D. C. l. c.) leaves oblong-lanceolate, acuminate at both ends, veined; corymb terminal, divaricate; pedicels subumbellate; young branches 4-sided; fruit nearly globose. *h. S.* Native of Java, on the mountains. *Calyptránthus corymbosa*, Blum. bijdr. p. 1091.

*Corymbose Syzygium.* Tree.

## § 2. Fruit oblong.

21 *S. PYRIFOLIUM* (D. C. l. c.) leaves elliptic-lanceolate, bluntly acuminate, full of parallel veins; corymbs trichotomous, terminal; pedicels usually 3-flowered; fruit oblong.

h. S. Native of Java, on Mount Salak. Calyptanthus pyrifolia, Blum. l. c. Like *S. caryophyllifolium*, but evidently distinct, in the corymbs being constantly terminal, and in the flowers being much larger.

*Pear-leaved Syzygium.* Tree 20 feet.

22 *S. ROSTRATUM* (D. C. l. c.) leaves broadly lanceolate, each with a long blunt acumen, shining, full of fine parallel veins; racemes axillary or terminal, solitary or crowded; pedicels 3-flowered; calyx obsoletely 4-toothed; fruit oblong. h. S. Native of Java, on high mountains. Calyptanthus rostrata, Blum. bijdr. p. 1092.

*Beaked Syzygium.* Tree.

23 *S. ? ACUMINATISSIMUM* (D. C. l. c.) panicles terminal, corymbose; pedicels usually 3-flowered; calyx almost quite entire; petals 5-6, small; leaves lanceolate, very much acuminate, finely veined, coriaceous; fruit oblong. h. S. Native of Java, on the mountains. Myrtus acuminatissima, Blume, l. c. p. 1088.

*Acuminate Syzygium.* Tree.

24 *S. ? MAGNOLIAEFOLIUM* (D. C. prod. 3. p. 261.) panicles terminal and axillary; flowers usually tern; calyx nearly entire; leaves elliptic-oblong, obtuse at the apex, narrow at the base, coriaceous, veined; fruit oblong. h. S. Native of Java, in the mountain woods in the province of Burangrang. Myrtus magnoliaefolia, Blum. bijdr. p. 1088.

*Magnolia-leaved Syzygium.* Tree 20 feet.

† *Species not sufficiently known.*

25 *S. METROSIDEROS* (D. C. l. c.) leaves ovate, scattered, serrated; peduncles nearly terminal, somewhat racemose; petals pilose inside. h. G. Native of Cochinchina, in woods. Opa Metrosideros, Lour. coch. p. 309, exclusive of the synonyme of Rumph. Style bipartite. Berry 1-seeded, hairy, crowned by the calyx. Perhaps belonging to a different genus.

*Iron-wood Syzygium.* Tree.

26 *S. BELLUTTA* (D. C. l. c.) arboreous; leaves ovate, acute, shining; peduncles somewhat spicate, axillary and terminal; fruit globose. h. S. Native of Malabar. Bellutta-Kannelli, Rheed. mal. 5. t. 20. Pet. Th. dict. sci. nat. 4. p. 29.?

*Bellutta-Kannelli Syzygium.* Tree 20 feet.

27 *S. MA'KUL* (Gærtn. fruct. 1. p. 166. t. 33.) h. S. Native of Ceylon. Fruit unknown.

*Makul Syzygium.* Tree.

28 *S. MYRTIFOLIUM* (D. C. l. c.) Eugenia myrtifolia, Roxb. hort. beng. p. 37.

*Myrtle-leaved Syzygium.* Tree 20 feet.

29 *S. HYPERICIFOLIUM* (D. C. prod. 3. p. 261.) Myrtus hypericifolia, Salisb. prod. p. 354.

*St. John's-wort-leaved Syzygium.* Tree.

*Cult.* For culture and propagation see *Myrcia*, p. 847.

XXXI. CARYOPHYLLUS (The Arabs, who have been acquainted from all antiquity with the clove, called it Qarumfel, which the Greeks altered to *Caryophyllon*.) Tourn. inst. t. 432. Lin. gen. 669. Gærtn. fruct. 1. p. 169. t. 33. Blum. in litt. D. C. prod. 3. p. 261. Myrtus species, Kunth.—Eugenia species, Willd.

LIN. SYST. *Icosandria, Monogynia.* Tube of calyx cylindrical (f. 123. c.); limb 4-parted (f. 123. d.). Petals 4, cohering together into a calyptra as in *Syzygium*. Stamens free (f. 123. b.), disposed in 4 bundles, inserted in a 4-angled fleshy concavity near the teeth of the calyx. Ovary 2-celled (f. 123. a.); cells 20-ovulate. Mature berry 1-2-celled, 1-2-seeded. Seeds cylindrical or semi-ovate. Cotyledons thick, fleshy, concave on the outside, sinuated in various ways on the inside. Radicle rising from the centre of the cotyledons, straight, and hidden by them.—Trees. Leaves opposite, coriaceous, dotted. Cymes terminal or subcorymbose in the forks of the branches.

1 *C. AROMATICUS* (Lin. spec. p. 735.) leaves ovate-oblong, acuminate at both ends; cymes many-flowered. h. S. Native of the Moluccas. Hook. bot. mag. 2749. and 2750.—Rumph. amb. 2. tt. 1, 2, 3. Blackw. t. 338. Eugenia caryophyllata, Thunb. diss. p. 1. Myrtus caryophyllus, Spreng. The dried flower-buds of this tree are the cloves of the shops, the clou de Girofle of the French. Calyx dark purple. Petals pale purple.

Every part of the plant is covered with minute dots or glands, which contain the oil, that gives the aromatic odour. It is not easy to determine when the clove was first known to Europeans. J. Bauhin tells us, that the inhabitants of the Moluccas were hardly acquainted with its value, till some Chinese vessels visited their country, and transported many plants into China, and that they were thus the means of distributing them into other districts of India, into Persia and Arabia. Sir James Smith (in Rees' cycl.) suspects that it was brought into Greece from Arabia, and that the first distinct mention of it is made by Paulus (Egineta, a Greek physician of the seventh century, when it was used in food and in medicine; and the same author supposes it was the Carumfel of Serapion, and the Charumfel bellum of Avicenna, two Arabian physicians. The Moluccas being discovered by the Portuguese in 1511, and from that time, or very soon after, it may be imagined, that cloves came into common use in Europe. The clove is now cultivated in almost every part of Asia, where the soil and climate are suitable; and several of the West India Islands now possess this precious vegetable, as St. Vincent, Trinidad, Martinique, St. Kitts, and other French Islands. The French have introduced it into Bourbon and the Mauritius, through the medium of M. Poivre, their then Intendant of those islands, who sent two vessels in 1769 to the kings of Gueby and Patony, to procure the clove and other valuable spices, which now succeed better in those islands than in Amboyna. Plants were sent from the Mauritius to Cayenne about the year 1779, and in 1792 the plantation there contained 2500 trees, which bore cloves equal to those of the East Indies, and fetched a higher price in France than those from the Moluccas.

The cloves of commerce are the unexpanded flowers, the corolla forming a ball or sphere on the top, between the teeth of the calyx; thus with the narrow base of the germ tapering downwards, giving the appearance of a nail; hence the Dutch call it *naghel*; the Spaniards *clavo*; the Italians *chiodo*; and the French *clou*, from which the English *clove* is derived.

The uses of cloves are sufficiently known, particularly in domestic economy, as a seasoning in various dishes, and to give flavour to wines and spirits. In medicine they are esteemed tonic and exhilarating, powerfully stimulating on the muscular fibres, but dangerous to bilious persons. These properties, and their acrid and burning taste, depend on the essential oil. Cloves yield, by distillation with water, about one-seventh of their weight of volatile oil. When the alcoholic extract is freed from the volatile oil by distillation with water, the oil that arises proves mild, and the resin that remains insipid. Its pungency, therefore, seems to depend upon a combination of these principles. The Dutch oil of clove is extremely hot, fiery, and of a reddish brown colour, but is greatly adulterated both with fixed oils and resin of cloves; for the genuine oil, when rectified, is comparatively mild and colourless. It is

FIG. 123.

heavier than water, and rises in distillation with some difficulty. It is hot and caustic, and therefore employed in the cure of tooth-ache. It is also employed by perfumers.

The cloves are gathered by hand, or beaten with reeds, so as to fall upon cloths which are placed under the trees to receive them, and dried by fire, or, what is better, in the sun. The fully-formed berries are preserved in sugar, and eaten after dinner, to promote digestion. *Clove* trees being difficult to transplant, the seeds are usually sown where the trees are intended to remain, for if the roots are once injured it is seldom they recover.

*Aromatic or Common Clove.* Clt. 1796. Tree 20 to 40 ft.

2 *C. ELLIPTICUS* (Labill. sert. calcd. p. 64. t. 63.) leaves ovate or elliptic, obtuse; cymes 3-flowered. *h. G.* Native of New Caledonia.

*Elliptic-leaved Clove.* Shrub 3 to 4 feet.

3 *C. ANTISEPTICUS* (Blum. in litt. ex D. C. prod. 3. p. 262.) leaves oblong-lanceolate, bluntly acuminate, full of fine pellucid veins; corymbs axillary and terminal; pedicels umbellate; calyx tubular, bluntly 5-toothed. *h. S.* Native of Java, in the province of Buiten-Zorg, at Mount Pantjor. *Calyptranthus aromatica*, Blum. bijdr. p. 1092.

*Antiseptic Clove.* Tree.

4 *C. FASTIGIATUS* (Blum. in litt. ex D. C. prod. 3. p. 262.) leaves, cuneate-oblong, bluntish, full of fine, transverse, parallel veins; corymbs terminal, fastigiate; pedicels 3-flowered. *h. S.* Native of Java, in woods, in the western parts. *Calyptranthus fastigiata*, Blum. bijdr. p. 1090. This plant appears to be allied to *Caryophyllus*, in the calyx or ovary being cylindrical, and in the limb of the calyx being bluntly and evidently 4-lobed.

*Fastigate Clove.* Tree 30 to 40 feet.

5 *C. FLORIBUNDUS* (Blum. in litt. ex D. C. l. c.) leaves oval-oblong, bluntish, attenuated at the base, almost veinless, shining; corymbs terminal, trichotomous, divaricate; pedicels 3-flowered. *h. S.* Native of Java, in woods on Mount Salak. *Calyptranthus floribunda*, Blum. l. c. p. 1091. This is distinguished from the first species in the leaves being broader, stiffer, and in the corymbs being divaricate and dense-flowered.

*Bundle-flowered Clove.* Tree 30 to 40 feet.

*Cult.* All the species of clove require a strong dry heat to flourish well, except *C. ellipticus*, which is a green-house plant. A mixture of loam and peat is the best soil for them. Ripened cuttings of them will root if planted in a pot of sand, with a hand-glass over them, in a moist heat. All the species are difficult to preserve through the winter in our stoves.

XXXII. ACME'NA (one of the names of Venus). D. C. dict. class. vol. xi. not. 1826. prod. 3. p. 262.

*LIN. SYST.* *Icosandria, Monogynia.* Tube of calyx turbinate; limb truncate, somewhat involute in the young state. Petals 5, small, distant, some of them sometimes abortive. Stamens numerous, free. Style terete, short. Berry globose or oval, 1-seeded. Seed roundish, thick. Cotyledons conferruminated.—Shrubs. Leaves opposite, glabrous, quite entire. Cymes 3-flowered, disposed in a terminal paniced thyrses. Flowers white.

1 *A. FLORIBUNDA* (D. C. prod. 3. p. 262.) leaves full of pellucid dots, oval-lanceolate, acuminate at both ends. *h. G.* Native of New Holland. *Metrosideros floribunda*, Smith, in Lin. trans. 3. p. 267. *Vent. malm. t. 75.* *Myrtacea*, Sieb. nov. holl. no. 598. Ovary 3-celled. Stamens hardly twice the length of the petals.

*Var. β, elliptica* (D. C. l. c.) leaves elliptic, acuminate. *h. G.* Native of New Holland. *Eugenia elliptica*, Smith, l. c. p. 281. Sims, bot. mag. 1872. *Eugenia Smithii*, Poir. *Myrtus Smithii*, Spreng. syst. no. 121. Berry globose, white. Calyx not toothed on the margin. Petals unknown.

*Bundle-flowered Acmena.* Fl. May, Sept. Clt. 1790. Sh. 4 to 6 ft. 2 *A. KINGII*; leaves elliptic, coriaceous, acuminate, glabrous, tapering to the base; panicle terminal, with trichotomous peduncles, and 3-flowered pedicels. *h. G.* Native of New Holland. Calyx truncate. (v. s. in herb. Lamb.)

*King's Acmena.* Fl. May, Sept. Clt. 1793. Shrub 4 to 8 ft. 3 *A. ? PARVIFLORA* (D. C. l. c.) leaves opaque, oval-lanceolate, acuminate. *h. S.* Native of the Moluccas. Flowers 3-times smaller than those of *A. floribunda*, but similar. Fruit unknown. Perhaps a species of *Syzygium*.

*Small-flowered Acmena.* Shrub 4 to 6 feet.

*Cult.* For culture and propagation see *Tristania*, p. 813.

XXXIII. EUGENIA (in honour of Prince Eugene of Savoy, who was a protector and encourager of botany, and possessed a botanic garden). Mich. nov. gen. t. 168. Lin. gen. no. 616. exclusive of some species. D. C. prod. 3. p. 262.—*Grægia*, Gaertn. fruct. 1. p. 168. t. 33.—*Myrtus* species, Swartz, Kunth.—*Olynthia*, Lindl. coll. no. 19. in a note.

*LIN. SYST.* *Icosandria, Monogynia.* Tube of calyx roundish; limb 4-parted, even to the ovary. Petals 4. Stamens numerous, free. Ovary 2-3-celled; cells many-ovulate. Berry nearly globose, crowned by the calyx, when mature 4-celled, but rarely 2-celled. Seeds 1-2, large, roundish. Embryo pseudo-monocotyledonous. Cotyledons very thick, and conferruminated. Radicle very short, hardly distinguishable.—Trees or shrubs, for the most part natives of the West Indies and South America. Leaves and inflorescence sometimes that of *Myrtus* and sometimes that of *Majera*.

\* *Peduncles axillary, 1-flowered.*

1 *E. MICHELI* (Lam. dict. 3. p. 203.) pedicels axillary, 1-flowered, usually solitary, shorter than the leaves; leaves ovate-lanceolate, glabrous; calyx 4-cleft; limb reflexed; berry to-rose. *h. S.* Native of Brazil and about Demerara, also cultivated in Martinico, under the name of *Cerisier de Cayenne*. Jacq. obs. 3. p. 3. *Eugenia*, Mich. nov. gen. t. 108. Till. pis. t. 44. *Myrtus Brasiliæna*, Lin. spec. p. 674. *Plinia rubra*, Lin. fil. suppl. p. 253. Curt. bot. mag. t. 473. Fruit edible, torulose, adhering to the calyx. Cotyledons conferruminated, ex Kunth. Perhaps the *Plinia*, Plum. gen. t. 11. which is the *Plinia pinnata* of Lin. 735.

*Micheli's Eugenia.* Shrub 12 to 14 feet.

2 *E. LIGUSTRINA* (Willd. spec. 2. p. 962.) pedicels 1-flowered, usually solitary, elongated, rising from the axils of the leaves or bractes, bractless under the flowers; leaves lanceolate, obtuse, rather concave, shining above, glabrous on both surfaces, as well as on the flowers. *h. S.* Native of the West Indies, *Myrtus cerasina*, Vahl. symb. 2. p. 57. *Myrtus ligustrina*, Swartz, fl. ind. occ. p. 835. Fruit black, 2-seeded, crowned by the calyx. Embryo with conferruminated cotyledons.

*Priest-like Eugenia.* Fl. Aug. Clt. 1798. Shrub 2 to 4 ft.

3 *E. SUBTERMINALIS* (D. C. prod. 3. p. 263.) pedicels 1-flowered, solitary, rising from the axils of the upper leaves, opposite, slender, 3-times shorter than the leaves; bractes small, acute, 2 under each flower; fruit globose; calyx lobes bluntish; leaves oblong, acuminate at both ends, opaque, nerveless, and are as well as the branchlets glabrous. *h. S.* Native of Brazil, at the river Ilheos. Leaves 2 inches long and 5 lines broad. Petioles 2 lines long. Pedicels 7-8 lines long.

*Subterminal Eugenia.* Shrub 4 to 6 feet.

4 *E. PIA* (D. C. l. c.) pedicels 1-flowered, solitary, elongated, rising from the axils of the bractes and leaves; leaves lanceolate, bluntish, shining above, glabrous on both surfaces, as well as on the flowers; branchlets hairy. *h. S.* Native of Brazil, in the province of Minas Geraes, at Serra de Piedado. *Myrtus Pia*, Mart. ined. Very like *E. ligustrina*, but the branches are

tomentose or hairy, and the fruit 4-seeded. Cotyledons confer-  
ruminated. Habit of *Myrtus*.

*Pia Eugenia*. Shrub 4 to 6 feet.

5 *E. sessilifolia* (D. C. l. c.) pedicels axillary, solitary, 1-flowered, opposite, slender, bractless at the apex, 3-times shorter than the leaves; fruit globose, crowned by the calycine lobes, which are oblong and acutish; leaves sessile, attenuated at both ends, oblong, full of pellucid dots, and are as well as the branches glabrous. *h. S.* Native of Brazil, in the province of Bahia. *Myrtus sessilifolia*, Mart. herb. Lobes of calyx 3 lines long. Pedicels 7-9 inches long. Leaves 3 inches long and 1 inch broad. Seeds thick, pseudo-monocotyledonous.

*Sessile-leaved Eugenia*. Tree.

6 *E. sparsiflora* (D. C. l. c.) pedicels 1-flowered, solitary, one half shorter than the leaves, opposite, bractless at the apex, rising from the lower part of the branchlets, in the axils of the scales or leaves; fruit globose; leaves oval, acuminate, obtuse at the base, glabrous on both surfaces as well as the branches. *h. S.* Native of Brazil, near Almada, in the province of Bahia. *Myrtus sparsiflora*, Mart. herb. Pedicels slender, 9 inches long. Calycine lobes 4, oval. Leaves 3-4 inches long, and 15 lines broad. Petioles 4 lines long. Seeds unknown.

*Scattered-flowered Eugenia*. Tree 20 feet.

7 *E. laxa* (D. C. l. c.) pedicels axillary, solitary, 1-flowered, very slender, shorter than the leaves; leaves oval, attenuated at the base, glabrous, acuminate at the apex; branchlets and young leaves clothed with rufous pubescence, but at length becoming glabrous; lobes of calyx 4, 2 larger and suborbicular; young fruit obovate. *h. S.* Native of Brazil, about Bahia, in the deserts. *Myrtus laxa*, Mart. herb. Pedicels 12-20 lines long, straight, rising from the axils of the upper leaves. Bracteas none, or very small. Leaves 3 inches long and 1 inch broad, full of pellucid dots. Immature fruit 1-seeded. Allied to *E. Patrisii*, but the fruit is obovate, not globose.

*Loose Eugenia*. Tree 10 to 20 feet.

8 *E. inocarpa* (D. C. prod. 3. p. 264.) pedicels axillary, 1-flowered, shorter than the leaves; calycine lobes 4, ovate; fruit globose, fibrous inside, 2-seeded; leaves ovate, attenuated at the base, acuminate at the apex, glabrous; branchlets clothed with rufous down, furnished with stipula-formed scales. *h. S.* Native of Brazil, at Rio Negro. *Myrtus inocarpus*, Mart. herb. Leaves 3 inches long and  $1\frac{1}{2}$  inch broad. Petioles short. Fruit full of tubercular dots, about the size of a plum, with fibry, acid-sweet flesh. Pedicels few, 7 lines long. Seeds 2, convex on one side and flat on the other.

*Nerved-fruited Eugenia*. Tree 20 feet.

9 *E. involucreta* (D. C. l. c.) pedicels axillary, 1-flowered, solitary, with large, foliaceous, deciduous bracteas under the flower; floral leaves smaller than the rest; calycine lobes 4, ovate-oblong, reflexed; leaves elliptic, petiolate, attenuated at both ends, when young rather villous and full of pellucid dots, but glabrous and opaque in the adult state; branches compressed. *h. S.* Native of Brazil. A small tree, with erect, spreading branches. Pedicels 5 lines long. Bracteoles 5 lines long. Sterile leaves 2 inches long. Petioles 4-5 lines long. Floral leaves smaller than the others.

*Involucreta-flowered Eugenia*. Shrub 6 to 8 feet.

10 *E. ? bracteata* (Rausch. nom. ex D. C. prod. 3. p. 264.) pedicels axillary, solitary, 1-flowered, bibracteate under the flowers, villous; leaves elliptic, obtuse, glabrous, when young clothed with appressed silky down; calyxes ciliated. *h. S.* Native of the East Indies. *Myrtus bracteata*, Willd. spec. 2. p. 969. Fruit and seeds unknown.

*Bracteate-flowered Eugenia*. Clt. 1820. Shrub.

11 *E. balsamica* (Jacq. fragm. t. 45. f. 2.) pedicels lateral, solitary, 1-flowered, slender, rather villous, bearing 2 oval

bracteoles under each flower; leaves ovate, bluntly acuminate, pale and dotted, glabrous; calyx rather villous. *h. S.* Native of Jamaica. *Myrtus balsamica*, Spreng. syst. 2 p. 481. Petals ciliated, one half shorter than the stamens. Bracteas usually at the origin of the petioles. Fruit and seeds unknown.

*Balsam Eugenia*. Clt. 1816. Tree 10 to 20 feet.

12 *E. pohliana* (D. C. prod. 3. p. 264.) pedicels axillary, solitary, rather longer than the leaves, some 1-flowered, and others 3-flowered; middle flower sessile in the bifurcation, 2 lateral ones pedicellate; bracteoles subulate; calycine lobes 4, roundish, clothed with silky down on the outside, at length reflexed; leaves ovate, glaucous, dotted beneath, opaque, glabrous; petioles and branches clothed with rufous velvety down. *h. S.* Native of Brazil, in deserts, in the provinces of the mines. *Myrtus pohliana*, Mart. herb. Allied to *E. Sellowiana* and *E. cana*, but in consequence of the pedicels being 1 or 3-flowered, it is an intermediate plant between the first and fourth sections. Leaves 9-10 lines long and 5 lines broad. Peduncles 10-11 lines long. Flowers about the size of those of *Myrtus communis*. Fruit unknown.

*Pohl's Eugenia*. Tree 20 feet.

13 *E. sellowiana* (D. C. l. c.) pedicels axillary, solitary, 1-flowered, bearing 2 subulate bracteoles; calyxes and branchlets clothed with velvety hoary down; leaves ovate-oblong, acuminate, full of pellucid dots, velvety above in the young, but in the adult state glabrous above, pubescent and reticulately nerved beneath. *h. S.* Native of Brazil, in the provinces of the mines, in the deserts. *Myrtus sellowiana*, Mart. herb. A crooked tree, about 10 feet high. Leaves 2 inches long and 7-8 lines broad, spreading, not reflexed. Pedicels 4-10 lines long, rising from the axils of the upper leaves. Allied to *E. cana*.

*Sello's Eugenia*. Shrub 10 feet.

14 *E. cana* (D. C. l. c.) pedicels axillary, solitary, 1-flowered, opposite, somewhat divaricate, bearing 2, subulate, rather alternate bracteas above the middle; calyx clothed with hoary velvety down; leaves ovate-oblong, acuminate, deflexed, opaque, when young pubescent above, but at length glabrous, and clothed with hoary velvety down beneath. *h. S.* Native of Brazil, in the provinces of the mines. *Myrtus cana*, Mart. herb. Species allied to *E. sellowiana*, but very distinct. Calycine lobes ovate, obtuse, reflexed. Pedicels 6-7 lines long. Leaves an inch long; floral ones smaller.

*Hoary Eugenia*. Tree 10 to 15 feet.

15 *E. ? rosea* (D. C. l. c.) pedicels axillary, 1-flowered, shorter than the leaves, bearing 2 oblong bracteas under the flowers; branches, calyxes, and bracteas clothed with hairy tomentum; leaves oblong, attenuated at both ends, with revolute margins, smaller ones villous on both surfaces, adult ones glabrous above, but clothed with velvety tomentum beneath; lobes of calyx large, broadly ovate, obtuse. *h. S.* Native of Brazil, among rocks. *Psidium roseum*, Mart. herb. A bush, with numerous procumbent branches. Flowers rose-coloured, 4-creft, with a broad, stamiferous disk, as in *Psidium*. Leaves 2 inches long, and 4-7 lines broad. Pedicels 7 inches long. Fruit unknown.

*Rose-coloured-flowered Eugenia*. Shrub procumbent.

16 *E. kunthiana* (D. C. l. c.) pedicels axillary, 1-flowered, 3 times shorter than the leaves, bibracteolate at the apex; ovary ovate, small; calycine lobes 3, obtuse, constricted after flowering; leaves oblanceolate, coriaceous, rather glaucous, glabrous, hardly with any pellucid dots; branchlets downy above. *h. S.* Native of Brazil. *Myrtus kunthiana*, Mart. herb. Seed 1, elliptic-globose, pseudo-monocotyledonous. Pedicels 5-6 lines long.

*Var. a*; fruit red.

*Var. b*; fruit yellow.

*Var. γ*; leaves smaller; pedicels shorter, 2 lines long. *h. S.* Native of Brazil, in the province of Minas Geraes.

*Kunth's Eugenia.* Tree 10 to 15 feet.

17 *E. fœtida* (Pers. ench. 2. p. 29.) pedicels axillary, solitary, 1-flowered, bibracteolate under the flowers, hardly longer than the petioles; leaves ovate-lanceolate, bluntly acuminate, membranous; calyx 4-lobed. *h. S.* Native of Cayenne. *Myrtus fœtida*, Spreng. syst. 3. p. 481. Fruit globose, size of a pepper. Seeds unknown.

*Var. α, maleolens* (Pers. ench. 1. c.) pedicels solitary; leaves blunter, rather coriaceous. *h. S.* Native of the West Indies. *E. fœtida*, Vahl. herb.

*Stinking Eugenia.* Tree 10 feet.

18 *E. angustifolia* (Lam. dict. 3. p. 203.) pedicels axillary, solitary, or twin, 1-flowered, naked, 3-times shorter than the leaves; leaves linear, acute, with revolute edges, and are as well as the branches glabrous. *h. S.* Native of St. Domingo. Plum. ed. Burm. t. 207. f. 2. *Myrtus angustifolia*, Spreng. syst. 2. p. 479. not of Lin. *M. rosmarinifolia*, Spreng. 1. c. Stamens hardly longer than the petals. Fruit globose, red, few-seeded. Seeds compressed.

*Narrow-leaved Eugenia.* Tree 10 to 12 feet.

19 *E. rosmarinifolia* (Poir. suppl. 3. p. 129.) pedicels axillary, 1-flowered, usually solitary, shorter than the leaves; leaves small, linear, mucronate, with revolute edges, glabrous, above but villous on the under surface, as well as on the branches; calyx 4-cleft, obtuse. *h. S.* Native of the Caribbee Islands. *Myrtus rosmarinifolia*, Pers. ench. 2. p. 30. Fruit and seeds unknown. Perhaps sufficiently distinct from *E. angustifolia*.

*Rosemary-leaved Eugenia.* Shrub.

20 *E. alpicena* (D. C. 1. c.) pedicels axillary, solitary, 1-flowered, 6-times shorter than the leaves, bibracteolate at the apex; flowers and branches covered with canescent down; calycine lobes 4, ovate; leaves on short petioles, elliptic-oblong, hoary beneath, clothed with adpressed pubescence above, opaque, nerveless, except the middle nerve. *h. S.* Native of Brazil, on the mountains, in the provinces of the mines. *Myrtus alpicena*, Mart. herb. Allied to *E. alpina*. Branches crowded. Flowers small. Leaves an inch long and 4 lines broad, pubescent above while young, but at length nearly glabrous, full of impressed dots.

*Alp-growing Eugenia.* Tree 10 feet.

21 *E. obscura* (D. C. 1. c.) pedicels 1-2, axillary, very short, 1-flowered; bracteoles subulate, adnate to the tube of the calyx; leaves almost sessile, glabrous, ovate-lanceolate, bluntly acuminate; calyxes and petals pilose on the outside; branchlets hairy. *h. S.* Native of Maranhão. *Myrtus obscura*, Lindl. bot. reg. t. 1044. Petals acuminate. Bracteas inserted immediately under the lobes of the calyx, in which it differs from all the other species.

*Obscure Eugenia.* Clt.? Shrub 4 to 6 feet.

22 *E. myrtifolia* (D. C. prod. 3. p. 265.) pedicels axillary, 1-flowered, one half shorter than the leaves, almost bractless at the apex; ovary globose; calycine lobes 4, broad, obtuse, constricted after flowering; leaves oval, cuneate at the base, bluish at the apex, pale beneath, hardly with any pellucid dots, and are as well as the branches glabrous. *h. S.* Native of Brazil, in the provinces of the mines. *Myrtus tenella*, var. Mart. herb. Allied to *E. rigidum*. Young fruit many-celled. Seeds unknown. Leaves 8 lines long and 4 broad, almost sessile, shining above; lateral veins confluent at the apex.

*Myrtle-leaved Eugenia.* Shrub 2 feet.

23 *E. alpina* (Willd. spec. 2. p. 961.) pedicels axillary, solitary, 1-flowered, shorter than the leaves, thickish; leaves ovate, coriaceous, veinless, glabrous; branches usually in fours, erect, rusty. *h. S.* Native of Jamaica, on the tops of the Blue

Mountains. *Myrtus rigida*, Swartz, in herb. Lher. *Myrtus alpina*, Swartz, fl. ind. occ. p. 883. Berry dry, ovate, when mature 1-seeded. Seed oblong.

*Alpine Eugenia.* Shrub 4 to 6 feet.

24 *E. Willdenowii* (D. C. 1. c.) pedicels 1-flowered, filiform, solitary, or twin, axillary and lateral, bearing 2 subulate very short bracteas under the flowers; leaves oblong, acuminate, coriaceous, dotless, shining. *h. S.* Native of Ceylon. Said to be allied to *E. Micheli* and *E. Patrisii*. *Eugenia Zeylanica*, Willd. spec. 2. p. 963. but not of Roxb. *Myrtus Willdenowii*, Spreng. syst. 2. p. 480. exclusive of the var. from Porto Rico.

*Willdenow's Eugenia.* Shrub.

25 *E. obtusa* (D. C. prod. 3. p. 266.) pedicels axillary, solitary, 1-flowered, a little shorter than the leaves; the bracteas under the flowers and the calycine lobes are oval-oblong and foliaceous; leaves oval, obtuse at both ends, glabrous, full of impressed dots on the upper surface, when young rufous beneath, but at length pale; branches and petioles clothed with rufous villi. *h. S.* Native of Peru. *Myrtus obtusa*, Juss. herb. Leaves 5-6 lines long and 3 lines broad. Fruit nearly globose, 1-seeded. The bracteoles are larger than those in the allied species. Habit of *E. alpina*, but the pedicels are longer, and the bracteoles are much larger and permanent.

*Blunt-leaved Eugenia.* Shrub.

26 *E. portoricensis* (D. C. 1. c.) pedicels 1-flowered, slender, shorter than the leaves, axillary or lateral, bearing 2 ovate, puberulous bracteoles under the flowers; leaves ovate-elliptic, acuminate, membranous, dotless, and are as well as the branches glabrous; petals sub-ciliated. *h. S.* Native of Porto Rico, on the edges of woods. *Eugenia latifolia*, Spreng. in herb. Balb. Pedicels half an inch long, axillary, solitary, numerous, rising from the base of the branches in an irregular way. Bracteoles small, scale-formed at the origin of the petioles. Leaves nearly 3 inches long. Flowers small, glabrous. Ovary globose. Fruit and seeds unknown.

*Var. β, brevipes* (D. C. 1. c.) pedicels hardly 3-times longer than the petioles; leaves smaller, rather coriaceous. *h. S.* Native of Porto Rico. *Myrtus Willdenowii*, var. *Porto-Ricensis*, Spreng. ex herb. Balb. but exclusive of the synonymes. Fruit and seeds unknown.

*Porto-Rico Eugenia.* Tree.

27 *E. producta* (D. C. 1. c.) pedicels 1-flowered, axillary, and lateral, solitary, or rather aggregate, naked, much shorter than the leaves; leaves coriaceous, quite glabrous, shining above, oval, drawn out into a long linear, blunt acumen each; calyx 4-cleft. *h. S.* Native of Cayenne. Leaves oval, 3¼ inches long, and 2 inches broad, terminating in an acumen, which is an inch long and a line and a half broad. Berry globose, 1-seeded. Seed thick. Cotyledons fleshy, conferruminate.

*Drawn-out-leaved Eugenia.* Shrub.

28 *E. crassifolia* (D. C. prod. 3. p. 266.) pedicels axillary, 1-2-flowered, very short, thickish; fruit globose, crowned by the lobes of the calyx, which are deciduous; leaves oblong, coriaceous, acuminate at both ends, glabrous above, but covered with hairy down beneath; petioles as well as the branchlets rather velvety. *h. S.* Native of Brazil, in woods, in the province of St. Paul. *Myrtus crassifolia*, Mart. herb. Seed 1, thick, rather horny, pseudo-monocotyledonous. Leaves 1½ inch long and ½ an inch broad. Petioles longer than the pedicels.

*Thick-leaved Eugenia.* Shrub.

29 *E. felisbertii* (D. C. 1. c.) pedicels solitary, very short, 1-flowered, opposite, rising from the axils of the small bractea-formed leaves; bracteoles large, under the flowers; calyx villous, 4-cleft; leaves oblong, acuminate at both ends, full of pellucid dots, when young rather villous on both surfaces; nerves

petioles, and branches clothed with adpressed villi. *h. S.* Native of Brazil, in woods on the road to Felisbert. *Myrtus Felisberti*, Mart. herb. Leaves membranous, pale green, 4 inches long and an inch and a half broad. Petals roundish, hardly longer than the calyx. Stamens innumerable. Fruit unknown.

*Felisbert Eugenia*. Shrub.

30 *E. PARVIFOLIA* (D. C. l. c.) pedicels axillary, 1-flowered, a little shorter than the leaves; bracteoles small; leaves oblong-linear, obtuse, acute, marked by the nerve above, which is impressed, dotted beneath, the rest veinless and glabrous. *h. S.* Native of Peru. *Myrtus parvifolia*, Juss. herb. Flowers small. Very like the following species, but the leaves are a little larger, and not exactly linear, acute at the apex.

*Small-leaved Eugenia*. Shrub 2 to 3 feet.

31 *E. ? LEPTOSPERMOIDES* (D. C. l. c.) pedicels axillary 1-flowered, a little shorter than the leaves; bracteoles small; leaves oblong-linear, obtuse, nearly nerveless, dotted, glabrous. *h. S.* Native of Chili and Peru. Leaves 4-5 lines long, and a line broad. Flowers small. Fruit and seeds unknown. It agrees with the figure of Feuill. obs. 3. t. 31. and is not unlike *Myrtus Ugni*. *Myrtus parvifolia*, Juss. herb.

*Leptospermum-like Eugenia*. Shrub 2 to 3 feet.

32 *E. PATRISII* (Vahl. ecl. amer. 2. p. 35.) pedicels 1-flowered, slender, axillary, solitary, and nearly terminal, in fours, naked under the flowers, bractless at the base; leaves elliptic, glabrous, acuminate at both ends. *h. S.* Native of French Guiana. *Myrtus Patrisii*, Spreng. syst. 2. p. 480. Pedicels an inch and a half long. Bracteas acute, short. Fruit globose, not torose. Stamiferous disk broad, nearly as in *Psidium*. Seeds very few. Cotyledons conferruminated? in the immature state. Allied to *Myrtus ligustrina*.

*Patris's Eugenia*. Tree.

33 *E. NEMORALIS* (D. C. prod. 3. p. 267.) glabrous; pedicels axillary, 1-flowered, solitary, opposite, erect, equal in length to the petioles; bracteoles hardly any under the flowers; fruit elliptic; calycine lobes 4, broad, obtuse; leaves elliptic, abruptly and obsoletely apiculated, coriaceous, opaque. *h. S.* Native of Brazil. *Myrtus nemoralis*, Mart. herb. Allied to *E. clinocarpa*, but differs in the fruit being erect and twice the size. Leaves 2 inches long and an inch broad.

*Grove Eugenia*. Shrub.

34 *E. CLINOCARPA* (D. C. l. c.) glabrous; pedicels axillary, 1-flowered, twice the length of the petioles, when in flower erect, and when in fruit deflexed; bracteoles small, under the flowers; fruit elliptic; lobes of calyx short, very blunt; leaves oval, rather oblong, attenuated at the base, obsoletely acuminate at the apex, rather coriaceous, full of pellucid dots. *h. S.* Native of Brazil, at the river Peruaguacu, in the province of Bahia, in woods. *Myrtus clinocarpa*, Mart. herb. Leaves 15-18 lines long and 6-8 lines broad. Young branches somewhat tetragonal. Fruit 1-seeded. Cotyledons conferruminated.

*Bed-fruited Eugenia*. Shrub.

35 *E. BRASILIENSIS* (Lam. dict. 3. p. 203.) pedicels 1-flowered, slender, rising from the axils of the scaly leaves, along the branches from velvety scaly buds; bracteoles none; calycine lobes reflexed; leaves oval or obovate-oblong, bluntish, coriaceous, quite glabrous. *h. S.* Native of Brazil. *Myrtus Dombeyi*, Spreng. syst. 2. p. 485.—*E. bracteolaris*, Lam. mss. in herb. Juss. Leaves shining above, 3 inches long,  $1\frac{1}{2}$  broad. Pedicels about equal in length to the floral leaves. Stamens hardly longer than the petals.

*Brasilian Eugenia*. Shrub.

36 *E. REINWARDTIANA* (D. C. l. c.) pedicels interpetiolar, 1-flowered, shorter than the leaves; leaves on short petioles, elliptic-oblong, bluntish, coriaceous, remote, smoothish. *h. S.* Native of the Moluccas. *Myrtus Reinwardtiana*, Blum. bijdr.

p. 1082. Calyx 4-cleft. Fruit roundish, and with the seeds nearly as in *Eugenia*.

*Reinwardt's Eugenia*. Shrub.

37 *E. MARANHONENSIS*; branched; leaves oblong, coriaceous, acuminate, glabrous on both surfaces; pedicels axillary, 1-flowered. *h. S.* Native of Maranham, in Brazil.

*Maranham Eugenia*. Shrub 4 to 8 feet.

38 *E. MYRTOIDES*; branched; leaves ovate, quite entire, acute, coriaceous, almost sessile; pedicels axillary, 1-flowered. *h. S.* Native of the western coast of Africa, on the Gold coast, particularly at Accra.

*Myrtle-like Eugenia*. Shrub 4 to 8 feet.

\* \* *Pedicels axillary, 1-flowered, twin, tern, or numerous.*

39 *E. ? PUNICAFOLIA* (D. C. l. c.) pedicels axillary, 1-flowered, twin, much shorter than the leaves, bibracteolate under the flowers; leaves oblong, obtuse, acute at the base, rather coriaceous, shining, and are as well as the branches glabrous; calyx 4-cleft. *h. S.* Native near Cumana, on Mount Impossible. *Myrtus puniceifolia*, H. B. et Kunth, nov. gen. amer. 6. p. 149. Leaves 2 inches long. Flowers the size of those of *Cratægeus oxyacantha*. Ovarium 2-celled. Berry nearly globose, red, 1-2-seeded. Said to be allied to *Myrtus ligustrina*.

*Pomegranate-leaved Eugenia*. Shrub 10 to 12 feet.

40 *E. VISMIOIDES* (D. C. l. c.) pedicels 1-3, axillary, 1-flowered, much shorter than the leaves, bibracteolate, under the flowers; leaves oval, cuneate at the base, on very short petioles, bluntly attenuated at the apex, glabrous on both surfaces as well as on the branches, with a very few pellucid dots. *h. S.* Native of the Moluccas. Pedicels 4 lines long. Flower-bud globose. Lobes of calyx very blunt, roundish. Leaves 3 inches long and  $1\frac{1}{2}$  broad.

*Vismia-like Eugenia*. Shrub 6 to 8 feet.

41 *E. SANCATA* (D. C. l. c.) pedicels 1-3 together, axillary, 1-flowered, 4 times shorter than the leaves, bibracteolate under the flowers; leaves oval, almost sessile, bluntish at both ends, stiff, full of minute pellucid dots, glabrous on both surfaces; branches rather pubescent. *h. S.* Native of Brazil, in the province of Bahia, among bushes at the bottoms of the mountains. *Myrtus sancta*, Mart. herb. Leaves pale green, 15 lines long, and 8-9 lines broad. Pedicels 3-4 lines broad, and are as well as the calyxes glabrous. Calycine lobes very blunt. Style hooked at the apex. Fruit unknown.

*Holy Eugenia*. Shrub 2 to 3 feet.

42 *E. COARENSIS* (D. C. l. c.) pedicels 1-3 together, 1-flowered, bibracteolate, under the flowers, 3 times shorter than the leaves; calycine lobes 4, obtuse; leaves oval, nearly sessile, bluntly somewhat acuminate, stiff, opaque, and are as well as the branches glabrous; lateral veins almost wanting. *h. S.* Native of Brazil, at Rio Negro. *Myrtus Coarënsis*, Mart. herb. Leaves an inch long and 6 lines broad. Pedicels 2-3 lines long. Flowers small. Fruit unknown.

*Coari Eugenia*. Shrub.

43 *E. KOCHIANA* (D. C. prod. 3. p. 268.) pedicels 1-3 together, 1-flowered, 3-times shorter than the leaves, bibracteolate at the apex; calycine tube obovate, with the lobes ovate; leaves oval-oblong, sessile, stiff, opaque, obtuse at both ends, almost veinless, and are as well as the obsoletely tetragonal branchlets, glabrous. *h. S.* Native of Brazil. *Myrtus Kochiana*, Mart. herb. Leaves an inch long and 4 lines broad, erect. Nearly like those of *Phylliræa media*. Pedicels 4 lines long. Flowers small.

*Koch's Eugenia*. Tree 20 to 30 feet.

44 *E. STIGMATOSA* (D. C. l. c.) pedicels 1-3 together, axillary, 1-flowered, 3-times the length of the petioles, acutely bibracteolate, under the flowers; leaves oval, cuneate at the base, bluntly acuminate at the apex, glabrous, full of large pellucid

dots, which are rarely blackish beneath. *h. S.* Native of Brazil, in the desert of Bahia. *Myrtus stigmatosa*, Mart. herb. Very nearly allied to *E. dipoda*. Pedicels 6 lines long. Leaves paler beneath, 2 inches long and an inch broad. Flowers small. Lobes of calyx roundish, reflexed; tube nearly globose. Fruit unknown.

*Stigmatose Eugenia.* Tree.

45 *E. DIPODA* (D. C. prod. 3. p. 268.) pedicels 1-flowered, axillary, twist, shorter than the leaves, bibracteolate under the flowers; leaves elliptic-oblong, attenuated at both ends, with an obtuse acumen, and are as well as the branches glabrous. *h. S.* Native of French Guiana. Leaves  $1\frac{1}{2}$  inch long, and about the same in breadth, full of very minute pellucid dots. Pedicels 5 lines long. Berry ovate, 1-seeded. Cotyledons thick, conferruminated. Calycine lobes very blunt.

*Var. β, brachypoda* (D. C. l. c.) pedicels 3 lines long.

*Two-pedicelled Eugenia.* Shrub.

46 *E. PROCERA* (Poir. suppl. 2. p. 129.) pedicels 1-flowered, axillary, 2-4 together, shorter than the leaves, bibracteolate under the flowers; leaves ovate, bluntly acuminate, and are as well as the branchlets glabrous. *h. S.* Native of St. Domingo, in woods also of Martinique and Santa-Cruz. *Myrtus procera*, Swartz, fl. ind. occ. p. 887. Branches twiggy. Leaves an inch and a half long. Petioles 3 lines long. Berry nearly globose, about the size of a pepper, 1-seeded. Cotyledons conferruminated. Fruit eatable.

*Tall Eugenia.* Tree 20 to 30 feet.

47 *E. PSEUDO-PSIDIUM* (Jacq. amer. 15. t. 93.) pedicels 1-flowered, shorter than the leaves, bibracteolate under the flowers, lower ones axillary, solitary, upper ones nearly terminal, in fascicles; leaves ovate, acute, and are as well as the branches glabrous; fruit smooth, globose. *h. S.* Native of Martinico, in mountain woods, where it is called *Gouyavier bâlard*. *Myrtus pseudo-psidium*, Spreng. syst. 2. p. 480. exclusive of the synonyms. Berry red, 1-seeded. Seed thick. Cotyledons conferruminated. Fruit eatable, and held in considerable esteem in the West Indies.

*False-guava Eugenia.* Tree 20 feet.

48 *E. PSIDIOIDES* (D. C. prod. 3. p. 268.) pedicels thickish, axillary, 1-flowered, much shorter than the leaves, 4-8 in a fascicle, minutely bibracteolate under the flowers; leaves oval, shortly acuminate, coriaceous, with revolute margins, and are as well as the branchlets glabrous. *h. S.* Native of Cayenne. Very like *E. pseudo-psidium*, but the leaves are more oval, and distinctly mucronately acuminate, coriaceous, with revolute edges; the pedicels are shorter, and hardly half an inch long. Fruit globose. Seed 1, large. Bracteoles small.

*Guava-like Eugenia.* Tree.

49 *E. NIGRA* (D. C. l. c.) pedicels 3-4 together, axillary, 1-flowered, thickish, length of petioles; fruit globose; leaves oval, short-acuminate, coriaceous, opaque, shining above, glabrous on both surfaces, as well as on the branchlets. *h. S.* Native of Brazil, in the province of Para near Ega. *Myrtus nigra*, Mart. herb. Branches terete. Leaves 5 inches long and 2 broad. Pedicels, when in fruit, hardly 3 lines long. Flowers unknown. Fruit half an inch in diameter. Calycine lobes deciduous, and therefore the fruit is marked with a somewhat tetragonal areola at the apex. Seeds 2, large.

*Black Eugenia.* Tree.

50 *E. CITRIFOLIA* (Poir. suppl. 3. p. 129.) peduncles axillary, very short, branched; pedicels in fascicles, shorter than the petioles, bracteolate under the flowers; leaves elliptic-oblong, acuminate, coriaceous, shining, and are as well as the branches quite glabrous. *h. S.* Native of Cayenne. *Myrtus Cayennensis*, Spreng. syst. 2. p. 480. Fruit small, according to Poiret, globose, and 1-seeded. Leaves 3-5 inches long.

*Citron-leaved Eugenia.* Shrub.

51 *E. DYSENTERICA* (D. C. prod. 3. p. 268.) pedicels axillary, solitary, 1-flowered, slender, shorter than the leaves, rather crowded on the short branches, bractless at the apex; calycine lobes ciliated, bearded at the apex; leaves ovate, obtuse, quite glabrous, on short petioles, rising with the flowers. *h. S.* Native of Brazil, in fields about Goyaz, where it is called *Cogaiteira*. *Myrtus dysenterica*, Mart. herb. trav. vol. 2. A twisted tree, leafless at the time of flowering. Branches glabrous, bearing 5-6 scales. Berry globose, depressed, furrowed, citron-coloured. Scales of buds ciliated.

*Dysenteric Eugenia.* Tree 10 to 20 feet.

52 *E. MARTUSIANA* (D. C. prod. 3. p. 269.) pedicels 5-9 together, axillary, 1-flowered, about the length of the petioles; bracteoles 2, obtuse, connate under the flowers; fruit globose, 3-seeded; calycine lobes 4, small, obtuse; leaves oval, bluntish at both ends, coriaceous, opaque, and are as well as the branchlets glabrous. *h. S.* Native of Brazil, in woods in the province of Bahia. *Myrtus Lindleyana*, Mart. herb. but not of Kunth. Leaves about 3 inches long, and about 2 broad. Petioles 3 lines long. Fruit the size of a pea. Seeds compressed, somewhat reniform. Cotyledons conferruminated.

*Martius's Eugenia.* Tree.

53 *E. LONGIFOLIA* (D. C. l. c.) pedicels 3-5 together, 1-flowered, a little shorter than the petioles, bibracteolate at the apex; calyx with an obovate, somewhat turbinate tube, and 4 obtuse lobes; leaves elliptic-oblong, acuminate at both ends, and are as well as the branches glabrous; lateral nerves running into a vein, which is distant from the margin. *h. S.* Native of Brazil, in swampy shady places of woods, in the province of Bahia. *Myrtus longifolia*, Mart. herb. A loose tree, with expanded branches. Leaves 9 inches long and  $2\frac{1}{2}$  inches broad. Petioles 4 lines long. Pedicels 3 lines long. Flowers small. Fruit unknown.

*Long-leaved Eugenia.* Tree.

54 *E. LATIFOLIA* (Aubl. guian. 1. p. 502. t. 199.) pedicels axillary, usually tern, 1-flowered, length of the petioles, bibracteolate under the flowers; leaves broad-ovate, acute, reticulately veined, and are as well as the branches glabrous; fruit ovate. *h. S.* Native of French Guiana, on the edges of fields. *Myrtus latifolia*, Spreng. syst. 2. p. 481. Leaves 10-11 inches long and 5-6 inches broad. Flowers white, sometimes 5-cleft, according to Aublet. Berry olive-formed, violaceous, 1-seeded. Seed thick.

*Broad-leaved Eugenia.* Clt. 1793. Shrub 6 to 7 feet.

55 *E. UNDEULATA* (Aubl. l. c. p. 508. t. 202.) pedicels axillary, usually 3-together, 1-flowered, rather shorter than the petioles, bibracteolate under the flowers; leaves ovate-oblong, acuminate, with undulated margins, and are, as well as the branchlets, glabrous; fruit ovate. *h. S.* Native of Guiana, on the banks of the river Sinenari. *Myrtus undulata*, Spreng. syst. 2. p. 482. Leaves 6-7 inches long, full of pellucid dots. Peduncles very short, branched. The flowers are said to be 5-cleft by Aublet, but in the figure they are drawn 4-cleft. Berry red, 1-seeded.

*Waved-leaved Eugenia.* Shrub 3 to 4 feet.

56 *E. ? ANASTOMOSANS* (D. C. l. c.) pedicels 1-flowered, axillary and lateral, 2-3-together, 3 times longer than the petioles, bibracteolate under the flowers; leaves oval, acute, membranous, glabrous; lateral nerves running into a vein, which is distant from the margin; calycine lobes very obtuse, 2 smaller than the rest. *h. S.* Native of French Guiana. Ovarium subglobose-ovate, 2-celled, few-seeded. Style filiform, long. Leaves 4-5 inches long, and 2 inches broad. Pedicels 6-7 lines long. Fruit and seeds unknown.

*Anastomosing-veined Eugenia.* Tree 10 to 15 feet.

57 *E. MICROPORA* (D. C. l. c.) pedicels axillary, 3-9 to-

gether, 1-flowered, length of the petioles, umbellate, refracted after flowering; fruit globose, depressed; calycine lobes 4, ovate; leaves oval, acuminate, petiolate, and are, as well as the branches, glabrous; lateral nerves running into a vein which is distant from the margin. *h. S.* Native of Brazil, at the river Amazon. *Myrtus umbellata*, Mart. herb. but not of Spreng. Leaves 5 inches long and 2 broad, full of minute pellucid dots. Petioles 5 lines long. Pedicels 4 lines long. Seeds 1 to 3. Fruit orange-coloured.

*Small-pored-leaved Eugenia.* Tree.

58 *E. PAUCIFLORA* (D. C. l. c.) pedicels 1-3-together, axillary, 1-flowered, slender, three times the length of the petioles, acutely bibracteolate under the flowers; calycine lobes 4, roundish; leaves oval-oblong, acuminate at the apex, attenuated at the base, petiolate, full of minute pellucid dots, glabrous on both surfaces, as well as on the branchlets. *h. S.* Native of Brazil, in woods in the province of Minas Geraes. *Myrtus* species, Mart. herb. Flowers few, small. Torus nearly as in *Psidium*. Pedicels 6-7 lines long, very slender. Leaves 5 inches long and 15-18 lines broad.

*Few-flowered Eugenia.* Tree 10 feet.

59 *E. HILARIA'NA* (D. C. l. c.) pedicels axillary, 2-5-together, 1-flowered, longer than the petioles, bluntly bibracteolate under the flowers; fruit globose, crowned by the calycine lobes, which are 4, obtuse, and conniving; leaves linear-oblong, obtuse, attenuated at the base, stiff, opaque, on very short petioles, and are as well as the branches glabrous, with revolute edges. *h. S.* Native of Brazil, in the provinces of the Mines. Leaves 2 to 3 inches long, and half an inch broad. Petioles one line long. Pedicels 4 lines long. Fruit smaller than a pea.

*St. Hilare's Eugenia.* Shrub 4 to 5 feet.

60 *E. FRUTICULOSA* (D. C. prod. 3. p. 270.) pedicels axillary, 1-flowered, longer than the petioles, lower ones solitary, upper ones 2-3 together, minutely bibracteolate under the flower; fruit ovate; calycine lobes obtuse; leaves oblong, cuneate at the base, obtuse at the apex, stiff, opaque, glabrous in the adult state, as well as on the branchlets, but when young clothed with adpressed down beneath. *h. S.* Native of Brazil, in the province of St. Paul. *Myrtus fruticulosa*, Mart. herb. A small shrub, having the branches knotted at the base. Leaves nearly 2 inches long, and 4-5 lines broad. Pedicels 4 lines long. Fruit yellow. Seed one, large.

*Shrubby Eugenia.* Shrub 1 to 2 feet.

61 *E. RUSCIFOLIA* (Poir. suppl. 3. p. 123.) pedicels axillary, solitary or the upper ones are aggregate, glabrous, longer than the petioles; leaves ovate, obtuse, coriaceous, glabrous, dotted beneath. *h. S.* Native of South America. *Myrtus daphnoides*, Spreng. syst. 2. p. 480. Fruit and seeds unknown. Perhaps the peduncles are one or many-flowered.

*Butcher's-broom-leaved Eugenia.* Shrub.

62 *E. ? OLEAFOLIA* (D. C. prod. 3. p. 270.) pedicels 1-flowered, axillary, 4 in a fascicle, twice the length of the petioles, bibracteolate under the flowers; leaves oblong, obtuse, cuneate at the base, coriaceous, shining, and are, as well as the branches, glabrous; calyx 4-cleft. *h. S.* Native of South America, in the province of Jaen de Bracamoros, at the river Marañon. *Myrtus oleaefolia*, H. B. et Kunth, nov. gen. amer. 6. p. 147. Pedicels 3 lines long. Berry 3-celled; cells 8-ovulate. Seeds unknown. Allied to *Eugenia buxifolia*.

*Olive-leaved Eugenia.* Shrub 4 to 6 feet.

63 *E. PISTACIÆFOLIA* (D. C. l. c.) pedicels 3-together, axillary, 1-flowered, twice the length of the petioles, minutely bracteate at the base, and bibracteate at the apex; tube of calyx globose; leaves ovate-lanceolate, obtuse at the base, bluish at the apex, rather coriaceous, and are, as well as the branches, glabrous. *h. S.* Native of Brazil, in the provinces of Bahia.

*Myrtus pistaciæfolia*, Mart. herb. Leaves with a few pellucid dots, like those of the *Pistachia*. Pedicels 3-4 lines long, rising from very short scaly branches. Flowers small. Fruit unknown.

*Pistachia-leaved Eugenia.* Tree 10 to 12 feet.

64 *E. STICTOPTALIA* (Mart. herb. ex D. C. prod. 3. p. 270.) glabrous; pedicels 5-7, aggregate, 1-flowered, rising from the axils of the old leaves, sometimes upon a very short peduncle; bracteas 2, ovate, adpressed to the ovarium; lobes of calyx 4, ovate, nearly orbicular, full of glandular dots; leaves nearly sessile, ovate or oval, obtuse at both ends, coriaceous, opaque, reticulately nerved on both surfaces. *h. S.* Native of Brazil, in the interior provinces. Pedicels 5-6 lines long. Leaves 3 inches long and 1½ broad.

*Dotted-petalled Eugenia.* Shrub 4 to 6 feet.

65 *E. ? ERYTHROCARPA* (D. C. prod. 3. p. 270.) pedicels 1-flowered, axillary, usually 5-together, racemously umbellate, one-half shorter than the leaves, furnished with one bractea at the base, 2 bracteoles under the flowers; leaves elliptic, obtuse, acute at the base, coriaceous, shining, and are, as well as the branches, glabrous; calyxes 4-cleft. *h. S.* Native of New Granada, near Honda. *Myrtus erythrocárpa*, H. B. et Kunth, nov. gen. amer. 6. p. 148. Leaves 12-14 lines long. Ovarium globose, 2-celled; cells 10-11-ovulate. Berry red. Seeds unknown.

*Red-fruited Eugenia.* Tree 6 to 8 feet.

66 *E. ? MAXIMILIA'NA* (D. C. l. c.) pedicels axillary, 2-6-together, aggregate, bibracteolate under the flowers; leaves elliptic, attenuated, coriaceous, dotted, shining, quite glabrous. *h. S.* Native of Brazil, about Barada Vereda. *Myrtus micrantha*, Nees et Mart. in nov. act. bonn. 12. p. 51. but not Kunth. Bracteoles ciliated. Ovarium 2-celled, many-ovulate. Fruit and seeds unknown. Said to be allied to *Myrcia bracteata* and *M. lucida*.

*Maximilian's Eugenia.* Shrub 3 to 4 feet.

67 *E. ? LAMBERTIA'NA* (D. C. l. c.) pedicels 1-flowered, 5-6-together, axillary, much shorter than the leaves, minutely bibracteolate under the flowers; leaves oval, acutish at both ends, with a very few dots, reticulately veined beneath, rather coriaceous, and are, as well as the branches, quite glabrous; calycine lobes ovate, obtuse. *h. S.* Native of the West Indies, in St. Vincent's. Petioles 3 lines long, hardly shorter than the pedicels. Leaves 4 inches long and 2 inches broad. Fruit ovate-globose, 1-seeded.

*Lambert's Eugenia.* Shrub.

68 *E. PLURIFLORA* (D. C. l. c.) glabrous; pedicels 1-flowered, hardly longer than the petioles, 5-7 from the axils of the old leaves, each bearing 2 ovate bracteas at the apex, which are adpressed to the ovarium; calycine lobes 4 ovate; leaves oval, coriaceous, obtuse, opaque, shining above, tubercularly dotted beneath. *h. S.* Native of Brazil, in the provinces of the Mines. Branches terete, robust. Leaves 1½ inch long. Petioles 2 lines long. Flowers small. Fruit unknown.

*Many-flowered Eugenia.* Shrub.

69 *E. BAHIENSIS* (D. C. prod. 3. p. 271.) pedicels 2-7-together, or rising from a short rachis, 1-flowered, a little longer than the leaves, minutely bibracteolate at the apex; leaves elliptic, somewhat acuminate, opaque, and are, as well as the branchlets, glabrous; lateral veins hardly prominent; calycine lobes 4, roundish. *h. S.* Native of Brazil, in the province of Bahia, in dense woods. *Myrtus Lambertiana*, Mart. herb. Very nearly allied to *E. Lambertiana*, but the leaves are a little narrower, more brown, never reticulated. Flowers double the size. Fruit unknown.

*Bahia Eugenia.* Tree 10 to 12 feet.

70 *E. ? PARKERIA'NA* (D. C. prod. 3. p. 271.) pedicels 1-flow-

ered, 5-7-together, shorter than the leaves, rising from the axils of the bracteas, which are oblong, bearing 2 linear bracteoles under the flowers; leaves elliptic-acuminate, glabrous; calyx 4-cleft; bracteas and bracteoles ciliated. *h. S.* Native about Demerara and of the Island of Trinidad. Sieb. pl. trin. no. 245. Allied to *E. Patrisii* and *E. inaequalifolia*, but differs in the pedicels being in fascicles, 6-7 lines long. Leaves 2 inches long, full of pellucid dots. Fruit and seeds unknown.

*Parker's Eugenia.* Shrub.

71 *E. ? CORONATA* (Vahl. ined. in herb. Puerari ex D. C. l. c.) pedicels 1-flowered, aggregate in the axils of the upper leaves, and much shorter than them, bearing 2 ovate bracteas under the flowers; leaves oval, bluntish at both ends, coriaceous, and are, as well as the branches, quite glabrous; calycine lobes 4, roundish. *h. S.* Native of Guinea. Leaves  $1\frac{1}{2}$  inch long, and 8-10 lines broad. Pedicels 3-4 lines long. Flowers smaller than those of *Myrtus communis*. Ovarium globose. Fruit and seeds unknown.

*Crowned-fruited Eugenia.* Shrub.

72 *E. ? ADENOCALYX* (D. C. prod. 3. p. 271.) pedicels 3-5-together, 1-flowered, in fascicles, shorter than the petioles, glabrous; leaves broad, ovate, acuminate, coriaceous, full of pellucid dots; branches and flowers quite glabrous; calyx 4-cleft, obtuse, full of glandular dots; bracteoles 2 at the base of the calyx, very blunt, and somewhat connate. *h. S.* Native of Cayenne. Leaves 4 inches long,  $2\frac{1}{2}$  broad; lower ones on the branches obtuse. Pedicels hardly  $1\frac{1}{2}$  line long. Fruit and seeds unknown.

*Gland-calyxed Eugenia.* Shrub.

73 *E. BIMARGINATA* (D. C. l. c.) pedicels 5-7-together, axillary, 1-flowered, much shorter than the leaves, bibracteolate under the flowers; calyx with an obovate tube, and bluntish short lobes; leaves ovate or ovate-oblong, sessile, somewhat cordate at the base, obtuse at the apex, coriaceous, stiff, opaque; marginal nerve double, outer one contiguous to the margin. *h. S.* Native of Brazil. *Myrtus antidysenterica*, Mart. herb. Leaves of the lower branches 15 lines long, and 11-12 lines broad; upper ones 20 lines long and 9 lines broad, with the margins of all reflexed. Pedicels 2 lines long.

*Double-margined-leaved Eugenia.* Shrub 4 to 8 feet.

74 *E. VETULA* (D. C. prod. 3. p. 271.) pedicels 1-3-together, 1-flowered, a little shorter than the leaves, glabrous, bibracteolate at the apex; calyx with a roundish tube and suborbicular lobes; leaves sessile, ovate, cordate at the base, obtuse at the apex, coriaceous, opaque, glabrous above, clothed with hoary velvety down beneath, as well as on the branchlets, but at length becoming naked. *h. S.* Native of Brazil, in the provinces of the Mines. *Myrtus vetula*, Mart. herb. Leaves 10-12 lines long and 1-9 broad. Pedicels 5-6 lines long. Calyx glabrous. Stamens shorter than the petals.

*Old Eugenia.* Shrub 4 to 6 feet.

75 *E. MARITIMA* (D. C. l. c.) pedicels 2-3-together, 1-flowered, hardly longer than the petioles, bibracteolate at the apex, rising from a very short rachis, in something like racemes; calyx with an obovate tube, and ovate-roundish lobes; leaves oval, bluntish, glabrous, opaque; lateral veins hardly evident at the apex. *h. S.* Native of Brazil, by the sea-side at Ilheus. *Myrtus maritima*, Mart. herb. Leaves  $1\frac{1}{2}$  inch long, and 9-10 lines broad. Pedicels 2-3 lines long. Flowers small.

*Sea-side Eugenia.* Shrub.

76 *E. ROXBURGHII* (D. C. l. c.) pedicels 1-flowered, axillary and lateral, aggregate or subracemose, much shorter than the leaves, bibracteolate under the flowers; leaves oval, bluntish, coriaceous, dotless, glabrous; calyxes and pedicels clothed with rusty pubescence. *h. S.* Native of the East Indies, in Silhet. *Eugenia Zeylanica*, Roxb. hort. beng. p. 92. but not of Wäld.

VOL. II.

Fruit globose, 1-seeded, glabrous, about the size of a grain of pepper. Leaves 15 lines long, and 7-8 lines broad.

*Roxburgh's Eugenia.* Tree.

77 *E. MINIMA* (Blum. cat. hort. buit. p. 75.) pedicels crowded, axillary, 1-flowered, shorter than the leaves; calyx crenulated; leaves on short petioles, elliptic-lanceolate, glabrous, full of fine parallel stripes. *h. S.* Native of Java, in woods. *Myrtus variegata*, Blum. bijdr. p. 1082. Fruit small, obovate, 1-seeded. Seeds of *Eugenia*. Calyx somewhat attenuated at the base.

*Small Eugenia.* Shrub 4 to 6 feet.

78 *E. TENELLA* (D. C. prod. 3. p. 272.) pedicels 1-3, very short, axillary, 1-flowered, minutely bibracteolate under the flowers; lobes of calyx 4, obtuse; leaves oval, obtuse, somewhat cuneate at the base, membranous, full of pellucid dots, veinless, except the middle nerve, glabrous; petioles and branchlets puberulous. *h. S.* Native of Brazil, on high mountains in the provinces of the Mines. *Myrtus tenella*, Mart. herb. Habit almost of *E. alpina* and *E. obtusa*, but truly different. Stamens and style exserted. Fruit unknown. Leaves 6-7 lines long, and 3 lines broad. Flowers small. Perhaps referrible to section iii.

*Weak Eugenia.* Shrub 2 to 3 feet.

79 *E. ? FLAVESCENS* (D. C. prod. 3. p. 272.) pedicels 3-5-together, axillary, 1-flowered, bibracteolate at the apex; lobes of calyx 4, ovate, acutish; leaves ovate, acuminate at the base, and attenuated at the apex, obtuse, membranous, full of pellucid dots, glabrous on both surfaces, as well as on the petioles, pedicels, and calyxes. *h. S.* Native of Brazil, in the desert of Bahia. *Myrtus flava*, Mart. herb. Calyxes yellowish. Petals 4, orbicular, white, ex Mart. Stamiferous disk 4-sided in the middle of the flower. Style longer than the filaments. Fruit unknown.

*Yellowish Eugenia.* Shrub 4 to 6 feet.

\*\*\* Flowers axillary, almost sessile, or on short peduncles, and disposed in glomerate fascicles in the axils of the leaves.

80 *E. ? L'HERITIERIANA* (D. C. prod. 3. p. 272.) flowers axillary, sessile, crowded; leaves elliptic-acuminate, and are, as well as the branches, quite glabrous; lateral nerves confluent near the margins. *h. S.* Native of Tobago. *Myrtus dumosa*, L'Her. herb. but not of Vahl. Very nearly allied to *E. coffeefolia*. Leaves less opaque, full of pellucid dots when examined by a lens.

*L'Heritier's Eugenia.* Shrub 5 to 6 feet.

81 *E. COFFEAFOLIA* (D. C. l. c.) flowers axillary, sessile, crowded; leaves elliptic, attenuated at the base, acuminate at the apex, and are, as well as the branches, quite glabrous; lateral nerves of leaves confluent at the apex, a considerable distance from the margin of the leaf. *h. S.* Native of Cayenne. Fruit globose, glabrous, size of a small pea. Seed one, roundish. Embryo homogeneous. Leaves obscure, almost without dots, 4-6 inches long, and from 1-2 inches broad.

*Coffee-leaved Eugenia.* Shrub 6 to 8 feet.

82 *E. AFFINIS* (D. C. l. c.) peduncles axillary, branched, 3-flowered, very short, bibracteolate at the base; leaves ovate-oblong, acuminate, and are, as well as the branches, quite glabrous; fruit oval. *h. S.* Native of St. Domingo and Porto Rico, at the edges of woods. Allied to *E. undulata*, but differs in the leaves being one-half smaller and flat. Berry olive-formed, 1-seeded. Cotyledons conferruminated.

*Allied Eugenia.* Shrub 6 to 8 feet.

83 *E. CALOPHYLLOIDES* (D. C. l. c.) flowers axillary and lateral, crowded, nearly sessile, 4-cleft; leaves oval, acute, shining above, glabrous in the adult state; nerves on the under surface, petioles, branchlets, pedicels, and calycine tube, clothed with rusty velvety down. *h. S.* Native of Sierra Leone.

*Calophylloides lucida*, Smeathn. mss. Lobes of calyx ovate, obtuse, smoothish. Leaves 5-6 inches long, and 2 or 2½ broad, on very short petioles, dotless; lateral nerves confluent towards the margins. Ovarium globose. Fruit and seeds unknown.

*Calophyllum-like* Eugenia. Shrub 10 feet.

84 *E. CHRYSOPHYLLUM* (Poir. suppl. 3. p. 129.) flowers axillary, almost sessile, aggregate, 4-cleft; leaves ovate, acute, glabrous and shining above, but clothed with adpressed silky golden down beneath, which becomes nearly deciduous; fruit ovate, rather velvety. *h. S.* Native of Cayenne, not in the Mauritius. *Myrtus chrysophyllum*, Spreng. syst. 2. p. 482. exclusive of the synonyms. Flowers clothed with rusty down, sessile. Pedicels 2 lines long after flowering, rather branched at the base. Mature fruit size of an olive, 1-seeded. Cotyledons conferruminated, furnished with bladdery glands inside. *α*

*Golden-leaved* Eugenia. Tree.

85 *E. ? CORDATA* (D. C. l. c.) flowers almost sessile, axillary and lateral, rather crowded; leaves sessile, ovate, very blunt, rather cordate, shining, and are, as well as the branches, quite glabrous; calyxes 4-5-cleft. *h. S.* Native of the West India Islands. *Myrtus cordata*, Swartz, fl. ind. occ. p. 893. Vahl. symb. 2. p. 55. Branches compressed above. Ovarium roundish. Stigma deflexed. Fruit and seeds unknown.

*Cordate-leaved* Eugenia. Shrub 2 to 3 feet.

86 *E. LATERIFLORA* (Willd. spec. 2. p. 749.) flowers almost sessile, lateral, crowded or scattered; leaves obovate-roundish, very blunt, attenuated at the base, with revolute margins, coriaceous, pale beneath, reticulated from elevated veins on both surfaces, and are, as well as the branches, quite glabrous. *h. S.* Native of the Island of Santa Cruz. *E. sessiliflora*, Vahl. symb. 3. p. 64. Calyx and petals dotted. Fruit and seeds unknown.

*Side-flowered* Eugenia. Tree.

87 *E. SESSILIFLORA* (D. C. prod. 3. p. 273.) flowers almost sessile, lateral, crowded or scattered; leaves oblong or oval, bluntish, with somewhat revolute margins, rather membranaceous, hardly veined, and are, as well as the branches, quite glabrous. *h. S.* Native of St. Domingo. *Myrtus sessiliflora*, Spreng. syst. 2. p. 479. *E. sessiliflora*, Vahl. symb. 3. p. 64. *? E. laterifolia*, Pers. *?* Fruit one-half smaller than those of *E. lateriflora*, but not sufficiently known.

*Sessile-flowered* Eugenia. Shrub.

88 *E. LINEATA* (D. C. prod. 3. p. 273.) flowers axillary, almost sessile, crowded; leaves ovate, acuminate, stiff, lined with elevated nerves, hoary beneath, but villous on the nerves; calyxes 4-cleft, clothed with rusty down. *h. S.* Native of St. Domingo, in mountain fields. *Myrtus lineata* Swartz, fl. ind. occ. p. 891. but not of Blume. Berry sapid scarlet, size of a cherry. Seeds 2 or more, angular. Leaves full of pellucid dots, but they are said to be scentless.

*Lined-leaved* Eugenia. Shrub 6 to 10 feet.

89 *E. ? TUBERCULATA* (D. C. l. c.) flowers crowded in the axils of the leaves, and on the tops of the branches, sessile, bi-bracteolate at the base, 4-cleft; leaves elliptic-oblong, coriaceous, with revolute edges, clothed with glandular tubercles above, and glabrous, but with silky down beneath, as well as on the calyxes; branchlets hairy. *h. S.* Native of Cuba, near Regla. *Myrtus tuberculata*, H. B. et Kunth, nov. gen. amer. 6. p. 148. Ovarium 2-celled; cells 8-10-ovulate. Fruit and seeds unknown. Said to be allied to *E. lineata*.

*Tubercular-leaved* Eugenia. Shrub.

90 *E. CAULIFLORA* (D. C. l. c.) flowers crowded, rising from the excoriated trunk and branches, from where the axils of the old leaves had been; pedicels very short, 1-flowered; leaves lanceolate, petiolate, attenuated at the base, long-acuminate at the apex, with a very few pellucid dots, and are, as well as the branches, glabrous. *h. S.* Native of Brazil. *Myrtus cauli-*

*flora*, Mart. reise, p. 285. isis. 1824. p. 589. but not of Blume. Berry edible, globose, of a purplish violet-colour, 1-seeded. Cotyledons conferruminated. Leaves 3 inches long and 9-10 lines broad. Petioles 2 lines long.

*Stem-flowered* Eugenia. Tree 10 to 20 feet.

91 *E. UMBELLATA* (D. C. l. c.) pedicels numerous, short, 1-flowered, umbellate, bi-bracteolate at the apex, rising from the axils of the old branches; leaves sessile, cordate at the base, ovate, acutish, coriaceous, opaque, and are, as well as the branchlets, glabrous, with the marginal nerve thick. *h. S.* Native of Brazil, in woods at Vao do Paran. *Myrtus lateriflora*, Mart. herb. but not of others. Umbels lateral, 7-8-flowered. Pedicels 2-3 lines long. Calycine lobes 4, roundish. Leaves 2-4 inches long and 1-2 broad. Lateral nerves of leaves confluent in front of the margins.

*Umbellate-flowered* Eugenia. Shrub 6 to 8 feet.

92 *E. DELICATULA* (D. C. l. c.) flowers 2-3-together, axillary, nearly sessile; leaves oblong, attenuated at both ends, stiffish, opaque, dotted beneath, glabrous on both surfaces, with a marginal nerve; petioles very short, and are, as well as the young branches, clothed with down. *h. S.* Native of Brazil, in the province of St. Paul. *Myrtus delicatula*, Mart. herb. A tree about 20 feet high, much divided. Leaves 15 lines long and 3 lines broad. Flowers small, like those of *E. rigida*.

*Delicate* Eugenia. Tree 20 feet.

93 *E. RIGIDA* (D. C. l. c.) flowers axillary, 1-3-together, nearly sessile, aggregate, bracteolate; fruit globose, somewhat depressed; calycine lobes 4, short, obtuse, somewhat connivent after flowering; leaves ovate, obtuse, stiffish, opaque, nerveless except the middle nerve, glabrous; petioles and branchlets pubescent. *h. S.* Native of Brazil, in the provinces of the Mines. *Myrtus rigida*, Mart. herb. Leaves 9-10 lines long and 4-5 broad. Pedicels very short, pubescent. Bracteoles obtuse. A much branched small tree. Flowers small. Fruit size of a pea, 2-seeded. Cotyledons conferruminated.

*Stiff* Eugenia. Tree 15 feet.

94 *E. GUAPURIUM* (D. C. l. c.) flowers in fascicles, splitting the bark of the naked branches in rising; leaves elliptic, petiolate, acuminate, membranous, full of pellucid dots, glabrous above, and beset with a few hairs beneath; petioles and branches villous. *h. S.* Native of Peru. *Guapurium*, Juss. gen. p. 324. *Guapurium Peruvianum*, Poir. dict. sc. nat. 20. p. 11. Lobes of calyx 4. Petals 4. Fruit umbilicate, 2-3-seeded. Seeds large, almost like those of *Eugenia*. *Guapuru* is the Peruvian name of the tree.

*Guapuru* Eugenia. Shrub or tree.

95 *E. ? CERASIFORMIS* (D. C. prod. 3. p. 274.) corymbs axillary or terminal, simple; branchlets 3-flowered; calyx 4-cleft; ovary hemispherical; leaves broad-lanceolate, bluntly acuminate, coriaceous, glabrous, with recurved margins, full of fine transverse parallel veins. *h. S.* Native of Java, on the mountains at fountains of rivers. Allied to *E. lineata*, but the rib of the leaf is for the most part purplish, and the marginal vein is simple. *Myrtus cerasiformis*, Blum. bijdr. p. 1088. Fruit globose. Seeds thick, angular, about 3 in number. Cotyledons conferruminated. Flowers not seen.

*Cherry-formed* Eugenia. Shrub.

96 *E. ? TRIFLORA* (Ham. prod. fl. ind. occ. p. 44.) peduncles axillary, usually tern, 3-flowered; flowers bractless, sessile; leaves alternate, petiolate, oblong, attenuated at the base, shining, greyish green beneath. *h. S.* Native of Carthage, in woods. *Myrtus triflora*, Jacq. stirp. am. p. 153. t. 193. f. 59. but not of Spreng. Petals 4, obovate. Fruit unknown. Leaves aromatic when bruised. This species differs from all in the leaves being alternate, but perhaps this is the case only at the tops of the branches.

*Three-flowered Eugenia.* Shrub or tree.

97 *E. BRACHYPODA* (D. C. l. c.) peduncles a little branched, axillary, shorter than the petioles, minutely bibracteate under the flowers; leaves elliptic, attenuated at the base, acuminate at the apex, shining above, pale beneath, glabrous on both surfaces; calyxes glabrous; branchlets and pedicels clothed with rufous velvety down.  $\frac{1}{2}$  S. Native of Cayenne. Leaves 2 or 3 inches long and an inch broad, full of pellucid dots. Pedicels 3 lines long. Fruit while young globose and 1-seeded.

*Short-pedicelled Eugenia.* Shrub or tree.

98 *E. DISTICHA* (D. C. l. c.) peduncles axillary, branched, 3-5-flowered, very short; leaves distich, ovate-lanceolate, acute, glabrous; lateral nerves confluent within the margin; calyx 4-lobed; stigma hooked.  $\frac{1}{2}$  S. Native of Jamaica, on the mountains. *Myrtus disticha*, Swartz, fl. ind. occ. p. 894. Sims, bot. mag. t. 867. Lindl. coll. t. 19. good. *Myrtus horizontalis*, Vent. malm. t. 60. In Swartz's plant the leaves are said to be very coriaceous, and with the lateral veins hardly manifest, but it is probably the same. Fruit ovate, red. Seeds 2-4, thick. Cotyledons conferruminated.

*Distich-leaved Eugenia.* Clt. ? Shrub 5 to 6 feet.

99 *E. GLABRATA* (D. C. l. c.) peduncles axillary, many-flowered, very short; leaves elliptic, acuminate, convex, coriaceous, branches and flowers quite glabrous.  $\frac{1}{2}$  S. Native of St. Domingo, in bushy places, on the mountains. *Myrtus glabrata*, Swartz, fl. ind. occ. p. 903. but not of Blume. Peduncles and petioles 2 lines long. Leaves an inch and a half or 2 inches long, and an inch broad. Berry oblong, black. Seeds 1-2, oblong.

*Smooth Eugenia.* Shrub 4 to 6 feet.

100 *E. CAMPESTRIS* (D. C. l. c.) flowers axillary, crowded, nearly sessile; leaves oval-oblong, acuminate at both ends, opaque, rather villous above when young, but at length becoming glabrous, rather hairy beneath and pale; branchlets compressed, rather hairy; branches white, glabrous.  $\frac{1}{2}$  S. Native of Brazil, in fields, in the province of Minas Geraes. *Myrtus campestris*, Mart. herb. Pedicels hardly any. Bracteoles 2, and are, as well as the calyxes, hairy. Lobes of calyx oblong, bluntish. Petals roundish, emarginate. Style exserted. Leaves 2 inches long and 9 lines broad. Petioles 2 lines long. Fruit unknown.

*Field Eugenia.* Tree 20 feet.

101 *E. AXILLARIS* (Poir. suppl. 3. p. 126.) peduncles axillary, many-flowered, very short, at length rather longer than the petioles; pedicels minutely bibracteolate under the flowers; leaves oval, bluntish, acuminate, flat, shining; branches and flowers glabrous.  $\frac{1}{2}$  S. Native of Jamaica, on the mountains. *Myrtus axillaris*, Swartz, fl. ind. occ. p. 901. but not of Poir. Leaves 2-8 inches long, on very short petioles. Flowers minute, white. Stamens very short. Berry ovate, 1-seeded. Allied to *E. monticola* and *E. glabrata*.

*Axillary-flowered Eugenia.* Fl. Sep. Clt. 1793. Sh. 4 to 6 ft.

102 *E. ? POIRETII* (D. C. l. c.) peduncles axillary, many-flowered, very short, rather longer than the petioles; pedicels minutely bibracteolate under the flowers; leaves oval-oblong, attenuated at the base, obtuse at the apex, full of pellucid dots, shining above, and pale beneath, glabrous on both surfaces, as well as on the branches and flowers.  $\frac{1}{2}$  S. Native of St. Domingo. Leaves an inch long. Flowers minute. Berry globose, 1-seeded, size of a grain of pepper. *Myrtus axillaris*, Poir. dict. 4. p. 412. but not of Swartz. *M. Poirèti*, Spreng. syst. 2. p. 483. *Eug. axillaris*, Spreng. in herb. Balb.

*Poiret's Eugenia.* Shrub 4 to 6 feet.

103 *E. FLORIBUNDA* (West. st. cr. p. 216. ex Willd. spec. 2. p. 960.) peduncles crowded, axillary, many-flowered, length of the petioles, bracteate at the base; leaves oblong, acuminate,

with revolute margins, finely veined, full of pellucid dots.  $\frac{1}{2}$  S. Native of the Island of Santa Cruz. Peduncles sometimes solitary. Flowers 4-cleft. Leaves nearly lanceolate, gradually attenuated.

*Bundle-flowered Eugenia.* Shrub 4 to 6 feet.

104 *E. BUXIFOLIA* (Willd. spec. 2. p. 960.) peduncles axillary, branched, many-flowered, very short; pedicels bibracteolate under the flowers; leaves obovate-oblong, obtuse, attenuated at the base, opaque, dotted beneath, with somewhat revolute edges, and are, as well as the branches and flowers, glabrous.  $\frac{1}{2}$  S. Native of St. Domingo, in sterile places. *Myrtus buxifolia*, Swartz, fl. ind. occ. 2. p. 899. *E. myrtoidea*, Poir. suppl. 3. p. 125. Style curved. Fruit roundish, 1-seeded. Embryo of *E. disticha*. Leaves 1 or  $1\frac{1}{2}$  inch long, of an obscure brown-colour.

*Box-leaved Eugenia.* Fl. May, Ju. Clt. 1818. Sh. 4 to 6 ft.

105 *E. ? MONTEICOLA* (D. C. prod. 3. p. 275.) racemes many-flowered, very short, axillary, solitary; leaves ovate or oval, obtuse, flat, opaque, and are, as well as the branches, glabrous; calyx 4-5-lobed.  $\frac{1}{2}$  S. Native of Jamaica, on the high mountains. *Myrtus monticola*, Swartz, fl. ind. occ. 2. p. 898. Racemes few-flowered. Flowers 4-cleft. Leaves ovate-oblong. The fruit is unknown, but the plant is so nearly allied to *Eugenia buxifolia* as hardly to be distinguished from it.

*Mountain-born Eugenia.* Shrub 4 to 6 feet.

106 *E. ? GUADALUPENSIS* (D. C. l. c.) racemes axillary, sessile, many-flowered, crowded into globerated whorls; pedicels bibracteolate under the flowers; leaves ovate, coriaceous, opaque, obtuse or emarginate at the apex, and are, as well as the branches, glabrous; calyx 4-lobed.  $\frac{1}{2}$  S. Native of Guadeloupe. *Eug. buxifolia*, Spreng. in herb. Balb. *Eug. Baruénsis* var. *Guadalupensis*, Spreng. syst. 2. p. 483. Leaves 2 inches long, 12-15 lines broad. Petioles 3 lines long, rather longer than the racemes. Fruit and seeds unknown.

*Guadeloupe Eugenia.* Shrub 6 to 8 feet.

107 *E. BARUENSIS* (Jacq. coll. 3. p. 183. icon. rar. t. 486.) racemes axillary, hardly equal in length to the petioles, and are, as well as the calyxes, pubescent; pedicels bibracteolate under the flowers; leaves ovate or oblong-lanceolate, bluntly acuminate at the apex, membranous, full of pellucid dots.  $\frac{1}{2}$  S. Native of the Island of Barú, and of St. Domingo. *Myrtus Baruénsis*, Spreng. syst. 2. p. 483. Leaves 3 inches long and an inch broad. Petioles 4-5 lines long. Stamens a little longer than the petioles. Fruit globose, glabrous, 1-seeded.

*Var.  $\beta$ , latifolia* (D. C. l. c.) racemes and calyxes glabrous; leaves ovate-lanceolate.  $\frac{1}{2}$  S. Native of St. Domingo. *Eug. latifolia*, Spreng. in herb. Balb. but not of Aubl. Perhaps a proper species.

*Barú Eugenia.* Clt. ? Shrub 4 to 6 feet.

108 *E. ? CASEAROIDES* (D. C. l. c.) racemes axillary and nearly terminal, twin, short, in conglomerate whorls; pedicels bibracteolate at the base of the calyxes; leaves oblong, acuminate, acute at the base, membranous, glabrous, puberulous on the nerve beneath, as well as the branchlets and peduncles.  $\frac{1}{2}$  S. Native of Cumana, on Mount Cocollar. *Myrtus casearoides*, H. B. et Kunth, nov. gen. amer. 6. p. 145. t. 546. Leaves an inch and a half long, full of pellucid dots. Ovarium 2-celled; cells 6-8-ovulate. Fruit and seeds unknown. There is a plant very nearly allied to this, which was collected in St. Domingo under the name of *Myrtus procera*, Browne, but not of Swartz.

*Casearia-like Eugenia.* Shrub 4 to 6 feet.

109 *E. ? MALPIGHIODES* (D. C. l. c.) racemes axillary and nearly terminal, twin, very short, 4-8-flowered; pedicels bibracteolate under the flowers; leaves ovate, acuminate, coriaceous, glabrous, shining; branches hairy.  $\frac{1}{2}$  S. Native of South America, in the province of Jaén de Bracamoros, at the river

*Calophylloides lucida*, Smeathn. mss. Lobes of calyx ovate, obtuse, smoothish. Leaves 5-6 inches long, and 2 or 2½ broad, on very short petioles, dotless; lateral nerves confluent towards the margins. Ovarium globose. Fruit and seeds unknown.

*Calophyllum-like Eugenia*. Shrub 10 feet.

84 *E. CHRYSOPHYLLUM* (Poir. suppl. 3. p. 129.) flowers axillary, almost sessile, aggregate, 4-cleft; leaves ovate, acute, glabrous and shining above, but clothed with adpressed silky golden down beneath, which becomes nearly deciduous; fruit ovate, rather velvety. *h. S.* Native of Cayenne, not in the Mauritius. *Myrtus chrysophyllum*, Spreng. syst. 2. p. 482. exclusive of the synonymes. Flowers clothed with rusty down, sessile. Pedicels 2 lines long after flowering, rather branched at the base. Mature fruit size of an olive, 1-seeded. Cotyledons conferruminated, furnished with bladdery glands inside. *α*

*Golden-leaved Eugenia*. Tree.

85 *E. ? CORDATA* (D. C. l. c.) flowers almost sessile, axillary and lateral, rather crowded; leaves sessile, ovate, very blunt, rather cordate, shining, and are, as well as the branches, quite glabrous; calyxes 4-5-cleft. *h. S.* Native of the West India Islands. *Myrtus cordata*, Swartz, fl. ind. occ. p. 893. Vahl. symb. 2. p. 55. Branches compressed above. Ovarium roundish. Stigma deflexed. Fruit and seeds unknown.

*Cordate-leaved Eugenia*. Shrub 2 to 3 feet.

86 *E. LATERIFLORA* (Willd. spec. 2. p. 749.) flowers almost sessile, lateral, crowded or scattered; leaves obovate-roundish, very blunt, attenuated at the base, with revolute margins, coriaceous, pale beneath, reticulated from elevated veins on both surfaces, and are, as well as the branches, quite glabrous. *h. S.* Native of the Island of Santa Cruz. *E. sessiliflora*, Vahl. symb. 3. p. 64. Calyx and petals dotted. Fruit and seeds unknown.

*Side-flowered Eugenia*. Tree.

87 *E. SESSILIFLORA* (D. C. prod. 3. p. 273.) flowers almost sessile, lateral, crowded or scattered; leaves oblong or oval, bluish, with somewhat revolute margins, rather membranaceous, hardly veined, and are, as well as the branches, quite glabrous. *h. S.* Native of St. Domingo. *Myrtus sessiliflora*, Spreng. syst. 2. p. 479. *E. sessiliflora*, Vahl. symb. 3. p. 64. ? *E. laterifolia*, Pers. ? Fruit one-half smaller than those of *E. lateriflora*, but not sufficiently known.

*Sessile-flowered Eugenia*. Shrub.

88 *E. LINEATA* (D. C. prod. 3. p. 273.) flowers axillary, almost sessile, crowded; leaves ovate, acuminate, stiff, lined with elevated nerves, hoary beneath, but villous on the nerves; calyxes 4-cleft, clothed with rusty down. *h. S.* Native of St. Domingo, in mountain fields. *Myrtus lineata* Swartz, fl. ind. occ. p. 891. but not of Blume. Berry sapid scarlet, size of a cherry. Seeds 2 or more, angular. Leaves full of pellucid dots, but they are said to be scentless.

*Lined-leaved Eugenia*. Shrub 6 to 10 feet.

89 *E. ? TUBERCULATA* (D. C. l. c.) flowers crowded in the axils of the leaves, and on the tops of the branches, sessile, bibracteolate at the base, 4-cleft; leaves elliptic-oblong, coriaceous, with revolute edges, clothed with glandular tubercles above, and glabrous, but with silky down beneath, as well as on the calyxes; branchlets hairy. *h. S.* Native of Cuba, near Regla. *Myrtus tuberculata*, H. B. et Kunth, nov. gen. amer. 6. p. 148. Ovarium 2-celled; cells 8-10-ovulate. Fruit and seeds unknown. Said to be allied to *E. lineata*.

*Tubercular-leaved Eugenia*. Shrub.

90 *E. CAULIFLORA* (D. C. l. c.) flowers crowded, rising from the excoarated trunk and branches, from where the axils of the old leaves had been; pedicels very short, 1-flowered; leaves lanceolate, petiolate, attenuated at the base, long-acuminate at the apex, with a very few pellucid dots, and are, as well as the branches, glabrous. *h. S.* Native of Brazil. *Myrtus cauli-*

*flora*, Mart. reise, p. 285. isis. 1824. p. 589. but not of Blume. Berry edible, globose, of a purplish violet-colour, 1-seeded. Cotyledons conferruminated. Leaves 3 inches long and 9-10 lines broad. Petioles 2 lines long.

*Stem-flowered Eugenia*. Tree 10 to 20 feet.

91 *E. UMBELLATA* (D. C. l. c.) pedicels numerous, short, 1-flowered, umbellate, bibracteolate at the apex, rising from the axils of the old branches; leaves sessile, cordate at the base, ovate, acutish, coriaceous, opaque, and are, as well as the branchlets, glabrous, with the marginal nerve thick. *h. S.* Native of Brazil, in woods at Vao do Paranã. *Myrtus lateriflora*, Mart. herb. but not of others. Umbels lateral, 7-8-flowered. Pedicels 2-3 lines long. Calycine lobes 4, roundish. Leaves 2-4 inches long and 1-2 broad. Lateral nerves of leaves confluent in front of the margins.

*Umbellate-flowered Eugenia*. Shrub 6 to 8 feet.

92 *E. DELICATULA* (D. C. l. c.) flowers 2-3-together, axillary, nearly sessile; leaves oblong, attenuated at both ends, stiffish, opaque, dotted beneath, glabrous on both surfaces, with a marginal nerve; petioles very short, and are, as well as the young branches, clothed with down. *h. S.* Native of Brazil, in the province of St. Paul. *Myrtus delicatula*, Mart. herb. A tree about 20 feet high, much divided. Leaves 15 lines long and 3 lines broad. Flowers small, like those of *E. rigida*.

*Delicate Eugenia*. Tree 20 feet.

93 *E. RIGIDA* (D. C. l. c.) flowers axillary, 1-3-together, nearly sessile, aggregate, bracteolate; fruit globose, somewhat depressed; calycine lobes 4, short, obtuse, somewhat connivent after flowering; leaves ovate, obtuse, stiffish, opaque, nerveless except the middle nerve, glabrous; petioles and branchlets pubescent. *h. S.* Native of Brazil, in the provinces of the Mines. *Myrtus rigida*, Mart. herb. Leaves 9-10 lines long and 4-5 broad. Pedicels very short, pubescent. Bracteoles obtuse. A much branched small tree. Flowers small. Fruit size of a pea, 2-seeded. Cotyledons conferruminated.

*Stiff Eugenia*. Tree 15 feet.

94 *E. GUAPURIUM* (D. C. l. c.) flowers in fascicles, splitting the bark of the naked branches in rising; leaves elliptic, petiolate, acuminate, membranous, full of pellucid dots, glabrous above, and beset with a few hairs beneath; petioles and branches villous. *h. S.* Native of Peru. *Guapurium*, Juss. gen. p. 324. *Guapurium Peruvianum*, Poir. dict. sc. nat. 20. p. 11. Lobes of calyx 4. Petals 4. Fruit umbilicate, 2-3-seeded. Seeds large, almost like those of *Eugenia*. *Guapuru* is the Peruvian name of the tree.

*Guapuru Eugenia*. Shrub or tree.

95 *E. ? CERASIFORMIS* (D. C. prod. 3. p. 274.) corymbs axillary or terminal, simple; branchlets 3-flowered; calyx 4-cleft; ovarium hemispherical; leaves broad-lanceolate, bluntly acuminate, coriaceous, glabrous, with recurved margins, full of fine transverse parallel veins. *h. S.* Native of Java, on the mountains at fountains of rivers. Allied to *E. lineata*, but the rib of the leaf is for the most part purplish, and the marginal vein is simple. *Myrtus cerasiformis*, Blum. bijdr. p. 1088. Fruit globose. Seeds thick, angular, about 3 in number. Cotyledons conferruminated. Flowers not seen.

*Cherry-formed-fruited Eugenia*. Shrub.

96 *E. ? TRIFLORA* (Ham. prod. fl. ind. occ. p. 44.) peduncles axillary, usually tern, 3-flowered; flowers bractless, sessile; leaves alternate, petiolate, oblong, attenuated at the base, shining, greyish green beneath. *h. S.* Native of Carthage, in woods. *Myrtus triflora*, Jacq. stirp. am. p. 153. t. 193. f. 59. but not of Spreng. Petals 4, obovate. Fruit unknown. Leaves aromatic when bruised. This species differs from all in the leaves being alternate, but perhaps this is the case only at the tops of the branches.

*Three-flowered Eugenia.* Shrub or tree.

97 *E. BRACHYPODA* (D. C. l. c.) peduncles a little branched, axillary, shorter than the petioles, minutely bibracteate under the flowers; leaves elliptic, attenuated at the base, acuminate at the apex, shining above, pale beneath, glabrous on both surfaces; calyxes glabrous; branchlets and pedicels clothed with rufous velvety down. *h. S.* Native of Cayenne. Leaves 2 or 3 inches long and an inch broad, full of pellucid dots. Pedicels 3 lines long. Fruit while young globose and 1-seeded.

*Short-pedicelled Eugenia.* Shrub or tree.

98 *E. DISTICHA* (D. C. l. c.) peduncles axillary, branched, 3-5-flowered, very short; leaves distich, ovate-lanceolate, acute, glabrous; lateral nerves confluent within the margin; calyx 4-lobed; stigma hooked. *h. S.* Native of Jamaica, on the mountains. *Myrtus disticha*, Swartz, fl. ind. occ. p. 891. Sims, bot. mag. t. 867. Lindl. coll. t. 19. good. *Myrtus horizontalis*, Vent. malm. t. 60. In Swartz's plant the leaves are said to be very coriaceous, and with the lateral veins hardly manifest, but it is probably the same. Fruit ovate, red. Seeds 2-4, thick. Cotyledons conferruminated.

*Distich-leaved Eugenia.* Clt.? Shrub 5 to 6 feet.

99 *E. GLABRATA* (D. C. l. c.) peduncles axillary, many-flowered, very short; leaves elliptic, acuminate, convex, coriaceous; branches and flowers quite glabrous. *h. S.* Native of St. Domingo, in bushy places, on the mountains. *Myrtus glabrata*, Swartz, fl. ind. occ. p. 903. but not of Blume. Peduncles and petioles 2 lines long. Leaves an inch and a half or 2 inches long, and an inch broad. Berry oblong, black. Seeds 1-2, oblong.

*Smooth Eugenia.* Shrub 4 to 6 feet.

100 *E. CAMPESTRIS* (D. C. l. c.) flowers axillary, crowded, nearly sessile; leaves oval-oblong, acuminate at both ends, opaque, rather villous above when young, but at length becoming glabrous, rather hairy beneath and pale; branchlets compressed, rather hairy; branches white, glabrous. *h. S.* Native of Brazil, in fields, in the province of Minas Geraes. *Myrtus campestris*, Mart. herb. Pedicels hardly any. Bracteoles 2, and are, as well as the calyxes, hairy. Lobes of calyx oblong, bluntish. Petals roundish, emarginate. Style exserted. Leaves 2 inches long and 9 lines broad. Petioles 2 lines long. Fruit unknown.

*Field Eugenia.* Tree 20 feet.

101 *E. AXILLARIS* (Poir. suppl. 3. p. 126.) peduncles axillary, many-flowered, very short, at length rather longer than the petioles; pedicels minutely bibracteolate under the flowers; leaves oval, bluntish, acuminate, flat, shining; branches and flowers glabrous. *h. S.* Native of Jamaica, on the mountains. *Myrtus axillaris*, Swartz, fl. ind. occ. p. 901. but not of Poir. Leaves 2-8 inches long, on very short petioles. Flowers minute, white. Stamens very short. Berry ovate, 1-seeded. Allied to *E. monticola* and *E. glabrata*.

*Axillary-flowered Eugenia.* Fl. Sep. Clt. 1793. Sh. 4 to 6 ft.

102 *E. ? POIRETII* (D. C. l. c.) peduncles axillary, many-flowered, very short, rather longer than the petioles; pedicels minutely bibracteolate under the flowers; leaves oval-oblong, attenuated at the base, obtuse at the apex, full of pellucid dots, shining above, and pale beneath, glabrous on both surfaces, as well as on the branches and flowers. *h. S.* Native of St. Domingo. Leaves an inch long. Flowers minute. Berry globose, 1-seeded, size of a grain of pepper. *Myrtus axillaris*, Poir. dict. 4. p. 412. but not of Swartz. *M. Poirèti*, Spreng. syst. 2. p. 483. *Eug. axillaris*, Spreng. in herb. Balb.

*Poirèti's Eugenia.* Shrub 4 to 6 feet.

103 *E. FLORIBUNDA* (West. st. cr. p. 216. ex Willd. spec. 2. p. 960.) peduncles crowded, axillary, many-flowered, length of the petioles, bracteate at the base; leaves oblong, acuminate,

with revolute margins, finely veined, full of pellucid dots. *h. S.* Native of the Island of Santa Cruz. Peduncles sometimes solitary. Flowers 4-cleft. Leaves nearly lanceolate, gradually attenuated.

*Bundle-flowered Eugenia.* Shrub 4 to 6 feet.

104 *E. BUXIFOLIA* (Willd. spec. 2. p. 960.) peduncles axillary, branched, many-flowered, very short; pedicels bibracteolate under the flowers; leaves obovate-oblong, obtuse, attenuated at the base, opaque, dotted beneath, with somewhat revolute edges, and are, as well as the branches and flowers, glabrous. *h. S.* Native of St. Domingo, in sterile places. *Myrtus buxifolia*, Swartz, fl. ind. occ. 2. p. 899. *E. myrtoïdes*, Poir. suppl. 3. p. 125. Style curved. Fruit roundish, 1-seeded. Embryo of *E. disticha*. Leaves 1 or 1½ inch long, of an obscure brown-colour.

*Box-leaved Eugenia.* Fl. May, Ju. Clt. 1818. Sh. 4 to 6 ft.

105 *E. ? MONICOLA* (D. C. prod. 3. p. 275.) racemes many-flowered, very short, axillary, solitary; leaves ovate or oval, obtuse, flat, opaque, and are, as well as the branches, glabrous; calyx 4-5-lobed. *h. S.* Native of Jamaica, on the high mountains. *Myrtus monticola*, Swartz, fl. ind. occ. 2. p. 898. Racemes few-flowered. Flowers 4-cleft. Leaves ovate-oblong. The fruit is unknown, but the plant is so nearly allied to *Eugenia buxifolia* as hardly to be distinguished from it.

*Mountain-born Eugenia.* Shrub 4 to 6 feet.

106 *E. ? GUADALUPE'NSIS* (D. C. l. c.) racemes axillary, sessile, many-flowered, crowded into glomerated whorls; pedicels bibracteolate under the flowers; leaves ovate, coriaceous, opaque, obtuse or emarginate at the apex, and are, as well as the branches, glabrous; calyx 4-lobed. *h. S.* Native of Guadeloupe. *Eug. buxifolia*, Spreng. in herb. Balb. *Eug. Baruénsis* var. *Guadalupénsis*, Spreng. syst. 2. p. 483. Leaves 2 inches long, 12-15 lines broad. Petioles 3 lines long, rather longer than the racemes. Fruit and seeds unknown.

*Guadeloupe Eugenia.* Shrub 6 to 8 feet.

107 *E. BARUÉNSIS* (Jacq. coll. 3. p. 183. icon. rar. t. 486.) racemes axillary, hardly equal in length to the petioles, and are, as well as the calyxes, pubescent; pedicels bibracteolate under the flowers; leaves ovate or oblong-lanceolate, bluntly acuminate at the apex, membranous, full of pellucid dots. *h. S.* Native of the Island of Barú, and of St. Domingo. *Myrtus Baruénsis*, Spreng. syst. 2. p. 483. Leaves 3 inches long and an inch broad. Petioles 4-5 lines long. Stamens a little longer than the petioles. Fruit globose, glabrous, 1-seeded.

*Var. β, latifolia* (D. C. l. c.) racemes and calyxes glabrous; leaves ovate-lanceolate. *h. S.* Native of St. Domingo. *Eug. latifolia*, Spreng. in herb. Balb. but not of Aubl. Perhaps a proper species.

*Barú Eugenia.* Clt.? Shrub 4 to 6 feet.

108 *E. ? CASEAROIDES* (D. C. l. c.) racemes axillary and nearly terminal, twin, short, in conglomerate whorls; pedicels bibracteolate at the base of the calyxes; leaves oblong, acuminate, acute at the base, membranous, glabrous, puberulous on the nerve beneath, as well as the branchlets and peduncles. *h. S.* Native of Cumana, on Mount Cocollar. *Myrtus casearoides*, H. B. et Kunth, nov. gen. amer. 6. p. 145. t. 546. Leaves an inch and a half long, full of pellucid dots. Ovary 2-celled; cells 6-8-ovulate. Fruit and seeds unknown. There is a plant very nearly allied to this, which was collected in St. Domingo under the name of *Myrtus procera*, Browne, but not of Swartz.

*Casearia-like Eugenia.* Shrub 4 to 6 feet.

109 *E. ? MALPIGHIOIDES* (D. C. l. c.) racemes axillary and nearly terminal, twin, very short, 4-8-flowered; pedicels bibracteolate under the flowers; leaves ovate, acuminate, coriaceous, glabrous, shining; branches hairy. *h. S.* Native of South America, in the province of Jaén de Bracamoros, at the river

Amazon. *Myrtus malpighioides*, H. B. et Kunth, nov. gen. amer. 6. p. 146. Allied to *E. axillaris* and *E. casearoides*. Fruit and seeds unknown.

*Malpighia-like* Eugenia. Shrub 6 to 8 feet.

110 *E. GUAYAQUILÆNSIS* (D. C. l. c.) racemes axillary, short, about equal in length to the petioles, in conglomerate whorls; leaves oblong, acuminate, narrowed at the base, rather coriaceous, covered with adpressed hairs on both surfaces; branches hairy. *h. S.* Native of Quito, near Guayaquil. *Myrtus Guayaquilensis*, H. B. et Kunth, nov. gen. amer. 6. p. 147. Leaves 3-4 inches long, and an inch and a half broad. Fruit glabrous, 1-seeded, hardly the size of a sloe. Seeds unknown.

*Guayaquil* Eugenia. Shrub 3 to 4 feet.

111 *E. SINEMARIÆNSIS* (Aubl. guian. 1. p. 501. t. 198.) peduncles axillary, very short, branched, 3-6-flowered; pedicels bibracteolate under the flowers; leaves ovate-oblong, acuminate, full of pellucid dots, and are, as well as the branchlets, glabrous. *h. S.* Native of Guiana, on the banks of the river Sinemari. *Myrtus Sinemariensis*, Spreng. Leaves rather membranous, 5-6 inches long, and from 1 to 2 broad. Fruit globose, 1-seeded. Cotyledons conferruminated. Seeds somewhat globose. Flowers sometimes 5-cleft, and the seeds are sometimes 2-3.

*Sinemari* Eugenia. Fl. May, July. Clt. 1823. Sh. 2 to 3 ft.

112 *E. CHRYSOPHYLLOIDES* (D. C. prod. 3. p. 276.) racemes axillary, very short, branched, and are, as well as the calyxes, clothed with rufous silky down; pedicels longer than the rachis; leaves elliptic, acuminate, coriaceous, glabrous above, but clothed with rufous silky deciduous down beneath, when young rather velvety; style flexuous, elongated. *h. S.* Native of Cayenne. Allied to *Eug. chrysophyllum*, but the flowers are evidently pedicellate, and disposed in short racemes. Lobes of calyx reflexed. Bracteoles none under the flowers. Fruit and seeds unknown.

*Chrysophyllum-like* Eugenia. Shrub.

113 *E. BRACTEOSA* (D. C. l. c.) pedicels 1 or 3 together, axillary, 1-flowered, and are, as well as the calyxes, bracteas, branches, and young leaves, clothed with tomentum; bracteoles about equal in length to the calyx; leaves oblong, dotless, coriaceous, glabrous above, and at length naked beneath, obtuse, callously mucronate; branches compressedly terete. *h. S.* Native of Brazil, in the provinces of the Mines. Pedicels 2 lines long. Leaves 2-3 inches long and 6-7 lines broad, opaque. Fruit unknown. This species has the habit of *E. alpigæna*.

*Bracteate* Eugenia. Tree.

114 *E. ? XALAPÆNSIS* (D. C. l. c.) peduncles axillary, short, 2-6-flowered; leaves ovate, acuminate, acute at the base, rather membranous, shining, and are, as well as the branches, glabrous. *h. S.* Native of Mexico, near Xalapa. *Myrtus Xalapensis*, H. B. et Kunth, nov. gen. amer. 6. p. 145.

*Xalapa* Eugenia. Shrub 6 feet.

115 *E. ? DUMOSA* (D. C. l. c.) peduncles axillary, very short, 4-flowered, bracteate at the base of the pedicels and under the flowers; leaves petiolate, broad-lanceolate, acuminate, membranous, clothed with silky villi. *h. S.* Native of South America. *Myrtus dumosa*, Vahl. symb. 2. p. 57.

*Bushy* Eugenia. Fl. June, July. Clt. 1793. Sh. 3 to 4 ft.

\*\*\* *Peduncles axillary, bifid or dichotomous; the flowers in the forks sessile, the rest pedicellate.*

116 *E. ? BIFLORA* (D. C. prod. 3. p. 276.) peduncles axillary, solitary, bifid, 2-flowered, bibracteolate at the bifurcation; leaves lanceolate, acute, glabrous on both surfaces. *h. S.* Native of Jamaica. Brown, jam. p. 248. t. 25. f. 3. *Caryophyllus fruticosus*, Mill. *Myrtus biflora*, Lin. amœn. 5. p. 398. Fruit 3-celled, 3 seeded.

*Two-flowered* Eugenia. Fl. Apr. May. Clt. 1739. Sh. 6 to 10 ft.

117 *E. ? SPRENGELII* (D. C. l. c.) peduncles axillary, aggregate, 2-flowered, shorter than the leaves, bibracteolate under the flowers; leaves linear, obtuse, veinless, coriaceous; calyx 4-cleft. *h. S.* Native of Brazil. *E. angustifolia*, Spreng. nov. prov. 18. but not Lam. Petals oblong. Fruit and seeds unknown.

*Sprengel's* Eugenia. Shrub.

118 *E. ? COMPRESSA* (D. C. l. c.) peduncles axillary, shorter than the leaves, 3-flowered; flowers 4-cleft, middle one sessile, lateral ones pedicellate; leaves oblong, obtuse, running into the petiole at the base, rather coriaceous, reticulated, and are, as well as the compressed branches, glabrous. *h. S.* Native of Peru, near Caxamarca. *Myrtus compressa*, H. B. et Kunth, nov. gen. amer. 6. p. 135. Ovarium 2-celled; cells 14-15-ovulate. Fruit and seeds unknown.

*Compressed-branched* Eugenia. Shrub.

119 *E. ? APICULATA* (D. C. l. c.) peduncles axillary, a little longer than the leaves, bifid, 3-flowered, middle flower sessile, lateral ones pedicellate; pedicels minutely bibracteolate under the flowers; leaves ovate, mucronately apiculated, glabrous above, puberulous beneath, and on the pedicels; branchlets hairy; calyx somewhat attenuated at the base. *h. G.* Native of Chili. Lobes of calyx very obtuse, somewhat ciliated. Leaves an inch long, and an inch and a half broad. Fruit and seeds unknown. Allied to *E. discolor*.

*Apiculated-leaved* Eugenia. Shrub.

120 *E. DOMBEYANA* (D. C. prod. 3. p. 276.) peduncles 1-3-together, axillary, 1-3-flowered, shorter than the leaves; flowers 4-cleft; tube of calyx rather turbinate; limb spreading, reflexed; leaves oblong, acute at both ends, opaque, glabrous, above, canescent beneath, and are as well as the branchlets villos. *h. S.* Native of Peru. *Myrtus lanceolata*, Juss. herb. Jaum. in Duham. ed. nov. 1. p. 208. but not *E. lanceolata*, Lam. Allied to *E. discolor*, but the leaves are much narrower, 10-12 lines long and 3 lines broad. Pedicels 5 lines long, sometimes 1-flowered at the apex, sometimes 3-flowered; pedicels, especially 2, rising from the axils of the bracteas, 4 lines long, 1-flowered. Torus square. Fruit unknown.

*Dombey's* Eugenia. Shrub or tree.

121 *E. ? ACKA* (D. C. prod. 3. p. 277.) peduncles axillary and nearly terminal, 1-3-flowered, very short, crowded; bracteoles 2, ovate, depressed; tube of calyx pubescent; lobes 4, ovate, ample, and are as well as the petioles full of pellucid dots; style very long, compressed; fruit ovate, many-seeded, crowned; leaves oval, obtuse, or acutish, opaque, glabrous above, but velvety from deciduous tomentum beneath, especially when young. *h. S.* Native of Peru. *Myrtus Acka*, Juss. herb. Branches terete, short. Leaves crowded, copper-coloured above, rusty beneath, 15-16 lines long, 6-7 lines broad. Lobes of calyx obtuse, somewhat bifid in the adult state. Stamens elongated. Style twisted when young, at length long and compressed.

*Acka* Eugenia. Shrub.

122 *E. ? DISCOLOR* (D. C. l. c.) peduncles axillary, shorter than the leaves, usually 3-flowered; flowers quadrifid, middle one sessile, lateral ones pedicellate; bracteoles under the calyx, linear-subulate; leaves opposite and tern, elliptic-oblong, acute, running into the petiole at the base, rather coriaceous, reticulated, discoloured, shining above, and are as well as the branchlets glabrous; branches triangular. *h. S.* Native on the Andes, near San Felipe. *Myrtus discolor*, H. B. et Kunth, nov. gen. amer. 6. p. 134. and *M. bicolor*, t. 540. Ovarium 2-celled. Cells 6-13-ovulate. Fruit and seeds unknown.

*Discoloured-leaved* Eugenia. Shrub.

123 *E. POLIOSA* (D. C. l. c.) peduncles axillary, 3-flowered, glabrous, about equal in length to the leaves; flowers 4-cleft, middle one sessile, lateral ones pedicellate; leaves approximate,

roundish-elliptic, rounded at the base, coriaceous, glabrous, shining; branches angular. *h. S.* Native of South America. *Myrtus foliosa*, H. B. et Kunth, nov. gen. amer. 6. p. 134. Ovary 2-celled; cells 7-8-ovulate. Style curved. Leaves 9-11 lines long and 7-9 lines broad. Fruit and seeds unknown.

*Leafy Eugenia.* Shrub.

124 *E. SUBAMPLEXICAULIS* (D. C. l. c.) peduncles axillary, shorter than the leaves, 3-flowered; flowers 4-cleft, the one on the bifurcation sessile, and the others pedicellate; lobes of calyx ovate, concrete above the ovary, but at length reflexed along with the petals; leaves ovate-oblong, cordate at the base, sessile, acuminate at the apex, opaque, glabrous on both surfaces, as well as on the branches. *h. S.* Native of Brazil, in woods on Mount Formosa on the confines of the provinces of Rio Janeiro and St. Paul. *Myrtus subamplexicaulis*, Mart. herb. Leaves 3 inches long and an inch broad. Peduncles an inch long. The lateral flowers on pedicels 4 lines long. Petals obovate-oblong.

*Somewhat-stem-clasping-leaved Eugenia.* Shrub.

125 *E. CRENULATA* (Willd. spec. 2. p. 961.) peduncles axillary, solitary, usually 3-flowered, hardly longer than the very short petioles; leaves oval or roundish, bluntly suberect at the apex, and are as well as the branches glabrous. *h. S.* Native of St. Domingo, in mountain thickets. *Myrtus crenulata*, Swartz, fl. ind. occ. 2. p. 889. Leaves 6-7 lines long and 4 lines broad. Flowers minute. Petals white, oblong. Stamens very minute. Berry roundish, red, 1-seeded. Seeds roundish.

*Crenulate-leaved Eugenia.* Shrub 8 to 12 feet.

126 *E. BRACHYBOTRYA* (D. C. l. c.) peduncles axillary, few-flowered, a little longer than the petioles, trifid; leaves ovate, acuminate, obtuse at the base, almost sessile, shining, opaque; branches and flowers glabrous. *h. S.* Native of Cayenne. Fruit globose, glabrous. Seeds few, thick, and rather angular. Leaves 2 inches long and 12-15 lines broad. Racemes 4-5 lines long.

*Short-racemed Eugenia.* Shrub 5 to 6 feet.

127 *E. SIEBERIANA* (D. C. l. c.) racemes axillary, few-flowered; fruit ovate-oblong; lobes of calyx 4, short, broad, very obtuse, conniving, crowned; leaves oval, shortly and bluntly apiculate, membranous, full of pellucid dots, white beneath from hardly visible down. *h. S.* Native of the Island of Trinidad. Sieb. fl. trin. no. 222. Leaves 3 inches long and 18-21 lines broad. Petioles 3-4 lines long. Peduncles rather velvety, hardly longer than the petioles. Fruit 7-8 lines long. Seeds oblong.

*Sieber's Eugenia.* Shrub 5 to 6 feet.

128 *E. MACROSPERMA* (D. C. l. c.) peduncles axillary, few-flowered, length of the petioles, shortly trifid at the apex; leaves oval, attenuated at the base, on longish petioles, acuminate at the apex, glabrous above, rather velvety beneath from rufous deciduous down, as well as the branchlets and pedicels; calycine lobes very obtuse. *h. S.* Native of Brazil, in the desert of Bahia. Fruit ovate, crowned by the calyx, glabrous, 1-seeded. Seeds similar to those of a *Phaseolus*, 7 lines long and 5 lines broad. Cotyledons conferruminate. Petioles 5 lines long. Leaves 5 inches long, hardly 2-lobed.

*Long-seeded Eugenia.* Shrub 5 to 6 feet.

129 *E. MYROBALANA* (D. C. l. c.) racemes few-flowered, axillary, short; fruit oblong, bluntly attenuated at both ends, crowned by the lobes of the calyx, which are very blunt and somewhat incurved, 1-seeded; seeds oblong; leaves oval, acuminate at the apex, opaque, glabrous on both surfaces, as well as on the branchlets. *h. S.* Native of Brazil, at Rio Negro. *Myrtus myrobalanus*, Mart. herb. Leaves 9 inches long, and  $3\frac{1}{2}$  broad. Petioles 6 lines long. Fruit an inch long and half an inch broad.

*Myrobalan Eugenia.* Tree 20 feet.

130 *E. SALICIFOLIA* (D. C. prod. 3. p. 278.) peduncles axillary, shorter than the leaves, twice bifid, 7-flowered, 3 of them sessile in the forks, and 4 of them pedicellate; limb of calyx deciduous; leaves lanceolate, rather membranous, narrowly acuminate, reticulated, glabrous on both surfaces, as well as on the branchlets. *h. S.* Native of New Granada. *Myrtus salicifolia*, H. B. et Kunth, nov. gen. amer. 6. p. 136. t. 541. *M. dumosa*, Spreng. syst. 2. p. 483. exclusive of the synonyme. Ovary 2-3-celled; cells 11-18-ovulate. Fruit and seeds unknown.

*Willow-leaved Eugenia.* Shrub 6 to 10 feet.

131 *E. ? LIMBATA* (D. C. prod. 3. p. 278.) peduncles axillary, shorter than the leaves, bifid, or twice bifid; some of the flowers sessile in the forks, and the others pedicellate; bracteoles linear; leaves oblong, acutish, running into the petiole at the base, coriaceous, reticulated, emarginate, shining, glabrous; branches puberulous. *h. S.* Native of Peru, near Ayavaca. *Myrtus limbata*, H. B. et Kunth, l. c. Lobes of calyx ciliate fringed. Stamens beyond 200. Ovary 2-celled; cells 16-ovulate. Flowers and seeds unknown.

*Limbate Eugenia.* Shrub.

132 *E. FIMBRIATA* (D. C. l. c.) peduncles axillary, exceeding the leaves, 3-flowered or bifid, with 1 flower in the fork, and the branchlets 3-flowered; bractees lanceolate, rather foliaceous; leaves roundish-elliptic, obtuse at both ends, coriaceous, reticulated, and are as well as the branchlets pubescent; petals fringed with villi. *h. S.* Native of Peru, near Ayavaca. *Myrtus fimbriata*, H. B. et Kunth, nov. gen. amer. p. 137. t. 542. Ovary 2-celled; cells 15-ovulate. Fruit and seeds unknown.

*Fringed-petalled Eugenia.* Tree.

133 *E. ? LINDLEYANA* (D. C. l. c.) peduncles axillary and nearly terminal, dichotomous, shorter than the leaves, rather corymbose; flowers sessile in the forks, and the others pedicellate; leaves nearly elliptic, obtuse, acutish at the base, coriaceous, margined, obsolete veined, glabrous, pubescent when young, as well as the branches and corymbs. *h. S.* Native of South America, near San Felipe. *Myrtus Lindleyana*, H. B. et Kunth, l. c. p. 138. t. 543. but not of Mart. herb. Ovary 2-3-celled; cells 12-13-ovulate. Fruit and seeds unknown.

*Lindley's Eugenia.* Shrub 10 to 12 feet.

134 *E. ? RHOPALOIDES* (D. C. l. c.) peduncles axillary, about equal in length to the leaves, usually 6-flowered and dichotomous at the apex; flowers sessile in the forks, the rest pedicellate; leaves obovate, rounded at the apex, emarginate at the base, reticulated, coriaceous, shining, and are as well as the branches glabrous. *h. S.* Native of Peru, at Ayavaca. *Myrtus rhopaloides*, H. B. et Kunth, l. c. p. 137. Ovary 2-celled; cells 20 ovulate. Fruit and seeds unknown.

*Rhopala-like Eugenia.* Tree.

135 *E. EXSUCCA* (D. C. l. c.) peduncles axillary or nearly terminal, length of leaves, bifid or dichotomous, cymose; flowers in threes, middle one sessile; tube of calyx obovate, clothed with rufous silky down; lobes 4, roundish, reflexed; leaves obovate, obtuse, opaque, pale, glabrous above, but rather velvety beneath when young; petioles and branches clothed with rufous down. *h. S.* Native of Peru. *Myrtus exsucca*, Domb. mss. but not of Mart. Peduncles sometimes rising by threes from the axils. Bracteoles linear, acute, under the flowers. Leaves 15 lines long and 7-8 broad. Fruit unknown.

*Dry Eugenia.* Tree 20 feet.

136 *E. ? DICHOTOMA* (D. C. prod. 3. p. 278.) peduncles axillary, opposite, or nearly terminal, longer than the leaves, bifid or twice bifid; flowers sessile in the forks, the rest pedicellate; leaves elliptic-lanceolate, attenuated at both ends, 1-nerved, full of pellucid dots, glabrous in the adult state, pubescent on both

surfaces when young, as well as the branchlets and calyxes. *h. S.* Native of St. Domingo. Perhaps the same as *Myrtus dichotoma* of Vahl. *miss.* Poir. suppl. 4. p. 53. but Poirét says his plant has 5-cleft flowers, but they are 4-cleft in the plant we have in view. Lobes of calyx blunt. Bracteoles oblong, rather foliaceous. Pedicels twice or thrice the length of the flowers in the forks. Petioles pubescent, 2 lines long. Fruit globose, size of a pea, 2-3-celled.

*Dichotomous Eugenia.* Shrub 6 to 8 feet.

137 *E. CHEKEN* (Hook. in Beech. bot. p. 56.) peduncles axillary, usually 1-flowered, solitary, longer than the leaves, furnished with 2 minute, deciduous, linear bracteas under the flowers; leaves glabrous, very dense, oval, acute at both ends, on very short petioles, obsolete and parallelly nerved, full of pellucid dots; calycine segments very blunt. *h. G.* Native of Chili, about Valparaiso. *Myrtus folio subrotundo vulgo.* Cheken, Feuill. obs. 3. p. 45. t. 32. Fruit round, black. Seeds 2, rather cordate. A decoction of the leaves of this plant is said to cure discases of the eyes. The bark is so astringent as to render a decoction of it of great use in cases of dysentery.

*Cheken Eugenia.* Shrub 4 to 6 feet.

138 *E. ? TRINÉRVIA* (D. C. prod. 3. p. 279.) peduncles trifid, or twice trifid, 3-7-flowered, shorter than the flowers; bracteoles oblong, under the flowers, and are as well as the branchlets and calyxes rather hairy; leaves oval-oblong, acuminate at both ends, glabrous above in the adult state, 3-nerved, and clothed with tomentose pubescence beneath; lateral nerves almost marginal. *h. G.* Native of New Holland. *Myrtus trinervia*, Smith, in Lin. trans. 3. p. 80. but not of Lour. Ovary 2-3-celled, but only 1-celled in the adult state. Fruit globose, size of a pea. Ovula 7-8. Seeds unknown. The leaves are 3-nerved, and the plant therefore allied to *Myrtus tomentosa*. It is the only species from New Holland, and on that account may probably be a new genus.

*Three-nerved-leaved Eugenia.* Clt. 1824. Shrub 4 to 6 feet.

\* \* \* \* \* *Peduncles in racemose cymes or panicles, axillary, or the upper ones are terminal.*

139 *E. XYLOPIFOLIA* (D. C. prod. 3. p. 279.) peduncles axillary, shorter than the leaves, racemose; pedicels few, elongated, bracteate at the base; leaves oblong, attenuated at the base, acuminate at the apex, coriaceous, opaque, shining above, and are as well as the branches glabrous. *h. S.* Native of French Guiana. Leaves 2 inches long and 8 lines broad. Pedicels 4 lines long. Calycine lobes 4, blunt, bent in after flowering. Fruit globose, glabrous, crowned, 1-seeded. Seeds thick, conforming to the fruit. Cotyledons conferruminated, full of resinous vesicles.

*Xylopi-leaved Eugenia.* Shrub 6 to 8 feet.

140 *E. CUSPIDIFOLIA* (D. C. l. c.) peduncles axillary, very short, racemose, and are as well as the calyxes clothed with rufous down; pedicels 7-9, in umbellate fascicles; leaves elliptic-oblong, cuspidate, coriaceous, hardly with any pellucid dots, glabrous on both surfaces, dotless, and paler beneath. *h. S.* Native of Brazil, on the banks of the river Negro. *Myrtus cuspidifolia*, Mart. herb. A tree 20 to 40 feet. Flowers at first sight appearing as in section second, in secund fascicles. Petioles hardly more than 2 lines long. Calycine lobes 4, reflexed, oval, obtuse. Allied to *E. xylopiifolia*. Leaves 3 inches long and 1 inch broad.

*Cuspidate-leaved Eugenia.* Tree 30 to 40 feet.

141 *E. SPIÆROSPERMA* (D. C. l. c.) racemes axillary, 5-7-flowered, much shorter than the leaves; pedicels slender; fruit spherical, 1-seeded; seed globose; leaves oblong, attenuated both at the base and apex, acuminate, full of pellucid dots, shining above, pale beneath and dotted, quite glabrous on

both surfaces, as well as the branchlets and flowers. *h. S.* Native of Brazil, at the Rio Negro. *Myrtus cuspidifolia*, Mart. herb. Leaves 3 inches long and half an inch broad. Fruit size of a grain of pepper. Lobes of calyx 4, obtuse, short. Allied to *E. cuspidifolia* and *E. xylopiifolia*.

*Round-seeded Eugenia.* Shrub or tree.

142 *E. MODÉSTA* (D. C. l. c.) racemes few-flowered, axillary, 3-times shorter than the leaves; bracteas ovate, obtuse, permanent, under the flowers; fruit spherical; lobes of calyx ovate, somewhat introflexed; leaves oblong, attenuated at both ends, narrowed and usually emarginate at the apex, with a few pellucid dots, quite glabrous on both surfaces, as well as the branches. *h. S.* Native of Brazil, at the river Ilheos. *Myrtus modesta*, Mart. herb. Leaves 2 inches long and 5 lines broad. Racemes 5-7-flowered, 5 lines long. Pedicels opposite, bracteolate at the base. Fruit the size of a grain of pepper, and is as well as the whole plant glabrous.

*Modest Eugenia.* Shrub or tree.

143 *E. ? VÁHLII* (D. C. l. c.) racemes axillary, opposite, solitary, or twin, compressed, rather villous, shorter than the leaves; leaves ovate, acute, 3-nerved, glabrous. *h. S.* Native of Cayenne. *E. trinervia*, Vahl. ecl. 2. p. 36. but not of Smith. *Myrtus VáhlII*, Spreng. syst. 2. p. 486. Leaves 2 inches long. Branchlets compressed, rather villous. Lobes of calyx 4, obtuse. Petals oblong. Ovary villous. Fruit and seeds unknown.

*Vahl's Eugenia.* Shrub.

144 *E. RUFESCENS* (D. C. l. c.) peduncles axillary, oppositely racemose, or in fascicles, and are as well as the calyxes clothed with rufous down; leaves oblong, attenuated at the base, bluntish at the apex, opaque, but at length glabrous. *h. S.* Native of Brazil, in fields in the province of St. Paul. Perhaps *Myrtus rufescens*, Spreng. syst. 2. p. 487. Tube of calyx ovate; lobes 4, erect, oblong. Seeds 2-3, compressed in the immature fruit. Leaves 2 or 2½ inches long, and 9-10 lines broad. Racemes one half shorter than the leaves. Pedicels 4 lines long, sometimes in racemes and sometimes in fascicles in the axils of the leaves.

*Rufescent Eugenia.* Shrub 6 to 8 feet.

145 *E. CONFUSA* (D. C. l. c.) peduncles axillary, disposed in simple racemes, length of the petioles; pedicels 1-flowered, twice or thrice the length of the petioles; leaves elliptic, rather attenuated at the base, long-acuminate at the apex, shining above, with revolute margins, full of pellucid dots, and are as well as the branches and flowers glabrous. *h. S.* Native of Guadaloupe. *E. floribunda*, Spreng. in herb. Balb. An intermediate plant, between the second and fifth sections. Pedicels very short, rising from the rachis, bearing 1 bractea at the base of each, and 2 acute bracteoles at the apex, under the flowers.

*Confused Eugenia.* Shrub or tree.

146 *E. INUNDATA* (D. C. prod. 3. p. 280.) peduncles axillary, shorter than the leaves, 3-7-flowered, racemose; pedicels elongated, and are as well as the calyxes clothed with white down; bracteoles obtuse, under the flowers; leaves oval or obovate, obtuse, membranous, opaque, glabrous on both surfaces, as well as branchlets. *h. S.* Native of Brazil, in inundated places at Rio Negro. *Myrtus inundata*, Mart. herb. Leaves 15-18 lines long and 5-6 broad. Petioles a line long. Lower surface of leaves rather dotted. Petals oval-oblong. Bracteas small, obtuse, under the pedicels. Calycine lobes obtuse. Fruit unknown.

*Inundated Eugenia.* Shrub or tree.

147 *E. LANCEA* (Poir. suppl. 3. p. 123.) racemes axillary, puberulous, nearly simple, shorter than the leaves; pedicels rather distant, bibracteolate under the flowers; leaves oval-ob-

long, acuminate at both ends, rather opaque, and are as well as the branches glabrous, shining above, veinless, and marked with elevated dots. *h. S.* Native of the Island of St. Thomas. Perhaps a var. of *E. virgultosa*. Stem whiter.

*Lance-leaved Eugenia.* Shrub 6 to 10 feet.

148 *E. TRINITATIS* (D. C. l. c.) peduncles axillary, solitary, opposite, longer than the leaves, disposed in simple racemes; pedicels opposite, 1-flowered, furnished each with 1 bractea at the base and 2 at the apex; flowers 4-lobed; leaves elliptic, acuminate, coriaceous, with a few pellucid dots, shining above, and pale beneath, quite glabrous on both surfaces, as well as the branches and peduncles. *h. S.* Native of the Island of Trinidad. *Myrtus dioica*, Sieb. pl. exs. trin. no. 94. Leaves an inch and a half long, and half an inch broad. Peduncles slender, 2-3 inches long. Lobes of calyx obtuse. Fruit globose, 1-seeded, a little smaller than a pea. Seed roundish. Cotyledons conferruminated.

*Trinidad Eugenia.* Shrub or tree.

149 *E. POLYSTACHYA* (Rich. in act. soc. hist. nat. par. 1792. p. 110.) peduncles axillary, solitary, or in fascicles, length of leaves, oppositely racemose, compressed, clothed with rufous velvety down; calyx downy, bluntly 4-lobed; leaves ovate-lanceolate, acuminate, opaque, coriaceous, glabrous; branchlets compressed, smoothish. *h. S.* Native of French Guiana. *E. rugosa*, Ruiz et Pav. in herb. Deless. The fruit of the Guiana plant is unknown, but that of Paven is furrowed from numerous irregular crests, as in *E. uniflora*. Seeds pseudocotyledonous.

*Many-spiked Eugenia.* Shrub or tree.

150 *E. EMARGINATA* (D. C. l. c.) racemes axillary, solitary, 8-10-flowered, when in fruit they are about equal in length to the leaves; calyx 4-parted; leaves obovate-oblong, emarginate, cuneate at the base, coriaceous, puberulous beneath, shining above, and are as well as the branches glabrous. *h. S.* Native on the banks of the Orinoco. *Myrtus emarginata*, H. B. et Kunth, nov. gen. amer. 6. p. 142. Flowers unknown. Berry nearly globose, pubescent, 1-seeded. Seed smooth. Cotyledons contortuplicate?

*Emarginate-leaved Eugenia.* Shrub or tree.

151 *E. LUDIBUNDA* (Bert. ined. ex D. C. l. c.) peduncles axillary, solitary, opposite, or in fascicles, panicle, shorter than the leaves; branches and flowers pubescent or villous; leaves ovate, acuminate, membranous, full of pellucid dots, glabrous in the adult state; calyx 4-cleft. *h. S.* Native of St. Domingo. *Myrtus monticola*, Vahl. herb. ex Puer. Fruit globose, 1-seeded. Seed shining, pseudo-monocotyledonous.

*Sporting Eugenia.* Shrub or tree.

152 *E. GRÉGII* (D. C. l. c.) peduncles axillary, many-flowered; pedicels opposite, 1-flowered; flowers 4-cleft; leaves elliptic or ovate, acute, or obtuse, clothed with hoary tomentum beneath. *h. S.* Native of the Island of Dominica. *Myrtus Grégii*, Swartz, fl. ind. occ. p. 896. *Grégia aromatica*, Gærtn. fruct. 1. p. 168. t. 33. Berry obovate-globose, coriaceous, when young 2-celled, many-seeded, but in the adult state 1-celled, 1-seeded. Seed large. Cotyledons fleshy, conferruminated.

*Greg's Eugenia.* Clt. 1776. Tree 30 to 40 feet.

153 *E. FRAGRANS* (Willd. spec. 2. p. 964.) peduncles axillary, trichotomous, and simple, compressed, twice the length of the leaves; flowers 4-cleft; leaves ovate, rather convex, and somewhat coriaceous, dotted, and are as well as the branchlets glabrous; stem arborescent. *h. H.* Native of the south of Jamaica, and on the high mountains of Martinique and Guiana. *Myrtus fragrans*, Swartz, fl. ind. occ. p. 974. Sims, bot. mag. 1742. Vahl. symb. 2. p. 59. Eng. paniculata, Jacq. coll. 2. p. 108. t. 5. f. 1. *E. montana*, Aubl. guian. 1. 495. t. 195. Berry roundish, 1-seeded.

*Fragrant Eugenia.* Fl. April, May. Clt. 1790. Tree 20 ft.

154 *E. VIRGULTOSA* (D. C. l. c.) racemes axillary and terminal, puberulous, somewhat compressed, shorter than the leaves; pedicels rather remote, decussate, bibracteolate at the base; leaves oval-oblong, acuminate at both ends, rather opaque, and are as well as the branches glabrous, shining above, and marked with impressed dots and veins. *h. S.* Native of the high mountains of Jamaica, Santa Cruz, &c. *Myrtus virgultosa*, Swartz, fl. ind. occ. 2. p. 905. exclusive of the synonyme of Plumier. Vahl. symb. 2. p. 58. Berry roundish, rather dry. Seeds 2-3, angular.

*Twiggy Eugenia.* Fl. July, Aug. Clt. 1787. Tr. 12 to 15 ft.

155 *E. BIFARIATA* (Wall. pl. asiat. rar. 2. p. 47. t. 161.) arborescent, quite smooth; leaves oblong, acuminate, approximate, on short petioles, spreading in a bifarious manner, shining, blistered above, and transversely nerved beneath, with the anastomosing vessels very conspicuous, and forming 2 marginal veins, which are remote from the margin; corymbs axillary, solitary, branched; ovarium clavate, on a slender pedicel; petals orbicular, unguiculate; berry oval, crowned by the permanent lobes of the calyx, which are incurved. *h. S.* Native of the mountains on the confines of Silhet.

*Bifarious-leaved Eugenia.* Tree 30 feet.

156 *E. PARVIFLORA* (Lam. dict. 3. p. 200. exclusive of the synonyme of Rheede) peduncles axillary, a little shorter than the leaves, panicle, pubescent; bractees oval, foliaceous, under the branchlets of the panicle; bracteoles linear, under the flowers; leaves elliptic-oblong, acuminate, opaque, rather dotted, glabrous above, pubescent beneath as well as on the branchlets. *h. S.* Native of Java. *Myrtus parviflora*, Spreng. syst. 2. p. 485. Calyx clothed with white down; lobes 4, obtuse. Flowers small. Embryo like that of *Myrtus communis*, ex Kunth.

*Small-flowered Eugenia.* Shrub or tree.

157 *E. EGËNSIS* (D. C. prod. 3. p. 281.) peduncles axillary, length of the petioles, bearing 8-10 slender, 1-flowered pedicels, which are twice the length of the petioles, disposed in the manner of a raceme; bractees small, under the flowers and at the origin of the pedicels; leaves elliptic-oblong, long-acuminate, full of pellucid dots, reticulated, glabrous on both surfaces as well as the branchlets, which are compressed. *h. S.* Native of Brazil, in the province of Rio Negro, near Ega. *Myrtus Egënsis*, Mart. herb. Leaves 4 inches long, and an inch broad. Pedicels 7 lines long. Peduncles or rachis 3-4 lines long. Fruit larger than a pea, globose, 1-seeded. Seeds globose. Immature embryo pseudo-monocotyledonous.

*Ega Eugenia.* Tree.

158 *E. ACUTILOBA* (D. C. l. c.) racemes axillary, simple, 7-flowered, shorter than the leaves, and are as well as the branches rather hairy; lobes of calyx and bractees rather acute; leaves oval-oblong, attenuated at the base, acuminate at the apex, full of pellucid dots, rather villous on the upper surface when young, but glabrous in the adult state, dotless, paler beneath, and pubescently villous. *h. S.* Native of Jamaica. Intermediate between *E. virgultosa* and *E. parviflora*. Fruit unknown.

*Acute-lobed Eugenia.* Shrub 6 to 10 feet.

159 *E. RACEMOSA* (D. C. prod. 3. p. 281.) racemes axillary, simple, 7-8-flowered, clothed with villous tomentum, much shorter than the leaves; bractees and bracteoles small, acute; calycine lobes 4, roundish; leaves oval-lanceolate, long-acuminate, with a few pellucid dots, clothed with adpressed villi when young, but glabrous in the adult state, shining above. *h. S.* Native of Brazil, in woods. *Myrtus racemosa*, Mart. herb. Leaves 3 inches long, and 12-15 lines broad. Racemes 9-10 lines long. Petals obovate. Style acute, longer than the stamens. Fruit unknown.

*Racemose-flowered Eugenia.* Shrub or tree.

160 *E. CANDOLLEANA* (D. C. l. c.) peduncles axillary, opposite, and terminal, tern, racemose, 7-9-flowered, shorter than the leaves; bracteoles bluntish; leaves oval-oblong, rather cuneated at the base, bluntly acuminate at the apex, full of pellucid dots, quite glabrous on both surfaces as well as on the branches. *h. S.* Native of Brazil, in woods near Rio Janeiro. *Myrtus Candolleana*, Mart. herb. Leaves 2 inches long and 9-10 lines broad. Peduncles 9-10 lines long. Fruit ovate, crowned by the lobes of the calyx, which are ovate, obtuse, 4 in number, and glabrous as well as the whole inflorescence.

*De Candolle's Eugenia.* Shrub or tree.

161 *E. COLLINA* (D. C. l. c.) peduncles extra-axillary, racemously paniced, shorter than the leaves, or equal in length to them; lobes of calyx 4, ovate, obtuse, spreadingly reflexed; stamiferous disk broad; leaves elliptic, bluntish, stiff, opaque, and are as well as the branchlets glabrous. *h. S.* Native of Brazil, on hills. *Myrtus collina*, Mart. herb. Peduncles rising a little above the leaves, opposite, and forming a cross angle with the leaves. Calyxes downy, expanded like that of *Psidium*, but 4-lobed, and with the lobes distinct in the bud. Leaves 2 and  $2\frac{1}{2}$  inches long and 1 inch broad. Peduncles an inch and a half long. Fruit unknown.

*Hill Eugenia.* Shrub or tree.

162 *E. CAPPARIDIFOLIA* (D. C. l. c.) peduncles axillary, racemose, 3-times shorter than the leaves, 7-8-flowered; bracteas and bracteoles ovate; fruit ovate, globose, glabrous at length, but when young clothed with short velvety down, as well as the lobes of the calyx, which are 4 and ovate; leaves oval oblong, bluntish, coriaceous, stiff, opaque, and are as well as the branches glabrous. *h. S.* Native of Brazil, on Serro Frio, in the provinces of the Mines. *Myrtus capparidifolia*, Mart. herb. Leaves  $2\frac{1}{2}$  inches long, and 9-10 lines broad. Racemes 8-10 lines long. Fruit larger than a pea, 1-seeded. Cotyledons conferruminated.

*Capparis-leaved Eugenia.* Shrub or tree.

163 *E. FIRMA* (D. C. prod. 3. p. 282.) peduncles axillary, racemose, simple, shorter than the leaves; bracteas and bracteoles small, broad, hardly acute; fruit globose, 2-seeded, crowned by the 4 ovate, erect lobes of the calyx; leaves oval, bluntish, stiff, opaque, glabrous on both surfaces as well as the branchlets and racemes. *h. S.* Native of Brazil. *Myrtus firma*, Mart. herb. Leaves 3-4 inches long and from 1-2 broad, on short petioles. Racemes 2 inches long. Fruit size of a cherry, of an orange colour.

*Firm Eugenia.* Shrub 6 to 10 feet.

164 *E. INÆQUILoba* (D. C. l. c.) peduncles axillary, disposed in a many-flowered, terminal panicle; calyx 4-lobed, the 2 larger lobes membranous, roundish and ciliated; leaves elliptic, somewhat attenuated at both ends, rather coriaceous, opaque, and are as well as the branches glabrous. *h. S.* Native of Cayenne. Leaves  $2\frac{1}{2}$  inches long and an inch broad, shining above. Flowers small. Fruit globose. Seeds roundish. Cotyledons conferruminated.

*Unequal-lobed-calyx Eugenia.* Shrub 6 to 8 feet.

165 *E. MARITIMA* (D. C. l. c.) racemes axillary, 1-2, terminal, tern, sessile, short, 8-10-flowered, hardly exceeding the petioles; branches and calyxes glabrous; calyx coriaceous, 4-lobed. *h. S.* Native of Mexico, near Acapulco. *Myrtus maritima*, H. B. et Kunth, nov. gen. amer. 6. p. 146. Leaves  $2\frac{1}{2}$  inches long, and 12-16 lines broad. Petals ciliated. Ovarium 2-celled; cells many-ovulate. Berry pea-shaped, 1-seeded. Perhaps distinct from *E. buxifolia*.

*Sea-side Eugenia.* Shrub 6 to 10 feet.

166 *E. MICRANTHA* (D. C. l. c.) racemes 1-2, axillary, or 2-3, terminal, usually 10-flowered, shorter than the leaves, and are as well as the branchlets and calyxes rather hairy; leaves

rather ovate-oblong, acuminate, cuneated, and acute at the base, revolute all round, rather coriaceous, glabrous, and rather shining. *h. S.* Native of New Granada, near Honda, and perhaps of Peru. *Myrtus micrantha*, H. B. et Kunth, l. c. p. 144. but not of Nees nor Mart. Ovarium 2-celled; cells many-ovulate. Fruit red, 1-seeded.

*Small-flowered Eugenia.* Shrub 6 to 10 feet.

167 *E. ALBIDA* (Humb. et Bonpl. pl. equin. 2. p. 107. t. 113.) racemes axillary, solitary, shorter than the leaves, or terminal, in threes, 8-10-flowered, and are as well as the branchlets clothed with silky silvery down; calyx acutely 4-lobed; leaves oblong-lanceolate, acuminate, narrowed at the base, coriaceous, glabrous above and shining, but covered with silky silvery down beneath. *h. S.* Native of New Granada, on mountains near Fusagasuga. Ovarium 2-celled; cells many-ovulate. Seed subglobose. Cotyledons fleshy, conferruminated.

*Whitish Eugenia.* Tree 12 to 18 feet.

168 *E. PUBESCENS* (D. C. l. c.) racemes axillary, twin, and terminal in fours, 8-10-flowered, about equal in length to the leaves, pubescent; calyx bluntly 4-lobed; leaves oblong, obtuse, acute at the base, coriaceous, glabrous above and shining, clothed with silky pubescence beneath; branchlets puberulous. *h. S.* Native on the banks of the Orinoco, near Maypures. *Myrtus pubescens*, H. B. et Kunth, l. c. p. 143. but not of Mart. Leaves 27-30 lines long and 12-14 lines broad. Flowers about the size of those of the hawthorn. Petals ciliated. Stamens about 170 in number. Ovarium 2-celled; cells many-ovulate. Fruit and seeds unknown.

*Pubescent Eugenia.* Shrub or tree.

169 *E. PSEUDO-CARYOPHYLLUS* (D. C. l. c.) peduncles axillary, alternate, twice trifid at the apex, shorter than the leaves; and are, as well as the calyxes, branchlets, and buds, clothed with hoary pubescence; leaves oblong, acuminate at both ends, stiff, opaque, glabrous above and shining, clothed with canescent silky down beneath. *h. S.* Native of Brazil, in the province of St. Paul. *Myrtus oleaster*, Mart. herb. *Myrtus pseudo-caryophyllus*, Gomez. mem. act. lib. 3. p. 93. t. 6. ex St. Hil. Leaves 3 inches long and 9-10 lines broad. Petioles 2 lines long. Fruit ovate, crowned by the lobes of the calyx, obtuse, somewhat inflexed. Peduncles  $1\frac{1}{2}$  inch long.

*Var.  $\beta$ , ocoteoides* (D. C. l. c.) peduncles axillary, and almost terminal, trichotomous, corymbose; flowers 1-cleft, middle one sessile, lateral ones pedicellate; leaves elliptic-oblong, acuminate, feather-nerved, glabrous above, and rather canescent from short silky adpressed down beneath; young branches puberulous. *h. S.* Native of Brazil. Fruit and seeds unknown.

*Bastard-clove Eugenia.* Tree 15 to 20 feet.

170 *E. FULVESCENS* (Mart. herb. ex D. C. prod. 3. p. 283.) peduncles axillary, and nearly terminal, paniced, and trichotomous; flowers 4-cleft, middle one sessile, lateral ones pedicellate; leaves elliptic, acuminate at both ends, feather-nerved, glabrous above, rather velvety beneath from short rufescent down, as well as branchlets and peduncles; branches compressed. *h. S.* Native of Brazil, in fields in the provinces of the Mines. Very like *E. pseudo-caryophyllus* var. *Ocoteoides*, but the leaves are shorter, and not silky beneath.

*Fulvescent Eugenia.* Shrub or tree.

171 *E. PATENS* (Poir. suppl. 3. p. 124.) racemes axillary, rather spreading, many-flowered, ultimate ones paniced; lobes of calyx 4, orbicular, 2 of which are smaller than the other 2; leaves lanceolate, acuminate, spreading, coriaceous, full of pellucid dots, and are, as well as the branches, glabrous. *h. S.* Native of Cayenne. Racemes a little shorter than the leaves. Bracteoles 2, ovate, obtuse under the calyx. Stamens a little longer than the petals. Fruit unknown.

*Spreading Eugenia.* Shrub or tree.

172 *E. MIKANIANA* (D. C. prod. 3. p. 283.) peduncles axillary, opposite, and nearly terminal, divaricately branched, longer than the leaves, and are, as well as the calyxes and branches, clothed with rufous tomentum; leaves ovate-oblong, acuminate, full of pellucid dots when young, villous and rather tomentose above, but in the adult state opaque, glabrous above, and almost naked beneath. *h. S.* Native of Brazil, in the province of St. Paul. *Myrtus Mikaniæna*, Mart. herb. Fruit ovate, crowned by the 4 lobes of the calyx, which are blunt and conniving. Leaves 2 inches long and 9 lines broad, on petioles a line long. Allied to *E. rufescens*, but the inflorescence is different.

*Mikan's Eugenia.* Tree 20 feet.

173 *E. ACETOSANS* (Poir. suppl. 3. p. 125.) racemes axillary and terminal, pedunculate, longer than the leaves; pedicels opposite; flowers 4-cleft; leaves obovate, obtuse, coriaceous, dotted beneath, and are, as well as the branches, glabrous. *h. S.* Native of Guiana. Leaves with an acid taste according to Richard. *Myrtus acetosans*, Spreng. syst. 2. p. 488. Fruit and seeds unknown.

*Acid-leaved Eugenia.* Tree.

174 *E. ÆRUGINEA* (D. C. l. c.) peduncles axillary and terminal, many-flowered, racemously paniced, shorter than the leaves; calyxes and panicles covered with rufous velvety down; pedicels opposite, 1-3-flowered; calyx 4-cleft; leaves oval-oblong, acute at both ends, opaque, membranous, glabrous in the adult state. *h. S.* Native of South America. *Myrtus æruginæa*, Forsyth in herb. Lher. Petioles 5 lines long. Leaves 3 inches long and 12-15 lines broad. Racemes an inch and a half long. The two broadest lobes of the calyx are blunter. Fruit and seeds unknown.

*Rusty Eugenia.* Shrub or tree.

175 *E. MURICATA* (D. C. l. c.) peduncles axillary and terminal, racemose, shorter than the leaves; bractæas small, acute under the flowers; fruit obovate, rough from blunt tubercles, crowned by the 4 lobes of the calyx, which are obtuse and spreading; leaves elliptic-oblong, acuminate, opaque, rather coriaceous, glabrous above, but clothed with paler rufous down beneath, pubescent while young, but glabrous in the adult state. *h. S.* Native of Brazil. *Myrtus muricata*, Mart. herb. Leaves 6 inches long and 2 inches broad. Petioles 2-3 lines long. Racemes 3 inches long when in flower, but when bearing the fruit they are from 4-6 inches long. Allied to *E. riparia*. Seeds unknown.

*Muricated-fruited Eugenia.* Tree 20 feet.

176 *E. RIPARIA* (D. C. l. c.) peduncles axillary and terminal, shorter than the leaves, racemously paniced; bractæas under the flowers, broad at the base, and acute at the apex; calyxes, peduncles, and branchlets, covered with rufescent down; leaves elliptic-oblong, terminated by a long acute acumen, coriaceous, opaque, nerveless, clothed with rufescent down beneath. *h. S.* Native of Brazil, on the banks of the river Amazon. *Myrtus riparia*, Mart. herb. Leaves 8 inches long and 2 inches broad, standing on petioles 2 lines long. Panicle 2-3 inches long. Calycine lobes 4, spreading, roundish. Stamiferous disk broad, as in *Psidium*. Fruit unknown.

*River-side Eugenia.* Tree 20 feet.

177 *E. HIRSU'TA* (Ruiz et Pav. fl. per. 4. t. 417. a.) peduncles leafy, few-flowered; pedicels 1-flowered, having 2 leafy bractæas in the middle, and each flower is surrounded by 5 bractæas in the form of an involucre; leaves ovate, acuminate, with revolute margins, on very short petioles; fruit oblong, small, crowned by the 5-lobed limb of the calyx, exserted. *h. S.* Native of Peru. Hairy in every part. Style subulate.

*Hairy Eugenia.* Shrub 6 to 8 feet.

178 *E. FLORIDA* (D. C. l. c.) peduncles axillary or terminal,

panicled, many-flowered, longer than the leaves; bractæoles acute, 2 under each flower, and a solitary one at the base of each pedicel; petals obovate, spreadingly reflexed; leaves elliptic-oblong, acuminate, membranous, opaque, nearly veinless above, and are, as well as the branchlets, glabrous. *h. S.* Native of Brazil, on the banks of the river Amazon. *Myrtus florida*, Mart. herb. Flowers as large as those of *Myrtus coccinea*. Style exserted. Calycine lobes 4, obtuse. Fruit unknown.

*Florid Eugenia.* Tree 20 to 30 feet.

179 *E. LÆVIGATA* (D. C. prod. 3. p. 283.) peduncles axillary and terminal, much branched, covered with rufous down, as well as the flowers and buds; leaves oval-oblong, attenuated at the base, bluntly acuminate at the apex, opaque, smooth above, pale and dotted beneath, glabrous on both surfaces, as well as on the branches. *h. S.* Native of Brazil, in the desert of Rio St. Francisco. *Myrtus lævigata*, Mart. herb. Leaves 2 inches long and 8-9 lines broad, standing on petioles 3 lines long. Flower-bud globose. Fruit unknown.

*Smooth Eugenia.* Shrub or tree.

180 *E. PÁTULA* (D. C. prod. 3. p. 281.) peduncles axillary or terminal, racemose, simple, 5-7-flowered, shorter than the leaves; pedicels spreading, distant; bractæas and bractæoles small, acute; lobes of calyx obtuse; leaves linear-oblong, acuminate, with a few pellucid dots; branchlets and racemes quite glabrous. *h. S.* Native of Brazil, at the river Amazon. *Myrtus pátula*, Mart. herb. Leaves 3-4 inches long and 5-10 lines broad. Petioles 2 lines long. Tube of calyx globose. Flowers small.

*Spreading Eugenia.* Tree 20 to 30 feet.

181 *E. RUTIDOCARPA* (Ruiz et Pav. fl. per. 4. t. 416.) peduncles racemose, aggregate in the axils of the leaves, and terminal, panicled, numerous, about the length of the leaves; leaves ovate-oblong, acuminate; fruit globose, rough. *h. S.* Native of Peru.

*Rough-fruited Eugenia.* Tree.

182 *E. PÁLLENS* (D. C. l. c.) peduncles terminal, twin, racemose; pedicels opposite, for the most part one-flowered, furnished each with one bractea at the base, and 2 bractæoles at the apex; calyxes 4-cleft, clothed with cinereous villi; leaves broad-lanceolate, attenuated, dotted above, and are, as well as the branchlets, glabrous. *h. S.* Native of South America. *Myrtus pállens*, Vahl. symb. 2. p. 57. Spreng. syst. 2. p. 485. exclusive of the synonyme of Poir., which is referrible to *Calyptranthes chytraculia*. Branches rather compressed above. Petals very minutely ciliated, length of the stamens. Fruit and seeds unknown.

*Pale Eugenia.* Tree.

183 *E. NERVOSA* (Lour. coch.) peduncles 1-flowered, terminal, crowded; calyx 4-lobed; lobes obtuse, concave; leaves lanceolate, glabrous. *h. G.* Native of Cochinchina, in woods. *Myrtus Loureiri*, Spreng. syst. 2. p. 489. Petals small, roundish. Stamens above 100 in number, 3 times longer than the petals. Style subulate, acute, longer than the stamens. Berry globose, nerved, glabrous, reddish brown.

*Nerved-leaved Eugenia.* Tree 30 to 40 feet.

184 *E. CORYMBOSA* (Lam. dict. 4. p. 199.) peduncles terminal, corymbose, with opposite branchlets; calyx with 4 short teeth; leaves ovate, obtuse, opaque, shining above, veined beneath, glabrous on both surfaces, as well as on the branchlets. *h. S.* Native of the East Indies. Njara, Rheed. mal. 5. p. 53. t. 27. Berry globose, blackish, 1-seeded, exserted.

*Corymbse-flowered Eugenia.* Tree.

185 *E. ANDROSÆMOIDES* (D. C. l. c.) racemes terminal and axillary, somewhat corymbose, few-flowered, shorter than the leaves; leaves oval, obtuse, stiff, coriaceous, opaque, nearly sessile, glabrous; branches tetragonal. *h. S.* Native of the East

Indies. *Myrtus androsæmoides*, Vahl. symb. 2. p. 58. perhaps exclusive of the synonyme. Fruit globose, size of a pepper. Seeds 2, hemispherical, fleshy inside, pseudo-monocotyledonous. *M. androsæmoides* of many herbaria.

*Androsæpum-like* Eugenia. Shrub.

186 E. ? *PÉNDULA* (D. C. l. c.) racemes terminal, elongated, pendulous; branches short, usually 3-flowered; calyxes semi-quadrifid; leaves on short petioles, oblong-lanceolate, attenuated at both ends, glabrous. *h. S.* Native of Java, in woods in the province of Bantam. *Myrtus péndula*, Blum. bijdr. p. 1085. Said to be allied to *E. lanceolata*.

*Pendulous-racemed* Eugenia. Shrub.

187 E. *SPICIFLORA* (Nees et Mart. nov. act. bonn. 12. p. 52.) peduncles compressed, rising from the stem; flowers spicate, opposite, tribracteolate; leaves oblong-lanceolate, acuminate, ciliated, hairy on the stem and petioles. *h. S.* Native of Brazil, at the river Ilheos. Leaves a hand long. Petioles covered with yellow bristles. Tube of calyx funnel-shaped. Fruit and seeds unknown. Said to be allied to *E. Brasiliensis*.

*Spicate-flowered* Eugenia. Shrub 10 to 18 feet.

188 E. ? *LANCEOLATA* (Lam. dict. 3. p. 200.) peduncles nearly terminal, racemose, few-flowered; calyx turbinate, 4-lobed; leaves lanceolate, nearly sessile, full of pellucid dots, glabrous on both surfaces, as well as on the branchlets. *h. S.* Native of the East Indies. *Myrtus Sonneratii*, Spreng. syst. 2. p. 485. Petals concave. Stamens, fruit, and seeds unknown.

*Lanceolate-leaved* Eugenia. Shrub 6 to 12 feet.

189 E. *TEMU* (Hook. in Beech. voy. pt. bot. p. 56.) panicles axillary, for the most part solitary, somewhat corymbose, few-flowered, almost the length of the leaves; leaves elliptic or ob-ovate, very blunt, coriaceous, pale beneath, when young rather velvety, as well as the branchlets, on short petioles. *h. G.* Native of Chili, about Valparaiso. *Temu* of Chili. Perhaps the same as *Myrtus Luma* of Molini.

*Temu* Eugenia. Shrub 5 to 6 feet.

190 E. ? *DUMETORUM* (D. C. l. c.) racemes long, nearly terminal; leaves ovate, acuminate, 3-nerved, glabrous on both surfaces, as well as the fruit. *h. G.* Native of Cochinchina, among bushes. *Myrtus trinervis*, Lour. coch. p. 312. *Myrtus dumetorum*, Poir. suppl. 4. p. 52. *Nélitris trinervia*, Spreng. syst. 2. p. 488. Berry brown, 1-celled. Seeds few, angular, ex. Lour.

*Bush* Eugenia. Shrub 6 to 10 feet.

191 E. *AXILLARIS*; racemes axillary, exceeding the pendulous petioles, covered with adpressed pubescence; peduncles bi-bracteolate at the apex, puberulous; leaves lanceolate, bluntly acuminate, glabrous, dotless; tops of branches and petioles beset with small down, the rest of the plant glabrous. *h. S.* Native of Mexico, in woods near Jalapa. *Myrtus axillaris*, Moc. et Sesse. Flowers small.

*Axillary-flowered* Eugenia. Shrub.

192 E. *VERRUCULOSA* (D. C. l. c.) panicle terminal, elongated; bractæas and bracteoles, as well as the lobes of the calyx, broad, short, and obtuse; fruit large, spherical, covered with dotted warts, crowned by the spreading lobes of the calyx; leaves elliptic, attenuated at the base, acuminate at the apex, stiff, opaque, shining above, almost veinless, quite glabrous on both surfaces, as well as on the branchlets. *h. S.* Native of Brazil, at the river Tapura. *Myrtus verruculosa*, Mart. herb. Leaves 3-4 inches long and 15 lines broad. Petioles 2 lines long. Fruit 7 lines in diameter. Seed one, pseudo-monocotyledonous.

*Warted-fruited* Eugenia. Shrub or tree.

193 E. *TABASCO*; cymes nearly sessile, lateral; leaves elliptic-lanceolate, acute at the base, and obtuse at the apex, full of pellucid dots; berry globose; limb of calyx bluntly 4-lobed,

having the lobes conniving; fruit 1-celled and 1-seeded from abortion; embryo spirally convolute; branches tetragonally winged. *h. S.* Native of Mexico, in hot regions. *Myrtus Tabasco*, Moc. et Sesse, ex Cham. et Schlecht. Linnæa. 5. p. 559. *Myrtus Piménta* and *Pimenta de Tabasco* of the Mexicans. The seeds are used as a condiment.

*Tabasco Pimenta*. Tree.

194 E. *MICROCARPA* (Cham. et Schlecht. in Linnæa. 5. p. 560.) glabrous; branches dichotomous; leaves on short petioles, acute at the base, and drawn out into a blunt acumen at the apex, shining above, and paler beneath, full of pellucid dots; berries glomerate at the tops of the branches, on short bibracteolate peduncles, crowned by 4 very blunt segments; flesh spongy, thick; cotyledons conferruminated; seed one. *h. S.* Native of Mexico, in woods near Jalapa. Flowers not seen.

*Small-fruited* Eugenia. Tree.

195 E. *MARGINATA* (Pers. ench. 2. p. 17.) peduncles axillary and almost terminal, trifid, trichotomous; tube of calyx globose, with 4 very blunt lobes; leaves oval, acutish, besprinkled with a very few pellucid and red glands, shining above, beset with impressed dots beneath, but with elevated ones above, glabrous on both surfaces in the adult state; branches terete, clothed with rusty villi at the tops. *h. S.* Native of St. Domingo. Perhaps the same as *Myrtus marginata*, Spreng. syst. 2. p. 438.

*Margined-leaved* Eugenia. Shrub or tree.

196 E. *PIMENTA* (D. C. prod. 3. p. 85.) peduncles axillary and terminal, trichotomously paniced; flowers 4-cleft, those in the forks almost sessile, the rest paniced; leaves oblong or oval, full of pellucid dots, rather opaque, glabrous; branches terete; branchlets compressed, pubescent when young, as well as the pedicels. *h. S.* Native of the Caribbee Islands, Jamaica, &c., and now cultivated in the East Indies. The upper leaves are rarely somewhat alternate, the rest opposite. Bracteoles 2 under each flower, falling off very late. Berry globose, 1-seeded. Embryo roundish. Cotyledons conferruminated, not distinct. Bayberry tree, Hugh. barb. p. 145. t. 10. good. ex Sins, bot. mag. 1236. *Myrtus Piménta*, Lin. spec. 676. Swartz, obs. p. 202. Soon after the *pimenta* trees have blossomed the berries become fit for gathering, without being suffered to ripen, as when ripe they are moist and glutinous, and therefore difficult to cure, and when dried become black and tasteless. The berries are dried by spreading them on a terrace exposed to the sun for about 7 days, during which time they gradually lose their green colour, and become of a reddish brown. The smell of them resembles a mixture of cinnamon, cloves, and nutmegs; their taste approaches to that of a mixture of the whole three; whence the tree has received the name of all-spice. Newmann ascertained that its flavour resides entirely in a volatile oil heavier than water, and its pungency is a resin or a substance soluble in alcohol, and insoluble in water. *Pimenta* is a warm aromatic stimulant, and is much used as a condiment in dressing food. As a medicine it may be advantageously substituted for the more costly spices. An oil is obtained by distillation, which is said to be nearly equal to oil of cloves, and is sometimes substituted for it.

*Var. α, longifolia* (D. C. l. c.) leaves oblong-lanceolate, bluntly acuminate.—Pluk. t. 155. f. 4.

*Var. β, ovalifolia* (D. G. l. c.) leaves oval, shorter, obtuse.—Sloane, hist. jam. 2. t. 191. f. 1. Perhaps referrible to *Myrcia pimentoides*, and probably the *Myrtus aromática* of Poir. dict. 4. p. 410. and is therefore perhaps a species of *Myrcia*.

*Pimenta*, or Jamaica All-spice, or Jamaica Pepper. Fl. May, July. Clt. 1723. Tree 20 to 30 feet.

197 E. *CHRYSOBALANOIDES* (D. C. l. c.) peduncles terminal, exceeding the leaves; pedicels opposite, 1-flowered; bractæas and bracteoles ovate, concave, dotted; flowers 4-cleft; leaves

broad, oval, obtuse or acuminate, full of pellucid dots, and are as well as the branches glabrous. *h. S.* Native of Guadeloupe. Branches terete. Petioles 5 lines long. Leaves 2-3 inches long and 1 or 2 inches broad. Pedicels rather downy. Calyx large, dotted. Fruit and seeds unknown.

*Cocoa-plum-like Eugenia.* Shrub 6 to 10 feet.

198 *E. ? NITENS* (D. C. l. c.) peduncles terminal, somewhat trichotomous at the apex; leaves elliptic-lanceolate, acute at the base, and bluntish at the apex, shining above, and full of pellucid dots beneath, and are glabrous as well as the branchlets. *h. S.* Native of the Mauritius. *Myrtus nitens*, Poir. suppl. 4. p. 51. Fruit 3-4-celled. Flowers 4-cleft, ex herb. mus. par. Seeds unknown.

*Shining Eugenia.* Shrub or tree.

199 *E. ? BERTERIA'NA* (Spreng. syst. 2. p. 487.) panicle terminal; flowers crowded, 4-cleft; leaves oblong-lanceolate, acuminate, shining above, and quite glabrous beneath. *h. S.* Native of South America, at the river Magdalena. *Myrtus Berteriana*, Spreng. syst. 2. p. 487. The rest unknown.

*Bertero's Eugenia.* Shrub or tree.

200 *E. PYRIFOLIA* (Desv. in Ham. prod. fl. ind. occ. p. 44.) panicle brachiate, terminal, many-flowered; rachis pubescent; leaves on short petioles, ovate, acuminate, nerved. *h. S.* Native of Guiana. The rest unknown.

*Pear-leaved Eugenia.* Shrub or tree.

† *Species of Eugenia not sufficiently known.*

201 *E. ACUMINATA* (Link. ennm. 2. p. 28.) *h. S.* Native country, flowers, and fruit unknown. Leaves acuminate.

*Acuminate-leaved Eugenia.* Shrub or tree.

202 *E. ? UMBELLATA* (Spreng. nen. entd. 2. p. 169.) pedicels 1-flowered, umbellate; leaves oblong, obtuse, opaque. *h. S.* Native of Brazil. The rest unknown. A very doubtful species.

*Umbellate-flowered Eugenia.* Shrub or tree.

203 *E. RAMIFLORA* (Desv. in Ham. prod. fl. ind. occ. p. 43.) pedicels short, clothed with rufous tomentum; calyx clothed with hoary tomentum; branches divaricate, glabrous; leaves on short petioles, oblong-elliptic, acuminate, shining above, and rather tomentose beneath. *h. S.* Native of Guiana. Flowers 4-cleft. The rest unknown.

*Branch-flowered Eugenia.* Tree 15 to 20 feet.

204 *E. TRUNCIFLORA*; glabrous; leaves nearly sessile, oblong, acuminate, acute, obtuse at the base, rather coriaceous, full of pellucid dots; flowers rising in fascicles from the trunk, 4-cleft, icosandrous; ovary 2-celled; cells about 15-ovulate; ovula fixed to the middle of the dissepiment. *h. S.* Native of Mexico, in shady woods between Mesahica and Papantla. Leaves 5-7 inches long and 2 or 2½ broad. Petioles thick, a line long. Peduncles 3-9 lines long, furnished with 2 scale-formed bractes under each flower. Flower-bud globose, size of a pea. Flowers white, more than half an inch in diameter when expanded. *Myrtus ? trunciflora*, Cham. et Schlecht. in Linnæa. 5. p. 561.

*Bitten-flowered Eugenia.* Shrub.

N. B. There are numerous names of species in Roxburgh's *Hortus Bengalensis*, but all without descriptions.

*Eugenia villosa*, Poir. suppl. 3. p. 124. or *Myrtus villosa*, Spreng. syst. 2. p. 487. is obviously the *Monimia rotundifolia*, Bet. Th. or *Ambora tomentosa*, Bory; a plant belonging to *Urticæ*.

*Eugenia violacea*, Lam. dict. 3. p. 200 is evidently a *Rubiacæ* plant, and perhaps an *Exora* mixed with the leaves of a species of *Syzgium* in M. Jussieu's herbarium.

*Cult.* For culture and propagation see *Jambosa*, p. 869.

XXXIV. JAMBOSA (altered from *Schambu*, the Malay name of one of the species). Rumph. amb. 1. p. 121.—D. C. prod. 3. p. 286.—Jambos, Adans. fam. 2. p. 88.—*Eugenia* species, Swartz, Kunth.

LIN. SYST. *Icosandria, Monogynia*. Tube of calyx turbinate (f. 124. a.), attenuated at the base, having the throat drawn out beyond the ovary, dilated and obovate; limb 4-cleft; lobes roundish. Petals 4, inserted in the throat of the calyx, broad, concave, obtuse. Stamens very numerous (f. 124. b.), longer than the petals, free, straight. Style filiform; stigma simple, acutish. Ovary many-celled, many-ovulate. Fruit 1-2-seeded, fleshy from the large baccate calyx, umbilicate at the apex. Seed angular. Cotyledons fleshy, thick, with conferruminated margins. Radicle almost cylindrical, hidden between the cotyledons.—Indian trees, with opposite leaves, standing on short petioles, and full of pellucid dots. Cymes lateral and terminal, few-flowered, simple, much shorter than the leaves; pedicels lateral, opposite, and one terminal. Flowers large, bractless, articulated on the tops of the pedicels. Fruit large, eatable. The greater part of the species being cultivated for the sake of their fruit are therefore difficult to extricate from confusion.

1 *J. VULGARIS* (D. C. prod. 3. p. 286.) racemes cymose, terminal; leaves narrow-lanceolate, attenuated at the base, acuminate at the apex. *h. S.* Native of the East Indies, and now cultivated in all the regions within the tropics. *Malacca-Schambu*, Rheed. mal. 1. t. 17. *Eugenia Jambos*, Lin. spec. p. 672. Sims, bot. mag. 1696. *E. Jambos*, Roxb. hort. beng. p. 38.—Delam. herb. amat. t. 77. Thouin, ann. mus. 1. p. 35. *Myrtus Jambos*, H. B. et Kunth, nov. gen. amer. 6. p. 138. Leaves 6-7 inches long and 1 to 1½ inch broad. Fruit ovate-globose. Flowers white. The *Jamsorade* or *Rose-apple* is a branching tree, about 20 feet high. The fruit is pear-shaped, about the size of a medlar, white, red, or rose-coloured, and ripening from September to December. There are several varieties differing in the size and colour of the fruit. It is not so much esteemed as the Malay-apple: it is however nevertheless excellent, resembling in appearance and flavour a Brussels apricot. To grow the fruit in this country, it requires a hot and moist atmosphere.

*Common Jamsorade or Rose-apple.* Fl. Feb. July. Clt. 1768. Tree 20 to 30 feet.

2 *J. SAMARANGENSIS* (D. C. l. c.) racemes loose, terminal or axillary, shorter than the leaves; branches usually 3-flowered; leaves elliptic-oblong, bluntish, rounded at the base, or nearly cordate, glabrous. *h. S.* Native of Java. *Myrtus Samarangensis*, Blum. bijdr. p. 1084. Flowers rose-coloured or whitish. Leaves acutish, greyish green beneath. Perhaps sufficiently distinct from the following.

*Samarang Rose-apple.* Tree 20 to 25 feet.

3 *J. VENOSA* (D. C. l. c.) racemes simple, terminal, or sub-corymbose, few-flowered; leaves elliptic, coriaceous, opaque, glabrous on both surfaces, and reticulately veined; branches angular. *h. S.* Native of Madagascar and of the Mauritius. *Eugenia venosa*, Lam. dict. 3. p. 200. *Myrtus venosa*, Spreng. syst. 2. p. 485. Leaves on short petioles, 4 inches long and 2 or 2½ broad. Fruit said to be 1-seeded.

*Viny-leaved Rose-apple.* Tree 20 feet.

4 *J. MACROPHYLLA* (D. C. l. c.) cymes lateral, fascicled; leaves ovate-lanceolate, obtuse at the base, acuminate at the apex. *h. S.* Native of the East Indies. *Eugenia macrophylla*, Lam. dict. 3. p. 139. *Eugenia alba*, Roxb. hort. beng. p. 39. Leaves 1 foot and more long, and 5 inches broad. Peduncles 5-flowered, 3 inches long. Flowers white? Perhaps *J. sylvestris alba*, Rumph. amb. 1. p. 127. t. 39.

*Long-leaved Rose-apple.* Clt. 1820. Tree 20 to 30 feet.

5 *J. PURPURA'SCENS* (D. C. l. c.) cymes lateral, in fascicles; 5 s 2

leaves elliptic, hardly acute at the base and apex. *h. S.* Native of the Island of Trinidad, (Sieb. trin. no. 148.) where it is probably cultivated. Flowers purple. *Eugenia Malaccensis*, Smith, exot. bot. t. 61. Andr. bot. rep. 458. but not of Lin. *Eugenia purpurea*, Roxb. hort. beng. p. 37. *Eugen. pseudo-Malaccensis*, Hort. par.

*Purplish-flowered Rose-apple.* Fl. May, Aug. Clt. 1768. Tree 20 to 30 feet.

6 *J. MALACCENSIS* (D. C. l. c.) cymes lateral, short; leaves ovate-lanceolate, attenuated at both ends. *h. S.* Native of the East Indies. Nati-Schambu, Rheed. mal. 1. t. 18. *Eugenia Malaccensis*, Lin. spec. p. 672. Lam. dict. 3. p. 196. Cor. ann. mus. 9. p. 292. f. 2. *Myrtus Malaccensis*, Spreng. syst. 2. p. 484. Leaves a foot long, shining. Fruit pear-shaped. *Jambosa nigra* l. t. 38. f. 1. Flowers white. This tree resembles the jamsorade, but has broader leaves. The fruit is ovate, an inch and a half in diameter, fleshy, and sweet-scented like the rose, agreeable to the taste, smell, and sight, and esteemed wholesome. It is common in most of the islands in the South Sea.

*Malay Apple.* Fl. May, Aug. Clt. 1768. Tree 20 to 30 ft.

7 *J. AMPLEXICAULIS* (D. C. prod. 3. p. 287.) racemes few-flowered, terminal; lower flowers axillary, solitary; leaves membranous, oblong-lanceolate, obtuse, glabrous, undulated, rather cordate at the base. *h. S.* Native of Sumatra. *Eugenia amplexicaulis*, Roxb. hort. beng. p. 37. Lindl. bot. reg. t. 1033. Fruit very fine purple, size of a small apple. Calyx fleshy, bluntly 4-cleft.

*Stem-clasping-leaved Rose-apple.* Fl. May, July. Clt. 1823. Tree 20 to 30 feet.

8 *J. AUSTRALIS* (D. C. l. c.) axillary peduncles 3-flowered, solitary, terminal ones rather panicle; leaves elliptic-lanceolate, acute. *h. G.* Native of New Holland. *Eugenia myrtifolia*, Sims, bot. mag. t. 2230. Ker. bot. reg. 627. Lodd. bot. cab. 525. *Eugenia australis*, Wendl. ex Link, enum. hort. berl. 2. p. 28. Coll. hort. rip. append. 1. p. 123. t. 8. *Myrtus australis*, Spreng. syst. 2. p. 482. Flowers white.

*Southern Rose-apple.* Fl. April, July. Clt. 1800. Tree 20 ft.

9 *J. FORMOSA*; leaves elliptic-oblong, rather acuminate, sessile, cordate, stem-clasping; racemes axillary, rising after the leaves have fallen, sessile, short; pedicels clavate-elongated; flowers smooth; stamens very long; berry globose, pendulous. *h. S.* Native of the East Indies, at Moalmyse, and at the bottoms of the rocks on the banks of the Athan, in Martaban. *Eugenia formosa*, Wall. pl. rar. asiat. 2. p. 6. t. 108. Calyx and petals reddish; filaments white. (f. 124.)

*Beautiful Rose-apple.* Tree 30 feet.

10 *J. LAURIFOLIA* (D. C. l. c.) cymes axillary, opposite, 3-5-flowered; lower pedicels opposite, elongated; flowers 3, terminal, sessile on the tops of the peduncles; leaves elliptic, bluntish at both ends. *h. S.* Native of the East Indies. *Eugenia laurifolia*, Roxb. hort. beng. p. 92. *Eugen. Javanica*, Lam. dict. 3. p. 200. exclusive of the synonyms of Rumph. *Myrtus Javanica*, Spreng. syst. 2. p. 484. but not of Blume. Flowers white.

*Laurel-leaved Rose-apple.* Clt. 1823. Tree 20 to 30 feet.

11 *J. HYPERICIFOLIA* (D. C. l. c.) pedicels terminal, solitary, 1-flowered, shorter than the leaves; leaves sessile, oblong-lanceolate, acuminate, rather cordate at the base, glabrous. *h. S.*

Native of Java, on Mount Salak. *Myrtus hypericifolia*, Blum. bijdr. p. 1082. Calyx 4-cleft, rather attenuated at the base.

*St. John's-wort-leaved Rose-apple.* Shrub.

12 *J. ? OWARIENSIS* (D. C. l. c.) cymes panicle, terminal; branchlets opposite, 3-flowered at the apex; calyxes turbinate, shortly and bluntly 4-lobed; leaves oval, acuminate, coriaceous, glabrous, rusty beneath. *h. S.* Native of the west coast of Africa, in the kingdom of Warce. *Eugenia Owariensis*, Beauv. fl. d'ow. 2. t. 70. The veins of the leaves are parallel in the figure and rather prominent. Leaves 3 inches long and  $1\frac{1}{2}$  broad. Stamens very numerous, exerted. Branches furnished with supra-axillary, opposite tubercles. Fruit unknown, but in the form of the calyx this plant agrees with *Jambosa*.

*Warce Rose-apple.* Tree 20 feet.

13 *J. ? OBTUSISSIMA* (D. C. prod. 3. p. 287.) panicles corymbose, terminal, or lateral; branches 3-flowered; calyx 4-cleft, attenuated at the base; leaves almost sessile, oblong, obtuse, somewhat cordate at the base, coriaceous, glabrous. *h. S.* Native of Java. *Myrtus obtusissima*, Blum. bijdr. p. 1085. Compare it with *Eugenia androsæmoides*, ex Blume.

*Very obtuse-leaved Rose-apple.* Tree 20 to 30 feet.

14 *J. DENSIFLORA* (D. C. l. c.) corymbs terminal, coarctate; pedicels 3-flowered; calyx 4-cleft, very much attenuated at the base; leaves oblong-lanceolate, coriaceous, glabrous, acuminate at both ends. *h. S.* Native by the sea-side, in the island of Nusa-Kambangan, in the East Indies, where it is called by the inhabitants *Jambon*. *Eugenia densiflora*, Blum. bijdr. p. 1087.

*Dense-flowered Rose-apple.* Tree 20 feet.

15 *J. GLABRATA* (D. C. l. c.) peduncles filiform, 1-3-flowered, glabrous, shorter than the leaves; ovary clavate; calyx 4-cleft; leaves oblong-lanceolate, bluntly acuminate, finely veined, quite glabrous; calyx attenuated at the base. *h. S.* Native of Java, on the mountains. *Myrtus glabrata*, Blum. bijdr. p. 1088. but not of Swartz.

*Smooth Rose-apple.* Tree.

16 *J. LINEATA* (D. C. l. c.) corymbs terminal or axillary, compound; calyx 4-cleft; ovary elongated; leaves broad-lanceolate, bluntly acuminate, glabrous, with fine parallel veins, shining. *h. S.* Native of Java, in mountain woods, where it is called *Kikangar*. *Myrtus lineata*, Blum. bijdr. p. 1087. but not of Swartz.

*Lined-leaved Rose-apple.* Tree 20 feet.

17 *J. ALBA*; racemes terminal and axillary; the terminal ones forming a panicle; peduncles 3-5-flowered; leaves very broad, elliptic, cordate at the base, strongly veined; petioles very short. *h. S.* Native of the East Indies. Calycine lobes broad, short, and rounded. *Eugenia alba*, Roxb. hort. beng. p. 37.

*White Rose-apple.* Tree.

18 *J. ? CAULIFLORA* (D. C. l. c.) panicles lateral; flowers in nearly sessile glomerules; calyx 4-cleft, attenuated at the base; leaves sessile, oblong, bluntly acuminate, rather cordate at the base, coriaceous, glabrous, and shining. *h. S.* Native of Java, at the foot of Mount Burangrang, where it is called *Kupa*. *Myrtus cauliflora*, Blum. bijdr. p. 1086. but not of Mart.

*Stem-flowered Rose-apple.* Tree 20 to 30 feet.

19 *J. AQUEA* (Rumph. amb. 1. p. 126. t. 30. f. 2.) panicles axillary and terminal; leaves elliptic-acuminate, auricled at the base, on very short petioles; stigma-simple. *h. S.* Native of the Moluccas. *Eugenia aquea*, Roxb. hort. beng. p. 37. Fruit torose, depressed.

*Watery Rose-apple.* Clt. 1820. Tree 20 to 30 feet.

20 *J. ? DOMESTICA* (Rumph. amb. 1. p. 121. t. 37.) racemes lateral, short; leaves ovate, acute; fruit obovate. *h. S.* Native of the Moluccas.

*Domestic Rose-apple.* Tree.

FIG. 124.

21 *J. HARDWICKIA*; leaves sessile, cordate at the base, elliptic, obtuse; corymbs terminal; peduncles usually 3-flowered; flowers sessile on the peduncles; calycine segments roundish; stamens exserted. *h. S.* Native of the Mauritius. Perhaps a species of *Jossinia* (v. s. in herb. Lamb.).

*Hardwick's Rose-apple.* Tree.

22 *J. ROTUNDIFOLIA*; corymbs terminal; leaves roundish, coriaceous, with revolute margins, reticulately veined, glabrous. *h. S.* Native of the Isle of France. Perhaps a species of *Jossinia* (v. s. in herb. Lamb.).

*Round-leaved Rose-apple.* Tree.

The *Eugenia oblata*, *E. lanceafolia*, and *E. lanceolaria* of Roxb. hort. beng. p. 37. are probably referrible to this genus, but they have not yet been described.

*Cult.* A genus of fine trees, with large foliage, beautiful flowers, and eatable fruit. They thrive well in a mixture of sand, loam, and peat; and flower freely when the plants are of good size. Ripened cuttings strike root readily in sand, under a hand-glass.

#### Tribe IV.

**BARRINGTONIÆ** (plants agreeing with the genus *Barringtonia* in important characters). D. C. dict. class. vol. 11. not. 1826. prod. 3. p. 288. A genus of *Levythideæ*, Rich. & Poit. Lobes of calyx 4-6. Petals 4-6. Stamens innumerable, equal, disposed in many series; filaments monadelphous a short way at the base. Fruit baccate or dry, valvless, many-celled. Cotyledons large and fleshy.—Trees. Leaves dotless, alternate, or nearly opposite, or in crowded whorls, quite entire or serrated. Flowers in racemes or panicles.

**XXXV. BARRINGTONIA** (dedicated to the Honourable Daines Barrington, F.R.S. A.S. &c. an active Fellow of the Society of Antiquaries, and author of several papers in their Transactions). Forst. gen. no. 38. D. C. prod. 3. p. 288. Butónica, Lam. dict. 1. p. 515. Juss. gen. p. 326.—Commer-sonia, Sonn. voy. guin. t. 8, 9. Hüttum, Adans. fam. 2. p. 88.—Mitraria, Gmel. syst. p. 799. but not of Cav.

*Lin. syst.* *Monadelphica, Polyandria.* Tube of calyx ovate; limb 2, rarely 3-parted; lobes oval, obtuse, concave, permanent. Petals 4, large, coriaceous. Stamens numerous, in many series; filaments filiform, long, free, but joined together into a short ring at the base; anthers roundish. Style filiform, length of stamens; stigma simple. Urceolus rising from the top of the ovary, and sheathing the base of the style. Ovary 4-celled; cells 2-ovulate. Berry large, ventricose at the base, pyramidal and tetragonal upwards, crowned by the limb of the calyx, 1-celled when mature; cell obversely pear-shaped, fibrous, almost putamineous. Seed ovate-globose, pendulous, attenuated upwards. Embryo exalbuminous (Blume), elliptic-globose, having its radicle superior, and confused with the cotyledons, which are conferruminated, and the embryo is therefore pseudo-monocotyledonous.—Large trees. Leaves crowded, opposite, or in whorls, dotless, obovate. Flowers large, disposed in a terminal thyrse; pedicels furnished with 1 bractea each.

1 *B. SPECIOSA* (Lin. fil. suppl. p. 312.) flowers disposed in an erect thyrse; leaves shining, cuneate-oblong, obtuse, quite entire; fruit acutely tetragonal, pyramidal. *h. S.* Native of the south of China, Java, Sumatra, the Moluccas, and of the islands in the Pacific Ocean, at the mouths of rivers by the sea-side. Blum. bijdr. p. 1096. Gaud. in Frey. voy. part. bot. p. 483. Butónica, Rumph. amb. 3. p. 114. *B. Butónica*, Forst. gen. t. 38. Manmæ Americana, Lin. spec. p. 737. Commer-sonia, Sonn. voy. guin. 1. p. 14. t. 8. and t. 9. Mitraria Commer-sonia, Gmel. l. c. Butónica speciosa, Lam. dict. 1. p. 521. Flowers purple and white, large and handsome. The drupe is

reddish brown; the seeds of which, mixed with bait, inebriates fish in the same manner as *Cocculus Indicus*.

*Shewy Barringtonia.* Clt. 1785. Tree 30 to 40 feet.

2 *B. RACEMOSA* (Blum. in litt. ex D. C. prod. 3. p. 288.) racemes pendulous, very long; leaves cuneate-oblong, acuminate, serrulated; fruit bluntly tetragonal, pyramidal. *h. S.* Native of Malabar, Moluccas, and Marianne Island, in humid woods. Gaud. in Frey. voy. part. bot. p. 483. t. 107. Samstravadi, Rheed. mal. 4. t. 6. Eugenia racemosa, Lin. spec. p. 673. Lam. dict. 3. p. 197.

*Racemose-flowered Barringtonia.* Clt. 1822. Tree 30 to 40 ft.

*Cult.* Most splendid trees, with large, shewy foliage and flowers, but difficult to cultivate. They require to be kept moist and warm, and the house in which they are grown should never be allowed to fall below 60° of Fahrenheit. A mixture of sand, loam, and peat is a good soil for them. Cuttings, taken off at a joint when the wood is ripe, planted in sand, with a hand-glass over them, root readily. The cuttings should not be stripped of any of their leaves.

**XXXVI. STRAVADIUM** (*Tsjeria Samstravadi* is the Malabar name of one of the species). Juss. gen. p. 326. D. C. prod. 3. p. 289.—Stravadia, Pers. ench. 2. p. 30. Meteorus, Lour. coch.—Manichea, Sonn. voy. guin. p. 139. tt. 92, 93. ex Juss.

*Lin. syst.* *Monadelphia, Polyandria.* All as in *Barringtonia*, but differs in the limb of the calyx being 4-parted. Ovary semi-bilocular; cells biovulate. Fruit oblong, tetragonal. Perhaps only a section of *Barringtonia*, according to Gartn. and Blume.

1 *S. ALBUM* (D. C. prod. 3. p. 289.) leaves cuneate-oblong, acuminate, obsolete serrulated; racemes very long, pendulous; drupe ovate. *h. S.* Native of the Moluccas, in woods on the sea-shore. Rumph. amb. 3. p. 116. Stravadia alba, Pers. Flowers white. Perhaps sufficiently distinct from *Barringtonia racemosa*.

*White-flowered Stravadium.* Tree 20 to 30 feet.

2 *S. RUBRUM* (D. C. l. c.) leaves cuneate-oblong, acuminate, obsolete serrulated; racemes very long, pendulous; drupe acutely 4-angled. *h. S.* Native of the Moluccas and Malabar, in bogs and watery places.—Rumph. amb. 3. t. 115.—Rheed. mal. 4. t. 7. Eugenia acutangula, Lin. spec. p. 673. Barringtonia acutangula, Gartn. fruct. p. 97. t. 111. Stravadia rubra, Pers. Flowers red.

*Red-flowered Stravadium.* Clt. 1822. Tree 20 to 30 feet.

3 *S. COCCINEUM* (D. C. l. c.) leaves ovate-oblong, subserrated; racemes very long, pendulous; drupe bluntly octagonal. *h. S.* Native of Cochinchina, in woods. Meteorus coccineus, Lour. coch. p. 410. Flowers scarlet. Fruit brown. Petals concrete, with the tube of the stamens.

*Scarlet-flowered Stravadium.* Tree 30 to 40 feet.

4 *S. SPICATUM* (Blum. in litt. ex D. C. prod. 3. p. 289.) leaves cuneate-oblong, acute, serrated; spikes filiform, pendulous. *h. S.* Native of Java, in the province of Bantam, in the lower woods. Barringtonia spicata, Blum. bijdr. p. 1097. Calyx 4-cleft. The rest unknown.

*Spike-flowered Stravadium.* Tree.

5 *S. EXCELSUM* (Blum. in litt. D. C. prod. 3. p. 289.) leaves oblong, attenuated at both ends, finely serrulated; racemes compound, terminal; drupe oblong, tetragonal. *h. S.* Native of the Island of Nusa-Kambangan, in woods on the sea-shore. Barringtonia excelsa, Blum. bijdr. p. 1097. Tree 80 feet high. Calyx 4-cleft. The rest unknown.

*Tall Stravadium.* Tree 80 feet.

*Cult.* For culture and propagation see *Barringtonia*.

**XXXVII. GUSTAVIA** (dedicated to Gustavus III. king of

Sweden, and patron of Linnæus, and who presented a large collection of Indian plants to him). Lin. amœn. 8. (1775.) p. 266. Lin. fil. suppl. 51. Poit. mem. mus. 13. p. 156. D. C. prod. 3. p. 289.—Pirigara, Aubl. guian. (1775.) 1. p. 487. H. B. et Kunth, nov. gen. amer. 7. p. 261.—Spallanzania, Neck. elem. (1790.) no. 733.

LIN. SYST. *Monadelphica*, *Polyandria*. Tube of calyx turbinate (f. 125. a.); limb entire, or 4-6-8-lobed. Petals 4-6-8 (f. 125. c.), ovate, nearly equal. Stamens numerous, monadelphous at the base, and somewhat adnate to the claws of the petals. Ovary 4-6-celled; cells many-seeded. Style short. Stigma obtuse. Capsule ovate, or nearly globose, 3-6-celled, coriaceous, valvless, umbilicate from the vestiges of the calyx. Seeds few in each cell, ovate, clothed with coriaceous membranes, suspended by long plicate funicles, fixed to the central column. Embryo fleshy. Cotyledons 2, large, nearly equal, convex on the outside, and flat inside. Radicle obtuse, hardly prominent.—Trees. Leaves alternate, large, dotless, serrated, or quite entire, glabrous. Racemes terminal, few-flowered. Flowers bibracteate, white and showy.

1 *G. AUGUSTA* (Lin. amœn. acad. 8. p. 266. t. 5.) flowers of 8 petals; calyx entire, glabrous; leaves oblong-lanceolate, acuminate, much narrowed at the base, membranous, remotely and sharply toothed. h. S. Native of Surinam, Maranham; and of New Granada, near Turbaco, where it is called *Membrillo* and *Baco*, ex H. B. et Kunth. *Pirigara* superba, H. B. et Kunth, nov. gen. amer. 7. p. 261. Fruit unknown. Petals white. Stamens yellow. The flowers smell sweet, but the wood is extremely fetid. In Surinam it is used for hooks.

*August* Gustavia. Clt. 1794. Shrub 5 to 10 feet.

2 *G. SPECIOSA* (D. C. prod. 3. p. 289.) flowers 6-petalled; calyx nearly entire, and are as well as the filicels and ovaria tomentose; leaves oblong-lanceolate, acuminate, quite entire, narrowed at the base, coriaceous. h. S. Native of New Granada at Mariquita, where it is called *Chupa*. *Pirigara* speciosa, H. B. et Kunth, nov. gen. amer. 7. p. 290. By eating the small fruit of this tree, the body becomes yellow, and after it remains 24 or 48 hours, nothing can erase the colour, according to Humb. and Bonpl.

*Showy* Gustavia. Tree.

3 *G. URCEOLATA* (Poit. mem. mus. 13. p. 156. t. 5.) flowers 6-7-petalled; calyx glabrous, with an entire margin; leaves oblong-lanceolate, obtuse, or acutish, membranous, remotely subserrated on the margin. h. S. Native of French Guiana, where it is called *Bois puant*, because the wood becomes fetid after exposure to the air. Petals oval, obtuse, an inch long, white, rather rose-coloured on the outside. Fruit wingless. Wood fetid. (f. 125.)

*Urceolate-calyxed* Gustavia. Tree.

4 *G. PTEROCARPA* (Poit. l. c. p. 158. t. 6.) flowers 6-petalled; calycine lobes 6, permanent, girding the fruit; leaves oval-oblong, acuminate, rather coriaceous, quite entire, or hardly denticulated. h. S. Native of Guiana, at La Maza and Roura. Smaller than the first. Fruit depressed, girded by a circular wing or margin. In the specimens of Perrottet the leaves are quite entire, but in the figure of Poit, they are somewhat denticulated.

*Wing-fruited* Gustavia. Tree 10 to 20 feet.

5 *G. FASTUOSA* (Willd. spec. 3. p. 847.) flowers 6-petalled; lobes of calyx 6, linear, thick, acute, permanent; leaves obovate, acuminate, rather repandly serrulated. h. S. Native of Guiana, in woods about Sinemari, where it is called *Pirigara-mepe*. *Pirigara* hexapétala, Aubl. guian. 1. p. 490. t. 193. *G. hexapétala*, Smith, in Rees' cycl. no. 2. Leaves obovate, acuminate. Bracteas oblong, acute. Lobes of calyx narrow, acute, fleshy. Stigma tetragonal. Capsule roundish, rather cinereous, 4-celled, crowned by the truncate lobes of the calyx. Funicles thick. Perhaps the same as the first species. Petals white. Stamens yellow.

*Disdainful* Gustavia. Clt. 1823. Tree 20 feet.

6 *G. BRASILIANA* (D. C. prod. 3. p. 294.) flowers 6-petalled; lobes of calyx 6, ovate, acutish, foliaceous, flat; leaves oval-oblong, acuminate, rather repandly toothed. h. S. Native of Brazil, on the banks of the river Amazon, near Garupa. *G. fastuosa*, Mart. herb. This plant differs from the preceding species in the leaves being oval or oval-oblong, not obovate, and in the bracteas on the peduncles being ovate-obtuse, not oblong, acute; lobes of calyx ovate. Fruit 6-ribbed, not roundish and yellow, nor cinereous.

*Var. γ, minor* (D. C. l. c.) flowers a little smaller; leaves a little narrower. h. S. Native of Para, in Brazil.

*Brazilian* Gustavia. Tree 20 feet.

7 *G. TETRAPETALA* (Rausch. ex D. C. prod. 3. p. 290.) flowers 4-petalled; lobes of calyx 4, roundish, at length deciduous; leaves oblong-lanceolate, acuminate, serrated, attenuated at the base. h. G. Native of Cayenne, on Mount Courou. *Pirigara* tetrapétala, Aubl. guian. 1. p. 489. t. 192. This is perhaps the same as *G. augusta*.

*Tetrapetalous* Gustavia. Tree 20 feet.

8 *G. VALIDA* (D. C. l. c.) flowers 4?-petalled; lobes of calyx 4, roundish; leaves cuneate-oblong, acutish, denticulated. h. S. Native of Java, in woods, and in the island of Nusa-Kambanga. *Pirigara* válida, Blum. bijdr. p. 1096. Cotyledons foliaceous, according to Blume. Radicle very long, clavate, ascending.

*Strong* Gustavia. Tree 30 to 40 feet.

*Cult.* A showy genus, with large leaves and flowers. A mixture of loam, peat, and sand answers the species best; and ripened cuttings root freely, if planted in sand, with a hand-glass over them, in a moist heat.

† Genera belonging to *Myrtaceæ*, but are not sufficiently known. Most of them probably belong to the Tribe *Myrtææ*.

XXXVIII. CATINGA (*Iva Catinga* is the Guiana name of the first species). Aubl. guian. 1. p. 511. t. 203. Juss. gen. 325. D. C. prod. 3. p. 294.

LIN. SYST. *Icosandria*, *Monogynia*. Tube of calyx ovate; limb 4-toothed, acute, small. Petals? Stamens numerous. Drupe or berry globose or ovate, crowned by the calycine limb, 1-celled, 1-seeded, having the bark or rind fleshy and filled with aromatic oily vesicles.—Trees, natives of Guiana, with opposite, or nearly alternate, oval, entire leaves, which are acuminate at both ends, and full of pellucid dots. This genus is not sufficiently known.

1 *C. MOSCHATTA* (Aubl. l. c. t. 205. f. 1.) fruit globose. h. S. Native of Guiana, where it is called *Iva Catinga*. Fruit exhaling a scent like musk.

*Musk* Catinga. Tree 50 feet.

2 *C. AROMATICA* (Aubl. l. c. t. 203. f. 2.) fruit ovate, attenuated at both ends. h. S. Native of Guiana, where it is called *Goyavarana*.

*Aromatic* Catinga. Tree 40 feet.

*Cult.* For culture and propagation see *Gustavia*, p. 870.

XXXIX. PETALOTOMA (from *πεταλον*, *petalon*, a petal,

FIG. 125.

and *τομή, tome*, a section; in reference to the cut petals). D. C. prod. 3. p. 294. *Diatoma*, Lour. coch. p. 296. but not of D. C.

LIN. SYST. *Icosándria, Monogýnia*. Tube of calyx campanulate, baccate; limb 8-cleft; segments acute. Petals 6-8, with filiform claws, and roundish cut limbs. Disk fleshy, crenated. Stamens 16, inserted in the disk. Anthers roundish. Style filiform; stigma 4-5-cleft, with the lobes ovate, furrowed and spreading. Berry round, crowned, 1-seeded.—A tree, with brachiate branches. Leaves opposite, ovate, glabrous, quite entire. Racemes short, nearly terminal. Flowers copper-coloured. The affinity of this genus is doubtful, unless it agrees with *Alángium*, but differs from it in the leaves being opposite, in the stigma being 4-5-cleft; stigmas and anthers roundish.

1 P. BRACHIA'TA (D. C. l. c.). *h. G.* Native of Cochinchina, in woods. *Diatoma brachiata*, Lour. l. c.

*Armed Petalotoma*. Tree 40 feet.

*Cult.* For culture and propagation, see *Gustàvia*, p. 870.

XL. FÆTIDIA (from *fæto*, to stink; smell of wood). Comm. in Juss. gen. p. 325. Lam. ill. t. 419. dict. 2. p. 157. D. C. prod. 3. p. 295.

LIN. SYST. *Icosándria, Monogýnia*. Tube of calyx tetragonal and hemispherical; limb 4-parted; lobes valvate in activation, permanent, at length reflexal. Petals wanting. Stamens numerous, disposed in many series; filaments capillary, free. Style filiform; stigma 4-cleft. Berry dry, hard, nucamentaceous, indehiscent, flat above, and bluntly tetragonal beneath, 4-celled; cells 1-2-seeded.—Tree. Leaves alternate, crowded on the branches, sessile, oval, attenuated at both ends, quite entire, obtuse, glabrous, nerved, dotless. Peduncles 1-flowered, in the axils of the upper leaves.

1 F. MAURITIA'NA (Lam. l. c.). *h. G.* Native of the Mauritius, where it is called *Bois puant*. F. Borbónica, Rausch. The wood is a good substitute for walnut wood.

*Mauritian Fætidia*. Clt. 1827. Tree 15 to 20 feet.

*Cult.* For culture and propagation see *Gustàvia*, p. 870.

XLII. COUPOUI (*Coupou-rana* is the name given to the tree by the Indians of Guiana). Aubl. guian. suppl. p. 16. t. 377.

LIN. SYST. *Icosándria, Monogýnia*? Tube of calyx ovate; limb permanent, 5-lobed. Petals and stamens unknown. Berry ovate, crowned by the calyx, 1-celled, 1-seeded. Seed large.—A tall tree. Leaves alternate, on long petioles, obovate, acute, cordate at the base, glabrous. Flowers unknown.

1 C. AQUA'TICA (Aubl. l. c.). *h. S.* Native of Guiana. Leaves 20-22 inches long, and 9 inches broad. Fruit about the form and size of an orange.

*Aquatic Coupoui*. Tree 60 feet.

*Cult.* For culture and propagation see *Gustàvia*, p. 870.

XLIII. CAREYA (in honour of the Rev. William Carey, of Serampore, a distinguished botanist). Roxb. corom. 3. p. 13. D. C. prod. 3. p. 295.

LIN. SYST. *Monadélphia, Polyándria*. Tube of calyx ovate; limb 4-parted (f. 126. b). Petals 4, ovate, concave, spreading. Stamens numerous; filaments filiform, free, but cohering at the base with the petals into a ring; outer ones sterile (f. 126. g.); anthers of the fertile ones ovate and bilocular. Style filiform; stigma capitate (f. 126. a.), obscurely 4-toothed. Berry globose (f. 126. d.), covered by the fleshy calyx, and crowned by its lobes, pulpy, many-seeded, 4-celled (f. 126. e.) when young. Seeds oval, compressed.—East Indian herbs or trees, with alternate, feather-nerved, dotless, glabrous leaves; and large flowers with white petals, and red or yellow stamens.

1 C. HERBA'CEA (Roxb. l. c. t. 217.) herbaceous; leaves on short petioles, obovate-cuneate, serrulated; racemes short; flowers pedunculate; outer filaments sterile, exceeding the fertile ones. *h. S.* Native of Bengal. Berry an inch in diameter. Leaves 4-8 inches long. Petals white. Stamens red. (f. 126.)

*Herbaceous Careya*. Fl. Juss. Aug. Clt. 1808. Pl.  $\frac{1}{2}$  to 1 ft.

2 C. ARBÒREA (Roxb. l. c. p. 14. t. 218.) arboreous; leaves on short petioles, obovate-cuneate, hardly serrated; spikes terminal, few-flowered; flowers sessile; outer filaments sterile, but not equal in length to the fertile ones. *h. S.* Native of the East Indies, in mountain valleys. Berries 4 inches in diameter, yellowish inside. Leaves 6-12 inches long. Petals yellowish. Stamens reddish.

*Tree Careya*. Clt. 1823. Shrub 6 to 10 feet.

3 C. MACROSTACHYA (Jack, in mal. misc. 1. no. 2. p. 47.) arboreous; leaves petiolate, obovate, rather serrated; racemes lateral, nodding, densely many-flowered; flowers sessile, in many series. *h. S.* Native of Pulo-Pinang. The inflorescence is different from those of the other species. Ovarium 4-celled: cells 4-ovulate.

*Long-spiked Careya*. Tree 20 feet.

4 C. SPHÆRICA (Roxb. hort. beng. p. 52.). *h. S.* Native of the East Indies. This species is not described.

*Spherical-fruit Careya*. Shrub 3 to 4 feet.

*Cult.* *Careya* is a genus of fine shrubs and trees, with showy flowers. Their culture and propagation are the same as that for *Gustàvia*, p. 870.

XLIII. GLAPHYRIA (from *γλαφυρος, glaphyros*, elegant; in reference to the neatness and elegance of the shrubs). Jack, in Lin. trans. 14. p. 128. D. C. prod. 3. p. 295.

LIN. SYST. Unknown. Limb of calyx 5-lobed. Petals 5. Berry 5-celled, many-seeded. Seeds fixed to the axis, 2 rows in each cell.—Small Indian trees, with alternate, minutely stipitate leaves, and few-flowered, axillary peduncles. Fabric of seeds unknown.

1 C. NITIDA (Jack, l. c.) leaves obovate. *h. S.* Native of the higher mountains of India, particularly on the Sugar-loaf Mountain, in the interior of Bencoolen, where the leaves are used by the natives in place of tea.

*Shining-leaved Glaphyria*. Tree 10 to 20 feet.

2 C. SERICEA (Jack, l. c.) leaves lanceolate, acuminate. *h. S.* Native of Pulo-Pinang, and on the west coast of Sumatra. Calyxes, peduncles, bractees, and young leaves silky. Petals and cells of ovary 5-6 in number.

*Silky Glaphyria*. Tree.

*Cult.* For culture and propagation see *Gustàvia*, p. 870.

XLIV. CROSSOSTYLIS (*κροσσος, krossos*, a fringe, and *στυλος, stylos*, a style; in reference to the lobes of the stigma, which are fringed). Forst. gen. t. 44. Juss. gen. p. 432.

LIN. SYST. *Icosándria, Monogýnia*. Calyx quadrangular, adnate to the ovary at the base, 4-cleft beyond the middle, permanent. Petals 4, unguiculate, alternating with the calycine lobes. Stamens about 20; filaments connate at the base into a ring, interspersed with many sterile, small hairs. Style 1, filiform. Stigma cruciately 4-lobed; lobes fimbriately trifid at the apex. Berry half superior, hemispherical, with many stripes,

FIG. 126.

1-celled, many-seeded. Seeds numerous, small, fixed to the central placenta.

1 C. BIFLORA (Forst. l. c.).  $\frac{1}{2}$ . S. Native of the Society Islands. The rest unknown.

Two-flowered Crossostylis. Tree.

Cult. For culture and propagation see *Gustavia*, p. 870.

XLV. GRAS (from *γρᾶν*, *grao*, to eat; fruit eatable). Lin. gen. no. 659. Swartz, obs. p. 215. Smith, in Rees' cycl. vol. 15.

LIN. SYST. *Icosándria*, *Monogynia*. Tube of calyx adhering to the ovarium; limb small, 4-lobed, obtuse. Petals 4, coriaceous. Stamens numerous, inserted in a square disk; filaments joined into 5 series at the base; inner ones very short; anthers kidney-shaped, small. Style wanting. Stigma cruciate, hidden by the incurved stamens. Drupe ovate, 8-furrowed, crowned by the calyx; nucleus oblong.—A tall, hardly branched tree. Leaves very long, oblong, entire, cuneate at the base, on short petioles. Flowers large, white. Peduncles short, many-flowered. This genus is said to belong to *Myrtaceæ* by Sir J. E. Smith, but it appears to be much more nearly allied to *Guttiferae*.

1 G. CAULIFLORA (Lin. spec. p. 732.).  $\frac{1}{2}$ . S. Native of Jamaica, in subalpine, boggy places, where it is called *Anchovy pear*. Sloan. hist. 2. p. 123. t. 217. f. 1-2. leaf. Brown, jam. p. 245. Lunan. hort. jam. 1. p. 19. The leaves are 2-3 feet long. The berry is ovate and crowned by the calyx, about the size and shape of an alligator's egg, of a brownish russet colour: it is pickled and eaten like the mango, which it greatly resembles in taste. It is readily propagated by seeds, and the plants must be kept in a moist heat. To grow it for fruit, plant in a border, and train horizontally near the light.

Stem-flowered Gras or Anchovy-pear. C. 1768. Tree 20 to 50 feet.

Cult. This tree grows best in loamy soil; and large cuttings succeed best under a hand-glass, in heat.

ORDER CII. LECYTHIDÆÆ (plants agreeing with *Lécythis* in important characters). Rich. mss. Poit. mem. mus. 13. p. 141. (1825.) Lindl. introd. nat. syst. p. 44. *Myrtaceæ*, sect. *Lecythidææ*, D. C. prod. 3. p. 290. Rich. in ann. des sc. 1. p. 321. (1824.)

Calyx superior, 2 or 6-leaved, or urceolate, with a divided limb (f. 127. a. f. 128. a.); valvate, or imbricate in æstivation. Corolla of 6 unequal petals, cohering at the base, with an imbricated æstivation. Stamens indefinite, epigynous, connected into a single petaloid, cucullate, unilateral body (f. 127. l. f. 128. c.). Ovarium inferior, 2-6-celled; ovula indefinite, or definite, attached to the axis; stigma simple. Fruit a woody capsule (f. 127. i. f. 128. f.), either opening with a lid or remaining inclosed. Seeds several, covered by a thick integument. Embryo without albumen, either undivided, or with 2 large, petaloid, fleshy, or leafy cotyledons, sometimes folded upon the radicle, which is next the hilum.—Large trees, with alternate, entire, or toothed leaves, with minute, deciduous stipula, and without pellucid dots. Flowers large, terminal, or lateral, solitary, or racemose. This order has been combined, by De Candolle and others, with *Myrtaceæ*, from which it differs most essentially in their alternate, often serrated leaves, without pellucid dots.

The fruit of *Couroupita Guianensis*, called in Guiana *Abricot sauvage*, in Cayenne is vinous and pleasant. The most gigantic tree in the ancient forests of Brazil is that called the *Jaca-pu-*

*caya*; it is the *Lécythis ollaria*, the seeds of which are large and edible. Pr. trav. p. 83. The fleshy seeds of most of the species of *Lécythis* are edible, but some of them leave a bitter unpleasant after-taste in the mouth. The bark of *Lécythis ollaria* is easily separable by beating the liber into a number of fine distinct layers, which divide so neatly from each other, that when separated they have the appearance of thin satiny paper. Poiteau says that he has counted as many as 110 of these coatings. The Indians cut them in pieces as wrappers for their cigars. The well-known Brazil nuts of the shops of London are the seeds of the *Bertholletia excelsa*. The lacerated parts of the flowers of *Couroupita Guianensis* become blue upon exposure to the air.

#### Synopsis of the genera.

1 LECYTHIS. Limb of calyx 6-lobed. Stamiferous ligula bearing the anthers at the base, and the sterile filaments at the apex on the inside. Ovarium 2-6-celled, many-ovulate. Capsule opening by a lid.

2 ESCHWEILERIA. Limb of calyx bent back and applied to the tube, and more or less adnate to it. The rest as in *Lécythis*.

3 BERTHOLLETIA. Limb of calyx 2-parted, deciduous. Corolla and stamens as in *Lécythis*. Ovarium 4-5-celled; cells 4 ovulate. Capsule large, opening by a lid. Seeds triangular.

4 COUROUPITA. Calyx and corolla as in *Lécythis*. Ovarium 6-celled. Capsule with the lid not separable.

5 COURATARI. Limb of calyx 6-parted. Petals 6, joined at the base. Staminateous ligula unilateral, and antheriferous inside. Fruit 3-celled, but at length 1-celled, with a convex lid, which is formed from the dilatation of the top of the central column.

I. LECYTHIS (λεκυθος, *lecythos*, an oil-jar; form of seed vessels). Læfl. itin. p. 189. Lin. gen. no. 664. Lam. ill. t. 476. Poit. l. c. D. C. prod. 3. p. 290.

LIN. SYST. *Monadelpia*, *Polyandria*. Tube of calyx turbinate; limb 6-lobed, permanent (f. 127. a.). Petals 6, unequal. Stamiferous ligula (f. 127. l.) bearing the anthers at the base, and the sterile filaments at the apex on the inside. Ovarium 2-6-celled; cells many-ovulate. Style short. Capsule coriaceous or woody, circumcised at the apex, and therefore opening by a lid at the top (f. 127. b.). Seeds few or solitary in each cell ovate-oblong, fixed to the central column at the base, covered by a fleshy membrane. Embryo undivided. Cotyledons thick, closely conferruminated.—Trees nearly all glabrous. Fruit large, turbinate, or globose. Seeds edible. Numbers of the species are not well known.

#### \* Leaves serrated.

1 L. OLLARIA (Lin. spec. p. 734.) leaves sessile, serrated, cordate-ovate; racemes terminal; fruit roundish.  $\frac{1}{2}$ . S. Native of Cumana, in fields, ex Læfl. itin. p. 159.; and of Brazil, if the *Jaca-pucaya*, Marcgr. bras. p. 128. be the same. Pis. bras. p. 135. with a figure. The tree is called at Barcinoma *Ollata*. Fruit the size of a child's head, according to Marcgraff. Corolla white, with a yellow nectary. The seeds are like chestnuts, eatable either raw or roasted. The bark of the tree serves to make ink.

*Ollata* Cannon-ball-tree. Tree 40 to 60 feet.

2 *L. MINOR* (Jacq. amer. p. 168. t. 100.) leaves petiolate, serrated, lanceolate-oblong; racemes terminal; fruit globose. *h. S.* Native in the woods of Carthage, especially about La Quinta. Flowers large, sweet scented, white, but with the strap of the stamens yellow. Fruit 2 inches in diameter. Seeds eatable, and with a very agreeable taste. Monkeys are said to be extremely fond of them.

*Smaller Cannon-ball-tree.* Clt. 1825. Tree 60 feet.

3 *L. LANCEOLATA* (Poir. dict. p. 27.) leaves petiolate, serrated, lanceolate, acuminate; racemes lateral; fruit ovate. *h. S.* Native of Brazil, whence it has been introduced to Madagascar and the Mauritius. Flowers smaller than those of the first species. Petals very blunt, nearly equal. Fruit large.

*Lanceolate-leaved Cannon-ball-tree.* Tree.

4 *L. ELLIPTICA* (H. B. et Kunth, nov. gen. amer. 7. p. 259.) leaves petiolate, elliptic, short-acuminate, rounded at the base, dentately crenate; racemes straight; petals obtuse. *h. S.* Native of South America, on the banks of the river Magdalena, near Morales. Fruit unknown.

*Elliptic-leaved Cannon-ball-tree.* Tree.

5 *L. DUBIA* (H. B. et Kunth, l. c.) leaves oblong, acuminate, narrowed at the base, obsolete toothed. *h. S.* Native on the banks of the river Magdalena. Flowers and fruit unknown.

*Doubtful Cannon-ball-tree.* Tr.

6 *L. LONGIFOLIA* (H. B. et Kunth, l. c.) leaves petiolate, lanceolate, acuminate, acute at the base, obsolete and remotely toothed, conduplicate. *h. S.* Native of South America, where it is called *Cocos de mono*. Flowers and fruit unknown.

*Long-leaved Cannon-ball-tree.* Tree.

FIG. 127.

\* \* \* *Leaves quite entire.*

7 *L. GRANDIFLORA* (Aubl. guian. 2. p. 712. tt. 283, 284, and 285.) leaves petiolate, oval, acute, quite entire, stiff; racemes axillary and terminal; pedicels thick, shorter than the largest petal; fruit ovate, nearly globose; operculum acute. *h. S.* Native of Cayenne, in woods, where it is called, as well as several other species, *Canari Macaque* and *Marmite de singe*. *L. ollaria*, Lin. amœn. but not of this spec. pl. according to the Linnæan herbarium, ex Smith, in Dees' cycl. 20. no. 1. Leaves glabrous on both surfaces, rather velvety beneath when young. Pedicels thick. Flowers 2 inches in diameter. Petals deep red, very hard. Fruit 4-5 inches in diameter. Seeds eatable and very palatable.

*Great-flowered Cannon-ball-tree.* Clt. 1824. Tr. 60 to 80 ft.

8 *L. CORIACEA* (D. C. prod. 3. p. 291.) leaves on short petioles, oval, acutish, quite entire, stiff, glabrous on both surfaces; panicles axillary and terminal; pedicels slender, about the length of the flowers. *h. S.* Native of Brazil, in the province of Rio Negro. Consistence and nervation of leaves nearly as in *L. grandiflora*, but the flowers are 3-times smaller. Fruit unknown.

*Coriaceous-leaved Cannon-ball-tree.* Tree.

9 *L. IDATIMON* (Aubl. guian. 2. p. 721. t. 259.) leaves on short petioles, ovate-lanceolate, acuminate, quite entire; racemes axillary and terminal; pedicels slender, longer than the

flowers; petals obtuse; fruit nearly ovate, depressed, 4-celled. *h. S.* Native of Guiana, in woods, at the river Sinemari, and of Brazil, in Maranhão, and the province of Para. Flowers rose-coloured. Fruit an inch in diameter. The leaves in the Brazilian specimen are less intensely reticulated than in the Guiana plant. Perhaps *L. lutea* is a variety of this species, only differing in the colour of the flowers.

*Idatimon Cannon-ball-tree.* Clt. 1825. Tree 60 feet.

10 *L. LONGIPES* (Poit. mem. mus. 13. p. 144. t. 2.) leaves petiolate, oblong, quite entire, abruptly acuminate; racemes terminal, loose, pendulous; fruit ovate, depressed, 2-celled. *h. S.* Native of Cayenne, at Mount Mahari. Flowers violaceous. Fruit violaceous, with a white lid, 18-24 lines in diameter.

*Var. β, platycarpa* (Poit. l. c.) fruit large, depressed; flowers smaller, pendulous. *h. S.* Native of Cayenne, at Savanna Baduel. Perhaps a proper species.

*Long-petioled Cannon-ball-tree.* Tree 20 to 30 feet.

11 *L. PEDICELLARIS* (D. C. l. c.) leaves on short petioles, oblong, gradually acuminate, quite entire; panicles terminal; pedicels slender, length of corolla. *h. S.* Native of Brazil. Intermediate between *L. longipes* and *L. corrugata*, but the colour of the flowers and fruit is unknown; it however differs from the first species in the leaves being not abruptly but gradually acuminate, and in the flowers being smaller; and from the second in the pedicels being 6-times longer than the flowers; and from both in the lobes of the calyx being oval-oblong, not roundish.

*Pedicelled-flowered Cannon-ball-tree.* Tree.

12 *L. ACUMINATA* (D. C. l. c.) leaves on short petioles, quite entire, oval, abruptly acuminate, rather membranous; panicle elongated, sparingly branched at the base; pedicels slender, length of the corolla. *h. S.* Native of Brazil, in the province of Rio Negro. This species is allied to *L. longipes* and *L. pedicellaris* in the elongated pedicels, but differs from the first in the leaves being oval, not oblong, and in the racemes being erect, not pendulous, &c., and from the second in the leaves being abruptly, not gradually acuminate. Fruit unknown.

*Acuminate-leaved Cannon-ball-tree.* Tree.

13 *L. SUBBIFLORA* (Ruiz et Pav. fl. per. 4. t. 461.) leaves petiolate, oblong-lanceolate, quite entire, acuminate; pedicels 1-flowered, usually 2-together; petals obtuse. *h. S.* Native of Peru.

*Somewhat-two-flowered Cannon-ball-tree.* Tree.

14 *L. ALBIFLORA* (D. C. l. c.) leaves petiolate, oval, acute or acuminate, rather coriaceous, quite entire; panicle terminal, with its branches angular; pedicels longer than the corolla; petals rather unequal. *h. S.* Native of Brazil, in the province of Para, at the Rio Negro, in woods. *Lecythis*, Mart. herb. Flowers white, nearly like those of *L. Idatimon*. Fruit unknown. Leaves less coriaceous, but much more reticulated than in *L. Idatimon*.

*White-flowered Cannon-ball-tree.* Tree 60 feet.

15 *L. CORRUGATA* (Poit. mem. mus. 13. p. 145. f. 3.) leaves petiolate, oblong, acute, coriaceous, quite entire; panicle terminal, erect; flowers on very short pedicels; fruit turbinate, 4-celled, corrugated. *h. S.* Native of Guiana, along the river Mana. Flowers rose-coloured. Fruit an inch in diameter, surrounded by the calyx, deeply corrugated by transverse wrinkles (f. 127.)

*Corrugated-fruited Cannon-ball-tree.* Shrub 6 to 10 feet.

16 *L. ZABUCAJO* (Aubl. guian. 2. p. 719. t. 288. and t. 284.) leaves petiolate, lanceolate-oblong, acuminate, quite entire; racemes terminal; panicles rather shorter than the flowers; petals white; fruit ovate. *h. S.* Native of Guiana, in woods, where it is called by the natives *Quatellé* and *Zabucajo*. Petals

white, edged with rose-colour, nearly equal. Fruit 4 inches in diameter. Racemes nodding. Seeds eatable, and preferable to our almonds.

*Zabucajo* Cannon-ball-tree. Tree 30 to 60 feet.

17 *L. AMARA* (Aubl. guian. 2. p. 716. t. 286. and t. 285. f. 1.) leaves petiolate, oblong, acuminate, quite entire, stiff; racemes axillary and terminal; pedicels rather shorter than the flowers; petals acutish; fruit ovoid, 4-celled. *h. S.* Native of Guiana, in woods. Fruit the size and form of an egg. Flowers small, yellow. Seeds bitter, but eaten by monkeys.

*Bitter-seeded Cannon-ball-tree.* Clt. 1825. Tree 10 to 12 ft.

18 *L. PARVIFLORA* (Aubl. guian. 2. p. 717. t. 287.) leaves petiolate, oblong, acuminate, quite entire; racemes paniced, terminal; pedicels rather shorter than the flowers; petals acutish; fruit rather ovate, and somewhat 2-celled. *h. S.* Native of Guiana, on the banks of rivers. Flowers small, sulphur-coloured. Nucleus of seeds bitter. Fruit tender, not woody, 2-seeded.

*Small-flowered Cannon-ball-tree.* Clt. 1825. Shrub 4 to 6 ft.

19 *L. OVALIFOLIA* (D. C. l. c.) leaves petiolate, oval, obtuse at the base, acute at the apex, or rather acuminate, quite entire; racemes sub-paniced; pedicels shorter than the flowers; sepals and petals very blunt. *h. S.* Native of Brazil. Leaves rather membranous, lateral nerves distant. Petioles 3-4 lines long. Flowers the size of those of *L. Idatimon*. Fruit unknown.

*Oval-leaved Cannon-ball-tree.* Tree.

† *A species not sufficiently known.*

20 *L. MULTIFLORA* (Smith in Rees' cycl. vol. 20. no. 8.) leaves unknown; racemes terminal, paniced; petals obtuse; calycine fibres tomentose. *h. S.* Native of Guiana. Flowers apparently yellow.

*Many-flowered Cannon-ball-tree.* Tree.

*Cult.* All the species of *Lécýthis* require a strong heat. A mixture of loam and sand is the best soil for them. Ripened cuttings will root if planted in sand with a hand glass over them, in a strong heat.

II. *ESCHWEILERIA* (evidently named after some person of the name of Eschweiler). Mart. mss. ex D. C. prod. 3. p. 293.

LIN. SYST. *Monadelphica, Polyándria*. All as in *Lécýthis*, but differs in the limb of the calyx being bent back upon the tube, and more or less adnate to it. Perhaps only a section of *Lécýthis*.

1 *E. PARVIFLORA* (Mart. mss. ex D. C. l. c.) leaves ovate, gradually acuminate, coriaceous, quite entire; lateral nerves hardly distinct, never elevated. *h. S.* Native of Brazil. *Zabucajo*, Pison, bras. p. 66. with a figure. Panicle terminal. Pedicels very short. The fruit agrees with that of *Lécýthis corrugata*, but is much more turbinate at the base, and the limb of the calyx is 6-lobed and folded back upon the tube.

*Small-flowered Eschweilera.* Tree 40 feet.

2 *E. GRANDIFLORA* (Mart. herb. ex D. C. l. c.) leaves long-lanceolate, obtuse at the base, acuminate at the apex, stiffish; with quite entire margins; lateral nerves distinct, elevated beneath. *h. S.* Native of Brazil, in the province of Para. Leaves almost like those of *Lécýthis Zabucajo*, Willd. t. 288. but they are less reticulated. Fruit globose, with a very blunt lid.

*Great-flowered Eschweilera.* Tree.

*Cult.* For culture and propagation see *Lécýthis*.

III. *BERTHOLLETIA* in honour of Louis Berthollet, the celebrated French chemist. Humb. et Bonpl. pl.

equin. 1. p. 122. t. 95. Poit. mem. mus. 13. p. 148. t. 4. D. C. prod. 3. p. 293.

LIN. SYST. *Monadelphica, Polyándria*. Limb of calyx bipartite, deciduous. Corolla and stamens as in *Lécýthis*. Style curved, bent to the side, opposite the bundle of stamens. Stigma capitate. Ovary 4-5-celled; cells 4-seeded. Seeds placed by pairs. Capsule large, roundish, valveless, woody, fleshy inside, opening by a lid. Seeds 16-20, fixed to the base of the central column, erect, triangular, convex on the outside, bony, wrinkled. Embryo fleshy, undivided in consequence of the cotyledons being conferruminated.—A tall tree, having the young branches leafy at the apex. Leaves alternate, oblong, quite entire, rather coriaceous. Flowers cream-coloured. Stamens white.

1 *B. EXCELSA* (Humb. et Bonpl. l. c.) *h. S.* Native of South America, spontaneous in woods on the banks of the Orinoco, and now cultivated in Brazil, Guiana, &c. II. B. et Kunth, nov. gen. amer. 7. p. 260. Rich. anal. fr. p. 74. and Tonka. Rich. ibid. p. 84. The triangular seeds known by the name of Brazil-nuts in our shops are the produce of this tree. The tree is said to be originally from the province of Para in Brazil, and is said also to form forests on the borders of the Orinoco. The almonds or nuts have been known to the Portuguese for a very long time, and are now known in all parts of Europe; in France under the name of Chastaignes du Bresil; in Spain under that of Almendron; in Portugal under Castanas de Maranon; in England under the name of Para-nuts or Brazil-nuts. The natives of the country call them Juvia, the Brazilians Capucaya. The Portuguese at Para carry them to Cayenne and Maranhão, and sell them under the name of Tuka. The capsule or fruit is as large as a large cannon-ball, containing many triangular nuts, laid over each other in a regular manner. An oil is prepared from them, as well as from the seeds of several species of *Lécýthis*, which is in great request in Brazil.

*Tall Bertholletia or Brazil-nut.* Tree 100 to 150 feet.

*Cult.* For culture and propagation see *Lécýthis*.

IV. *COUROUPITA* (*Couroupitoutoumou* is the Caribbean name of the tree). Aubl. guian. 2. p. 708. Poit. mem. mus. 13. p. 152. D. C. prod. 3. p. 293.—Pontopiddana, Scop.—Elsholtzia, Rich. but not of Willd.—*Lécýthis* species, Willd.—*Pekca* species, Juss.

LIN. SYST. *Monadelphica, Polyándria*. Calyx and corolla of *Lécýthis*. Staminaiferous ligula furnished with anthers, both at the base and apex. Ovary turbinate, 6-celled. Parietal dissepiments reflexed towards the axis, and stretched even to the column; funicles concrete among themselves, and therefore bearing many ovula. Style wanting. Stigma stellately hexagonal. Capsule crustaceous, globose, girded by the calycine circle, valveless, pulpy inside. Operculum not separable. The pulp before the fruit is ripe is fleshy, but after deliquescence it vanishes, and at length the endocarp is separable from the epicarp. Seeds imbedded in the pulp, numerous, ovate, covered by a coriaceous villos membrane. Embryo roundish, compressed, beaked. Cotyledons large, foliaceous, nerved, plicate, corrugated, curved under the club-formed radicle.—Trees. Leaves petiolate, oblong-cuneate, rather crenulated. Stipules small, caducous. Racemes simple, arising from the trunk and

FIG. 128.

branches, bracteate. Flowers large, of a dirty whitish or flesh-colour.

1 C. GUIANE'NSIS (Aubl. guian. 2. p. 708. t. 239.) leaves acute; edge of calyx circumcised; petals acute. h. S. Native of Guiana and Cayenne, in sand by the sea side, where it is called *Couroupitoutoumou*, ex Barre; *Abricot sauvage*, ex Aublet; *Calebasse-colin*, ex Poit. Fruit larger than a head, and consequently called *boulet de canon* or *cannon-ball*. Tuss. ant. 2. p. 45. f. 20-11. *Lécythis bracteata*, Willd. *Pèkea Couroupita*, Juss. Pulp of fruit vinous. Flowers flesh-coloured, size of those of *Lécythis grandiflora*, sweet-scented. The pulp of the fruit is white, acid, and not disagreeable.

• *Guiana Cannon-ball-tree*. Clt. 1820. Tree 50 to 100 ft.

2 C. NICARAGUARE'NSIS (D. C. prod. 3. p. 294.) leaves obtuse; margin of calyx lobed; petals obtuse. h. S. Native of South America, near Nicaragua. *Lécythi Nicaraguarënsis*, Moc. et Sesse, fl. mex. icon. ined. Differs from the first in the flowers being smaller, of a dirty whitish brown-colour, and in the pulp of the fruit being bluish.

*Nicaragua Cannon-ball-tree*. Tree 40 to 50 feet.

• *Cult.* For culture and propagation see *Lécythi*, p. 874.

V. COURATARI (*Couratari* is the Guiana name of the first species). Aubl. guian. 2. p. 723. t. 290. Rich. ann. sc. nat. 1. p. 329. Poit. mem. mus. 14. p. 154. D. C. prod. 3. p. 294. —*Lecythopsis*, Schrank in akad. munch. phil. 7. p. 241. —*Curupita*, Gmel.

LIN. SYST. *Monadelphica*, *Polyandria*. Tube of calyx turbinate; limb 6-parted. Petals 6, joined at the base. Stamens numerous; filaments concrete into an urceolately concave truncate unilateral ligula, bounding the anthers on the inside. Ovary 3-4-celled; cells 4-ovulate; ovules erect. Style subulate, simple. Fruit or pyxidium oblong, somewhat trigonal, 3-celled, but at length becoming 1-celled, coriaceous, valveless, closed; operculum convex, formed from the central dilated column. Seeds oblong-lanceolate, numerous, disposed in 3 bundles in the bottom of the fruit. Embryo conduplicate, with a long root. Cotyledons 2, long, foliaceous, corrugated. Radicle incumbent.—Trees. Leaves alternate, exstipulate, quite entire. Racemes axillary, spicate.

1 C. GUIANE'NSIS (Aubl. l. c. t. 290.) fruit somewhat tetragonal, with the orifice entire; seeds girded by a wing. h. S. Native of Guiana, near Aroura, at the river Sinemari, where it is called *couratari*, *maou*, and *balutu blanc*. Rich. l. c. t. 21. good. The inhabitants of Guiana form cordages of the bark of this tree.

*Guiana Couratari*. Tree 60 feet.

2 C. ESTRELLE'NSIS (Raddi, mem. pl. bras. add. p. 25. f. 2.) fruit nearly cylindrical, with a lobate orifice; seeds acute upwards. h. S. Native of Brazil, on the mountains of Estrella. Flowers unknown.

*Estrella Couratari*. Shrub 6 to 10 feet.

• *Cult.* For culture and propagation see *Lécythi*, p. 874.

END OF THE SECOND VOLUME

nov. act. bonn. 9. p. 192.) plant glabrous; stem tetragonal, nearly simple; leaves ovate, acute, sharply denticulated, somewhat acuminate, for the most part opposite, but the upper ones are alternate; racemes short. ☉. H. Native of Mexico. Sterile stamen white.

*Small Lopezia.* Pl.  $\frac{1}{2}$  foot.

5 *L. OPPOSITIFOLIA* (Lag. nov. gen. et spec. p. 1.) plant glabrous; leaves ovate, dentately serrated, for the most part opposite, but the upper ones are scattered; racemes terminating the branches; upper flowers nearly leafless. ☉. H. Native of New Spain. Schrank, nov. act. bonn. 9. p. 91. *L. annua*, Hort.

*Opposite-leaved Lopezia.* Pl. 1 foot.

6 *L. INTEGRIFOLIA* (D. C. prod. 3. p. 62.) plant glabrous; leaves alternate, ovate-lanceolate, acuminate at both ends, quite entire; racemes leafy, terminating the branches. ☉. H. Native of Mexico. Stem angular. Petioles of lower leaves more than an inch long. Sterile stamen white. Leaves quite entire or hardly sinuated, never serrated.

*Entire-leaved Lopezia.* Pl. 1 to  $1\frac{1}{2}$  foot.

7 *L. MINIATA* (D. C. cat. hort. monsp. 1813. p. 121.) stem shrubby, glabrous, terete; leaves alternate, ovate-lanceolate, serrated; racemes terminating the branches. ☉. S. Native of New Spain. Lag. nov. gen. et spec. 1814. p. 1. Jacq. fil. eclog. t. 109. *L. frutescens*, Rœm. et Schult. syst. 1. (1817.) p. 34. *L. fruticosa*, Schrank, nov. act. bonn. 9. p. 91. Sterile stamen the same colour as the petals.

*Vermilion-flowered Lopezia.* Shrub 1 to 2 feet.

8 *L. HIRSU'TA* (Jacq. coll. 5. p. 5. t. 15. f. 4.) stem suffrutescent, hairy, terete; leaves ovate-lanceolate, hairy, subserrated; racemes terminating the branches. ☉. H. Native of Mexico. Sterile stamen the same colour as the petals.

*Hairy Lopezia.* Fl. Sept. Nov. Pl. 1 to 2 feet.

9 *L. PUBESCENS* (H. B. et Kunth, nov. gen. amer. 6. p. 92.) stem branched, glabrous, terete, as well as the downy branches; leaves oval-oblong, acute, pubescent. ☉. H. Native of Mexico?

*Pubescent Lopezia.* Pl. 1 foot.

10 *L. PUBILA* (Bonpl. nav. p. 57.) stem simple, hairy, terete; leaves on short petioles, ovate, acute, toothed, upper ones lanceolate, pilose on both surfaces; racemes terminal; flowers on long pedicels. ☉. H. Native of Mexico, on hills between Guanaxuato and Santa Rosa. Bractæas shorter than the pedicels. Calyx glabrous.

*Dwarf Lopezia.* Fl. July, Sept. Clt. 1824. Pl.  $\frac{1}{2}$  foot.

*Cult.* All the species are elegant border annuals, when in flower, and most of them will live through many winters, and become suffrutescent, if sheltered from the frost. They are of easy culture, the seeds only requiring to be sown in the border early in spring, or sown on a hot-bed to forward the plants, which may afterwards be planted out in the open border. A light soil and warm situation suit them best.

**XV. CIRCÆA** (*Circe*, in mythology, the famous enchantress; in reference to the fruit, which lays hold of the clothes of passengers, from being covered with hooked prickles, as Circe is fabled to have done by her enchantments). Tourn. inst. t. 155. Lin. gen. no. 24. Lam. ill. t. 16. Gærtn. fruct. 1. p. 114. t. 24. D. C. prod. 3. p. 63.

**LIN. SYST.** *Diandria, Monogynia*. Calyx deciduous, tubular, with a 2-parted limb. Petals 2, alternating with the lobes of the calyx. Stamens 2, alternating with the petals, inserted into the calyx. Disk large, cup-shaped, filling up the whole of the tube of the calyx, and projecting beyond it. Ovary 2-celled, with an erect ovulum in each cell. Style simple, arising out of the disk. Stigma emarginate. Capsule 2-celled, 2-valved, 2-seeded. Seeds solitary, erect, without albumen. Embryo

erect, with a short inferior radicle.—Herbaceous plants. Roots creeping. Leaves opposite, stalked, toothed. Flowers in terminal and lateral racemes, covered with uncinate hairs. This genus differs from the rest of *Onagrariæ*, in its large fleshy disk, in its solitary, erect ovula, and in the binary division of the flower; it is connected with this order through *Lopezia*, with which it cannot, however, be absolutely associated, and bears about the same relation to *Onagrariæ*, as is borne by *Haloragææ*.

1 *C. LUTETIANA* (Lin. spec. 12.) stem erect, pubescent; leaves ovate, acuminate, toothed, opaque and downy, longer than the petioles. ♀. H. Native of Europe, in moist shady places; plentiful in some parts of Britain. Fl. dan. t. 210. Schkuhr, handb. t. 2. Smith, engl. bot. t. 1026. *C. vulgaris*, Mœnch. *C. pubescens*, Pohl. *C. ovalifolia*, Gray. The roots are creeping; and have been considered detersive. Flowers pale red. Anthers and style whitish. Stigma red. •

*Var. β, Canadensis* (Lin. l. c.) stem glabrous. ♀. H. Native of North America, particularly in Canada, about Lake Huron and Montreal, as well as in the United States. *C. Canadensis*, Muhl. cat. p. 2. *C. Lutetiana*, Bigel. fl. bost. p. 8.

*Parisian or Common Enchantress Nightshade.* Fl. June, Jul. Britain. Pl. 1 to  $1\frac{1}{2}$  foot.

2 *C. ALPINA* (Lin. spec. 12.) stems ascending, smoothish; leaves cordate, toothed, shining, length of petioles, membranous. ♀. H. Native of Europe, in moist, shady, stony places; plentiful in some parts of the north of England and Scotland, and almost throughout all North America. Smith, engl. bot. t. 1057. Lam. ill. t. 16. f. 2. *C. cordifolia*, Stok. mat. med. 26. Flowers pale red. Fruit less hispid than those of the preceding species. Plant 4 or 6 inches high.

*Var. β, intermedia* (Ehrh. Beitr. 4. p. 42.) stem erect, simple, smoothish; leaves repandly denticulated, acuminate. ♀. H. Native of Europe, in mountainous and shady places. Sturm, fl. germ. with a figure. This plant grows to the height of *C. Lutetiana* but it differs from it in the leaves being cordate, as in *C. alpina*.

*Alpine Enchantress Nightshade.* Fl. July, Aug. Britain. Pl.  $\frac{1}{2}$  to 1 foot.

*Cult.* The species of *Circæa* will grow under any circumstance, and are easily increased by the running roots, which render them a great pest in gardens, unless confined by some means.

† *Genera belonging to Onagrariæ, but are not sufficiently known.*

**XVI. PLEUROSTEMON** (from *πλευρον*, *pleuron*, a side, and *στέμον*, *stemon*, a stamen; in reference to the stamens being all at one side of the flower). Rafin. adn. 1820. D. C. prod. 3. p. 64.—*Pleurandra*, Rafin. fl. lud. 1817. p. 93. but not of Labill.

**LIN. SYST.** *Octandria, Monogynia*. Tube of calyx drawn out beyond the ovary, bifid at the apex. Petals 4, spatulate, all on one side. Stamens 8, and are as well as the style at that side of the flower opposite the petals. Stigma 4-lobed. Capsule oval, 4-celled, many-seeded. Seeds unknown. This genus appears to come very near *Enothera*, from the calycine tube being drawn out beyond the ovary.

1 *P. ALBUM* (Rafin. l. c.). ♀. F. Native of Louisiana. *Enothera*, no. 2. Robin. louis. p. 490. Stem shrubby, 7 feet high. Branches terete, twiggy. Leaves sessile, narrow, entire, acute. Flowers white, on short pedicels; genitals exserted.

*White-flowered Pleurostemon.* Pl. 7 feet.

*Cult.* The seeds of this plant may be sown in the open border.

XVII. ONOSURUS (meaning unknown to us, but appears to be derived from *ovoc*, *onos*, an ass, and *oupa*, *oura*, a tail; but the application is not evident). Rafin. lud. p. 96. D. C. prod. 3. p. 64.—Chamissoia, Link. in jarb. der gewasch. 1818. p. 186. but not of Humb. and Kunth.

LIN. SYST. *Octândria, Monogýnia*. Tube of calyx adhering to the ovarium; limb 2-parted; lobes reflexed, deciduous, ex Rafin. Petals 4, inserted at the base of the limb of the calyx. Stamens 8. Stigma quadrifid. Capsule 4-celled, 4-valved. This genus is hardly known. It is probably not distinct from *Ænothëra*.

1 O. ACUMINATA (Rafin. l. c.) petals obovate. ☉ II. Native of Louisiana. *Ænothëra*, no. 3. Robin. louis. p. 490. Stem thick, 7 feet high, hairy. Leaves crowded, sessile, lanceolate, acuminate, somewhat bluntly and remotely toothed.

*Acuminated-leaved Onosurus*. Pl. 7 feet.

*Cult.* The seeds of this plant should be sown in the open border.

ORDER XCH. HYDROCARYES (from *ὕδωρ*, *hydor*, water, and *καρυον*, *caryon*, a nut; water nuts). Link. enum. 1. p. 141. Lindl. introd. nat. syst. p. 58. Onagrariæ, Tribe vi. ? Hydrocaryes, D. C. prod. 3. p. 63.

Calyx superior, 4-parted (f. 101. c.), with the tube adhering to the ovarium. Petals 4 (f. 101. b.), arising from the throat of the calyx. Stamens 4, alternating with <sup>P</sup>petals. Ovarium (f. 101. a.) 2-celled. Ovules solitary, pendulous. Style filiform, thickened at the base. Stigma capitate. Fruit hard, indehiscent, 1-celled, 1-seeded, crowned by the indurated segments of the calyx. Seed large, solitary, pendulous, exalbuminous. Cotyledons 2, very unequal.—Floating herbs. Lower leaves opposite, upper ones alternate; those under water cut into capillary segments; petioles tumid in the middle (f. 101. c.). Flowers small, axillary.

This order is closely allied to *Onagrariæ*, from which it is distinguished by its solitary pendulous ovules; more closely allied to *Halorageæ*, from which it is distinguished only by the very large seeds, unequal cotyledons, developed calyx, and want of albumen. Seeds of all eatable.

1. TRAPA (abridged from *calcitrapa*, the Latin name of an instrument called *caltraps*, furnished with four spines, formerly used in war to impede the progress of cavalry; in reference to the fruit of some of the species being furnished with 4 spines). Lin. gen. no. 157. Lam. ill. t. 73. Gaertn. fruct. 1. p. 127. t. 26. D. C. prod. 3. p. 63.—Tribuloides, Tourn. inst. t. 431.

LIN. SYST. *Tetrândria, Monogýnia*. Being no other genus, the character is therefore the same as that of the order. The lower leaves of all the species are capillaceously multifid, as in *Myriophyllum*, the upper or floating ones are deltoid and toothed, and disposed in a rosulate manner.

\* Fruit furnished with 4 horns.

1 T. NATANS (Lin. spec. 175. exclusive of the synonyme of Rheede,) horns of fruit disposed in a cross-like manner, acute, and furnished with a small retrograde beard at the apex, 2 upper ones spreading horizontally, 2 lower ones somewhat ascending. ☉. W. H. Native of the temperate parts of Europe and Siberia, in stagnant and slow running water. Schkuhr, handb. t. 25. Mirb. ann. mus. 16. p. 447. t. 19. D. C. org. veg. t. 55.

Ker. bot. reg. 88.—Cam. epit. 715. with a figure. Flowers white, the claws of the petals short and purplish. The nuts are esteemed farinaceous, nourishing, and pectoral. The calyx with its spines or indurated lobes being removed, there is a white sweet kernel within, somewhat like a chestnut in taste; they are sold in the markets at Venice under the name of Jesuits' nuts. At Vercelli they are called galarin, and are much eaten there by the common people and children. Pliny says that the Thracians made them into bread. According to Thunberg the roots of this or some other species are commonly boiled in broth in Japan, though the taste is by no means pleasant.

*Floating Water-caltrops*. Fl. June, Aug. Clt. 1781. Pl. fl.

2 T. QUADRISPINOSA (Roxb. fl. ind. 1. p. 451.) horns of fruit stiff, acute, spinose, disposed in a cross-like manner. ☉. W. S. Native of Silhet, floating in lakes. Flowers white. The rest unknown. Nuts eatable.

*Four-spined Water-caltrops*. Fl. June, Aug. Clt. 1823. Pl. fl.

\*\* Fruit furnished with 2 horns only.

3 T. BISPINOSA (Roxb. cor. t. 234. fl. ind. 1. p. 449.) horns of fruit opposite, stiff, acute, spinose, and bearded; floating leaves rather quadrate, serrulately toothed, tomentose beneath. ☉. W. S. Native of the East Indies, floating in water.—Rheed. mal. 11. p. 64. t. 33. Shringata, Jones in asiat. res. 2. p. 350. and 4. p. 253. Petioles furnished with a large bladder in the middle. Petals white. Necessary cupulate, curled. The nuts are sold in the markets in many parts of the East Indies, the kernels being much esteemed by the Hindoos.

FIG. 101.

*Two-spined-fruited Water-caltrops*. Fl. June, Aug. Clt. 1822. Pl. fl.

4 T. BICORNIS (Lin. fil. suppl. 128.) horns of fruit opposite, thick, very blunt, somewhat recurved at the apex; floating leaves quadrate, entire, or a little toothed. ☉. W. G. Native of China, about Canton, floating in water; it is also cultivated by the Chinese for the sake of its fruit. Gaertn. fruct. 2. t. 89. T. Chinensis, Lour. coch. p. 86. Braam, icon. chin. 1821. t. 22. Burm. in Plum. icon. fasc. 3. p. 56. t. 67. the lower figure. Flowers white.

*Two-horned-fruited Water-caltrops*. Fl. June, Aug. Clt. 1790. Pl. fl.

5 T. COCHINCHINENSIS (Lour. coch. p. 86.) horns of fruit thick, obtuse, opposite, somewhat recurved at the apex; leaves oblong, cut at the apex, tomentose beneath. ☉. W. H. Native of Cochin-china, floating in stagnant water. Flowers white, on long peduncles. The seeds are eatable, and taste like chestnuts.

*Cochin-china Water-caltrops*. Fl. June, Aug. Pl. fl.

*Cult.* The seeds of the species of *Trapa* require to be sown or thrown into a cistern, or pond, or large pan of water, with rich loamy soil in the bottom. They all grow best in a strong heat. *T. natans* grows well in a pond in the open air.

ORDER XCIV. HALORAGEÆ (plants agreeing with *Haloragis* in important characters). R. Br. gen. rem. (1814.) p. 17. D. C. prod. 3. p. 65.

Tube of calyx adhering the whole length of the ovarium (f.

102. c. a.); limb minute, 4-parted (f. 102. c.), or almost wanting (f. 103. a.). Petals minute, inserted in the summit of the calyx, opposite the calycine lobes, and equal in number to them, or wanting. Stamens inserted with the petals, equal in number to them or occasionally fewer. Ovarium adhering to the calyx, with 1 or more cells (f. 102. d.). Style none. Stigmas equal in number to the cells of the ovary, papulose or pencil-formed, sessile. Fruit dry, indehiscent, membranous (f. 103. c.), or bony (f. 102. d.), with 1 or more cells. Seeds solitary in the cells, pendulous; albumen fleshy. Embryo straight in the axis, with a superior, terete, elongated radicle, and 2 short minute cotyledons.—Herbaceous or suffruticose plants, the greater part of which are inhabitants of water and moist places. Leaves alternate, opposite, or in whorls. Flowers axillary, sessile, or disposed in terminal spikes, occasionally monoecious or dioecious. The plants contained in this order are not known to possess any medical properties.

*Synopsis of the genera.*

TRIBE I.

CERCODIA'NÆ. Limb of calyx evidently parted (f. 102. c.). Stamens equal, or double the number of the calycine lobes (f. 102. a.). Petals and cells of fruit equal in number to the lobes of the calyx.

1 SERPICULA. Flowers monoecious. Calyx 4-parted. Petals and stamens 4. Nut 1-celled, 1-seeded.

2 GONIOCARPUS. Limb of calyx 4-parted (f. 102. c.). Petals 4 (f. 102. a.). Stamens 8 (f. 102. b.). Fruit 8-angled, 4-celled, 4-seeded (f. 102. d.).

3 HALORAGIS. Limb of calyx 4-parted. Petals 4. Stamens 8. Fruit globose, 2-4-celled, 2-4-seeded.

4 CERCODIA. Limb of calyx 4-parted. Petals 4. Stamens 8. Fruit nucumetaceous, 4-winged, 4-celled, 4-seeded.

5 PROSERPINA'CA. Limb of calyx 3-parted. Petals wanting. Stamens 3. Fruit trigonal, 1-celled, 1-seeded.

6 MYRIOPHYLLUM. Flowers monoecious, rarely hermaphrodite. Calyx 4-parted. Petals 4. Stamens 4-6, or usually 8. Fruit separable, in 4 hard nuts.

TRIBE II.

CALLITRICH'NÆ. Limb of calyx not conspicuous (f. 103. a.). Petals wanting. Stamen 1, rarely 2. Fruit 4-celled, 4-seeded (f. 103. c.).

7 CALLITRICHIE. Flowers polygamous, hermaphrodite, or dioecious, or often monoecious. Bractæ 2, petaloid, at the base of the flowers.

TRIBE III.

HIPPURIDÆ. Limb of calyx small, entire. Petals wanting. Stamen 1 (f. 104. c.). Fruit nucumetaceous (f. 104. d.), 1-celled, 1-seeded.

8 HIPURIS. Character the same as that of the tribe.

Tribe I.

CERCODIA'NÆ (plant agreeing with *Cercodia* in important characters). Juss. dict. sci. nat. (1817.) 7. p. 441. D. C. prod. 3. p. 65. Hygrobiæ, Rich. anal. fru. p. 34. Limb

of calyx evidently parted (f. 102. c.). Stamens equal in number to the calycine lobes, or double that number (f. 102. b.). Petals and cells of fruit usually equal in number to the calycine lobes (f. 102. d.).

I. SERPICULA (from *serpo*, to creep; this genus is composed of small creeping plants). Lin. mant. 16. Lam. ill. t. 758. Koen. ann. bot. 1. p. 544. but not of Roxb. nor Pursh.—Lauremburgia, Berg. cap. p. 350.

LIN. SYST. *Monœcia*, *Tetrândria*. Flowers monoecious. Male. Calyx small, 4-parted. Petals 4. Stamens 4. Rudimentary styles 4 (ex Kön.). Female. Tube of calyx adnate to the ovary; limb small, 4-parted. Petals wanting (ex Berg. et Thunb.) Nut globose, 8-nerved, 1-celled, 1-seeded, probably from abortion.—Creeping branched herbs. Leaves opposite or alternate, entire or toothed. Flowers axillary; male ones small, pedicellate; the female ones are hardly known.

1 S. REPENS (Lin. mant. 124.) leaves alternate, linear-lanceolate, quite entire, and rather scabrous.  $\mathcal{U}$ . G. Native of the Cape of Good Hope, on the Table Mountains near rivulets. Thunb. fl. cap. p. 142. S. Capensis, Rausch. S. serpyllifolia, Burm. cap. 26. Lauremburgia repens, Berg. cap. p. 350. t. 5. f. 10. Lauremburgia Capensis, Gmel. Habit of *Veronica serpyllifolia*.

Creeping Serpicula. Fl. July, Aug. Clt. 1789. Pl. cr.

2 S. VERONICIFOLIA (Bory. voy. 3. p. 174.) leaves oval, opposite, glabrous, toothed at the apex.  $\mathcal{U}$ . S. Native of the Island of Bourbon, and Caffraria, among moist rocks. Willd. spec. 4. p. 330. Leaves almost like those of *Veronica agræstis*. Stems red or reddish creeping.

Speedwell-leaved Serpicula. Pl. creeping.

3 S. RUBICUNDA (Burch. cat. geogr. no. 404. trav. 1. p. 37.) leaves opposite, linear, quite entire, glabrous.  $\mathcal{U}$ . G. Native of the Cape of Good Hope. Plant weak, much smaller and slenderer than the first.

Reddish Serpicula. Pl. creeping.

+ A very doubtful species.

4 S. THYMIFOLIA (Burm. cap. p. 26.)—Native of the Cape of Good Hope. Stem much branched. Leaves alternate, deflexed, ovate, acute, 1-nerved. Flowers rising from the axils of the upper leaves, rather pedicellate, nearly terminal, 5-parted. Perhaps a species of *Ionidium*.

Thyme-leaved Serpicula. Pl.

Cult. Any common soil will suit the species of *Serpacula*, and they are easily increased by separating the creeping shoots.

II. GONIOCARPUS (from *gonia*, *gonia*, an angle, and *καρπος*, *karpōs*, a fruit; in reference to the angular fruit). Kön. ann. bot. 1. p. 546. D. C. prod. 3. p. 66.—Gonocarpus, Thunb. fl. jap. 5. but not of Hamilt.—Gonatocarpus, Willd. spec. 1. p. 690.

LIN. SYST. *Octândria*, *Monogynia*. Tube of calyx adhering to the ovary, which is ovate (f. 102. c.); limb 4-parted (f. 102. c.). Petals 4 (f. 102. a.), alternating with the calycine lobes. Stamens 8 (f. 102. b.). Stigmas 4. Fruit nucumetaceous (f. 102. d.), indehiscent, 8-angled, 8-nerved, 4-celled, 4-seeded. Seeds pendulous.—Herbs. Leaves opposite, toothed. Flowers sessile in the axils of the upper leaves.

SECT. I. APOD'GYNUS (from *a*, priv. and *πους ποδος*, *pous podos*, a foot, and *γυνή*, *gynē*, a female; in reference to the stigmas being sessile, without any foot or style). D. C. prod. 3. p. 66. Stigmas sessile on the top of the ovary, wart-formed.

1 G. MICRANTHUS (Thunb. jap. p. 69. t. 15.) leaves ovate, serrate-toothed, smooth; spikes elongated, branched; flowers on short pedicels, pendulous. ☉. II. Native of Japan. Pe-

als 4, white, ex Kön. ann. bot. p. 546. t. 12. f. 5. Stamens 8, ex Brown, gen. rem. p. 18. Stem tetragonal.

*Small-flowered Goniocarpus*. Pl. decumbent.

2 *G. scaber* (Koen. ann. bot. 1. p. 547. t. 12. f. 6.) leaves lanceolate, deeply serrated, scabrous; spikes compound; branches nearly opposite. ☉. H. Native of China, about Macao, where it is cultivated. *Ludwigia octandra*, Banks, herb.

*Scabrous Goniocarpus*. Pl. decumbent.

3 *G. microcarpus* (Thibaud, herb. ex D. C. prod. 3. p. 66.) leaves ovate, acute, serrated, glabrous on both surfaces, as well as the branches and petioles; panicle loose; flowers on short pedicels, spreading. ☉. H. Native of New Holland. Habit of *G. micranthus*, but differs in the leaves being quite glabrous.

*Small-fruited Goniocarpus*. Pl. proc.

SECT. II. *PTEROGYNUS* (from *πτερον*, *pteron*, a wing, and *γυνή*, *gynē*, a female; in reference to the stigmas being plumose at the apex). D. C. prod. 3. p. 66. Styles 4, ending each in a plumose pencil-formed stigma.

4 *G. tetragynus* (Labill. nov. holl. t. 53.) leaves ovate, serrated, acute, rather scabrous, pilose when young, as well as the petioles and branches; spikes elongated; flowers sessile, erect. ☉. H. Native of Van Dieman's Land (f. 102.).

*Four-styled Goniocarpus*. Pl.  $\frac{1}{2}$  foot.

5 *G. tenellus* (D. C. prod. 3. p. 66.) leaves oblong-lanceolate, acute, scabrous, pilose when young, as well as the petioles; stem beset with adpressed bristles; spikes elongated; flowers sessile, erect, upper ones male, the rest female. ☉. H. Native of New Holland. Very like *G. tetragynus*, but the stems are much more slender, the leaves much narrower, and the flowers are monoecious from abortion.

*Weak Goniocarpus*. Pl.  $\frac{1}{2}$  foot.

6 *G. teucrioides* (D. C. prod. 3. p. 66.) leaves ovate, serrated, acute, scabrous; stem hispid from spreading hairs; flowers in the axils of the upper leaves on short petioles, constituting a leafy loose raceme.—Native of New Holland. Sieb. pl. ex sic. no. 544. Stems tetragonal, much branched; branches opposite. Leaves and habit those of a species of *Teucrium*. Flowers larger than those of any other species. Petals pilose on the back. Stamens 8. Stigmas 4, short, a little bearded. Fruit bluntly tetragonal, rather globose.

*Teucrium-like Goniocarpus*. Pl. decumbent.

*Cult.* The seeds of the species of *Goniocarpus* should be sown in the open border, in a warm sheltered situation.

III. *HALORAGIS* (from *ἅλς ἅλος*, *hals halos*, the sea, and *παῖς παις*, *paîs ragis*, the berry of a bunch of grapes; because it grows on the sea coast, and the fruit resemble grapes in being round). Forst. gen. t. 31. D. C. prod. 3. p. 66.—*Haloragis* spec. Lher. Labill.

LIN. SYST. *Octândria*, *Di-Tetragynia*. Tube of calyx adnate to the ovary; limb 4-parted. Petals 4, alternating with the lobes of the calyx. Stamens 8. Stigmas 2-4, short, sessile, papulose. Fruit namentaceous, dehiscent, globose, smooth, 2-4-celled, 2-4-seeded.—Smooth Australian shrubs. Leaves

quite entire. Flowers axillary. *Goniocarpus* and *Cercodia* are probably only sections of *Haloragis*.

1 *H. prostrata* (Forst. l. c. et prod. no. 179.) stems prostrate; leaves opposite, oblong, undulated; flowers solitary in the axils of the leaves; stigmas and seeds 4.  $\frac{1}{2}$ . G. Native of Botany Bay, New Caledonia, and the Island of Pines. Lher. stirp. nov. 1. p. 82. Willd. spec. 2. p. 474.

*Prostrate Haloragis*. Fl. May, Sept. Clt. 1820. Sh. pros.

2 *H. digyna* (Labill. nov. holl. 1. p. 100. t. 129.) stem erect; leaves alternate, linear; flowers fasciculate in the axils of the leaves; stigmas and seeds 2.  $\frac{1}{2}$ . G. Native of New Holland, in Van Leuwin's Land. Fruit sometimes 1-seeded from abortion.

*Digynous Haloragis*. Sh. 2 ft.

† *A species not sufficiently known.*

3 *H. capensis* (Nois. et Cels. ex Colla, hort. ripul. p. 63.) stem erect; leaves alternate, petiolate, elliptic, dotted beneath.  $\frac{1}{2}$ . G. Native of the Cape of Good Hope, ex Hort. Flowers unknown.

*Cape Haloragis*. Sh. 2 to 3 ft.

*Cult.* The species of this genus thrive well in any light rich soil, and young cuttings root freely if planted under a hand-glass.

IV. *CERCODIA* (from *κερκος*, *kerkos*, a tail, and *εἶδος*, *eîdos*, like; in reference to the long narrow petals). Murr. comm. gætt. 3. p. 1780. p. 3. t. 1. D. C. prod. 3. p. 67.—*Cercodia*, Lam. ill. t. 319.—*Haloragis* spec. Lher. Jacq.

LIN. SYST. *Octândria*, *Tetragynia*. Tube of calyx adnate to the ovary, which is 4-sided; limb 4-parted. Petals 4. Stamens 8. Stigmas 4, sessile. Fruit numentaceous, indehiscent, 4-celled, 4-seeded, 4-sided; angles winged.—Smooth Australian shrubs. Leaves opposite, toothed. Flowers in fascicles or racemose. Petals 3 times the length of the lobes of the calyx. This genus is intermediate between *Haloragis* and *Proserpinaca*.

1 *C. erecta* (Murr. l. c.) leaves petiolate, ovate-lanceolate, coarsely toothed; flowers sessile, aggregate in the axils of the upper leaves.  $\frac{1}{2}$ . G. Native of New Zealand. *Tetragonia ivæfolia*, Lin. fil. suppl. 257. *Haloragis alata*, Jacq. icon. rar. 1. t. 69. exclusive of the country. *Haloragis Tetragonia*, Lher. stirp. nov. 1. p. 82. *Haloragis Cercodia*, Ait. hort. kew. 2. p. 37.

*Erect Cercodia*. Fl. April, Sept. Clt. 1772. Sh. 1 to 2 ft.

2 *C. racemosa* (D. C. prod. 3. p. 67.) leaves sessile, linear-lanceolate, serrated; racemes terminal and axillary.  $\frac{1}{2}$ . G. Native of New Holland, in Van Leuwin's Land. *Haloragis racemosa*, Labill. nov. holl. 1. p. 100. t. 128.

*Racemose Cercodia*. Sh. 2 to 3 ft.

*Cult.* For culture and propagation see *Haloragis*.

V. *PROSERPINACA* (from *proserpo*, to creep; creeping rooting plants). Lin. gen. 102. Lam. ill. t. 50. Juss. ann. mus. 3. p. 320. t. 30. f. 1. D. C. prod. 3. p. 67.—*Trixis*, Mitch. eph. nat. car. 1748. no. 23. Gaertn. fr. 1. p. 115. t. 24. but not of Browne.

LIN. SYST. *Triândria*, *Trigynia*. Tube of calyx adhering to the ovary, which is triquetrous; limb 3-parted. Petals none. Stamens 3. Stigmas 3, sessile on the top of the ovary. Carpels 3, joined together into a dry indehiscent trigonal 1-seeded fruit. Seed pendulous. Albumen fleshy, or only perhaps a tumid endopleura.—Smooth aquatic North American herbs, with creeping roots. Leaves opposite. Flowers axillary, glomerate, sessile, sometimes 4-cleft and tetrandrous.

1 *P. palustris* (Lin. in act. ups. 1741. p. 81.) leaves linear-lanceolate, lower ones usually pinnatifid; angles of nut acute.  $\frac{1}{4}$ . W. H. Native of North America, from Canada to Carolina

FIG. 102.

in ditches and ponds; and of Mexico in slow running water. Ell. sketch. 1. p. 181. Torr. fl. unit. st. 1. p. 161. *P. palustris* var.  $\alpha$ , Michx. fl. bor. amer. 1. p. 76. *Trixis*, Mitch. l. c. with a figure. *Trixis palustris*, Gaertn. fr. 1. p. 115.

*Marsh Proserpinaca*. Fl. July. Clt. 1818. Pl. cr.

2 *P. PECTINATA* (Lam. ill. 1. p. 214. t. 50. f. 1.) leaves all pinnatifidly pectinated; angles of nut blunt.  $\mathcal{U}$ . W. H. Native of South Carolina, Georgia, New Jersey, and Pennsylvania. Ell. sketch. 1. p. 182. Torrey, fl. unit. st. 1. p. 162. *P. palustris*  $\beta$ , Michx. l. c. Only a variety of the preceding according to Michx, but according to Lamarck, Elliott, and Torrey it is a proper species.

*Pectinate-leaved Proserpinaca*. Fl. July, Aug. Clt. 1822. Pl. cr.

*Cult.* These plants should either be grown in large pans of water, with an inch or two of mould in the bottom for the roots to run in, or in pots set in pans of water, or they may be grown in ponds. They require some care and shelter to preserve them through the winter in Britain.

. VI. MYRIOPHYLLUM (from *μυριος*, *myrios*, a myriad, and *φυλλον*, *phyllon*, a leaf; in reference to the numerous divisions of the leaves). Vaill. act. acad. par. 179. t. 2. Lin. gen. no. 1066. Gaertn. fr. 1. t. 68. Lam. ill. t. 775. D. C. prod. 3. p. 68.—*Pentapterophyllum*, Dill. nov. gen. 7.—*Pentapteris*, Hall. helv. 1. p. 45 t.

LIN. SYST. *Monœcia*, *Tetrândria*, and *Octândria*, *Tetragynia*. Flowers monoecious, rarely hermaphrodite. Male. Calyx 4-parted. Petals 4, caducous, ovate, alternating with the calycine lobes. Stamens 4-6 or 8. Female. Calyx adhering to the ovary; limb 4-lobed. Petals none. Fruit separable into 4 hard, 1-seeded, indehiscent nuts. Albumen almost absent.—Floating aquatic herbs, rising above the water to flower. Leaves finely cut, opposite or verticillate. Flowers small, disposed in axillary whorls; or in whorled spikes, in consequence of the upper leaves being almost abortive; upper ones male, lower ones female.

SECT. I. PENTAPTERIS (from *πεντη*, *pente*, five, and *πτερον*, *pteron*, a wing; application not evident). D. C. prod. 3. p. 68. Flowers usually monoecious. Anthers oblong. Leaves opposite or often in whorls.

\* *Male flowers octandrous*.

1 *M. SPICATUM* (Lin. spec. 1409.) leaves finely cut into capillary segments, disposed in whorls; flowers in whorled interrupted, almost leafless spikes; floral leaves shorter than the flowers, lower ones a little serrated, the rest quite entire.  $\mathcal{U}$ . W. H. Native of Europe and North America, in ditches, lakes, and pools, never in flowing water; plentiful in Britain. Fl. dan. 681. Smith, engl. bot. t. 83. Schkuhr, handb. t. 296. Petals reddish.

*Spiked Water-milfoil*. Fl. June, Aug. Britain. Pl. fl.

2 *M. PECTINATUM* (D. C. fl. fr. suppl. 529.) leaves finely cut into capillary segments, disposed in whorls; flowers in whorled, interrupted, almost leafless spikes; floral leaves a little longer than the flowers, all pectinately serrated.  $\mathcal{U}$ . W. H. Native about Montpellier, in still water, and Denmark, and probably through the whole of Europe. Habit of the preceding species, but differing in the floral leaves. It appears to be intermediate between *M. spicatum* and *M. verticillatum*.

*Pectinate-leaved Water-milfoil*. Pl. fl.

3 *M. ALTERNIFOLIUM* (D. C. fl. fr. suppl. p. 529.) leaves finely cut, disposed in whorls; flowers in nearly leafless spikes, alternate, lower ones in fascicles, the rest solitary; lower floral leaves pinnatifid, exceeding the flowers, upper ones entire, short.  $\mathcal{U}$ .

W. H. Native of the west of France, in still water about Nantes, and in Vascony. *M. alternifolium*, Steud. nom.

*Alternate-leaved Water-milfoil*. Pl. fl.

4 *M. VERTICILLATUM* (Lin. spec. 1410.) leaves finely cut into capillary opposite segments; flowers in axillary whorls; floral leaves all pinnatifid, much longer than the flowers, and hardly distinguishable from the other leaves.  $\mathcal{U}$ . W. H. Native of Europe and North America, in pools, lakes, and ditches, but never in running water. Smith, engl. bot. 218.—Clus. hist. 2. p. 252.

*Var.  $\beta$ , limosum* (Heet. in litt.) lobes of leaves linear, acute, and regular.  $\mathcal{U}$ . H. Native of Europe, in almost dry places.

*Whorled-flowered Water-milfoil*. Fl. Ju. Aug. Brit. Pl. fl.

5 *M. QUITEÑSE* (H. B. et Kunth, nov. gen. amer. 6. p. 89.) leaves finely cut into filiform lobes, about 15 lobes on each side.  $\mathcal{U}$ . W. S. Native of the Andes about Quito, in the river Guacabamba.

*Quito Water-milfoil*. Pl. fl.

6 *M. INDICUM* (Willd. spec. 4. p. 407.) leaves in whorls, lower ones finely cut into capillary segments, upper ones lanceolate, cuneated, rather cut at the apex; flowers axillary, verticillate.  $\mathcal{U}$ . W. S. Native of Ceylon and Coromandel. The flowers are said to be hermaphrodite.

*Indian Water-milfoil*. Pl. fl.

7 *M. ELATINOIDES* (Gaud. fl. mal. p. 17. ann. sc. nat. 5. p. 105.) leaves 4 in a whorl, lower ones cut into capillary segments, upper ones pinnatifid, toothed or entire, oblong-lanceolate; flowers dioecious, female ones axillary.  $\mathcal{U}$ . W. F. Native of the Maclove and Falkland Islands. Male flowers unknown.

*Elatine-like Water-milfoil*. Pl. fl.

8 *M. TERNATUM* (Gaud. l. c.) leaves 3 in a whorl, lower ones cut into capillary lobes, upper ones oblong, quite entire; flowers axillary, upper ones male, octandrous, lower ones female.  $\mathcal{U}$ . W. F. Native of the Falkland Islands.

*Ternate-leaved Water-milfoil*. Pl. fl.

9 *M. AMPHIBIUM* (Labill. nov. holl. 2. p. 70. t. 220.) leaves opposite, obovate, entire; flowers axillary, solitary.  $\mathcal{U}$ . B. G. Native of Van Dieman's Land, in marshes. A creeping herb, with the habit of *Callitriche*. Flowers monoecious, male ones octandrous.

*Amphibious Water-milfoil*. Pl. cr.

\* \* *Male flowers hexandrous*.

10 *M. HETEROPHYLLUM* (Michx. fl. bor. amer. 2. p. 191.) leaves in whorls, cut into capillary segments; spikes terminal, almost naked; floral leaves opposite, ovate, acute, sharply serrated, exceeding the flowers.  $\mathcal{U}$ . W. H. Native of Carolina and Georgia, in still water. *Potamogeton verticillatum*, Walt. car. p. 90.

*Variable-leaved Water-milfoil*. Pl. fl.

\* \* \* *Male flowers tetrandrous*.

11 *M. TUBERCULATUM* (Roxb. fl. ind. 1. p. 471.) leaves in whorls, lower ones pinnatifid; spikes almost naked; bracteas oblong, a little toothed at the apex; carpels tubercular, acute on the back.  $\mathcal{U}$ . B. S. Native of humid places and on the shores of lakes, near Calcutta. Flowers pink.

*Tubercled-fruited Water-milfoil*. Pl. fl.

12 *M. INTERMEDIUM* (D. C. prod. 3. p. 69.) leaves in whorls, lower ones cut into filiform lobes; floral ones oblong-linear, serrated, acuminate at both ends; carpels rather tubercular, blunt on the back.  $\mathcal{U}$ . W. S. Native of the East Indies. *Ammannia pinnatifida*, Lin. fl. suppl. 127. ? *Hottônia sessiliflora*, Vahl. symb. 2. p. 36. Willd. spec. 1. p. 813. ?

*Intermediate Water-milfoil*. Pl. fl.

13 *M. TETRANDRUM* (Roxb. fl. ind. 1. p. 470.) leaves dis-

posed in whorls, cut into capillary segments; spikes almost leafless; bractæas pinnatifid; carpels smoothish, blunt on the back. *W. S.* Native of the East Indies, in pools filled by the rain, and where it is called *Neerla-pamarum* by the Telingas. Flowers white.

*Tetrandrous Water-milfoil.* Pl. fl.

14 *M. SCABRA'TUM* (Michx. fl. bor. amer. 2. p. 190.) leaves in whorls, cut into linear distant lobes; flowers in axillary whorls; bractæas much like the leaves; fruit 8-angled; angles tubercular. *W. H.* Native of Carolina, Georgia, and North California, in stagnant water. *Potamogeton pinnatum*, Walt. fl. car. 90. Carpels more closely connected than in any of the other species.

*Scabrous-fruited Water-milfoil.* Pl. fl.

15 *M. TENELLUM* (Bigel. fl. bost. ed. 2. p. 346. D. C. prod. 3. p. 69.) stem simple, almost leafless, erect, rooting at the base; leaves scale-formed, alternate, entire; flowers in the axils of the upper leaves, as well as disposed in interrupted spikes, having the flowers alternate. *W. H.* Native of North America, in watery places about New Cambridge, and in Newfoundland. *Hylas aphyllus*, Bigel. mss. *M. nudum*, Lapy-laie, mss.

*Slender Water-milfoil.* Pl. fl.

SECT. II. *PTILOPHYLLUM* (from *πτελον*, *ptilon*, a soft feather, and *φυλλον*, *phyllon*, a leaf; in reference to the narrow segments of the leaves.). Nutt. gen. amer. 2. p. 211.—*Purshia*, Rafin. but not of D. C. Flowers all hermaphrodite, tetrandrous. Petals wanting. Anthers roundish. Stig. minute, pubescent. Leaves alternate.

16 *M. AMBIGUUM* (Nutt. l. c.) leaves alternate, petiolate, lower ones cut into capillary lobes, upper ones into linear lobes, uppermost ones almost entire or serrated. *W. H.* Native of North America, in ponds in New Jersey.

*Var. α, natans* (D. C. prod. 3. p. 70.) stems floating, dichotomous. *W. H.* Native of Jersey, New York, floating in water.

*Var. β, limosum* (Nutt. l. c.) stem rooting, erect; leaves stiff, almost entire or trifid; lobes setaceous, acute. *B. H.* Native on the banks of the Delaware, and in New Jersey.

*Ambiguous Water-milfoil.* Pl. fl.

*Cult.* All the species of *Myriophyllum* being aquatic plants if cultivated should be grown in ponds, in which they may be either planted or the seeds thrown in. Small parts of the tropical species should be taken up in the autumn, planted in a pan of water, and then to be placed in the stove, in order to preserve them in a living state during the winter; and in the course of the April or May next season may again be returned to the pond in the open air, where they will thrive much better than if grown all the year round in pans of water or cisterns in a hot-house. None of the species are, however, worth growing except in botanical gardens.

#### Tribe II.

*CALLITRICHE'NEÆ* (plants agreeing with *Callitriche* in important characters). Link, enum. hort. berol. 1. p. 7. D. C. prod. 3. p. 70. Limb of calyx hardly discernible. Petals wanting. Stamen 1, rarely 2. Fruit 4-celled, 4-seeded (f. 103. c.).—Aquatic herbs, with opposite leaves, and insignificant axillary solitary flowers.

VII. *CALLITRICHE* (a name given by Pliny to a plant which had the colour of beautiful hair, from *καλλος*, *kallos*, beautiful, and *τριχος*, *thrix trichos*, a hair, but the present genus has nothing to do with the plant of Pliny). Lin. gen. 13. Lam. ill. t. 5. Gartn. fruct. 1. p. 330. t. 68. A. Richard, dict. class. 3. p. 59. D. C. prod. 3. p. 70.—*Stellaria*, Dill. gen. p. 119. t. 6. but not of Lin.

LIN. GEN. *Monandria*, *Monogynia*, or *Polygamia*, *Monœcia*.

Flowers usually bisexual, monoecious, with 2 opposite petaloid bractæas at the base of each flower. Styles 2 (f. 103. a.), subulate.—Smooth annual aquatic herbs.

1 *C. VÉRNA* (Lin. spec. 2.) leaves triple-ribbed, the uppermost crowded and obovate; margin of fruit obtuse; fruit sessile. *W. H.* Native throughout the whole of Europe, and of North America, in ditches and slow running streams; plentiful in Britain. Smith, engl. bot. t. 722. Wahl. fl. lapp. 2. Wallr. ann. bot. p. 1. *C. aquática* var. Smith, fl. brit. 1. p. 8. *C. sessilis*, Vahl. var. D. C. fl. fr. ed. 3. no. 3655. *C. pallens*, Goldb. act. mosc. 5. p. 118. Gray, brit. pl. 2. p. 555.

*Var. α, vulgaris* (D. C. prod. 3. p. 70.) leaves all obovate. *C. verna*, Fl. dan. t. 129. *C. aquática*, Huds. fl. ang. p. 397.

*Var. β, intermedia* (Hoffm. fl. germ. 1791. p. 2.) lower leaves linear, obtuse or emarginate, upper ones oval. Schkuler, handb. t. 1. Pursh, fl. amer. sept. 1. p. 3. *C. aquática*, Bigel. fl. bost. p. 2.

*Var. γ, linearis* (D. C. l. c.) leaves all linear, upper ones scarcely obovate, 3-nerved. In ditches about Moscow. Stems short, creeping.

*Var. δ, stellata* (Hopp. bot. tasch. 1792. p. 758.) leaves all oval; stems short. *C. æstivalis*, Thuill. fl. par. p. 2.

*Var. ε, cæspitosa* (Schultz, prod. starg. p. 3.) leaves all oval, stiffish, small; stems short, stellately spreading. In very shallow water or among mud. *C. verna minima*, Wallr. ann. bot. p. 1.

*Var. ζ, rigidula* (Wallr. in litt. D. C. prod. 3. p. 70.) leaves all ovate-oblong, opaque, stiffish; stems rooting. Native of Thuringia.

*Var. η, tenuifolia* (Pers. ench. 1. p. 5.) leaves all linear, upper ones 3-nerved. In humid, hardly inundated places.

To this polymorphous species the following names probably appertain, viz. *C. dioica*, Pentag. inst. bot. 2. p. 10. *C. Brütia*, Pentag. l. c. *C. androgyna* or *C. hermaphrodita*, Schum; but these are extremely doubtful.

*Spring Water-starwort.* Fl. April, Oct. Britain. Pl. fl.

2 *C. PEDUNCULATA* (D. C. fl. fr. ed. 3. no. 3656.) lower leaves linear, upper ones oblong, 3-nerved; fruit pedicellate; margin of carpels obtuse. *W. H.* Native of France, in stagnant water; also of Scotland, in ditches. Hook, in engl. bot. suppl. 2606. Stalk of fruit from 1 to 3 lines long, upper ones the shortest.

*Stalked-fruited Water-starwort.* Fl. Apr. Oct. Scotl. Pl. fl.

3 *C. AUTUMNALIS* (Lin. spec. FIG. 103. p. 2.) leaves linear, abrupt, single ribbed, uniform; fruit sessile; margin of fruit membranous. *W. H.* Native throughout Europe and North America, in clear pools, lakes, and slow running streams. Smith, engl. bot. t. 722. f. 2. *C. aquática*, var. Smith, fl. brit. 1. p. 8. *C. sessilis* var. D. C. fl. fr. *C. angustifolia*, Hoppe, bot. tasch. 1792. p. 155. *C. linearis*, Pursh, fl. amer. sept. 1. p. 3. *C. virens*, Goldb. act. mosc. 5. p. 119. Gray, brit. pl. 2. p. 556.—Gmel. sib. 3. t. 1. Flowers often hermaphrodite. Cells of leaves very fine. This plant is distinguished by its narrower leaves and deeper green colour at first sight.

*Autumnal Water-starwort.* Fl. June, Oct. Britain. Pl. fl.

4 *C. TERRESTRIS* (Rafin. med. spec. xi. p. 358.) leaves approximate, short, oblong, obtuse, rather succulent; fruit sessile,

broad, short, emarginate. ☉. W. H. Native of North America, in marshes and on the borders of rivers, especially in New Jersey. Torrey, fl. un. st. 1. p. 4. *C. brevifolia*, Pursh, fl. amer. sept. 1. p. 3. Plant procumbent, diffuse.

*Ground Water-starwort*. Pl. proc.

*Cult.* The species of *Callitriche* are not worth cultivating. The seeds only require to be thrown in a pond of water, or the plants may be planted in it.

### Tribe III.

**HIPPURIDÆÆ** (plants agreeing with *Hippuris* in important characters). Link, enum. hort. berl. 1. p. 5. Limb of calyx small, entire. Petals wanting. Stamen 1 (f. 104. c.). Fruit nucamentaceous (f. 104. d.), 1-celled, 1-seeded. Aquatic herbs, with whorls of narrow leaves and whorls of axillary sessile flowers.

**VIII. HIPPURIS** (from ἵππος, *hippos*, a horse, and οὐρα, *oura*, a tail; resemblance in stem from the crowded whorls of very narrow hair-like leaves). Lin. gen. no. 11. Lam. ill. t. 5. Gartn. fruct. 2. t. 84. Juss. ann. mus. 3. t. 30. f. 3. D. C. prod. 3. p. 71.—*Pinastella*, Dill. nov. gen. 168.

Lin. syst. *Monandria*, *Monogynia*. Style filiform (f. 104. f.), received into the furrow of the anther (f. 104. e.). Fruit crowned by the limb of the calyx. Flowers usually hermaphrodite, but sometimes are found female and neuter from abortion.

1 *H. vulgaris* (Lin. spec. p. 3.) leaves linear, many in a whorl, usually from 6-12. ♀. W. H. Native throughout Europe and North America, in ditches and lakes, in muddy places among grass and weeds. Oeder, fl. dan. t. 87. Smith, engl. bot. t. 763. Drev. et Heyne, pl. eur. t. 93. Poit. fl. par. 1. t. 1. According to Torrey in fl. un. st. 1. p. 2. the Pennsylvanian and Canadian plant does not differ from the European, but the Hudson's Bay one is probably distinct according to Pursh, fl. amer. sept. 2. p. 774. and is probably the *H. polyphylla* of Rafin. fl. lud. p. 13. Root creeping much.

*Var. β, fluviatilis* (Hoffm. fl. germ. 3. p. 1.) leaves longer, and membranous. ♀. W. H. Native of deep water, from which it hardly emerges. *H. alopecurus*, Brouss. cat. hort. monsp. 1804. Compare D. C. fl. fr. 4. p. 415.

*Common Maretail*. Fl. May, June. Britain. Pl. 1 foot.

2 *H. montana* (Ledeb. in Rehb. icon. bot. 1. t. 86. no. 181.) plant weak; leaves 7 in a whorl, linear, acute. ♀. W. H. Native of the island of Unalashka, in ditches and lakes. *H. Eschölzii*, Cham. in litt. Habit of a species of *Galium*. Perhaps only a variety of *H. vulgaris*.

*Mountain Maretail*. Pl. 1 foot.

3 *H. maritima* (Hellen. diss. with a figure,) leaves linear, obtuse, 4 in the lower whorls, and 5-7 in the upper whorls. ♀. W. H. Native of Sweden and Finland, &c. in salt water. Horn. fl. dan. t. 1261. Rehb. t. 86. f. 182. *H. lanceolata*, Retz, obs. 3. p. 7. t. 1. *H. tetraphylla*, Lin. fil. suppl. 81. The leaves are much shorter and a little broader than those of *H. vulgaris*.

*Maritime Maretail*. Pl. 1 foot.

*Cult.* Not worth cultivating unless in botanical gardens. The species should be grown in ponds or cisterns of water, if cultivated.

FIG. 104.

*Ceratophyllum* in important characters). Gray. brit. pl. 2. p. 554. D. C. prod. 3. p. 73.

Flowers monoecious. Calyx or perigone free, many-parted (10-12); lobes equal. Petals none. Male. Stamens 12-20; filaments wanting; anthers ovate-oblong, 2-celled, sessile, and crowded in the centre of the calyx, furnished each with 2 (f. 105. d.) -3 points. Female. Ovary free, ovate, 1-celled. Stigma sessile, filiform, incurved, oblique (f. 105. c.). Nut 1-celled, 1-seeded (f. 105. b.), indehiscent, terminated by the hardened style. Seeds pendulous. Albumen none. Embryo straight, with a superior radicle, 4 cotyledons in a whorl, which are alternately smaller, and a many-leaved plumule.—Floating herbs, with whorls of multilid cellular leaves (f. 105. f.); the segments filiform, and serrated along the edges.

This is a very distinct order, but whose proper station in the natural system is not well known. It agrees with *Coniferae* in the many-whorled cotyledons, but the habit is wholly different. In habit it agrees with *Myriophyllum* on the one hand, and on the other with *Hippuris*, and in many characters with the last, especially in the want of petals, in the 1-celled ovary, in the nucamentaceous fruit, in the solitary pendulous seed, as well as in habit, from the leaves being in whorls, from the axillary sessile, usually unisexual flowers, and in its habitat, but differs in the free ovarium and the many cotyledons.

**I. CERATOPHYLLUM** (from κερας, *keras*, a horn, and φυλλον, *phyllon*, a leaf; in reference to the leaves being branched, like a stag's horn). Lin. gen. no. 1055. Gartn. fruct. 1. p. 211. t. 44. Lam. ill. t. 775. Schkuhr, handb. 3. p. 254. t. 297.—*Hydroceratophyllum*, Vaill. act. par. 1719. t. 2. f. 2. *Dichotophyllum*, Dill. gen. p. 91. t. 3.

Lin. syst. *Monandria*, *Polyandria*. The character is the same as that of the order, being the only genus.

1 *C. demersum* (Lin. spec. 1409.) fruit armed with 3 spines, which are unequal, 1 terminal, and 2 lateral (f. 105. e. d.); segments of the calyx notched at the extremity. ♀. W. H. Native of Europe, in ditches and ponds, and all still water; plentiful in some parts of Britain. Smith, engl. bot. t. 947. *C. cornutum*, Rich. l. c. Gray. brit. pl. 2. p. 554. *Dichotophyllum demersum*, Mæench. meth. 345. Vaill. l. c. t. 2. f. 1. Loes. pruss. t. 12. Leaves dichotomous, somewhat trifid, a little toothed along the lobes, when young crowded. (f. 105.)

*Demersed Hornwort*. Fl. Aug. Sept. Britain. Pl. fl.

2 *C. submersum* (Lin. spec. 1409.) fruit destitute of spines, but furnished with 2 tubercles at the sides, and the base of the style at the apex; segments of the calyx acute, entire. ♀. W. H. Native of Europe, in ditches, ponds, and all still water with a muddy bottom; and of Porto Rico in the West Indies; plentiful in Britain. Oed. fl. dan. 510. Smith, engl. bot. t. 679. Schkuhr, handb. t. 297. *C. verrucosum*, Rich. l. c. Gray, l. c. Leaves rather more divided than those of the first species, and the young ones are less crowded.

FIG. 105.

*Submersed Hornwort.* Fl. Sept. Britain. Pl. fl.

3 *C. PLATYCA'NTHUM* (Cham. in Linnæa. 4. p. 504. t. 5. f. 6. a.) fruit obovate, winged, armed with 3 spines, with a few teeth between the spines; spines elongated, lateral ones flat.  $\mathcal{U}$ . W. H. Native of California. *C. demersum*, Schlecht. fl. berol. 1. p. 486.

*Broad-spined Hornwort.* Pl. fl.

4 *C. OXYACA'NTHUM* (Cham. in Linnæa. 4. p. 504. t. 5. f. 6. b.) fruit elliptic, compressed, armed with 3 spines; spines terete, elongated.  $\mathcal{U}$ . W. H. Native of California?

*Sharp-spined Hornwort.* Pl. fl.

5 *C. MURICA'TUM* (Cham. in Linnæa. 4. p. 504. t. 5. f. 6. c.) fruit elliptic, compressed, winged, muricated, armed with 3 spines; spines slender, weak; wing narrow, many-toothed.  $\mathcal{U}$ . W. H. Native of Egypt and California? *C. demersum*, Sieb. pl. ægypt.

*Muricated-fruited Hornwort.* Pl. fl.

6 *C. TUBERCULATUM* (Cham. in Linnæa. 4. p. 504. t. 5. f. 6. d.) fruit elliptic, rather compressed, finely tubercled, armed with 3 spines; spines slender, weak; wing none.  $\mathcal{U}$ . W. S. Native of the East Indies. *C. indicum*, Willd. herb. no. 17546. *C. demersum*, Klein.

*Tubercled-fruited Hornwort.* Pl. fl.

7 *C. APICULATUM* (Cham. in Linnæa. 4. p. 504. t. 5. f. 6. e.) fruit elliptic, compressed, armed with one spine, and furnished with a tubercle on each side; spine weak; wing none.  $\mathcal{U}$ . W. H. Native of Europe. *C. submersum*, D. C. and Schkuhr handb. t. 297.

*Apiculated Hornwort.* Pl. fl.

*Cult.* The plants of this genus grow in ponds, pools, or ditches, but are not worth cultivating except in botanical gardens.

ORDER XCVI. LYTHRARIÆ (plants agreeing with *Lythrum* in important characters). Juss. dict. se. nat. 27. p. 453. D. C. mem. soc. gen. 3. pt. 2. p. 65. prod. 3. p. 75.—Salicariæ, Juss. gen. 330.—Calycanthemæ, Vent. tabl. 3. p. 298.—Salicariæ, Link. enum. 1. p. 142.

Calyx monosepalous (f. 106. a. f. 107. a.), with a tubular (f. 107. a.) or campanulate tube; lobes valvate or separate in æstivation, their sinuses sometimes lengthened into other lobes (f. 106. b.), which are produced on the outside. Petals variable in number (f. 106. c.), inserted between the lobes of the calyx, very deciduous; sometimes wanting altogether. Stamens inserted into the tube of the calyx below the petals, to which they are sometimes equal in number; sometimes they are twice, thrice, or even 4-times as numerous, but they are very seldom fewer; anthers oval, 2-celled, inserted by the back (f. 106.). Ovary free, 2 or 4-celled. Style filiform; stigma usually capitate (f. 106. c.). Capsule membranous, covered by the calyx (f. 106. a.), 1-celled, opening either longitudinally or in an irregular manner. Seeds numerous, small, exalbuminous, adhering to the central placenta. Embryo straight, with the radicle turned towards the hylum, and the cotyledons flat and foliaceous.—Herbs, rarely shrubs. Branches terete, but most frequently tetragonal. Leaves opposite, seldom alternate, entire, feather-nerved, without either stipulas or glands. Flowers axillary, or in spikes or racemes at the tops of the branches. This order is nearly allied to *Onagraræ*, from which it is distinguished by the free, ribbed calyx. It is also separated from *Meclastomæ* in the ovary being free and in the different position of the veins of the leaves.

Astringency is the property of *Lythrum Salicaria*, which is reputed to have been found useful in inveterate diarrhœas; another species of the same genus is reputed, in Mexico, to be astringent and vulnerary. The flowers of *Lythrum Huntleri* are employed in India, mixed with *Morinda*, for dyeing, under the name of *Dharry*. The Mexicans consider *Hémia salicifolia* a potent remedy in venereal diseases, and call it *Hauchinol*; its expressed juice, taken in doses of 4 ounces, excites violent perspiration. *Lansônia inermis* is the plant from which the henna of Egypt is obtained. Women of that country stain the nails of their fingers and feet with it. It is also used for dyeing skins and maroquins reddish-yellow, and for many other purposes. It contains no tannin. (Edinb. phil. joarn. 12. p. 416.) The leaves of *Annámia vesicatoria* have a strong muriatic smell, they are extremely acrid, and are used by the native practitioners of India to raise blisters in rheumatism, &c.; bruised and applied to the part intended to be blistered, they perform their office in half an hour, and most effectually. (Ainly 2. p. 93.)

#### *Synopsis of the genera.*

##### Tribe I.

SALICARIÆ. Lobes of calyx separate or somewhat valvate in æstivation. Petals numerous (f. 106. c.). Alternate lobes of calyx at the sinuses formed from the other lobes. Seeds wingless.

1 ROTALA. Calyx tubular, 3-toothed. Petals none. Stamens 3, inserted in the middle of the tube. Capsule 3-celled.

2 CHRYSTHECA. Calyx funnel-shaped, 4-cleft. Petals 4, small, or wanting. Stamens 2, inserted in the bottom of the calyx. Capsule 1-celled.

3 SUFFRÉNIA. Calyx campanulate, 4-lobed, and furnished with a little tooth at each recess. Petals wanting. Stamens 2, inclosed. Capsule 2-valved, hardly 2-celled.

4 AMELE'TIA. Calyx campanulate, 8-lobed, the 4 at the sinuses tooth-formed. Petals wanting. Stamens 4. Capsule 1-celled, 2-valved.

5 PEP'LIS. Calyx campanulate, 12-lobed, the 6 that rise from the sinuses smaller. Petals 6, small. Stamens 6. Capsule 2-celled.

6 AMMA'NNIA. Calyx campanulate, 8-14-toothed, those rising from the sinuses the smallest. Petals 4-7, but sometimes wanting. Stamens equal in number to the petals, rarely twice that number. Capsule 4-celled, or when mature only 1-celled.

7 LYTHRUM. Calyx 8-12-toothed, the alternate ones at the sinuses smaller and spreading. Petals 4-6, equal, inserted in the orifice of the calyx. Stamens equal in number, or twice the number of the petals, inserted in the middle or at the base of the calyx. Capsule 2-celled.

8 CUPHÆA. Calyx tubular, 12-toothed. Petals 6-7, unequal. Stamens 11-14, rarely 6-7, unequal, inserted in the orifice of the calyx. Capsule 1-2-celled.

9 ACISANTHERA. Calyx ventricose, 5-cleft. Petals 5. Stamens 12. Capsule round, covered, and crowned by the calyx, 2-celled.

10 PATIO'A. Calyx campanulate, 6-cleft, valvate in æstivation. Petals 6. Stamens 24, inserted in the bottom of the tube. Ovary 3-celled.

11 PE'MPHIS. Calyx turbinate, 12-lobed, the 6 at the sinuses the smallest. Petals 6. Stamens 12. Capsule 6-valved, 3-celled at the base.

12 HE'MIA. Calyx bibracteolate at the base, campanulate, 12-lobed, those at the sinuses horn-formed. Petals 6. Stamens 12., nearly equal. Ovarium 4-celled.

13 DIPLO'SODON. Calyx bibracteate at the base (f. 106. a.), 12-lobed (f. 106. b.), those at the sinuses narrowest, the rest triangular. Petals 6 (f. 106. c.). Stamens 6-12-18-24-30-36. Capsule 2-valved, 2-celled, but at maturity only 1-celled.

14 PHYSOCALY'MNA. Calyx campanulate, 8-toothed, without any at the sinuses. Petals 8, rising from the sinuses of the calyx. Stamens 24. Capsule globose, 1-celled.

15 DE'CADON. Calyx campanulate, with 5 erect lobes, and 5 horn-formed ones at the sinuses. Petals 5. Stamens 10, 5 of which are very long. Ovary 3-celled.

16 NE'SEA. Calyx campanulate, with 4-6 erect lobes, and as many horn-formed ones at the sinuses. Petals 4-6. Stamens 8-12, nearly equal. Ovarium 4-celled.

17 ČRE'NEA. Calyx urceolate, 4-cleft. Petals 4. Stamens 8. Capsule 1-5-celled.

18 LAWSŌNIA. Calyx 4-parted. Petals 4. Stamens 8. Capsule 4-celled, globose.

19 ABA'TIA. Calyx subturbinat; limb 4-parted. Petals wanting. Stamens about 20, inserted near the base of the calycine tube. Capsule 1-celled, 2-valved, opening at the apex.

20 ANTHERY'LUM. Calyx 4-parted, equal. Petals 4. Stamens 12-16. Capsule 3-4-valved, and probably 3-4-celled, when young.

21 DODE'CAS. Calyx with an urceolate tube and a 4-cleft limb. Petals 4. Stamens 12. Capsule 4-valved, 1-celled.

22 GINŌRIA. Calyx campanulate, 6-cleft. Petals 6. Stamens 12. Capsule 4-valved, 1-celled, dehiscent at the apex.

23 ADENA'RIA. Calyx campanulate, 4-5-cleft. Petals 4-5. Stamens 8-10. Ovary 2-celled. Fruit globose.

24 GRIS'LEA. Calyx tubular (f. 107. a.), with 4-6 erect teeth, and as many horn-formed, spreading ones at the sinuses. Petals 4-6. Stamens 8-12. Ovary 2-celled. Capsule globose (f. 107. d.).

## TRIBE II.

*LAGERSTRÆMIÆ.* Lobes of calyx valvate in the bud. Petals the same number as the lobes of the calyx, and inserted at its divisions at the top of the tube. Stamens inserted lower down in the calyx than the petals, twice or thrice the number of the petals. Seeds expanded into a membranous wing.—Shrubs or trees.

25 LAGERSTRÆ'MIA. Calyx bibracteolate at the base, 6-cleft. Petals 6. Stamens 18-30. Capsule 3-6-valved, 3-6-celled.

26 LAFOE'NSIA. Calyx bibracteate at the base, campanulate, 8-10-toothed. Petals 10-12. Stamens 20-24. Ovary 2-celled. Berry spherical.

† Genera belonging to *Lythraricæ*, but are not sufficiently known.

27 PHYSORŌNIUM. Calyx turbinate, 5-toothed. Petals 5. Stamens 10. Ovary oblong.

28 SYMME'TRIA. Calyx campanulate, 6-cleft. Petals 6. Stamens 12. Ovarium 4-celled; cells biovulate. Drupe baccate, 1-3-celled; cells containing a one 1-seeded reniform nut each.

## Tribe I.

*SALICARIÆ* (so named from the plants agreeing in habit and character with *Lythrum Salicaria*, which has received its specific name from its resemblance to *Salix* in its leaves). D. C. mem. soc. h. n. gen. 3. pt. 2. p. 71. D. C. prod. 3. p. 75. Lobes of calyx more or less separate in aestivation, or somewhat valvate. Petals many, alternating with the lobes of the calyx, and inserted at the top of the tube at the divisions; sometimes wanting. Stamens inserted in the tube of the calyx below the petals. Seeds wingless. Herbs or shrubs.

1. ROTALA (from *rota*, a wheel; in reference to the whorled leaves of the species). Lin. mant. 175. St. Hil. mem. mus. 3. p. 381. D. C. prod. 3. p. 75.

LIN. SYST. *Triandra*, *Monogynia*. Calyx membranous, tubular, 3-toothed. Petals wanting. Stamens 3, inserted in the middle of the tube of the calyx. Capsule covered by the calyx, 3-valved, 3-celled, many seeded.—Small herbs. Leaves sessile, spreading. Flowers minute, axillary, solitary.

1 R. VERTICILLARIS (Lin. l. c.) leaves 4-8 in a whorl, linear, acute. ☉. B. H. Native of the East Indies. En-cael, Rheed. mal. 9. t. 81. ex Lin. Capsule 3-valved, 3-celled.

*Whorled-leaved Rotala.* Pl.  $\frac{1}{2}$  foot.

2 R. DECUSSATA (D. C. prod. 3. p. 76.) leaves opposite, oval-oblong. ☉. B. H. Native of New Holland, at Endeavour River. *Ortegioides decussata*, Sol. mss. *Entelia ammannioides*, R. Br. ex Salisb. in litt. Capsule 3-valved, many-seeded. Calyx 3-5? toothed? Stamens 3? Habit of *Péplis* or *Ammannia*.

*Decussate-leaved Rotala.* Pl.  $\frac{1}{2}$  foot.

3 R. MEXICANA (Schlecht. et Cham. in Linnæa. 5. p. 567.) leaves 3-4 in a whorl, usually opposite towards the tops of the branches, linear, a little dilated at the base; flowers in whorls; capsule 3-valved, 1-celled. ☉. W. H. Native of Mexico, in slow running water, near Hacienda de la Laguna.

*Mexican Rotala.* Pl.  $1\frac{1}{2}$  inch.

*Cult.* Sow the seeds in a warm moist sheltered place in the open border.

II. CRYPTOTHECA (*κρυπτος*, *cryptos*, hidden, and *θηκα*, *theca*, a cover; capsule hidden by the calyx). Blum. bijdr. p. 1128. D. C. prod. 3. p. 76.

LIN. SYST. *Diandra*, *Monogynia*. Calyx funnel-shaped, 4-cleft. Petals 4, small, or wanting. Stamens 2, opposite, inserted in the bottom of the calyx; anthers roundish. Style 1, lateral, obtuse. Capsule girded by the calyx, 1-celled, irregularly circumscribed at the apex. Seeds numerous.—Suffruticose, branched herbs from Java, with angular stems. Leaves opposite. Peduncles axillary, many-flowered. This genus agrees with *Suffrœnia* in the number of the stamens, and in the inflorescence with *Ammannia*.

1 C. DICHOTOMA (Blum. l. c.) leaves linear-lanceolate, broadest at the base, half stem-clasping; corymbs dichotomous; flowers 4-petalled. ☿. B. S. Native of Java, in bogs about Batavia, and on the margins of rivers about Buitenzorg.

*Dichotomous Cryptotheca.* Shrub 1 foot.

2 C. APETALA (Blum. l. c.) leaves on short petioles, lanceolate; peduncles many-flowered; flowers apetalous. ☿. B. S. Native of Java, on the banks of the river Tjidanie, in the province of Tjanjor.

*Apetalous Cryptotheca.* Shrub 1 foot.

*Cult.* These plants will do well in a mixture of loam, peat, and sand, and cuttings will root in sand under a bell-glass. The pots in which the plants are grown should be always kept in pans of water.

III. SUFFRENIA (in honour of De Suffren, a French botanist, author of *Principes de Botanique, suivis d'un catalogue des plantes de Frioul et de Carnia*, 1 vol. 8vo. Venice, 1802). *Bell. act. taur.* 7. t. 1. f. 1. *D. C. prod.* 3. p. 76.

*Lin. syst.* *Dicandria, Monogynia*. Calyx tubularly-campanulate; lobes 4, erect, ovate, acute; teeth 4, small, at the sinuses. Petals wanting. Stamens 2, inclosed, inserted in the tube of the calyx. Style filiform; stigma capitate. Capsule oblong, 2-valved, when young 2-celled, but in the adult state only 1-celled, the dissepiment having vanished at the apex, many-seeded.—A nearly simple, erect herb. Leaves opposite, quite entire. Flowers small, sessile, solitary, axillary.

1 *S. FILIFORMIS* (Bell. l. c.). (C). B. H. Native of Ticin, about Vercelli in rice-fields. *D. C. fl. fr. no.* 3651. exclusive of the synonyme of Lobel. Herb weak, 3-6 inches long. Flowers yellowish.

*Filiform Suffrenia.* Pl.  $\frac{1}{2}$  to 1 $\frac{1}{2}$  foot.

*Cult.* The seed to be sown in wet or marshy ground in the open air.

IV. AMELETIA (from *αμελητος*, *ameletos*, neglected. The present genus was formerly included in the genus *Péplis*, from its characters having been overlooked). (C). *C. mem. soc. hist. nat. gen.* 3. pt. 2. p. 82. *prod.* 3. p. 76.—*Péplis* species of Willd.

*Lin. syst.* *Tetrandria, Monogynia*. Calyx campanulately-tubular; larger lobes 4, erect, ovate, acuminate, connivent, smaller ones 4, tooth-formed at the sinuses. Petals none. Stamens 4, inserted in the tube of the calyx. Ovary ovate. Style filiform; stigma capitate. Capsule ovate, when young 2-celled, but in the adult state only 1-celled, from the dissepiment having vanished, 2-valved, many-seeded.—An herb with opposite, entire leaves. Spikes axillary, sessile, bracteate. Flowers small, bilacteolate at the base, sessile along the rachis, rising from the axils of the elongated bracteas. This genus is intermediate between *Ammania* and *Péplis*. The habit is peculiar.

1 *A. INDICA* (*D. C. l. c. t.* 3. f. A.).—Native of the East Indies. *Péplis Indica*, Willd. spec. 2. p. 244. *Ammania peploides*, Spreng. syst. 1. p. 444. Branches nearly tetragonal. Leaves obovate-oblong, feather-nerved, bluntish. Spikes rather longer than the leaves. Bracteas linear-oblong, acute, longer than the flowers.

*Indian Ameletia.* Pl.  $\frac{1}{2}$  foot.

*Cult.* The seeds of this plant should be sown thinly in a pot, which should be placed in a hot-bed, and when the plants are about 2 inches high, the pot may be removed to the stove or greenhouse, where the plants will flower and ripen their seed.

V. PEPLIS (πεπλις, *peplis*, the Greek name for the purslane; similar habit). *Lin. gen. no.* 446. *Lam. ill. t.* 262. *D. C. prod.* 3. p. 76.—*Pörtula*, Dill. gen. 7.—*Glaucoides*, Mich. gen. 18.—*Chabrea*, Adans. fam. 2. p. 234, but not of *D. C.*—*Glaux*, Vaill. bot. p. 80. t. 15. f. 5.

*Lin. syst.* *Hexandria, Monogynia*. Calyx campanulate, with 12 lobes, of which 6 are broader than the rest and erect, the others spreading, subulate, and rising from the sinuses. Petals 6, minute, fugaceous, sometimes wanting. Stamens 6, alternating with the petals in front of the broader calycine lobes. Style hardly any; stigma capitate. Capsule 2-celled, many-seeded. Branched herbs, with opposite or alternate, entire leaves; and sessile, axillary, solitary, insignificant flowers.

1 *P. PÖRTULA* (Lin. spec. 474.) leaves opposite, obovate, stalked; petals hardly visible; flowers axillary, solitary. (C). B. H. Native of Europe, in watery places, on a sandy, gravelly, or heathy soil, frequent; plentiful in some parts of England. *Schkuhr, handb. t.* 99. *Fl. dan. t.* 64. *Curt. lond. t.* 27. *Smith, engl. bot. t.* 1211. *Pörtula diffusa*, Mœnch. Calyx reddish. Petals white, very minute, or wanting.

Common Water Purslane. *Fl. June, Sept.* *Brit. Pl. cr.*

2 *P. BIFLORA* (Saltzm. pl. exsic. 1825.) leaves opposite or alternate, obovate, cuneated at the base, on short petioles; flowers twin, axillary. (C). B. H. Native in humid places about Tangiers. Flowers rather larger than those of *P. pörtula*.

Two-flowered Water Purslane. *Pl. creeping.*

3 *P. ALTERNIFOLIA* (Bieb. suppl. 277.) leaves alternate, linear, somewhat spatulate. (C). B. H. Native of Caucasus, about the Volga. *P. Volgensis*, Fisch. in litt. 1810.

Alternate-leaved Water Purslane. *Fl. Ju. Sept.* *Cl. 1816.* *Pl. creeping.*

4 *P. ? DIA'NDRA* (Nutt. in litt. ex *D. C. prod.* 3. p. 77.) leaves opposite, linear, upper ones somewhat alternate. (C). B. H. Native of North America, in marshes and bogs about the Arkansas. Leaves 8-9 lines long and hardly a line broad. Flowers axillary, sessile. Stigmas 2. Capsule globose. Stamens 2, according to Nuttall. Calyx 4-6-cleft. Perhaps a proper genus.

Diandrous Water Purslane. *Pl. creeping.*

*Cult.* The species of *Water Purslane* grow in any soil that is moist, where the seeds may be sown.

VI. AMMA'NNIA (in honour of John Ammann, once professor of botany at Petersburg; author of *Stirpium rariorum in imperio Rutheno sponte provenientium icones et descriptiones*, 1 vol. 4to. Petersburg, 1739). *Hout. in Lin. gen. no.* 155. *Lam. ill. t.* 77. *D. C. mem. soc. gen.* 3. pt. 2. p. 79. *D. C. prod.* 3. p. 77.—*Cornelia*, Hard. spec. 2. p. 1. t. 1.

*Lin. syst.* *Tetra-Heptandria, Monogynia*. Calyx campanulate, with 4-7, erect, flat teeth, and 4-7 horn-formed, spreading, smaller ones rising from the sinuses. Petals 4-7, alternating with the erect teeth of the calyx. Stamens equal in number to the petals, rarely double that number. Capsule oval-globose, membranous, 4-celled, or only 1-celled when mature. Seeds numerous, fixed to the central placenta, which is tetragonal.—Smooth aquatic plants. Stems usually tetragonal. Leaves opposite, quite entire. Flowers small, axillary, sessile, or on short pedicels, usually pink or red.

§ 1. *Flowers apetalous. Stamens 4. Some of the species are probably placed in this division from the petals being very caducous.*

1 *A. PARVIFLORA* (*D. C. prod.* 2. p. 77.) stem erect, tetragonal, glabrous; leaves oblong, sessile; cymes axillary, many-flowered, longer than the leaves; calyx 4-toothed; capsule globose, hardly longer than the calyx. (C). B. F. Native of the East Indies. Herb slender.

Small-flowered Ammania. Pl.  $\frac{1}{2}$  foot.

2 *A. FILIFORMIS* (*D. C. mem. soc. gen.* 3. p. 95.) stem erectish, branched from the base; branches diffuse, filiform, tetragonal; leaves linear; umbels axillary, many-flowered, rather loose, pedunculate; flowers apetalous, tetrandrous; capsule globose, exceeding the calyx. (C). B. F. Native of Senegal. *Lythrum filiforme*, Perr. in litt. Herb weak. 3-4 inches long.

Filiform Ammania. *Pl. ascending.*

3 *A. SENEGALENSIS* (*Lam. ill. no.* 155. t. 77. f. 2.) stem erect, terete, branched, and floriferous from the base, tetragonal at the apex; leaves linear-lanceolate, sessile, dilated at the base, cordate; umbels axillary, many-flowered, on short peduncles; flowers apetalous, tetrandrous; capsule globose, twice the

length of the calyx. ☉. B. F. Native of Senegal. *Lýthrum multiflorum*, Perr. in litt.

*Senegal Ammannia*. Pl.  $\frac{1}{2}$  foot.

4 *A. INDICA* (Lam. ill. no. 1555.) stem erect, branched, terete; branches rather tetragonal, erectish; leaves lanceolate, attenuated at the base; corymbs axillary, many-flowered, on short peduncles; flowers apetalous, tetrandrous. ☉. B. F. Native of the East Indies, and the Island of Timor.

*Indian Ammannia*. Pl.  $\frac{1}{2}$  foot.

5 *A. MICROCARPA* (D. C. mem. soc. gen. p. 93.) plant erect, branched, terete; branches rather tetragonal; leaves lanceolate-linear, sessile, somewhat dilated and cordate at the base; umbels axillary, many-flowered, on short peduncles; flowers apetalous, tetrandrous; capsule obovate, length of calyx. ☉. B. F. Native of the Island of Timor. Intermediate between the preceding and the following species.

*Small-fruited Ammannia*. Pl.  $\frac{1}{2}$  foot.

6 *A. EGYPTIACA* (Willd. hort. berol. t. 6.) stem erect, branched, terete at the base and tetragonal at the apex; branches spreading; leaves lanceolate, sessile, attenuated at the base, spreading; flowers sessile, axillary, crowded, apetalous, tetrandrous, disposed in something like whorls. ☉. B. F. Native of Egypt, in rice-fields. Del. fl. ægypt. 37. t. 15. f. 3. Calyx acutely 8-toothed. Capsule spherical, when mature 1-celled.

*Egyptian Ammannia*. Fl. Jul. Aug. Clt. 1820. Pl.  $\frac{1}{2}$  to 1 ft.

7 *A. VESICATORIA* (Roxb. fl. ind. 1. p. 447.) stems erect, branched; branches undivided; leaves sessile, lanceolate, attenuated at the base; flowers sessile, axillary, disposed in something like whorls, apetalous, tetrandrous. ☉. B. F. Native of the East Indies, in humid cultivated fields. Pluk. alm. t. 136. f. 22. Burm. ind. t. 15. f. 3. ? *A. baccifera*, Lin. spec. 175. ? Capsule 1-celled. The leaves have a strong muriatic smell; they are extremely acrid, and are used by the native practitioners of India to raise blisters in rheumatism, &c., bruised and applied to the part of the body intended to be blistered; they perform their office in half an hour most effectually.

*Blistering Ammannia*. Pl.  $\frac{1}{2}$  to 1 $\frac{1}{2}$  foot.

8 *A. HASTATA* (D. C. prod. 3. p. 78.) stem branched, diffuse, rooting at the base, somewhat tetragonal, glabrous; leaves stem-clasping, and bluntly hastate at the base, linear-lanceolate; flowers axillary, sessile, solitary, apetalous, tetrandrous. ☉. B. F. Native of Peru, in marshes. *Isnardia hastata*, Ruiz, et Pav. fl. per. 1. p. 66. t. 85. f. 6. *Isnardia subhastata*, Dietr. gart. 5. p. 137. ex Rœm. et Schultes, syst. 3. p. 477.

*Hastate-leaved Ammannia*. Shrub 1 foot.

9 *A. ELATINOIDES* (D. C. mem. soc. hist. nat. gen. 3. pt. 2. p. 92. t. 3. f. B.) stems decumbent at the base; branches erect, filiform, somewhat tetragonal, simple; leaves sessile, all opposite, lower ones oblong, upper ones ovate; flowers sessile, apetalous, tetrandrous, nearly all solitary. ☉. B. F. Native of Senegal. *Lýthrum uniflorum*, Perr. in litt. Capsule ovate, 4-celled. Calyx cylindrical, 4-toothed, with the sinuses scarcely exerted into teeth.

*Elatine-like Ammannia*. Pl. decumbent.

10 *A. BORYTHÉNICA* (D. C. prod. 3. p. 78.) stem branched, diffuse; leaves oblong, or obovate-lanceolate, lower ones opposite, upper ones alternate; flowers axillary, sessile, apetalous, and tetrandrous, almost always solitary. ☉. B. F. Native at the Bosphorus, near Kiew and Kremetschug. Péplis *Borysthénica*, Bess. ex Spreng. syst. 1. p. 135. Calyx 8-cleft, and the capsule is that of *Ammannia*.

*Bosphorus Ammannia*. Pl. diffuse.

11 *A. OCCIDENTALIS* (D. C. prod. 3. p. 78.) stems ascending, rooting at the base; leaves lanceolate, tapering into the petiole at the base; flowers axillary, sessile, apetalous, tetrandrous, nearly all solitary. ☉. B. F. Native of Porto Rico. Péplis

*occidentalis*, Spreng. syst. 2. p. 135. Calyx 8-toothed. Young capsule 4-celled, but the mature capsule is nearly 1-celled, as in *Ammannia*. Habit of *Péplis*.

*Western Ammannia*. Fl. July. Clt. 1829. Pl. creeping

§ 2. *Tetrapétale* (from *τετρα*, *tetra*, 4, and *πτελον*, *petalon*, petal; petals 4). Calyx 8-toothed. Petals and stamens 4.

12 *A. CASPICA* (Bieb. fl. taur. 2. p. 457. suppl. p. 111.) stem tetragonal, erect, branched; leaves lanceolate, attenuated at the base; flowers axillary, glomerate, sessile, tetrandrous; petals 4, small, or wanting. ☉. B. H. Native at the river Cyrus, towards the Caspian Sea. Habit of *A. Egyptiaca*, but the petals are 4, ex Bieb. Like *A. sanguinolenta*, but the teeth of the calyx are more stiff and acute. Flowers purple.

*Caspian Ammannia*. Fl. June, Aug. Clt. 1818. Pl.  $\frac{3}{4}$  ft.

13 *A. RAMOSIOR* (Lin. spec. 174.) stems tetragonal, erect, branched; leaves linear-lanceolate, dilated at the base, and rather stem-clasping; lower flowers disposed in compact whorls, upper ones solitary, opposite; petals 4, obovate-roundish; stamens 4. ☉. B. H. Native of Virginia and Carolina, in bogs. *A. purpurea*, Lam. dict. 1. p. 131. Petals and filaments purple.

*More-branched Ammannia*. Fl. Jul. Aug. Clt. 1759. Pl. 1 ft.

14 *A. LATIFOLIA* (Lin. spec. 174.) stems tetragonal, erect, branched; leaves linear-lanceolate, bluntly and auriculate cordate at the base; flowers axillary, 1-3-together, sessile; petals and stamens 4. ☉. B. F. Native of Jamaica, and probably of South Carolina. Sloane, hist. 1. t. 7. f. 4. Lam. ill. t. 77. f. 1. Petals are said to be white. Perhaps the plant is apetalous.

*Broad-leaved Ammannia*. Fl. July, Aug. Clt. 1733. Pl. 1 to 2 feet.

15 *A. HUMILIS* (Michx. fl. bor. amer. 1. p. 99.) stem procumbent at the base, slender, tetragonal, branched; leaves linear-lanceolate, attenuated at the base; flowers axillary, solitary, sessile; petals 4, orbicular; stamens 4. ☉. B. H. Native from Carolina to Virginia, along the banks of the rivers in marshes. Torr. fl. un. st. 1. p. 189. *A. ramosior*, Walt. ear. 88. Petals white or pale-purple. Capsule 4-celled.

*Humble Ammannia*. Fl. July, Aug. Clt. 1823. Pl. proc.

16 *A. VERTICILLATA* (Lam. ill. 1. no. 1554. t. 77. f. 3.) stem erect, tetragonal, branched; leaves lanceolate, nearly sessile, attenuated at the base; flowers crowded in whorls in the axils of the leaves; petals 4, obovate; stamens 4. ☉. B. H. Native of marshy places about Padua, and in rice grounds near Florence, and probably also of the East Indies and China. *Cornelia verticillata*, Hardw. spec. 2. p. 9. t. 1. *A. Indica*, Lam. dict. 9. p. 328. *A. baccifera*, Lin. spec. 175. ? *A. viridis*, Willd. in Horn. hort. hafn. 1. p. 146. Habit of *A. Egyptiaca* and *A. vesicatoria*, but differs in the flowers being 4-petalled, not apetalous. Calyx 4-toothed. Capsule roundish, equal in length to the tube of the calyx, 1-celled, of an obscure purple colour, ex Hardw.

*Whorled-flowered Ammannia*. Fl. July, Aug. Clt. 1819. Pl.  $\frac{1}{2}$  foot.

17 *A. DENSIFLORA* (Roth, nov. spec. 99.) stems ascending, branched, creeping at the base; leaves sessile, linear-lanceolate, rather cordate at the base; branches all densely beset with flowers from the base, so much so as to appear spike-formed; bractæa spreadingly recurved; flowers axillary, sessile; petals 4, obovate; stamens 4. ☉. B. F. Native of the East Indies. Petals whitish. Capsule subglobose, smaller than the calyx.

*Dense-flowered Ammannia*. Pl.  $\frac{3}{4}$  foot.

18 *A. MULTIFLORA* (Roxb. fl. ind. 1. p. 447.) stem straight, tetragonal; angles acute; leaves linear, dilated and cordately sagittate at the base, stem-clasping; peduncles axillary, 3-7-flowered; petals 4, roundish. ☉. B. F. Native about Calcutta, in fields. Petals red. Capsule 1-celled.

*Many-flowered Ammannia.* Pl.  $\frac{1}{2}$  to 1 foot.

19 *A. DE'BILIS* (Ait. hort. kew. ed. 1. vol. 1. p. 163.) stems angular, branched; leaves lanceolate, attenuated at the base; flowers in axillary fascicles; petals 4, obovate; stamens 4; capsule bilocular? ☉. B. F. Native of the East Indies. Petals pale purple.

*Weak Ammannia.* Fl. Jul. Aug. Clt. f778. Pl.  $\frac{1}{2}$  foot.

20 *A. DIFFUSA* (Willd. enum. 1. p. 167.) stems ascending, branched, tetragonal at the apex; branches diffuse; leaves lanceolate, bluntish, narrowed at the base, upper ones cordate; corymbs axillary, 3-7-flowered, pedunculate; petals and stamens 4. ☉. B. F. Native country and fruit unknown. Petals white.

*Diffuse Ammannia.* Fl. July, Aug. Clt. 1820. Pl. ascend.

21 *A. CATHOLICA* (Schlecht. et Cham. in Linnæa. 2. p. 378.) flowers solitary, sessile, tetrandrous; calyx 8-toothed, outer teeth narrower, longer, erect, about equal in length to the petals, which are fugaceous; capsule ovoid, inclosed, 4, rarely 3-celled; leaves lanceolate, tapering to the base. ☉. B. F.

*Var. α, Philippensis* (Schlecht. et Cham. l. c.) stem weak, rooting at the base. Native of the Island of Lucon, in moist sandy places.

*Var. β, Brasiliensis* (Schlecht. et Cham. l. c.) stem firm, erect.

*Universal Ammannia.* Pl.  $\frac{1}{2}$  foot.

22 *A. ROTUNDIFOLIA* (Roxb. fl. ind. 1. p. 446.) stems diffuse, creeping at the base, but ascending at the apex; leaves almost sessile, nearly orbicular; flowers nearly sessile, crowded in the axils of the upper leaves, and constituting terminal spikes; petals 4, ovate; stamens 4. ☉. B. H. Native of Nipaul, near Katmandu; and of Bengal. D. Don, prod. fl. nep. p. 220. This plant has the appearance of a species of *Goniocarpus*. Stems 2-3 inches high. Capsule 4-lobed, girded by the permanent calyx and corolla. Petals pink.

*Round-leaved Ammannia.* Fl. July, Aug. Clt. 1819. Pl.  $\frac{1}{2}$  to  $\frac{1}{2}$  foot.

§ 3. *Pentandra* (in reference to the flowers being pentandrous). Petals and stamens 5. Calyx 10-toothed.

23 *A. PENTA'NDRA* (Roxb. fl. ind. 1. p. 448.) stems creeping at the base, simple, but erect and branched at the apex; branches simple; leaves sessile, lanceolate; flowers axillary, sessile, solitary, 5-petalled, and pentandrous. ☉. B. F. Native of the East Indies, in humid places, and of Java, in rice-fields. Blum. bijdr. p. 1130. Petals purple. Capsule 4-celled, but when mature, almost 1-celled, longer than the calyx.

*Pentandrous Ammannia.* Fl. Jul. Aug. Clt. 1823. Pl.  $\frac{1}{2}$  ft.

24 *A. NA'NA* (Roxb. fl. ind. 1. p. 418.) stems creeping at the base, but erect at the apex and branched; branches branched again; leaves sessile, wedge-shaped; flowers solitary, 5-petalled, and pentandrous. ☉. B. F. Native of the East Indies, in marshes. Petals purple. Very like the *A. pentandra*, but much smaller. Capsule 1-celled.

*Dwarf Ammannia.* Pl.  $\frac{1}{4}$  to  $\frac{1}{2}$  foot.

§ 4. *Dyplostemonice* (from *δυπλοος*, double, and *στυμον*, stemon, a stamen). D. C. prod. 3. p. 80. Petals 4-7. Stamens twice the number of the petals.

25 *A. DODECA'NDRA* (D. C. mem. soc. hist. nat. gen. 3. pt. 2. p. 89. t. 2.) leaves linear-lanceolate, acute, sessile, bluntly somewhat auricled at the base; flowers axillary, almost sessile, 1-3-together; petals 6-7; stamens 12-14. ☉. B. H. Native of Senegal. *Lythrum grandiflorum*, Perr. in litt. Herb greenish-glaucous, erect. Petals violaceous. Capsule 4-5-celled, 4-5-valved, length of calyx.

*Dodecandrous Ammannia.* Pl.  $\frac{1}{2}$  to 1 foot.

26 *A. SANGUINOLE'NTA* (Swartz, fl. ind. occid. 1. p. 272.)

leaves linear-lanceolate, acutish, but bluntly and auriculately cordate at the base, half stem-clasping; flowers almost sessile, axillary, 3-5 together; petals 4; stamens 8. ☉. B. F. Native of Jamaica, in bogs and ditches; and of Hispaniola and Mexico. Petals blood-coloured. Capsule 4-celled. *A. octandra* β, Poir. suppl. 1. p. 328.

*Bloody-flowered Ammannia.* Fl. Jul. Aug. Clt. 1803. Pl.  $\frac{1}{2}$  ft.

27 *A. OCTA'NDRA* (Lin. fil. suppl. 127.) leaves linear-lanceolate, sessile, acutely and auriculately cordate at the base; flowers axillary, almost sessile, 1-3-together; petals 4; stamens 8. ☉. B. F. Native of the East Indies, in boggy places. Roxb. cor. 2. t. 133. *A. coccinea*, Pers. ench. 1. p. 147. Capsule 4-celled. Flowers red.

*Octandrous Ammannia.* Fl. Jul. Aug. Clt. 1820. Pl. 2 ft.

28 *A. AURICULATA* (Willd. hort. berol. 1. p. 7. t. 7.) leaves linear-lanceolate, sessile, bluntly and auriculately cordate at the base; corymbs axillary, many-flowered, on short peduncles; petals 4; stamens 8. ☉. B. F. Native of Egypt and Senegal, in rice fields. Del. fl. eg. p. 36. t. 15. f. 2. *A. racemosa*, Poir. suppl. 1. p. 329. *Lythrum ramosum*, Perr. in litt. Stems tetragonal.

*Auriculate-leaved Ammannia.* Pl. 1 foot.

† *Species not sufficiently known.*

29 *A. RUBRA* (Hamilt. in D. Don, prod. fl. nep. p. 220.) stem erect, almost simple, tetragonal, rooting at the base; leaves oblong, obtuse, sessile; flowers sessile, solitary; floriferous branchlets opposite, hardly longer than the leaves. ☉. B. H. Native of Nipaul. Stem 3-4 inches high. Petals red.

*Red-flowered Ammannia.* Fl. Jul. Aug. Clt. 1818. Pl.  $\frac{1}{4}$  ft.

30 *A. ROSEA* (Poir. suppl. 1. p. 329.) stems weak; branches filiform; leaves linear, sessile, acutish, floral ones small; flowers usually solitary, sessile; capsule globose. ☉. B. F. Native of the East Indies. Flowers small, rose-coloured. Plant small.

*Rose-coloured-flowered Ammannia.* Pl.  $\frac{1}{2}$  foot.

31 *A. REPENS* (Rottl. ex Mart. acad. munch. phil. 6. p. 150.) stems rooting, tetragonal; leaves on short petioles, oblong, bluntish; flowers axillary, solitary, sessile. ☉. B. H. Native of the East Indies.

*Creeping Ammannia.* Pl. creeping.

32 *A. PALLIDA* (Lehm. sem. hort. hamb. 1823. p. 3.) stem erect, tetragonal; leaves lanceolate, acuminate, dilated and cordate at the base; flowers in glomerate whorls. ☉. B. F. Native country unknown. Perhaps the same as *A. latifolia*.

*Pale Ammannia.* Pl. 1 foot.

33 *A. ? SAGITTATA* (D. C. prod. 3. p. 80.) branches somewhat tetragonal, glabrous, herbaceous; leaves linear, sessile, bluntly sagittate at the base; capsules globose, somewhat tetragonal, in glomerate whorls, 4-toothed at the apex? ☉. B. F. Native of St. Domingo. *Jussiaea sagittata*, Poir. suppl. 3. p. 198.

*Sagittate-leaved Ammannia.* Pl.  $\frac{1}{2}$  foot.

34 *A. ? PINNATIFIDA* (Lin. fil. suppl. 127.) stems procumbent, rooting, compressed; leaves scattered, linear, pinnatifid; lobes filiform; flowers axillary; capsule tetragonal. ☉. ? B. F. Native of Java. From the capsule being 4-cornered it is probable that this plant ought to be excluded from the genus. It is perhaps a species of *Myriophyllum*, but differs from that genus in the leaves being scattered.

*Pinnatifid-leaved Ammannia.* Pl. procumbent.

*Cult.* The species of *Ammannia* being all annuals, and for the most part natives within the tropics, the seeds of them must be sown in pots, which should be placed in a hot-bed frame or in a stove, and when the plants have grown to the height of 2 inches, they may be transplanted into other pots, 3 or 4 plants in each; these pots should be placed in the stove or warm part of a green-house, placing each in a pan of water. Some of the plants may also be planted out in the open ground, in a shel-

tered moist situation. None of the species are worth growing, unless in botanic gardens.

VII. LYTHRUM (*λυθρον*, *lythron*, black-blood; from the purple colour of the flowers). Juss. gen. p. 332. D. C. prod. 3. p. 80.—*Salicaria*, Tourn. inst. 253.—*Lythrum* species of Lin. and Lam.

LIN. SYST. *Dodecandria*, *Monogynia*. Calyx cylindrical, striated, with 8-12 teeth, of which from 4-6 are broader than the rest, and erect; the others smaller and spreading. Petals 4-6, inserted in the orifice of the calyx, alternating with its erect teeth. Stamens inserted in the middle, or at the base of the tube of the calyx, twice as numerous as the petals, or occasionally fewer. Style filiform; stigma capitate. Capsule oblong, included in the calyx, 2-celled, many-seeded. Placentas thick, adnate to the dissepiment.—Herbs, seldom subshrubs. Leaves entire. Flowers axillary, purple or white. Stems square.

SECT. I. AMMANNIOIDES (containing plants with the habit of *Ammannia*). D. C. in mem. soc. gen. and prod. 3. p. 81. Stamens 4-6. Petals wanting? Calyx tubularly campanulate.

1 L. ? NUMMULARIFOLIUM (Lois. not. p. 74 but not of Pers.) glabrous; stem herbaceous, branched; leaves obovate-roundish, obtuse, opposite, but some of the rameal ones are alternate; flowers axillary, solitary, apetalous. ☉. II. Native of Corsica. Calyx nearly of *Ammannia*, 8-16-toothed, the alternate teeth small and horn-formed. Petals wanting, or falling off very early. Stamens 4-8, inclosed. Capsule ovate, 2-celled. This plant is an *Ammannia* in flower, but a *Lythrum* in fruit.

*Money-wort-leaved Purple Loosestrife*. Pl.

SECT. II. HYSSOPIFOLIA (plants agreeing in character with *L. hyssopifolium*). D. C. mem. soc. gen. 3. part 2. p. 78. prod. 3. p. 81.—*Hyssopifolia*, C. Bauh. pin. p. 218.—*Pythagorea*, Rafin. journ. phys. aug. 1819. p. 96. but not of Lour. Stamens equal in number to the petals, rarely double that number. Flowers solitary in the axils of the leaves, never disposed in spikes. Plants nearly all glabrous in every part.

\* *Stamens usually equal in number to the petals.*

2 L. THYMIFOLIUM (Lin. spec. 642.) leaves alternate, linear, acutish; flowers almost sessile, shorter than the leaves; bractes foliaceous, linear, usually longer than the calyx; petals 4-5; stamens 2. ☉. B. II. Native of Egypt, Mauritania, and many parts of the south of Europe, in salt marshes by the sea side; and a plant very much resembling the present species, if not the same, was collected about Conception in Chili, by Captain Dumont D'Urville.—J. Bauh. hist. 3. p. 792. Barrel. icon. t. 773. f. 2. *Pentaglossum limifolium*, Forsk. descrip. no. 11. *Salicaria thymifolia*, Lam. fl. fr. Stems erect. Flowers small, pale lilac.

*Var. β, major* (D. C. prod. 3. p. 81.) stems more branched, elongated; leaves linear-lanceolate. ☉. B. II. Native about Montpellier. L. bibracteatum, Salz. in litt. Habit of *L. hyssopifolium*, but the character is that of *L. thymifolium*.

*Thyme-leaved Purple Loosestrife*. Fl. July, Aug. Clt. 1816. Pl.  $\frac{1}{3}$  to 1 foot.

3 L. THESIOIDES (Bieb. fl. taur. 1. p. 367.) leaves alternate, linear-lanceolate; capsule nearly globose, 4-toothed, pedicellate. ☉. B. II. Native of Caucasus. Flowers the size of those of *L. thymifolium*, but the fruit is globose, and the plant is probably generically distinct.

*Thesium-like Purple Loosestrife*. Fl. July, Sept. Clt. 1828. Pl. 1 foot.

4 L. LINEARE (Lin. spec. 641.) leaves linear, for the most part opposite, acute; flowers on short pedicels, about the length

of the leaves, bibracteate at the base; petals and stamens 6. ☉. II. Native of Virginia and Carolina, by the sea side. Pursh, fl. amer. sept. 1. p. 334. *Pythagorea linearis*, Rafin. l. c. Stem erect, angular. Calyx 10-striped. Corolla white.

*Linear-leaved Purple Loosestrife*. Fl. July, Aug. Clt. 1812. Pl. 3 to 4 feet.

5 L. ALATUM (Pursh, fl. amer. sept. 1. p. 334. but not of Presl.) leaves opposite, ovate-oblong, acute, rather cordate at the base, sessile, or on very short petioles; branches twiggy, tetragonally winged; flowers almost sessile, erect, 6-petalled, hexandrous, furnished with two minute bractes. ☉. F. Native of North America, in a part of Lower Georgia, and of Mexico. Sims, bot. mag. 1812. *L. vulneraria*, Schrank, hort. mon. t. 27. *L. acinacifolium*, Moc. et Sesse, fl. mex. icon. ined. *L. Kennedyanum*, H. B. et Kunth, nov. gen. amer. 6. p. 194. *L. Virginicum*, Kenn. ex Kunth. *Pythagorea alata*, Rafin. l. c. Flowers beautiful purple. An elegant half-shrubby plant.

*Winged-stemmed Purple Loosestrife*. Fl. May, Nov. Clt. 1812. Pl. 1 to 4 feet.

6 L. HYSSOPIFOLIUM (Lin. spec. 642.) leaves linear-lanceolate, bluntnish; lower ones opposite, upper ones alternate; flowers axillary, solitary, nearly sessile, each with a pair of small bractes at the base; stamens 6. ☉. B. H. Native throughout the whole of Europe, also to be found in North and South America, New Holland, and the Cape of Good Hope, where it has probably been introduced; in partially dried up pits or ditches, or places where water has stagnated during winter. In England, on Hounslow Heath; in several parts of Cambridgeshire, Huntingdonshire, Bedfordshire, Oxfordshire, Suffolk, and Worcestershire, but by no means common. Jacq. fl. austr. t. 133. *L. hyssopifolium*, Smith, engl. bot. t. 292. *Hyssopifolia*, Bauh. pin. 218. *Salicaria hyssopifolium*, Lam. Mœnch. Flowers small, light purple. The *L. hyssopifolium*, Brot. fl. lus. 2. p. 214. is said by Link to be a distinct species, which he calls *L. meonanthum*, but the character given by Brotero is too imperfect to decide this point.

*Var. β, acutifolium* (D. C. prod. 3. p. 82.) leaves acutish. ☉. II. Native of temperate parts of Europe. *L. thymifolium*, Hoffm. fl. germ. 1800. p. 213. but not of Lin.

*Var. β, virgulosum* (D. C. prod. 3. p. 82.) stems suffruticose; flowers on long pedicels. ☉. II. Native of St. Domingo. *L. lineare*, Bertero, ined. *L. virgatum*, Spreng. in herb. Balb. Perhaps a proper species.
